10	J. V. Aimikhe	B. Eng Pet. Engg, (Benin), M.Eng. Pet Engg (UPH). PhD Gas Engg (UPH), R.28853	Gas Engineering	Senior Lecturer
11	T. O. Odutola	B.Tech Chem.(LAUTECH)M. Sc. Pet. Engg. (AUST) PhD Pet. Engg. (UPH), R. Eng 30662	Production Engineering	Senior Lecturer
12	I. I. Mbachu	B.Eng. Polymer Eng. (FUTO), M.Eng. Pet. Engg, PhD Pet. Engg. (UPH), R. Eng 49559	Reservoir Engineering	Senior Lecturer
13	E.E. Okoro	B.Eng Chem (NAU), M.Eng. PhD Pet. Engg. (UPH) R.Eng 32925	Drilling Engineering/ Geomechanics	Senior Lecturer
14	L. Ikeh	B.Eng, M.Eng (UPH), M.Sc., PhD (UK). R. Eng 57955	Gas & Pipeline Engineering	Lecturer I

15	I. O. Ogali	B.Eng Elect/Elect (UPH), MSc, Pet (AUST), PhD, Pet (UPH) R.33687	Reservoir Engineering	Lecturer I
16	J. L. Ichenwo	B.Eng, M. Eng. Pet. Engg, (UPH), (UPH), PhD (RSU)	Drilling Engineering	Lecturer I
17	E. Ndubuisi	B.Eng, M.Eng, PhD Pet. Eng. (UPH) R. R. Eng 40855.	Drilling Engineering	Lecturer I
18	U. Akwa-Abasi	B.Eng Gas Eng. (UPH), MSc Subsea Eng. (UK)	Production Engineering	Lecturer I
19	O. C. Ekeh	B.Eng, M.Eng. Pet.Engg.	Reservoir Engineering	Lecturer II
20	P. O. Wachuku	B.Eng., M. Eng. Pet. Engg. PhD (UPH)	Reservoir Engineering	Lecturer II
21	G.O. Ani	B.Eng, Gas Engr., M.Eng Pet Econs. (UPH)	Gas Engineering	Lecturer II

ENGINEERING MANAGEMENT PROGRAMMES (MEM)

INTRODUCTION

The Graduate Programmes in Engineering Management aims to develop highly skilled professionals in the field of engineering management for the public, private and international organizations, as well as for teaching and research in Tertiary Institutions and global competitiveness.

To help in these and other conditions, industrial administrators are turning to be engineering managers. The education of the engineering manager would be anchored in the faculty of engineering but includes an appropriate blend of management, human behavior, and social sciences. The student is thus well prepared for corporate positions that require knowledge of organizations and people as well as technology. The student is usually capable of operating effectively in such areas as production, operations, plant engineering, industrial marketing, and sales engineering.

OBJECTIVES

The Graduate programmes in Engineering Management (MEM) is designed to provide knowledge of the process of management as it applies to technically-based enterprises and to provide additional skills in basic engineering and related disciplines. The programmes have been developed to meet the needs of graduates of engineering and related science disciplines who find themselves performing or preparing for managerial functions without the benefit of advanced technical management education. Additionally, the programme has been designed to equip those who may want to pursue an advanced research degree in Engineering Management.

POST GRADUATE DIPLOMA (PGD) IN ENGINEERING MANAGEMENT

ADMISSION REQUIREMENTS

1. For admission into the Post Graduate Diploma of Engineering Management programme, the candidate must normally possess a Bachelor's degree with a minimum of Third class (honors) degree or Upper credit in Higher National Diploma (HND) in engineering or related fields from schools recognized by the senate of the University of Port Harcourt.
2. Additionally, the candidate is expected to have an NYSC discharge certificate or have a valid exemption certificate. Full-time and part-time modes of study are available.

DURATION OF STUDY

The programme shall last for a minimum of twelve (12) calendar months and a maximum of twenty-four(24) months for the full-time study while the part-time will last for a minimum of twenty-four calendar months and a maximum of forty-eight months.

MODE OF STUDY AND EXAMINATION

The mode of study shall be modular and students are expected to pass all taught courses which comprise all the modules listed in the course description section.

AWARD OF DEGREE

Successful students at the end of the programme shall receive a PGD in Engineering Management from the University of Port Harcourt.

COURSE CONTENT IN MODULE DESCRIPTION

Course Code	Course Title	Unit
ENG 701	Technical Report writing and Presentation	2
ENG 702	Fundamentals of Engineering Management	3
ENG 703	Introduction to Project Management for Engineers	3
ENG 704	Design Engineering Management	3
ENG705	Introduction to Quality Management	3
ENG 706	Operational Excellence and Lean Six Sigma	3
ENG 707	Production and Operations Management	3
ENG 708	Operations Research	3
ENG 709	Fundamentals of Business for Engineers	2
ENG 710	Introduction to Engineering Economics	3
ENG 711	Accounting Systems and Marketing Management	3
ENG 712	Engineering management project	6
	Total	40

COURSE DESCRIPTION

ENG 701 Technical Report writing and Presentation

Introduction to technical writing, Definition of technical writing and report; Technical correspondence; Technical illustrations; Progress report; Tendering and Bill of Quantities; Proposal writing and gap analysis

ENG 702 Fundamentals of Engineering Management

Fundamentals of engineering management. Managerial accounting: cost-volume-profit analysis, costing systems and standard costs, activity-based costing, relevant costing. Organizational behavior: motivation, stress management, effective leadership, communication, work teams. Quantitative decision making in engineering: scoring models, AHP, decision trees, mini-max regret, and other strategies.

ENG 703 – Introduction to Project Management for Engineers

This course introduces the engineer to the basics of project management.

Outline: Basics of project integration, project scope, cost management, time management, engineering quality, human resources, project communications, risk management, and procurement management. Introduction to Risk Management, particularly in the area of safety-critical engineering projects.

ENG 704 - Design Engineering Management

The objective of this course is to understand the key aspects of managing design within a corporate context effectively and systematically.

Outline: key challenges in the management of the design of innovative engineering devices, processes, technologies, and services; the importance of the interaction between design, business, and management items in design organizations and how to make the existence of the innovative design activity visible in the corporate structure using strategic planning; Case studies

ENG705 - Quality Management

Quality engineering and management evolution, definitions, concepts, and principles. Topics include philosophy of quality, quality engineering and management tools, design of experiments, statistical process control, and engineering statistics. Managing quality processes and quality-based projects.

ENG 706 Operational Excellence and Lean Six Sigma

Lean Six Sigma Green Belt tools and techniques, operational efficiency, waste and variability reduction, continuous improvement, the pursuit of perfection. DMAIC (define, measure, analyze, improve and control), process mapping, data collection and analysis, root cause problem solving, the cost of quality, mistake proofing, change management

ENG707 - Production and Operations Management

This course covers the primary tools and methods used in the management of production and

operations of engineering systems. Product demand forecasting: moving averages, exponential smoothing, inventory management, economic order quantity, (s,S) policy, (r,Q) policy, newsvendor models, dynamic programming models, production planning, linear and integer programming models and solutions, lean manufacturing principles, and operations and job scheduling

ENG 708 - Operations Research

This course surveys analytical methods in operations research for modeling complex decision-making problems in the modern global economy, with emphasis on applications from data analytics, supply chain management, energy markets, or other relevant domains. The course introduces deterministic and stochastic operations research model formulation, solutions, and applications.

Outline: Introduction to linear, non-linear, and integer programming, dynamic programming, spreadsheet modeling, network models, queueing, simulation, decision analysis, Markov models, forecasting, and software tools for operations research.

ENG 709 - Fundamentals of Business for Engineers

This course provides managers with an overview of the economic environment within which businesses must operate. Students will also learn how Engineering organizations interpret and engage with their stakeholders and environments, develop unique capabilities, implement strategic change and set up and maintain strategic alliances to achieve competitive advantage. The outline includes Key concepts and ideas from microeconomics, macroeconomics, and international economics; economic forces that affect the operation of business entities; the impact of change in the economic environment on the strategic direction of the firm; Strategy, strategic theory, and the strategy process for Engineers; Strategic analysis tools and concepts; Strategy formulation including business-level strategies; Stakeholders and governance; Resources and capabilities; Cooperative strategies in the Engineering sector: mergers, acquisitions, partnerships, and alliances; Implementation of strategic change in Engineering. Credit hours: 3

ENG 710 Introduction to Engineering Economics. 3 Credits.

Introduction to cost estimation, accounting, and financial metrics. Valuation techniques, time value of money, and cash flow analysis. Economic

analysis of engineering alternatives including depreciation effects, income taxes, inflation, engineering management capital budgeting of projects, portfolio, and public sector projects. Prerequisite: Junior standing.

ENG 711 Accounting Systems and Marketing Management in Engineering Organizations

This course provides an overview of financial and managerial accounting; the concepts and tools of managerial accounting; alternative costing methods and illustrates how the resulting cost information can be used for decision making and examines the role of the internal accounting system in evaluating managerial performance and in coordinating the activities within a firm. The Marketing Management course is designed to offer a broad overview of the fundamental areas in the marketing process. The topics covered in the course include marketing planning; segmentation and positioning; and devising strategies for new products, appropriate pricing, marketing communications, and distribution. Digital Marketing- Fundamentals of using the Internet for marketing tasks. Strategic Implications of the Internet for Marketing. Marketing models for Electronic Commerce. Customer retention, customization, value-based pricing, branding, advertising in the context of Electronic Commerce. WWW and the pricing, promotion, and distribution of goods.

ENG 712 Engineering Management Project

An Essay on management-related problems in Engineering organizations and suggested solutions through supervised case studies or research.

MASTER’S DEGREE IN ENGINEERING MANAGEMENT PROGRAMME

ADMISSION REQUIREMENTS

For admission into the Master of Engineering Management programme, Candidates must possess either a Bachelor's Degree with a minimum of Second Class Honors Lower Division in the relevant Disciplines or a PGD in the relevant areas with a CGPA of 3.0 on a 5 point scale.

Additionally, the candidate is expected to have an NYSC discharge certificate or have a valid exemption certificate. Full-time and part-time modes of study are available.

DURATION OF STUDY

The duration of the programme shall be a minimum of twelve (12) calendar months and a maximum of twenty-four (24) months for the full-time mode of study or minimum of twenty-four (24) calendar months and maximum of forty-eight (48) months for the part-time mode of study.

MODE OF STUDY AND EXAMINATION

The mode of study shall be modular and students are expected to pass all the courses.

AWARD OF DEGREE

Successful students at the end of the programme shall receive an M.Sc. in Engineering Management Degree.

AREAS OF SPECIALIZATION

The dissertation will be based on the following areas of specialization.

- a. Chemical Engineering
- b. Civil Engineering
- c. Electrical/Electronic Engineering
- d. Environmental Engineering
- e. Mechanical Engineering
- f. Petroleum/Gas Engineering

ELECTIVE 2		3
	Total	42

ELECTIVE COURSES

The student is expected to offer a module in each of the elective groups according to the student’s area of specialization.

ELECTIVE I

CHE 851	Advanced Principles I	Chemical Engineering
CEG 851	Advanced Principles I	Civil Engineering
EEE 851	Advanced Principles I	Electrical Engineering
MEG 851	Advanced Principles I	Mechanical Engineering
PNG 851	Advanced Principles I	Petroleum Engineering

ELECTIVE II

CHE 852	Advanced Principles II	Chemical Engineering
CEG 822	Advanced Principles II	Civil Engineering
EEE 852	Advanced Principles II	Electrical Engineering
MEG 851	Advanced Principles II	Mechanical Engineering
PNG 852	Advanced Principles II	Petroleum Engineering

COURSE DESCRIPTION

SGS 801.1: ICT and Research Methodology

This course covers essential areas of general Introduction to ICT (focus on emerging trends in ICT), Hardware/software fundamentals, internet / online tools (focus on search engines), productivity tools (Google suite), word processing (MS word), data processing (MS Excel), data analysis (MS Excel, SPSS), Introduction to computer programming (Excel VBA/ macros), presentation tools (MS power point), graphics (focus on infographics), group work, presentation. It also covers what is research, research process and characteristics, types of research, formulating a research problem, research design, principles of scientific research, concept of hypothesis, research techniques, formulation and testing, organization of research and report writing, literature review, document management- content and layout in report writing, understanding data and data types, referencing and bibliography.

SGS 801.2: Management and Entrepreneurship

This course covers business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving

MOE 802: Operations and Maintenance Management

The focus is efficient and effective management of the efforts and activities of people, capital, equipment, and resources in the process of converting raw materials into finished goods and services. The module is designed to develop the thinking underpinning the transformation

processes in an organization towards maximizing throughput and minimizing cost. This course outline is as follows;

- i. Introduction to Operations and Maintenance;- Maintenance as a business process and added value process. Trends in maintenance management Definitions and terminology. Types of maintenance, choice of maintenance strategy and methods, NORSOK Standards, legislative requirements, and governmental regulations. Establishment of goals, requirements, and risk acceptance criteria for Health, safety, and environment. Myths about maintenance.
- ii. Principal Concepts, Tools and Techniques;- Engineering analysis, equipment, technical and functional hierarchy, Failure Mode Effects and Criticality Analysis (FMECA), Fault Tree Analysis (FTA), Event Tree Analysis (ETA). Design out/ design for maintenance considering reliability, availability, maintainability, operations, and maintenance support, Life cycle cost analysis, Spare parts inventory and logistics, Data and information management, Defining best practices, Excellence, and Culture- Defining terms related to maintenance, reliability, and operations (MRO), Elements of asset (equipment) performance, Identifying stakeholders to journey to excellence.
- iii. Maintenance Strategies and Practices;- Preventive maintenance (PM), Predictive/ condition-based maintenance (PBM/CBM), Run-to-failure (RTF), Planning and scheduling, Material stores management, optimizing maintenance based on reliability centered maintenance.
- iv. Maintenance Management and Development of Maintenance Programs;- Standards and Standardization impacting maintenance and equipment care, energy, environment, risk, asset, etc. Reliability centered maintenance (RCM), Risk-based maintenance (RBM) and Risk-based inspections (RBI), Maintenance objectives and strategies, Maintenance management and work processes, challenges in implementing best practices.

MOE 803: Supply Chain Management

Goods and services are to be delivered to the final consumer; therefore effective management of the supply chain must be ensured. The module outlines the supply chain management and covers the following topics;

- i. Introduction to supply chain management;- Importance of supply chain management, matching supply chains with products, supply chain value adds, ways to view supply chain management, integrated supply chain management, process, innovation, theory of

- constraints, supply chain information technology.
- ii. Customer Service and Channels;- Customer service, customer satisfaction, channels of distribution. Business models and sourcing-Anticipatory to response-based business models, purchasing Vs procurement, procurement strategies, building deep supplier relationships.
 - iii. Manufacturing and Integrated Planning;- Manufacturing strategy, flexibility, total integrated planning, sales, and operational planning, forecasting and Woodmere case-forecasting, collaborative planning, forecasting and replenishment, Woodmere introduction, and Woodmere solution.]
 - iv. Advanced planning and scheduling (APS);- APS concepts and framework, APs demonstration, APS challenges and benefits, APS demand and supply planning, APS using software and planning charts, APS six components.\
 - v. Supply Chain Globalization;- Supply chain globalization- Rationale and key, strategies, requirements and challenges, operational differences, potential hidden costs, total cost strategy.

IET 801: Project Management

Based on the PMBOK guide, the course is designed to provide a sound introduction to the basics of project management, including project planning and risk management. It further focuses on the following:

- i. Project Management Overview: Identify project management processes, professional and social responsibilities, interpersonal skills required for project management.
- ii. Project Management Methodology
- iii. Project Management Toolset
- iv. Project Management Documentation
- v. System Development Life Cycle
- vi. Initiating a project: Examine the project management content, examine project selection, prepare a project statement of work, and create a project charter, Identify project stakeholders.
- vii. The Planning Phase: Identify elements of the project management plan, Document stakeholder requirements, create a scope statement, and develop a work breakdown structure.
- viii. Developing Project Schedules: Create an activity list, create a project schedule network diagram, Estimate activity resources, Estimate duration for project activities, develop a project schedule, identify the critical path, Optimize the

- project schedule, Establish a schedule baseline.
- ix. The analysis phase
- x. The design phase
- xi. Evaluation phase
- xii. Changing information systems
- xiii. Project management assessment

IET: 804 Risk Management

Modern organizations are increasingly exposed to risk due to vagaries of the natural environment, complex technologies, diverse socio-political environments, sophisticated resource structures, and complicated economic processes and interactions. Such risks need to be managed responsibly by any business enterprise.

The model will cover the following;

1. Principles of Risk and Risk Management: introduction to the principles and concepts of risk and risk management, Identifying the risk associated with the goals and objectives of an organization, history of risk management, development, and impact of international standards.
2. The practice of Risk Management; explores the impact of the global business environment on risk, examines issues relevant to specific sectors and geographical areas, and the needs and demands of various stakeholder groups, including regulatory authorities.
3. Risk Assessment; To quantify and prioritize the risk, nature of risk-losses and opportunities, sources and types of risk information that help identify, record, and communicate risk effectively, examine the different techniques for identifying risks, and explore common methods for analyzing risks and uncertainties.
4. Risk Treatment; To develop appropriate responses to the prioritized risk. Role of risk treatment within the wider enterprise, risk management framework, different approaches to effectively respond to opportunities and treat threats, evolving risk management fundamental tools, monitoring the impact of risk on the organization.
5. Risk, Governance and Culture; Examines issues of corporate governance, risk oversight, internal control, and assurance in a global marketplace. Role of the board and key stakeholders in ensuring that risk is integrated with strategy. Critical elements of organizational behaviors including culture, corporate social responsibility, and business ethics.
6. Crises, Resilience, and Future Risks; A demonstration exercise to develop a framework to help organizations strengthen their resilience at strategic, tactical, and

operational levels to face current and future risks. Using case studies from different business sectors and geographical regions to analyze how crises are managed.

ENG 801: Technical Report Writing & Presentation

What are technical writing and technical report? In report writing, who is a layman technician, expert, or executive? Technical correspondence; Technical illustrations; Progress Reports, Proposal writing, Tendering & Bill of Quantities, Thesis documentation, and Gap Analysis. A series of seminars will be delivered by students on topics of current interest including student's projects.

ENG 802: Engineering Statistics and Experimental Data Analysis

- Part-1: Parametric Statistics:
 - Descriptive statistics-mean, standard deviation & skewness;
 - Regression-simple, multiple & partial;
 - Auto- and Cross-correlation & correlograms;
 - Comparative analysis and Test of Significance - t-test, z-test,
 - Chi-squared test & F-test;
 - Trend analysis-moving average, simple and weighted;
- Part-2: Non-parametric statistics:
 - i. Normality test, Spearman's method; Kendall's Coefficient of Concordance;
- Mann-Whitney u – Test; Kruskal-Wallis's 1-way Analysis of variance (ANOVA); Friedman's 2-way ANOVA; Dunn-Conover-Iman Multiple pairwise comparison Nemenyi test; Principal Component Analysis (PCA) & Regression (PCR); Agglomerative Hierarchical Clustering (AHC) & Application of XLSTAT

ENG 803: Advanced Engineering Economics and Costing

Application of the concepts of efficiency to engineering decision-making. More extensive work on the evaluation of capital projects. Examples will include make or buy decisions and replacement equipment decisions. Decision under conditions of risk and uncertainty. Optimization, empirical and statistical methods applied to technical problems.

Rationale: All engineering and management decisions have economic consequences, such as profitability and risk. This course is aimed at providing the necessary background and techniques for the economic evaluation of decision alternatives. Topics such as time value of money, depreciation, and taxation, cost estimation and cost control, risk and uncertainty in decision-making, and replacement analysis are included. Basic Concepts in Engineering Economics. Economic

Evaluation of Alternatives. Replacement Analysis. Accounting Concepts. Depreciation and Taxation. Product Costing and Cost Estimation. Risk and Uncertainty. Deterministic Capital Budgeting Models.

Cost Accounting: Job-Order Costing / Project Costing; Capital Planning and Budgeting

ENG 804: Products Liability and Engineering Law

Products Liability laws define the responsibility of engineers and manufacturers towards the way their products affect public safety.

Study of basic concepts of reliability as they apply to the efficient operation of industrial systems. Quality control, product failure, user rights, contract of sale, warranties, litigations, and glass action. Appraisal of environmental health hazards determination and monitoring techniques.

ENG 805: Quality Control and Reliability

Rationale: To present quality as a strategic business weapon, and to detail the ways and means of achieving it in an organization. The managerial aspects and statistical procedures of quality control are treated in depth. Catalog Description: Quality System, Quality Management System, Planning and Operations for Quality, Statistical Methods for Quality Control.

Statistical Quality Control and Applications
Modern Approaches to Quality Control / Quality Assurance

Shewhart Control Charts: Control Chart for Attributes: Specifications and Tolerances

Acceptance Sampling: Lot by lot acceptance; and the Operating Characteristics (OC) curve; Producer's risk and consumer's risk in acceptance sampling.

Economic Aspects of Quality Control Decisions
Reliability in Design and Production: Definition of Reliability; The Reliability Function; Graphical Representations of Reliability and Mortality curves

ENG 810: M.Sc. Dissertation

An essay on managerial problems and suggested solutions for local industrial enterprises through supervised case studies or research.

ELECTIVE COURSES

This comprises two elective M.Sc. courses taken from the student's parent department.

CHE 851 ADVANCED CHEMICAL ENGINEERING PRINCIPLES II

This course is designed to give an overview of chemical engineering and familiarity with the principles of chemical engineering especially to those not from the chemical engineering stream. Selected topics in chemical engineering and technology with a unified approach will be dealt

with. Role of computers in the chemical industry. Emphasis will be given to design decisions.

CHE 852 ADVANCED CHEMICAL ENGINEERING PRINCIPLES II

This course is designed to deal with salient features of project engineering. Industrial Production and Quality control with particular reference to chemical and allied industries. Topics include alternate sources of energy safety and disposal.

CEG 851 ADVANCED CIVIL ENGINEERING PRINCIPLES I

Hydrology in Engineering Practices: Stream flow duration curve, precipitation-runoff relationship flood routing by hydrological and hydraulic principle. Probability in surface water hydrology as a basis for design. Soil mineralogy, properties and engineering behavior of soils. Shear strength principles of effective stress. Consolidation and settlement/permeability and seepage analysis. Beam deflections Energy, method, trusses, virtual work, unit Dummy methods and Castigliano's Theorems. Stratically indeterminate structures. Influences line for stratically indeterminate structures. Probabilistic method in civil engineering

EEE 851 ADVANCED ELECTRICAL ENGINEERING PRINCIPLES I

Nigerian energy resources and demand. Modelling of power system components, Operational features of different types of power plants. Principles of power systems protection Generation expansion studies Electronic system design, processing of signals by means of analog and digital circuits and systems.

EEE 852 ADVANCED ELECTRICAL ENGINEERING PRINCIPLES II

Introduction to the modern control of physical systems. Examples of engineering systems involving control of force and motion and industrial processes. Introduction to non-linearities encountered in physical systems. Introduction to microprocessor systems. The design of microcomputer system. Application areas and typical design areas. Microcomputer software packages. Computer-aided design of control systems.

MEG 851 ADVANCED MECHANICAL ENGINEERING PRINCIPLES I

Industrial air conditioning: the psychrometry of air conditioning processes; Comfort and inside design conditions; cooler coils and air washers; the need for ventilation and the application of the decay equation to changes of enthalpy; Air filtration techniques.

Tribology in industry:-Tribological properties of solid materials; self-lubricating materials and types of solid lubricants, lubricant properties and testing; Hydrostatic lubrication, hydrodynamic lubrication and elastohydrodynamic lubrication. Aspects of fluid-flow measurements; Properties of non-Newtonian industrial fluids, Hydro-kinetic machines and positive displacement machines; Maintenance of industrial machines.

MEG 852 ADVANCED MECHANICAL ENGINEERING PRINCIPLES II

Analysis of Management policy on equipment replacement; application of the MAPI formula on equipment replacement. The concepts and managerial aspects of production and operations design of products and services; capacity planning; demand forecasting for operations; inventory replenishment and material requirements; rules for reducing material handling costs. Material handling organization; service systems; maintaining system reliability; personnel scheduling for service systems; Areas of waste in material handling and transportation. Handling and treatment of industrial waste

PNG 851 ADVANCED PERTROLEUM ENGINEERING PRINCIPLES I

Importance of rock and fluid properties to petroleum reservoir revaluation. Calculations of reservoir behavior and flow of oils, gas and water for different reservoir drive mechanisms. Application of well test and pressure transient analysis for reservoir description. Well-logging methods and interpretations. Applications of economic principles in petroleum property valuation.

PNG 852 ADVANCED PETROLEUM ENGINEERING PRINCIPLES II

Explanation and application of established and current procedures for selecting bits, and mud properties and for optimizing hydraulics, bit weights and rotary speeds. Well completion methods and practices. Design and selection of well production system. Analysis and evaluation of surface production system.

DOCTOR OF PHILOSOPHY (Ph.D.) DEGREE PROGRAMME IN ENGINEERING MANAGEMENT

ADMISSION REQUIREMENTS

1. For admission into the Doctoral Degree programme in Engineering Management, the candidate must normally possess a minimum of 3.5 CGPA in Master's in Engineering Management Degree.

2. Candidates possessing a minimum of 3.5 CGPA in Master's degree in any engineering discipline with certification in Project management or equivalent management experience in Engineering field can also be granted admission

Additionally, the candidate is expected to have an NYSC discharge certificate or have a valid exemption certificate. Full-time and part-time modes of study are available.

DURATION OF STUDY

The duration of the programme shall be a minimum of thirty-six (36) calendar months for the full-time mode of study and a maximum of sixty (60) calendar months or minimum of forty-eight calendar months and maximum of eighty-four (84) months for the part-time mode of study.

MODE OF STUDY AND EXAMINATION

The mode of study shall be modular and students are expected to pass all taught courses. This comprises the modules listed in the course description section.

AWARD OF DEGREE

Successful students at the end of the programme shall receive a Ph.D. in Engineering Management from the University of Port Harcourt.

GRADING SYSTEM

All examinations are graded out of 70% while continuous assessment same as homework (including term paper) is out of 30%. The defense whether internal or external (with External Examiner) will involve a number of lecturers for scoring. The oral examination attracts a letter Grade. The distribution of letter grades is as follows:

	Scores	Letter Grade
i)	70 – 100	A
ii)	60 – 69	B
iii)	50 – 59	C
iv)	0 – 49	F

The pass mark (or grade) for all examination is 50%.

AREAS OF SPECIALIZATION

The dissertation will be based on the following areas of specialization.

- i. Chemical Engineering
- ii. Civil Engineering
- iii. Electrical/Electronic Engineering
- iv. Environmental Engineering
- v. Mechanical Engineering
- vi. Petroleum/Gas Engineering

COURSE CONTENT IN MODULE DESCRIPTION

ENG 901	Technical Seminar and Report Writing – 3
ENG 902	Advanced Optimization - 3
ENG 903	Management of Major Engineering Projects - 3
ENG 904	Emerging/Disruptive Technologies and Decision making for Engineers - 3
ENG 905	Human Resources and Organizational Performance in Engineering - 3
ENG 906	Energy Systems Management- 3
ENG 907	Graduate Seminar in Engineering Management - 3
ENG 908	Ph.D. Thesis - 12
	Total - 33

COURSE DESCRIPTION

ENG 901 Technical Seminar and Report Writing

Technical writing and technical report. Layman technician, expert, and executive. Technical correspondence; Principles of scientific research. Introduction: Definition of research, characteristics of research, types of research, research process, research as a way of thinking, application of research. Technical illustrations; Progress Reports. The Research Proposal. The Introduction. The Problem. The Objective of the Study. The Hypothesis to be tested. The Study Design. The Setting. Measurement Procedures. Sampling. Analysis of Data. Structure of the Report. Problems and Limitations. Work Schedule. Formulating a Research Problem: Reviewing the literature. Formulating a Research Problem. Identifying Variables. Constructing Hypothesis. Conceptualizing a Research Design: The Research Design. Selecting a Study Design. Constructing an Instrument for data collection and Sampling; Selecting a Method for Data Collection. Use of computer programme and software and Basics of PowerPoint presentation. Intellectual Property Issues: Protecting the intangible, Patents Infringement, Changes to watch for, Patent searches over the Internet), Copyrights Changes to watch for, Software piracy, Plagiarism), Trade secrets (What is eligible to be a trade secret?, Using a trade secret, Infringement), Reverse engineering, Tendering & Bill of Quantities, Thesis documentation and Gap Analysis.

ENG 902 Advanced Optimization

The objective of this course is to understand the principles of optimization and its application to engineering problems. Topics covered include the steepest descent and Newton methods for unconstrained optimization; golden section, quadratic, cubic, and inexact line searches;

conjugate and quasi-Newton methods; the Fletcher-Reeves algorithm; fundamentals of constrained optimization theory; simplex methods for linear programming; modern interior-point methods; active-set methods and primal-dual interior-point methods for quadratic and convex programming; semi-definite programming algorithms; sequential quadratic programming; and interior-point methods for non-convex optimization. In addition, implementation issues and current software packages/algorithms for optimization will be covered. Global optimization, including genetic algorithms and simulated annealing, will be introduced.

ENG 903 Management of Major Engineering Projects

Major Engineering projects are complex interdisciplinary projects cutting across different sectors involving huge financial investments and are of high strategic importance to their stakeholders and have a long-lasting impact on the economy, the environment, and society. They are often (but not always) associated with budget escalation and delay and questionable cost/benefit analysis.

Outline: Engineering project management Revision - definition of project, programme, and portfolio; Optimizing efficiency and value in Engineering projects; Introduction to major Engineering projects (and programmes) and their performance; Scope definition, including requirements translation & target operating model; Stakeholders and stakeholder relationships in major Engineering projects; Techniques to build a robust and realistic business case; Project management success (iron triangle) vs Project success (cost/benefit analysis for the different stakeholders); Strategic risk management in major Engineering projects; Time value of money and economic indicators for major Engineering projects; Financing and contractual arrangements for Engineering managers; Project governance and project leadership; Improving infrastructure delivery: project initiation routemap

ENG 904 Emerging/Disruptive Technologies and Decision making for Engineers

The first part of this course which is on Emerging and Disruptive Technologies will the students to manage the adoption of new technologies within their organization.

Outline: Emerging technologies from a representative range of Science and Engineering disciplines, such as: Spintronics, quantum technologies, 2D materials, nanotechnology, Industry 4.0, 5G, graphene and nanotechnology, augmented/virtual reality, sustainable energy systems, autonomous vehicles, space systems, medical engineering & surgical robotics, e-

commerce, cyber-physical systems, additive and hybrid manufacture, artificial intelligence, cloud robotics, big data, complex systems, technologies for sustainable development; Business strategies and tools for adopting new technologies; Intellectual property in science and engineering; Managing organizations in the midst of rapid technological change; Methods for responding to external disruptive change; New business models and funding schemes; crowdsourcing and crowdfunding; Ethics, sustainability and societal factors; Case studies from a representative range of Engineering sectors will be used, where appropriate, to illustrate these principles.

The second part of this course is on Decision making which is a key management function that will help the student understand the thinking processes that underlie their own and others' judgment and decision making in individual and group decision-making situations.

Outline: Introduction to organizational decision making, judgments, forecasts and probabilities; System thinking, prospect theory, heuristics, and biases; Ways of improving judgments; Decision framing and structured decision-making tools; Engineering Decision Making in the context of quality, cost and speed and the balancing of opportunities and risks; Data-Driven Decision Making and the Use of Technology in Decision making; Group decision making and Negotiations

ENG 905 Human Resources and Organizational Performance in Engineering

This course is designed to help engineers develop skills in peoples' management and have a good understanding of the factors that influence human behavior and performance in various organizational settings.

Outline: The significance of behavior in organizational life; Established and contrasted approaches to organizational behavior and management; Strategic and operational HRM. Impacts of HRM on organizational performance; Individual personality and characteristics; Perception and communication; Recruitment, employment law, and industrial relations; Recognition and reward, learning and development; Teamwork, group dynamics, stakeholders and leadership in Engineering organizations; Ethical approaches to managing and leading people in organizations; Work design, organizational structures and changing organizational forms in a range of Engineering sectors; Organizational norms and values. Culture and change management; Power and control. Equality and diversity.

ENG 906 Energy Systems Management

Effective management of energy systems by monitoring, controlling, and optimizing their performance. Concepts and techniques of energy

management and conservation. Energy auditing; improving energy utilization in space conditioning; insulation; hot water and compressed air systems; steam distribution systems; energy-saving opportunities in fired heaters, boilers, refrigeration and cooling systems; continual improvement and awareness of energy efficiency throughout an organization; cogeneration; trend analysis and annual consumption forecasts to effectively manage energy systems; waste-heat recovery and synthesis of heat and power networks; heat exchanger network optimization.

ENG 907: Graduate Seminar in Engineering Management

This is a required course for all graduate students. Intensive review of the literature in the management of technology and technically-based enterprises. A series of seminars will be delivered by students on topics of current interest including students' research work.

ENG 908 Ph.D. Thesis

A report on managerial problems and suggested solutions for local industrial enterprises through supervised case studies or high-level research.

LIST OF ACADEMIC STAFF AND AREAS OF SPECIALISATION

S/No	NAMES	QUALIFICATION	FIELD OF SPECIALISATION	DESIGNATION
1	Nwaogazie, Ify L.	B.Sc Civil Eng., M.Sc. Water Resources Ph.D.,	Hydrology Water Resources & Mathematical Modeling	Professor
2	Kuye, A.O.	B.Sc., M.Sc., Ph.D.,	Computer-Aided Design	Professor
3	Appah, D.	M.Sc. Mining Eng. Dip. EDuc, Ph.D.,	Production Engineering/ Formation Evaluation	Professor
4	Ogbonna, F. Joel	B.Sc., M.Sc., Ph.D.	Petroleum Engineering	Professor
5	Nwosu, H.U.	B.Sc., M.Sc., Ph.D., MBA,	Production Engineering/ Applied Mechanics	Professor
6	Etebu, D.M.O.	B.Sc., M.Sc. Chem. M.Eng. Mech. Ph.D	Industrial Engineering	Professor
7	Ikiensikmama, S.	B.Sc., M.Sc., Ph.D.	Petroleum Engineering	Professor
8	Uhunmwangho, R.	B.Sc., M.Tech., Ph.D.,	Power Systems & Electrical Machines	Professor
9	Kamalu, U.A.	B.Sc., M.Sc., Ph.D.	Electronic / Computer Engineering	Professor
10	Omijeh, B.O.	B.Eng, MSc, Ph.D	Electronic & Communication Engineering	Professor
11	Umoh, G.I.	M.Sc., Ph.D., PGD, Dip. IDP	Operation Management, Quantitative Analysis, Operations research	Professor
12	Ogbuji, C.	B.Sc., MBA, M.Sc., Ph.D.	Marketing Management	Professor
13	Uyigwe, L.	B.Sc, M.Sc., Ph.D.	Polymer Engineering	Professor
14	Kinigoma, B.S.	B.Sc., M.Eng. & Ph.D.	Energy and Environmental Engineering	Professor
15	Ndu E.C.	B.Sc., M.Sc., Ph.D	Operations Management	Reader
16	Omorogiuwa, E.	B.Eng, MSc, Ph.D	Power Systems & Electrical Machines	Reader
17	Ossia, C.V.	B.Eng, MSc, Ph.D	Applied Mechanics and Tribology	Professor
18	Big-Alabo, A.	B.Eng, MSc, Ph.D	Mechanical Engineering	Senior Lecturer
19	Ude, N.	B.Eng, MSc, Ph.D	Environmental Engineering	Senior Lecturer
20	Saturday, E	B.Eng, MSc, Ph.D	Mechanical Engineering	Senior Lecturer
21	Nwofor, T.	B.Eng, MSc, Ph.D	Civil and Environmental Engineering	Senior Lecturer
22	Achadu, M.A.	B.Eng, MSc, Ph.D	Chemical Engineering	Senior Lecturer
23	Nwazor, N.O.	B.Eng, M.Eng, Ph.D	Computer and Control Systems Engineering	Senior Lecturer
24	Orakwue, S.I.	B.Eng, M.Eng, Ph.D	Electronic & Telecommunication Engineering	Senior Lecturer
25	Eteng, A.	B.Sc. M.Sc., Ph.D.	Electronics/ Telecommunication Engineering	Senior Lecturer
26	Jonah, C.T.	B.Sc., M.Sc., Ph.D	Human Resources Management	Lecturer 1

ENVIRONMENTAL ENGINEERING AND MANAGEMENT (MEET)

PROGRAMME DESCRIPTION AND REQUIREMENTS

Introduction/Preamble

Today's society is besieged with numerous environmental challenges that pose risk to health, life and property. The recent and up-surging interest in climate change has made the need to address environmental challenges a front burner issue. Therefore, there is need to train manpower that can rise up to environmental challenges with solutions that can address the problems. Environmental Engineering and Management programmes have been designed to provide engineers and scientist with advanced environmental engineering knowledge and skills required to tackle real environmental problems.

Philosophy

The philosophy of the Graduate Programmes in Environmental Engineering and Management are to provide advanced professional training for upgrading knowledge and skills of degree holders employed in the industry, the Public Service or those on self-employment

Vision

The vision of the programmes in Environmental Engineering and Management are to become the foremost Centre of Excellence in Environmental Engineering and Management in Nigeria and Africa at large.

Mission

The mission of the programme is to meet the needs of the industry through a commitment to excellence in training, applied research and capacity building.

Rationale/Justification

These programmes are designed to provide opportunity to professionals from other related disciplines who may wish to have training in Environmental Engineering and Management.

Programme Aim/Objectives

The aim of the programmes in Environmental Engineering and Engineering Management is to provide students an opportunity to acquire an in-depth of current issues/problems in Environmental Engineering and Management.

The objectives of setting up the Graduate programmes in Environmental Engineering and Management are as follows:

1. To equip fresh graduates and graduates with professional experience who would like develop their problems solving abilities to tackle real environmental issues.

2. To equip graduates of engineering and science background with advanced knowledge and skill set in Environmental Engineering to enable them proffer solutions to real environmental problems..
3. To prepare those who are interested in academics for a Master's and Ph.D. Degrees in Environmental Engineering and Management.

MASTER'S DEGREE IN ENVIRONMENTAL ENGINEERING AND MANAGEMENT

Admission Requirements

Candidates for the Master's Degree in Environmental Engineering and Management must have:

- (i) A minimum Second Class Honours, lower division, from a recognized university or a PGD in Engineering or related disciplines in the sciences with a CGPA of 3.0 on a 5.0 scale.
- (ii) A first degree in Engineering or related disciplines in the Sciences, e.g Microbiology, Chemistry, etc and
- (iii) An NYSC discharge or exemption certificate. Candidate can apply for either full-time or part-time mode of study.

Programme Requirements

In addition to the general University requirements for Master's degrees, the candidate must fulfill the following requirements:

- i. Be registered in the School of Graduate Studies for equivalent of twelve (12) calendar months for full-time mode of study
- ii. Complete a total of thirty (49) credit units. At least 6 credits must be on a dissertation devoted to solving Environmental problem.
- iii. Complete seven (16) core Engineering and Management courses and a graduate seminar course with at least a 'C' grade.

Areas of specialization

The Master's dissertation will be based on the following areas of specialization.

- a. Environmental Engineering (for students with Engineering background)
- b. Environmental Engineering Technology (for students with Science background)

Award of Degree

Two degrees shall be awarded by the University of Port Harcourt to successful students at the end of the programme, namely:

- a. M.Eng in Environmental Engineering for students with Engineering background and

- b. M.Sc in Environmental Engineering Technology for students with Science background.

EVE 809	Industrial Attachment	3
EVE 810	Graduate Seminar	3
EVE 811	Applied Statistics and Analysis	3
EVE 820	Dissertation	6

Structure of Programme

The programme shall be administered in a modular manner and shall operate under Institute of Engineering, Technology and Innovation Management (METI). Examinations shall be administered at the end of each module and students are expected to offer and pass all the courses.

Programme Duration

The duration of the programme shall be a minimum of 12 calendar months and a maximum of 24 calendar months of intensive full-time study and a minimum of 24 calendar months and a maximum of 48 calendar months for part-time option.

Graduation Requirements

The student is expected to pass all the prescribed courses and defend the research project.

Modular Courses and Codes

COURSE CODE	MODULE TITLE	CREDIT UNITS
SGS 801.1	ICT and Research Methods	2
MOE 802	Operations and Maintenance Management	3
MOE 805	Logistic Engineering	3
EVE 801	Introduction to Environmental Engineering	3
EVE 802	Waste water Engineering and Design	3
EVE 803	Solid and Hazardous Waste Management and Control	3
EVE 804	Air Quality Modeling and Climate Change	3
EVE 805	Water and Land Pollution: Treatment and Control	3
SGS 801.2	Management and Entrepreneurship	2
EVE 806	Environmental Pollution, Noise and Vibration	3
EVE 807	Environmental Pollution Modeling & Management	3
EVE 808	Group project	3

COURSE DESCRIPTION

SGS 801.1 ICT and Research Methods (2 Units)

This course covers essential areas of general Introduction to ICT (focus on emerging trends in ICT), Hardware/software fundamentals, internet/online tools (focus on search engine), productivity tools (Google suite), word processing (MS word), data processing (MS Excel), data analysis (MS Excel/SPSS), introduction to computer programming (Excel VBA/macros), presentation tools (MS power point), graphics (focus on infographics), group work, presentation. It also covers what is research, research process and characteristics, types of research, formulating a research problem, research design, principles of scientific research, concept of hypothesis, research techniques, formulation and testing, organization of search and report writing, literature review, document management – content and layout in report writing, understanding data and data types, referencing and bibliography.

MOE 802 Operations and Maintenance Management (3 Units)

The focus is efficient and effective management of the efforts and activities of people, capital, equipment and resources in the process of converting raw materials into finished goods and services. The module is designed to develop the thinking underpinning the transformation processes in an organization towards maximizing throughput and minimizing cost. This course outline is as follows;

- i. Introduction to Operations and Maintenance; Maintenance as a business process and added value process. Trends in maintenance management, definitions and terminology, types of maintenance, choice of maintenance strategy and methods, NORSOK Standards, legislative requirements and governmental regulations, establishment of goals, requirements, and risk acceptance criteria with respect to Health, Safety and Environment, Myths about maintenance.
- ii. Principal Concepts, Tools and Techniques: Engineering analysis, equipment, technical and functional hierarchy, Failure Mode Effects and Criticality Analysis (FMECA), Fault Tree Analysis (FTA), Event Tree Analysis (ETA). Design out/ design for maintenance considering reliability, availability, maintainability, operations and

- maintenance support, Life cycle cost analysis, Spare parts inventory and logistics, Data and information management, defining best practices, Excellence and Culture-Defining terms related to maintenance, reliability, and operations (MRO), Elements of asset (equipment) performance, identifying stakeholders to journey to excellence.
- iii. Maintenance Strategies and Practices: Preventive maintenance (PM), Predictive/condition-based maintenance (PBM/CBM), Run-to-failure (RTF), Planning and scheduling, Material stores management, optimizing maintenance based on reliability centered maintenance.
 - iv. Maintenance Management and Development of Maintenance Programs: Standards and Standardization impacting maintenance and equipment care, energy, environment, risk, asset, etc. Reliability centered maintenance (RCM), Risk based maintenance (RBM) and Risk based inspections (RBI), Maintenance objectives and strategies, Maintenance management and work processes, challenges in implementing best practices.

MOE 805 Logistic Engineering (3 Units)

This course is designed to equip professionals, Engineers, Technical personnel and managers of manufacturing and defense related industries with the essential logistics concept, Methodologies, processes and tools needed to understand and apply logistics engineering knowledge required to support and strategically review any type of material system acquired and operated by the company. The course will outline the importance of system approach design of logistics that include design development, operating and decommissioning phases of the system, and focus on affordable logistics support and on total cost of ownership in its life cycle. It is also structured to develop the processes required to give a fundamental overview of logistic Engineering, Management, Techniques and Methods in an acquirer and supplier context with particular emphasis on the lifecycle through life approach to support solution development, optimization and implementation. The course content is as follows.

- i. Logistics support Analysis (LSA): Supportability Engineering, task analysis concept, Logistics Support Analysis Record (LSAR), support Scenario modeling.
- ii. Availability, Reliability and maintainability (AR&M); Apply AR&M through the lifecycle, safety and cost.
- iii. Introduction to Integrated Logistic Support (ILS): Integrated Logistic Support trade off studies, whole of life costing, life cycle cost(LCC)/ Level of repair analysis (LORA),

- Reliability centered maintenance (RCM), integrated logistic support management- plan implementation and deliver an ILS program, contracting.
- iv. Applying ILS: Understanding the need, influencing design, Develop support solution delivery, Operation and Sustainment.
 - v. Value based management: Introduction to logistic data, Logistics support analysis. Data repository, standards, provisioning modeling, obsolescence management and SW support. Determine range and scale of acquisition, initial and replenishment. Contractor logistics support, plan and formulate and recommend a CLS program.

EVE 801 Introduction to Environmental Engineering (3 Units)

Basic Chemistry- Element and compounds molecules, ions, radicals' chemical bonds, Acids, Bases and salts, chemical reactions, buffer and pH colloid chemistry, saturated and unsaturated organic halides; Sanitary microbiology/biochemistry; Microbiology of waste water treatment; Enzymes, DNA, chemical toxicology; Ecology: Ecosystem, types, component, biogeochemical cycles, aquatic ecology, etc. Environmental performance indicators; Biodiversity conversation; Principles of environmental chemistry; Contamination and types of environmental pollution and pollutants; Global warming and climate change; Environmental quality monitoring and assessment; Environmental and sustainable developments.

EVE 802 Waste water Engineering and Design (3 Units)

Waste-water treatment and plant design; operation and unit processes; optimal design of sewer network; FEPA effluent treatment option and kinetics; Waste stabilization ponds, septic tank system and VIP; Primary treatment units, reactions and reactors, basic bio-kinetic and trickling filters; Activated sludge process, anaerobic wastewater treatment principle, sludge treatment/disposal.

EVE 803 Solid and Hazardous Waste Management and Control (3 Units)

Solid waste sources and characteristics; Landfill and modern composition, disposal, processing and recycling; Hazardous waste characteristic classification, treating procedure; Incineration for thermal energy generation; Ground water contamination, control, and contingency planning; Hazardous waste generation, transportation and treatment. Storage and disposal facilities; Route optimization in solid waste collection and disposal; Anaerobe digestion and generation of gases

(methane); Containers labeling, collection, hazardous waste manifest.

EVE 804 Air quality Modeling and Climate change (3 Units)

Sources and formation of Air pollutants; Meteorology, dispersion and Air pollution, plume rise calculations. Chimney height and global greenhouse effects; Types of emission Control of emissions, incineration, and particulate release to the atmosphere; Application of mathematical models for air pollution predictions; Air quality standards and environmental impact of polluted air; Introduction to climate change science and impacts, climate change risk and management, climate change mitigation, climate change adaptation.

EVE 805 Water and Land Pollution: Treatment and Control (3 Units)

Oil pollution and characteristics; Water pollution: water quality index, water quality assessment, water treatment by reverse osmosis and conventional methods, effect of pollution on streams; Concepts of dilution, absorption, adsorption and dispersion of pollutants in surface and ground water systems; Hydraulically interconnected streams/ rivers and ground water systems as aid to contaminants transport; Remediation techniques on polluted land; Effect of pollution on land, vegetation and humans; Water quality parameters, water quality maps for rivers, ground water and top soils.

SGS 801.2 Management and Entrepreneurship (2 Units)

This course covers business Environment, general Management, financial Management, entrepreneurship Development, feasibility Studies, marketing and managerial problem solving.

EVE 806 Environmental noise and vibration (3 Units)

Sound properties- Analysis of sound wave and computation of decibels; Noise measurement and effects of noise pollution; Noise types. FEPA and 150 guidelines;

Annoyance calculations, introduction to vibrations, vibration standards, control noise and vibration; Mechanism of hearing and impairment; Highway traffic noise modeling.

EVE 807 Environmental Pollution Modeling and Management (3 Units)

Pollution monitoring, modeling and prediction; Review of field surveys for data collection; Data Analysis, model calibrations, verification and prediction; Case study on noise pollution in Nigeria, air pollution studies, and water pollution studies; Pollution legislation and economic

evaluation; Environmental assessments and audits; Economic evaluation of polluted environment, Costs and benefits, risks and uncertainty, contingency planning.

EVE 808 Group Project (3 Units)

This is required for students in this programme. The students will be shared into groups and each group shall undertake a project in their areas of interest. This will prepare the students for their independent project/dissertation.

EVE 809 Industrial Attachment (3 Units)

This is the practical exposure of the students through direct participation in the work of an industry to real life working condition. During the training, the students get familiar with engineering works, organization, physical layout, and the flow of information, materials and operations.

EVE 810 Graduate Seminar (3 Units)

Intensive review of the literature in the student's area of interest will be required. A series of seminar presentation will be delivered by students on current issues in environmental engineering and management. Lecturers from within the University and the industry will be invited to give seminar lectures on chosen topics of current academic and economic interest such as those related to Environmental Engineering and Management.

EVE 811 Applied Statistics and Data Analysis (3 Units)

Part-1: Parametric Statistics; Descriptive statistics-mean, standard deviation and skewness; Regression-simple, multiple and partial; Auto- and Cross-correlation;

Comparative analysis and Test of Significance-t-test, z-test, chi squared test and F-test; Trend analysis-moving average, simple and weighted;

Part-2: Non-parametric statistics:

- i. Normality test, Spearman's method; Kendall's Coefficient of Concordance;
- ii. Mann-Whitney u- Test; Kruskal-Wallis's 1-way Analysis of variance (ANOVA);
- iii. Friedman's 2-way ANOVA; Dunn-Conover-Iman Multiple pairwise comparison Nemenyi test;

Principal Component Analysis (PCA) and Regression (PCR); Agglomerative Hierarchical Clustering (AHC) and Application of XLSTAT

EVE 820 Dissertation (6 Units)

Research work on a selected topic in the field of environmental engineering and management to result in a acceptable M.Eng dissertation in Environmental Engineering and M.Sc in Environmental Engineering Technology.

