Strengthening Forensic Science in the United States National Research Council, Division on Engineering and Physical Sciences, Committee on Applied and Theoretical Statistics, Policy and Global Affairs, Committee on Science, Technology, and Law, Committee on Identifying the Needs of the Forensic Sciences Community, 2009-07-29 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Is Work Good for Your Health and Well-being? Gordon Waddell, Great Britain: Department for Work and Pensions, A. Kim Burton, 2006-09-06 Increasing employment and supporting people into work are key elements of the Government's public health and welfare reform agendas. This independent review, commissioned by the Department for Work and Pensions, examines scientific evidence on the health benefits of work, focusing on adults of working age and the common health problems that account for two-thirds of sickness absence and long-term incapacity. The study finds that there is a strong evidence base showing that work is generally good for physical and mental health and well-being, taking into account the

nature and quality of work and its social context, and that worklessness is associated with poorer physical and mental health. Work can be therapeutic and can reverse the adverse health effects of unemployment, in relation to healthy people of working age, for many disabled people, for most people with common health problems and for social security beneficiaries.

How Tobacco Smoke Causes Disease ,2010 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

The End of Trauma George A. Bonanno,2021-09-07 A top expert on human trauma argues that we vastly overestimate how common PTSD is and fail to recognize how resilient people really are After 9/11, mental health professionals flocked to New York to handle what everyone assumed would be a flood of trauma cases. Oddly, the flood never came. In *The End of Trauma*, pioneering psychologist George A. Bonanno argues that we failed to predict the psychological response to 9/11 because most of what we understand about trauma is wrong. For starters, it's not nearly as common as we think. In fact, people are overwhelmingly resilient to adversity. What we often interpret as PTSD are signs of a natural process of learning how to deal with a specific situation. We can cope far more effectively if we understand how this process works. Drawing on four decades of research, Bonanno explains what makes us resilient, why we sometimes aren't, and how we can better handle traumatic stress. Hopeful and humane, *The End of Trauma* overturns everything we thought we knew about how people respond to hardship.

The Antitrust Paradox Robert Bork,2021-02-22 The most important book on antitrust ever written. It shows how antitrust suits adversely affect the consumer by encouraging a costly form of protection for inefficient and uncompetitive small businesses.

Review of Civil Litigation Costs Great Britain. Ministry of Justice,Rupert M. Jackson,2010 In January 2009, the then Master of the Rolls, Sir Anthony Clarke, appointed Lord Justice Jackson to lead a fundamental review of the rules and principles governing the costs of civil litigation. This report intends to establish how the costs rules operate and how they

impact on the behavior of both parties and lawyers.

Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation Intergovernmental Panel on Climate Change, 2012-05-28 Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. This Special Report explores the social as well as physical dimensions of weather- and climate-related disasters, considering opportunities for managing risks at local to international scales. SREX was approved and accepted by the Intergovernmental Panel on Climate Change (IPCC) on 18 November 2011 in Kampala, Uganda.

Living Donor Kidney Transplantation Jonas Wadström, Robert Gaston, 2005-07-14 Living donor kidney (LDK) transplantation has become the definitive approach to the treatment of end-stage renal failure, providing a better quality of life and the best opportunity for survival when compared with dialysis or transplantation from a deceased donor. A timely compendium of the modern day practice of LDK transplantation from a group of outstanding international experts, this text explores a number of controversial aspects of this innovative new technique. Discussing in detail the current situation, the authors also focus on the responsibility of the medical community to the live kidney donor as a patient, and the potential for complacency regarding donor risk. Emphasizing the ethical principles that must dictate medical practice in LDK transplantation for the foreseeable future - voluntarism, informed consent and medical follow-up - this book comprehensively records the best practices currently available.

Strengthening Health Systems Through Nursing Anne Marie Rafferty, 2019

Orthogeriatrics Paolo Falaschi, 2021 This new open access edition supported by the Fragility Fracture Network aims at giving the widest possible dissemination on fragility fracture (especially hip fracture) management and notably in countries where this expertise is sorely needed. It has been extensively revised and updated by the experts of this network to provide a unique and reliable content in one single volume. Throughout the book, attention is given to the difficult question of how to provide best practice in countries where the discipline of geriatric medicine is not well established and resources for secondary prevention are scarce. The revised and updated chapters on the epidemiology of hip fractures, osteoporosis, sarcopenia, surgery, anaesthesia, medical management of frailty, peri-operative complications, rehabilitation and nursing are supplemented by six new chapters. These include an overview of the multidisciplinary approach to fragility fractures and new

contributions on pre-hospital care, treatment in the emergency room, falls prevention, nutrition and systems for audit. The reader will have an exhaustive overview and will gain essential, practical knowledge on how best to manage fractures in elderly patients and how to develop clinical systems that do so reliably.

