Yearbook on International Investment Law & Policy, 2013-2014 Andrea K. Bjorklund, 2015-07-31 International investment law today consists of a network of multifaceted, multilayered international treaties that, in one way or another, involve virtually every country of the world. The evolution of this network raises a host of issues regarding international investment law and policy, especially in the area of international investment disputes. The Yearbook on International Investment Law & Policy 2013-2014 monitors current developments in international investment law and policy, focusing on recent trends and issues in foreign direct investment (FDI). With contributions by leading experts in the field, this title provides timely, authoritative information on FDI that can be used by a wide audience, including practitioners, academics,

researchers, and policy makers. The 2013-2014 Yearbook begins with trends in international investment and the activities of multinational enterprises, a review of trends and new approaches in international investment agreements for 2013-2014, and a review of international investment law and arbitration for 2013. This edition contains a sample of the research and ideas generated by the Investment Treaty Forum at the British Institute of International and Comparative Law--The Investment Treaty Forum brings together experts in international investment law to engage in high-level debate about salient topics in investment law. This edition covers many important topics, such as the principle of proportionality and the problem of indeterminacy in international investment treaties; proportionality, reasonableness and standards of review in investment treaty arbitration; and the role of investors' legitimate expectations in defense of investment treaty claims. The general articles included in this volume provide analysis of balancing investor protection and regulatory freedom in international investment law. The jurisprudential interaction between ICSID tribunals and the International Court of Justice are also discussed, along with inconsistencies in investor-state awards, the role of state interpretations; old and new ways for host states to defend against investment arbitrations, and approaches and analogies in the countermeasures defense in investor-state disputes. This volume explores the political economy of crises and the international law of necessity after the great recession. In addition to this are articles on unilateral treaty-making and bilateral investment treaties; investment promotion, agencies; the trend toward open contracting; and new regulations on foreign acquisitions of land in Brazil and Argentina. This volume concludes with the winning memorials from the 2013 FDI International Moot Competition.

Learn LabVIEW 2013 / 2014 Fast Douglas Stamps, 2015 Learn LabVIEW 2013 / 2014 Fast is written for users that have no experience with LabVIEW and only a limited understanding of automatic data acquisition. This primer will help you

quickly become proficient using LabVIEW and confident in your ability to create applications in a wide variety of data acquisition topics. The goal of this primer is to introduce you to LabVIEW for hands-on use in automatic data acquisition and controls applications. This primer uses a number of practical real-life examples to provide both breadth and depth to the topic. The real-life examples used in this book demonstrate the value of LabVIEW, provide motivation for learning LabVIEW and make the examples fun to program. The first chapter of this book is designed to introduce you to the general concepts of LabVIEW through the development of a general program that acquires analog input data. The rest of the book introduces you to general concepts of data measurement and generation using LabVIEW's DAQ Assistants, Express VIs and the configuration approach for automatic data acquisition. This primer has a unique modular structure that does not require the chapters to be completed in succession. After you complete the first chapter you are free to complete whichever sections you would like, in the order you would like to complete them, allowing you to focus on the topics that are of most interest to you. Each section in the primer introduces you to a new data acquisition topic. After an introduction to the topic, a program is developed within this topic using step by step instructions. Each chapter concludes with several additional practical application problems, where the data acquisition program is given, but the detailed steps to create the program are left to you. Example problems are provided for all modes of data acquisition, including analog input and output, digital input and output, and counters. For example, the problems show many aspects of analog input, such as hardware and software timing, buffered and triggered acquisition, and examples with common sensors, such as thermocouples and strain gages. Examples from other acquisition modes show how to drive many common output devices, such as stepper motors, servo motors, and DC motors, as well as software control programs, such as the PID compensator and pulse width modulation.