DOCTOR OF PHILOSOPHY IN ENVIRONMENTAL ENGINEERING AND MANAGEMENT

Admission Requirements

Candidates are eligible to apply for a PhD in Environmental Engineering and Engineering Management programme provided they have:

- i. Satisfied the general university requirements for admission into PhD programmes.
- ii. A minimum CGPA of 3.5 at Masters on a 5-point scale.
- iii. A first degree in Engineering or related disciplines in the Sciences, e.g. Microbiology, Chemistry, etc
- iv. Must be successful in a proposal presentation/admission interview in the department.

Programme Requirements

In addition to the general University requirements for Doctoral Degree, the candidate must fulfill the following requirements:

- a. Be registered in the School of Graduate Studies for equivalent of thirty six (36) calendar months for full-time mode of study
- b. Complete a total of forty six (44) credit units. At least 12 credits must be on a thesis devoted to solving Environmental problems.
- c. Complete eleven (11) core Environmental Engineering and Management courses and a graduate seminar course with at least a 'C' grade.

Areas of Specialization

The PhD thesis will be based on the following areas of specialization.

- a. Environmental Engineering (for students with Engineering background)
- b. Environmental Engineering Technology (for students with Science background)

Award of Degree

Two degrees are awarded, namely:

- a. PhD in Environmental Engineering for students with Engineering background and
- b. PhD in Environmental Engineering Technology for students with Science background.

Structure of Programme

The programme shall be administered in a modular manner and examinations shall be administered at the end of each module and students are expected to offer and pass all the courses.

Programme Duration

The duration of the programme shall be a minimum of thirty six (36) calendar months and a maximum of sixty (60) calendar months of intensive full-time study and a minimum of forty

eight (48) calendar months and a maximum of eighty four (84) calendar months for part-time option.

Graduation Requirements

The student is expected to pass all the prescribed courses and defend the research project.

COURSE DESCRIPTION

MOE 902 Advanced Operations and Maintenance Management (3 Units)

The focus is efficient and effective management of the efforts and activities of people, capital, equipment and resources in the process of converting raw materials into finished goods and services. The module is designed to develop the thinking underpinning the transformation processes in an organization towards maximizing

throughput and minimizing cost. This course contents are as follows:

- i. Introduction to Operations and Maintenance; Maintenance as a business process and added value process. Trends in maintenance management, definitions and terminology, types of maintenance, choice of maintenance strategy and methods, NORSOK Standards, legislative requirements and governmental regulations, establishment of goals, requirements, and risk acceptance criteria with respect to Health, Safety and Environment, Myths about maintenance.
- ii. Principal Concepts, Tools and Techniques: Engineering analysis, equipment, technical and functional hierarchy, Failure Mode Effects and Criticality Analysis (FMECA), Fault Tree Analysis (FTA), Event Tree Analysis (ETA). Design out/ design for maintenance considering reliability, availability, maintainability, operations and maintenance support, Life cycle cost analysis, Spare parts inventory and logistics, Data and information management, defining best practices, Excellence and Culture- Defining terms related to maintenance, reliability, and operations (MRO), Elements of asset (equipment) performance, identifying stakeholders to journey to excellence.
- iii. Maintenance Strategies and Practices: Preventive maintenance (PM), Predictive/condition-based maintenance (PBM/CBM), Run-to-failure (RTF), Planning and scheduling, Material stores management, optimizing maintenance based on reliability centered maintenance.
- iv. Maintenance Management and Development of Maintenance Programs: Standards and Standardization impacting maintenance and equipment care, energy, environment, risk, asset etc. Reliability centered maintenance (RCM), Risk based maintenance (RBM) and Risk based inspections (RBI), Maintenance objectives and strategies, Maintenance management and work processes, challenges in implementing best practices.

MOE 905 Logistic Engineering (3 Units)

This course is designed to equip professionals, Engineers, Technical personnel and managers of manufacturing and defense related industries with the essential logistics concept, methodologies, processes and tools needed to understand and

apply logistics engineering knowledge to acquire support and strategically review any type of material system acquired and operated by the company. The course will outline the importance of system approach design of logistics that include design development, operating and decommissioning phases of the system, and focus on affordable logistics support and on total cost of ownership in its life cycle. It is also structured to develop the processes required to give a fundamental overview of logistic Engineering, Management, Techniques and Methods in an acquirer and supplier context with particular emphasis on the lifecycle/ through life approach to support solution development, optimization and implementation. This course contents are as follows:

- i. Logistics support Analysis (LSA): Supportability Engineering, task analysis concept, Logistics Support Analysis Record (LSAR), support Scenario modeling.
- ii. Availability, Reliability and maintainability (AR and M); Apply AR and M through the lifecycle, safety and cost.
- iii. Introduction to Integrated Logistic Support (ILS): Integrated Logistic Support trade off studies, whole of life costing, life cycle cost(LCC)/ Level of repair analysis (LORA), Reliability centered maintenance (RCM), integrated logistic support management- plan implementation and deliver an ILS program, contracting.
- iv. Applying ILS: Understanding the need, influencing design, Develop support solution delivery, Operation and Sustainment.
- v. Value based management: Introduction to logistic data, Logistics support analysis. Data repository, standards, provisioning modeling, obsolescence management and SW support. Determine range and scale of acquisition, initial and replenishment. Contractor logistics support, plan and formulate and recommend a CLS program

EVE 901 Advanced Environmental Microbiology and Chemistry (3 Units)

Environmental biology and microbiology; Environmental performance indicators; Biodiversity conservation; Principles of environmental chemistry; Contamination and types of environmental pollution and pollutants; Global warming and climate change; Environmental quality monitoring and assessment; Environmental and sustainable developments.

EVE 902 Advanced Air Quality Modeling and Climate Change (3 Units)

Sources and formation of Air pollutants; Meteorology, dispersion and Air pollution, plume rise calculations; Chimney height and global greenhouse effects; Types of emission

Control of emissions, incineration, and particulate release to the atmosphere; Application of mathematical models for air pollution predictions; Air quality standards and environmental impact of polluted air; Introduction to climate change science and impacts, climate change risk and management, climate change mitigation, climate change adaptation.

EVE 903 Advanced Statistical Methods and Computer Applications (3 Units)

Part-1: Parametric Statistics; Descriptive statistics-mean, standard deviation and skewness; Regression-simple, multiple and partial; Auto- and Cross-correlation;

Comparative analysis and Test of Significance-t-test, z-test, chi squared test and F-test; Trend analysis-moving average, simple and weighted; Part-2: Non-parametric statistics:

- i. Normality test, Spearman's method; Kendall's Coefficient of Concordance
- ii. Mann-Whitney u – Test; Kruskal-Wallis's 1-way Analysis of variance (ANOVA)
- iii. Friedman's 2-way ANOVA; Dunn-Conover-Iman Multiple pairwise comparison Nemenyi test;

Principal Component Analysis (PCA) and Regression (PCR); Agglomerative Hierarchical Clustering (AHC) and Application of XLSTAT.

EVE 905 Advanced Environmental Engineering Practice (3 Units)

Environmental Law and Act of Parliament (Regulations, Guidance and Manual); Waste treatment Plant Operation; Health and Safety of Environment; Relationship between Industry and Environment; Design and Simulation of Process Equipment for Environment; Policy and Implementation.

EVE 905 Advanced Studies in Solid Waste Management (3 Units)

This course will introduce to students the basic concerns of waste management for both solid and hazardous waste streams. The course contents are as follows:

Waste-water treatment and plant design; Unit operation and unit processes; optimal design of sewer network; FEPA effluent treatment option and kinetics; Waste stabilization ponds, septic tank system and VIP; Primary treatment units, reactions and reactors, basic bio-kinetic and trickling filters; Activated sludge process, anaerobic wastewater treatment principle, sludge treatment/disposal.

EVE 906 Advanced Water, Air, Land Pollution and Abatement (3 Units)

This course explains basic environmental pollution prevention and control methods and environmental management techniques. The course contents are as follows:

Oil pollution and characteristics; Water pollution: water quality index, water quality assessment, water treatment by reverse osmosis and conventional methods, effect of pollution on streams; Concepts of dilution, absorption, adsorption and dispersion of pollutants in surface and ground water systems; Hydraulically interconnected streams/rivers and ground water systems as aid to contaminants transport; Remediation techniques on polluted land; Effect of pollution on land, vegetation and humans; Water quality parameters, water quality maps for rivers, ground water and top soils.

EVE 907 Advanced Air and Noise Pollution Control (3 Units)

Sound properties; Analysis of sound wave and computation of decibels; Noise measurement and effects of noise pollution; Noise types. FEPA and 150 guidelines; Annoyance calculations, introduction to vibrations, vibration standards, control noise and vibration; Mechanism of hearing and impairment; Highway traffic noise modeling.

ETM 908 Advanced Environmental Modeling and Simulation Techniques (3 Units)

Pollution monitoring, modeling and prediction; Review of field surveys for data collection; Data Analysis, model calibrations, verification and prediction; Case study on noise pollution in Nigeria, air pollution studies, and water pollution studies; Pollution legislation and economic evaluation; Environmental assessments and audits; Economic evaluation of polluted environment, costs and benefits, risks and uncertainty, contingency planning.

ETM 909 Advanced Studies in Remediation and Environmental Assessment Techniques (3 Units)

This course is designed to equip students, professionals, Engineers, Technical personnel and managers of manufacturing industries with basic understanding and skills to carry out environmental assessment and audit. This course outline is as follows:

Principles of environmental field studies and environmental assessment methodologies; Strategic environmental assessment and Life Cycle analysis; Site selection, sample collection, sample treatment, sample handling and sample integrity; Environmental Impact Assessment, Process and practice in Nigeria; Environmental Audits, Post Impact Assessment and Impact Mitigation Monitoring; Methods of investigating and assessment of contaminated soil and water;

Remedial Techniques for contaminated soil and water; Best principles of environmental chemistry, microbiology and laboratory analysis.

EVE 910 Seminar (6 Units)

The seminar will provide an opportunity for the in-depth study of current issues in Environmental Engineering and Management. Each student will be expected to present a paper that will be discussed on selected current issues related to Environmental Engineering and Management.

Guest lecturers from both the department and the industry will be invited to give seminar lectures on current issues in Environmental Engineering and Management.

EVE 920 Thesis (6 Units)

This is a directed research on current problems in environmental engineering and management. Research methodology will be used for scientific investigation which will lead to a written thesis.

ACADEMIC STAFF LIST

S/No	Name	Qualification	Field of Specialization	Designation
1	Nwaogazie Ify, L.	B.Sc., M.Sc. (Kansas), PhD (Oklahoma State), FNSE, R.Eng (2455)	Hydrology, Water Resources and Mathematical Modeling	Professor
2	Ogbonna, Joel	B.Tech. (UST), M. Sc. (Uniben), PhD (UST), R.Eng.	Drilling and Environmental Engineering	Professor
3	Nwosu, H.U.	B.Sc. M.Sc, PhD (Texas), M. BA (Oklahoma), MNSE, R.Eng (98,52)	Applied Mechanics and Production Engineering	Professor
4	Uyigüe, L.	B.Eng. (UPH), M. Eng (Benin), PhD, R.Eng (15616)	Polymer Engineering	Reader
5	Otaraku, J.I.	M.Sc (Volgograd), PhD (Moscow), AIChE	Reaction and Fine Chemical Engineering	Reader
6	Ugbebo, J	M.Eng, PhD (UPH), MNSE, R.Eng ()	Environmental Engineering	Reader
7	Ossia, C.V.	B.Tech. (RSUST), M.Tech., PhD (Korea), R.Eng (10375)	Mechanics and Tribology	Reader
8	Momoh, Yussuf	B.Sc., M.Sc, PhD (Benin)	Environmental Engineering	Senior Lecturer
9	Sule, S.	B.Eng. (ABU), M. Eng. (UNN), PhD (FUTO), R.Eng (R 27,606)	Structural Engineering	Senior Lecturer
10	Big-Alabo, A	B.Eng. (UPH), M. Sc. Mech and Mgt Eng (Glasgow), PhD (Glasgow), R.Eng	Applied Mechanics/Dynamics	Senior Lecturer
11	Demuodeke, E.O.	B.Eng. , M.Eng (UPH), PhD (UK), R.Eng (22274)	Energy and Thermofluids	Senior Lecturer
12	Achadu, M.A.	B.Eng. (MINNA), M. Eng. (UPH), PhD (Benin), R.Eng	Chemical Engineering	Senior Lecturer

FACULTY OF MANAGEMENT SCIENCES

POST-GRADUATE DIPLOMA PROGRAMME (PGDP)

1. Introduction

The basic purpose of the post-graduate diploma programme (PGDP) is to prepare qualified men and women whose previous training are deficient in business courses, for entry into the Faculty's Master of Business Administration MBA

programme. It provides the basic courses in Economics, general business administration, finance, marketing and accounting which may enable graduates of the programme to gain entry into the already existing regular MBA programme of the Faculty or into another MBA programme in other higher institutions. Successful completion of the programme with (3.5) CGPA qualifies a candidate to apply for the admission into any of the specialized area of the Faculty's MBA programme in; Management, Finance, Marketing and Accounting.

2. Duration of the PGD

The post-graduate diploma degree programme is designed to be completed in one-year 12 calendar months and maximum of 24 calendar months of full-time studies. The year is made up of two semesters and classes may be offered on regular and part-time basis. Part-time students may complete the programme in three semesters in 12 calendar months.

3. Admission Requirements

The PGD programme is designed to prepare candidates for admission into Faculty's regular full time and part-time MBA programmes and as a terminal post-graduate diploma degree. All candidates for the PGD programme are required to satisfy the following conditions before they are admitted into the programme.

(a) Previous Training

Candidates for the PGD programme must be holders of the following qualifications:

- (1) B.Sc. honours degree of the University of Port Harcourt or any other University recognized by the Senate in the Engineering, Physical and Health Sciences or Humanities.
- (2) Finals of ICAN, ACA, ACCA, and other acceptable professional bodies.

(b) All other conditions that apply to other PGD in the University of Port Harcourt will apply.

4. POST GRADUATE DIPLOMA PROGRAMME COURSES

The following courses must be passed by all PGD students before they can obtain the degree.

First Semester

Course Code	Course Title	Credit
FMS 700	Business and Environment	3
FMS 791	Quantitative Methods of Business	3
FMS 792	Business Statistics	3

EMS 793	Business Economics	3
FMS 794	Financial Accounting	3
Total		15

Second Semester

Course Code	Course Title	Credit
EMS 795	Intermediate Marketing	3
FMS 796	Management Theory	3
EMS 797	Financial Management	3
EMS 798	Business Policy	3
FMS 799	Elective	3
Total		15
Grand Total Credits		30

5. ELECTIVE

The elective course is designed to allow some flexibility into the PGD. The student is given a chance to take a second course in his chosen area of business.

- (1) Accounting PGD students may take as elective: Cost and Management Accounting.
- (2) Finance Students may take Investment Analysis
- (3) Marketing students may take Consumer Behaviour.
- (4) Management students may take Comparative management.

PART-TIME PGD COURSES

First Semester

Course Code	Course Title	Credit
FMS 790	Business and Environment	3

The programme seeks to develop effective managerial skills among candidates with which to recognize, analyse and solve organizational problems, utilizing, modern concepts and methods for running complex organizations. The programme consists of selected courses from all the disciplines in business administration and are co-ordinated in a way that they may be directed towards the preparation for further graduate work in business administration.

3. Admission Requirements

The MBA programme is open to any person who satisfies the following conditions.

- 1) Satisfactory evidence of educational attainment and scholarship as indicated by
 - a) B.Sc. IS Class honours in Business Administration or
 - b) B.Sc. 2 Class upper division in Business Administration or acceptable 2 class CGPA
 - c) A 3.5 points pass in the Faculty of Management Post Graduate Diploma Programme.
- 2) Strong evidence of intellectual ability and maturity as shown by three letters of recommendations and other related documents.

3. The MBA Curricula

The programme is divided into two sections. The first section contains a set of core courses, which all MBA students must take in their first year of study.

The second sections of courses are the specialized departmental courses requirements. There are at least five departmental courses plus an MBA project-seminar in the candidates' area of specialization.

4.1 MBA CORE COURSES (FULL-TIME)

First Semester

Course Code	Course Title	Credit
FIN 800	Managerial Economics	3
ACT 801	Managerial Accounting	3
MGT 802	Information Systems	3
MGT 803	Advanced Statistics and Methods	3
MGT 804	Business Law	3
SGS 801.1	ICT & Research Method	2
Total		17

Second Semester

Course Code	Course Title	Credit
MGT 805	Advanced Management Theory	3
MGT 806	Marketing Management	3
FIN 807	Advanced Corporate Finance	3
MGT 808	Business Policy	3
MGT 809	Research Methodology	3
SGS 802.2	Entrepreneurship & Management	2
Total		17

4.2 CORE COURSE DESCRIPTIONS

FIN 800 Managerial Economics

This reviews basic micro and macro economic theories like theory of the firm, resource allocations, pricing and cost structures, the working of the economy, national income, real, monetary, and labour market equilibria and managerial imperatives. Money Supply & demand dynamics and business decisions, monetary and fiscal policy and role of Government. 2nd Semester (Year 3)

MBA Project

DEPARTMENT OF ACCOUNTING

INTRODUCTION

The Postgraduate Programme in the Faculty of Management Sciences at the University of Port Harcourt have been designed to help people cope with a rapidly changing modern society. The management arts and sciences will assume increased importance as the years pass. This rapid rate of change will complicate man's social and organizational problems and require students of Management Science to adapt their knowledge and skills to organizational problems which do not yet exist.

To meet these challenges, the department of Accounting has introduced post graduate programmes (MBA, PGD, MSC and PhD) in which students learn a framework of theoretical concepts and develop a set of basic analytic tools which enable them to identify the issues. Thus, the uniqueness of these programmes is its emphasis on quantitative and analytical skills for creative decision making in the relevant spheres of industry, administration academic/research.

History of Post Graduate Programme in Department of Accounting

Post graduate studies in Accounting started under the erstwhile graduate school of Business Administration which commence in 1980 with Professor Lucius as the first Dean. The Graduate School of Business Administration Offered four (4) major MBA Programmes – Accounting, Finance, Management and Marketing in 1984, the Graduate School of Business Administration metamorphosed into the Faculty of Management Sciences to enable it commence under graduate programmes in the four stress areas.

The above move was principally informed by the fact that undergraduate studies in the above discipline were not offered in then graduate school of Business Administration and also, to align with the University-wide Faculty Structure. Adoption of the faculty structure paved way for introduction of more post graduate programmes in the department as follows;

PGD Accounting	1998/99
MSC Accounting	2009/10
PhD Accounting	2006/07
DBA Accounting	2014/15

Vision of the Department of Accounting, University of Port Harcourt:

The vision of the department is to become a top rated department among Nigeria and other Universities actively involved in educating

students, training and research activities thereby, serving as a reference point for other Universities and higher institutions of learning.

Mission of the Department of Accounting,

University of Port Harcourt:

The mission of the department is to provide knowledge to our students and potential members of the public in an organized and most articulate manner, which will accelerate the dissemination of the knowledge of finance discipline and contribute to the growth of the private and public sectors of the Nigerian economy.

Shared Values of the Department:

The shared values of the department can be expressed in terms of the following – Quality Teaching, Efficiency, Research, Training and Publications.

Philosophy of the MSC Accounting Programme:

The philosophy of the MSC accounting Programme is to broaden and deepen the intellectual exposure of students in the major areas of Accounting and particularly, develop their capability to undertake in-dept graduate research in Accounting.

The Aims/Objectives of MSC Accounting Programme

The objectives of the MSC Accounting Programme are to:

- Develop requisite intellectual and conceptual foundation in students that will permit meaningful participation in the discussion or resolution of problems that confront Accounting and Reporting practices.
- Equip students with the requisite analytical and quantitative skills for undertaking meaningful research that will encourage maximum contribution of the Accounting profession to national, social and international development of economics.
- Develop the skills of logical reasoning and critical analysis so as to improve students' capacity to formulate sound financial and reporting policies and strategies.

Structure of the PG.D Accounting Programme:

The structure of courses offered for the PGD Programme is shown below;

Course structure of PGD Accounting Programme the PGD Accounting Programme requires a minimum of 30 credit Units made up as follows.

Unit

(a) Ten (10) Core courses of 2 Credit unit each	20
(b) Three courses from Area of Concentration 2 Credit Each	6
(c) Research Project	4
Grant Total	30

Course Code	Description	Credit Unit
ACT 815	Oil & Gas Accounting	2
ACT 809	Accounting Standards	2
ACT 803	International Accounting	2

FIRST SEMESTER YEAR 3

Course Code	Description	Credit Unit
ACT 804	Auditing Theory	2
ACT 805	Taxation Theory And Practice.	2
ACT 810	M.Sc Seminar	2

SECOND SEMESTER YEAR 3

Course Code	Description	Credit Unit
ACT 816	M.Sc Dissertation	6
Grand Total Credit Units		36

WORK LOAD FOR M.SC (ACCOUNTING) PROGRAMME

- a) No course shall carry less than 2 credit units
- b) A masters Degree Programme shall have 9 minimum of 36 credit units of workload broken into 30 credit

units of course work and 6 credit units for dissertation.

Admission Requirements:

MSC Accounting Candidates are admitted based on their prior relevant qualifications and experience. MSC candidates are required to have a minimum CGPA of 3.0 on a 5-point scale for B.Sc degree holders in Accounting or equivalent and a minimum CGPA of 3.5 on a 5-point scale for PGD holders in Accounting. In addition a candidate must satisfy the University Matriculation requirement.

MSC ACCOUNTING COURSE DESCRIPTIONS/ CONTENTS/ SPECIFICATIONS:

COURSE DESCRIPTION

ACT 807 Financial Accounting Theory

A review of basic accounting procedures, including the rationale of financial accounting and the economic foundations of accounting generally Elements of the history of accounting working papers and the interpretations of financial statements, including the analysis of working capital and statements of the sources and application of funds and cash flows Generally accepted accounting principles and not income concepts, including the valuation of stock and work-in-progress. The theory and techniques relating to balance sheet categories including cash, debtors, stock, investments, tangible and intangible fixed assets, liabilities and reserves, elements of the impact of price-level changes on financial statements.

ACT 812 Accounting Research

Introduction- The domain of scientific research. Research design and strategy sampling. Activities of research department – model construction. Data-Collecting strategies. The questionnaire. The interview motivation research. Measurement and analysis of data. Report writing. Research in Nigeria. Ethics in management. Business and social responsibility. Research presentations. Quest lecturers.

ACT 811 Corporate Finance

Theory and measurement of business income, finance and growth-investment selection, business valuation, financial planning and budgeting capital structuresources, gearing, cost, financial criteria; new issue market and role of institutions; principles and law; international comparisons.

ACT 804 Auditing Theory

Advanced principles in external and internal auditing, practices and techniques; principles and practices of internal control: the auditor's report audit programme, auditing standards, professional ethics.

ACT 801 Management Accounting Theory

Nature, scopes and purpose of costing. Theory of costing, elements of costing, materials, labour and over-head (in outline only); cost allocation, apportionment; methods of costing. Marginal costing, costing ascertainment cost/profit/volume analysis break even analysis standard costing, profit contribution, mix and yield variances; interpretation of variances and their relationships.

ACT 803 International Accounting

The course is designed for students interested in accounting and financial control of international operations. It involves preparation, transition and analysis of financial statements for companies that have braches of foreign multinational companies.

CGS 814 ICT Application in Accounting Research

Computer, history, system theory, system design and analysis data network, file structure and file organization. Principles of data design. Data manipulation and administration. Methods of data collection and coding and output. Principle of programme stored instructions and languages, model and structured programmes. Memory and backing store, input and output devices, data communication.

ACT 806 Public Sector Accounting

Basic accounting for non-profit organization, basic characteristics of government accounting, structure of governmental accounting in Nigeria; the treasury; audit department; consolidated revenue fund, capital and development fund; planning, programming and budgeting system (PPBS).

ACT 805 Taxation Theory and Practice

The principles, practice and theory of the Nigerian system of income tax, surtax, corporation tax and capital gains tax. Computation and assessments in relation to individuals, partnerships and limited companies. Procedures and practice relative to claims and appeals. Nigerian taxation in relation to foreign taxation.

ACT 802 Accounting Information System

This course is designed to expose students to the practical application of computers to management information processing. The course provides the followed in the utilization of electronic data processing (EDP) system in producing financial and management information, in feasibility studies, system analysis, system design and system implementation for computerized accounting system. Among other things, the course will examine the following issues: Elements of computing mechanical and electronic, types of computers and their applications, computer programming using either COBOL, or FORTRAN, data processing manual and mechanized system, system analysis and design, evaluation and administration of MIS with emphases on computer based systems, meaning of information technology and its application in business finance and management.

ACT 813 Economic Theory

ACT 815 Oil and Gas Accounting

This course aim at introducing the students to the up and down streams of oil activities in Nigeria. Royalties, petroleum task and financial control activities in the oil and gas industry.

ACT 808 Forensic Accounting

This course introduces the students to the investigative aspects of accounting.

ACT 809 Accounting Standards

The aim of this course is to inculcate in the students the understanding the major accounting standards bodies of the world including their history, methods and the standards they set. The Nigerian Accounting Standards Board (NASB) and the Statements of Accounting Standards (SASs), the Financial Accounting Standards Board (FASB-USA) and the Financial Accounting Standards (FASs), the Accounting Standard Board (ASBUK) and the Statements of Standard Accounting Practice (SSAPs); and the International Accounting Standards Board (ISAB) and International Financial Reporting Standards.

Exposure to essential theories and concepts for Anglicizing managerial decision making; Planning, organizing, directing and coordination, Problems affecting the character and success of the enterprise; the design and implementation of corporate strategy.

ACT 829: Accounting Policy and Corporate Strategy

Conceptual frameworks and models for the analysis of competitive situation and strategic dilemmas; Insight into strategic management; Analyses of external competitive environment, industry structure, value chain dynamics, etc.

ACT 826: Managerial Economics

Application of principles from various fields in economics and business to management decision making; Price mechanism, allocation of resources, profit drivers of the firm revenue and cost drivers, interaction among the market players, firms strategy, understanding market forces, the meaning of competition, pricing and profits, market power – good or evil, playing games I – Competition versus Cooperation, playing games II – Entry and Exit, Firms versus Markets; Make or Buy, auctions and market design, economics of information.

ACT 820: Introduction to Financial Accounting
Accounting Concepts, Construction of

Financial statements – balance sheet, Income Statements, Cash-flow statements, Analysis and Interpretations of financial statements, Element of costing and auditing.

ACT 822: Business and Company Law

Familiarize candidates with the legal aspect of business. Law of contracts, Agency, Hire purchase, carriage of goods, and related laws are examined. The company Act and company and miscellaneous matters decree are examined in depth.

ACT 823: Environment of Business

The basic objective of the course is to examine the legal, legal, social, political and economic framework which business organization must operate in the Nigerian environment. Because of the pervasive influence of globalization and reduction of distances between nations, there value systems, language etc. International business environments will be explored.

ACT 833: Human Resource Accounting

an overview of strategies and management practices in manpower planning techniques; staffing, human resource training and development; performance and systems design; compensation designs and reward management, career planning and employee welfare; Line and staff functions as well as the relationship between personnel department and other departments. Review of current principles and practices of human resources management in the Nigerian and global context.

ACT 812: Accounting Research Methodology

- Introduction to Research Methodology
- Research in Social Sciences
- Research in Physical and Natural Sciences
- Problems of Research in Developing Countries
- Common errors in research
- Research in practice:
 - (a) Problem identification
 - (b) Literature review
 - (c) Materials and methods (methodology)
 - (d) Results (Data Analysis)
 - (e) Discussions
 - (f) Summary, conclusions and recommendations
- Report Writing

ACT 807: Advanced Accounting and Theory

Analyze the Accounting discipline and its purpose; needs of users of accounting information; accounting theory and concepts of income measurement; disclosure requirements for profit and loss statement and balance sheet; amalgamations and reconstruction, consolidated accounts; branch and departmental accounts, current cost

accounting, inflation account; fixed asset valuation; human asset valuation; social responsible accounting.

ACT 804: Advanced Auditing and Investigations

Evolution of auditing, procedures with particular reference to internal control systems, internal audit functions; sampling and statistical techniques; auditing standards and guidelines including exposure drafts; post audit review; audit accounts of solicitors, charitable and other non- trading organizations.

ACT 830: Advanced Cost Management Accounting

Framework of modern management accounting; cost analysis and cost concepts; overheads; product costing and cost concept absorption and marginal costing, attributable cost, relevant cost, buy to make decisions, management audit, transfer pricing critical evaluation of variance analyses profit and cash planning, performance evaluation; motivation and human aspects of accounting.

ACT 824: Taxation and Public Finance

Tax theory, Income tax for individuals, partnership and corporation tax, tax planning and control; sales and company tax, value added tax. The Nigerian tax law. Tax planning in a multinational context. An examination of government operations and its role in economic activity and distribution. Theory of public goods and its optimal distribution.

ACT 827: ICT Application in Accounting

Computer, history, system theory, system design and analysis data network, file structure and file organization. Principles of data design. Data manipulation and administration. Methods of data collection and coding and output. Principle of programme stored instructions and languages, methods and structured programme. Memory and backing store, input and output devices, data communication.

ACT 828: Public Sector Accounting

Basic accounting for non-profit organization; basic characteristics of government accounting; structure of governmental accounting in Nigeria ; the treasury; audit department; consolidated revenue fund, capital and development fund; planning, programming and budgeting system (PPBS).

ACT 832: International Accounting

The course is designed for students interested in accounting and financial control of international operations. It involves preparation, transition and analysis of financial statements for companies that have branches of foreign multinational companies.

ACT 810: Graduate Seminar

Admission Requirements:

Candidates for the Ph.D. Programme shall have a Masters degree and should normally have had a minimum CGPA of 3.50 on a 3.50 scale or its equivalent grade. For candidates who obtained their Masters exclusively by research assessment, admission will be based on the quality of their theses. Final selection of candidates will be based on PhD admission interview performance. Also, provided that the University Matriculation requirements are satisfied, Relevant masters degree Matriculation requirements are satisfied, Relevant Masters degree with at least an average of B grade (60%) which includes course work and thesis from a recognized university.

Ph.D (Accounting) Programme course Descriptions/ Contents/ Specifications

ACT 901: History/Philosophy of Accounting Thought

The nature and scope of accounting and its evolution; the accounting function and its relationship with the information systems of organizations. Accounting procedures and systems. Source documents, books of original entry and books of accounts. Double entry book keeping systems, the trial balance, accruals, prepayments and adjustments. Provisions and reserves, classification of expenditure between capital and revenue, methods of recording accounting data -manual and mechanical; manufacturing, trader. Accounting treatment of control accounts and bank reconciliation.

ACT 902: Contemporary Issues in Accounting
Discussion and articulation of recent developments in the accounting literature.

ACT 903: Advanced Management Accounting Theory

This course aims at introducing students to the advanced theories and practice of management accounting in the decision making process.

ACT 906: Advanced Financial Accounting Theory

Further work on advanced company accounts including the accounts of banks and insurance companies, and the Nigerian Insurance Acts. Valuation of goodwill and company shares. Divisible profits and company individuals. Royalty and hire -purchase accounts. Consolidated and other group accounts. Governmental, municipal and public utility accounting, with special reference to Nigerian Organisations. Seminars on accounting systems, including business, governmental municipal and public utility accounting systems.

ACT 908: Environmental Accounting

This course has the aim of inculcating in the students the idea of cost and control processes of the effects of productive activities on the environment.

ACT 909: Public Sector Accounting

Basic accounting for non-profit organization; basic characteristics of government accounting; structure of governmental accounting in Nigeria; the treasury; audit department; structure of governmental accounting in Nigeria; the treasury; audit department; consolidated revenue fund, capital and development fund; planning, programming and budgeting system (PPBS).

ACT 905: Advanced Auditing Theory

Evolution of auditing, procedures with particular reference to internal control systems, internal audit functions; sampling and statistical techniques; auditing standards and guidelines including exposure drafts; post audit review; audit of accounts of solicitors, charitable and other non-trading organizations.

ACT 904: Advanced Accounting Research Methodology

Introduction to Accounting Research Methodology, Research in Social Sciences, Research in Physical and Natural Sciences, Problems of Research in Developing countries, Common errors in research.

ACT 907: PhD Seminar

Each seminar relates to an examination of current issues in the area of specialization in consultation with supervisor. Results of such examinations shall be at the recommendation of the supervisor and the approval of the departmental post graduate sub-committee.

ACT 911: Advanced Forensic Accounting Theory and Practice

This course reviews the role of the forensic accountant, in investigations and audits. Topics covered are the legal environment audit and investigation, dispute resolution and litigation services, information security, financial statement analysis, and tax fraud. Students will merge from the course with an understanding of the roles of forensic accountants and familiarity with their tools and practices.

ACT 912: Advanced Tax Strategy

Contemporary issues of research in taxation. Tax laws and Fiscal Policies and their impact on the economy and society. Overview of Tax Environment, Structure and Administration in Nigeria: issues and challenges arising from Personal Income Tax Laws, Company Income Tax Act, Petroleum Profit Tax Act, Industrial Development (Income Tax Relief) Act, Value Added Tax Laws, Capital Gain Tax Laws, Capital Transfer Tax. Double Taxation Relief and other unfolding events and typical issues such as Tax Review and Reforms.

ACT 910: PhD Thesis

DOCTOR OF BUSINESS ADMINISTRATION (DBA) PROGRAMME IN ACCOUNTING

COURSE STRUCTURE

The DBA in Accounting) Finance and Banking, Management and Marketing programmes require a minimum of 48 credit units made up as follows;

i.	5 General Course	-	15 Units
ii.	6 core courses (3 credit units each)	-	18 Units
iii.	Dissertation	-	12 Units
iv.	DBA Seminar in Accounting	-	3 Units

COURSE DESCRIPTION

ACT 901: Philosophy of Accounting

The nature and meaning of accounting, the various postulates and concepts that underpin development of accounting thought. The ontology and epistemology that tries to justify conservative accounting.

ACT 908: Social and Environmental Accounting

Social and Environmental effects of organization's economic actions to particular interest groups within society. Purpose of social accounting. Corporate accountability and management control purpose. Self-reporting and third party audits, Cost structure and environmental performance reporting. Environmental Management Accounting and internal reporting practices.

ACT 904: Advanced Accounting Research Methods

Fundamental of experimental and non-experimental accounting research and their applications to the study of accounting problems. Issues will also cover construct, internal and external validities, survey and single-case research designs in accounting.

ACT 906: Advanced Financial Accounting

This course covers more advanced treatment of fundamentals of financial accounting, with preparation of financial statements of corporate organisations in conformity of IFRS and IAS. It reviews dissolutions of partnership accounts and amalgamation, advanced incomplete records, advanced treatment of accounts non trading concern, published financial statements, purchase and sale of business accounts, royalty accounts, contract accounts and other specialised accounts.

ACT 903: Advanced Management Accounting

The aim of this course is to up-grade the analytical skills of the students and to identify research issues in management accounting, budgeting theory, learning curves, forecasting, variance analysis, profit analysis and cost allocation techniques, the agency-theoretic approach in management accounting.

ACT 912: Advanced Tax Strategies and Fiscal Policies

Contemporary issues of research in taxation. Tax laws and Fiscal Policies and their impact on the economy and society. Overview of Tax Environment, Structure and Administration in Nigeria: issues and challenges arising from Personal Income Tax Laws, Company Income Tax Act, Petroleum Profit Tax Act, Industrial Development (Income Tax Relief) Act, Value Added Tax Laws, Capital Gain Tax Laws, Capital Transfer Tax. Double Taxation Relief and other unfolding events and typical issues such as Tax Review and Reforms.

ACT 911: Advanced Forensic Accounting Theory and Practice

This course reviews the role of the forensic accountant, in investigations and audits. Topics covered are the legal environment audit and investigation, dispute resolution and litigation services, information security, financial statement analysis, and tax fraud. Students will merge from the course with an understanding of the roles of forensic accountants and familiarity with their tools and practices.

ACT 905: Advanced Auditing/Assurance Services

Information - theoretic approach to auditing, statistical aspects of auditing and fraud, the generation and formulation of audit hypothesis, and heuristic and biases in audit judgments. Forensic audit techniques and the role of the forensic auditor as an expert witness. Financial Performance Reporting under International Financial Reporting Standards (IFRS), guidance on IFRS, corporate governance, audit and professional Financial Reporting Standards (IFRS); guidance on IFRS, corporate governance, audit and professional responsibility reporting; Reporting on impairment of nonfinancial asset, employee, benefits, and going concern. Implications of applying IAS 23 (REVISED) "Borrowing costs". Guidance on impairments for financial assets. Ethics as an integral part of accounting profession

ACT 909: Advanced Public Sector Accounting

This course provides the tools necessary for understanding the principles of fiscal accountability. It will also equip the student with the knowledge of IPSAS (International Public Sector Accounting Standards) with the aim to improve the quality of general purpose financial reporting by public sector entities, leading to better informed assessments of resource allocation decisions made by government, thereby increasing transparency and accountability as well as quality service delivery.

M.Sc. IN TAXATION

Philosophy

M.Sc. in Taxation has been designed to give the best possible preparation for a long and successful global career in taxation. This unique programme will provide a high level academic understanding of contemporary development in Nigeria and international taxation policy and practice.

Alongside traditional accounting subjects the programme cover all aspects of taxation including policy development and implementation and practical operation of tax system in Nigeria.

Objectives

- i. To advance knowledge of the theories and practice of taxation
- ii. To provide students with a thorough understanding of policy issues relating to taxation as well as the technical aspects of the subject.
- iii. To improve competency of tax professional to sustainably manage the ever changing tax world.

Admission Requirements

- i. Candidates seeking admission into M.Sc. (Taxation) programme shall possess a minimum of Second Class Lower Division in Accounting and Economics, or any other relevant degree in Management and Social Sciences Degree from a recognized University may be admitted provided the University Admission Requirements are satisfied.
- ii. HND holders with professional qualification such as ACTI, ACA, CNA, ACIB, ACCA, etc.
- iii. Holders of LLB in law and professional qualifications of chartered institute of taxation of Nigeria (CITN).

Course Structure

The M.Sc. programme requires a minimum of 36 credit units made up as follows:

- | | |
|------------------------------------------|-----------------|
| • Core courses | 26 units |
| • Two courses from area of concentration | 4 units |
| • Dissertation | <u>6 units</u> |
| • Total | <u>36 units</u> |

Duration of Programme

- (a) Full Time: A minimum of twelve(12) calendar months and a maximum of twenty four(24) calendar months
- (b) Part Time: A minimum of twenty four (24) months and a maximum of thirty six (36) months

ACT 820	Public Sector Accounting II	2
ACT 827	Oil, Gas and Solid Minerals Taxation	2
ACT 828.2	Revenue Law, Income Taxation and Indirect Taxation	2
	Grand Total	4
		36

ACT 811 Corporate Finance

This course will cover topics such as: overview of welfare economics; market failure and the rationale for government intervention; public expenditure theory (resource allocation mechanism, public choice theory, theories of public expenditure growth, public expenditure policy in Africa, public enterprise pricing); cost benefit analysis; investment rules and government failures; theory of taxation (overview of a good tax system, the incentive effects of taxation, theory of optimal taxation); tax policy (tax design and structure, tax administration, tax reforms); inter-governmental fiscal relationships (principles of

inter-governmental relations. Assignment of functions: Expenditure and tax assignments. Revenue sharing mechanisms/inter-governmental grants and transfers: the African experience), public debt (Domestic and external debt: causes, management and financing. Overview of external debt in Africa and HIPC initiatives).

ACT 816 Accounting Research

Designed to equip students with the techniques for identifying research problems, planning, executing and evaluating research problems. Topics covered include the nature of scientific research, a review of research process, theory building, advanced study of experimental designs, and analysis; concept of definition, formulating hypothesis, validity and reliability; measurement and scaling methods; concepts and problems in data collection and sampling, criteria for causal inference, studies and control groups, report writing including editing, footnoting etc; statistical inference and regression analysis; analysis of variance, non-parametric techniques.

ACT 820 Public Sector Accounting II

A study of the special problems which arise in the planning and control of financial resources in public sector organisations, government companies, boards and corporations (utilities). Issues examined include, the role of public enterprise procedures for making investments and pricing decisions, and the constraints of these decisions; government budgeting and accounting systems; relationship between public enterprise and government; and the factors which tend to impede performance in this sector. The rationale, problems and prospects of privatization and commercialization of government business will also be considered. International comparisons will be drawn where relevant.

ACT 821 International Comparative Studies of Taxation

This course seeks to deepen students understanding of the more complex problems in international comparative studies of taxation. SGS 801.2 Management and Entrepreneurship

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and management problem solving.

DEPARTMENT OF ACCOUNTING STAFF LIST

S/N	Name	Qualifications	Area of Specialisation	Designation
1.	Ofurum Cliford .O.	B.Sc, (UNIBEN) PGD, (UNN) MBA, (UNN) M.Sc, (FUTO) PhD, (FUTO) ACA, ACTI	Management and Cost Accounting	Professor
2.	Ogbonna Gabriel .N.	B.Sc, (UNIPOINT) MBA, (UNIPOINT) FCA, M.Sc, (FUTO) PhD, (UNIPOINT) ACTI	Financial Reporting and Accounting Information System	Professor
3.	Micah Leyira Christian	B.Sc, (UST) MBA,(UST) PhD, (UNIPOINT) CPA, CNA, ACTI, FCFIA	Public Sector and Management Accounting	Professor
4.	Akani Fyneface Nmecha	B.Sc, (UNIPOINT) MBA, (UST) PhD, (UNIPOINT) CNA	Auditing and Bankruptcy	Professor
5.	Ironkwe Uwaoma I.	B.Sc, (UNIFE) MBA,(UNIPOINT) LLB, B.L, (RSUST) FCNA, FCTI, PhD, FCFIA	Executorship and Bankruptcy, Auditing	Professor
6.	Egbe Solomon	B.Sc, (UNIPOINT) PGD, (UNIPOINT) MBA, (UNIPOINT) PhD (UNIPOINT)	Corporate Reporting and Management Accounting	Reader
7.	Ebere Chukwuma Christopher	B.Sc, PGD, MBA, M.Sc, (UNIPOINT) PhD, (UNIPOINT) M.Ed, CNA	International Accounting, Accounting Research and Taxation	Reader
8.	Nwaiwu Johnson Kem	B.Sc, MBA, (UST) PhD, (UNIPOINT) CNA, ACTI, FCFIA	Taxation and Accounting Research	Reader
9.	Wobo Henry .O.	B.Sc, (UNIPOINT) M.Sc,(UNIPOINT) PhD, (UNIPOINT) ACA, ACTI	Management and Cost Accounting	Senior Lecturer
10.	Asian Asian Umobong	B.Sc, (UST) MBA, (UST) M.Sc, (ABSU) PhD, (ABSU) FCA, ACTI	Tax and Financial Reporting	Senior Lecturer
11.	Joseph Benvolio	B.Sc. (UNIPOINT) M.Sc (UNIPOINT) Ph.D (UNIPOINT)	Public Sector Accounting, Cost and Management Accounting	Lecturer I
12.	Odoemelum .N.	B.Sc, (UNIPOINT) M.Sc, (UNIPOINT) PhD (UNN)	Financial Accounting and Corporate Reporting	Lecturer I
13.	Ojukwu Chioma .O.	B.Sc,(UNIPOINT) M.Sc, (UNIPOINT) PhD, (UNIPOINT) FCA, ACTI,	Taxation, Auditing, Financial Accounting	Lecturer I
14.	Ohimaimen John	B.Sc, (UNIPOINT) MBA, (UNIPOINT) M.Sc, (UNIPOINT) PhD (UNIPOINT)	Financial and Cost Accounting	Lecturer II
15.	Fred Vincent Fred-Horsefall	B.Sc. (RSU), PGD (NOUN), MBA, M.Sc. (UNIPOINT), Ph.D (RSU)	Cost and Management Accounting	Lecturer II
16.	Inuadume Daniel Syder	B.Sc, MBA, M.Sc., Ph.D (UNIPOINT), ACA	Financial Accounting, Sustainability Accounting Information, Tax and Management Reporting	Lecturer II

17.	Miebaka Big-Alabo	B.Sc., M.Sc., Ph.D (UNIPORT), ACA, ACTI	Financial Accounting, International Financial Reporting Standards, Tax and Management Accounting	Lecturer II
18.	Eke, Chidi	B.Sc., M.Sc., Ph.D (UNIPORT)	Financial Accounting	Lecturer II
19.	Chibuike Camillus Ugo	B.Sc., M.Sc. (UNIPORT), Ph.D (IAUE), CAN, ACTI	Financial Accounting, Auditing and Investigation	Lecturer II

DEPARTMENT OF MANAGEMENT

Offers Graduate Degree in the Following Programmes:

- i. Postgraduate Diploma (PGD) in Management Programme - Full-Time & Part-Time week ends
 - ii. Master of Business Administration (MBA) in Management Programme - Full-Time & Part-Time/week ends
 - iii. Master of Science (M.Sc) Management Programmes - Full-Time & Part-Time/week ends
 - iv. Doctor of Business Administration (DBA) Management Programmes- Full-Time & Part-Time/week ends
 - v. Doctor of Philosophy (Ph.D) Management Programmes - Full-Time & Part-Time/week ends
- b) The master of philosophy (M.Phil/MP hi?) degree in relevant discipline/area related to management
 - c) The final selection of candidates for the DBA programme shall be based on the candidate's performance at an interview to be conducted by the Faculty Graduate Committee.

v. Doctor of Philosophy (Ph.D.) Degree

- a) Admission into the Ph.D degree programme is open to candidates who possess a master of science (M.Se) degree in Human Resources Management, Industrial Relations and Personnel Management, Business Administration, Management, Entrepreneurship, operations research or any other relevant discipline/area from a recognized University with at least an average of B grade (60%) which includes coursework and research thesis from a recognized university
- b) The master of philosophy (M.Phil/MPhi/) degree in relevant discipline/area related to management
- c) The final selection of candidates for the Ph.D programme shall be based on the candidate's performance at an interview to be conducted by the Faculty Graduate Committee.

ADMISSION REQUIREMENTS

i. Postgraduate Diploma (PGD) Management

- a) Bachelor's Degrees in any discipline can be admitted into the PGD programme (Third class)
- b) Higher National Diploma. (Upper credit)
- c) Relevant professional qualifications

ii. Master of Business Administration (MBA) Management

- a) Degree in relevant area from a recognized University with minimum of second class lower Division.
- b) A postgraduate diploma in relevant area from a recognized university.

iii. Master of Science (M.Sc) Management

- a) Admission into the M.Sc. degree programme is open to candidates who possess a Bachelor's degree in Human Resources management, Industrial Relations and Personnel Management, Business Administration, Management or any other relevant discipline/ area from a recognized University with minimum of second class lower division.
- b) A postgraduate diploma in relevant area from a recognized university.

iv. Doctor of Business Administration (DBA)

- a) Master of Science (M.Sc) or Master of Business Administration (MBA) in accounting, finance and banking, management and marketing or in an acceptable and closely related area/discipline.with an overall CGPA of 3.5 on a 5.0 point scale or 3M on a 4.0 point scale in their master's programme

In addition to requirements in item i- v listed above, other qualifications that are considered relevant by the Senate of University of Port-Harcourt from time to time may also be acceptable for admission and provided the university matriculation requirements are satisfied.

Note that all candidates must have five credit passes including English, Mathematics and Economics at the 'O' Level, as basic requirement.

DURATION OF PROGRAMME

i) Postgraduate Diploma Programme (PGD)

- a) Full-time Diploma; Minimum of two (2) semesters and a maximum of four (4) semesters.
- b) Part-time Diploma; Minimum of four (4) semesters and a maximum of six (6) semesters

ii) Master of Business Administration (MBA) Programme

- a) The Full-time MBA programme should run for a minimum of four semesters and a maximum of six semesters.

- b) The Part-time should run for a minimum of six semesters and a maximum of eight semesters.

iii. Master of Science (M.Sc) Programmes

- a) Full-time: A Minimum of four (4) semesters and a maximum of six (6) semesters
 b) Part-time: A minimum of six (6) semesters and a maximum of eight (8) semesters

iv. Doctor of Business Administration (DBA) Programmes

- a) Full-time candidates shall be required to spend a minimum of three (3) years and a maximum of five (5) years from the date of first registration. Part-time candidates will be required to spend a minimum of five (5) years and a maximum of seven (7) years.
 b) At the end of the maximum period, depending on the progress report on the candidate, the candidate may have his period of study extended for a defined period or advised to withdraw. A minimum of 12 months (full time) and 18 months (part time) shall be strictly dedicated to course work.

v. Doctor of Philosophy (Ph.D.) Programmes

- a) Full-time: A Minimum of six (6) semesters, a maximum of ten (10) semesters.
 b) Part-time: A minimum of Ten (10) semesters and a maximum of twelve (12) semesters.

A. POSTGRADUATE DIPLOMA (PGD) IN MANAGEMENT PROGRAMME

Philosophy of the postgraduate diploma (PGD) programme

The philosophy of the postgraduate diploma (PGD) programme in management is to provide basic and remedial training in management for the purpose of preparing students for higher studies as well as for managerial positions in the private and public sectors of the economy.

Objectives of the PGD (Management) Programme

The objectives of the postgraduate diploma (PGD) programme in management is to prepare candidates for admission into the Faculty of Management Sciences' regular full-time and part-time programmes at masters level such as MBA and M.Sc., programmes or as a terminal post-graduate diploma qualification. The programme also seeks to develop the competency of students in understanding the basic principles and concepts

of management, encouraging practical utilization of the basic knowledge gained to solve managerial problems and issues of decision-making in both private and public sector organizations.