Academic Knowledge Production and the Global South Márton Demeter, 2020-10-01 This book investigates and critically interprets the underrepresentation of the global South in global knowledge production. The author analyses the serious bias towards scholars and institutions from this region: he argues that this phenomenon causes serious disadvantages not only for authors and institutions, but global science as well by impeding the flow of fresh, innovative scholarship. This book uses a combination of field theory and world-systems analysis to explain the motives and dynamics behind the geopolitical and societal inequalities in the system of global knowledge production. Subsequently, the author offers several solutions by which these inequalities could be reduced, or even eliminated. This book will be of interest and value to scholars of knowledge inequalities, and knowledge production in the global South. "Márton Demeter's monograph invokes rich anecdotal, empirical and scientometric evidence to delineate the contours of a world system that preserves the dominance of Western knowledge and scholars and the westernisation or peripheralisation of the rest - a system defined by geopolitical and material inequalities, socio-economic class differences, institutional elitism and publishing biases. Demeter's work counters narratives that present academia as meritocratic and that justify disparities in world publications on the basis of pure rigour, exposing rather norms and values that perpetuate a western elitist system and peripheralise those who happen to lack this cultural capital. Demeter's work adds to an expanding field of research documenting how Anglophone standards and biases in journal indexing, peer review and editorial board recruitment marginalise consistently the Global South. His practical and concrete suggestions to subvert this system of horizontal and vertical inequalities could not be timelier and provides momentum to decolonisation movements in higher education across the world." —Dr Romina Istratii, SOAS University of London, UK "Márton Demeter is a scholar dedicated to revealing the inequality in academic publishing and a strong advocate for scholars from the Global South. This book is an epitome of his effort on this cause. Demeter utilizes his wealth of data including authorships, citations, journal publishers, editorial review board compositions, the reviewers and the editors of journals as strong evidence of inequality with his three-dimensional model of academic stratification. This book is a must-read for scholars both in the Global North and the Global South to reflect on the current state of academic knowledge gatekeeping and production. It will spark a dialogue between scholars to address the dominance of the Global North especially in the field of communication." —Professor Louisa Ha, Bowling Green State University, USA "Márton Demeter's analysis and critique of the unequal structure of global knowledge production is a powerful contribution to the global justice movement with dramatic implications for what academics in both the Global North and the Global South can do to help science and the humanities live up to their claims of meritocracy and universality. Demeter employs a useful critical combination of the

world-systems perspective and Bourdieusian field theory to organize the results of his careful and sophisticated empirical studies of global knowledge production. He is an intrepid protagonist of a more egalitarian human future.” —Professor Christopher Chase-Dunn, University of California, Riverside, USA

Disability and Development Report United Nations Publications, 2019-08-16 Disability-inclusive development is an essential condition for a sustainable future. In 2015, the United Nations adopted the 2030 Agenda for Sustainable Development, pledging to leave no one behind in the global efforts to realize the 17 Sustainable Development Goals. Without the world's one billion persons with disabilities - 15% of the world population - being included as both agents and beneficiaries of development, these Goals will never be achieved. Yet, persons with disabilities are still invisible and often left behind. This United Nations flagship report is the first publication to address, at the global level, the nexus between disability and the Sustainable Development Goals. It is also the first global analysis based on an unprecedented amount of data, legislation and policies from over 100 countries to understand the socio-economic circumstances of persons with disabilities and the challenges and barriers they face in their daily lives. This report examines new areas, like the role of access to energy to enable persons with disabilities to use assistive technology, for which no global research was previously available. And explores the linkages between the Sustainable Development Goals and the Convention on the Rights of Persons with Disabilities as well as other international relevant norms and standards relating to disability. Against the backdrop of all the available evidence, the report identifies good practices and recommends urgent actions to be taken for the achievement of the Sustainable Development Goals by, for and with persons with disabilities. The e-book for this publication has been converted into an accessible format for the visually impaired and people with print reading disabilities. It is fully compatible with leading screen-reader technologies such as JAWS and NVDA.

The Kilbrandon Report Charles James Dalrymple Shaw Baron Kilbrandon, 1995

Clinical Pathways in Stroke Rehabilitation Thomas Platz, 2021-01-14 This open access book focuses on practical clinical problems that are frequently encountered in stroke rehabilitation. Consequences of diseases, e.g. impairments and activity limitations, are addressed in rehabilitation with the overall goal to reduce disability and promote participation. Based on the available best external evidence, clinical pathways are described for stroke rehabilitation bridging the gap between

clinical evidence and clinical decision-making. The clinical pathways answer the questions which rehabilitation treatment options are beneficial to overcome specific impairment constellations and activity limitations and are well acceptable to stroke survivors, as well as when and in which settings to provide rehabilitation over the course of recovery post stroke. Each chapter starts with a description of the clinical problem encountered. This is followed by a systematic, but concise review of the evidence (RCTs, systematic reviews and meta-analyses) that is relevant for clinical decision-making, and comments on assessment, therapy (training, technology, medication), and the use of technical aids as appropriate. Based on these summaries, clinical algorithms / pathways are provided and the main clinical-decision situations are portrayed. The book is invaluable for all neurorehabilitation team members, clinicians, nurses, and therapists in neurology, physical medicine and rehabilitation, and related fields. It is a World Federation for NeuroRehabilitation (WFNR) educational initiative, bridging the gap between the rapidly expanding clinical research in stroke rehabilitation and clinical practice across societies and continents. It can be used for both clinical decision-making for individuals and as well as clinical background knowledge for stroke rehabilitation service development initiatives.