Structure of the Post Graduate Diploma (PGD) Programme

First Semester

Core Courses	Course Description	Credit Units
MGT 700.1	Principles of Management	2
ACT 700.1	Principles of Accounting	2

Total = 36 Credits Units (All courses are compulsory)

B. MASTER OF BUSINESS ADMINISTRATION (MBA) IN MANAGEMENT PROGRAMMES

Philosophy of MBA in Management Programme

The philosophy of this programme is to provide graduate education and training in management with a view to broadening the intellectual exposure

of students in the discipline, developing their capacities to take rigorous and quality research in the core areas of the discipline, and applying theoretical understanding and research results to practical management situations and problems.

Objectives of MBA in Management Programme

The objectives of the programme include:

- i. To prepare graduates for various management and administrative positions in both public and private organizations.
- ii. To develop effective managerial skills and know-how among candidates to put them in good stead to effectively recognize, analyse, and solve business related problems.
- iii. To equip candidates with the basic skills of utilizing modern concepts, principles, theories, and methods in running organizations.
- iv. To develop the students' skills in critical thinking and analysis, logical reasoning and research methodologies to improve their capacities to appreciate rigorous and quality research, and formulation of management policies and strategies at the organisational and national levels.
- v. To expose the students to the fundamental courses in management necessary for M.Sc., and Ph.D., in the management programme.
- vi. To update the students in the area of cognate business courses necessary for understanding and analyzing management problems.
- vii. To help the student acquire the necessary skills needed for evaluating business and its environment both within and outside the business.

Structure of the MBA Programme

The programme consists of selected courses from all the disciplines in business administration which is coordinated in a way that they may be directed towards the preparation of candidates for further graduate work in Management.

First Semester

Core Courses	Course Description	Credit Units
MGT 801.1	Business Research Methods	3
MGT 801.1	Quantitative Methods for Management	3
FIN 801.1	Corporate Finance	3
MGT 803.1	Operations Management	3
MKT 806.1	Marketing Management and Strategy	3

ACT 807.1	Introduction to Accounting	3
MGT 804.1	Organization Behaviour	3
SGS 801.1	ICT and Research Methods	2
Total		23

Second Semester

Core Courses	Course Description	Credit Units
MGT 805.2	Business Law	3
MGT 806.2	Environment of Business	3
MGT 807.2	Introduction to General Management	3
MGT 808.2	Corporate Strategy and Policy	3
FIN 802.2	Managerial Economics	3
FMS 801.2	MBA Language Programme	3
MGT 809.2	Human Resources Management	3
SGS 801.2	Management and Entrepreneurship	2
Total		23

Third Semester

ELECTIVES COURSES FOR SPECIALIZED AREAS (student are required to choose one but areas to offer will be subject to availability of academic staff for each academic session)

ELECTIVE COURSES FOR GENERAL MANAGEMENT OPTION:

Core Courses	Course Description	Credit Units
MGT 851.3	Corporate Management	3
MGT 852.3	Human resources Management	3
MGT 851.3	Entrepreneurship Development and Small Business Management	3
MGT 854.3	Comparative Management	3
MGT 855.3	Organizational Behaviour	3
MGT 856.3	International Business	3

ELECTIVE COURSES FOR PRODUCTION/OPERATIONS MANAGEMENT OPTION:

Core Courses	Course Description	Credit Units
MGT 810.3	Production management and problem solving Techniques	3
MGT 811.3	Case Studies in Production and	3

MGT 812.3	Operation Management Facility location methods	3
MGT 813.3	Operations Management	3
MGT 814.3	Strategic Decisions in Production	3
MGT 815.3	Operational decisions in production management	3
MGT 816.3	Project management and feasibility studies	3

ELECTIVE COURSES FOR OPERATIONS RESEARCH OPTION:

Core Courses	Course Description	Credit Units
MGT 817.3	Linear programming	3
MGT 818.3	Mathematical Programming	3
MGT 819.3	Introduction to Stochastic Process	3
MGT 820.3	Applied Queuing Models	3
MGT 821.3	Dynamic Programming	3
MGT 822.3	Theory of Games	3

ELECTIVE COURSES FOR ENTREPRENEURSHIP AND SMALL BUSINESS MANAGEMENT OPTION:

Core Courses	Course Description	Credit Units
MGT 823.3	Entrepreneurship Development	3
MGT 824.3	Small Business Management	3
MGT 825.3	Purchasing and Supplies Management	3
MGT 826.3	Venture Management	3
MGT 827.3	Small Business Accounting	3
MGT 828.3	Feasibility Studies and Marketing Survey	3

ELECTIVE COURSES FOR HUMAN RESOURCE MANAGEMENT OPTION:

Core Courses	Course Description	Credit Units
MGT 829.3	Compensation: Theory and Administration	3
MGT 830.3	Personnel Staff Evaluation	3

Year Two Third Semester

Third Semester (Students are required to take any two elective courses)

Core Courses	Course Description	Credit Units
MGT. 811.3	Business Policy	2
MGT. 812.3	Economy and Industry Analysis	2
MGT. 813.3	Operations Management	2
FIN. 850.3	Advanced Corporate Finance	2
MGT. 814.3	International Business Management	2
MGT. 815.3	Organisational Development and Change	2

Fourth Semester

Core Courses	Course Description	Credit Units
MGT 816.4	M.Sc., Seminar	2
MGT 817.4	M.Sc., Dissertation	6
total		8

Total = 40 Credits Units

Specialization Areas

i) M.Sc. HUMAN RESOURCE MANAGEMENT

Structure of the M.Sc. Human Resources Management programme

The M.Sc. Human Resources Management programme requires a minimum of 36 credit units made up as follows:

- Fifteen core courses (2 credits each) - 30 units
 - Two elective courses (2 credits each)- 4 units
 - M.Sc., Thesis - 6 units
- Total 36 units +4 units = 40**

Course Description	Credit Units
Human Resource Management	2
Human Behaviour in Organizations	2

Labour Law	2
Retirement and Pension Administration	2
Performance Evaluation and Control	2
Managing Diversity (Cultural Differences)	2
Human Resource Training and Development	2
Labour Market Analysis	2
Human Resource Planning	2
Research Methodology	2
Micro-economic Theory	2
Macro-economic Theory	2
ICT and Research Methods	2
Management and Entrepreneurship	2
M.Sc. HRM Seminar	2
M.Sc. Dissertation	6
Elective Courses (Select any two courses of two credit units)	
Industrial Relations	2
Strategic Management	2
Negotiations	2
Managing Organizational Change	2
Compensation Management	2
Qualitative Methods	2
Organizational Theory	2
Women Participation in the Labour Force	2
International Labour Movements and Institutions	2
Collective Bargaining	2

(ii) M.Sc. Industrial and Labour Relations

Structure of the M.Sc. industrial and Labour Relations

The M.Sc., programme requires a minimum of 36 credit units made up as follows:

- Thirteen core courses (2 credits each) 26 units
 - Two elective courses (2 credits each) 4 units
 - Thesis 6 units
- Total 36 units + 4 Units = 40 units**

Course Description	Credit Units
Labour History and Philosophy	2
Labour Law	2
Industrial Relations Theory	2
Collective Bargaining	2
Trade Unions and Management in Nigeria	2
State and Industrial Relations	2
Labour Relations and Administration in Nigeria	2
Occupational Safety and Health	2
Micro-economic Theory	2
Macro-economic Theory	2
Research Methodology	2
ICT & Research Methods	2
Management & Entrepreneurship	2
M.Sc. Seminar	2
M.Sc. Dissertation	6

Students are required to take any two elective courses of two credit units from the following:

Labour Management Relations

Women Participation in the Labour force	2
Seminar in Nigerian Labour Relations	2
Comparative industrial Relations	2
Industrial Conflict and Dispute Settlement	2
Compensation and Benefit Systems	2
International Labour Bodies	2
Collective Bargaining and Simulation	2
Motivation and Productivity at Work	2
Job Evaluation	2

Collective Bargaining

Collective Bargaining Simulation	2
Trade Union Management	2
Labour Arbitration and Alternative Dispute Resolution	2
Current Issues in Collective Bargaining	2

(iii) M.Sc. MANAGEMENT INFORMATION SCIENCE

Structure of the M.Sc Management Information Science

The M.Sc., programme requires a minimum of 36 credit units made up as follows:

- Fifteen core courses (2 credits each) 30 units
 - Thesis 6 units
- Total 36 unit + 4 Units = 40 units**

Course Description	Credit Units
Management Information Resources: Characteristics and Types	2
Information Representation, Organization and Retrieval	2
Management Theory and Practice	2
Database Management	2
Information Technologies	2
Evaluation of Management Information Resources and Systems	2
Financial Management and Strategy	2
Strategic Management	2
Information Behaviour of Organizations and institutions	2
Preservation and Security of Management Information	2
Resources and Systems	2
Automated and Networked Information Systems	2
Independent Study in Management Information Science	2
Research Methodology	2
Financial Accounting	2
ICT & Research Methods	2
Management & Entrepreneurship	2
M.Sc. Seminar	2
M.Sc. Dissertation	6

D. DOCTOR OF BUSINESS ADMINISTRATION (DBA) IN MANAGEMENT PROGRAMME

Philosophy

The philosophy of the Doctor of Business Administration (DBA) in Management is the development of distinguished and result-oriented business executive who is vast in distinguished functional area of business skills and knowledge to lead organizations, provide high valued consulting services and educate the next generation of specialized on management theory and practice through sound and analytical research background as well as specialized courses.

Justification for the Programme:

- a. The DBA is an advanced post graduate programme that focuses on professional business practice as well as providing experienced managers with research skills that can be applied to issues of organizational leadership. In line with this, our professional MBA graduates will be better suited to pursue further education through this programme.
- b. The DBA is fashioned to take care of further academic needs of executive professionals with MBA degree, which have career ambition to gain academic recognition in their chosen profession.
- c. In terms of its relationship with the Doctor of Philosophy (Ph.D), the DBA is an equivalent of the Ph.D, In terms of application to specific industry needs. The DBA though industry based, is equally fashioned to cater for the demand of the academia while the Ph.D is purely academic based.
- d. The DBA provides a platform for business executives to further their career ambition in their different professions, thereby widening the broad based of the academic system with theory and applications.

Objectives of the programme

The objectives of the programme are:

- i. To produce sound, corporate executives who can evaluate evolving conceptual models, theoretical framework as well as technological and organizational systems with particular emphasis on their implications on business theory and practices.
- ii. To produce candidates who can critically and properly access cultural and societal perspectives influencing business practice in the global era.
- iii. To produce business executives who can lead high value consulting services and

- exhibit proficiency in research and critical thinking skills.
- iv. To develop in students, effective communication, skills and the use of information technologies in the global business environment.
- v. To produce candidates equipped with analysis skills to evaluate business issues, ethical and legal within regulatory frameworks that guide the theory and practice in accounting, finance and banking, management and marketing.
- vi. To develop the entrepreneurial capacity of the student in dynamic business environment (world).

Structure of the DBA programme

The DBA in Management programme require a minimum of 54 credit units made up as follows:

- i. 7 General Course - 21 Units
- ii. 6 Core courses (3 credit units each) - 18 Units
- iii. DBA Seminar - 3 Units
- iv. Thesis - 12 Units
- Total - 54 Units**

GENERAL COURSES:

Core Courses	Course Description	Credit Units
MGT 921	Advanced Research Methods	3
ACT 922	Advanced Management Accounting	3
MKT 922	Strategic Marketing Management	3
FIN 922	Corporate Financial Management and Policy	3
MGT 922	Business Policy and Strategy	3

E. DOCTOR OF PHILOSOPHY (Ph.D) IN MANAGEMENT PROGRAMME

Ph.D in Management Specialization Areas:

The Department of Management offers Doctor of Philosophy (Ph.D) degree in the following specialization areas

- i. Doctor of Philosophy (Ph.D) in General Management
- ii. Doctor of Philosophy (Ph.D) in Human Resources Management
- iii. Doctor of Philosophy (Ph.D) in Industrial and Labour Relations
- iv. Doctor of Philosophy (Ph.D) in Organizational Behaviour
- v. Doctor of Philosophy (Ph.D) in Information Science Programme
- vi. Doctor of Philosophy (Ph.D) in Production/Operations Management

i. Ph.D GENERAL MANAGEMENT PROGRAMME

Philosophy

The philosophy of the programme is to provide graduate education and training in management to develop and deepen the culture of enquiry and responsibility in the students, to take on teaching, research in higher institutions, as well as management responsibilities in public and private sectors of the national and global economies. The Ph.D., programme in management also seeks to develop business scholars who are versed in the theory and in research skills in management as well as having the capability of developing and promoting indigenous academic culture in the field of management.

Objectives

The objectives of the Ph.D (Management) programme are to provide training in Management research for those whose future careers lie in teaching and research at the university and other tertiary institutions and for those who may have to operate in research and development environments in core and specialized areas of management that would equip graduates to provide quality consultancy services to both local and international clientele. It also aims at providing critical manpower in the area of business administration/management needed for national development.

The specific objectives of the Ph.D programme in Management are as follows:

- a) To produce candidates with high level of intellectual rigour and maturity for independent work in Management.
- b) To produce candidates who can develop and promote indigenous concepts, principles, and theories in their area of specialty and translate same to practice.
- c) To equip candidates with the requisite theoretical, quantitative, and qualitative tools to enable them undertake teaching and research responsibilities in universities, industries and government.

Structure of the Ph.D in General Management

The structure of the courses offered in the Ph.D., (General Management) programme is shown below:

The Ph.D., Management programme requires a minimum of 36 credit units made up as follows:

- Six core courses (3 credits each) 18 units
- Two elective courses (3 credits each) 6 units
- Ph.D., Thesis 12 units

Total 36 units+4 units = 40 units

First Semester

Core Courses	Course Description	Credit Units
MGT. 900.1	Management Thought and Philosophy	3
MGT. 901.1	Seminar in Strategic Management and Entrepreneurship	3
MGT. 902.1	Advanced Research Methodology	3
SGS. 801.1	ICT and Research Methods	2

First Semester

Core Courses	Course Description	Credit Units
MGT. 903.2	Imperatives of Globalization	3
MGT. 904.2	Advanced Quantitative Techniques	3
SGS 801.2	Management and Entrepreneurship	3
Elective courses (Chose any two courses)		
MGT. 905.2	Seminar in Business Environment	3
MGT. 906.2	Management of Change in Organisation	3
MGT. 907.2	Government, Business and Society	3
MGT. 908.2	Seminar in Public Enterprises Management	3

MKT. 909.2	Advanced Marketing Theory	3
MGT. 909.2	Multinational Enterprises Management	3
MGT. 910.2	Advance Conflict Management	3
MGT. 911.2	Ph.D., Seminar	3
MGT. 912.1	Ph.D. Thesis	3
	Total	40

Contemporary Issues in Industrial and Labour Relation	3
Ph.D., Seminar	3
Management Thought and Philosophy	3
Research Methodology	3
ICT and Research Methods	2
Management and Entrepreneurship	2
Elective Courses	
Economics of Collective Bargaining	3
Seminar in Labour law and Research	3
Seminar in International Labour Organizations	3
Labour Markets: Processes and Dynamics	3
Ph.D Thesis	12

Specialized Areas

i) Ph.D HUMAN RESOURCE MANAGEMENT PROGRAMME

Course Structure

The Ph.D., programme requires a minimum of 36 credit units made up as follows:

- Six core courses (3 credits each) 18 units
- Two elective courses (3 credits each) 6 units
- Thesis 12 units
- Total 36 units+ 4 units = 40**

Course Description	Credit Units
Management Thought and Philosophy	3
Contemporary Issues in Human Resource Management	3
Advanced Research Methodology	3
Ph.D., HRM Seminar	3
Advanced Human Resource Management	3
Seminar in Training, Development, Leadership and Productivity	3
ICT and Research Methods	2
Management and Entrepreneurship	2

Electives Courses (Students to choose any 2 of their choice)

Advanced Labour Analysis	3
Advanced Conflict Management	3
Advanced Strategic Management	3
Ph.D., Thesis	12

ii) Ph.D INDUSTRIAL AND LABOUR RELATIONS PROGRAMME

Structure of the Ph.D in Industrial and Labour Relations

The Ph.D., programme requires a minimum of 36 credit units made up as follows:

- Six core courses (3 credits each) - 18 units
- Two elective courses (3 credits each)- 6 units
- Thesis - 12 units
- Total 36 units + 4 units = 40 units**

Course Description	Credit Units
Advanced Theories of Industrial Relations	3
Globalization and Industrial and Labour Relation	3

(iii) Ph. D ORGANIZATIONAL BEHAVIOUR PROGRAMME

The objectives

The objectives of the Ph.D., (Organisational Behaviour) programme are to provide training in Organisational Behaviour for those whose future careers lie in teaching and research at the university and other tertiary institutions and for those who may have to operate in research and development environments; in core and specialized areas of Organisational Behaviour that would equip graduates to provide quality consultancy services to both local and international clientele. It also aims at providing critical manpower in the area of Organisational Behaviour for national development.

The specific objectives of the Ph.D., programme in Organisational Behaviour are as follows:

- a) To produce candidates with high level of intellectual rigour and maturity for independent work in Organisational Behaviour.
- b) To produce candidates who can develop and promote indigenous concepts, principles, and theories in their area of specialty and translate the same to practices.
- c) To equip candidates with the requisite theoretical, quantitative, and qualitative tools to enable them undertake teaching and research responsibilities in universities, industries and government.

(iv) Ph.D MANAGEMENT INFORMATION SCIENCE PROGRAMME

Structure of the Ph.D in Management Information Science

The PhD programme requires a minimum of 36 credit units made up as follows:

- Six core courses (3 units each) - 18 units
- Two electives (3 units each) - 6 units

- Thesis - 12 units
- Total 36 Units + 4 Units = - 40 units**

Course Description	Credit Units
Advanced Research Methodology	3
Advanced Quantitative Techniques	3
Advanced I.T. Applications	3
Advanced Evaluation of Information Systems	3
Seminar in Organization and Retrieval of Information and Records	3
PhD Seminar	3
ICT and Research Methods	2
Management and Entrepreneurship	2
Elective Courses	
Performance Evaluation and Control	3
Leadership in Theory and Practice	3
Seminar in ICT Applications to Management	3
Information Systems	3
Seminar in Information Behaviour of Organizations	3
Human Resources Information Systems	3
Qualitative Research Method	3
Seminar in Financial Management	3
Conflicts Management	3
PhD Thesis	12

iv) Ph. D PRODUCTION/OPERATIONS MANAGEMENT PROGRAMME

Structure of the Ph.D in Production/Operations Management Science

The Ph.D., (Production/Operations Management) programme requires a minimum of 44 credit units made up as follows:

- i) Nine Core Courses (3 units each) - 27 units
- ii) Two General Courses (ICT and Entrepreneurship) of 2 credit units each - 4 units
- iii) Two Electives (2 units each) - 4 units
- Thesis - 12 units
- Total - 47 Units**

Course Structure

The course work of the Ph.D., (Production/Operations Management) programme consists of research tools courses, and field of specialization courses.

Course Description	Credit Units
Research Methods and Statistical Techniques	3
Advanced Statistics for Business and Government	3
Advanced Production/Operation Management Problem Solving Techniques	3
Programming and Theory of Games	3
Operations Control Systems	3
ICT	2

Second Semester

Management Thought and Philosophy	3
Decision Model and Simulation	3
Strategic Decision in Production/Operation and Project Management	3
Entrepreneurship	2

ELECTIVE COURSES (Choose any two)

Operations control system	3
Service system design and control Systems Dynamics	3
Seminar in ICT Application to Management	3
Seminar in Production/Operations Systems	3
Ph.D., Thesis	12

1. COURSE DESCRIPTIONS FOR THE PGD PROGRAMME IN THE DEPARTMENT OF MANAGEMENT

MGT. 700.1 Principles of Management

The development of management thought; theories and models of management; the manager and his environment; organisation structure and relationships; leadership and motivation; organization development, the management functions and procedures; planning, organising; directing; controlling etc.

ACT. 700.1 Principles of Accounting (see Department of Accounting)

This course deals with the underlying theory of double entry book keeping. Topics: the nature, scope and purpose of accounting, theories and mechanics of double entry, book-keeping statements, fixed accounts, funds flow statements, account of not-for-profit organisations, incomplete records.

POL. 701.1 Introduction to Public Administration

This course focuses on the emergence of public administration; problems of organisations, the bureaucratic phenomenon and social change. The basics of public policy formulation and implementation process by bureaucracies accountability and efficiency in public administration.

MKT. 700.1 Fundamentals of Marketing (see Department of Marketing)

This course focuses on the appreciation of functions and channels of marketing and its role in the corporate environment. Major elements of marketing strategy in relation to product development; distribution channels; advertising, sales promotion and pricing are examined in details.

FIN. 710.1 Principles of Finance (see Department of Finance)

This provides a systematic and vigorous examination of the theoretical framework of financial/investment management analysis. The Main topics include: The economic theory of choice: investment decision and appraisal techniques, financial requirements planning, working capital management, financial ratios, dividend decision, cash budgeting, fixed assets and equity management, funds flow statement, and emphasis on financial markets.

ECO. 701.1 Principles of Economics (see Department of Economics).

This course covers both Introduction to Economics, Micro and Macro economics and other economic theories.

MGT 701.1 Research Methods

The objective of this course is to introduce the students to scientific enquiry through gathering and analysis of relevant data.

MGT 702.2 Comparative Management

In this course, students are exposed to the opinion differences about the universality of management which are attributed to the fact that management as science (organised knowledge) has universal applications, but the practice of management is an art. To achieve these objectives, students are made to appreciate how external environmental factors such as demographics of labour force characteristics, educational factors, socio-cultural factors, legal-political factors, economic factors as well as internal environmental factors such as management philosophy; organisation structure, etc. lead to difference in the managerial effectiveness of managers in different countries.

MGT. 703.1 Business Mathematics

Topics to be covered include: Revision of basic algebra; set theory; permutations and combinations; annuity, cash flow; functions and functional relationship; analysis of marginal utility and integral calculus; partial and total derivatives. In discussing these topics, emphasis will be on their specific relevance to business/management contents.

MGT. 704.1 Human Resource Management

Topics to be addressed in this course include: Nature and scope of HRM; strategies and management practices in manpower planning; staffing; human resource planning; human resource training and development; performance measurement and management, career planning and employee welfare; compensation designs and reward management.

MGT. 705.2 Computers in Organisations

This course explains the why and how of computers, the use of computers in business and

other organisations; Data transmission, nature, speed and error detection. it also examines system analysis and design, the programming process; problem definition, flow charting and decision table.

MGT. 706.2 Business Statistics

This course covers basic concepts in descriptive and inferential statistics and their use in empirical research.

MGT. 707.2 Global Economic Environment

This course deals with the following topics: Nigeria and the global economy, the implication of the free market economy on business; governments, consumers, and labour, strategic aspects of international trade, globalisation and international institutions; multilateral negotiations; lessons from the Asian tigers.

MGT. 708.2 Business Strategies and Policy

This course covers contemporary managerial decision approaches in the organisation. Topics to be covered include: business opportunities, mission statements and the development of corporate strategy, building the organisation competence, resource allocation, mergers and acquisition strategies, integration strategies, building organisational competitive strategies for their effectiveness through product pricing techniques, management process and policy control. This course also discusses analysis of industry structures and dynamics, ebusiness, process reengineering and corporate turnaround. Case writing and analysis are fundamental to this course.

MGT. 709.2 Organisational Behaviour

The course is intended to help in the exposure of students to the essential theories and concepts for analysing managerial problems, individual and group analysis of cases and experimental exercises, exchange of ideas and experiences in the classroom, intensive field-based project work in groups.

MGT. 710.2 Research Project

A research-based study and report on an acceptable management problem area approved by the supervisor and the Head of Department.

2. COURSE DESCRIPTIONS FOR THE MBA PROGRAMME IN THE DEPARTMENT OF MANAGEMENT

MGT 801.1 Research Methodology 3 Credits

This course will acquaint students with the basic principles of research design, methodology, methods of data collection and analyses, analytic communication skills, hypotheses testing, sampling procedures, parametric and non

parametric procedures and presentation of research reports. Topics to be covered include: introduction to Research Methodology, Research in Social Sciences, Research in Physical and Natural Sciences, Problems of Research in Developing countries, Common errors in Research, Research in Practice: Problem identification, Literature Review, Materials and Methods(Methodology), Results (Data Analysis), Results and Discussions, Summary, Conclusion and Recommendations, Report writing.

MGT. 802.1 Quantitative Methods in Business

This course seeks to further expose students to the use of quantitative techniques in business management, theories and practices. It covers basic elements of decision making under condition of uncertainty, set theory, probability theory, classical statistics and statistical decision theory; linear programming, primal and dual simplex algorithm, transportation and network analysis, dynamic programming, decision theories, structural operation modeling, inventory models, and queuing theory, games theory, markov analysis, assignment techniques, integral programming among others. More specifically, the course is designed to enable students understand and apply quantitative techniques in research and business decision making situations, emphasizing multivariate quantitative methods, optimization techniques in solving business management problems, among others.

FIN. 801.1 Corporate Finance

This course focuses on the principles and procedures underlying financial statements; financial transactions; alternative accounting statements; tools for analysis of ratios and other quantitative measures; accounting information useful for managerial action; application of information in decision making situations. Project appraisal analysis of investment projects, the impact of risk, tax and inflation, the term structure of interest rates, the cost of capital and target rates of return; capital market, its efficiency, the role of intermediaries, sources of finance, the borrowing decision and company valuation and optimal portfolio allocation; capital structure- optimal capital structure of firms, mergers and acquisitions and market for corporate control, market efficiency, the principle of capital structure, gearing and the basis of hedging and international finance.

MGT 803.1 Operations Management

This course deals with issues in operations strategy, process analysis and the use of data and managerial opinion in making effective propositions to address the questions in the cases. Major economic decision, problems of production

and operations management; aggregate production and work-force scheduling; multi- plant allocation of product; large scale project control (CPM and PERT); production and inventory control; demand forecasting; quality control; and short run job shop scheduling; the interaction of production problems with those of other functional areas, queuing theory, dynamic programming, multiple regression and correlation.

MKT. 806.1 Marketing Management and Strategy (MMS)

This course discusses the managerial aspects of marketing. It deals with the perspectives and problems of marketing management in a multi-product firm; the concept and application of strategic planning to business units and functional areas of marketing, utilization of current marketing strategy models as aids in strategy formulation, decision processes for product planning, pricing, promotion, distribution and competitive strategy.

ACCT. 807.1 Introduction to Accounting 3 Credits

This course deals with accounting concepts, construction of financial statements, balance sheets, income statements, cash-flow statements, analysis and interpretations of financial statements, element of costing and auditing.

MGT 804.1 Advanced Organisational Behaviour

This course exposes students to essential theories and concepts for analyzing managerial problems, individual and group analysis of cases and experiential exercises in the organization, exchange of ideas and experiences in the classroom, intensive field-based project work in groups. Topics covered to be in this area include: individuals and group behaviour, motivation, organisation design theory, work design and control. Other topics include leadership style, group decisionmaking, organisational socialisation, power and influence, group dynamics, organisational communication dynamics, union-management dynamics and conflict management.

MGT 805.2 Business Law 3 Credits

This course will familiarize candidates with the legal aspect of business law of contracts. The course reviews Nigerian Business Laws including laws of contract, forms of contract, law of agency formation and termination, negotiable instruments, bills of exchange, promissory notes, sale of goods, hire purchase, insurance including goods in transit insurance, obligations and liability, agency, carriage of goods and related laws are examined. The company act and company, and miscellaneous matters decree are examined in depth.

MGT 806.2 Environment of Business 3 Credits

The basic objective of the course is to examine the legal, socio-cultural, political and economic framework which business organization must operate in the Nigerian environment. Because of the pervasive influence of globalization and reduction of distances between nations, their value systems, language etc., international business environments will be explored.

Topic to be covered include: the concept, scope and nature of the business environment and environmental scanning, legislations related to business. Ethical theories of business decision, social and cultural issues in business. Theoretical and practical issues of the Nigerian political economy which dictates the basis of fiscal and monetary policies, macroeconomics management and business practices.

MGT 807.2 Introduction to General Management (IGM) 3 Credits

This course deals with the evolution of management thought, functions and responsibility of general management, understanding global management, managing through processes, managerial values, managerial decision making, planning, organizing, directing and coordination, problems affecting the character and success of the enterprise, the design and implementation of corporate strategy.

MGT 805.2 Corporate Strategies and Policy 3 Credits

This course deals with conceptual frameworks and models for the analysis of competitive situation and strategic dilemmas, insight into strategic management, analyses of external competitive environment, industry structure, value chain dynamics, etc. Topics to be covered include business opportunities, mission statements and the development of corporate strategy, building the organisation competence, resource allocation, mergers and acquisition strategies, integration strategies, building organisational competitive strategies for their effectiveness through product pricing techniques, management process and policy control. This course also discusses analysis of industry structures and dynamics, e-business, process reengineering and corporate turnaround. Case writing and analysis are fundamental to this course.

FIN.802.2 Managerial Economics 3 Credits

This course focuses on the application of principles from various fields in economics and business to management decision making, price mechanism, allocation of resources, profit drivers of the firm, revenue and cost drivers, interaction among the market players, firm strategy, understanding

market forces, the meaning of competition, pricing, and profits, market power good or evil, playing games I competition versus cooperation, play games II entry and exit, firm versus markets; make or buy, auctions and market design, economies of information.

FMS 801.2 MBA Language Programme (MBA LP) 3 Credits

This course focuses on teaching students at least one foreign language. Examples of foreign languages required include; French, German Language, Spanish etc.

MGT 809.2 Human Resource management 3 Credits

Topic to be covered should include the scope, nature, methods, and principle of organizational human resources management. The course could provide an overview of strategies and management practices in manpower planning techniques; staffing, human resource training and development, performance management and systems design, compensation designs and reward management, career planning and employee welfare, line and staff functions as well as the relationship between personnel department and other departments. Review of current principles and practices of human resource management in the Nigerian and global context.

SGS 801.2 Management and Entrepreneurship 3 Credits

This course is aimed at empowering the graduates with the relevant skills that will empower them to engage in income-yielding ventures to be responsible, enterprising individuals who will eventually become entrepreneurs or entrepreneurial thinkers and by so doing make significant contributions to nation building, national economic development, and sustainable communities. It will equip graduates with the basic skills to make them job creators rather than job seekers.

MGT 837.2 International business

Students will be introduced to the language and terminology of international business and major international, legal, political and socio-cultural, educational, demographic/labour force, economic variables in international businesses. Special attention is given to fundamental concepts of international finance, international accounting, international law, international business management and international marketing. International trade theories, challenges and risks of engaging in international business, modes of entering international business will also be examined.

MGT 838.3 International Law and Business

This course surveys trends and practices that are part of the proceeds of adjudication across national boundaries. Students will study the interrelationships among countries as these affect individuals and business organizations attempting to operate internationally. Course content focuses on transnational business activities.

MGT. 814.3 International Business Management

Course content focuses on the development of management skills related to multinational business. Students will examine the issues of operating in a foreign country or cross national boundaries and how management theory and practice in an international setting differs from those in foreign countries. Students will be introduced to the language and terminology of international business. The course focuses on the international dimension of business, including trade, financial and foreign investment patterns, and problems and policies at the corporate and national levels. It covers theoretical, institutional and case analysis of major issues, including to impact of international codes and organisations on corporate policies in home and host countries, the effect of changing governmental policies on strategies for managing international operations. It also covers legal, political and socio-cultural, educational, demographic/ labourforce, economic variables in international businesses. Special attention is given to fundamental concepts of international finance, international accounting, international law, international business management and international marketing. International trade theories, challenges and risks of engaging in international business, modes of entering international business will also be examined. Using a wide range of data sources, cases, and other empirical studies, each student will prepare and individual study of a specific company and country.

MGT 839.3 Cross-Cultural Management

The course examines the cultural, attitudinal and behavioural differences that affect international business. Course content focuses on the cultural differences between nations and how these differences affect social organizations. The management of multinational corporations from the perspective of environment, structure, process and inter-firm and intrafirm relations are considered. A comparative study of management practice in selected countries. Topics include cross-cultural methodology for management studies, impact of social environment and culture on management functions of business enterprises.

MGT 840.3 Issues in International Business

Current and significant issues in international business are examined. Course content focuses on existing theories and practices with emphasis given to new and emerging topics in the field.

MGT 841.3 International Trade and Finance

This course examines the theories, policies and instruments (tariff quotas) of international trade and considers trade integration. Course content focuses on the foreign exchange and balance of payments in international trade. Theories and policies of direct investment in foreign markets are considered.

MGT 842.3 International Business Finance

Course content focuses on the environment in which the international financial manager operates. Students will be taught the risks of doing business overseas and the tools available to minimize those risks. Foreign exchange risks, political risks, working capital management, long-term investments and financing and accounting and control are examined within this context.

ELECTIVE COURSES FOR ENTREPRENEURSHIP AND SMALL BUSINESS MANAGEMENT OPTION

MGT 823.3 Entrepreneurship

Concept and objectives. The objective is to impart knowledge and skills required to start new business. Analysis of personal efficacy and self-awareness. Personal characteristics of entrepreneurs. Identification of ideas and venture capital opportunities. Sources and availability of resources; finance; technology; manpower appropriate technology; government regulations; national and international regulatory and support environment, marketing plan, policy and strategy, accounting and keeping account, financial statements, feasibility studies and project evaluation, students' business plan.

MGT 824.3 Small Business Management

The objective of this course is to encourage effective and successful management of small business or training for future managers who will have contact in one way or the other with small firms either as bankers, consultants, investors and government officials. Topics to be covered include: small firm characteristics and trends, start-up situation and development of business plans. Venture and expansion capital, cost and benefits analysis, sources of finance, problems and prospect of small business generally and of small scale industries in particular. Case studies of entrepreneurs and small businessman (owners/managers). Students' actual proposals made to panel of venture capital firms, banks and other financial institutions.

MGT 826.3 Venture Management

This course deals with introduction, venture creation, venture growth, diversification, growth models, technology, licensing, venture strategy, venture financing and venture capital. Patent, copy rights and inventions.

ELECTIVE COURSES FOR OPERATIONS RESEARCH OPTION

MGT 817.3 Linear Programming (LP) 3 Credits

Linear programming with geometric and algebraic interpretations, duality, primal and dual simplex algorithm; primal-dual algorithm, shadow prices and perturbation analysis; the revised simplex method; transportation and network problems,

MGT 818.3 Mathematical programming (MP) 3 Credits

An introduction to integer programming and non-linear programming problems; formulation; applications; intuitive qualitative concepts, and solution techniques.

MGT 819.3 Introduction to Stochastic Process (ISP) 3 Credits

Introduction to stochastic process in 3 major areas; queues with poisson arrivals, Markov processes and renewal theory, Random walks, reliability and maintenance, winner processes and application to finance and marketing.

MGT 820.3 Applied Queuing Models (AQM) 3 Credits

Concepts of single server and multi server queues; utilization, busy period analysis, residual service times, queues length distribution, M/G 1 queues; priority rules and other service disciplines; Phase-type distribution, diffusions and other approximation techniques, effects of limited waiting room and estimation of overflow probabilities, computational methods.

MGT 821.3 Dynamic Programming (DP) 3 Credits

Principle of optimality and structural results for sequential decision process. Models of both deterministic and probabilistic systems markovian decision processes. Effect of planning horizon and interest rates. Computations drawn from inventory control production planning, combinatorial optimization and other application. Selected examples of theory and computations drawn inventory, control, production planning, combination optimization and other applications.

MGT 822.3 Theory of Games (TG) 3 Credits

Introduction to optimization problems characterized by more than one decision- maker and or more than one decision criterion. Topics include two-person games with zero- sum pay offs, admissibility and utility. Concepts of differential and stochastic games of differential and stochastic games.

ELECTIVE COURSES FOR PRODUCTIONS! OPERATIONS MANAGEMENT OPTION

MGT 810.3 Production Management Problems & Techniques 3 Credits

Economic decision problems in production management; schematic and quantitative techniques; size and location choices; process and equipment selection; aggregate production; planning and scheduling; production and inventory control; planning system; distribution system, project control, assembly balancing and sampling inspection and quality control.

MGT 811.3 Case Studies in Production & Operation Management 3 Credits

Analysis of cases illustrating decision problems in production and operation management using techniques studies in MGS 672, aggregate scheduling, job- shop scheduling; equipment replacement, inventory and production control, plant size and location.

MGT 812.3 Facilities Location Models 2 Credits

Theory and method of facility location; plant and warehouse siting; plant layout problems; and location of service facilities such as hospital and stations. Cases of actual applications.

MGT 813.3 Operations Management 3 Credits

An introduction to techniques of work measurement facility location, process planning production scheduling and sequencing, PERT and limited resource project planning.

MGT 814.3 Strategic Decisions in Production Management 3 Credits

Analysis Management decision problems in process design, equipment selection and replacement, selection of materials, project planning and control.

MGT 816.3 Project Management and Feasibility Studies 3 Credits

This course focuses on project identification, project definition and management, the concept and practice of project evaluation and appraisal, definition of feasibility studies, implications of feasibility studies; the accepted format for presenting feasibility studies report, tools used in

project management and feasibility studies e.g., techniques of monitoring, forecasting etc., such as PERT, CPM etc.

ELECTIVE COURSES FOR HUMAN RESOURCE MANAGEMENT OPTION

MGT 836.3 Organizational Behavior 3 Credits

This course deals with employees' attitudes and behaviours in organizations. Analysis of how individual, group, and organization characteristics influence employee behaviors such as participation and performance. It also examines the influence of managerial policies and practices on work attitudes and behaviours.

MGT 829.3 Compensation: Theory and Administration 3 Credits

This course focuses on the examination of the determinants of wage levels, wage structures, and individual wages; analysis of the impact of wages on work attitude and performance in organization.

MGT. 830.3 Personnel Staffing Evaluation 3 Credits

This course focuses on elements of manpower planning and internal labour markets; validation procedures for determining the potential job effectiveness and individuals, description and validity of selection instruments such as tests, interviews, and biographical data, measuring performance, turnover absenteeism and the process of performance appraisal.

MGT 831.3 Industrial Relations 3 Credits

This course deals with theories of industrial relations and the industrial relations system. Trade unionism and employers associations. Labour/management relations at the organizational and industry level. The role of government in industrial relations. Strikes and trade disputes settlements and collective bargaining in the public and private sectors of the Nigerian economy. The Nigerian labour Law.

MGT 832.3 Organizational Change and Development 3 Credits

This course outlines the basic steps or stages involved in the process of organizational diagnosis and change. Emphasis is placed upon the development of strategies necessary for gaining entry into an organization, collecting data, feeding back data to the client organization. Several specific strategies and technologies for general organizations are presented and the relative strengths and weaknesses of these strategies are presented.

MGT 834.3 Organisational Design 3 credits

This course takes an indepth study of organizational processes and structures. The following are the primary objectives:

- i. To develop an understanding of theories or approaches to the design of organizations; where design is defined primarily in terms of structure and requisite processes of coordination and information processing in organisations. To develop a sensitivity to and awareness of the "realities" of organizations.
- ii. To understand how organizational planning and design decisions are interdependent and critical to the successful implementation of strategic and short term aims of the organization

MGT 835.3 Managerial Problem Solving 3 credits

This course focuses on the practical study of managerial work. It examines communication skills and offers the opportunity for assessment and feedback. Organizational context, team building and case work.

MGT 836.3 Seminar in Organizational Behavior 3 credits

The seminar critically investigates advanced topics and themes in current theories and research on organizational behaviour.

ELECTIVE COURSES FOR MANAGEMENT INFORMATION SYSTEM OPTION

MGT 843.3 Simulation and Systems Modeling

This course focuses on the concepts of simulation, simulation software, system modeling and model validation. Statistical analysis of output data, random variable general and input probability.

MGT. 844.3 Data and Business Communications

This course deals with the overview of data and computer communication; general categories of principles, TCPJJP, internetworking family of protocols, LANs, WANs, wireless, peer to peer computing, security, and infrastructure driving networked economy. Methods, processes and functions necessary for effective communication in today's high-tech global market place.

MGT. 845.3 Social Issues of Computing

This course deals with the survey of the individual, organizational and environmental impact of computers, social and ethical issues of present and projected uses of computers, computers and workplaces, computers and communities, computers and moral values, computers and privacy, computers and education, etc.

MGT 846.3 Business Computing Environments (BCE)

This course deals with information architecture, functional characteristics of business resource planning (BRP environments, alternatives to integrated BRP environment, impact of BRP implementation on business processes.

MGT 847.3 Information Systems Analysis and Design

This course introduces the basic concept in engineering and design, techniques for analysis, design and overall software lifecycle management. Analysis, basic object-oriented analysis and development of large scale systems. Architecture in the context of business process of engineering of business information systems.

MGT 848.3 International Dimensions of IT

This course deals with national, regional and international information technology development strategies and policies; IT and national sovereignty, development and control of global information highways; international institutions and IT, convergence and divergence of information systems across nations, regions and international sectors.

MGT 849.3 E-business

This course deals with designing and implementing practical E-business centered software projects, system integration in the web environment, widely deployed scripting languages; python, perl etc. Aspects of E-business: business to business, business to customer and intranet knowledge management. E-procurement, E-payment and other applications.

MGT 850.3 Data Mining

This course deals with industry trends in data mining and business intelligence; decision trees, regression, neural net, clustering, network analysis and future selections; genetic algorithms, spreading activation, information retrieval and natural language processing. Evaluation of business intelligence systems, data warehousing, privacy issues, strategic use of information and emerging information systems in business engineering and bioinformatics.

ELECTIVE COURSES FOR INDUSTRIAL MANAGEMENT OPTION

MGT 857.3 Production and inventory management

This course deals with introduction to production and inventory management, purchasing, work simplification, value analysis, forecasting and calculation and value of economic order quantity. Master planning, material requirements planning

capacity requirements planning and production activity control.

MGT 858.3 Quality and series control

This course focuses on product quality control and reliability using sampling plans, control charts and limits, statistical evaluations of tolerance, systematic investigation of processing variables, and evaluations of reliability. The history of quality control, the impact of the methods of squires, Deming Juran, and Taguchi on competitive position, the International Standards Organizations (ISO). The 150 900 series of standards to include, ISO 9000, 9001, 9002. 9003 and 9004 and Workforce Development.

MGT 859.3 Industrial Safety

This course deals with the control of industrial hazards through safe-guarding machineries and processes, mechanical guards, remote control, nature and analysis of accidents, and control of accidents, laws, electrical safety, lifting, oxyacetylene welding, fire safety, chemical safety, grinding wheel safety, eye safety etc.

MGT 860.3 Waste Management

This course deals with waste and environment handling of solid waste substances which are original converted raw materials and in most cases, can be reconverted. Monitoring adverse health effects of wastes and hazardous materials.

MGT 861.3 Computer Integrated Manufacturing (CIM)

This course deals with the role of CIM components. The planning of CIM, the CIM implementation and management, and overcoming obstacles to implementation. The strategic, leadership, operational and material flow process associated with the planning and implementation of CIM.

MGT 862.3 Management of Technology

This course deals with technology and managerial challenges in hi-tech industries, forces affecting nature and rate of technological innovation, developing technology vision and forecasting (examples and emphasis on micro-electronics, computers and telecommunications, medical device technology, etc).

ELECTIVE COURSES FOR GENERAL MANAGEMENT OPTION

MGT 851.3 Corporate Management

This course will provide an integrative view of business operations and decision making interconnected business accounting marketing, management and financial problems using both theory and case methods will be examined and

policy solutions sought complex business problems will be identified, solved and control measure set in motion.

MGT 852.3 Human Resource management 3 Credits

Topics to be covered should include the scope, nature, methods, and principle of organizational human resources management. The course could provide an overview of strategies and management practices in manpower planning techniques; staffing; human resource training and development; performance management and systems design; compensation designs and reward management; career planning and employee welfare; line and staff functions as well as the relationship between personnel department and other departments. Review of current principles and practices of human resource management in the Nigerian and global context.

MGT 853.3 Entrepreneurship Development and Small Business Management 3 Credits

The objective this course is to impart knowledge and skills required to start new business. Analysis of personal efficacy and self-awareness. Personal characteristics of entrepreneurs. Identification of ideas and venture capital opportunities. Sources and availability of resources; finance; technology; manpower, appropriate technology; government regulations; national and international regulatory and support environment; marketing plan, policy and strategy; accounting and keeping account, financial statements; feasibility studies and project evaluation; business plan. Students will also learn the skills and strategies for effective and successful management of small business or training for future managers who will have contact in one way or the other with small firms either as bankers, consultants, investors and government officials. Topics to be covered include: small firm characteristics and trend; start-up situation and development of business plans. Venture and expansion capital, cost and benefits analysis, sources of finance; problems and prospect of small business generally and of small scale industries in particular. Case studies of entrepreneurs and small businessman (owners/managers). Students' actual proposals made to panel of venture capital firms, banks and other financial institutions.

MGT 854.3 Comparative Management 3 Credits

In this course, students are exposed to the opinion differences about the universality of management which are attributed to the fact that management as science (organised knowledge) has universal application, but the practice of management is an art. To achieve these objectives, students are made to appreciate how external environmental factors

such as demographics or labour force characteristics, educational factors, socio-cultural factors, legal-political factors, economic factors as well as internal environmental factors such as management philosophy; organisation structure, etc. lead to difference in the managerial effectiveness of managers in different countries. Students will be introduced to the management principles and practices in different companies- Japanese management as opposed to western management practices of enterprise managers in the public and private sectors.

MGT 833.3 Advanced Organisation Behaviour 3 Credits

This course exposes students to essential theories and concepts for anglicizing managerial problems, individual and group analysis of cases and experiential exercises in the organization, exchange of ideas and experiences in the classroom, intensive field-based project work in groups. Topics covered in this area include: individuals and group behaviour, motivation, organisation design theory, work design and control. Other topics include leadership style, group decision-making, organisational socialisation, power and influence, group dynamics, organisational communication dynamics, union-management dynamics and conflict management.

MGT 837.3 International business 3 Credits

Students will be introduced to the language and terminology of international business. The course focuses on the international dimension of business, including trade, financial and foreign investment patterns, and problems and policies at the corporate and national levels. It covers theoretical, institutional and case analysis of major issues, including to impact of international codes and organizations on corporate policies in home and host countries, the effect of changing governmental policies on strategies for managing international operations. It also covers legal, political and socio-cultural, educational, demographic/labourforce, economic variables in international businesses. Special attention is given to fundamental concepts of international finance, international accounting, international law, international business management and international marketing. International trade theories, challenges and risks of engaging in international business, modes of entering international business will also be examined. Using a wide range of data sources, cases, and other empirical studies, each student will prepare and individual study of a specific company and country.

3. COURSE DESCRIPTIONS FOR THE M.Sc PROGRAMMES IN THE DEPARTMENT OF MANAGEMENT

A. M.Sc (MANAGEMENT) PROGRAMME:

The programme consists of selected courses from all the disciplines in business administration which is coordinated in a way that they may be directed towards the preparation of candidates for further graduate work in business administration.

MGT 800.1 Management Theory

The intent of this course is to expose students to the basic issues and theories with regard to the practice of management in contemporary organisations. It examines the introduction and integration of the evaluation and the development of theories and concepts, their application in the field of management. Students are expected to critically analyse the different perspectives within the field of management. Development of management models (Rational goals, internal process, human relations and open system models): organisational effectiveness, business environments, technology design and performance; images of organisations and implications for research and practice; organisational ecology; institutional theories organisational culture and climate; organisational learning and globalisation theory. This is tended to build a theoretical foundation for the understanding of management issues, and provide guidance for research activities in the programme.

MGT 801.1 Global Economic Environments

This course is to help situate Nigerian economy within the broader global economy. It examines the implementation of the movement towards free market economy on stakeholders including business, government, consumers, labour and public. This takes a multidisciplinary approach drawing from international politics, economy, and finance, cross-cultural and business management. Topic covered here include: Strategic aspect of international trade, globalisation/international institutions, industrialisation strategies, determinants of economic growth and poverty reduction in Africa; global power and wealth distribution; lessons from Asian and Mexican financial crises; multilateral negotiations, global culture and information technology, exchange rates/inflation/interest rates.

MGT 802.1 Strategic Management

This course deals with theoretical and practical aspects of strategy formulation and implementation. Attention is placed on the art of strategic thinking leading to creativity and innovation as well as the rational strategic planning

process. Topics covered include business opportunities, mission statements and the development of corporate strategy, building the organisation competence, resource allocation, mergers and acquisition strategies, integration strategies, building organisational competitive strategies for their effectiveness through product pricing techniques, management process and policy control. This course also covers analysis of industry structures and dynamics, assessing positions, actions, and reactions of competitors; processes of strategic planning, technology strategy and e-business, process reengineering and corporate turnaround. Case writing and analysis are fundamental to this course.

MGT 803.1 Advanced Organisation Behaviour

This course is designed to aid students in understanding organizations both at the micro and macro levels. Specifically, this course examines rigorously, the structure, function and people in the organisations and society. It helps students understand the behavior of individuals and groups in the organisation. Topics covered in this area include: individuals and group behaviour, motivation and job satisfaction, organizational dynamics, micro and macro perspectives; organizations and the systems concept; organizational entry, bases of individual attitudes and behaviours in organizational settings, individuals and their relationships in organizations; and group and inter-group behaviours; organizational design and structures, work design and control. Other topics include leadership style, group decision —making, organisational socialization, power and influence, group dynamics, organisational communication dynamics, union- management dynamics and conflict management; organisational efficiency and effectiveness; environmental factors and organisational structures; Typology/Taxonomy of organisations; organisational politics; organisational change and development; organisation and environment.

MGT 804.1 Management Information System

This course is designed to expose students to the practical appreciation of computerized data processing of business activities. Topics covered include: system analysis, fact finding techniques, fact recording, data analysis, dialogue design, Input/output design and analysis, data control and the promotion of information sharing in the organisation; meaning and use of information technology; evaluation and administration of MIS with emphases on computer based systems, meaning of information technology and its application in business finance and management.

MGT 805.1 Research Methodology

This course is designed to sharpen the students' skills and appreciation of organized enquiry. The course is designed to cover such topics as: meaning and nature of research; comparison between research, common sense and science; types of research; the research circle; selecting research topics, problem and hypotheses formulation, the basic principles of research design, sampling procedures, research instruments, methods of data collection and analyses and interpretation; hypothesis testing, parametric procedures and presenting of research reports; research and the issue of relevance; ethical issues in research.

MGT 806.2 Quantitative Analysis

Analytical tool is very vital to acquisition and development of managerial skills. Hence, there is the need to expose students to basic quantitative analysis and reasoning and its application to management decision making. The course introduces students to basic problem solving techniques in decision making. It provides them with set of mathematical models which are directly applicable to situations in business and government. Topics to be covered shall include: set theory; basic concepts in probability; probability distributions; decision theory; forecasting models and techniques, linear programming (graphic and simplex methods); introduction to operations research, queuing models; network models; introduction to operations research and simulation.

ECO. 800.1 Economic Theory (provided by Department of Economics)

MGT 807.2 Strategies and Structure

This course will be built on a base of the study on organizations and focus on the ways organizations are structured to suit the evolving strategies and the mutual impact of strategy and structure.

MGT 808.2 Comparative Management 3 Credits

In this course, students are exposed to the opinion differences about the universality of management which are attributed to the fact that management as science (organised knowledge) has universal application, but the practice of management is an art. To achieve these objectives, students are made to appreciate how external environmental factors such as demographics or labour force characteristics, educational factors, socio-cultural factors, legal-political factors, economic factors as well as internal environmental factors such as management philosophy; organisation structure, etc. lead to difference in the managerial effectiveness of managers in different countries. Students will be introduced to the management

principles and practices in different companies- Japanese management as opposed to western management practices of enterprise managers in the public and private sectors.

MGT 809.2 Diversity and Conflict Management

This course deals with managing and resolving workplace conflict and examines dispute resolution and conflict management in both various and non-various settings. The course covers two related topics: (1) third- party dispute resolution, including alternative dispute (ADR). It focuses primarily on the use of mediation and arbitration but also deals with other dispute resolution techniques, such as fact finding, facilitation, mini-trials, early neutral evaluation peer review, and the ombuds function: (2) conflict management in organizations, including the recent development of conflict management systems. This course also reviews the factors that have cause the growth of ADR and conflict management systems, and it provides instruction on the design, Implementation and evaluation of such systems.

MGT 810.2 Rewards and Compensation Management

This course will familiarize students with the basic responsibilities of the Human Resources function in organization. This course covers topics such as strategic manpower planning, job analysis, employees' recruitment, selection, training and development, career planning, performance appraisal, reward management or compensation and international HRM. It also covers such topics as incentives and fringe benefits administration, collective bargaining, labour management relations, retirement. Students will learn about the various tools and techniques available to Human Resources professionals (such as environmental scanning, Delphi methods and transition probability matrices, performance appraisal instruments, selection techniques, job evaluation methods, and some of the various applications of needs analysis); through the use of lectures, case analyses, student presentation, and textbooks with supplemental readings to enrich the students' knowledge.

SGS 801.2 Management and Entrepreneurship 3 Credits

This course is aimed at empowering the graduates with the relevant skills that will empower them to engage in income-yielding ventures to be responsible, enterprising individuals who will eventually become entrepreneurs or entrepreneurial thinkers and by so doing make significant contributions to nation building, national economic development, and sustainable communities. It will equip graduates with the basic

skills to make them job creators rather than job seekers.

MGT 816.4 M.Sc. Seminar

This course introduces the student to the skill of writing seminar papers. How to write journal articles, use of internet to access materials, retrieve the materials and use them for journal articles, referencing techniques and cross referencing of materials etc. The Students' position paper will be presented and evaluated.

MGT 817.4 M.Sc., Dissertation

The M.Sc., dissertation is designed to give each student the opportunity to undertake a sustained piece of research work. The students will work under the supervision of an appointed post graduate supervisor. The specific research topic is chosen from any area of management that is of interest to the students. The research topic is approved by the students' supervisor and ratified by the Departmental Post Graduate Committee. The students are required to provide detailed reports of their original research work and thereafter present/defend same before an appointed external examiner.

ELECTIVE COURSES

MGT. 811.3 Business Policy 3 Credits

This course deals with conceptual frameworks and models for the analysis of competitive situation and strategic dilemmas; insight into strategic management; analyses of external competitive environment, industry structure, value chain dynamics, etc. Topics covered include business opportunities, mission statements and the development of corporate strategy, building the organisation competence, resource allocation, mergers and acquisition strategies, integration strategies, building organisational competitive strategies for their effectiveness through product pricing techniques, management process and policy control. This course also discusses analysis of industry structures and dynamics, ebusiness, process reengineering and corporate turnaround. Case writing and analysis are fundamental to this course.

MGT 812.3 Economy and Industry Analysis

The basis of formulating strategy is the assessment of the environment in all its dimension. This course will focus on the use of concepts and techniques used in environmental and industry analysis and in identifying trends and changes in the environment. These will include: economic, social and technological forecasting, Delphi method, Scenario. This course provides managers with an overview of the economic environment within which business must operate, and an

understanding of some of the analytical tools that economists use to solve business and economic problems. The focus is to enable students to identify, understand and evaluate the domestic and global forces causing economic change. Key concepts and ideas from both microeconomics and macroeconomics are introduced. Topics relevant to real- world issues and problems provide the focus for in-class discussion. With this course, students are expected to be familiar with the fundamental concepts of economics, and to be able to analyze how changes in the economic environment affect business performance and future strategic options. On the other hand, students are exposed to current trends/industry analysis/research curriculum is to explore, interpret, and use current industry trends. The instructor will lead participants through an open discussion on how to access this information and apply it to basic business practices including the use of term papers and case studies.

MGT 813.3 Operations Management

This course deals with aggregate planning methods with emphasis on the mathematical model; seasonal production planning and workforce planning. Integration of planning and scheduling levels in hierarchical systems. Determination of capacity in services systems; services design and service mix problems. Concepts, models and theories relevant to the management of the processes involved to provide goods and/or services to consumers in both the public and private sectors; production, inventory and distribution functions, scheduling of services or manufacturing activities; facilities planning and device of technology. This course is intended to discuss issues in operations strategy, process analysis and the use of data and managerial opinions in making effective propositions to address the questions in the identified cases. Major economic decision, problems of production and operations management; aggregate production and work force scheduling; multi-plant allocation of product; large scale project control (CPM and PERT); production and inventory control; demand forecasting; quality control; and short run job shop scheduling; the interaction of production problems with those of other functional areas, queuing theory, dynamic programming, multiple regression and correlation.

FIN. 850.3 Advanced Corporate Finance

This course is design to introduce student to an advanced treatment of theories and three decision areas or financing, investment and dividend. This course therefore examines the effects of various corporate financial policy decisions (example capital structure, working capital, capital budgeting and dividend policies) on the values of

the firm. Issues to be examined include: financial structure, capital structure, market valuation of risky assets under uncertainty, risk and uncertainty management strategies, capital budgeting, operation of capital market and money market, analysis for investment in securities, portfolio theories and the concept of diversification, efficient market theory, cost of capital, dividend policy, corporate financial problems example leasing, mergers, and of new securities, the institution of Zakat, the insurance debate and the non-interest banking and financial system. This course also helps students to understand financial ratios, current assets, investment and capital structure such as money and capital markets.

MGT 814.3 International Business Management

This course focuses on the international dimension of business, including trade, financial and foreign investment patterns, and problems of policies at the corporate and national levels. It covers theoretical, institutional and case analyses of major issues, including the impact of international codes and organisations on corporate policies at home and in the host countries, the effect of changing government policies on strategies for managing international business operations. Using a wide range of data sources, cases, and other empirical studies, each student will prepare an individual study of specific firm and country.

MGT 815.3 Organisational Development and Change

This course examines the problem associated with implementing change in the organisation; the role of external consultants, entering and contracting consultants, determining needs and measuring relevant variables; change management. Students are expected to examine the theory, and techniques for organisation diagnoses both at personal, group and organisational levels, data collection, analyses and writing and presenting reports, etc.

B. M.Sc. (HUMAN RESOURCE MANAGEMENT) PROGRAMME:

MGT. 819.1 Human Behaviour in Organizations

This course examines rigorously, people in organizations and society. Topics include organizational dynamics micro and macro perspectives; organizations and the systems concept; organizational entry, motivation and job satisfaction, bases of individual attitudes and behaviour in organizational settings, individual and their relationships in organizations; and group and inter group behaviour.

MGT. 820.1 Human Resource Management in the Public Sector

The course provides the student with tools to make administrative decisions regarding personnel in public and nonprofit settings. These include human resource planning, recruiting, coordinating, development, compensation, and evaluation. Important additional influences are examined such as legal, environmental, behavioral, sensitivity, labor relations, and grievance systems.

MGT. 821.1 Performance Evaluation and Control

This course focuses on the theoretical underpinnings, analysis, design, and implementation of performance appraisal, control, and reward methods, tools and systems. Directs critical attention to measurement, motivation, personality, goal setting and behavioral theory and concepts and applies them to the selection of performance criteria and incentives. Includes the design of performance appraisal instruments and control reward systems; and the management of the implementation process, for example, involving performance feedback and behavior modification of performance, control, and reward systems in an existing organization. It may discuss topics performance appraisal, compensation, benefits, and incentive systems. In the area of performance appraisal, topics to be studied include systems, methods, rater errors, and interviewing. Other topics to be explored include pay plans, compensation administration, flexible benefits, health plans, individual and group incentives, employee motivation, and HRIS.

MGT. 822.1 Managing Diversity (Cultural Differences)

This course is designed to provide an understanding of the diverse people that are involved in the employment relationship and how to manage such without disrupting the flow of work. Such diversity includes cultural, gender, generational, religious among others. Participants are expected to study the different ways various cultures think, communicate and behave, particularly within business contexts, in order to develop a necessary level of cross-cultural competency. Today's global business implies co-operating, coordinating, negotiating and supervising, using management processes appropriate to the cultural context. The student will explore cultural implications in those management processes, as well as its impact on team-building, ethics, conflict resolution and creative problem-solving. Students will also study their own culturally-based perceptions, patterns of thinking and behavior, communication styles, values and how they can be adapted to an intercultural context. Although the course will primarily deal with cultural differences in national culture

context, it will also address cultural differences in gender and in organizational level as long as they affect the global business environment.

MGT. 823.1 Human Resource Training and Development

This course examines key principles relevant to training and development, including the role of training in an organization, adult learning theory, needs assessment, training methodology, organizational support, resources and constraints, evaluation of training, and managing the training function. International training considerations are also addressed. Issues that influence training implementation, such as ethics and interpretation, are also reviewed. Students design and develop training modules in response to the needs of a client organization and of adult learners.

MGT. 824.1 Research Methodology

The objective of this course is to deepen the understanding of the students, of the traditional scientific research methods. Topics to be discussed include Research in Social, Physical and natural sciences; problems of research in developing countries; common errors in research; types of research; and research in practice: selecting a topic, problem and hypotheses formulation, research design, instruments and data collection data analysis and interpretation, research report, etc.

MGT. 826.3 Industrial Relations

This course discusses the determination, acquisition, development, utilization and maintenance of human resources by employment organizations. Covers manpower/employment planning, recruitment and selection, training and development, performance evaluation, and compensation administration, while giving special emphasis to labor-management relations. Considers whether recent developments such as concession bargaining, worker participation programme and the growth of nonunion firms represent a fundamental transformation in industrial relations practice, review recent research and new theories arguing that such a transformation is occurring, also reviews the counterarguments and evidence put forth by those who believe no such transformation is underway.

MGT. 827.3 Strategic Management

The course is intended to introduce participants to strategic and futuristic thinking and planning; and theories, skills and tools for translating long-term plans into attainments. Topics to be covered include visioning, setting strategic goals, objectives and targets, preparing, implementing,

monitoring, evaluation and review of strategic plans while contextualizing discussions within the private and public sector settings. An integral component, futures studies, shall involve an introduction into thinking about the future, the foundation of the field, its methodologies, link to planning, decision-making, strategy and public policy.

MGT. 825.2 Human Resource Planning

This course will emphasize decision-making processes in the development and maintenance of various programme elements in human resource management. Decision analysis will also be considered. Traditional and current issues-oriented programming will be addressed. Programme elements that may be included are human resource

MGT. 828.3 Negotiations

This course examines the dynamics that occur before, during, and after negotiations and the theory behind various negotiation approaches. Topics to be addressed will include: claiming versus creating value (also known as distributive and integrative bargaining); preparation strategies the nature of power; psychological aspects of negotiation; experience and expertise; multi-party/group negotiations; culture and gender; communications and perception; mediation and other alternative dispute resolution systems; working with lawyers; organizational change, and salary negotiations.

MGT. 829.3 Managing Organizational Change

Management of change is designed to acquaint participants with the issues, techniques, and strategies for the management of change. The first part of the course concentrates on developing expertise in predicting relevant changes in the organization's task environment and making sure that change initiatives are in harmony with environment. Techniques for environmental scanning and task forecasting will be explored and useful models analyzed. Students will also discuss and make presentations on current issues such as employee ownership, team-based management, mergers and acquisitions, and organizational renewal, etc. By course end, participants will understand the techniques for creating a change, managing resistance, and applying change models to various industries and situations.

MGT. 830.3 Qualitative Research Methods

This course will focus on the styles of research, analysis, and epistemologies associated with qualitative research in the social and policy sciences. The objective is for students to gain confidence in the applicability and relevance of non-quantitative methods in our research environment, where the tradition of believing in

“objective measurement” is strong. Qualitative research methods open up for us a class of research questions that is not accessible within the “normal” scientific method. That is, as researchers, we can ask new questions if we have a richer repertoire of tools, both the qualitative and the quantitative from which to choose. Topics to be discussed include the basics of qualitative research methods and research approaches. Some qualitative research approaches, such as phenomenography, activity theory and ethnography, data collection methods such as interviews, field studies and rapid rural appraisal, and observations; and evaluating collected data.

MGT. 831.3 Organizational Theory

This course is an introduction to the major theoretical approaches and debates in organizational theory, which draws primarily on sociology and secondarily on economics, psychology, and political science to explain the basic building blocks of modern society. The purpose of this course is to provide you a roadmap for you to roam the terrain of organizational theory. Accordingly, we will start with the classics and then trace the history of ideas as the field has evolved to the present.

MGT. 832.2 Labour Market Analysis

In-depth treatment of the characteristics and problems of labour markets in developing countries. Analysis of the theories which explain the evolution and functioning of such markets. The specific content include structure and characteristics of internal migration, employment problems, skill generation and labour market needs, wage determination. Inflation and government policies and the effective functioning of urban labour markets.

MGT. 833.3 International Labour Movement and Institutions

This course would discuss in details the International Labour Organizations (ILO), origin and growth. It will also look at the other institutions that work with the international labour movement including its agencies. The contributions of the international labour movement in labour issues around the world and its relationship with various governments would be discussed.

MGT. 701.1 Micro-economic Theory (see Department of Economics)

MGT. 701.2 Macro-economic Theory (see Department of Economics)

C. M.Sc INDUSTRIAL AND LABOUR RELATIONS PROGRAMME:

MGT. 834.1 Labour History and Philosophy

This course examines the organized labour movement in Nigeria and its influence on political and legal institutions. Topics covered include: the emergence of wage employment, the origin and evolution of trade unions. In addition, it reviews Nigerian labour history from the perspectives of workers social dimensions of the development of the working class, reform and revolutionary movements. It also includes the discussion of the development of trade union institutions and leaders and the evolution of union political activities and collective bargaining.

MGT. 835.1 Labour Law

This course surveys and analyses the laws governing labour management relations and employee right in the workplace in Nigeria. Topics include; the legal framework of collective bargaining, problems in the administration and enforcement of agreements, protection of individual employee right including such topics as employment discrimination, the development of law of unjust dismissal, and union democracy.

MGT. Case Studies in Labour-Management Relations

This course surveys labour management relationships in a variety of organizational settings in Nigeria using case study technique.

MGT. 836.1 Industrial Relations Theory

This course traces the evolution of theory and research on industrial relations. Topics include: theories of the labour movement; institutional models and evidence regarding what unions do; origins of internal labour markets and their relationship with unions; models of strikes; empirical assessments of arbitrations; research on union decline; and empirical evidence of the impacts of new technology and globalization.

MGT. 837.3 Comparative Industrial Relations

This course focuses on identifying the similarities and differences in industrial relations in selected countries of Europe, North America, Africa, Latin America and Asia. It examines trade unionism and industrial relations of these countries showing their roles in economic, social and political developments. It takes historical, analytical and comparative perspectives in the study of the industrial relations of the selected countries. Topics include: structure and functions of labour movements: interaction between unions and political organizations; national labour policies; resolution of workplace problems and the functions of international organizations in labour relations among others.

MGT. 838.1 State and Industrial Relations

The course would focus on the conceptualization and theories of the State, Members and institutions of the State, Determinants of State action in TR: Theory of the State in IR, labour policy, theoretical overview of the role of government: the Marxist perspective, democratic elitism, pluralism: The role of government in JR from 1960 to date.

MGT. 839.2 Trade Unions and Management in Nigeria

This course focuses on the evolution of Unionism as well as the principles and practices of effective union management. Students learn the dynamics of democratic organizations and the development of labour union leadership. It is taught in two parts; the first part looks at the evolution of trade unionism in Nigeria with special reference to the rise of the Nigerian working class. It also considers the structure of the labour force and growth of trade unions with primary emphasis on their organization, leadership and ideology. In addition, it looks at the emergence of central labour organizations. The second part of the course focuses on management. Issues examined include the emergence of employers' organization, methods of decisions making and lines of responsibility, managerial ideology, indigenization, legal obligations of unions and union officials and other labour union related policies in Nigeria.

MGT. 805.1 Research Methodology

The course allows students to develop the skills to critically evaluate a wide variety of research relating to unions and the work place. It exposes students to the quantitative and qualitative research techniques used by trade unions and in the field of industrial relations. Topics include: research design, methods, techniques, and procedures applicable to research problems in labour studies.

MGT. 817.4 Thesis

Thesis provides the scholarly approach or the opportunity to undertake independent research of an industrial and labour relation issue or a case study of an organization or several organizations and to develop the ability to express their ideas in an organized form.

Specialization Areas:

(1) Labour Management Relations

MGT. 840.3 Seminar in Nigerian Labour Relations

Seminar in Labour Relation is designed to cultivate and hone the skills of students to prepare for and participate in collective bargaining process in Nigeria. Students are allowed to prepare and present scholarly papers in areas such as labour law reform in Nigeria, union growth and structure

in Nigeria, alternative dispute resolution mechanism in Nigeria, collective bargaining by Federal, State and Local government employees, impact of collective bargaining on wages and other conditions of employment in Nigerian organizations etc.

MGT. 841.3 Principles and Techniques of Collective Bargaining

This course deals with collective bargaining and negotiation in Nigeria. It gives a critical understanding of the institutions of unionism and collective bargaining, their rationale, policies, programmes and effects on workers, organizations and the society. Topics include; theory and practice of collective bargaining and negotiation, bargaining structure and practice, union and campaign power analysis, role of membership in bargaining, interest-based bargaining, strategic and coordinated campaigns, strikes and lockouts, bargaining in a global economy etc.

MGT. 842.3 Industrial Conflicts and Dispute Management

This course looks at forms of workers' protest and resolution of industrial conflict. It examines conflict resolution and management in both public and private organizations. Topics include: third party dispute resolution, mediation and arbitration, fact finding, facilitation, mini-trials, early neutral evaluation, peer review etc.

MGT. 843.3 Compensation and Benefit Systems

The course provides a comprehensive understanding of compensation systems and how organisations use them to attract and motivate employees. Topics covered include: legal constraints, job analysis and evaluations, performance appraisal, person based pay, setting and administering pay, structures, incentives, benefits and the compensation of special groups, theory and practice relating to organizations system strategy, design and administration, job evaluation, pay survey structure, pay administration, group incentives and benefits such as pensions, childcare, health care etc.

MGT. 844.3 International Labour Bodies

An examination of the emergence and roles of international bodies and agencies involved in employment relations, such as the ILO. AU Labour Commission, OATIJU and international trade union organizations. The impact of these bodies on industrial peace and fair labour practices.

MGT. 845.3 Collective Bargaining Simulation

This course exposes students to real life collective bargaining issues and processes. They prepare for and participate in a simulated negotiation between a hypothetical corporation and a hypothetical union in a typical big company with mid-size

single site bargaining unit context. Students are assigned, usually in line with preferences, to either a management or union bargaining team. The course stresses the negotiation process over settlement or substantive outcomes. Negotiation problems are as real life as possible, constrained by student time needs and with attention given to dynamic legal, political, economic, and communications concerns as well as power, information, and time factors. Participants plan for negotiations, reach agreements in principle and negotiate language, bargain wages, pensions, health care and noneconomic items in the context of a company and union with an established contract, policies, and culture. This is a hands-on programme with active participation considered essential.

2. Human Resource Development

MGT. 846.4 Seminar in Human Resource Development in Nigeria

The course focuses on developing the knowledge and skills to design, implement and evaluate human resource development programmes generally but gives consideration to recruitment, selection and development of human resource. It deals with how to establish appropriate recruitment strategies, choose effective selection tools etc. Students will also how to create, use and evaluate pattern behavior, describe interview questions to increase validity and reliability in the selection process etc.

MGT. 847.2 Human Resource Economics

This course takes a critical review of labor-market trends, data collection systems, and theories pertaining to public efforts to develop the employment potential of the nation's human resources and to combat unemployment. It examines the major segments of the nation's educational training enterprise (e.g., public education, higher education, employer-provided training, apprenticeship, and special training programs for the economically disadvantaged). It also covers policy issues pertaining to welfare reforms, direct job creation, worker relocation, economic development, and targeted tax credits.

MGT. 820.1 Human Resource Management

This course will familiarize students with the basic responsibilities of the human resource functions in organizations. It covers topics such as strategic planning, job analysis, recruitment, selection, training and development, career planning, performance appraisal, and compensation. In addition, it covers current topics in HRM that border on environmental and organizational challenges, such as technology, globalization, legislation, restructuring, work/life balance,

changing labor markets etc. The course also places emphasis on developing relevant problem solving and critical thinking skills because the basic concepts of HRM and the skills developed in this course are applicable to all types of organizations and jobs.

MGT. 848.2 Human Resource Simulation

The course uses a simulation model and an open-systems approach (as means) to enhance students' skills in strategic planning and managerial decision making. Attention is given to the implications and effects of strategic human resource managerial and supervisory decisions as measured by some organizational performance indicators, including quality of work life, employee productivity, customer satisfaction, employee retention, internal control, and the bottom line. Each student is assigned to a group (team) of five to ten members and must be committed to the work of that group.

MGT. 849.2 Human Resource Information Systems

This course is a comprehensive analysis of human-resource information systems with exploration of major applications and use of systems to improve decision-making, it emphasises hands-on use of technology in human resource planning, selection, appraisal, and compensation. In addition, the course provides an introduction to the development and use of information systems to organise and retrieve data pertinent to human resource and industrial relations operations. It focuses on understanding how and why human resource information systems are developed, maintained, and managed. Consequently, the course familiarizes students with general design issues, choices to be made, and problems encountered in the creation of an IS, and it also provides students with rudimentary applications' programming skills. Furthermore, the course examines ways to make databases efficient and consistent. Production database systems such as PeopleSoft also are reviewed and used. A computer laboratory is used to introduce the different software packages.

MGT. 850. Field Study in Strategic Human Resource Management

This course provides students with in-depth classroom instruction on HRM in a specific region of the world, and a one-to three-week visit to the region to explore human resource strategies and practices firsthand. Attention is paid to the development of selected European business entities, the history, role, and current efforts of the European Union in the workplace, and local cultural nuances as they affect the world of work. Students are asked to compare and contrast significant aspects of the dominant Nigeria strategic HR model with strategic HR models

found in the other countries. Students incorporate their learning in the classroom and on the field visit in a final paper and on class presentation. Papers and projects are essential parts of the course.

3. Collective Bargaining

MGT. 851.3 Collective Bargaining

This course is a comprehensive introduction to collective bargaining in Nigeria, the negotiation, scope, and day-to-day administration of contracts, the major substantive issues in bargaining, including their implication for public policy, industrial conflict, the major challenges facing unions and employers today, Nigeria industrial relations in international and comparative perspective. Topics include: theory and practice of collective bargaining and negotiation, bargaining structure and practice, union and campaign power analysis, role of membership in bargaining, interest based bargaining, strategic and coordinated campaigns, strikes and lockouts, bargaining in a global economy etc.

MGT. 841.3 Principles and Techniques of Collective Bargaining

This course deals with collective bargaining and negotiation. It gives a critical understanding of the institutions of unionism and collective bargaining; their rationale, policies programmes and effects on workers, organizations and the society. Topics include; theory and practice of collective bargaining and Negotiation; bargaining structure and practice; union and campaign power analysis; role of membership in bargaining, interest based bargaining, strategic coordinated campaigns, strikes and lockouts; bargaining in a global economy etc.

MGT. 845.3 Collective Bargaining Simulation

This course exposes students to real life collective bargaining issues and processes. They prepare for and participate in a simulated negotiation between a hypothetical corporation and a hypothetical union in a typical big company with mid-size single site bargaining unit context. Students are assigned, usually in line with preferences, to either a management or union bargaining team. The course stresses the negotiation process over settlement or substantive outcomes. Negotiation problems are as real life as possible, constrained by student time needs and with attention given to dynamic legal, political, economic, and communications concerns as well as power, information, and time factors. Participants plan for negotiations, reach agreements in principle and negotiate language, bargain wages, pensions, health care and noneconomic items in the context of a company and union with an established contract, policies, and culture. This is a hands-on program with active participation essential.

MGT. 839.2 Trade (Labour) Union Management

The course studies and analyses the structure and operations of Nigerian unions, including the complicated and complex internal life of the organizations: the varied environments in which unions develop and grow or decline; the relationship of national unions, local unions, and members in the context of internal union government; the ways in which unions are set up to handle organizing, collective bargaining, contract management, and political activities, It also examines the role of union leaders and the strategic choices they make. Attention is also given to current developments in the labour movement and to the eternal problems of attaining union democracy.

MGT. 852.3 Labour Arbitration and Alternate Dispute Resolution

This course looks at the legal framework for contract negotiations and administration. Topics include: National Labour Relations Acts; right to organize and undertake concerted activity; strikes and lockouts and unfair labour practices.

MGT. 841.3 Current Issues in Bargaining

This course is designed to provide an in-depth analysis of the contemporary collective bargaining process from a strategic and theoretical perspective. It takes a critical review of recent literature on bargaining theory and practice as well as an analysis and evaluation of a series of contract negotiations from a variety of industries, unions, strategic models, and outcomes. Topics covered include: changing bargaining climate, bargaining theory, changes and variations in bargaining structures and practices, union and company power analysis, role of membership in bargaining, interest-based bargaining, strategic coordinated campaigns, strikes and lockouts, bargaining in a global economy, labour coalitions, concessions and job security, and settlement.

D. MSc. (MANAGEMENT INFORMATION SCIENCE) PROGRAMME:

MGT. 853.1 Management Information Resources: Characteristics and Types

Examines the characteristics that distinguish management information resources, their types and the offices that generated them, lifecycle of information resources: creation, storage, utilization, preservation, and disposal. Problems in the acquisition, storage and preservation of information resources.

MGT. 854.1 Information Representation, Organization and Retrieval

Exploration of methods of representing information and organization for efficient storage and retrieval of information and records. The course will expose students to the design of information retrieval systems and conventional methods of information representation and organization.

MGT. 800.1 Management Theory and Practice

Conventional and modern conceptions of management; definition and dynamics of management theory; features of theories of management; applications and relevance of theories in the management of information organizations in Nigeria.

MGT. 855.1 Database Management

Critical examination of manual and computerized data bases on various subject areas covered by the organization with particular reference to file structure and file organization updating information, revision etc.

MGT. 856.1 Information Technology

Examination of variety of information technology relevant to management information handling namely, telecommunication, E-mail, facsimile, teletext, computer, reprography and micrograph, etc.

MGT. 857.1 Evaluation of Management Information Resources and Systems

Critical analysis of management information resources and systems in relation to selected parameters such as relevance, timeliness, appropriateness, etc.

MGT. 816.4 Graduate Seminar in Management Information Science

An examination of contemporary issues in Management Information Systems in consultation with supervisor. The seminar paper is presented at departmental or faculty seminars.

MGT. 817.4 Thesis

Original research independently conducted by the student under the direction of a supervisor.

FIN. Financial Management and Strategy

Examines the theoretical and practical aspects of financing organizations and institutions as well as the strategies adopted in attracting increase in budget allocation. Topics to be considered include macro/micro allocation of resources, types of budgeting, incrementalism, programme budgeting, zero base budgeting, MBO, etc

MGT. 892.1 Strategic Management

This course deals with Management Information Systems focusing on the nature and dynamics of organizational policies, missions and objectives;

strategic planning process, techniques for strategic appraisal, SWOT analysis, development of strategic options, etc.

MGT. 858.2 Information Behaviour of Organizations and Institutions

The course examines the information needs, searching behaviour, the utilization and non-utilization of management members of organizations and institutions. It also examines policies procedures and ethics on information in the organization.

MGT. 859.2 Preservation and Security of Management Information Resources and Systems

The modern methods for preserving and securing management information resources and systems will be examined in this course. Topics to be covered include threat to information resources and systems, techniques for combating the threats etc.

MGT. 860.2 Automated and Networked Information Systems

Computerized and networked information systems will be examined in this course. Case studies of such systems will be critically examined to know their strength and weaknesses.

MGT. 861.2 Independent Study in Management Information Science

A case study of Management Information Science conducted under the supervision of a lecturer will be the main focus of this course.

4. COURSE DESCRIPTIONS FOR THE DBA PROGRAMME

MGT 923 - Advanced Organizational Theory

This course contrasts and compares a variety of perspectives in organization theory and design; contingency theory, resource dependency and population ecology models. Students are expected to develop an understanding of the special methodological problems in undertaking organizational research.

MGT 924 - Contemporary Management Philosophy

The course will look at how various approaches to the management process will be analyzed. Attention is focused on such topics as social, political and religious factors having bearing on management decision. Emphasis is placed on the development of a philosophy of management by such student through a critical examination of current managerial thought and action in our social and economic system.

MGT 925- Decision Models and Simulation

This course consists of a survey of analytical and simulation approached to model building. Deterministic models, such as mathematical programming and scholastic models are included. All of the mathematical developments are related to an overall framework of modeling and problem solving.

MGT 926 -Comparative Management Systems

This course is designed to study in different types of managerial systems required to administer organizations in varying cultures. Culture has profound effects on the behavior of individuals in organizations, on their motivations and expectations, or their views of the functions of management etc. as a consequence, effective management in different cultures require different approaches to a variety of management problems. The basic aim of the course is to develop in the students and understanding of these problems and an ability to deal with them from a top management point of view.

MGT 922 - Business Policy and Strategy

This course provides an advanced coverage of the development and transformation of business enterprise within the global economy, by focusing on the business strategy and dynamics of institutional and organizational change resulting from today's globalization process. This includes the effect of structural, institutional, and organizational change upon the strategy of the business enterprises for survival and success in the contemporary hyper-competitive, technology-driven, fast-paced, uncertain, globalized environment. This course provides the student with several survival strategies adopted by organizations to overcome competitive challenges such as; dynamics of transnational corporations; strategy in a fast-paced, uncertain environment; competition and hyper-competition; the meaning of management strategy in a globalized world; technological innovation as a strategy; understanding the organizational transformation as a interface of internal and external change leadership and mobilization; institutional and organizational innovation; globalization as a strategy.

MGT 921- Advanced Research Methods

This course moves students towards the fulfillment of the thesis and publication requirements of the doctoral degree. The course focuses on 'when' and 'why' to use the different methodologies; such as case study research, action research, etc. understanding their nature, and appreciating the advantages and disadvantages of each research method. It also covers the main two research paradigms; the quantitative as well as the qualitative paradigms. Other class topics include

concepts from the philosophy of science and from psychology, acquiring data, interpreting and presenting of research results, and thesis writing. Ethical, social and political aspects of conducting research and producing knowledge for practice are examined. Quantitative designs covered include experimental and quasi-experimental, survey, causal-comparative, evaluation and existing action research, qualitative designs covered include case study, phenomenology, grounded theory, and ethnography. The coursework also covers the application of several modern mathematics/statistical software, such as SPSS, ANOVA, etc.

MGT 927 -Quantitative Decision-Making Using Statistics for Business Analysis

This course develops students' skills in descriptive statistics, statistical inference, quantitative techniques including analysis of variance and covariance, multiple linear regressions and various non-parametric techniques. Students will use quantitative data reduction and analysis and data management techniques. Students will learn to utilize software for data analysis. This research competency component is intended to focus on key concepts and issues in the conduct of data analysis in management-oriented social science research, including the role of distribution assumptions underlying various hypothesis tests, the distribution assumptions underlying various hypothesis tests, the computational details of various tests, and the use of readily available statistical software packages. It is specifically not expected that learners will become fully grounded in statistical methods, rather it is hoped that students will learn what questions to ask about data analysis and be able to defend their use of specific techniques to be used in professional practice.

MGT 928 - Human Resource Planning and Development

The purpose of this course is to analyze and evaluate manpower policies designed to enhance national priorities, organizational goals, and individual values in a pluralistic economy. A framework of analysis is developed to permit a critical investigation of manpower questions relating to employment, human resource planning and job design, appraisal and evaluation, recruiting and selecting, training and development, career planning, compensation, conflict and its resolution and various special topics.

MGT 930 - DBA Seminar in Management

This course critically examines the issues, problems, and strategies for managing organizations in a dynamic business environment.

5. COURSE DESCRIPTIONS FOR THE Ph.D PROGRAMMES

A. Ph.D (GENERAL MANAGEMENT) PROGRAMME:

MGT 900.1 Management thought and philosophy

This course examines the idea and evolution of management as a field of study.

MGT. 901.1 Seminar in Strategic Management and Entrepreneurship

Students will gain a well-developed understanding of business enterprises, the entrepreneurial and strategic thinking that drives them in a dynamic, competitive regional, national, and global economy. Students will learn to apply entrepreneurial and strategic management practices (e.g., using case analysis) to organizations of varying sizes. An integral component, future studies, shall involve an introduction into thinking about the future, the foundation of the field, its methodologies, linked to planning, decision-making, strategy and public policy. The relationship between core competences (at the company level) and key success factors at the industry shall be examined.

MGT. 902.1 Advanced Research Methods

The objective of this course is to deepen the understanding of the students of the traditional scientific research methods. Topics to be discussed here include research in social, physical and natural sciences, problems of research in developing countries, common errors in research, types of research, and research in practice, selecting a research topic, problem and hypotheses formulation, research design, instruments for data collection, data analysis and interpretation, research report, etc.

The objective is for students to gain confidence in the applicability and relevance of non-quantitative methods in our research environment, where the tradition of believing in 'objective measurement' is strong. Quantitative research opens up for us a class of research questions that are not accessible within the 'normal' scientific method. That is, as researchers, we can ask new questions if we have a richer repertoire of tools, both the qualitative and the quantitative research methods and research approaches from which to choose.

Topics to be discussed include the basics of qualitative research methods and research approaches. Some qualitative research approaches, such as phenomenography, activity theory and ethnography, data collection methods such as

interviews, field studies and rapid rural appraisal and observations and evaluating the collected data.

MGT 903.2 Imperatives of Globalisation

Globalisation Overview: Why has the global economy grown so rapidly? How is it affecting the environment, 'ocal economies, social and cultural customs throughout the world? Questioning Free Trade: What are the negative and positive impacts of free trade? Economic globalisation and technological changes. These processes are examined in relation to the national development. It also examines multinational companies, their histories, the reasons for these companies' special mobility and the impact on developing world. Globalisation and the environment, social equity, is social equity relevant to trade issues? What is gained and lost through the gradual homogenization and distortion of cultures as a result of globalisation? The role of regional economic groupings.

MGT. 904.2 Advanced Quantitative Techniques

The course is designed to provide students the opportunity to explore more advanced quantitative techniques for decision making in general and research in particular. It introduces students to basic problem solving techniques in decision making. It provides them with set of mathematical models which are directly applicable to situations in business and government. Emphasis will be on multi-variate statistical methods, advanced topics in optimization techniques and stochastic models, decision theory, network analysis, inventory management concepts, queuing models; linear programming (graphic and simplex methods); introduction to operations research and simulation

MGT. 905.3 Seminar in Business and Environment

Students will gain a well-developed understanding of business enterprises and the environmental factors that influence the performance of enterprise managers. The basic objective of the course is to examine the legal, social, political and economic framework in which business organizations should operate in the Nigerian environment. Because of the pervasive influence of globalization and reduction of distances between nations, their value systems, language etc., international business environments will be explored.

Topics to be covered include: the concept, scope and nature of the business environment and environmental scanning, legislations related to business. Ethical theories of business decision, social and cultural issues in business. Theoretical and practical issues of the Nigerian political economy which dictate the basis of fiscal and

monetary policies, macroeconomics management and business practices.

MGT. 906.3 Management of Change in Organisations

Management of change is designed to acquaint participants with issues, techniques, and strategies for the management of change. The first part of the course concentrates on developing expertise in predicting relevant changes in the organisation's task environment and making sure that change initiatives are in harmony with the changes in the business environment. Techniques for environmental scanning and task forecasting will be explored and useful models analysed. Students will also discuss and make presentations on current issues such as employee ownership mindset, team-based management, mergers and acquisitions, organisational renewal etc. At the end of the course, participants will understand the techniques for creating change, managing resistance, change agents, and the application of various change models to various industries and situations.

MGT. 907.3 Government, Businesses and Society

The course will examine the area of government business and business-society relations as one of the critical areas where managers spend considerable amount of time. The responsibilities of the firm in these areas, the role of general manager, the skills needed, ethical and philosophical issues involved will be discussed.

MGT. 908.3 Seminar in Public Enterprise Management

This course seeks to acquaint students with the theoretical and practical issues confronting non-profit organisations. The course systematically examines the ways in which the public policy process both supports and regulates the activities of non-profit organisations and the ways in which they seek to affect public policy governing their behaviour. How these government organisations are controlled by boards of directors appointed by government machinery. This course discusses the legal foundations for boards, their conventional roles and responsibilities, and the strategic planning processes to strengthen board leadership.

MKT. 909.2 Advanced Marketing Theory

The objective of this course is to provide students with the knowledge of advanced marketing theory and research. Marketing is an applied discipline that is informed by professional scholarly research in marketing and related fields (e.g. psychology, economics). This course provides an in-depth review of marketing theory and research, an advanced review of influential theory in the development of marketing thought, and an

overview of contemporary theories of research in marketing. Reading material shall largely be scholarly articles in refereed journals.

MGT. 909.3 Multinational Enterprises

This course covers World Trade Organisation (WTO) and multilateral trade agreements. The course will present an overview of the WTO and then focus on multilateral trade negotiations. Multilateral trade agreements shall be studied in four parts: trade in goods, trade in services, trade related aspects of intellectual property rights and institutional issues. Agreements on trade in goods are further divided into three subcategories: market access, custom-related issues and trade rules. Lastly, this course will look at the future challenges facing the current multilateral trading system. Although this course deals with trade agreements, it will put more emphasis on the economic interpretation rather than the legal aspects. For this course, outside scholars and experts from policy, academic, and private sectors may be invited as special guest lecturers.

MGT. 910.3 Advanced conflict Management:

This course is designed to provide an understanding of intercultural management useful for international management and trade negotiations. Participants are expected to study the different ways various cultures think, communicate and behave, particularly within business contexts, in order to develop a necessary level of cross-cultural competency. Today's global business implies co-operating, coordinating, negotiating and supervising, using management processes appropriate to the cultural context. The student will explore cultural implications in those management processes, as well as their impacts on team-building, ethics, conflict resolution and creative problem-solving. Students will also study their own culturally-based perception, patterns of thinking and behaviour, communication styles, values and how they can be adapted to an intercultural context. Although the course will primarily deal with cultural differences in national culture context, it will also address cultural differences in gender and in organizational context as long as they affect the global business environment. Topics to be covered include:

- a) Foundations and theories of conflict: theories of conflict resolution- an interdisciplinary approach to examination of conflict and conflict resolution theory.
- b) Responses to conflict: An examination of the different approaches to conflict resolution represented by two party negotiation, facilitative processes such as mediation, the various evaluative processes, adjudicative processes such as litigation and binding arbitration, and the

- various hybrid processes as well as negotiation.
- c) Mediation skills clinic- A basic introduction to the mediation skills, theory and ethics.
 - d) Interpersonal and inter-group conflict: An indepth study of the dynamics of interpersonal and intergroup conflicts.
 - e) Organizational and community conflict- An exploration of the dynamics of conflict in organizations and the community.
 - f) International and cross-cultural conflict- An examination of the practical negotiation skills central to the resolution of situation-specific international and inter-cultural conflict.
 - g) Methodology of Conflict Resolution Research — an introduction to a range of qualitative data collection methods with particular focus on techniques used in research on conflict and conflict resolution, including participant observation, content analysis, behavioural mapping, and non-intrusive measures as well as a review of relevant research literature in the field.

MGT. 911.4 Ph.D., Seminar

This seminar introduces students to the most recent research in the area of Management and Organisational analysis, examining current issues and trends. Students have the opportunity to present and discuss their own research and are actively engaged in the analysis and discussion of the work of others. Each student is expected to make at least one presentation during the course, focusing on the formulation, design, execution, and results in the student's research.

B. Ph.D., HUMAN RESOURCE MANAGEMENT) PROGRAMME:

MGT. 900.1 Management Thought and Philosophy

This course examines the idea and evolution of management as a field of endeavor.

MGT. 914.2 Organization Theory

This course is designed to enable students undertake an indepth study of the organizational processes and characteristics that influence organizational decisions and change. Topics to be covered include: dimensions of organization structure, organization design, organization culture, organization change and development, organization technology, the environment of organizations, and the relationships between these processes and characteristics.

MGT. 915.2 Advanced Human Resource Management

This course introduces students to the most recent developments in the area of HRM, examining current issues and trends. Students have an opportunity to present and discuss their own research and actively engage in the analysis and discussion of the work of others. Each student is expected to make at least one presentation during the course, focusing on the formulation, design, execution, and results of his/her method is to identify and conceptualize the structural determinants of relative bargaining power. On this basis, the course examines both the economic outcomes of collective bargaining and current bargaining trends in a variety of industries. Tentative theoretical analyses of unionism (neoclassical, institutionalist) are compared. The statistical techniques and empirical results of research on the union effect on economic outcomes (wages, prices, inflation, profits, productivity, earnings inequality) are also evaluated. The effect of technology, corporate structures, and public policy on union bargaining power is outlined, and a number of case studies on collective bargaining in the private sector are reviewed.

MGT.911.2 Seminars in ILR

This seminar introduces students to the most recent research in the area of ILR, examining current issues and trends. Students have an opportunity to present and discuss their own research and actively engage in the analysis and discussion of the work of others. Each student is expected to make at least one presentation during the course, focusing on the formulation, design, execution, and results of his or her research.

MGT. 925.2 Contemporary Issues in ILR

This will run as a seminar to address emerging theoretical and empirical issues in ILR.

C. Ph.D (MANAGEMENT INFORMATION SCIENCE) PROGRAMME

MGT. 902.1 Advanced Research Methodology

This course examines in-depth concepts and tools on research methodology and their application to research situations. Topics to be covered include types of research, selecting a topic for investigation, problem statements, hypothesis, conceptual, theoretical and empirical frame works, types of research methods, instrumentation, sample and sampling techniques, statistical techniques, reporting findings etc.

MGT. 926.1 Advanced Quantitative Methods

An examination of quantitative methods involves analysis of research data in quantitative terms. The methods include the use of descriptive statistics such as percentage and inferential statistics such as

t-test, ANOVA etc. The students are expected to utilize quantitative methods in the research report.

MGT. 927.1 Advanced Information Technology Application

Critical examination of information technologies, notably computers, the effective management of information and information systems in organizations. Examines the steps followed in the utilization of electronic data processing system in producing management information.

MGT. 928.2 Advanced Evaluation of Information Systems

Critical assessment of information systems in different organizations based on selected parameters. Manual and mechanical information systems will be examined, the recall and precision of the systems will also be examined.

MGT. 929.2 Performance Evaluation and Control

Examines the theoretical underpinnings, analysis, design, and implementation of performance appraisal, control, reward methods, tools and systems. Measurement, motivation, personality, goal setting and behavioural concepts and their application to the selection of performance criteria and incentives.

MGT. 930.2 Leadership in Theory and Practice

This course examines leadership both in theory and in practice. The strengths and limitations of the theories will be examined and related to leadership in information organizations.

MGT. 931.2 Seminar in Organization and Retrieval of Information and Records

Oral presentation of seminar paper on the organization, access, retrieval and delivery of management information in the department or faculty directed by academic staff.

MGT. 932.2 Seminar in ICT Applications to Management Information Systems

Oral presentation of seminar paper on the application of ICT to the management of information resources and systems in the department or faculty directed by academic staff. The seminar presentation will explore internet tools that enable the international community have access to the organizations' information as well as search strategies

MGT. 933.2 Seminar in Information Behaviour of Organization

Oral presentation of seminar paper on aspects of information user attitudes and behaviours in the department or faculty directed by academic staff. Topics for seminar papers include organizational

dynamics, motivation and job satisfaction, basis of individual attitude and behaviours in organizational settings, individual and their relationships in organizations.

MGT. 934.2 Human Resources Information Systems

Examines the expert human resources available inside and outside organization in diverse areas and the process of developing information systems based on knowledge of human resources in an environment, their maintenance and management.

MGT. 935.2 Qualitative Research Method

The course introduces students to the methodology of qualitative research with particular emphasis on the case study method and the use of interview and observation as data collection tools. Topics to be examined include basics of qualitative research and research approaches such as phenomenology, field studies, appraisal and observation. Evaluation of data collected.

FIN Seminar in Financial Management and Budgetary

Oral presentation of seminar paper on financial management and budgeting practices in the department or faculty directed by academic staff.

MGT. 936.2 Managing Conflicts

This course introduces the students to the theories of conflicts, types of conflict and resolution of conflict in information environment. It examines the theories of conflict, conflict resolution, organizational and the community conflict, international and the cross-cultural conflict and the methodology of conflict resolution research.

D. Ph.D., (ORGANISATIONAL BEHAVIOUR) PROGRAMME:

MGT. 937.1 Advanced Research Methods and Statistical Techniques

The objective of this course is to deepen the understanding of the students of the traditional scientific research methods. Topics to be discussed here include research in social, physical and natural sciences, problems of research in developing countries, common errors in research, types of research, and research in practice, selecting a research topic, problem and hypotheses formulation, research design, instruments for data collection, data analysis and interpretation, research report, etc. Other topics to be discussed include the basics of qualitative research methods and research approaches. Some qualitative research approaches, such as phenomenography, activity theory and ethnography, data collection methods such as interviews, field studies and rapid rural appraisal and observations and evaluating the collected data.

The aim is for students to gain confidence in the applicability and relevance of non-quantitative methods in our research environment, where the tradition of believing in 'objective measurement' is strong. Quantitative research opens up for us a class of research questions that are not accessible within the 'normal' scientific method. That is, as researchers, we can ask new questions if we have a richer repertoire of tools, both the qualitative and the quantitative research methods and research approaches from which to choose.

MGT. 938.1 Advanced Statistics for Business and Government

This course covers basic concepts in descriptive and inferential statistics and their use in empirical research.

MGT.939.1 Advanced Organization Theory

This course contrasts and compares a variety of perspectives in organization theory and design, contingency theory, resource dependency and population ecology models. Students are expected to develop an understanding of the special methodological problems in undertaking organizational research.

MGT.913.2 Management Thought and Philosophy

Various approaches to the management process will be analyzed. Attention is focused on such topics as social, political and religious factors having bearing on management decisions. Emphasis is placed on the development of a philosophy of management by each student through critical examination of current managerial thought and action in our social and economic systems.

MGT. 940.1 Comparative Management System

This course is designed to study different types of managerial systems required to administer organization in varying cultures. Culture has profound effect on the behavior of individuals in organizations, on their motivation and expectations, on their views of the functions of management etc. As a consequence, effective management in different cultures requires different approaches to a variety of managerial problems. The basic aim of the course is to develop in the students an understanding of these problems and an ability to deal with them from a top management point of view.

MGT. 941.2 Organisational Development and Change Management

This course examines the problem associated with implementing change in the organization, the role of external consultants, entering and contracting

consultants, determining needs and measuring relevant variables; change management. Students are expected to examine the theory, and techniques for organisation diagnoses both at personal, group and organisational levels, data collection, analyses and writing and presenting reports, etc.

MGT. 942.2 Advanced Topics in Organizational Behaviour

The course deals with theory of individual behavior in organizational settings. Theory of motivation, statistics and job designs are carefully explored and their research implications identified.

SGS 901.2 Entrepreneurship

This course is aimed at empowering the graduates with the relevant skills that will enable them to engage in income-yielding ventures to be responsible, enterprising individuals who will eventually become entrepreneurs or entrepreneurial thinkers and in so doing make significant contributions to nation building, national economic development, and sustainable communities. It will equip graduates with the basic skills to make them job creators rather than job seekers.

MGT.943.3 Government, Businesses and Society

The course will examine the area of government business and business-society relations as one of the critical areas where managers spend considerable amount of time. The responsibilities of the firm in these areas, the role of general manager, the skills needed and ethical and philosophical issues will be discussed.

MGT. 910.3 Advanced Conflict Management:

This course is designed to provide an understanding of intercultural management useful for international management and trade negotiations. Participants are expected to study the different ways various cultures think, communicate and behave, particularly within business contexts, in order to develop a necessary level of cross-cultural competency. Today's global business implies co-operating, coordinating, negotiating and supervising, using management processes appropriate to the cultural context. The students will explore cultural implications in those management processes, as well as their impacts on team-building, ethics, conflict resolution and creative problem-solving. Students will also study their own culturally-based perspectives, patterns of thinking and behaviour, communication - styles, values and how they can be adapted to an intercultural context. Although the course will primarily deal with cultural differences in national culture context, it will also address cultural differences in gender and at organizational level as

long as they affect the global business environment. Topics to be covered include:

- i) Foundations and theories of conflict, theories of conflict resolution- An interdisciplinary approach to examination of conflict and conflict resolution theory;
- ii) Responses to conflict: an examination of the different approaches to conflict resolution represented by two party negotiation, facilitative processes such as mediation, the various evaluative processes, adjudicative processes such as litigation and binding arbitration, and the various hybrid processes; negotiation;
- iii. Mediation skills clinic- A basic introduction to the mediation skills, theory and ethics;
- iv. Interpersonal and inter-group conflict: An in depth study of the dynamics of interpersonal and inter group conflicts.
- v. Organizational and community conflict- An exploration of the dynamics of conflict in organizations and the community
- vi. International and cross-cultural conflict- An examination of the practical negotiation skills central to the resolution of situation-specific international and intercultural conflict.
- vii. Methodology of Conflict Resolution Research — an introduction to a range of qualitative data collection methods with particular focus on techniques used in research on conflict and conflict resolution, including participant observation, content analysis, behavioural mapping, and non-intrusive measures as well as a review of relevant research literature in the field.

MGT. 944.3 Seminar in Strategic Management and Entrepreneurship

This course deals with theoretical and practical aspects of strategy formulation and implementation. Attention is placed on the art of strategic thinking leading to creativity and innovation as well as the rational strategic planning process. Topics covered include business opportunities, mission statements and the development of corporate strategy, building the organisation competence, resource allocation, mergers and acquisition strategies, integration strategies, building organisational competitive strategies for their effectiveness through product pricing techniques, management process and policy control. This course also covers analysis of industry structures and dynamics, assessing positions, actions, and reactions of competitors; processes of strategic planning, technology strategy and e-business, process reengineering and corporate turnaround. Case writing and analysis are fundamental to this course.

Students will also gain a well-developed understanding of business enterprises and the entrepreneurial and strategic thinking that drives them in a dynamic, competitive regional, national, and global economy. Students will learn to apply entrepreneurial and strategic management practices (e.g., using case analysis) to organizations of varying sizes. An integral component, futures studies, shall involve an introduction into thinking about the future, the foundation of the field, its methodologies, link to planning, decision-making, strategy and public policy. The relationship between core competences (at the company level) and key success factors at the industry shall be examined.

MGT. 945.3 Advanced Theories of Industrial Relations

This course traces the evolution of theory and research on industrial relations and gives an advanced study and analysis of topics such as the ideological problems in industrial relations literature and research, the theoretical approaches to the study of management and trade unions, theories of strikes, wage determination, research on union decline or ascendancy and the impact of new technology on industrial relations.

MGT.911.2 Seminar in Organizational Behaviour

The seminar critically investigates advanced topics and themes in current theories and research on organizational behavior. The course is intended to provide Ph.D students in the organizational behavior concentration opportunities to conduct in depth investigations in specialized area of inquiry and to prepare them for their preliminary examination in their major fields.

This seminar introduces students to the most recent research in the area of Management and Organisational analysis, examining current issues and trends. Students have the opportunity to present and discuss their own research and are actively engaged in the analysis and discussion of the work of others. Each student is expected to make at least one presentation during the course, focusing on the formulation, design, execution, and results in the student's research.

MGT.912.4 Ph.D., Dissertation

The Ph.D Dissertation is designed to give each student the opportunity to undertake a sustained piece of research work. The students will work under the supervision of an appointed post graduate supervisor. The specific research topic is chosen from any area of organizational behaviour that is of interest to the students. The research topic is approved by the students' supervisor(s) and

ratified by the Departmental Post Graduate Committee. The students are required to provide detailed reports of their original research work and thereafter present/defend same before an appointed External Examiner.

E. Ph.D (PRODUCTION/OPERATIONS MANAGEMENT) PROGRAMME:

MGT 902.1 Advanced Research Methods and Statistical Techniques

The objective of this course is to deepen the understanding of the students of the traditional scientific research methods. Topics to be discussed here include research in Social, Physical and natural sciences; problems of research in developing countries; common errors in research; types of research; and research in practice: selecting a topic, problem and hypotheses formulation, research design, instruments for data collection, data analysis and interpretation, research report, etc. Other topics to be discussed include the basics of qualitative research methods and research approaches. Some qualitative research approaches, such as phenomenography, activity theory and ethnography, data collection methods such as interviews, field studies and rapid rural appraisal and observations and evaluating the collected data.

The aim is for students to gain confidence in the applicability and relevance of non-quantitative methods in our research environment, where the tradition of believing in 'objective measurement' is strong. Quantitative research opens up for us a class of research questions that are not accessible within the 'normal' scientific method. That is, as researchers, we can ask new questions if we have a richer repertoire of tools, both the qualitative and the quantitative research methods and research approaches from which to choose.

MGT 938.1 Advanced Statistics for Business and Government

This course covers basic concepts in descriptive and inferential statistics and their use in empirical researches.

MGT. 946.1 Advanced Production/Operations Management Problem Solving Technique

This course further strengthens students' knowledge on how to adopt scientific approach in decision making in the organizations. Topics examined are decision problems in production/operations management, schematic and quantitative techniques, work measurement, facility location and choice, process planning, scheduling and sequencing, process and equipment selection, aggregate production, planning and

scheduling, inventory control, project and network analysis.

MGT. 947.1 Programming and Theory of Games

This area exposes student to ways of using programming approach and games model in decision making. Topics to be covered here include linear programming, mathematical programming, dynamic programming, integer programming, shadow price, perturbation analysis and games theory.

MGT. 913.2 Management Thought and Philosophy

Various approaches to the management process will be analyzed. Attention is focused on such topics as social, political and religious factors having bearing on management decisions. Emphasis is placed on the development of a philosophy of management by each student through critical examination of current managerial thought and action in our social and economic systems.

MGT. 948.2 Decision Models and Simulation

This course consists of a survey of analytical and simulation approaches to model building. Deterministic models, such as mathematical programming, and stochastic models are included. All of the methods of mathematical developments are related to an overall framework of modeling and problem solving.

MGT. 949.2 Strategic Decision in Production/Operation Management and Project Management.

This course is concerned with how students will be exposed to decision making process in both conditions of certainty and uncertainty in organization that will yield maximum benefits. Topics to be covered here include process design, decision making in stable and unstable environment, project planning, evaluation and appraisal and forecasting.

SGS. 801.2 Management and Entrepreneurship

This course is aimed at empowering the graduates with the relevant skills that will enable them to engage in income-generating ventures to be responsible, enterprising individuals who will eventually become entrepreneurs or entrepreneurial thinkers and in so doing, make significant contributions to nation building, national economic development, and sustainable communities. It will equip graduates with the basic skills to make them job creators rather than job seekers.

MGT. 950.1 Operations Controls Systems

This course explores systems procedures, and model that can be used to change the productivity and effectiveness of an organization's operations over medium and short horizons. Topics to be considered include uses and management of inventories, aggregate production planning, scheduling and control of operations, and quality control.

MGT. 951.3 Service System Design and Control

This course focuses on design and management of service operations in non-manufacturing organizations.

MGT. 952.3 System Dynamics

This course deals with the analysis of feedback structure and dynamic behavior of management decision and information system.

MGT. 953.3 Seminar in ICT Applications to Management Information Systems

Oral presentation of seminar paper on the application of ICT to the management of information resources and systems in the department or faculty directed by academic staff. The seminar presentation will explore internet

tools that enable the international community have access to the organizations' information' as well as search strategies

MGT. 911.4 Seminar in Production/ Operations Systems

The seminar critically investigates advanced topics and themes in current theories and research on Production/Operations Systems. The course is intended to provide Ph.D., students in the Production/Operations Systems ample opportunities to conduct indepth investigations in specialized area of inquiry and to prepare them for their preliminary examination in their major fields.

This seminar introduces students to the most recent research in the area of Management and Production/Operations Systems, examining current issues and trends. Students have the opportunity to present and discuss their own research and are actively engaged in the analysis and discussion of the work of others. Each student is expected to make at least one presentation during the course, focusing on the formulation, design, execution, and results in the student's research.

LIST OF ACADEMIC STAFF

S/N	NAME OF ACADEMIC STAFF	QUALIFICATIONS	DESIGNATION	AREAS of SPECIALIZATION
1	R.S. Needorn	B.Sc., MBA, Ph.D.	Professor (HOD)	Operations Mgt/Quant. Analysis, Project Mgt.
2	Seth Accra Jaja	B.Sc., MBA, Ph.D.	Professor	Organizational Behaviour/ Policy studies/ Global business Management
3	Chima B. Onouha	B.Sc MBA (Mgt.), M.Sc, MBA (Finance), Ph.D PGDE	Professor	Business Policy and Strategic Management, Entrepreneurship, General Management, Global business Management
4	G. I. Umoh	M.Sc., Ph.D. PGD, Dip IDP (finals),	Professor (Dean)	Operations Management, Quantitative. Analysis, Operations Research, Project Mgt.
5	(Mrs.) C.A. Nwuche	B.Ed., M.Sc.,Ph.D.	Professor	Human Resource Management, Labour & Industrial Relations, Global business Management
6	(Mrs.) Edwinah Amah	B.Sc., MBA,M.Sc., Ph.D.	Professor	Organizational Behaviour, Entrepreneurship, Human Resource Management, Global business Management
7	C. A. Eketu	B.Sc.,MBA, Ph.D.	Professor	Research methodology/ Organizational Behaviour, Policy Studeies & Leadership
8	W.O. Olori	B.Sc., MBA, Ph.D	Professor	Business Policy. Human Resource Management, Labour & Industrial Relations Research Methodology/ Global business Management
9	Omoankhanlen Joseph Akhigbe	B.Sc., M.Sc. Ph.D.	Professor	Management & Organization/General Management, Global Business Management, Human Resources Management
10	John I. Ogolo	B.Sc., M.Sc. MBA, Ph.D.	Professor	Human Resources Management, Labour & Industrial Relations/ Global business Management
11	Mrs. A. D. Alaghah	NCE, B.Sc.(Ed), PGD, MBA, Ph.D.	Professor	Organizational Behaviour/ Business Policy and Strategic Management
13	J.E. Chikwe	B.Sc., MBA., Ph.D., PGDE	Senior Lecturer	Business policy, Policy studies, Strategic Management, Labour & Industrial Relations
14	G.O. Worlu	B.Sc., MBA, Ph.D.	Senior Lecturer	Organizational Behaviour/ Business Policy and Strategic Management
15	Haliru Bala	HND, B.Sc, PGD, MBA, M.Phil, Ph.D	Senior Lecturer	International Business, Business policy, Policy studies, Public management

16	Joseph Elang O. Oshi	B.Sc., MBA, PGDE	Senior Lecturer	Entrepreneurship/ HRM, Labour & Industrial Relations, Global business Management
17	Maxwell Nwinye	B.Sc., MBA, LLB, Ph.D.	Senior Lecturer	Organizational Behaviour/Global business Management
18	Sylva Waribugo	B.Sc.,M.Sc, Ph.D.	Senior Lecturer	Operations Mgt/Management Science, Project Mgt.
19	Macaulay E. Wegwu	B.Sc., MBA, M.Sc., Ph.D.	Senior Lecturer	Business Policy, Strategic Management and Leadership
20	Wilson Ofoegbu,	B.Sc, M.Sc., Ph.D.	Senior Lecturer	Operations Mgt/Quant. Analysis, Project Mgt.
21	Ike, Osadebe O.	B.Sc.,MBA	Lecturer I	General Management, Global business Management
22	Matthias Okon Nkuda	B.Sc.,MBA, Ph.D.	Lecturer I	Business Policy/General Management, Global business Management
23	C.T. Jonah	B.Sc., M.Sc., Ph.D.	Lecturer I	Business Policy, strategic Management Human Resources Management
24	Chukwuma, Isaac O.	B.Sc., M.Sc., Ph.D.	Lecturer II	Human Resources Management, Global business Management
25	Wogwu V.E,	B.Sc., M.Sc., Ph.D.	Lecturer II	Human Resources Management, Global business Management

ASSOCIATE LECTURERS

26	B.F. Nwinee	B.Sc, MBA, M.Sc, Ph.D, Ffian, FNISM, FIIMN, FPPA, ACAI	Professor	Finance/Banking
27	Okeychukwu Onuchukwu	B.Sc, M.Sc, Ph.D	Professor	Economics
28	Nna Johnson	B.Sc, M.Sc, Ph.D	Professor	Political Science
29	E.J. Okereke	B.Sc, MBA, M.Sc, Ph.D	Professor	Finance/Banking
30	I.A. Akakuru	BA, MA, DEA, Ph.D	Professor	Translation Studies & Stylistics (Francophone)
31	I.S. Nnamdi	B.Sc, MBA, Ph.D	Professor	Finance/Banking
32	F.N. Akani	B.Sc, MBA, Ph.D	Professor	Accounting
33	G.N. Ogbonna	B.Sc, MBA, M.Sc, Ph.D	Professor	Accounting
34	S.S. Ogunbiyi	B.Sc, MBA, Ph.D	Professor	Finance/Banking
35	L.L. Torbira	B.Sc, MBA, Ph.D	Professor	Finance/Banking

DEPARTMENT OF MARKETING

INTRODUCTION

The Postgraduate programmes in the Faculty of Management Sciences, University of Port Harcourt have been designed to equip people with the basic managerial knowledge and skills needed to cope with the rapidly changing modern society. Given the continuous increase in the challenges faced by enterprise managers in both the public and private sectors of the Nigerian economy, managerial arts and sciences will assume increased importance in the years ahead. This challenges faced by enterprise managers in both the public and private sectors have complicated the social and organizational problems they are confronted with on a daily basis and thus require students of Management Sciences to adapt their knowledge and skills to the dynamism of the environment by thinking globally although with the peculiarity of our unique local environmental circumstance in mind.

To meet these challenges in our contemporary society, the Department of Marketing introduced post graduate programmes to enable students acquire the basic knowledge and skills required to cope with modern day business related challenges as well as drive organizations to success. Thus, the uniqueness of these programmes is its emphasis on bridging the gap between theory and practice by helping students imbibe the relevant concepts, principles, and theories for creative decision making in the relevant spheres of industry, administration, academics /research.

VISION OF THE DEPARTMENT OF MARKETING, UNIVERSITY OF PORT HARCOURT

The vision of the Department is to ranked amongst the top rated Departments in Nigerian and African Universities, renowned for its active involvement in teaching, research activities, creativity, and innovation thereby, serving as a reference point for other Nigerian and African Universities and higher institutions of learning.

MISSION OF THE DEPARTMENT OF MARKETING, UNIVERSITY OF PORT HARCOURT

The mission of the Department is the pursuit of academic excellence, advancement of knowledge and community service through quality teaching, research activities, continuous learning, creativity, and innovation in an organized and most articulate manner, which will accelerate the dissemination of the knowledge of Marketing discipline and contribute to the growth of the private and public sectors of the Nigerian and African economy. To

achieve this mission, the Department is guided by the spirit of enquiry, self-reliance, fairness, ethical and professional standards of the Marketing discipline.

Procedures for Registration in the Department of Marketing

After a candidate has been duly registered at the College of Graduate Studies he/she shall proceed to the Department for briefing by the Head of Department and Course registration in the Department. The underlisted documents shall be presented for the Departmental Registration:

- Admission letter
- Evidence of Registration at the College of Graduate Studies
- Evidence of payment of all prescribed dues

Every student is expected on first registration to sign the University Register of Graduate Students at the College of Graduate Studies. When all these procedure have been duly accomplished, the candidate becomes a bona fide graduate student of the University of Port Harcourt.

Examination Malpractice

Any report of examination malpractice is investigated and deliberated upon by the Departmental and Faculty Graduate Committees before submission to the Provost, College of Graduate Studies through the Dean, Faculty of Management Sciences. Students found guilty are sanctioned in accordance with the University of Port Harcourt regulations on examination malpractice.

PHILOSOPHY OF THE Ph.D (MARKETING) PROGRAMME

The philosophy of the programme is to provide graduate education and training in marketing, which develops and deepens the spirit of enquiry and responsibility in the students, to take on teaching, research in higher institutions, as well as management responsibilities in public and private sectors of the national and global economies. The Ph.D programme in Marketing also seeks the development of business scholars who are versed in the theory and in research skills in marketing as well as having the capability of developing and promoting indigenous academic culture in the field of marketing.

THE AIM/OBJECTIVES OF THE Ph.D (MARKETING) PROGRAMME

The objectives of the Ph.D (Marketing) programme is to provide training: In marketing research for those whose future careers lie in

teaching and research at the University and other tertiary institutions and for those who may have to operate in research and development environments; in core and specialized areas of marketing that would equip graduates to provide quality consultancy services to both local and international clientele; and aimed at providing critical manpower in the area of business Administration/Marketing needed for national development.

The specific objectives of the Ph.D programme in Marketing are as follows:

- a) To produce candidates with high level of intellectual rigour and maturity for independent work in their chosen areas of specialisation.
- b) To produce candidates who can develop and promote indigenous theories in their area of specialty and translate same to practices
- c) To equip candidates with the requisite theoretical, quantitative, and qualitative tools to enable them undertake teaching and research responsibilities in universities, industries and government.

Ph.D. Comprehensive/ Candidacy

Examination:

Candidates in the Ph.D programme in Marketing are required to write a 3-hours written comprehensive examination in their areas of specialization at the successful completion of their course work. Also, each candidate may be examined orally. The Ph.D comprehensive examination in Marketing requires candidates to attempt questions from eight (8) sections of the paper involving the general courses, the core/compulsory courses, and the candidates' areas of specialization.

Each candidate shall be examined by not less than four examiners approved by the Board of the College of Graduate Studies. If a candidate fails the comprehensive examination, one reseat is allowed the following year. Candidates are required to pass the Ph.D comprehensive examination at not more than two attempts. A candidate who fails the examination after the second attempt will be advised to withdraw from the programme. Success in the Ph.D comprehensive examination serves as a prerequisite for the candidate to proceed to the Ph.D Thesis stage.

(A) Ph.D (MARKETING) PROGRAMME COURSE DESCRIPTIONS/ CONTENTS/ SPECIFICATIONS

Course structure

The PhD Marketing programme requires a minimum of 36 credit units made up as follows:

- Six core courses (3 credits each) - 18 units
- Two elective courses (3 credits each) -6 units
- Thesis -12 units
- Total -36 units

First Semester Core Courses

Courses Code	Course Description	Credit
MKT 900.1	Advanced Research Methodology in Marketing	3
MKT 902.1	Development of Marketing Thought and Theory	3
MKT 903.1	Ph.D. Seminar 1	3
MKT 901.1	Advanced Quantitative Techniques in Marketing	3
	Total	9

Second Semester Core Courses

Courses Code	Course Description	Credit
MKT 904.2	Contemporary Issues in Marketing	3
MKT 905.2	Advanced Marketing Research	3
MKT 906.2	Seminar in Consumer Behaviour	3
MKT 907.2	Marketing Models	3
MKT 923	Thesis	12
	Total	21
	Total	6
	Grand Total	36

COURSE DESCRIPTION

MKT 900.1 Advanced Research Methodology in Marketing

This course examines the role and nature of marketing research methods, the importance of marketing research and its contribution to competitive success. Secondly, students will be exposed to the use of advanced qualitative, quantitative research designs and methods and multivariate techniques in conducting empirical research and theoretical modeling in marketing domain. Special emphasis will be given to probabilities approach to decision-making under conditions of uncertainty, following the principles of Bayesian analysis. Critical reviews of current scholarly literature in marketing domains will be emphasized.

MKT 901.1 Advanced Quantitative Techniques in Marketing

This course shall examine various techniques and methods apply in solving marketing problems. The course shall involve intensive review in such areas

as multivariate methods (factor analysis, cluster analysis, multi-dimensional scaling); Regression and Forecasting Techniques (multiple regression, discriminant analysis, automatic interaction detection) statistical decision theory for stochastic methods (Queuing, stochastic processes, Game theory); Deterministic operational research methods (linear, non-linear, transportation model); Hybrid Techniques (Dynamic Programming, Heuristic programming, stock control); Network programming (PERT, CPM).

This is a course in the application of quantitative techniques for marketing decision-making and for formulating marketing policies. The course shall also employ other modern quantitative tools for deriving estimates of relevant marketing variables for managerial decision-making.

MKT 902.1 Development of Marketing Thought and Theory

The development of the Marketing Organization specialized marketing activities, the total systems approach, and the social role of marketing are traced by means of a survey of marketing literature from early writers to the present.

MKT 903.1 Ph.D. Seminar 1

Topics of special interest to doctoral candidates in marketing management will be discussed and approved.

MKT 904.2 Contemporary Issues in Marketing

Analysis of current and unresolved issues in Marketing Role of economic development, political, social-cultural factors in conditioning performance of the marketing function. The role of marketing in interaction with the social-economic systems and on economic growth and stability. Effects of marketing activities on consumer welfare, and on economic growth and stability. Effects of governmental regulations, legislation, consumer reaction, social change on marketing policies and operations.

MKT 905.2 Advanced Marketing Research

Essentially, this is a course that takes marketing from an art to a science, from conjecture to rigour and therefore represent market behaviour mathematically. The course involve the development and application of quantitative models to understand market behaviour and to solve problems in marketing decision making. Emphasis shall be on the models of marketing mix variables. Such models include New product decision models, models for strategic marketing decision making, aggregate models to analyse promotional effect, pricing models, sales force strategy model and marketing efficiency and effectiveness using such models as trial and repeat model, choice models and product portfolio

analysis model all will be emphasized. The course shall examine comprehensively the empirical evidence on the efficiency of the use of models in marketing decision making in the context of Nigeria and international marketing environment.

MKT 906.2 Seminars in Consumer Behaviour

Topics of special interest to doctoral candidates in consumer behaviour will be discussed and approved.

MKT 907.2 Marketing Models

Describes theoretical and empirical models used to analyse marketing management issues in areas of product introduction and positioning, pricing, advertising and distribution channels. Theoretical structure of this course stems from micro-economics of the firm and consumer decision making, with special consideration of competitive issues analysed with game theory and applications of control theory. Empirical requirements include conjoint analysis, choice modeling and multivariate techniques.

(B) MASTER OF SCIENCE (M.Sc) PROGRAMME IN MARKETING.

PHILOSOPHY, AIMS AND OBJECTIVES OF M.Sc. PROGRAMME IN MARKETING

i) Philosophy of M. Sc Programme in Marketing

Philosophy: The philosophy of the programme is derived from the philosophy of the NUC and the Faculty of Management Sciences of the University of Port Harcourt. Specifically, it seeks to broaden and deepen the intellectual exposure of students in their major areas of marketing; and to develop their capability to undertake in-depth graduate research in marketing. The Master of Science in Marketing is highly specialized.

ii) Objectives of the M. Sc. (Marketing) Programme

The programme in keeping with similar objectives promoted by the NUC seeks to accomplish the following objectives;

- (a) To inculcate requisite intellectual/conceptual foundations in the students that will permit meaningful participation in the discussion or resolution of problems that confront marketing.
- (b) To encourage research into problems that impede the maximum contribution of marketing to National, social and international development of economies
- (c) To develop the skill of logical reasoning and critical analysis and improve students' capacity to formulate sound marketing policies and strategies
- (d) To arm candidates with required theoretical and quantitative tools to enable them

undertake teaching and research responsibilities in universities, industry and government.

Course structure

The M. Sc. Marketing programme requires a minimum of 36 credit units made up as follows:

- Twelve core courses (2credits each)- 24 units
- Dissertation - 12 units
- Total - 36 units

First Semester Year 1 Core Courses

Courses Code	Course Description	Credit
MKT 800.1	Marketing Models	2
MKT 801.1	International Marketing	2
MKT 803.1	Advanced Consumer Behaviour	2
MKT 802.1	Marketing of Services	2

M.Sc COURSE

STRUCTURE/DESCRIPTION

The Department of Marketing offers an M.Sc degree programme and therefore all courses leading to the award of the degree are compulsory.

COURSE DESCRIPTION

MKT 800.1 International Marketing

Course covers marketing planning, strategy and action in international and multinational environments. Examines international market environment; international marketing planning and strategies; marketing action in international settings and valuation and control of international marketing plans that integrate the cultural, economic, political and demographic factors etc for class presentation, Can combine marketing, ethnographic and international business studies.

MKT 801.1 Marketing Management

Covers managerial aspects of marketing: Marketing concept, marketing management process and practices, behavior of markets, demand measurement/forecasting, marketing mix decisions and strategies and policy implications etc. also covers marketing and social responsibility and other broad policy issues in marketing.

MKT 802.1 Consumer Behaviour

Designed to prepare students to understand the customer in order to serve him/her with appropriate marketing mix programmes. Covers consumer decision process; economic and demographic influences on consumption, cross-cultural and sub-cultural influences on consumption, cross-cultural and sub-cultural influences; style and fashion research and marketing strategy; innovation diffusion, beliefs, attitudes and intentions, brand loyalty and repeat purchase behavior; and retailing strategies, models of consumer behavior etc.

MKT 803.1 Service Marketing

Designed to expose students to the skills and techniques of applying concepts of marketing to the business or services delivery and requirements for the development of market research, marketing, mix etc. in depth examination and analysis of the critical theories and concepts in services marketing, and demonstrates how these concepts can be practicalised to meet the needs of service organizations especially those operating in key industries of the economy like banks, insurance, communication, government, transportation, leisure, travel, hotels, tourism, hospitality. Health, sports, recreation etc. Topics include characteristics of people, processes and physical marketing, mix, management of service quality, current developments in service marketing theories and practices.

MKT 804.1 Research Methodology

Design the understanding of research methods in both quantitative and qualitative research

environments; review and computation and application of inferential, statistical tools to research. Types of research and types of data, problems of research, problem definition and hypotheses formulation, data collection analysis and report writing.

MKT 805.1 Marketing Communication

Covers various theories of promotion and sales management principles and practices. Promotional implications of marketing mix integration; advertising, design and management/measurement); models of communication/advertising; media characteristics and planning strategies, advertising agencies, sales promotion, publicity and public relations. Sales force training, motivation and compensation, sales forecasting, and resource allocation, market potentials etc.

MKT 806.1 Marketing Models

Describes theoretical and empirical models used to analyze marketing management issues in areas of product introduction and positioning, pricing, advertising and distribution channels. Theoretical structure of this course stems from micro-economics of the firm and consumer decision making, with special consideration of competitive issues analyzed with game theory and applications of control theory. Empirical requirements include conjoint analysis, choice modeling and multivariate techniques.

MKT 810.2 Industrial Marketing

This course takes students on an exploration of the ramifications and dynamics of the operations in industrial markets. The students at the end of the course should underscore the point that marketing in industrial markets is greatly different from consumer market. It covers areas like; concept and nature of industrial products and their features; industrial markets, industrial services, marketing mix strategies and selling techniques in industrial marketing, segmenting the industrial market and industrial buyer behavior.

MKT 811.2 Marketing Theory

Designed to provide knowledge of marketing theories and research Marketing is an applied discipline informed by scholarly research in marketing and related fields like psychology, economics, sociology etc. reviews marketing theories and research especially the influential theories in the development of marketing thought. Review of contemporary theories and research in marketing from published scholarly articles in refereed journals.

MKT 812.2 Seminars In Marketing

Designed to introduce students to the most recent research in marketing includes the examination of

current issues and trends. Students will be required to present their own research and discuss and analyze the work of others. Research presentation will focus on the formulation, design, execution and results/or findings of the research work. Topics can include, market development, demand creation, psychological and sociological determinants of behavior, consumer protection laws etc.

MKT 813.2 IT Applications in Marketing

Will cover different forms of computers, and their applications to marketing. Other issues include systems theory and design, data analysis and networking; data manipulation and administration; data collection, coding and output data transmission and error detection. Process of national, regional and international information technology development; design implementation and control of e-marketing, the necessity for control of information technology.

MKT 814.2 Marketing Research

Covers theoretical and practical procedures in marketing research, including measurements and scaling, research, sampling, data collection and analysis, and statistical techniques; advertising research, motivation research and theory, product and channel research and report writing etc.

MKT 815.2 Marketing Logistics/Distribution Management

Analysis of the policies, practices and problems of corporate logistics, including activities like transportation, warehousing, materials management, inventory control, order processing and customer services. Physical distribution activities and the role of middle men in the channel problems and conflict management etc.

MKT 816.2 Agricultural and Food Marketing

Review and analysis of agricultural and food marketing techniques in Nigeria. exposes students to major agricultural and food products, agricultural marketing inputs, agric technology and sources. Consider development, policies and problems of agricultural and food marketing in Nigeria; government intervention in agric marketing, international problems cooperatives, standardization and grading, packaging, weights and measures, agric market centralization and decentralization; interstate marketing of farm products, and the future of agricultural marketing in Nigeria.

(C) MASTER OF BUSINESS ADMINISTRATION (MBA) PROGRAMME IN MARKETING

i) Philosophy of MBA Programme in Marketing

Philosophy: The philosophy of the programme is to develop highly skilled professional managers for the public, private and international organizations.

ii) Objectives of the MBA (Marketing) Programme

The programme in keeping with similar objectives promoted by the NUC seeks to accomplish the following objectives;

- a. Providing students with knowledge and skills to enhance their performance and to enable them assume broader responsibility in the rapidly changing environment faced by private and public sectors.
- b. The provision of knowledge required for understanding, and practical analysis of problems related to management/and administration, public, private and international organizations.
- c. Producing managers who are capable of appropriate management principles and techniques of problem solving in the Nigerian environment and the world at-large.
- d. To produce especially responsible managers who are mindful of accepted norms and ethics.
- e. To produce managers who are equipped with relevant ICT knowledge and skills
- f. To produce managers with entrepreneurial skills and leadership qualities.
- g. To provide interested individuals with the necessary competencies and skills to function effectively as academics in business administration.

MBA COURSE

STRUCTURE/DESCRIPTION

The Department of Marketing offers an MBA degree programme and therefore all courses leading to the award of the degree are compulsory.

COURSE DESCRIPTION

MKT 800.1 International Marketing

Course covers marketing planning, strategy and action in international and multinational environments. Examines international market environment; international marketing planning and strategies; marketing action in international settings and valuation and control of international marketing plans that integrate the cultural, economic, political and demographic factors etc for class presentation, Can combine marketing, ethnographic and international business studies.

MKT 801.1 Marketing Management

Covers managerial aspects of marketing; Marketing concept, marketing management process and practices, behavior of markets, demand measurement/forecasting, marketing mix decisions and strategies and policy implications etc. also covers marketing and social responsibility and other broad policy issues in marketing.

MKT 802.1 Consumer Behaviour

Designed to prepare students to understand the customer in order to serve him/her with appropriate marketing mix programmes. Covers consumer decision process; economic and demographic influences on consumption, cross-cultural and sub-cultural influences on consumption, cross-cultural and sub-cultural influences; style and fashion research and marketing strategy; innovation diffusion, beliefs, attitudes and intentions, brand loyalty and repeat purchase behavior; and retailing strategies, models of consumer behavior etc.

MKT 804.1 Research Methodology

Design the understanding of research methods in both quantitative and qualitative research environments; review and computation and application of inferential, statistical tools to research. Types of research and types of data, problems of research, problem definition and hypotheses formulation, data collection analysis and report writing.

MKT 805.1 Advertising Management

Covers various theories of promotion and sales management principles and practices. Promotional implications of marketing mix integration; advertising, design and management/ measurement); models of communication/ advertising; media characteristics and planning strategies, advertising agencies, sales promotion, publicity and public relations. Sales force training, motivation and compensation, sales forecasting, and resource allocation, market potentials etc.

MKT 810.2 Industrial Marketing

This course takes students on an exploration of the ramifications and dynamics of the operations in industrial markets. The students at the end of the

course should underscore the point that marketing in industrial markets is greatly different from consumer market. It covers areas like; concept and nature of industrial products and their features; industrial markets, industrial services, marketing mix strategies and selling techniques in industrial marketing, segmenting the industrial market and industrial buyer behavior.

MKT 811.2 Marketing Thought

Designed to provide knowledge of marketing theories and research Marketing is an applied discipline informed by scholarly research in marketing and related fields like psychology, economics, sociology etc. reviews marketing theories and research especially the influential theories in the development of marketing thought. Review of contemporary theories and research in marketing from published scholarly articles in reefered journals.

MKT 812.2 Seminar in Marketing

Designed to introduce students to the most recent research in marketing includes the examination of current issues and trends. Students will be required to present their own research and discuss and analyze the work of others. Research presentation will focus on the formulation, design, execution and results/or findings of the research work. Topics can include, market development, demand creation, psychological and sociological determinants of behavior, consumer protection laws etc.

MKT 814.2 Marketing Research

Covers theoretical and practical procedures in marketing research, including measurements and scaling, research, sampling, data collection and analysis, and statistical techniques; advertising research, motivation research and theory, product and channel research and report writing etc.

MKT 827.1 Quantitative Methods for Management (QMM)

Basic elements of decision making under conditions of uncertainty, set theory; probability theory; classical statistics and statistical decision theory ; linear programming, primal and dual simplex algorithm, Transportation and network analysis, Concept of queuing theory, games, statistical Inference and Hypothesis testing, Time series.

MKT 818.1 Corporate Finance

The principles and procedures, underlying financial statements; financial transactions; alternative accounting statements; tools or analysis of ratios and other quantitative measures; accounting information useful for managerial action; application of information in decision

situations. Project Appraisal analysis of investment projects, the impact of risk, tax and inflation, the term structure of interest rates, the cost of capital and target rates of return; capital markets, its efficiency, the role of intermediaries, sources of finance, the borrowing decision and company valuation and optimal portfolio allocation; Capital structure, optimal capital structure of firms, mergers and acquisitions and the market for corporate control, market efficiency, the principle of capital structure, gearing and the basics of hedging and international finance.

SGS 801.1 ICT&Research Methods (ICM)

Uses of computers in problem solving; its application to the solution of problems at the introductory level in capital budgeting and linear programming.

MKT 804.1 Operations Management (OM)

Issues in operations strategy, process analysis and the use of data and managerial opinion in making effective propositions to address the questions in the cases. Major economic decision, problems of production and operations management; aggregate production and work-force scheduling; multi-plant allocation of product; large scale project control (CPM and PERT); production and inventory control; demand forecasting; quality control; and short run job shop scheduling; the interaction of production problems with those of other functional areas, queuing theory, dynamic programming, multiple regression and correlation.

MKT 806.1 Marketing Management & Strategy (MMS)

Perspectives and problems of marketing management in a multi-product firm; the concept and application of strategic planning to business units and functional areas of marketing, utilization of current marketing strategy models as aids in strategy formulation, decision processes for product planning, pricing, promotion, distribution and competitive strategy.

MKT 809.2 Organizational Behaviour (OB)

Exposure to essential theories and concepts for managerial problems, individual and group analysis of cases and experiential exercises, Exchange of ideas and experiences in the classroom, intensive field-based project work in groups.

MKT 828.2 Introduction to General Management (IGM)

Evolution of Management thought; functions and responsibility of general management;

Understanding global management; Managing through processes; managerial values; Managerial decision making; planning, organizing, directing and coordination, problems affecting the character and success of the enterprise; the design and implementation of corporate strategy.

MKT 817.2 Corporate Strategy (CS)

Conceptual frameworks and models for the analysis of competitive situation and strategic dilemmas; Insight into strategic management; Analyses of external competitive environment, industry structure, value chain dynamics, etc.

MKT 819.2 Managerial Economics (ME)

Application of principles from various fields in economics and business to management decision making; price mechanism, allocation of resources, profit drivers of the firm, revenue and cost drivers, interaction among the market players, firms strategy, understanding market forces, the meaning of competition, pricing profit, market power good or evil, playing games I, Competition versus Cooperation, playing games II, Entry and Exit, firms versus Markets; Make or Buy, auctions and market design, economics of information.

MKT 828.1 Introduction to Accounting

Accounting concepts, Construction of Financial statements Balance sheet, Income Statements, Cash-flow statements, Analysis and Interpretations of financial statements, Element of costing and auditing.

MKT 811.2 Environment of Business

The basic objective of the course is to examine the legal, social, political and economic framework which business organization must operate in the Nigerian environment, due to the pervasive influence of globalization and reduction of distances between nations, their value systems, language etc. international business environments will be explored.

MKT 815.1 Human Resource Management

Topic to be covered should include the scope, nature, methods and principles of organizational human resources management. The course could provide an overview of strategies and management practices in manpower planning techniques; staffing; human resource training and development; performance management and systems design; compensation designs and reward management; career planning and employee welfare; line and staff functions as well as the relationship between personnel department and other departments. Review of current principles and practices of human resources management in the Nigerian and global contest.

RESEARCH/PROJECT

Research/Project Policy, Methodology and Thrust:

The MBA (Marketing) policy centres on;

- Establishment of ownership and empirical evaluation of existing research problems
- Evolution of scientific problem-solving procedures that could provide valid, testable and reliable results.
- Potency of the results in terms of their validity for reliance as basis for extension of policy formulation and/or modification of same in both the public and private sectors of the economy.

The research/project component of the MBA (Marketing) programme provides an avenue which encourages students to adopt contemporary research methods that are in line with world class standards and international best practices. Candidates are encouraged to adopt research procedures that are evident of high level of intellectual rigour, and has practical implications for the Nigerian work environment in particular and businesses in general. Candidates are encouraged to ensure rigorous verification of the subject matter of their research and thus, provide results that are derived from verification of the study-implied hypotheses, which are based on carefully drawn data and reviewed literature.

(D) POST GRADUATE DIPLOMA (PGD) PROGRAMME IN MARKETING

i) Philosophy of PGD Programme in Marketing

Philosophy: the philosophy of the programme is to prepare graduates with some deficiencies in their previous studies to adequately fit into the MSC and MBA Marketing programme.

ii) Objectives of the MBA (Marketing) Programme

The programme in keeping with similar objectives promoted by the NUC seeks to accomplish the following objectives;

iii) To expose students to the fundamental courses in marketing needed for advanced MSC and MBA Marketing programme.

iv) To teach students the process of investigative science needed to explore theoretical and practical problems in Marketing.

v) To update students regarding deficient knowledge in marketing and cognate business courses needed to understand and analyse marketing problems.

PGD CORE COURSES

Courses Code	Course Description	Credit
MKT 700.1	Fundamentals of marketing	2
MGT 700.1	Principles of Management	2
FIN 710.1	Principles of finance	2
MGT 703.1	Business mathematics	2
ACT 701.1	Principles of accounting	2
ECO 710.1	Microeconomics	2
MKT 707.2	Business statistics	2
MKT 708.2	Research methodology	2
MKT 709.2	Introduction to marketing management	2

CONCENTRATIONS COURSES

Courses Code	Course Description	Credit
ECO 701.2	Principles of Macroeconomics	2
MKT 710.2	Introduction to consumer behavior	2
MKT 713.2	Introduction to marketing Research	2
MKT 710.2	Introduction to Consumer Behaviour	2
MKT 714.2	Introduction to International Marketing	2
MKT 712.2	Introduction to strategic marketing	2
MKT 720	Research project	2
	TOTAL	34

Elective Courses

Candidates are required to register for and pass any three out of the following five courses.

Courses Code	Course Description	Credit
MKT 710.2	Introduction to consumer behavior	2
MKT 713.2	Introduction to marketing Research	2
MKT 710.2	Introduction to Consumer Behaviour	2
MKT 714.2	Introduction to International Marketing	2
MKT 712.2		2

PGD COURSE STRUCTURE/ DESCRIPTION

MKT 700.1 Fundamentals of Marketing

The course introduces students to the basics of marketing with regard to meaning, definitions of marketing, basic marketing concepts, marketing

evolution and practices, behavior and market segmentation, introduction to marketing research and introduction to international marketing as well as other areas of marketing.

MKT 714. Introduction to International Marketing

Course covers marketing planning, strategy and action in international and multinational environments. Examines international market environment; international marketing planning and strategies; marketing action in international settings and valuation and control of international marketing plans that integrate the cultural, economic, political and demographic factors etc for class presentation, Can combine marketing, ethnographic and international business studies.

MKT 709.2 Introduction to Marketing Management

Covers managerial aspects of marketing: Marketing concept, marketing management process and practices, behavior of markets, demand measurement/forecasting, marketing mix decisions and strategies and policy implications etc. also covers marketing and social responsibility and other broad policy issues in marketing.

MKT 710.2 Introduction to Consumer Behaviour

Designed to prepare students to understand the customer in order to serve him/her with appropriate marketing mix programmes. Covers consumer decision process; economic and demographic influences on consumption, cross-cultural and sub-cultural influences on consumption, cross-cultural and sub-cultural influences; style and fashion research and marketing strategy; innovation diffusion, beliefs, attitudes and intentions, brand loyalty and repeat purchase behavior; and retailing strategies, models of consumer behavior etc.

MKT 708.2 Research Methodology

Design the understanding of research methods in both quantitative and qualitative research environments; review and computation and application of inferential, statistical tools to research. Types of research and types of data, problems of research, problem definition and hypotheses formulation, data collection analysis and report writing.

MKT 713.2 Introduction to Marketing Research

Covers theoretical and practical procedures in marketing research, including measurements and scaling, research, sampling, data collection and analysis, and statistical techniques; advertising research, motivation research and theory, product and channel research and report writing etc.

MKT 711.2: Introduction to Sales Management

The course introduces students to principles of selling, sales, management evolution of sales management, major tasks of sales management, determining sales policies and strategies and sales forecasting among others.

Mkt 712.2: Introduction to Strategic Marketing Management

The course introduces students to knowledge regarding foundations of strategic marketing, strategic marketing management process, opportunity analysis and market targeting, case analysis in marketing management and environment for strategic marketing management decisions, among others.

POST GRADUATE DIPLOMA IN SUPPLY CHAIN MANAGEMENT

Admission Requirements

- i. Holders of B. Sc. or B.A. degrees in relevant fields not lower than third class including Marketing, Mass Communication, Linguistics, Public Administration, Political Science, Management, Personnel/Human Resources Management, Advertising, Purchasing and Supply, History and International Relations, Law, Sociology, Hospitality Management and Tourism, Accounting, Finance and Banking, Personnel Management, English language, Library science, Education, Economics, etc. with a grade not lower than third class.
- ii. Holders of upper credit in Higher National Diploma (HND)

Duration

The duration of the program shall be for a minimum of 12 calendar months and a maximum of 18 calendars months. It shall run on the usual semester pattern like other PGD programmes in the Department.

Graduation Requirements

Candidates for the PGD in Supply Chain Management programme are required to pass all their course work and seminars before proceeding further to the Project. On the whole, candidates are expected to complete the programme and graduate within the stipulated maximum period of residency as provided in the admission guideline.

COURSE DESCRIPTIONS

MKT 700.1: FUNDAMENTALS OF MARKETING-2 UNITS

The fundamentals of marketing will treat the nature and scope of marketing in details. It will give a general survey of the field of marketing covering marketing channels and intermediaries in distribution, the role and importance of marketing to organization and society, evaluate the function of a marketing manager of a company, marketing systems and other areas in marketing as may be deemed necessary.

MGT 700.1: PRINCIPLES OF MANAGEMENT- 2 UNITS

Principles of management covers the nature, definition and scope of management, types of businesses, principles of management or management functions as discharged by individuals giving such responsibilities. It further treats organizational structure and chart and reporting lines in the organization for effective and efficient management of human and other resources for optimal productivity.

FIN 710.1: PRINCIPLES OF FINANCE- 2 UNITS

Principles of finance is a core course for supply chain managers at the intermediate level of the

organizational structure. It treats the under listed and other topical areas such as introduction to finance, time value of money, ratio analysis, simple financial statements and simple and compound interest which forms the mathematical aspect of finance.

MGT 703.1: BUSINESS MATHEMATICS-2 UNITS

Business mathematics covers differentials, indices, inequalities, vein diagrams, logarithms, set theories etc.

ACT 701.1: PRINCIPLES OF ACCOUNTING-2 UNITS

Principles of accounting will expose the students to revenue and expenditure recognition principle, cost principle, production principle, matching principle, full disclosure principle, objectivity principle and other conventions.

ECO 710.1: LOGISTIC-ECONOMICS- 2 UNITS

Micro-economics is a social science that covers the implication of incentives and decisions, specifically about how those incentives and decisions affects the utilization and distribution of resources, why different goods have different values, how individuals and businesses conduct and benefit from efficient production and exchange and how individuals can best coordinate and cooperate with one another in the organization.

SCM 701: SUPPLY CHAIN STRATEGY AND SUSTAINABILITY 2 UNITS

This module is intended to provide you with a sound foundation to the course by introducing the main concepts and principles that underpin Logistics and Supply Chain Management, including the important issue of sustainability. It presents the fundamental principles of contemporary logistics and supply chain management within a business context. This unit will explore the ways in which good practice in these fields can contribute to achieving sustainable competitive advantage. Overarching aspects of Supply chain sustainability are explored, such as corporate responsibility and ethics. Further the Global Supply Chain Game will enable students to understand through an interactive and competitive business game the principles of building an efficient global sourcing and supply chain under conditions of uncertainty so as to achieve high levels of profit and product availability. Global marketplaces are characterised by shortening product life cycles, increasing product variety, and highly variable demand that is difficult to forecast. The module explores how the competitive landscape is constantly changing, and

the role of logistics and supply chain management in meeting the challenges raised.

SCM 702.2: STRATEGIC PROCUREMENT & MATERIAL MANAGEMENT-2 UNITS

The course will explore the subject of procurement and supply in the industrial and commercial context, explaining its role and purpose within the supply chain. Students will learn how procurement has developed, the skills and information needed by procurement professionals, the academic theory and knowledge accumulated on the subject area and the use of specific tools and techniques employed in managing the procurement function. In addition, we will explore and use some of the recently emerged technologies within e-procurement which are designed to improve both process and cost management.

SCM 703.2: INVENTORY AND OPERATIONS MANAGEMENT-2 units

To provide comprehensive overview of the role of operations in the organization's collaborative/constructive working environment, business models and performance, within the overall context of supply chain management/external environment, and enable them to analyze and design effective supply chain operations with the ultimate goal to improve the match between demand and supply.

SCM 704.2: ANALYTICAL TECHNIQUES FOR SCM-2 units

Managerial decisions in logistics and supply chain management are heavily based on quantitative analysis using models from the management science discipline. Data, models, and available software have dramatically changed the operations in manufacturing, services, and logistics sectors. The module aims to provide students with an introduction to the role and the relevance of analytical techniques in logistics and supply chain management. From simple graphs to deterministic and stochastic optimisation models, it offers transferable skills to use associated techniques for the practice of these disciplines. Students will develop the ability to model and solve realistic decision problems in the context of logistics and supply chain management. This process will be facilitated by spreadsheet-based software packages where the students will have an opportunity to build their own spreadsheet models with emphasis on appropriate application of methods and interpretation of model outputs.

SCM 705.2: FREIGHT TRANSPORT-2 units

The Freight Transport module provides a sound foundation in road, rail, air and sea freight transport. The focus is primarily from a user perspective in order to provide a logistics and

supply chain management viewpoint. However, in road freight, the module also covers more detailed fleet management and operational aspects, recognising that many organisations operate their own road transport fleets but also reflecting the importance of road freight as the primary inland freight mode in most geographies for national and urban freight traffic.

SCM 707.2: PHYSICAL DISTRIBUTION & NETWORK DESIGN MGT -2 units

The heart of any logistics and supply chain operation is its physical network. The location of factories, distribution centers, suppliers, customers and so forth and the means by which they are linked, fundamentally affects the efficiency with which an organization's network operates. This module aims to introduce the concepts and techniques of network theory and analysis and use these to demonstrate how physical networks are designed, redesigned and optimized and how current supply chain trends and challenges are influencing this design. Physical distribution, channel intensity and structures.

MKT 706.2: MARKETING MANAGEMENT AND STRATEGY-2 units

Marketing environment. Organizing, planning, coordinating and control of the marketing functions. Product strategy, pricing, distribution and promotion. Services marketing, marketing information system, market research and post marketing activities.

SCM 708.2: PROJECT-6 UNITS

At the completion of course work each student is expected to embark on a dissertation to be defended before an external examiner.

MASTER OF SCIENCE IN SUPPLY CHAIN MANAGEMENT

Admission Requirements

- i. Holders of B. Sc. or B.A. degrees in relevant fields including Marketing, Mass Communication, Public Administration, Political Science, Management, Personnel/Human Resources Management, Advertising, Purchasing and Supply, International Relations, Law, Sociology, Hospitality Management and Tourism, Accounting, Finance and Banking, Personnel Management, Education, Economics, etc. with a minimum of second class lower division.
- ii. Holders of PGD in the above-mentioned fields or in Supply Chain Management of the University of Port Harcourt or any other

recognized University with lower and upper credit.

Duration

The duration of the program shall be for a minimum of 18 calendar months and a maximum of 36 calendar months for full time study and minimum of 24 calendar months & maximum of 48 calendar months for part time study. It shall run on the usual semester pattern like other M.Sc. programmes in the Department.

Graduation Requirements

Candidates for the MSc in Supply Chain Management programme are required to pass all their course work and seminars before proceeding further to the Dissertation. On the whole, candidates are expected to complete the programme and graduate within the stipulated maximum period of residency as provided in the admission guideline.

COURSE DESCRIPTIONS

SCM 801: SUPPLY CHAIN STRATEGY AND SUSTAINABILITY- 2 units

This module is intended to provide you with a sound foundation to the course by introducing the main concepts and principles that underpin Logistics and Supply Chain Management, including the important issue of sustainability. It presents the fundamental principles of contemporary logistics and supply chain management within a business context. This unit will explore the ways in which good practice in these fields can contribute to achieving sustainable competitive advantage. Overarching aspects of Supply chain sustainability are explored, such as corporate responsibility and ethics. Further the Global Supply Chain Game will enable students to understand through an interactive and competitive business game the principles of building an efficient global sourcing and supply chain under conditions of uncertainty so as to achieve high levels of profit and product availability. Global marketplaces are characterised by shortening product life cycles, increasing product variety, and highly variable demand that is difficult to forecast. The module explores how the competitive landscape is constantly changing, and the role of logistics and supply chain management in meeting the challenges raised.

SCM 802: STRATEGIC PROCUREMENT & MATERIALMANAGEMENT-2 units

The course will explore the subject of procurement and supply in the industrial and commercial context, explaining its role and purpose within the supply chain. Students will learn how procurement has developed, the skills and information needed by procurement professionals, the academic theory and knowledge accumulated on the subject area and the use of specific tools and techniques employed in managing the procurement function. In addition we will explore and use some of the recently emerged technologies within e-procurement which are designed to improve both process and cost management.

SCM 803: INVENTORY AND OPERATIONS MANAGEMENT-2 units

To provide comprehensive overview of the role of operations in the organisation’s collaborative/constructive working environment, business models and performance, within the overall context of supply chain management/external environment, and enable them to analyse and design effective supply chain operations with the ultimate goal to improve the match between demand and supply.

SCM 804: ANALYTICAL TECHNIQUES FOR SCM-2 units

Managerial decisions in logistics and supply chain management are heavily based on quantitative analysis using models from the management science discipline. Data, models, and available software have dramatically changed the operations in manufacturing, services, and logistics sectors. The module aims to provide students with an introduction to the role and the relevance of analytical techniques in logistics and supply chain management. From simple graphs to deterministic and stochastic optimisation models, it offers transferable skills to use associated techniques for the practice of these disciplines. Students will develop the ability to model and solve realistic decision problems in the context of logistics and supply chain management. This process will be facilitated by spreadsheet-based software packages where the students will have an opportunity to build their own spreadsheet models with emphasis on appropriate application of methods and interpretation of model outputs.

SCM 805: FRIEGHT TRANSPORT-2 units

The Freight Transport module provides a sound foundation in road, rail, air and sea freight transport. The focus is primarily from a user perspective in order to provide a logistics and supply chain management viewpoint. However, in road freight, the module also covers more detailed fleet management and operational aspects, recognizing that many organizations operate their own road transport fleets but also reflecting the importance of road freight as the primary inland freight mode in most geographies for national and urban freight traffic.

SCM 806: INFORMATION SYSTEMS AND eBUSINESS-2 units

To provide theoretical and practical knowledge about: The value of information and the role of information systems (IS) for supply chain management. The role and impact of information systems in e-business. The opportunities and implementation challenges provided by information systems in supply chain management.

SCM 807: PHYSICAL NETWORK DESIGN - 2 units

The heart of any logistics and supply chain operation is its physical network. The location of factories, distribution centres, suppliers, customers and so forth and the means by which they are linked, fundamentally affects the efficiency with which an organisation's network operates. This module aims to introduce the concepts and techniques of network theory and analysis and use these to demonstrate how physical networks are designed, redesigned and optimised and how current supply chain trends and challenges are

influencing this design. Physical distribution, channel intensity and structures.

SCM 809: WAREHOUSING - 2 units

The module provides a thorough grounding in the role and operation of warehouses including the range of storage and handling equipment, the design of warehouses and the use of information technology. It emphasizes on the strategic use of methods to analyze the wide range of available options. Additionally, the module focuses on developing the students' ability to discern and use appropriate warehouse design techniques. This module is taught in light of the wider context of an organisation's supply chain strategy and, thus, equips students with the means to tackle the warehousing aspects of complex supply chain problems.

MKT 806: MARKETING MANAGEMENT AND STRATEGY-2 units

Marketing environment. Organizing, planning, coordinating and control of the marketing functions. Product strategy, pricing, distribution and promotion. Services marketing, marketing information system, market research and post marketing activities.

SGS 801.2: MANAGEMENT & ENTERPRENUERSHIP-2 units

Advanced learning in starting and running small and medium scale businesses. Entrepreneurship theories and applications. Conducting Feasibility surveys and preparing a business plan. Consultancy services for SMEs and as a career option.

SGS 801.1: ICT AND RESEARCH METHODS- 2units

Application of Information communication technology tools to the conduct of research at an advanced level. Exposure to different Statistical softwares used for analysis. ICT importance in carrying out the collection, analysing and interpretation of data.

SCM 810 : CUSTOMER SERVICE MANAGEMNET-2 units

Designed to expose students to the skills and techniques of applying concepts of marketing to the business or services delivery and requirements for the development of market research, marketing, mix etc. in depth examination and analysis of the critical theories and concepts in services marketing, and demonstrates how these concepts can be practicalised to meet the needs of service organizations especially those operating in key industries of the economy like banks, insurance, communication, government, transportation, leisure, travel, hotels, tourism, hospitality. Health, sports, recreation etc. Topics

include characteristics of people, processes and physical marketing, mix, management of service quality, current developments in service marketing theories and practices.

SCM 811: SEMINARS IN SUPPLY CHAIN MANAGEMENT- 2units

The course is designed to introduce candidates to the most recent research supply chain management including examination of current issues and trends. Students are required to present their own research, discuss analyze the various presentations by colleagues. Research presentation will focus on the formulation, design, execution and results/or findings of the research work. Topics can include procurement, logistics, transportation, inventory control, materials management, warehousing and supply chain integration etc.

SCM 812: RESEARCH METHODOLOGY- 2units

Design the understanding of research methods in both quantitative and qualitative research environments. Review and computation, application of inferential, statistical tools to

research. Types of research and types of data, problems of research, problem definition and hypotheses formulation, data collection analysis and reporting.

MKT 804: GLOBAL LOGISTICS -2 units

Investigation into export promotion ordinance and their implication on their export and import trade. Theories of international trade and their implications, reason for internationalization, adapting marketing strategies to international operations (product, price, promotion, distribution). Planning for international marketing (resources, environmental factors organization, etc). Product and brand concepts in marketing planning and their implications. International marketing, foreign exchange and balance of payments disequilibrium. Creative innovations in international marketing, multinational and economic development, etc.

SCM 808.2: DISSERTATION-6 units

At the completion of course work each student is expected to embark on a dissertation to be defended before an external examiner.

DEPARTMENT OF MARKETING ACADEMIC STAFF LIST

S/N	NAME	QUALIFICATION	AREAS OF SPECIALIZATION	RANK
1	Igwe, S.R.	B.Sc, MBA, Ph.D. (UPH)	Strategic Marketing, Consumer Behavior and Supply Chain	Professor/HOD
2	Ezirim, A.C.	DIP, B.Sc, (OWERRI) MBA (ENUGU) M.Sc, (FUTO) Ph.D. (RSUST)	International Marketing, Logistics and Distribution	Professor

3	Asiegbu, I.F.	B.Sc, (RSUST), MBA (IMSU), Ph.D. (UPH)	Marketing Communication, Logistics and Supply Chain Management	Professor
4	Ogbuji, C.N.	B.Sc, (ABSU), MBA, M.Sc (UNHC) Ph.D.(ABSU)	Social/Services Marketing and Marketing Research	Professor
5	Awa, H.O.	B.Sc, (UNICAL), MBA(UPH), M.Sc,(ABSU), Ph.D. (UPH)	Consumer Behaviour, Digital & Interactive Marketing	Professor
6	Ozuru, H. N.	BBA, MBA, (USA), Ph.D. (RSUST)	Consumer Behavior & E-Commerce	Professor
7	Onuoha, A. O.	BSc, MBA, MSc (ABSU), Ph.D. (UNN)	Marketing Communications and Quantitative Techniques in Marketing	Professor
8	Ademe, D G.	BSc., MBA, (RSUST), PhD (UPH)	Services Marketing and Relationship Marketing	Reader
9	Igwe, P	BSc., MBA, MSc. PhD (UPH)	Logistics and Distribution Management	Senior Lecturer
10	Eke, Haniel O	BSc, MSc, PhD (UPH)	Marketing Communication and Strategy	Senior Lecturer
11	Nnenanya, D. A.	B.A (IMSU), PGD (FUTO), MBA (FUTO) M.Sc. (UPH), PhD (UPH)	Logistics and Distribution Management	Senior Lecturer
12	Lekue, J.	B.Sc., M.Sc. (RSUST) PhD (UPH)	Logistics and Distribution Management	Senior Lecturer
13	Atuo, E.C.	B.Sc., M.Sc (RUST)., PhD (UPH)	Marketing Communication and Digital Marketing	Senior Lecturer
14	Abiye, H. L.	BSc, MBA, (UPH), MSC (ABSU)	Marketing Management and Sustainable Marketing	Lecturer 1
15	Nwiepe, M.N.	BSc, MBA, M.Sc. (UPH), PhD. (RSUST)	Strategic Marketing and Consumer Psychology	Lecturer 1

DEPARTMENT OF FINANCE AND BANKING

History of Post Graduate programmes In the Department of Finance and Banking

Post graduate studies in Finance and Banking started under the erstwhile Graduate School of Business Administration which commenced in 1980 with Professor Lucius as the first Dean. The Graduate School of Business Administration offered four (4) Major MBA Programmes - Accounting, Finance, Management and Marketing. In 1984, the Graduate School of Business Administration metamorphosed into the Faculty of Management Sciences to enable it commences undergraduate programmes in the four stress areas. Accelerate the dissemination of the knowledge of finance discipline and contribute to the growth of the private and public sectors of the Nigerian economy.

The above move was principally informed by the fact that undergraduate studies in the above disciplines were not offered in then Graduate School of Business Administration and also, to align with the University-wide faculty structure. Adoption of the faculty structure paved way for introduction of more post graduate programmes in the department as follows:

- i. PGD (Finance and Banking) 1998/99
- ii. MSc (Finance and Banking) 2009/10
- iii. Ph.D. (Finance and Banking) 2006/07

Vision of the Department of Finance and Banking, University of Port Harcourt

The vision of the department is to become a top rated department among Nigerian and other universities actively involved in educating students, training and research activities thereby, serving as a reference point for other Universities and higher institutions of learning.

multi-nature of public sector-federal, state and local authorities and the financial relationship between government units; fiscal federalism, local government finance; rates, borrowing, federal/state grants, commercial activities; the systems of federal/states grants and changes overtime; the central of local authority expenditure: current and capital expenditure, its planning and control; pricing and investment problems, accounting and financial control in public owned enterprises.

(E) PhD (FINANCE & BANKING)

Philosophy of the PhD (Finance and Banking) Programme

The Philosophy of PhD (Finance and Banking) programme is to broaden and deepen the intellectual and managerial exposures of students in the major areas of finance and banking in particular, develop their capability to undertake advanced managerial, administrative and academic pursuits in different areas of financial concerns

The Aims/Objectives of PhD (Finance and Banking) Programme

- Develop effective managerial skills among candidates with which to recognize, analyze and solve organizational problems
- Train candidates who are equipped with capacity to utilize modern concepts and methods in running complex organizations
- Prepare candidates for further graduate work in the management sciences

Examination Malpractice

Any report of examination malpractice is investigated and deliberated upon by the departmental and faculty Graduate Committees before submission to Provost, College of Graduate Studies, through Dean, Graduate School of Management, Business and Trade and Dean, Faculty of Management Sciences for decision. Students found guilty are sanctioned in accordance with University of Port Harcourt regulations on examination malpractice.

Structure of the PhD (Finance and Banking) Programme

The structure of courses offered for the PhD (Finance and Banking) Programme is shown below:

FIRST SEMESTER, YEAR 1

Course Code	Course Title	Credit Units
FIN 901	Advanced Theory of corporate Finance	3

FIN 902	Advanced Portfolio Theory and Management	3
FIN 903	Advanced Theory of financial Intermediation	3
FIN 904	Advanced Quantitative Decisions Techniques in Finance	3
FIN 905	Advanced Research Methodology	3
FIN 906	Advanced Financial Econometrics	3
SUB TOTAL		18

SECOND SEMESTER, YEAR 1

Finance Option

Course Code	Course Title	Credit Units
FIN 914	Theory and Management of Financial Institutions and Markets	3
FIN 907	Empirical investigations in Finance	3
FIN 908	Contemporary issues in Finance	3
FIN 909	Issues in Public Financial Management	3
FIN 910	Advanced International Trade and Finance	3
SUB TOTAL		15

Banking Option

Course Code	Course Title	Credit Units
FIN 914	Theory and Management of Financial Institutions and Markets	3
FIN 911	Empirical investigations in Banking	3
FIN 912	Contemporary issues in Banking	3
FIN 913	Issues in insurance Management	3
FIN 910	Advanced International Trade and Finance	3
SUB TOTAL		15

FIRST SEMESTER, YEAR 2

Finance Option

Course Code	Course Title	Credit Units
FIN 920	Ph.D Seminar in Finance 1	3
FIN 921	Ph.D Seminar in Finance 11	3
SUB TOTAL		6

Banking Option

Course Code	Course Title	Credit Units
FIN 924	Ph.D Seminar in Banking 1	3
FIN 925	Ph.D Seminar in Banking 11	3
	SUB TOTAL	6

SECOND SEMESTER, YEAR 2

Course Code	Course Title	Credit Units
FIN 930	Ph.D Thesis/Dissertation	12
	GRAND TOTAL	51

COURSE DESCRIPTIONS

FIN 902: Advanced Portfolio Theory and Management

Essentially, this is a course in multi period wealth maximization using portfolios and in the analysis of capital markets where portfolio assets are traded. Emphasis shall be on the models of portfolio management and capital market analysis, such models include the Capital Asset Pricing Models (CAPM); the Arbitrage Pricing Theory (APT); Random Walk and Martingale Models. Also tests of Capital markets for efficiency using such models as special analysis, Special Correlation and Runs Analysis shall be emphasized. The courses shall be examined comprehensively. The empirical evidence on the efficiency of selected international capital markets including Nigeria.

FIN 914: Theory and Management of Financial Institutions and Markets

The course shall examine the various theories of financial intermediation plus the role played in financial markets by financial institutions and the Central Bank. The course shall involve intensive literature review in such areas as the saving investment process; financial institutions and instruments; inflation in financial markets; money demand and money supply models, transmission mechanism and effectiveness of monetary policy in financial markets; impacts of fiscal policies on financial markets.

FIN 906: Advanced Financial Econometrics

Scope and methodology of econometric research, modeling, specifications and evaluation, correlation and regression theories, statistical tests for significance, regression analysis of variance, second order tests of the assumptions of linear regression, autocorrelation, multi collinearity, errors in variables, time as variable, dummy variables and distributed lag models, models of simultaneous relationships, mixed estimation methods of principal components, maximum likelihood method, three stages least square,

forecasting power of estimated models, choice of econometric technique, Monte Carlo studies.

FIN 910: International Banking and Finance

Topics covered include; overview of the global financial system, foreign exchange market, national banking and financial markets, Euro-banks and euro financing, international trade financing; international financial institutions and financial integration in ECOWAS and Africa: problems of developing countries in the international financial system and markets; reform of the international financial system; external borrowing; debt and debt servicing problems; foreign aid and foreign direct investment; Nigeria and international trading, payments and financial issues in the context of the changing global financial developments.

FIN 904: Advanced Quantitative Decision Techniques in Finance

It is designed to provide students the opportunity to explore more advanced quantitative techniques for decision making in general and research in particular. Emphasis will be on: quantitative methodologies in business, export commerce and international business, multivariate statistical methods, advance topics in optimizing techniques and stochastic models: application of t series, inbox number, other vital statistics to issues in business studies. In addition, it covers techniques of mathematical programming as applied in finance-the development of an intuitive appreciation of the techniques as opposed to rigorous mathematical derivation, illustration of the application in financial analysis-to be accomplished via a computer-assessed case, analysis and/or journal articles.

FIN 901: Advanced Theory of Corporate Finance

The course treats at the theoretical level the conceptual foundations of funds allocation among assets and assets classes, and analyses the effects of various corporate financial policy decisions (e.g. capital structure and dividends policies) on the value of the firm. It also includes analysis of the effects of taxes, bankruptcy costs, and agency costs on these decisions. The analyses are conducted successively under the assumptions of perfect and imperfect markets, and certainty and uncertainty conditions. In addition, it covers recent literature with emphasis on mathematical techniques which have been used to solve problems in portfolio theory, multi period asset pricing models and option pricing models. Financial leverage, market efficiency and information economics, term structure models,

capital market equilibrium models, corporate finance issues. Readings are drawn almost exclusively from the theoretical literature of corporate finance.

FIN 902: Advanced Portfolio Theory and Management

This course provides an advanced treatment of investment portfolio theories; computer enhanced models used to provide instruction in capital asset portfolio management and technique. Advanced treatment of diversification theories and applications in asset selection, analysis and management and risk management are exclusively discussed.

FIN 909: Public Sector Financial Management

This covers the procedure for estimation and control of government expenditure, and the raising of revenue estimation of expenditure, authorization of expenditure and accounting processes for planning public expenditure efficiency of government expenditure; measurement of 'efficiency' of government expenditure; objective functions of government expenditure; the planning programming Budgeting system and other budgeting systems as an approach to cost effectiveness appraisal of government expenditure. Also included are: the multi-nature of public sector-federal, state and local authorities and the financial relationship between government units; fiscal federalism, local government finance; rates, borrowing, federal/state grants, commercial activities; the systems of federal/states grants and changes overtime; the central of local authority expenditure: current and capital expenditure, its planning and control; pricing and investment problems, accosting and financial control in public owned enterprises.

FIN 908: Contemporary Issues in Finance

This is a seminar to address emerging issues in theoretical and empirical literature in finance.

FIN 912: Contemporary Issues in Banking

This is a seminar to address emerging issues in theoretical and empirical literature in Banking

FIN 920: PhD Seminar In Finance I

Candidates will be required to make a seminar presentation. Each student will be required to produce a manuscript in the usual journal format on the topic under investigation. For these candidates, a sound literature review and development of relevant mathematical models or techniques of analysis related to their research topics will be acceptable.

FIN 921: PhD Seminar In Finance II

Candidates will be required to make at least two seminar presentations. The first seminar presentation is the thesis proposal if the approved proposal is completed. The second seminar presentation will emphasize the actual results of the students research work.

FIN 911: Empirical Investigations In Banking

Market efficiency tests, term structure theory test, market structure, and financial structure issues. Topics focus on statistical and methodological problems encountered in empirical research in related areas of finance, economics and accounting.

FIN 924: PhD Seminar in Banking I

Candidates will be required to make a seminar presentation. Each student will be required to produce a manuscript in the usual journal format on the topic under investigation. For these candidates, a sound literature review and development of relevant mathematical models or techniques of analysis related to their research topics will be acceptable.

FIN 925: PhD Seminar in Banking II

Candidates will be required to make at least two seminar presentations. The first seminar presentation is the thesis proposal if the approved proposal is completed. The second seminar presentation will emphasize the actual results of the students research work.

STAFF LIST

S/NO	NAME OF LECTURER	QUALIFICATION	RANK
1.	Dr. G. O. Omojefe	B.Sc., M.Sc., PGD, MBA, Ph.D	Professor/HoD
2.	Prof C.B. Ezirim	B.Sc, MBA, M.Sc, Ph.D, FNISM, FIABBS, FICN, LMNES, PGDE	Professor
3.	Prof. E. J. Okereke	BSc, MBA, M.Sc, Ph.D, MACM, FISM	Professor
4.	Prof. B. F. Nwinee	B.Sc, MBA, M.Sc, Ph.D, FCIFIA, FNISM, FIIMMN, EPPA	Professor
5.	Prof. I. S. Nnamdi	B.Sc, MBA, Ph.D, FCIFIA,	Professor
6	Prof. E.P. Ifionu	B.SC, M.SC, Ph.D, M.SC	Professor
7	Dr. S. S. Ogunbiyi	B.Sc, MBA, Ph.D, FCIFIA	Professor
8	Dr. L.L. Torbira	NCE, B.Sc, MBA, Ph.D, FCIFIA	Professor
9.	Dr. V. O. Olulu-Briggs	B.Sc, MBA, M.Sc, Ph.D,	Reader
10.	Dr. R. E. Odi	B.Sc, MBA, M.Sc, Ph.D, ACIB	Senior Lecturer
11.	Dr. G.U. Oji	B.Sc, MBA, M.Sc.	Senior Lecturer
12.	Dr R O Mojekwu	B.Sc, MSC, Ph.D	Lecturer II
13.	Dr. E. U. Makwe	PhD.	Lecturer II

DEPARTMENT OF HOSPITALITY MANAGEMENT AND TOURISM

Preamble

The idea to establish the Department of Hospitality Management and Tourism was based on the realization that the Hospitality and Tourism Industry is fast growing with attractive potentials which create the need for training of graduates in the discipline. This thought corroborates the Federal Government's initiative to develop the Hospitality and Tourism Industry to enhance the foreign exchange earning capacity of the economy. In reaction to this noble idea, the Faculty mandated a committee to write a proposal for the proposed department. On the 7th of September 2007, a committee to develop the programme was constituted. The committee submitted its report which includes the mission, philosophy, objectives and curriculum of the programme. The report was harnessed to form a proposal which the Faculty presented to the Senate for approval. The proposal was approved by the Senate on 3rd December 2009 at its 353rd meeting (extraordinary), authorizing the establishment of the Department of Hospitality Management and Tourism, in the Faculty of Management Sciences.

Philosophy

The general philosophy of programmes in Postgraduate Programme in Tourism and Hospitality Management is to provide graduate education and training in the discipline, which develops and deepens the spirit of enquiry and responsibility in the graduate students, to take on research, teaching and administrative responsibilities, in public and private sectors of the nation and global economies.

Vision

The vision of the programme is to become top rated among Nigerian and other universities that are actively involved in educating and training students in the profession by integrating practical and theoretical learning to give the knowledge and tools needed to succeed in the rapidly evolving hospitality and tourism environment.

Mission

The mission of the programme is to provide knowledge to our students and potential members of the public through a broad based, qualitative and analytical background deemed necessary for success in the professional, business and academic spheres of life.

Rationale

The tourism and hospitality industry is undergoing major global changes bringing both opportunities and challenges and the ability to provide a

consistently high level of service is paramount to the success of any business operating within this competitive environment. Due to its enormous size and scope the tourism and hospitality industry generates both positive and negative impacts that must be properly understood and managed. Many opportunities are emerging that require a combination of management and organizational skills as well as a sound knowledge and understanding of the industry, its products and its services. Students interested in pursuing a career in the Hospitality and Tourism cluster will need knowledge and experiences to prepare for on-the-job or post-secondary training. Tourism and Hospitality Management is a course designed to provide this knowledge and training by focusing on the management skills needed in hospitality and tourism occupations.

Aim

The aim of the programme is to advance the professional, academic and competitive competence of graduates in the discipline for higher level managerial and executive accomplishments in the cooperate world.

Objectives

The objectives of the programme are:

- i. Providing academic experiences through appropriate research and course work in Tourism and Hospitality Management.
- ii. Developing student's intellectual capabilities and enhance the marketability of their professional competencies.
- iii. Developing a critical mass intellectual that will help lead the way forward in developing innovative solutions, through research and scholarship, to address the many challenges facing tourism industry.
- iv. Preparing scholars in selected areas of tourism and hospitality management who will take active role in developing the tourism and hospitality industry.

A) Postgraduate Diploma Programmes (PGD)

Admission Requirements

Candidates seeking admission for Postgraduate Diploma in Tourism and Hospitality Management must have any of the following qualification from recognized institutions; Provided the matriculation requirements are satisfied:

- i. Five credit passes including English language, Mathematics and any two from, Commerce/economics, Geography, Biology

- /Agricultural Science, Catering, Tourism and Nutrition at the 'O' level.
- ii. Relevant Bachelor's Degrees not lower than third Class Division from recognized Universities.
 - iii. Bachelor's Degrees with any grade lower than 3.00 averages in a 5-point grading system or its equivalent in areas not related to Tourism and Hospitality Management may be considered.
 - iv. Higher National Diploma at minimum of lower credit level.
- N/B: Relevant professional qualifications will be added advantage.

Duration of Postgraduate Programmes

A) Postgraduate Diploma Programmes (PGD)

- a) Full-time Diploma: Minimum of two (2) semesters and a maximum of four (4) semesters.
- b) Part-time Diploma: Minimum of four (4) semesters and a maximum of six (6) semesters

Requirements for Graduation

The programme consists of course work, project work and seminars or special topics.

A) POSTGRADUATE DIPLOMA

To be awarded the Postgraduate Diploma in Tourism and Hospitality Management a candidate must have fulfilled the following conditions:

- i. Passed a minimum of 44 Credit Units, as follows:

Course Structure for Postgraduate Diploma in Tourism and Hospitality Management

Course Description for Postgraduate Diploma in Tourism and Hospitality Management

COURSE CODE, COURSE TITLE AND CONTENT

THM 702.1 Introduction to Tourism and Hospitality Management

An introductory course providing an overview of the structure and scope of the travel/tourism and hospitality industries. This course examines the components of the tourism industry: transportation, accommodation, food and beverage, and attractions. Other topics include the history, economic, political, social and cultural impacts tourism have on local, state and global environments. A section of the course is devoted to the State of the Nigerian Tourism and Hospitality environment. Students will review marketing, motivation and other forces that draw guests to sites of attraction. Students will be required to prepare a career-planning outline. Hotel classification, etc the basic structure and organization of the foodservice industry, basics of catering operations, the structure, amenities and product types available in the lodging industry. Various types of companies in the travel industry.

THM 704.1 Zoo and Park Management

Concepts of ecosystem, ecotourism, zoo, park and park management. Principles of recreation. Principles of nature conservation; population and natural resources relationship, social values and ethical issues in leisure; nature protection.

THM 705.1 Research Methods and Computer Application in Tourism and Hospitality Management

This course provides a methodological foundation for doing tourism and Hospitality research. Method here is understood not only as research techniques, procedures, and practices, but also as involving the theories and perspectives that inform the production of a particular kind of research and justify it in terms of knowledge-building skills. By exploring different tourism research methods, students will learn how to apply these methods to themselves. Practical examples will be used to illustrate these methods and the problems entailed. Types of research and research design in tourism, hospitality. Diverse aspects of research, from setting the theoretical background to evaluating the results of analyses. Strategies and methods of primary and secondary data collection. Preparation of different research instruments. Elements of statistics and applications in research. Demand forecasting methods. Data processing, quantitative and qualitative methods of data analysis in tourism, hospitality management. Research report writing.

THM 711.1 Sustainable and Ecotourism Management

Explain sustainable developments and ecotourism; Explain sustainable tourism as a problem of scale; Explain the Time Scale involved; Explain the sustainable development framework - sustainable development in environmental, socio-cultural and economic terms; Explain community participation; Identity a tourist; Illustrate the corporate dimension; Explain the regulatory contest of sustainable development; Identify the role of the community in the sustainable development framework (i.e. the community as owner of the resources and their responsibility towards tTHM); Concepts of ecosystem, eco-tourism, park, and park management. Principles of nature conservation; population and natural resources relationship, social values and ethical issues in leisure; nature protection, protected ecosystems. Study of the components, history, practice and current issues of nature-based tourism. Explores principles and problems of ecotourism for natural resources and host populations and includes rural tourism, economic impacts, tourism life cycle and case studies, sustainable tourism, Principles of intermediate tourism, etc. This course will introduce students to the history, concepts, marketing, planning and management of ecotourism activities and development.

THM 722.2 Industrial Relations in Tourism and Hospitality

The course focused on the difference and the relationship between an employer and an employee. Discuss labour relations and trace the history of labour unionism in the country and identify the fore-runners of industrial relations struggles; identify some labour unions both nationally and internationally. Highlight and discuss labour laws and their relevance in achieving industrial peace. Discuss; engagement, disengagement, dismissal, retrenchment, retirement, annual leave etc. discuss agitation by employees and industrial actions and the impact on the organization. Current approaches in the study of industrial system relation; environmental conditioning; industrial relations parties in Nigeria; government intervention in industrial relations in Nigeria: aims, factors necessitating the intervention, methods and forms of intervention; trade unionism: objectives, methods, functions and problems in Nigeria; principles of collective bargaining, industrial democracy, industrial conflict and types; trade dispute, strike, measurement of strikes, causes and strike settlement mechanism.

THM 724.2 Hotel Operations and Customer Relationship Management in the Tourism and Hospitality Industry

This course is designed to give an overview of the working components of a hotel and their interrelationships. Students will explore in a descriptive fashion the responsibilities of each hotel department and how and why their interactions are important. Students will examine the difference in operations of various types and sizes of hotels from B&B to full-service hotels. An examination of the challenges in operating food and beverage outlets as well as on- and off-premise catering. Topics to be covered include: menu development, beverage operations, levels and types of service, structures of kitchens and dining rooms, in-room dining, marketing, customer service, purchasing, inventory management, labour scheduling, pricing, costing, and the role of the food and beverage manager. An analysis of the rooms division within hotels and the role of revenue management in successful operations. Topics to be covered include: revenue management, pricing patterns and models, rooms division staffing, departmental structures, cost containment, customer data analysis, revenue optimization, and the integrated operation of lodging departments (rooms division, front office, guest services, sales and marketing night audit, accounting, housekeeping, reservations, engineering/maintenance, and security). Front office and housekeeping are the two basic departments in the room division. In this course, students will learn the daily operation of these two departments. Also, students will brainstorm on

how to keep these two departments work harmonically in order to provide ready rooms efficiently. This course provides students with basic skills in how to meet the expectations of their customers, upper management, colleague and even government as being a supervisor. In this course, students will learn not only theories but also learn from the discussion of cases for their future career path. Actual case studies of operations will be used.

THM 725.2 Advance Food and Beverages Production / Service Management

Purposes of cooking food, use of heat, effect of various methods of heat application on physical, nutritional and aesthetic aspects of foods; nutrients loss in food processing and preparation, enzymatic and microbiological aspects of food preparation, measuring techniques; leavenings; flour mixes; modern and traditional equipment and procedures in relation to time, energy and monetary expenditures and health preparation. Menu planning; food standardisation; food commodities selection and storage; food products and their preparations; food production resources; Effective use of manpower resources and profit generation in hospitality business. Food hygiene legislation. Statutory requirements to reduce and control food borne infection; relationship of public health officers with hospitality personnel; menu planning: food habits, age, sex, skills, time, resources like materials, equipment, energy etc. Management principles and its application to decision making in food production; pareto analysis, sensitivity analysis, cost-benefit analysis; labour and material management in food production processes; organization and management of special functions; utilization of local food commodities; sources of fuels and usages; choice and management of cooking equipment; kitchen planning and layouts; Menu making, pricing, cost control. Production methods, production systems, service systems. Management of different menus table *dhote*, *a la carte*, etc.

THM 726.2 Tourism and Hospitality Law

A comprehensive overview of laws and regulatory agencies governing the tourism, hospitality, and events industry in Nigeria. Legal implications of civil laws, areas of tort and contract will be discussed, along with the law and legal relationships that exist in the business context. Hospitality law, especially when dealing with customers and business contracts, will be the main focus. Students will review theory and the application of general and contract law as they relate to business regulations. A further study of the legal procedures as they apply to the statutes and common law governing innkeeper's liability. Students will also learn the legal issues as they

relate to the travel and tourism industry. Additional topics include: disclaimer of liability, safe keeping facilities, guests' rights, personnel issues and other hospitality related issues. Issues will be discussed from the points of view of innkeepers, restaurateurs, travel agents, and event planners. Attention will be given to labour relations laws, risk management, land use zoning, and labour unions. Overview of the fundamental legal framework that governs the conduct of hospitality and tourism managers. Topics include civil rights, contracts, court procedures, ethics, and risk management. Ethical principles as applicable to the industry.

THM 729.2 Advance Events Management and Tourism and Hospitality Marketing

Students acquire an understanding and skills related to the processes involved in overall management of events. Critical path, goal development and program administration are explored. In addition, emphasis is placed on task diagnosis, timeframes, analysis of work problems, and alternative work designs for improving the organizational performance and effectiveness of events. MICE programme strategies. Also, Students develop a conference program including speaker and entertainment selection, delivery methods, such as workshops, plenary, round tables and webcasts. Skills for master of ceremony. Students gain the skills and knowledge to plan and execute successful meetings. Strategies for the creation of green meetings and conferences are discussed. Casino Operations, Private Clubs and Resorts Management skills. MICE. Special attention is given to recreational programming, sporting activities, food and beverage operations, social events, educational activities, private parties and profit oriented vs. not-for-profit enterprises. Event Administration, Event Coordination and Operations, Event Marketing, Event Risk Management, event protocol, social event management, Event Entertainment and Production, event catering and hospitality management, event fundraising and sponsorship, event design and décor, event negotiations and contracts.

THM 730.2 Tourism and Hospitality Economics

This course takes a system approach and is designed to extend students' knowledge and experience in marketing to tourism, hospitality and events by first understanding the nature of competition within the tourism industry; second, by understanding the role of information technology; and third, by developing extensive analytical skills. An overview of hospitality and tourism economics; the hospitality and tourism

industry; theory of demand and supply as applicable to hospitality and tourism industry; Production and production resources management in the hospitality and tourism industry; Pattern of integration and franchising in the hospitality and tourism industry; nature of hospitality and tourism market; pricing policies and practices in the hospitality and tourism industry; regulatory agencies and operators in the Nigerian hospitality and tourism industry. Application of basic and advanced principles of marketing and sponsorship to the tourism and hospitality industry. The course will provide students with the skills and competencies to a) understand why consumers attend events to participate and/or watch and b) use this knowledge to develop a marketing plan with an embedded sponsorship proposal to attract a corporate sponsor. Strategies for realising successful sponsorship of tourism and hospitality industry. Major topics include: strategic selling principles, prospecting, building relationships, conducting sales meetings, delivering sales presentations, and dealing with objections and closing the sale. Emphasis will be on developing confidence and professionalism in the selling interaction and enhancing the student's communications, listening, presentation, team participation and problem-solving skills.

TEM 731.2 Project

THM 732.2 Seminar

Practical included in most courses

MASTERS IN HOSPITALITY MANAGEMENT AND TOURISM

Options

- i) Tourism and Leisure Studies
- ii) Hospitality and Event Management)

Admission Requirements

Candidates seeking admission for Masters in Tourism and Hospitality Management must have any of the following qualification from recognized institutions: Five credit passes including English language, Mathematics, Economics and any two from, Commerce/ Geography, Biology /Agricultural Science, Catering, Tourism and Nutrition at the 'O' level.

Bachelor's Degree with a minimum of second-class lower division in Tourism and/or Hospitality Management or any other related discipline from a recognized university may be considered. However, candidates with obvious deficiency will be required to take some foundational courses and in addition to graduation requirements, pass same.

A postgraduate Diploma with a minimum of 3.50 on a 5-point scale in Tourism and /or Hospitality Management or related discipline from a recognised university. However, candidates with obvious deficiency will be required to take some foundational courses and in addition to graduation requirements, pass same.

Duration of programmes:

For both options, the duration is as follows:

- a) Full-time: A minimum of twelve calendar months and maximum of 24 calendar months
- b) Part-time: A minimum of 24 calendar months and a maximum of 36 calendar months

Requirements for Graduation

The programme consists of course work, dissertation and seminars or field trip.

A) MASTERS IN TOURISM AND LEISURE MANAGEMENT

To be awarded the Masters in Tourism and Leisure Management a candidate must have fulfilled the following conditions:

- i. Passed a minimum of 40 Credit Units, as follows:

Course	Units
Core Courses	28
Dissertation	6
Electives	4
Seminar	2
Total	40

- ii. Carried out a dissertation relevant to the area of specialisation and submitted an acceptable project report.

C) MASTERS IN HOSPITALITY AND EVENT MANAGEMENT

To be awarded the Masters in Hospitality and Event Management a candidate must have fulfilled the following conditions:

- i. Passed a minimum of 37 Credit Units, as follows:

Course	Units
Core Courses	27
Dissertation	6
Seminar	2
Field Tour	2
Total	37

- ii. Carried out a dissertation relevant to the area of specialisation and submitted an acceptable project report.

Examinations

i. Course work

For all postgraduate coursework, the minimum pass score shall be 50%; continuous assessment shall constitute 30% of the examination for each course, while the written semester examination will be 70%

To be in good standing, a student must in each semester have a Cumulative Grade Point Average (CGPA) of not less than 2.75.

A student whose Cumulative Grade Point Average is below 2.75 at the end of a particular year of study, shall be placed on probation for one academic session. Note: Scoring and grading of courses shall be as follows:

Marks%	Letter Grades	Grade Points
70 and above	A	5
60 – 69	B	4
50- 59	C	3
0- 49	F	0

Course Description for M.Sc in Tourism and Leisure Management

COURSE CODE, COURSE DESCRIPTION

THM 812.1 Tourism Planning, Development and Administration

This course is designed to enable the students review, analyse and apply concepts, strategies, techniques and approaches associated with destination tourism planning, development and management. Students to be able to identify tourism development processes and practices, principles, process and techniques for preparing local, regional and national tourism plans, importance of community participation in tourism planning, role of stakeholders in tourism development. An analysis of the socioeconomic planning process involved in developing tourism destinations in global, community, metropolitan, urban, and rural settings. Emphasis will be on policy and product development, regeneration and enhancement of facilities and services to meet the needs of tourists. Focus will also be on the adjustment process involved in integrating tourism into a developing economy, and the project management skills inherent in steering a development from inception to fruition. Extensive use is made of concepts from sociology, economics, political science, and business disciplines. Case studies will form an integral part of this course.

THM 813.1 Ecotourism and Park Management

Introduction to ecotourism and management, environmentalism, sustainable development and planning, the politics and sociology of ecotourism, economic development, and globalization. Ecotourism and examples of sustainable

development, both in the public and private sectors, will also be examined at the local, national, and international level. Students will examine theories, policies and practices specific to nature-based tourism. We will consider both the tourist and host community perspectives as we explore opportunities and constraints related to ecotourism development including social, environmental and economic outcomes. Dimensions and processes of park management shall be examined

THM 814.2 Tourism Law

This course explores the legal dimension to professional activity in the tourism industry; Legislative act, Civil and criminal law ; Court system ; Contract law and tort law (negligence) ; Consumer Protection ; Insurance ; Unique Tourism Law; Travel agency ; Aviation law tangential tourism law ; Rulings related to the tourism industry

THM 815.1 Strategic Management and Organizational Behaviour in Tourism

This course focuses on how managers can guide their tourism firms in the formulation, implementation, and evaluation of strategies. The goal is to develop a mastery of the analytical tools to perform analyses of the industry and competitors. Attention is given to strategies for building competitive advantage and generating superior value for customers. Readings and lectures are essential to provide foundation. In addition, effective strategic decision making requires learning by active problem solving; hence, our emphasis will be on translating concepts into action through the case method. Cases of tourism-specific companies, readings, and lectures/discussions are utilized. Topics include the tourism industry internal and external contexts of strategic planning and execution; growth and competitive advantage strategies for tourism organizations; organizational resource and capability analysis; prevention and management of crisis situations in the tourism industry. Topics also include the evaluation of how values shape individual and organizational ethical behaviors, and how these behaviors influence leadership and decision-making. Students apply practical knowledge and tools needed to effectively manage the everyday ethical conduct of self and employees. Core components include discussions on how legal, philosophical, and corporate practices influence ethical behavior for individuals and companies. Hofstede analysis of culture. Students examine how social, environmental, and stakeholder responsibilities, as well as different values, impact ethical behavior in companies. Using an interdisciplinary approach, students will deepen and broaden their learning about theories, models, and constructs related to the study and

practice of ethics and leadership while examining compelling contemporary questions and dilemmas. Students will develop strategies and ways of thinking when faced with ethically complex dilemmas in the leadership process. This is a highly interactive learning that requires the students reflect and actively participate in in-class activities and discussion.

THM 826.2 Recreation Resources Management

This course provides an overview of community based recreation including municipal and non-profit recreation agencies. The Course will focus on the history, legalities, complexities and unique needs of managing community based recreation, along with examining the interrelationships between leisure behaviour and the natural environment, administrative functions such as staffing, risk management and transportation while in the outdoors will be discussed. Students are expected to synthesise research, lecture, experiential and reading components of course into assignments which demonstrated an understanding of outdoor adventure leadership; maintenance of recreational resources. This course explores the increasingly diversified nature of society and its impact on individuals experiences of leisure. A focus will be placed on factors that influence the experience of leisure and leisure service delivery. Focus is on the principles of managing indoor/outdoor recreation sites and visitor systems where the natural environment provides the dominant attraction. Other topics include recreation activities, agencies, philosophy and management. Topics include outdoor recreation management and visitor systems; the natural environment as a major focus in outdoor recreation, characterize the different types of agencies that provide outdoor recreation and define their missions, management principles of outdoor recreation resources, impact of technology methods for monitoring recreational impacts and approaches to managing resource quality and recreational opportunities will be address.

THM 827.1 Cultural Tourism

This course explores the many dimensions of cultural tourism, including how arts, crafts, local heritage, history, and other elements of culture can be incorporated into tourism planning and development. Topics covered include the meaning, value, and potential tourism roles of historical sites and monuments, festivals and other events, local and regional arts and artisans, archaeological and other cultural heritage sites, and museums and other educational institutions. Complex issues such as cultural identity and representation and authenticity and commoditization will be explored

THM 822.2 Strategic Tourism Marketing

Building upon the Principles of Marketing this course investigates a range of approaches and issues associated with marketing destinations and the tourism experience. Using selected case studies from around the world the course examines the challenges of contemporary marketing approaches to the development and promotion of sustainable tourism. Working through experiential exercises the student undertakes research and marketing strategies reflective of current professional practice. Strategic marketing and sustainable tourism; Destination marketing and branding; Understanding tourist markets; Tourism marketing, communication and promotion; Tourism marketing and information technology; Tourism product and price; Collaborative approaches to tourism marketing; Tourism marketing and crises; Approaches to and trends in tourism destination marketing; A practical framework for strategic destination marketing; Analysing and interpreting the macro, market and competitive environments; Doing a destination attractions and resource analysis; Segmenting markets and selecting target markets; Destination branding and competitive positioning; Developing and implementing integrated marketing and communication strategies; Facilitating destination partnerships; Managing information and marketing research; Destination marketing and the future.

THM 823.2 Financial Management in Tourism Management

Exposes students to four key areas of financial management – financial accounting, managerial accounting, corporate finance and international finance. Students develop financial models for predicting funding requirements, as applied to the tourism industry. Key topics such as budgeting, foreign exchange, profit centers, productivity, and reading financial statements will be discussed.

THM 824.2 Seminar

In this course, students are to make comprehensive presentations on contemporary issues and trends impacting the Tourism Industry and therein proffer practical solutions to challenges faced in the Industry.

THM 852.2 Tourism and Hospitality Economics

This course is designed to enhance the scarce resource orientation of hospitality and tourism managers. It explores relevance theories and their applicability to hospitality and tourism industry; Production and production resources management in the hospitality and tourism industry; Pattern of integration and franchising in the hospitality and tourism industry; nature of hospitality market;

pricing policies and practices in the hospitality and tourism industry; regulatory agencies and operators in the Nigerian hospitality and tourism industry.

THM 862.2 Zoo and Museum Management

The primary objective of this course is to provide students with an understanding of management and administration procedures that are essential to operating and managing zoo and park facilities and recreation programs within. Secondly, students will be given an opportunity to be exposed to zoo and park governance processes and will be asked to synthesize the roles that key stakeholders play in the management of public-sector zoo and park organizations. Key topics covered in this course include a historical account of park and zoo operating environment as well as trends in park support and positioning of the field; Inter-organizational partnerships and collaborations in the park and zoo recreational field; Financing, budgeting and fiscal control processes; Human resource management principles and policies; Creating effective working relationships with community stakeholders and park and zoo board members

THM 872.2 Travel Retail Management

This covers gives a thorough understanding of the Travel Retail chain, the way it operates and its players. It describes the methods and techniques required to succeed and develop the students career in this rapidly growing market. Comprehensive knowledge of the Travel Retail market, its principal players and the airport environment; Sales and Merchandising techniques in the Travel Retail sector; Techniques for recruiting, managing and leading a multicultural team; The development of commercial performance; A capacity to anticipate and adapt to the major trends of tomorrow in Travel Retail mgt; Commercial network management in the Travel Retail sector; Travel Retail sales outlet management; Flow management; Travel Retail financial data analysis; effective communication process in travel retail management; Retail pricing strategy and retailing research

THM 882.2 Insurance, Security and Loss Preventions Management in Tourism Industry

The basics of insurance, security and loss preventions management are covered in this course. Problems of liability and personal loss exposures of a business are examined. Private insurance programs such as health and life insurance, and employee benefit plans are examined and assessed. Life, health and disability insurance; property and liability insurance; control measures in loss prevention; elements of risk management.

THM 892.2 International Tourism Management

This course provides students with the fundamental knowledge concerning marketing, human resources management, financial management, destination planning, policy, environment and prospects in the tourism industry. Real life cases will also be discussed in order to give students a relatively comprehensive understanding of the tourism industry.

THM 897.2 Special Interest Tourism

An analysis of the issues involved in developing destinations and tourism products that are sensitive to the natural and cultural resources of the area. Topics to be covered include: sustainable development; rural tourism; poverty tourism; heritage and cultural tourism; adventure tourism; and urban tourism.

THM 898.2 Transportation Management

This course provides students with an understanding of system analysis tools used in urban transportation. Students will work with analytical techniques employed in urban transportation planning, such as traffic forecasting and system capacity analysis and apply these techniques using real-world data for analyzing both the demand and supply of transportation; e-ticketing principles. This course provides students with an understanding of system analysis tools used in urban transportation. Students will work with analytical techniques employed in urban transportation planning, such as traffic forecasting and system capacity analysis and apply these techniques using real-world data for analyzing both the demand and supply of transportation; This course focuses on public transportation issues and models. Topics include: policy issues, government's role in transit, transit planning

THM 899.2 Tourism and Climate Change

To analyse the implications (threats/ opportunities) for tourism destinations; tourism's contribution to climate change; evaluate a range of policy tools that can be used in managing for sustainable tourism; examine the impact of climate change, and future projections, on important tourism space such as mountains, small islands and coastal environments; evaluate and criticise alternative tourism approaches within a sustainable tourism context.

THM 825.2 Dissertation

Researches are to focus on trends and current problems in Tourism Management projects. Case analysis examines and finds solutions to chosen contemporary issues or case studies in the tourism and hospitality management industry, particularly in Nigeria.

DOCTOR OF BUSINESS ADMINISTRATION (DBA) PROGRAMME IN ACCOUNTING, FINANCE & BANKING, MANAGEMENT AND MARKETING

DOCTOR OF BUSINESS ADMINISTRATION (DBA) PROGRAMME IN ACCOUNTING, FINANCE & BANKING, MANAGEMENT AND MARKETING

1. PHILOSOPHY OF THE PROGRAMME:

The philosophy of the Doctor of Business Administration in the four functional areas of management sciences is the development of a distinguished and result-oriented business executive who is vast in advanced modern business skills and knowledge to lead organizations, provide high valued consulting services and educate the next generation of specialized professionals on accounting, finance and banking, management and marketing theory and practice through sound and analytical research background as well as specialized courses.

1.1: Justification for the Programme:

- a. The DBA is an advanced postgraduate programme that focuses on professional business practice as well as providing experienced managers with research skills that can be applied to issues of organizational leadership. In line with this, our professional MBA graduates will be better suited to pursue further education through this programme.
- b. The DBA is fashioned to take care of further academic needs of executive professionals with MBA degree, who have career ambition to gain academic recognition in their chosen professions.
- c. In terms of its relationship with the Doctor of Philosophy (PhD), the DBA is an equivalent of the PhD, in terms of application to specific industry needs. The DBA though industry based, is equally fashioned to cater for the demands of the academia while the PhD is purely academic based.
- d. The DBA provides a platform for business executives to further their career ambition in their different professions, thereby widening the broad base of the academic system with theory and applications.

2. OBJECTIVES OF THE PROGRAMME:

The objectives of the programme are:

- i. To produce sound, corporate executives who can evaluate evolving conceptual models, theoretical framework as well as technological and organizational systems with particular emphasis on their

implications on business theory and practice.

- ii. To produce candidates who can critically and properly access cultural and societal perspectives influencing business practice in the global era.
- iii. To produce business executives who can lead high value consulting services and exhibit proficiency in research and critical thinking skills.
- iv. To develop in students, effective communication, skills and the use of information technologies in the global business environment.
- v. To produce candidates equipped with analytical skills to evaluate business issues, ethical and legal within regulatory frameworks that guide the theory and practice in accounting, finance and banking, management and marketing.
- vi. To develop the entrepreneurial capacity of the student in a dynamic business environment (world).

3. ADMISSION REQUIREMENTS:

The following requirements must be met for admission into the Doctor of Business Administration (DBA) Programme:

- i. Candidates for the DBA programme must possess an MBA or M.Sc in accounting, finance and banking, management and marketing or in an acceptable and closely related area/discipline. The Master's programme must have had a Thesis/Research component. Candidates are required to have had a minimum of 3.5 on a 5.0 point scale or 3.0 on a 4.0 point scale in their master's programme.
- ii. Working experience of two years attained in a middle management position in the corporate world or in an alternative relevant employment will be an added advantage.
- iii. The final selection of candidates for the DBA programme shall be based on the candidate's performance at an interview to be conducted by the Faculty Graduate Committee.
- iv. Holders of Executive MBA Degrees, are not eligible to apply.

4. PROGRAMME OF STUDY:

At the end of the first year, the candidate shall choose, at least two supervisors; one of whom must be from his discipline and serves as the lead supervisor. This is subject to the approval of the

Department Graduate Board. The supervisors shall be responsible for guiding and monitoring the student's progress throughout the remaining duration of his/her study.

5. MODE OF STUDY/DURATION OF PROGRAMME:

Fulltime candidates shall be required to spend a minimum of three (3) years and a maximum of five (5) years from the date of first registration.

Part-time candidates will be required to spend a minimum of five (5) years and a maximum of seven (7) years.

At the end of the maximum period, depending on the progress report on the candidate, the candidate may have his period of study extended for a defined period or advised to withdraw. A minimum of 12 months (full time) and 18 months (part time) shall be strictly dedicated to course work.

6. CANDIDACY EXAMINATION:

Each student shall be required to take a three (3) hour written comprehensive examination at the successful completion of his coursework. Passing these examinations will lead to the declaration for Doctoral Dissertation. If a candidate fails the candidacy examination, one resit is allowed the following year. A candidate who fails the examination after the second attempt will be required to withdraw from the programme.

7. DISSERTATION

i) Research Proposal

After the successful completion of the candidacy examination, the candidate shall be required to write and defend his/her research proposal, first, before a Departmental Graduate Committee, then, a Faculty Graduate Committee. Having successfully defended the research proposal, the candidate on completion of his/her Dissertation shall defend same at the department and faculty before proceeding to the School of Graduate Studies.

ii) Notification of Title

The Head of Department through the Dean shall in not more than 2 months after faculty proposal defense formally notify the Board of School of Graduate Studies, the title of the candidate's dissertation as approved by the Faculty Board.

iii) Dissertation Report

Each candidate shall be examined by an examination board which shall include an external examiner approved by the Board of School of Graduate Studies. After the external examination and without further consultation or correspondence among the examiners, the Head of

Department shall submit to the Faculty Board on a prescribed form, a joint report on the candidate. The report shall contain:

- a. A clear and detailed evaluation of the research work as summed up in the dissertation, including an assessment of its originality and its contribution to the advancement of knowledge.
- b. A clear assessment of the candidate's knowledge and understanding of his subject as shown in the dissertation and subsequent examination.
- c. An unequivocal declaration as to the acceptability or otherwise of the dissertation in partial fulfillment of requirements of the degree. The report shall thereafter, be forwarded by the Head of Department through the Dean, to the School of Graduate Studies.
- d. Every dissertation should be supervised by a minimum of two (2) Supervisors who must not be, below the rank of a senior lecturer with a Ph.D.

iv. Submission of Dissertation:

- (a) A candidate shall submit six copies of his dissertation in hard binding to the Dean, through the Head of Department not later than two months from the date of the examination.
- (b) All dissertations must conform to the specifications laid down by the Faculty Graduate Board.
- (c) Before the degree is conferred, three copies of every dissertation accepted shall be bound in a manner approved by the Faculty Board and these shall become the property of the University.

8. FIELD OF SPECIALIZATION:

The following fields of specialization are available for candidate (a) Accounting (b) Finance & Banking (c) Management (d) Marketing

9. DBA SEMINAR

A candidate shall present one departmental seminar, which must come from any area of his/her discipline. He/she must also present another seminar at the Faculty, which must come from his dissertation. The final seminar will be on the candidate's work to be presented at the school of Graduate studies.

10. AWARD OF THE DBA DEGREE:

The DBA programme is prosecuted by course work, seminars, and dissertation, but the award of DBA is based on comprehensive research to be embodied in a dissertation which will be orally defended.

11. ACADEMIC REQUIREMENTS:

The course work of the DBA programme in Accounting, Finance and Banking, Management and Marketing consist of the Research Tool and General Courses, Core Courses and Stress Area Seminars. The General Courses are compulsory for every student in the DBA programme. All courses must be completed with a grade of not less than a "C". The DBA degree shall be awarded upon successful completion of the prescribed course work and successful defense of dissertation.

12. CURRICULUM:

The course work of the DBA programme in Accounting, Finance and Banking, Management and Marketing consists of Research Tools and Genemi Courses, Core Courses and Seminar Course. These courses are outlined in detail for each of the disciplines below:

13. COURSE STRUCTURE

The DBA in Accounting, Finance and Banking, Management and Marketing programmes require a minimum of 48 credit units made up as follows;

i.	5 General Course	- 15 units
ii.	6 core courses (3 credit units each)	- 18 units
iii.	Dissertation	- 12 units
iv.	DBA Seminar	- 3 units
	Total	- 48 units

DEPARTMENT OF ACCOUNTING

GENERAL COURSES

ACT 924	Social and Environmental Reporting
ACT 925	Advanced Financial Accounting
ACT 926	Advanced Tax Strategies and Fiscal Policies
ACT 927	Advanced Forensic Accounting Theory & Practice
ACT 928	Advanced Auditing/Assurance Services
ACT 929	Advanced Public Sector Accounting

COURSE/SEMINAR CODE

COURSE TITLE

ACT 930	Departmental Seminar in Accounting
ACT 931	DBA Dissertation/Defence

COURSE DESCRIPTION

ACT 923 Philosophy of Accounting

The nature and meaning of accounting, the various postulates and concepts that underpin development of accounting thought. The ontology and epistemology that tries to justify conservative accounting.

ACT 924 Social and Environmental Accounting

Social and Environmental effects of organization's economic actions to particular interest groups within society. Purpose of social accounting. Corporate accountability and management control purpose. Self-reporting and third party audits. Cost structure and environmental performance reporting. Environmental Management Accounting and internal reporting practices.

ACT 921 Advanced Accounting Research Methods

Fundamental of experimental and non-experimental accounting research and their applications to the study of accounting problems. Issues will also cover construct, internal and external validities, survey and single-case research designs in accounting.

ACT 925 Advanced Financial Accounting

This course covers more advanced treatment of fundamentals of financial accounting, with preparation of financial statements of corporate organisations in conformity of IFRS and IAS. It reviews dissolutions of partnership accounts and amalgamation, advanced incomplete records, advanced treatment of accounts non trading concern, published financial statements, purchase and sale of business accounts, royalty accounts, contract accounts and other specialised accounts.

ACT 922 Advanced Management Accounting

The aim of this course is to up-grade the analytical skills of the students and to identify research issues in management accounting, budgeting theory, learning curves, forecasting, variance analysis, profit analysis and cost allocation techniques, the agency-theoretic approach in management accounting.

ACT 926 Advanced Tax Strategies and Fiscal Policies

Contemporary issues of research in taxation. Tax laws and Fiscal Policies and their impact on the

economy and society. Overview of Tax Environment, Structure and Administration in Nigeria: issues and challenges arising from Personal Income Tax Laws, Company Income Tax Act, Petroleum Profit Tax Act, Industrial Development (Income Tax Relief) Act, Value Added Tax Laws, Capital Gain Tax Laws, Capital Transfer Tax, Double Taxation Relief and other unfolding events and typical issues such as Tax Review and Reforms.

ACT 927 Advanced Forensic Accounting Theory and Practice

This course reviews the role of the forensic accountant in investigations and audits. Topics covered are: the legal environment audit and investigation, dispute resolution and litigation services, information security, financial statement analysis, and tax fraud. Students will merge from the course with an understanding of the roles of forensic accountants and familiarity with their tools and practices.

ACT 928 Advanced Auditing/Assurance Services

Information theoretic approach to auditing, statistical aspects of auditing and fraud, the

generation and formulation of audit hypothesis, and heuristic and biases in audit judgments. Forensic audit techniques and the role of the forensic auditor as an expert witness. Financial Performance Reporting under International Financial Reporting Standards (IFRS); guidance on IFRS, corporate governance, audit and professional Financial Reporting Standards (IFRS); guidance on IFRS, corporate governance, audit and professional responsibility reporting; Reporting on impairment of non-financial asset, employee benefits, and going concern. Implications of applying IAS 23 (REVISED) "Borrowing costs". Guidance on impairments for financial assets. Ethics as an integral part of accounting profession.

ACT 929 Advanced Public Sector Accounting

This course provides the tools necessary for understanding the principles of fiscal accountability. It will also equip the student with the knowledge of IPSAS (International Public Sector Accounting Standards) with the aim to improve the quality of general purpose financial reporting by public sector entities, leading to better informed assessments of resource allocation decisions made by government, thereby increasing transparency and accountability as well as quality service delivery.

UNIVERSITY OF PORT HARCOURT FACULTY OF MANAGEMENT SCIENCES

UNIVERSITY OF PORT HARCOURT BUSINESS SCHOOL

INTRODUCTION

The Doctor of Philosophy (PhD) Programme of the University of Port Harcourt, Faculty of Management Sciences, is the highest degree in terms of academic qualification in the field of Business Management/Administration.

THE PHILOSOPHY OF THE PROGRAMME

The philosophy of the Doctoral Programme in University of Port Harcourt Business School, Faculty of Management Sciences (FMS), is centered on the Development of Business Scholars who are versed in modern method and research skills; as well as having the capability of developing and promoting indigenous academic culture in the field of Management Sciences.

OBJECTIVES OF THE PROGRAMME

- i. To produce candidates with high level of intellectual rigour and maturity for independent work in Management Sciences.
- ii. To produce candidates who can develop and promote indigenous concepts, principles, and theories in their area of specialty and translate same to practices in organizations and institutions
- iii. To equip candidates with the requisite theoretical, quantitative, and qualitative skills to enable them undertake teaching and research responsibilities in Universities, industries and government.

ADMISSION REQUIREMENTS

The following requirements must be met for admission into the doctoral degree programme.

- i. Candidates for the PhD programme must possess a Master of Science (M.Sc) Degree in Accounting, Finance and Banking, Management, and Marketing. Master of Science (M.Sc) programme must have had a Research Project/Dissertation (Thesis) component. Candidates are required to have obtained a CGPA of 3.5 on a 5 Point Scale.
- ii. The final selection of candidates for the doctoral programme shall be based on the candidate's performance at an interview to be conducted by University of Port Harcourt Business School (UPBS) Academic Committee.

PROGRAMME OF STUDY

Following the admission and registration, a student shall be assigned to supervisors who shall be chosen from his/her area of Specialization. The supervisors shall be responsible for guiding and the monitoring of the student's progress throughout the duration of his or her study.

DURATION OF THE PROGRAMME

Full-time Candidates will be required to spend a minimum of 24 Calendar months and a maximum of 60 Calendar months. Part-time Candidates will be required to spend a minimum of 36 Calendar months and a maximum of 84 Calendar months.

TITLE OF THESIS

The candidate shall, in not more than two Modules, notify the University of Port Harcourt Business School (UPBS) Academic Committee in writing and state the full Title of his/her Thesis.

THESIS

The student is expected to work on the approved topic with assigned Supervisors, who will present them for proposal defense. On successful defense of the Research proposal, the student shall commence the writing of his or her full Thesis.

THESIS/DISSERTATION COMMITTEE

In line with Graduate School regulations, the Committee shall include: The Director of UPBS, Deputy Director, Short-Course Coordinator and Three others mainly Professors/Senior Lecturers representing Supervisors, one of which must be bias in Research Methodology.

SUBMISSION OF THESIS

- a. A candidate shall submit four copies of his/her Thesis in hard binding to the UPBS Committee not later than the beginning of the last period of study and not later than two months to the date of examination.
- b. All Theses must conform to the specifications laid down by SGS.
- c. Before the degree is conferred, three copies of every Thesis accepted shall be bound in a manner approved by the UPBS Academic Committee and these shall become the property of the University.

AWARD OF THE Ph.D

The Doctoral Degree shall be awarded upon the successful completion of the course work and oral defense of the Thesis. This gives a **Minimum Total Credit Units of 56** for each specialization. No candidate may defend the Doctoral Thesis more than two (2) times.

Students apply principles of management to security administration. Topics include personnel management, security planning, organizational leadership and communication, and recruitment and training.

UPBSS 753 Emergency Planning

Students discuss the role of the security manager in the identification, analysis, and response to a variety of human and natural crises. They examine threats resulting from riots, demonstrations, product tampering, work stoppage activities, terrorism, and natural disasters.

UPBSS 754 Human Factors in Security

This course focuses on historical and contemporary perspectives of human behaviour. Theories of behaviour in the context of threat-producing activities are discussed. Contemporary issues such as substance abuse, violence, ideologies, and similar themes are examined.

EXECUTIVE MBA CORE COURSES (STRUCTURE)

BUSINESS ANALYTICAL TOOLS/ANALYSIS & DECISION MAKING (MODULE ONE)

Course Code	Course Description	Credit Unit
UPBS 800	Quantitative Methods/Operations Management	2
UPBS 801	Managerial Economics	2
UPBS 802	Research Methodology in Business	3
UPBS 803	Global Economic Environment	2

FINANCIAL AND PROJECT MANAGEMENT (MODULE TWO)

Course Code	Course Description	Credit Unit
UPBS 804	Accounting for Managers	2
UPBS 805	Corporate Financial Strategy and Management	2
UPBS 806	Organizational Behaviour	2
UPBS 807	Project and Operations Management	3

ENTREPRENEURIAL AND STRATEGIC THINKING (MODULE THREE)

Course Code	Course Description	Credit Unit
UPBS 808	Strategy and Innovation	2
UPBS 809	Marketing Operations & Strategy	2
UPBS 810	Entrepreneurship	3
UPBS 811	Management Theory	2

BUSINESS SUPPORT AND LEADERSHIP (MODULE FOUR)

Course Code	Course Description	Credit Unit
UPBS 812	ICT & Data Analytics	3
UPBS 813	Leadership, Ethics and Corporate Governance	2
UPBS 814	Business and Company Law	2
UPBS 815	Supply Chain Analytics	2

PERFORMANCE AND ORGANISATIONAL MANAGEMENT (MODULE FIVE)

Course Code	Course Description	Credit Unit
UPBS 816	Strategic Human Resources Management	3
UPBS 817	Management of Organisational Change	2
UPBS 818	Management Communication	2
UPBS 819	Social Media Analytics	2

RESEARCH PROJECT AND GRADUATE SEMINAR (MODULE SIX) *

Course Code	Course Description	Credit Unit
UPBS 820	Graduate Seminar	3
UPBS 821	Research Project	6

*EMBA students are exempt from this Module

UPBS 807: Project and Operations Management

In recent years, computers and the availability of software have changed the way companies analyse, evaluate, and optimise decisions. This course provides the foundation for the use of decision technologies to solve complex management problems in various business areas. Students will learn a combination of Management Science/Operations Research Techniques (MS/OR) and Operations Management Techniques (OM), with a focus on prescriptive analytics. Students will get familiar with the concept of Modelling and Optimisation to structure optimisation problems, to solve them using software, and to generate insights on how to manage variability in their today's businesses.

UPBS 812: ICT and Data Analytics

You require a profound understanding of data management methods and organisational and technical measures to derive value from data and to bring fully its potential to business processes.

In this course, students will learn the basics of data storage and database management systems and gain basic skills in data cleansing and data quality to facilitate data use and ensure data quality in companies and in data science projects.

The course will cover the basics of metadata and metadata standards, methods for solving basic data integration problems and data models and software architectures for integrating different data types. Packages like Excel, SPSS, and E-views will be discussed and applied.

In addition, it will present in a practical-oriented way the following topics, using company examples: Relational databases, document-based databases, NoSQL, data manipulation, access to data sources, web APIs, web crawling and parsing of text data.

MBA ELECTIVE COURSES

ACCOUNTING

Course Code	Course Description	Credit Unit

UPBS 812: ICT and Data Analytics

You require a profound understanding of data management methods and organisational and technical measures to derive value from data and to bring fully its potential to business processes.

In this course, students will learn the basics of data storage and database management systems and gain basic skills in data cleansing and data quality to facilitate data use and ensure data quality in companies and in data science projects.

The course will cover the basics of metadata and metadata standards, methods for solving basic data

integration problems and data models and software architectures for integrating different data types. Packages like Excel, SPSS, and E-views will be discussed and applied.

In addition, it will present in a practical-oriented way the following topics, using company examples: Relational databases, document-based databases, NoSQL, data manipulation, access to data sources, web APIs, web crawling and parsing of text data.

UPBS 814: Business and Company Law (3 Credit)

Familiarize candidates with the legal aspects of business. Law of contract, agency, hire purchase, carriage of goods, and related laws are examined. The company act and company and miscellaneous matters decrees are examined.

UPBS 802: Research Methods in Business (3 Credits)

- Introduction to Research Methodology
- Research in Social Sciences
- Research in Physical and Natural Sciences
- Problems of Research in Developing Countries
- Common errors in Research
- Research in practice:
 - (a) Problem identification
 - (a) Literature review
 - (b) Materials and Methods (Methodology)
 - (c) Results (Data Analysis)
 - (d) Discussions
 - (e) Summary, Conclusions and Recommendations
 - (f) Report Writing

UPBS 813: Introduction to Management Thinking (3 Credits)

A critical analysis of the theories as well as the study of selected problems and developments in management thinking. The course places particular emphasis on the application of a wide range of social science theory and research to the study of managerial thought.

**COURSE DESCRIPTION FOR OIL, GAS
AND ENERGY MANAGEMENT (MSC)**

MODULE 1:

UPBSOG 800: Introduction to Oil & Gas Industry

The aim is to provide a wide ranging and practical industry overview. Topics to be covered include the scientific origins of oil and gas, the commercial issues underpinning hydrocarbon exploration and development. The role of government and its agencies, the oil and gas terminology, the technological process of exploration, the technological process of drilling, the technological process of production and the challenges of decommissioning.

UPBSOG 801: Oil & Gas Economics & Risk Analysis

Fundamentals of oil & gas E & P economics and Analysis. Profitability analysis in oil and gas investments, interpretation of technique and economic data, evaluation of risk and uncertainty in oil and gas exploitation. Decision tree analysis: Monte Carlo simulation preference theory; pricing and bidding strategies; optimum development of oil and gas fields.

UPBSOG 802: Health, Safety & Environment Management in the Oil and Gas Industry

Introduction to (HSE MS). HSE legislation/policies, security management, accident prevention, reporting and investigation. Health Risk Assessments. HSE Auditing. Hazard management tools. Contingency management. Interaction with the environment. EIA – instrument for sustainable development, problems and solutions of sustainable development.

UPBSOG 803: Oil and Gas Law

This course aims at providing the skills and knowledge necessary to work in and on the legal aspects of the exciting global industry. The focus is upon setting practical and real problems in a wider conceptual context with the aim that you should not just know, but understand the relevant areas of oil and gas law. Topics covered includes, state control of Hydrocarbons, international energy and environmental law, contracting in Hydrocarbon operations, downstream and upstream energy law, international investment law and arbitration law in the Energy sector, local content laws.

UPBSOG 804: Oil Spills and Remediation Management

Management of the composition of crude oil and some petroleum products and naturally occurring hydrocarbons. Sources of hydrocarbon spillage in the Nigerian environment. Oil spill remediation and management of their impact. Hydrocarbon toxicity, determination and the effects of hydrocarbon pollution in the environment. Case

studies of actual oil spills and their management in the Nigerian context.

UPBSOG 805: Renewable Energy Management

The course aim to provide an opportunity for graduates and professionals to acquire knowledge of renewal energy and energy management and develop skills appropriate to its practice. Topics covered includes: energy policy, market and economics, current status of energy systems, energy management, wind energy conversion technologies, solar Thermal and photovoltaic processes and technologies and biomass process and technologies.

MODULE 3

UPBSOG 806: Oil & Gas Marketing

The main objective of this course is to expose students to the dynamics of oil and gas marketing with respect to development, production, transportation, distribution and trading. Topics covered include: An overview of the Nigerian economy and the role of oil and gas, the structure and operation of the oil and gas sector, integrated petroleum business, from crude oil supply and trading through refining, wholesale product marketing; the concept of deregulation and global oil pricing; regulation and regulatory authorities of oil and gas marketing including the influences of international institutions like OPEC on oil and gas marketing. Marketing implications of mega-mergers in the oil and gas sector.

UPBSOG 807: Oil & Gas Accounting

The course aim at introducing the students to oil and gas accounting in the down streams and upstream of oil activities in Nigeria. Royalties, petroleum tax and financial control activities in the oil and gas industry.

UPBSOG 808: Ethics & Corporate Social Responsibility in Oil & Gas Industry

Principles and moral values. Managing ethics in oil and gas work environment. Assessing culture and cultivating ethical work culture. Business ethics. Resources for managing ethics in oil and gas work environment. Social responsibility. Resource for managing corporate social responsibility.

MODULE 4

UPBSOG 810: Oil and Gas Security and Geopolitics

This course provides you with the ability to analyse political and legal oil and gas issues. The course will equip you with an in-depth all round ability to analyse oil and gas issues. Topics covered includes oil and gas politics, commercial domestic and international political regulations of oil and gas markets. The politics of renewable energy. The role of OPEC in oil politics.

UPBSOG 811: Strategic Leadership in Oil and Gas Industry

The course aims at providing the skills and leadership ability to influence others to voluntarily make decisions that will enhance the prospects for the oil and gas firm's long-term success while maintaining short-term financial stability. Topics includes- definition and qualities of a strategic leader, strategic leadership framework, systems and design thinking, complete project leadership and management, strategic organization development and change, juxtaposition of military and civilian strategic leadership, theory of constraints, pattern of strategy, leading in the digital oil and gas transformation age.

UPBSOG 812: Petro Retailing Business

This course involved the marketing and distribution of crude oil once it has been refined into transportation fuels, heating oil, lubricants and other products. The course will equip you with knowledge of how refined products are transported; types and operations of storage terminals. Topics includes crude oil production, product distribution. Pipeline and depot, Petroleum products supply in Nigeria, distribution infrastructure, Petroleum products measurement and quality assurance.

UPBSOG 813: Advanced Safety, Risk and Reliability in Oil and Gas Management

Review of the principles of risk identification, assessment and control, work place safety, materials handling, mechanical plant and equipment, fire and explosion, noise, whole body vibration, electrical safety and workplace design, concepts of reliability, availability and maintainability, failure rate and mode, and reliability data, reliability block diagram analysis of series and parallel system, reliability center maintenance and inspection, markov modelling of system failures, probabilistic safety analysis, concept of structural safety and risk.

COURSE DESCRIPTION FOR OIL, GAS AND ENERGY MANAGEMENT (MBA)

UPBSOG 800: The Industry of Oil and Gas

The aim is to provide a wide ranging and practical industry overview. Topics to be covered include the scientific origins of oil and gas, the commercial issues underpinning hydrocarbon exploration and development. The role of government and its agencies, the oil and gas terminology, the technological process of exploration, the technological process of drilling, the technological process of production and the challenges of decommissioning.

UPBSOG 801: Economic Analysis

Fundamentals of oil & gas E & P economics and Analysis. Profitability analysis in oil and gas investments, interpretation of technique and economic data, evaluation of risk and uncertainty in oil and gas exploitation. Decision tree analysis: Monte Carlo simulation preference theory; pricing and bidding strategies; optimum development of oil and gas fields.

UPBSOG 802: Corporate Strategy

Conceptual frameworks and models for the analysis of competitive situation and strategic dilemmas, insight into strategic management analyses of external competitive environment, industry structure, value chain dynamics, etc.

MODULE 2

UPBSOG 803: Petroleum Economics

Fundamentals of oil & gas E & P economics and Analysis. Profitability analysis in oil and gas investments, interpretation of technique and economic data, evaluation of risk and uncertainty in oil and gas exploitation. Decision tree analysis: Monte Carlo simulation preference theory; pricing and bidding strategies; optimum development of oil and gas fields.

UPBSOG 804: Health, Safety & Environment Management in the Oil and Gas Management

Introduction to (HSE MS). HSE legislation/policies, security management, accident prevention, reporting and investigation. Health Risk Assessments. HSE Auditing. Hazard management tools. Contingency management. Interaction with the environment. EIA – instrument for sustainable development, problems and solutions of sustainable development.

UPBSOG 805: Human Resource Management & Strategic Leadership in Oil and Gas Industry

An analysis of the methods and techniques used in the management of human resources. Strategies and practices in manpower planning, staffing, HR training and development, performance management, compensation and rewards management etc.

UPBSOG 806: Oil and Gas Law

This course aims at providing the skills and knowledge necessary to work in and on the legal aspects of the exciting global industry. The focus is upon setting practical and real problems in a wider conceptual context with the aim that you should not just know, but understand the relevant areas of oil and gas law. Topics covered includes, state control of Hydrocarbons, international energy and environmental law, contracting in Hydrocarbon operations, downstream and upstream energy law, international investment law and arbitration law in the Energy sector, local content laws.

UPBSOG 808: Advanced Financial Management

Principles and moral values. Managing ethics in oil and gas work environment. Assessing culture and cultivating ethical work culture. Business ethics. Resources for managing ethics in oil and gas work environment. Social responsibility.

Resource for managing corporate social responsibility.

MODULE 4

UPBSOG 809: Marketing and Operation Strategy

Perspective and problems of marketing management in a multi-product firms; the concept and application of strategic planning to business units and functional areas of marketing utilization of current marketing strategy models as aids in strategy formulation, decision processes for product planning, pricing, promotion, distribution and competitive strategy.

UPBSOG 811: Strategic Leadership in Oil and Gas Industry

The course aims at providing the skills and leadership ability to influence others to voluntarily make decisions that will enhance the prospects for the oil and gas firm's long-term success while maintaining short-term financial stability. Topics includes- definition and qualities of a strategic leader, strategic leadership framework, systems and design thinking, complete project leadership and management, strategic organization development and change, juxtaposition of military and civilian strategic leadership, theory of constraints, pattern of strategy, leading in the digital oil and gas transformation age.

UPBSOG 810: Oil and Gas Accounting

The course aims at introducing the students to oil and gas accounting in the down streams and upstream of oil activities in Nigeria. Royalties, petroleum tax and financial control activities in the oil and gas industry.

UPBSOG 813: Oil and Gas Marketing

The main objective of this course is to expose students to the dynamics of oil and gas marketing with respect to development, production, transportation, distribution and trading. Topics covered includes: An overview of the Nigerian economy and the role of oil and gas, the structure and operation of the oil and gas sector, integrated petroleum business, from crude oil supply and trading through refining, wholesale product marketing; the concept of deregulation and global oil pricing; regulation and regulatory authorities of oil and gas marketing including the influences of international institutions like OPEC on oil and gas marketing. Marketing implications of mega-mergers in the oil and gas sector.

UPBSOG 814: Renewable Energy Management

UPBSM 916	DBA Seminar in Management*	3
UPBSM 917	DBA Thesis*	6

COURSE DESCRIPTION

UPBS 901 – Advanced Research Methodology

This course aims at preparing students for the Thesis research and write-up as well as publications in the management sciences. It will cover several essential areas in research methodology. It will start with a review of research essentials as well as the philosophical and ethical foundations of research. It will deal with some knotty issues in the introductory background, literature reviewing, deigning methods of study; the questions of citation and references in research writing, the questions surrounding research instruments and utilizations; issues in analytical techniques and modelling, use and applications of appropriate descriptive and inferential statistical tools; the data problem and applications to different research situations; knotty issues in data and results' presentations and analyses; dealing with findings and concluding imperatives. The course will conclude with current thinking and developments in management sciences' research.

UPBS 902 - Advanced Management Accounting

In this course, students will be exposed to topics that cover both quantitative and behavioural dimensions of management information such as long range planning, cost control through learning curves, mathematical modelling and decision models. Further topics include behavioural aspects of budgeting, pricing and cost estimation, performance evaluation and strategic cost management.

UPBS 903 – Strategic Marketing Management ???

UPBS 904 – Corporate Finanacial Management and Policy

The goal of this course is to review the fundamental concepts of financial management as a prelude to helping the students sharpen the practical analytical skills required for making sound corporate investment and management decisions fully reflective of risk considerations. In particular, this course recognises corporate valuation as a unifying theme in corporate finance, as reflected in the firm-value-maximization goal of corporate management. As such, students with a solid understanding of the theoretical underpinnings for value maximization, as well as a competent grasp of the practical skills required to analyse business decisions within this context make better, more valuable managers or researchers. The course will thereby examine

various concepts, including discounting and compounding, opportunity costs, discounted cash flow analysis, structure and analysis of financial statements, interest rates and bond valuation, stock valuation, risk and return (including the relation between risk and return in the capital asset pricing model, the efficient market hypothesis, the Fama-French three-factor model, the arbitrage pricing theory, and behavioural finance), the cost of capital, capital budgeting, and capital structure, real options, distribution to shareholders (includes dividend policy), corporate governance, lease financing, working capital management, mergers and corporate control, as well as multinational financial management.

UPBS 905: Business Policyand Strategy

This course provides an advanced coverage of the development and transformation of business enterprise within the global economy by focusing on the business strategy and dynamics of institutional and organizational change resulting from today's globalisation process. This includes the effect of structural, institutional, and organisational change upon the strategy of the business enterprises for survival and success in the contemporary hyper-competitive, technology-driven, fast-paced, uncertain, globalized environment. This course provides the student with several survival strategies adopted by organisations to overcome competitive challenges such as; Dynamics of Transnational Corporations; Strategy in a fast-paced, uncertain Environment Competition and Hyper-Competition. The meaning of management strategy in a globalized world, Technological innovation as a strategy; Understanding the organizational transformation as an interface of internal and external change; Leadership and Mobilization; institutional and organizational Innovation; Globalization as a strategy.

UPBS 906 – Advanced Managerial Economics

This course provides students with the tools of intermediate microeconomics, game theory, and industrial organisation that they need to make sound managerial decisions (In the face of uncertainties). It teaches managers the practical utility of basic economic tools such as present value analysis, supply and demand, regression, indifference curves, isoquants, production, costs, and the basic models of the market such as perfect competition, monopoly, and monopolistic competition, using real world examples and case studies. Public sector economics covering issues of externalities and government policies as they affect productive activities will also be covered.

UPBS 907 – Entrepreneurship Development and Management

???

UPBS 908: Advanced Organisational Theory

This course contrasts and compares a variety of perspectives in organisation theory and design; contingency theory, resource dependency and population ecology models. Students are expected to develop an understanding of the special methodological problems in undertaking organisational research.

UPBS 909: Contemporary Management Philosophy

The course will look at how various approaches to the management process will be analysed. Attention is focused on such topics as social political and religious factors having bearing on management decision. Emphasis is placed on the development of a philosophy of management by such student through a critical examination of current managerial thought and action in our social and economic system.

UPBS 910: Decision Models and Simulation

This course consists of a survey of analytical and simulation approaches to model building. Deterministic models, such as mathematical programming and scholastic models are included. All of the mathematical developments are related to an overall framework of modelling and problem solving. Application of simulation to models in business/management (for example, linear and nonlinear, regression models, queuing models, etc) will be dealt with.

UPBS 911: Comparative Management Systems

This course is designed to study in different types of managerial systems required to administer organizations in varying cultures. Culture has profound effects on the behaviour of individuals in organizations, on their motivations and expectations, on their views of the functions of management Etc. As a consequence, effective management in different cultures require different approaches to a variety of management problems. The basic aim of the course is to develop in the students and understanding of these problems and an ability to deal with them from a top management point of view.

UPBS 912: Quantitative Decision-Making for Business Analysis

This course develops students' skills in descriptive statistics, statistical inference. Quantitative techniques including analysis of variance and covariance, multiple linear regressions, and various non-parametric techniques. Students will use quantitative data reduction and analysis and data management techniques. Students will learn to use software for data analysis. This research

competency component intends to focus on key concepts and issues in the conduct of data analysis in management-oriented social science research, including the role of distribution assumptions underlying various hypothesis tests, the computational details of various tests, and the use of readily available statistical software packages. This course does not intend that learners will become fully grounded in statistical methods, rather, it hopes that students will learn what questions to ask about data analysis and be able to defend their use of specific techniques used.

UPBS 913: Human Resource Planning and Development

The purpose of this course is to analyse and evaluate manpower policies designed to enhance national priorities, organizational goals, and individual values in a pluralistic economy. A framework of analysis is developed to permit a critical investigation of manpower questions relating to employment, human resource planning and job design, appraisal and evaluation, recruiting and selection, training and development, career planning, compensation, conflict and its resolution and various special topics.

CORE COURSES:

UPBSM 913	Human Resource Planning and Development
UPBSM 914	Production and Operations Management

UPBSM 915	Decision Models and Quantitative Decision-Making for Business Analysis
UPBSM 916	DBA Seminar in Management*
UPBSM 917	DBA Thesis*

UPBSA 905	Management and Policy Business Policy and Strategy	3
UPBSA 906	Advanced Managerial Economics	3

*Note that both the Seminar and Thesis are to reflect each student's area of specialization.

COURSE DESCRIPTION

UPBSM 921: Advanced Research Methods

This course moves students towards the fulfilment of the dissertation and publication requirements of the doctoral degree. The course focuses on 'when' and 'why' to use the different research methodologies, such as Case Study research, Action research, etc., understanding their nature, and appreciating the advantages and disadvantages of each research method. It also covers the main two research paradigms; the Quantitative as well as Quantitative paradigms. Other class topics include concepts from the philosophy of science and from psychology, acquiring data, interpreting and presenting research results, and dissertation writing. It examines ethical, social, and political aspects of conducting research and producing knowledge for practice. Quantitative designs covered include experimental and quasi-experimental, survey, causal-comparative, evaluation, and existing action research, quantitative designs covered include case study, phenomenology, grounded theory, and ethnography. The course work also covers the application of several modern mathematics/statistical software such as SPSS, ANOVA etc.

UPBSM 934: DBA Seminar in Management

This course critically examines the issues, problems and strategies for managing organizations in a dynamic business environment.

COURSE DESCRIPTION FOR DBA ACCOUNTING

UPBSA 921: Advanced Accounting Research Method

Fundamental of experimental and non-Experimental accounting research and their applications to the study of accounting problems. Issues will also cover construct, internal and external validities, survey and single-case research designs in accounting.

UPBSA 922: Advanced Management Accounting

The aim of this course is to up-grade the analytical skills of the students and to identify research issues in management accounting, budgeting theory, learning curves, forecasting, variance analysis, profit analysis and cost allocation techniques, the agency-theoretic approach in management accounting.

UPBSA 923: Philosophy of Accounting

The nature and meaning of accounting, the various postulates and concepts that underpin development accounting of accounting thought. The ontology and epistemology that tries to justify conservative accounting.

UPBSA 924: Social and Environmental Reporting

Social and Environmental effects of organization's economic actions to particular interest groups within society. Purpose of social accounting.

Corporate accountability and management control purpose. Self-reporting and third party audits. Cost structure and environmental performance reporting. Environmental Management Accounting and internal reporting practices.

UPBSA 925: Advanced Financial Accounting

This course covers more advanced treatment of fundamentals of financial accounting, with preparation of financial statements of corporate organizations in conformity of IFRS and IAS. It review dissolutions of partnership accounts and amalgamation, advanced incomplete records, advanced treatment of accounts non trading concern, published financial statements, purchase and sale of business accounts, royalty accounts contract accounts and other specialised accounts.

UPBSA 926: Advanced Tax Strategies and Fiscal Policies

Contemporary issues of research in taxation. Tax laws and Fiscal Policies and their impact on the economy and society. Overview of Tax Environment, Structure and Administration in Nigeria: issues and challenges arising from Personal Income Tax Laws, Company Income Tax Act, Petroleum Profit Tax Act, Industrial Development (Income Tax Relief) Act, Value Added Tax Laws, Capital Gain Tax Laws, Capital Transfer Tax, Double Taxation Relief and other unfolding events and typical issues such as Tax Review and Reforms.

UPBSA 927: Advanced Forensic Accounting Theory & Practice

This course reviews the role of the forensic accountant in investigations and audits. Topics covered are: the legal environment audit and investigation, dispute resolution and litigation services, information security, financial statement analysis, and tax fraud. Students will merge from the course with an understanding of the roles of forensic accountants and familiarity with their tools and practices.

Information theoretic approach to auditing, statistical aspects of auditing and fraud, the generation and formulation of audit hypothesis, and heuristic and biases in audit judgments. Forensic audit techniques and the role of the forensic auditor as an expert witness. Financial Performance Reporting under International Financial reporting Standards (IFRS); guidance on IFRS, corporate governance, audit and professional Financial Reporting Standards (IFRS); guidance on IFRS, corporate governance, audit and professional responsibility reporting; Reporting on impairment of non-financial asset, employee benefits, and going concern. Implications of applying IAS 23 (REVISED) "Borrowing costs". Guidance on

impairments for financial assets. Ethics as an integral part of accounting profession.

UPBSA 929: Advanced Public Sector Accounting

This course provides the tools necessary for understanding the principles of fiscal accountability; It will also equip the student with the knowledge of IPSAS (International Public Sector Accounting Standards) with the aim to improve the quality of general purpose financial reporting by public sector- entities, leading to heifer informed assessments of resource allocation decisions made by government, thereby increasing transparency and accountability as well as quality service delivery.

UPBSF 917	DBA Thesis*

*Note that both the Seminar and Thesis are to reflect each student's ASrea of Specialisation.

COURSE DESCRIPTION FOR DBA FINANCE AND BANKING

UPBSF 925: Theory of Finance and Banking

Survey of the relationship between theory of choice, theory of the firm and theory of finance. Money credit and finance. Sources and nature of funds. The allocation of financial resource over time. The nature and application of the theory of utility and indifference curves in financial and risk analysis. The theory of production equilibrium, investment and consumption within the capital market framework. Efficient market theories, theories of risks and returns in enterprises. Liquidity, intermediation and interest rate theories in bank Management.

UPBSF 926: Advanced Public Finance

Meaning and scope of Public Finance; analysis of public revenue, analysis of problems in public expenditure systems, character of governmental expenditures, governmental activity and economic development, role of investment in the modern economy, fiscal policy and budgeting, the changing role of investment in the modern economy, fiscal policy and budgeting, the changing role of fiscal policy, fiscal federalism in Nigeria, the tax structures, institutional and administrative constraints in tax administration, unequal fiscal capacity, public debt management.

UPBSF 927: Advanced Insurance

The regulatory functions of the National Insurance Commission (NICOM). Problem, development and organization of the Insurance industry in Nigeria, types of insurance businesses life, non-life, social and health insurance etc. Structure of the Nigerian Insurance Market, insurance statistics, reinsurance, state control of insurance, application of Linear programming and actuarial science technique to various aspects of the insurance business, management and investment of insurance funds, risk management and risk reduction through portfolio diversification, internal funds structure of insurance organizations.

UPBSF 928: Advanced Internationaltrade and Finance

Concept of international trade and the need for international trade. Balance of payments and the trends in the structure of Nigeria's balance of payment. The concept of surplus and deficit in the balance of payments and their implications for the macro-economic goals. Automatic measures (exchange rate regime variations) and discretionary measures (exchange control, devaluation, revaluation and other policy intervention measures). Types of exchange rates and their determinants. Exchange rate policies and practices in Nigeria since 1960. International investments (real and portfolio) and the impediments to their inflows. Various reforms carried out since 1986 by the Nigerian monetary authorities to ease foreign capital inflow. Genesis of world monetary crisis

and the roles of international Financial Institutions i.e World bank, IMF etc. in shaping international monetary order. Regional Central Banks e.g. RCB in fostering economic union, exchange rate stability and growth. Efforts towards the creation of ECOWAS monetary Union and ECOWAS Central Bank.

UPBSF 929: Bank Credits and Administration

Basic considerations in financial Analysis: Analysis and criticisms of financial/accounting statements including cash-flow statements, budgeting, cash flow forecasts etc. for lending purposes. Nature of credit risks, uncertainties and lending.

COURSE DESCRIPTION FOR DBA MARKETING

UPBSK 922: Advanced Strategic Marketing

The course aims to expose students to a relatively high knowledge regarding foundations of strategic marketing, strategic marketing management process, and opportunity analysis and market

management decisions. Strategic marketing mix elements: product analysis, development and management, Pricing and Price Management and Policy, Promotion and Distribution Management.

UPBSK 923: Advanced Marketing Models

This course describes the theoretical and empirical models used to analyze marketing management issues in areas of product development and positioning, pricing, advertising and sales management as well as distribution channels. Theoretical structure of the course micro-economics of the firm and consumer making, with special consideration on competitive analyzed with game theory and applications of theory. The course equally covers quantitative techniques in marketing including but not limited to conjoint analysis, choice modeling, Univariate at bivariate analysis and multivariate techniques.

UPBSK MKT 926: Consumer Behaviour

Designed to prepare students to understand the customer in order to serve him/her with appropriate marketing programmes. Covers consumer decision process: economics and demographic influences; style and fashion research and marketing strategy; innovation diffusion, beliefs, attitudes and intentions, brand loyalty and repeat purchase behavior; and retailing strategies models of consumer behavior etc.

UPBSK MKT 927: Advanced Industrial Marketing

This course aims to take the students through contemporary and emerging trends in industrial, governmental and instructional marketing. After studying the course, students should appreciate the reason for the development of their reason for the development of this specialized branch of marketing called industrial marketing. Areas covered in the course include the nature and scope of industrial marketing, industrial market segmentation, models of industrial buying behavior and application of the marketing mix in industrial marketing as well as marketing of industrial marketing Services. The students should also be guided to appreciate the particular importance of customer relationships in industrial marketing and the important role played by the information and Telecommunications technology in contemporary industrial marketing.

UPBSK MKT 928: Advanced Marketing Communication

Covers various theories of promotion and sales management principles and practices. Promotional implications of marketing mix integration; advertising design and management, measurement, models of communication/advertising; media characteristics and planning

strategies, advertising agencies, sales promotion, publicity and public relations, sale force training, motivation and compensation, sales forecasting and resource allocation, market potentials etc.

UPBSK MKT 930: Dba Seminar in Marketing

Designed to introduce students to the most recent research in marketing which includes the examination of current issues and trends. Students will be required to present their own research and discuss and analyse the work of others. Research presentation will focus on the formulation, design, execution and results/or findings of the research work. Topics can include market development, demand creation, psychological and sociological determinants of behaviour, consumer protection laws etc.

THE DOCTOR OF PHILOSOPHY (PHD) PROGRAMME IN THE UNIVERSITY OF PORT HARCOURT BUSINESS SCHOOL

INTRODUCTION

The Doctor of Philosophy (PhD) Programme in the University of Port Harcourt Business School, Faculty of Management Sciences, is the highest degree in terms of academic qualification in the field of Business Management/Administration. It is to be introduced in the functional departments at different sessions; beginning from the 2021/2022.

THE PHILOSOPHY OF THE PROGRAMME

The philosophy of the Doctoral Programme in University of Port Harcourt Business School, Faculty of Management Sciences (FMS), is centered on the Development of Business Scholars who are versed in modern method and research skills; as well as having the capability of developing and promoting indigenous academic culture in the field of Management Sciences.

OBJECTIVES OF THE PROGRAMME

- i. To produce candidates with high level of intellectual rigour and maturity for independent work in Management Sciences.
- ii. To produce candidates who can develop and promote indigenous concepts, principles, and theories in their area of specialty and translate same to practices in organizations and institutions
- iii. To equip candidates with the requisite theoretical, quantitative, and qualitative tools to enable them undertake teaching and research responsibilities in Universities, industries and government.

ADMISSION REQUIREMENTS

The following requirements must be met for admission into the doctoral degree programme.

- i. Candidates for the PhD programme must possess a Master's Degree in Accounting, Finance and Banking, Management, Marketing or any area closely related thereto. Master's programme must have had a Research Project/Dissertation (Thesis) component. Candidates are required to have obtained a 'B' average or CGPA of 3.5 on 5 Point Scale in their Masters programme.
- ii. Candidates with good first Degree interested in the Ph.D programme must first register and successfully complete the Masters programme.
- iii. The final selection of candidates for the doctoral programme shall be based on the candidate's performance at an interview to be conducted by University of Port Harcourt Business School (UPBS) Academic Committee.

PROGRAMME OF STUDY

Following the admission and registration, a student shall be assigned to a supervisor who shall be chosen from his/her area of Specialization. The supervisor shall be responsible for guiding and the monitoring of the student's progress throughout the duration of his or her study.

DURATION OF THE PROGRAMME

Candidates will be required to spend a minimum of three (3) years and a maximum of seven (7) years. At the expiration of the maximum period, a candidate who is unable to satisfactorily complete his/her programme will be advised to withdraw.

TITLE OF THESIS

The candidate shall, in not more than two Modules, notify the University of Port Harcourt Business School (UPBS) Academic Committee in writing and state the full title of his/her Dissertation.

THESIS

The student is expected to work on the approved topic with assigned Supervisors, who will present them for proposal defense. On successful defense of the Research proposal, the student shall commence the writing of his or her full Thesis.

On completion of the full Thesis, the student is presented for External Examination.

After examination and with or without further consultation or correspondence among the Examiners, the Examiners shall submit to UPBS Academic Committee, through the Director, on a prescribed form a joint report on the candidate. The report shall contain:

- i. A clear and detailed evaluation of the research work as summed up in the Thesis, including an assessment of its originality and

- its contribution to the advancement of knowledge.
- ii. A clear assessment of the student's knowledge and understanding of his/her subject as shown in the Thesis.
 - iii. An unequivocal declaration as to the acceptability or otherwise of the Thesis in fulfillment of requirements of the degree. The report shall thereafter, be forwarded by the Director, UPBS through the Dean, FMS, to the School of Graduate Studies (SGS).

In the case of differences in opinion, the Examiners shall submit separate reports to the UPBS Academic Committee, which will make an appropriate recommendation to the Board, School of Graduate Studies (SGS).

THESIS/DISSERTATION COMMITTEE

In line with Graduate School regulations, the Committee shall include: The Director of UPBS, Deputy Director, Short-Course Coordinator and Three others mainly Professors representing Supervisors, one of which must be bias in Research Methodology.

SUBMISSION OF THESIS

- a) A candidate shall submit four copies of his Thesis in hard binding to the faculty Committee not later than the beginning of the last period of study and no later than two months to the date of examination.
- b) All Theses must conform to the specifications laid down by the Faculty Graduate Board.
- c) Before the degree is conferred, three copies of every Thesis accepted shall be bound in a manner approved by the UPBS Academic Committee and these shall become the property of the University.

AWARD OF THE Ph.D

The Doctoral Degree shall be awarded upon the successful oral defense of the Thesis. No candidate may defend the Doctoral Thesis more than two (2) times.

SCHEDULE OF GENERAL COURSES FOR PhD

MODULE 1

Course Code	Course Description	Credit Unit
UPBS 951	Strategic Management and Entrepreneurship	3
UPBS 952	Advanced Research Methodology	3
UPBS 953	Contemporary Issues in Accounting	3

MODULE 2

Course Code	Course Description	Credit Unit

PhD - ACCOUNTING (Forensic Accounting; Taxation and Public Sector Accounting; Management Accounting and Policy)

Ph.D -FINANCE BANKING (Investment and Portfolio Management; Management of Financial Institutions and Markets; Corporate Finance)

Ph.D - MANAGEMENT (Organizational Behaviour; Human Resources and Strategic Management; Production and Operations Management)

Ph.D MARKETING - (Digital and Social Marketing; Consumer Behaviour; International Marketing)

COURSE DESCRIPTION

SCHEDULE OF GENERAL COURSES FOR Ph.D Programme

MODULE 1

UPBS 952: Strategic Management and Entrepreneurship

Students will gain a well-developed understanding of business enterprises and the entrepreneurial and strategic thinking that drives them in a dynamic, competitive regional, national, and global economy. Students will learn to apply entrepreneurial and strategic management practices (e.g., using case analysis) to organizations of varying sizes. An integral component, futures studies, shall involve an introduction into thinking about the future, the foundation of the field, its methodologies, link to planning, decision-making, strategy and public policy. The relationship between core competences (at the company level) and key success factors at the industry shall be examined.

UPBS 952: Advanced Research Methodology

The objective of this course is to deepen the understanding of the students, of the traditional scientific research methods. Topics to be discussed here include research in Social, Physical and natural sciences; problems of research in developing countries; common errors in research; types of research; and research in practice: selecting a topic, problem and hypotheses formulation, research design, instruments for data collection, data analysis and interpretation, research report, etc.

The objective is for students to gain confidence in the applicability and relevance of non-quantitative methods in our research environment, where the tradition of believing in 'objective measurement' is strong. Quantitative research opens up for us a class of research questions that are not accessible within the 'normal' scientific method. That is, as researchers, we can ask new questions if we have a richer repertoire of tools, both the qualitative and

the quantitative research methods and research approaches from which to choose.

Topics to be discussed include the basics of qualitative research methods and research approaches. Some qualitative research approaches, such as phenomenography, activity theory and ethnography, data collection methods such as interviews, field studies and rapid rural appraisal and observations and evaluating the collected data.

UPBS 953: Contemporary Issues in Accounting

Discussion and articulation of recent developments in the accounting literature.

MODULE 2

UPBS 954: Advanced Theory of Corporate Finance

The course treats at the theoretical level the conceptual foundations of funds allocation among assets and assets classes, and analyses the effects of various corporate financial policy decisions (e.g. capital structure and dividends policies) on the value of the firm. It also includes analysis of the effects of taxes, bankruptcy costs, and agency costs on these decisions. The analyses are conducted successively under the assumptions of perfect and imperfect markets, and certainty and uncertainty conditions.

In addition, it covers recent literature with emphasis on mathematical techniques which have been used to solve problems in portfolio theory, multi period asset pricing models and option pricing models. Financial leverage, market efficiency and information economics, term structure models, capital market equilibrium models, corporate finance issues. Readings are drawn almost exclusively from the theoretical literature of corporate finance.

UPBS 955: Management of Change in Organizations

Management of change is designed to acquaint participants with issues, techniques, and strategies for the management of change. The first part of the course concentrates on developing expertise in predicting relevant changes in the organisation's task environment and making sure that change initiatives are in harmony with the changes in the business environment. Techniques for environmental scanning and task forecasting will be explored and useful models analysed. Students will also discuss and make presentations on current issues such as employee ownership, team-based management mergers and acquisitions, and organisational renewal, etc. at the end of the course, participants will understand the techniques for creating change, managing resistance, change agents, and the application of various change models to various industries and situations.

UPBS 956: Advanced Consumer Behaviour and Demand Analysis

Topics of special interest to doctoral candidates in consumer behaviour will be discussed and approved.

MODULE 3

UPBS 957: Theory and Management of Financial Institutions and Markets

The course shall examine the various theories of final intermediation plus the role played in financial markets by financial institutions and the Central Bank. The course shall involve intensive literature review in such areas and saving investment process; financial institutions and instruments; inflation in financial markets; money demand and money supply models, transmission mechanism and effectiveness of monetary policy in financial markets impacts of fiscal policies on financial markets.

UPBS 958: Advanced Business Management

Advanced Business Management is designed to build wealth creation and entrepreneurship in families at their sustainable levels through effective succession plan. The course shall cover conceptual treatment of Business Management, corporate governance, financing, professionalizing, challenges and problems of Family Businesses, among others.

UPBS 959: Digital and Social Marketing

Describes theoretical and empirical models used to analyse marketing management issues in areas of product introduction and positioning, pricing, advertising and distribution channels. Theoretical structure of this course stems from micro-economics of the firm and consumer decision making, with special consideration of competitive issues analysed with game theory and applications of control theory. Empirical requirements include conjoint analysis, choice modeling and multivariate techniques.

MODULE 4

UPBS 960: Empirical and Contemporary Issues in Finance and Banking

This is a seminar to address emerging issues in theoretical and empirical literature in finance and Banking.

UPBS 961: Globalization and Management

Globalization Overview: Why has the global economy grown so rapidly? How is it affecting the environment, local economics, and social and cultural customs throughout the world? Questioning Free Trade: What are the negative and positive impacts of free trade?; Economic globalization and technological changes: these

processes are examined in relation to the national development. It also examines multinational companies, their histories, the reasons for these companies' special mobility and the impact on developing world; Globalization and the Environment: Social equity: Is social equity relevant to trade issues?; What is gained and lost through the gradual homogenization and distortion of cultures as a result of globalization? The role of regional economic groupings.

UPBS 962: Advanced Business Environment and Corporate Governance

The course will examine the area of government business and business-society relations as one of the critical areas where managers spends considerable amount of time. The responsibilities of the firm in these areas, the role of general manager, the skills needed and ethical and philosophical issues will be discussed.

SPECIALIZATION: MODULES 5 & 6

PhD -ACCOUNTING (*Forensic Accounting; Taxation and Public Sector Accounting; Management Accounting and Policy*)

MODULE 5

UPBSA 951: History of Accounting Thought

The nature and scope of accounting and its evolution; The accounting function and its relationship with the information systems of organizations.

Accounting procedures and systems. Source documents, books of original entry and books of accounts. Double entry book-keeping systems, the trial balance, accruals, prepayments and adjustments.

Provisions and reserves, classification of expenditure between capital and revenue, methods of recording accounting data-manual and mechanical; manufacturing, trader. Accounting treatment of control accounts and bank reconciliation.

UPBSA 952: Advanced Auditing Theory

Evolution of auditing, procedures with particular reference to internal control systems, internal audit functions; sampling and statistical techniques; auditing standards and guidelines including exposure drafts; post audit review; audit of accounts of solicitors, charitable and other non-trading organizations.

UPBSA 953: Advanced Financial Accounting Theory

Further work on advanced company accounts including the accounts of banks and insurance companies, and the Nigerian Insurance Acts. Valuation of goodwill and company shares.

Divisible profits and company individuals. Royalty and hire-purchase accounts.

Consolidated and other group accounts. Governmental, municipal and public utility accounting, with special reference to Nigerian Organisations.

Seminars on accounting systems, including business, governmental municipal and public utility accounting systems.

Ph.D -FINANCE BANKING (*Investment and Portfolio Management; Management of Financial Institutions and Markets; Corporate Finance*)

UPBSF 951: Advanced Theory of Financial Intermediation

This course provides an advanced treatment of investment portfolio theories; computer enhanced models used to provide instruction in capital asset portfolio management and technique. Advanced treatment of diversification theories and applications in asset selection, analysis and management and risk management are exclusively discussed.

UPBSF 952: Advanced Quantitative Decisions Techniques in Finance

It is designed to provide students the opportunity to explore more advanced quantitative techniques for decision making in general and research in particular. Emphasis will be on: quantitative methodologies in business, multivariate statistical methods, advance topics in optimizing techniques and stochastic models; application of time series, inbox number, other vital statistics to issues in business studies. In addition, it covers, techniques of mathematical programming as applied in finance the development of an intuitive appreciation of the techniques as opposed to rigorous mathematical derivation illustration of the application in financial analysis-to be accomplished via a computer-assessed case, analysis and/or journal articles.

UPBSF 953: Advanced Portfolio Theory and Management

Essentially, this is a course in multi period wealth maximization using portfolios and in the analysis of capital markets where portfolio assets are traded. Emphasis shall be on the models of portfolio management and capital market analysis, such models include the Capital Asset Pricing Models (CAPM); the Arbitrage Pricing Theory (APT); Random Walk and Martingale Models. Also tests of Capital markets for efficiency using such models as special analysis, Special Correlation and Runs Analysis shall emphasized. The courses shall be examined comprehensively. The empirical evidence on the efficiency of

selected international capital markets including Nigeria.

Ph.D - MANAGEMENT (*Organizational Behaviour; Human Resources and Strategic Management; Production and Operations Management*)

UPBSM 951: Management Thought and Philosophy

This course examines the idea and evolution of management as a field of endeavour.

UPBSM 952: Advanced Management Theory

This course aims at introducing students to the advanced theories and practice of management in the decision making process.

UPBSM 953: Advanced Conflict Management

This course is designed to provide an understanding of intercultural management useful for international management and trade negotiations. Participants are expected to study the different ways various cultures think, communicate and behave, particularly within business contexts, in order to develop a necessary level of cross-cultural competency. Today's global business implies co-operating, coordinating, negotiating and supervising, using management processes appropriate to the cultural context. The student will explore cultural implications in those management processes, as well as its impact on team-building, ethics, conflict resolution and creative problem-solving. Students will also study their own culturally-based perception, patterns of thinking and behaviour, communication styles, values and how they can be adapted to an intercultural context. Although the course will primarily deal with cultural differences in national culture context, it will also address cultural differences in gender and in organizational level as long as they affect the global business environment. Topics to be covered include:

- a) Foundations and theories of conflict: theories of conflict resolution- An interdisciplinary approach to examination of conflict and conflict resolution theory;
- b) Responses to conflict: an examination of the different approaches to conflict resolution represented by two party negotiation, facilitative processes such as mediation, the various evaluative processes, adjudicative processes such as litigation and binding arbitration, and the various hybrid processes; Negotiation;
- c) Mediation skills clinic- A basic introduction to the mediation skills, theory and ethics;

- d) Interpersonal and inter group conflict: An in depth study of the dynamics of interpersonal and inter group conflicts.
- e) Organizational and community conflict- An exploration of the dynamics of conflict in organizations and the community
- f) International and cross-cultural conflict- An examination of the practical negotiation skills central to the resolution of situation-specific international and intercultural conflict.
- g) Methodology of Conflict Resolution Research – an introduction to a range of qualitative data collection methods with particular focus on techniques used in research on conflict and conflict resolution, including participant observation, content analysis, behavioural mapping, and non-intrusive measures as well as a review of relevant research literature in the field.

Ph.D MARKETING - (*Digital and Social Marketing; Consumer Behaviour; International Marketing*)

UPBSK 951: Marketing Thought and Philosophy

The development of the Marketing Organization specialized marketing activities, the total systems approach, and the social role of marketing are traced by means of a survey of marketing literature from early writers to the present.

UPBSK 952: Advanced Quantitative Techniques in Marketing

This course shall examine various techniques and methods apply in solving marketing problems. The course shall involve intensive review in such areas as multivariate methods (factor analysis, cluster analysis, multi-dimensional scaling); Regression and Forecasting Techniques (multiple regression, discriminant analysis, automatic interaction detection) statistical decision theory for stochastic methods (Queuing, stochastic processes, Game theory); Deterministic operational research methods (linear, non-linear, transportation model); Hybrid Techniques (Dynamic Programming, Heuristic programming, stock control); Network programming (PERT, CPM).

This is a course in the application of quantitative techniques for marketing decision-making and for formulating marketing policies. The course shall also employ other modern quantitative tools for deriving estimates of relevant marketing variables for managerial decision-making.

UPBSK 953: Advanced International Marketing Strategy and Managerial Decisions

The objective of this course is to provide students with the knowledge of advanced marketing theory

and research. Marketing is an applied discipline that is informed by professional scholarly research in marketing and related fields (e.g. psychology, economics). This course provides an in dept review of marketing theory and research, an advanced review of influential theory in the development of marketing thought, and an overview of contemporary theories of research in marketing. Reading material shall largely be scholarly articles in refereed journals.

MODULE 6

PhD -ACCOUNTING (*Forensic Accounting; Taxation and Public Sector Accounting; Management Accounting and Policy*)

UPBSA 954: SEMINAR 1*

Each seminar relates to an examination of current issues in the area of specialization in consultation with supervisor.

Results of such examinations shall be at the recommendation of the supervisor and the approval of the departmental post graduate sub-committee.

UPBSA 955: SEMINAR 2*

Each seminar relates to an examination of current issues in the area of specialization in consultation with supervisor.

Results of such examinations shall be at the recommendation of the supervisor and the approval of the departmental post graduate sub-committee.

UPBSA 956: THESIS*

Ph.D -FINANCE BANKING (*Investment and Portfolio Management; Management of Financial Institutions and Markets; Corporate Finance*)

UPBSF 954: SEMINAR 1*

Candidates will be required to make a seminar presentation. Each student will be required to produce a manuscript in the usual journal format on the topic under investigation. For these candidates, a sound literature review and development of relevant mathematical models or techniques of analysis related to their research topics will be acceptable.

UPBSF 955: SEMINAR 2*

Candidates will be required to make at least two seminar presentations. The first seminar presentation is the thesis proposal if the approved proposal is completed. The second seminar presentation will emphasize the actual results the students research work.

UPBSF 956: THESIS*

Ph.D -MANAGEMENT (*Organizational Behaviour; Human Resources and Strategic Management; Production and Operations Management*)

UPBSM 954: SEMINAR 1*

This seminar introduces students to the most recent research in the area of Management and Organisational analysis, examining current issues and trends. Students have the opportunity to present and discuss their own research and are actively engaged in the analysis and discussion of the work of others. Each student is expected to make at least one presentation during the course, focusing on the formulation, design, execution, and results in the student's research

UPBSM 955: SEMINAR 2*

This seminar introduces students to the most recent research in the area of Management and Organisational analysis, examining current issues and trends. Students have the opportunity to present and discuss their own research and are actively engaged in the analysis and discussion of the work of others. Each student is expected to make at least one presentation during the course, focusing on the formulation, design, execution, and results in the student's research

UPBSM 956: THESIS*

Ph.D MARKETING - (*Digital and Social Marketing; Consumer Behaviour; International Marketing*)

UPBSK 954: SEMINAR 1*

Topics of special interest to doctoral candidates which should be in area of Specialization in Marketing will be discussed and approved.

UPBSK 955: SEMINAR 2*

Topics of special interest to doctoral candidates which should be in area of Specialization in Marketing will be discussed and approved.

UPBSK 956: THESIS*

***PhD -ACCOUNTING** (*Forensic Accounting; Taxation and Public Sector Accounting; Management Accounting and Policy*)

***Ph.D -FINANCE BANKING** (*Investment and Portfolio Management; Management of Financial Institutions and Markets; Corporate Finance*)

***Ph.D -MANAGEMENT** (*Organizational Behaviour; Human Resources and Strategic*

*Management; Production and Operations
Management)*

**Ph.D MARKETING - (Digital and Social
Marketing; Consumer Behaviour; International
Marketing)*

7	C.A. Nwuche (Mrs)	B.Ed., M.Sc.,Ph.D.	Reader	Human Resource Management, Industrial Relations
8	Edwinah Amah (Mrs)	B.Sc., MBA,M.Sc., Ph.D.	Reader	Organizational Behaviour, Entrepreneurship, Human Resource Management
9	C.A. Eketu	B.Sc.,M8A, Ph.D.	Reader	Research Methodology/ Organisational Behaviour
10	W.O. Olori	B.Sc., MBA, Ph.D	Senior Lecturer	Business Policy, Human Resource Management, Research Methodology
11	G.O. Worlu	B.Sc., MBA, Ph.D.	Senior Lecturer	Organizational Behaviour
12	Mrs. A.D. Alaghah	NCE, B.Sc.(Ed),	Senior Lecturer	Organizational Behaviour
13	R.S. Needom	PGD, MBA, Ph.D.	Senior Lecturer	Operations Mgt/ Quant. Analysis
14	Haliru Bala	HND, B.Sc, PGD, MBA, M.Phil, Ph.D	Senior Lecturer	International Business, Business Policy
15	Joseph Elang O. Oshi	B.Sc., MBA, PGDE	Lecturer I	Entrepreneurship/ HRM

16	Dr. K.T. Ngaage	B.Sc., MBA, Ph.D.	Lecturer I	Production and Operations Mgt.
17	Maxwell Nwinye	B.Sc., MBA, LLB	Lecturer I	Organizational Behaviour
18	Ike, Osadebe O.	B.Sc.,MBA	Lecturer I	General Management
19	Yemi Taiwo Eniola	B.Sc.,MBA	Lecturer I	Entrepreneurship
20	Matthias Okon Nkuda	B.Sc.,MBA	Lecturer I	Business Policy/ General Management
21	Macaulay E. Wegwu	B.Sc.,MBA	Lecturer I	Business Policy
22	Sylva Waribugo	B.Sc.,M.Sc, Ph.D.	Lecturer I	Operations Mgt/ Management Science
23	Wilson Ofoegbu	B.Sc, M.Sc.	Lecturer I	Operations Mgt/ Quant. Analysis
24	C.T. Jonah	B.Sc., M.Sc.	Lecturer II	Business Policy, Human Resources Management

LIST OF OTHER STAFF/INDUSTRY RESOURCE PERSONS

S/N	Name	Department	Areas of Specialization
1	Prof. Okey Onuchuku	Economics	Econometric & Economic Theory
2	Prof. Mrs. O.M. Etebum	Engineering	Quantitative Analysis
3	Dr. Jonathan Edwyn	Business and Company Law	
4	Prof. Essi Isaac D.	Statistics and Econometrics	
5	Mr. Uche Nwabuoku	Industry	Industrial Relations
6	Mr. William Park	Industry	Security Management
7	Engr. Ekpah Daniel	Industry	Information Management System
8	Dr. Peter	Industry	Information/Organisational Behaviour
9	Mrs. Michell	Industry	Human Resources Management
10	Nkem E.	Industry	Operations Management
11	Mr. Godwin O.O.	Industry	Operations Management
12	Dr. Nwokolo E.	Agriculture	Agric Business
13	Dr. Alabere I.D.	Health Science	Healthcare Management

FACULTY OF PHARMACEUTICAL SCIENCES

DEPARTMENT OF PHARMACOGNOSY & PHYTOTHERAPY

Available Programmes

- (i) Master of Pharmacy (M. Pharm) and Doctor of Philosophy (Ph. D) in Pharmacognosy and Phytotherapy with specialization in the following areas:
 - (a) Phytochemistry/ Phytotherapy Research
 - (b) Medicinal Plant Research
 - (c) Standardization of phytopharmaceuticals /herbals
 - (d) Formulation studies of herbal products
 - (e) Tissues culture

Introduction and Philosophy of Programme

Postgraduate studies in the Department of Pharmacognosy and Phytotherapy are designed to offer intensive training in specialized areas of Pharmacognosy and ethnomedicine for development of quality staff distinguished for teaching, innovation and research.

The overall philosophy of the programme is to train qualified graduates to become familiar with trends in natural product research and development; to be adequately equipped to screen our natural flora and fauna for drug development and sourcing of local raw materials for the pharmaceutical industry in pursuance of academic excellence and promotion of scholarship. The programme shall focus on advancement of knowledge of Nigerian medicinal plants and phytotherapy to address aspects of health challenges of developing countries through research into alternative medicines.

Objectives of Programme

The main objectives of the programme are:

- (a) Training in methods of scientific enquiry for those who are interested in and are capable of pursuing an academic career in research and/or teaching.
- (b) To encourage research and development of phytopharmaceuticals and phytotherapy.
- (c) Training and improvement in various pharmacognosy techniques and methods beyond first degree for those needed in the pharmaceutical industry, hospital, government and private manufacturing and research institutes.
- (d) To equip qualified graduates with research techniques to screen our abundant natural resources for alternative source of drugs and raw materials for the pharmaceutical industry.

Admission Requirements

(a) M. Pharm. Degree

- (i) Candidates for admission to the M. Pharm degree programme must possess a good first degree in Pharmacy from the University of Port-Harcourt or of other Universities recognized by Senate, not below Second Class Honours, Lower Division
- (ii) Non-pharmacy graduates in closely related subjects like Chemistry, Biochemistry and Botany may be considered for admission. Such candidates may be required to take remedial undergraduate courses in Pharmacognosy as recommended by the Departmental postgraduate committee.

(b) Ph.D Degree

- (i) Candidates who possess the M. Pharm. degree in Pharmacognosy of the University of Port-Harcourt or of other universities recognized by Senate with a CGPA of 3.5 on the 5 point scale. However, candidates with CGPA of 3.0 in their M. Pharm. or M.Sc. programmes in pharmacognosy or related disciplines may be considered for admission. Such candidates shall be required to take recommended 800 level/remedial courses which they must pass at an average score of 60% in the first year.
- (ii) Candidates with M.Sc./M.Pharm degree (minimum CGPA of 3.5); M.Phil. degrees in Pharmacognosy, Ethnomedicine, Chemistry, Biochemistry or Botany of the University of Port-Harcourt or other approved universities/Institutions.
- (iii) Final selection of candidate is by presentation of a research proposal in accordance with University regulations.
- (iv) Part-time candidates will normally be considered.

Deferment of admission

This is permitted up to the official end of late registration specified by the School of Graduate Studies.

Mode of admission

Admission into the Postgraduate programmes of the Department shall be by:

- (i) Full-time or
- (ii) Part time

Duration of Programme/Mode of Study

(i) M. Pharm. Programme

- (a) Full-time candidates will be required to spend a minimum of 18 calendar months and maximum of 24 calendar months.
- (b) Part-time candidates will be required to spend a minimum of 24 calendar months and a maximum of 36 calendar months.
- (c) Mode of study shall be by taught courses, tutorials, seminars, field trips and laboratory work. Every taught course shall be examined by a three (3) hour written examination except for PCG. 814 and PCG. 818 which shall be by continuous assessment. The pass mark shall be 50% for all courses.
- (d) Candidates admitted to the M. Pharm. programme are required to register for maximum of 36 units of taught courses comprising all core courses and two elective courses after consultations with the supervisor(s) and Head of Department. To graduate candidates are required to be credited with minimum of 32 units.

(ii) Ph.D. Programme

Candidates admitted into the Ph.D programme will require a minimum of 3 years to complete the programme. Mode of study for Ph.D degree is by research work and seminars (considered as course-work) and presentation of thesis in accordance with University of Port Harcourt regulations.

Part-time candidates

These candidates must:

- (a) Be engaged in approved employment
- (b) Submit evidence that they can devote substantial proportion of their time to their studies.
- (c) Satisfy the Departmental Graduate Studies Committee that they will be available for attendance at courses, seminars and for regular consultation with their supervisors.

Registration

Both full-time and part-time candidates must register during the time specified by the Graduate School.

Course outline for M. Pharm. degree programme

First Semester

The taught courses consist of five compulsory first semester courses namely:

Course Code	Course Title	Credit Units
PCG 813.1	Research Method	3
PCG 814.1	Separative techniques in natural product research	3

PHA 800.1	Biogenesis of natural products	3
SOS 801.1	Advanced laboratory Course	3
PCG 811.1	Biostatistics	3
PCG 812.1	ICT and research methods	3
	And any one (1) elective from any of these elective courses	2

Total credits (First Semester) 18

Second Semester

The taught courses consist of five compulsory second semester courses namely:

Course Code	Course Title	Credit units
PCG 815.2	Standardization and Quality Assurance of natural products	3
PCG 816.2	Recent Advances in Pharmacognosy	3
PCG 817.2	Medicinal Plants and Raw materials	3
PCG 818.2	Seminar & Directed Reading	3
PCG 823.2	Project	6
SGS 801.2	Entrepreneurship and Management	2

Total credits (Second Semester) 22

Total credits for the session 40

Elective courses (one for each semester)

Course Code	Course Title	Credit units
PCG 819.1	Drugs of biological Origin and phytochemical analysis	2
PCG 820.1	Phytotherapy and Alternative medicines	2
PCG 821.2	Medicinal Plant Taxonomy	2
PCG 822.2	Application of Microscopic techniques in Pharmacognosy	2

Course outline for Ph.D degree programme

First Semester

Course Code	Course Title	Credit units
PCG 901.1	Research Seminar I	3
PCG 902.1	Research Seminar II	3

Total credits (First Semester)		6
Second Semester		
Course Code	Course Title	Credit units
PCG 903.2	Dissertation	12
PCG 904.2	Research Seminar III	3
Total credits (Second Semester)		15
Total Credits for the session		21

COURSE DESCRIPTIONS

PCG811.1 Research methods (3 Units)

Trends in phytochemical medicinal plant research. Micro-method for screening for bioactive compounds. In vivo and in vitro biologically monitored phytochemical separations and relevance to drug discovery from nature. Selection of plants for bioactivity guided study of medicinal plants. Processes that lead from plants to pharmacologically active pure compounds. Targets for bioassay. Bench-Top techniques. Major areas of research and discoveries. The microscope. Advanced microscopic and anatomical techniques and relevance in plant identification and in provision of pharmacopoeial standards for vegetable drugs and herbal remedies. Advanced treatment of spectroscopy (UV, IR, NMR, MS etc.) in determination of purity of plant isolates and structure elucidation.

PCG 812.1 Separative techniques in natural product research (3 Units)

Principles and application of various separative techniques in natural product research. Adsorption and partition chromatography. Factors affecting sensitivity and resolution in chromatographic systems. Qualitative and quantitative applications of paper, TLC, Column chromatography, GLC, gel-filtration, electrophoresis, DCCC, HPLC etc. Preparative chromatography.

PCG 813.1 Biogenesis of natural products (3 Units)

Significance of study of biosynthetic pathways. Method of investigation. Mechanisms for hydroxylation, methylation, phenolic coupling and cyclisation. Shikimic acid and pathways leading to production of aromatic natural products. Biological origin of isoprene unit and pathways leading to production of plant terpenoids. Polyketides. Selected pathways of mixed biogenetic origin.

PCG 814.1 Advanced laboratory course (2 Units)

Experimental designs to illustrate advanced phytochemical research techniques aimed at improving candidate's practical ability in Pharmacognosy. Practical work to illustrate the principle underlying methods discussed in theory.

PCG 815.2 Standardization and quality assurance of natural products (3 Unit)

General methods of evaluation of vegetable, animal and microbial drugs. Commercial requirements. Basic information and standards with respect to potency, identity, purity and safety. Organoleptic, biological and physico-chemical methods. Ash and Extractive Values. Pharmacopoeias, monographs and standards. Prospects and problems of standardization of herbal remedies.

PCG 816.2 Recent advances in pharmacognosy (3 Units)

Contribution of plant/plant products in treatment of diseases. Recent developments in selected areas such as antimalarials, cancer chemotherapy, cardiovascular agents, natural laxatives and bitters, antidiabetic agents, antimicrobials, anti-oxidants, sickle cell anaemia, immunomodulators, anti-fertility agents, anti HIV/AIDS etc. Selected phytopharmaceuticals like Aloe vera, Garlic, Ginkgo and Ginseng products. Allelopathy and allelochemicals. Application to pharmacy and agriculture.

PCG 817.2 Medicinal plants and raw materials (3 Units)

Medicinal and poisonous plants (manifestations, antidote, mechanism of action, phytotoxicity) in traditional medicine. Cultivation, collection, processing and storage. Description of medicinal plants of local significance. Botanical sources, geographical distribution, habitat, ethnobotany, biological and chemical evaluation. Selected medicinal plants with scientific evidence of efficacy from various plant families. Genetics, tissue culture and chemical races. Raw materials. Sources of drug excipients/galenicals. Prospects and problems of sourcing. Factors involved in production of drugs from natural sources. Phytoterapy. Field trip.

PCG 818.2 Seminar and directed reading (3 Units)

Designed to acquaint the candidate with current and relevant research topics and developments in Pharmacognosy and Phytochemical Research.

PCG 819.1 Drugs of biological origin and phytochemical analysis (2 Units)

Plant and animal kingdoms as sources of novel bioactive natural products. Phytochemistry. Principles of phytochemical analysis of medicinal plant constituents. Advanced treatment of extraction and detection of secondary metabolites of medicinal interest. Fractionation and purification of crude extracts. (Elective)

PCG 820.1 Phytotherapy and alternative medicines (2 Units)

Historical development of phytomedicines. Ethnomedicine. Old Herbals Materia medica and pharmacopoeias. Method of preparation of phytomedicines. Concoction, decoction, tisane, herbal teas and extracts, tinctures mixtures. Formulation of pharmaceutical dosage forms: creams, ointments, suspensions and other dosage forms. Alternative medicines and methods of healing. Definition. Sources and scientific evidence of efficacy of selected phytomedicines. Aetiology and diagnosis of diseases in orthodox and traditional medical practices. Factors affecting quality of phytomedicines. Requirements for production of phytomedicines. (Elective).

PCG 821.2 Medicinal plant taxonomy (2 Units)

Classical taxonomy, units of classification. Artificial and Natural classifications. Phylogenic relationships. Chemo-taxonomy Chemo-

taxonomic markers and relevance to classification and identification of medicinal plants (Elective).

PCG 822.2 Application of microscopic techniques in pharmacognosy (2 Units)

Microscopy. Advanced histological techniques. Photomicrography. Use of flora and keys for identification. Preparation of herbarium specimens and relevance to medicinal plant research, Application of microscopic methods to vegetable drug evaluation. Examples from pharmacopoeial and Nigerian medicinal plants. (Elective)

PCG 823.2 Research project (6 Units)

Candidates will present bound research project incorporating a review of relevant literature and an account of laboratory work in a selected topic.

PHA 800. 1 Biostatistics (3 Units)

Course content as described under Department of Clinical Pharmacy and Pharmacy Management.

ACADEMIC STAFF LIST FOR THE MASTER AND DOCTOR OF PHILOSOPHY DEGREE PROGRAMME IN PHARMACOGNOSY AND PHYTOTHERAPY

NAME OF STAFF	QUALIFICATION	DESIGNATION	AREA OF SPECIALIZATION
Prof. Kio A. Abo	BPharm, PhD (Lond), <i>MNI Biol., MPSN, FNSP</i>	Professor	Medicinal plant research, Drug discovery, Standardization of phytomedicine
Prof. B.A. Ayinde	BSc, MSc, PhD	Professor (Adjunct)	Medicinal plant research, Pharmacognosy
Prof. J.S. Aprioku	B.Pharm. M.Sc, Ph.D	Professor	Reproductive Pharmacology, Immunopharmacology Toxicology
Dr. O.E. Afieroho	BSc, MSc, PhD, <i>MRSC, MICCON, MNSP</i>	Senior Lecturer/Ag. Head	Phytochemistry, Functional foods, analytical and Medicinal chemistry. Drugs and agrochemical discovery from nature
Dr. O.A. Shorinwa	B.Pharm, M.Sc, MBA, PhD, <i>FPCPharm.</i>	Senior Lecturer	Ethnopharmacology
Dr. S. Ukwueze	B.Pharm, M.Pharm, Ph.D, <i>MNSP</i>	Senior Lecturer	Medicinal chemistry, pharmaceutical Analysis
Dr. N.O Ezenobi	B.Sc., M.Sc., Ph.D	Senior Lecturer	Antimicrobial resistance, Biotechnology
Dr. M. Suleiman	BSc, MSc, PhD, <i>MNSP, MFAN, FIPMD</i>	Lecturer I	Medicinal plant research, Pharmacognosy
Dr. O.E. Biu	B.Sc, MSc, Ph.D	Lecturer I	Biostatistics
Pharm. A.N. Elechi	BPharm, MPharm <i>MPSN, MNSP</i>	Lecturer I	Medicinal plant research, Pharmacognosy
Pharm. B.A. Adewoyin	BPharm, MSc <i>MPSN, MNSP</i>	Lecturer I	Medicinal plant research, Pharmacognosy
Pharm. O. Lambert	BPharm, MPharm <i>MPSN, MNSP</i>	Lecturer I	Medicinal plant research, Pharmacognosy

DEPARTMENT OF PHARMACEUTICS AND PHARMACEUTICAL TECHNOLOGY

PROFILE OF GRADUATE PROGRAMME

Introduction and philosophy

Drugs and drug products are intellectual entities resulting from extensive research and development. The physicochemical characteristics of the drug substance, the dosage form and the route of administration are critical determinants of the performance, safety and stability of the products. The basic physicochemical and biological principles of drug product performance are introduced to the undergraduate audience but it requires an in-depth understanding of those principles to present an efficacious drug product that will not deteriorate for a reasonable length of time. The graduate programme in Pharmaceutics and Pharmaceutical Technology will provide advanced training in those specialized areas of the Pharmacy profession.

The concept of Pharmaceutics in the broad sense is a specialist field in the Pharmacy profession that encompasses a broad spectrum of interrelated physicochemical and biological principles that determine the final form of presentation of a drug in a given dosage form. Indeed it is the science of dosage form design, the “melting pot” of Pharmacy with well-defined and articulated stages of the development of a drug into a drug delivery system to consumers. The detailed elucidation the various applications of the physicochemical and biopharmaceutical considerations is the plank upon which this post-graduate programme is formulated. Each course is aimed at exploring to a great extent the principles and application to enable the student to develop the incentive and self-reliance in practical research and literary expositions in any chosen area of Pharmaceutics, physical pharmacy, Pharmaceutical technology, Bio-Pharmaceutics and the development of Pharmaceutical grade raw materials.

Objectives

The objectives of this post-graduate programme include training in the methods of scientific enquiry for those interested in and are capable of pursuing an academic career in search and/ or technology. It is also positioned to impart in-depth training in Pharmaceutics and Pharmaceutical Technology with the aim of providing expert manpower for the academic and industrial sectors of Pharmacy practice.

Available programmes

The Department of Pharmaceutics and Pharmaceutical Technology offers the following:

- (a)
 - i. Master of Pharmacy (M.Pharm) in Pharmaceutics
 - ii. Master of Pharmacy (M.Pharm) in Pharmaceutical Technology
- (b)
 - i. Doctor of Pharmacy (PhD) in Pharmaceutics
 - ii. Doctor of Pharmacy (PhD) in Pharmaceutical Technology

The following fields of specialization are available in the Department of Pharmaceutics and Pharmaceutical Technology

- i. Tableting Technology
- ii. Stability Studies
- iii. Disperse Systems drug release/controlled release studies
- iv. Bio-pharmaceutics
- v. Drug delivery Systems
- vi. Pharmaceutical excipient development

Admission requirement

- (a) M.Pharm. degree in Pharmaceutics or Pharmaceutical Technology

An applicant for the Degree of Master of Pharmacy (M.Pharm) must be:

- i. A pharmacy graduate of the University of Port Harcourt.
 - ii. A pharmacy graduate of other Universities recognized by the senate of the University of Port Harcourt, with at least a class (lower division) or a declassified approved degree programme with evidence of good performance in Pharmaceutics.
- * Candidate shall be required to satisfy the department in a selection process as put forward by the Department.

- (b) **PhD degree in Pharmaceutics or Pharmaceutical Technology**

1.1 Philosophy

The philosophy of the Department is to explore to a great extent the principles and application of the physicochemical and biopharmaceutical considerations drug entities and impact in-depth

training in Pharmaceutics and Pharmaceutical Technology.

1.3: Vision

To provide expert manpower for the academic and industrial sectors of Pharmacy practice.

1.4: Mission

The Department of Pharmaceutics and Pharmaceutical Technology aims at providing in-depth training in Pharmaceutics and Pharmaceutical Technology with the aim of providing expert manpower for the academic and industrial sectors of Pharmacy practice.

1.5: Justification

Drugs and Drug related products are intellectual entities resulting from extensive studies, research and development.

The basic Physico chemical and biological principles of drug product performance are introduced to the undergraduate audience but require an in-depth understanding of the principles to present an efficacious drug product that will not deteriorate for a reasonable length of time.

1.6: Aim

To provide advanced training in specialized areas of Pharmacy profession such as: the physicochemical and biological principles that determine the final form of drug presentation in a given dosage form.

1.7: Objectives

- i. The objectives of the Post graduaprogramme include:
 - i. Training in methods of Scientific enquiry for pursuant of academic career in research and Technology
 - ii. To impact in-depth training in Pharmaceutics and Pharmaceutical Technology through
 - (a) Knowledge on novel drug delivery systems
 - (b) Advances in validation and regulatory issues in Pharmaceutical manufacturing and distribution

However, the School of Graduate Studies on the recommendation of the Departmental and Faculty Post Graduate committee may grant an extension of time to students to allow them to graduate.

Course requirements

- (a) M.Pharm degree in Pharmaceutics or Pharmaceutical Technology.

Candidates for the M.Pharm degree in Pharmaceutics or Pharmaceutical Technology must take all the compulsory courses and some elective courses relevant to the area of specialization with a total credit load of a maximum of 36 in the entire academic session. Candidates shall be expected to give at least two seminar presentations on their projects.

Outline of Courses

First semester

The taught compulsory courses for M. Pharm in Pharmaceutics or Pharmaceutical Technology in the first semester include:

Course Code	Course Title	Credit units
PCT 801.1	Tableting and related unit of operations	4
PCT 802.1	Formulaon of drug delivery systems	4
PCT 804.1	Kinetic and drug stability studies	3
PMB 805.1	Biostatistics	2
SGS 801.1	ICT and research methods	2
Any two (2) elective courses		2
Total credits (First Semester)		19

Second semester

The taught compulsory courses for the M. Pharm in Pharmaceutics or Pharmaceutical Technology in the second

Course Code	Course Title	Credit units
PCT803.2	Dispersesystems	4
PCT 805.2	Biopharmaceutics	2
PCT806.2	Seminarand directed reading	1
PCT 807.2	Seminar (Project) (runs with the project)	2
PMB 801.2	Microbial spoilage and preservation of dosage forms	2
PCT 801.2	Project	6
SGS 801.2	Entrepreneurship and management	2
Any (1) elective course		2
Total credits (second semester)		21
Total credits for the session		40

Elective courses

The candidate is expected to select a maximum of at least 3 elective courses relevant to the area of specialization in the entire academic session:

Course Code	Course Title	Credit units
PCT 808	Powder technology	2
PCT 809	Packaging science	2
PCT 810	Current good manufacturing practice	2
PMB 807	Sterile dosage form	2

- (a) Course requirements for Ph. D. in Pharmaceutics or Pharmaceutical Technology.

Course outline for Ph.D. degree programme

- (i) A Ph. D candidate may be required to take some courses based on his/her entry qualifications and M. Pharm. degree transcript.
- (ii) A Ph.D candidate must submit a thesis according to the University of Port-Harcourt School of Graduate Studies regulations. Such a thesis shall be examined by an oral qualifying examination as specified by the University of Port Harcourt School of Graduate Studies regulations.

However, the following courses must be accomplished by a Ph.D candidate before the award of a Ph.D. degree.

First semester

Course Code	Course Title	Credit units
PCT 901.1	Research Seminar I	3
PCT 902.1	Research Seminar II	3
Total credits (First Semester)		6

Second semester

Course Code	Course Title	Credit units
PCT 903.2	Dissertation	12
PCT 904.2	Research Seminar III	3
Total credits (Second Semester)		15
Total credits for the session		21

EXAMINATIONS

- (a) M.Pharm Degrees
- (i) Written examination of three (3) hours each on each course shall be taken except for PCT 806 and PCT 807 which shall be by continuous assessment.
- (ii) The project (dissertation) PCT 801 for Pharmaceutics and Pharmaceutical Technology shall be examined as prescribed by the University of Port-

Harcourt School of Graduate Studies regulations.

Course Description

(a) Pharmaceutical microbiology

PMB 801: Microbial Spoilage and Preservation of dosage forms (3 units)

Types of Microbial Spoilage, sources of microbial contaminants, organisms involved in the biodegradation of drugs and pharmaceuticals, conditions essential for limiting the biodegradation of products. Effect of preservatives and inoculum size. A detailed study of available preservatives. Factors influencing the choice of preservatives for pharmaceutical products. Recent developments on the evaluation of preservatives and the effects of the multi-phased system in formulated products.

PMB 805: Biostatistics (2 units)

A review of basic biostatistics from measures of central tendency to paired sample hypothesis. Multi-sample hypothesis and multiple comparisons: two-factor analysis of variance, linear regression and comparison, linear correlation and multiple regressions. Bio-normal distribution; testing for randomness, inclusive of poison probabilities and serial randomness of nominal categories. Computer application in statistics.

(b) Pharmaceutical and Pharmaceutical Technology.

PCT 801: Tableting and related unit operations (4 units)

Advanced studies on (a) size reduction - physical changes (b) selection and control of raw materials (active ingredients and excipients) for tableting. Unit operations - mixing, drying, granulation - theories and mechanisms. Compaction and compression- physics of compression. Physical properties of powder, granules and tablets (including disintegration and dissolution). Instrumentation of the tablet press - processing problems. Coating of tablets. Effects of storage conditions i.e. humidity, temperature and ageing on physical properties of tablets. Sustain/control release formulations.

PCT 802: Formulation of drug delivery systems. (4 units)

Dosage form design and evaluation: physical properties of drugs and formulations; Pre-formulation studies- particle size, solubility, partition coefficient, polymorphism, salt formulation, cohesiveness, compressibility, interfacial tension and rheology. Chemical characteristics of drugs molecules and their effect on formulations. Influence of temperature,

hydrolysis, oxidation, racemization, and photolysis on drug stability. Formulation ingredients- surfactants stabilizers, hydrocolloids, etc. Drug-drug interactions, drug-excipient interactions. Modifications of the activity of drug delivery systems by physical and chemical methods, controlled release, the ranking of drugs and several formulations of one drug release and pattern. Methods of estimating in-vitro and in-vivo dissolutions and correlation. Specialized formulations related to the tropical condition.

PCT 803: Disperse Systems (4 units)

Interfacial phenomena — advanced studies on surface activity, adsorption at interfaces and solubilization. Adsorption and desorption phenomena.

Kinetic properties of colloids — including Brownian movement Sedimentation, viscosity, electrical properties - diffuse double layer, zeta potential, electrokinetic phenomena and Doman membrane equilibrium, the stability of colloids. Coarse dispersions — detailed study about wetting of particles, controlled flocculation, detailed study about emulsification, hydrophiliclipophilic balance; physical stability, phase inversion, phase equilibrium. Evaluation techniques of suspensions and emulsions. Binding complexation — protein binding etc.

Rheological properties of pharmaceuticals.

PCT 804: Kinetics and drug Stability studies (3 units)

Kinetics of drug degradation: Rates and orders of reaction, specific rate constants, half-life, determination of orders, complex reactions and steady-state approximations. Influence of temperature and other factors - light, solvent, ionic strength, dielectric constant. Acid-base catalysis, enzyme catalysis.

Decomposition of medicinal agents (dosage forms) - hydrolysis oxidation, photochemical degradation.

Stabilization of dosage forms — emulsions, suspensions, etc.; protection against adsorption and complex formation. Chemical stability — protection against hydrolysis, oxidation, photolysis. Accelerated stability studies and shelf life determination of drug products.

PCT 805: Biopharmaceutics (2 units) Advanced studies of the concept of bioavailability. Drug absorption from the gastro-intestinal tract and other routes of administration. Kinetics of drug absorption, distribution and elimination - Factors (physiological, physiochemical, formulation and dosage form) which influence drug absorption - Ranking of drug products. In vitro, insitu and in-vivo methods used to study various factors affecting drug absorption. Methods of estimating bioavailability. Dosages of drugs in infants,

children, adults and geriatrics (factors influencing). Pharmacokinetic models as they relate to standard sustained release and controlled release dosage forms.

PCT 806: Seminar and directed reading (1 unit)

Development of specific topics of interest and presentation of an up-to-date report on the topics; highlighting recent advances in chosen subjects.

PCT 807: Seminar (Project) (2 units)

Candidates shall be required to give at least two seminar presentations on the research topic under investigation indicating the objective, literature review, experimental methods, results and discussions on the results.

PCT 808: Powder Technology. (2 units)

Measurements of primary properties of powders (direct and derived), delivery properties of powders. Friction, cohesion, Shear strength etc. Flow pattern and segregation and percolation. Critical void ratio, consolidation and compaction. Powder discharge, granule discharge.

PCT 809: Packaging Science. (2 units)

Need for proper packaging; special requirements for pharmaceutical packaging; packaging materials science; closures, unit dose packaging. Biological determination of packaging materials, sterile packaging. Aerosols and packaging; tests for accurate drug delivery.

PCT 810: Current Good Manufacturing Practice (2 units)

A detailed study of the contents and requirement of the guide to Good Pharmaceutical Manufacturing Practice, components of current Good Manufacturing Practice, (organization and personal; building and facilities equipment), control of components, product and process control, packaging and labelling control records and reports etc.; additional cGMP regulatory requirements. Aspects of Total Quality Management (TQM) — control of the principles of TQM. The concept of drug quality control and assurance. Statistical aspects of quality control including sampling techniques and methods of evaluation of results.

PCT 801: Dissertation: (Research Project) (6 units)

Suitable topics shall be selected with the approval of the post-graduate school of the University in the recommendation of the Departmental and Faculty Post Graduate committees.

CONDITIONS FOR THE AWARD OF DEGREES.

- (a) To qualify for the award of Master of Pharmacy, the candidate may have earned minimum credit units of 32 for Pharmaceutics or Pharmaceutical Technology in the course work and has successfully defended the dissertation in the presence of an external examiner and the faculty post-graduate committee.
- (b) To qualify for the award of Doctor of Philosophy in Pharmaceutics or

Pharmaceutical Technology, the candidate must have given all the required number of seminars on the research topic and successfully completed and defended the research work in the presence of an external examiner and in accordance with the Faculty and the University of Port Harcourt Post Graduate School regulations.

LIST OF GRADUATE TEACHING STAFF

S/No.	Name	Status	Areas of Specialisation
1	Prof. O. Okorie	Professor	Formulation of drug delivery systems/sourcing of pharmaceutical raw materials
2	Prof. O.E. Orisakwe	Professor	Biopharmaceutics and Toxicology
3	Prof. S.I. Ofoefule	Professor	Formulation of drug delivery systems/sourcing of pharmaceutical raw materials, Pharmacokinetics
4	Dr. K.C. Ugoeze	Senior Lecturer	Formulation of drug delivery systems/sourcing of pharmaceutical raw materials, pharmaceutical particle engineering.
5	Dr. O. Chukwumerije	Senior Lecturer	Pharmaceutical quality assurance and quality control. Good manufacturing practice. Stability of pharmaceutical materials & products. Physical pharmacy.
6	Dr. N. Nwachukwu	Senior Lecturer	Powder & tablet technology. Raw material & excipient development. Formulation of drug delivery systems.
7	Dr. J.I. Ordu	Senior Lecturer	Excipient development, microsuspension, solid dosage drug formulation.

DEPARTMENT OF EXPERIMENTAL PHARMACOLOGY & TOXICOLOGY

INTRODUCTION

Toxicology is a subfield of bioscience which is engrossed with the study of toxicants and toxins which have deleterious effect on human and other living organisms. Students will comprehend about the dose and effect relationship on the exposed organisms.

Toxicology is categorized into different subject areas. Toxicology with bias in clinical/medical area (clinical/medical toxicology) involves observing and reporting symptoms, mechanisms, detection, and treatments of toxic substances, in particular relation to the poisoning in humans. Understanding the toxins, their mode of action, detection, and treatment is key. Environmental toxicology concerns study on environmental agents and chemical compounds found in nature, as well as pharmaceutical compounds that are synthesized for medical use by humans. Forensic toxicology deals with medicolegal aspect of poison and provision of evidence of poisoning in lawsuit. The postgraduate toxicology programme offers opportunity for candidates to choose any of the various available areas of specialization such as environmental toxicology, clinical toxicology, forensic toxicology, food toxicology, occupational toxicology, aquatic toxicology, etc. Generally, the postgraduate programme has two broad areas: health-related toxicology and toxicants in the environment. Good analytical and logical thinking skills are pre-requisite and graduates of this programme will have a solid foundation in both areas with a command of skills in one or the other. Graduates of the programme will have the needed skills and competencies for employment in academic research and teaching institutions, private industry, and government agencies. These are demanding jobs that may determine the fate of a product in development or affect the health of many.

The study of Toxicology is very important, as people are concerned about the potentially harmful effects of products, medications, and the chemicals they are exposed to daily in their environment. Besides the effect of these chemicals on human health, there is the concern of the impact of these substances on the environment. This has increased much interest in this study area, but our present toxicology programme in the department cannot accommodate the different categories of persons that wish to enrol into the programme. Also, there are many medicinal plants and natural products in the Niger Delta region and other areas of Nigeria that are highly potent and efficacious against several ailments. With increasing concern of cost, treatment failures and unbearable

adverse effects of many orthodox medications, there is high research interest in the discovery of drug candidates from the natural environment, like the flora and fauna of the Niger Delta. This necessitated the need for the department to review her existing postgraduate programmes in response to the needs of the society to train and produce sound and critical thinking graduates with the right knowledge in toxicology and experimental/clinical pharmacology to solve problems and develop the society and the world at large.

VISION

For the Department of Experimental Pharmacology and Toxicology and the University of Port Harcourt to be one of the leading centres in Sub Sahara Africa for the training of sound and competent toxicologists, and for the university to be recognized for her teaching, research, innovation, creativity, productivity, entrepreneurship and scholarship.

MISSION

The Mission of the department is aligned with that of University of Port Harcourt which is the pursuit of academic excellence, the advancement of knowledge and services through quality teaching, lifelong learning, social inclusion, strengthening of civil society and policy relevant research that address the challenges of contemporary society.

PHILOSOPHY

The philosophy of the programmes is to produce sound and innovative Toxicologists/ Pharmacologists of global recognition with ample knowledge, skills and competence through provision of education and laboratory training at the postgraduate level, enhancement of research with emphasis on multidisciplinary approaches and exchange of scientific information relating to toxicology and pharmacology.

1. OBJECTIVES & OUTCOMES

The objectives of the MSc Toxicology/ Pharmacology (Toxicology Option) are to:

- (i) provide students with broad and balanced foundation in all areas of toxicology.
- (ii) train qualified candidates in applied toxicology with a particular focus on the environment and protection of human health and animals.
- (iii) provide training to students to have knowledge (including the mechanism of action) of potential toxicants in the environment that can be exposed to humans and animals, which are common in many parts of Nigeria due to pollution from oil

- exploration activities and other industrial activities.
- (iv) train students evaluate and identify through fundamental and applied research (including qualitative and quantitative analysis) environmental toxicants that are potentially hazardous, which may be chemical, biological or physical in nature
 - (v) develop in the students the ability to evaluate the impact caused by such exposure on health of man, animal and environment through risk assessment.
 - (vi) develop in the students the ability to evaluate the harmful effects of pharmaceutical compounds and other chemical compounds that are poisonous to humans using systematic methods.
 - (vii) provide the needed training and skills in toxicology for students to be useful in the academics, research institution and regulatory bodies.

After completing the MSc. Toxicology/Pharmacology (Toxicology Option), the student will be able to:

- (i) have good knowledge about the different toxins, chemicals and their adverse effects on the health and environment.
- (ii) critically evaluate different advanced exposure assessment methods
- (iii) design strategies for exposure assessment
- (iv) analyse and interpret exposure measurements applying standard modelling tools
- (v) design strategies for study of dose-response relations
- (vi) apply methods for combining information from different studies to derive a dose-response relationship (meta-analysis)
- (vii) have good understanding about risk assessment process and know how exposure limits and standards are derived

The objectives of the MSc Toxicology/Pharmacology (Pharmacology Option) are to:

- (i) provide students with the opportunity to greatly enhance and expand their understanding of pharmacology and closely associated disciplines.
- (ii) enable students have a good understanding of research and development of novel pharmacological agents, as well as evaluating their safety.
- (iii) acquire knowledge and skills required for discovery of drugs in natural products from the flora and fauna of Niger Delta.
- (iv) enable students be able to evaluate pharmacoeconomics impacts upon the drug discovery and development process.

- (v) work in partnership with pharmaceutical industries to commercialize research findings by developing patentable drug products needed for treatment of tropical diseases.
- (vi) promote collaborative research and training at national and international level to acquire competence needed for the advancement of pharmacology.

By the end of the MSc. ToxPharm (Pharmacology Option) programme, student will be able to:

- (i) understand principles of pharmacology and drug discovery
- (ii) critically appraise pharmacological drugs used in major disorders
- (iii) show good understanding of the application of novel compounds in the pharmaceutical and biotechnology industries
- (iv) have in depth understanding of the molecular mechanisms of toxicology, with perspectives on drug metabolism and pharmacokinetics and how these can lead to toxicity
- (v) exhibit a high level of competence in the application and use of important research tools in the field of pharmacology.
- (vi) Plan and conduct toxicity studies and clinical trials
- (vii) develop competence, confidence and an enquiring, investigative approach.

AVAILABLE PROGRAMMES

- (i) MSc Toxicology/Pharmacology (MSc ToxPharm)

MSc TOXICOLOGY/PHARMACOLOGY PROGRAMMES

Postgraduate study in Toxicology/Pharmacology is designed to offer intensive training in specialized areas with emphasis on certain selected research programmes. For MSc ToxPharm programmes, students will be required to choose option for Toxicology or Pharmacology. The MSc students will be awarded MSc (Toxicology) or MSc (Pharmacology) degree, depending on the option.

(a) Areas of Research in MSc ToxPharm (Toxicology Option)

- (i) Clinical/Medical Toxicology
- (ii) Food Toxicology
- (iii) Molecular/Genomic Toxicology
- (iv) Environmental/Occupational Toxicology
- (v) Aquatic/Ecotoxicology
- (vi) Analytical/Forensic Toxicology
- (vii) Nanotoxicology

(b) Areas of Research in MSc ToxPharm (Pharmacology Option)

- (i) Ethnopharmacology or Pharmacology of Natural Products
- (ii) Cardiovascular Pharmacology
- (iii) Reproductive Pharmacology
- (iv) Biochemical Pharmacology
- (v) Neuropharmacology/Neurodegeneration
- (vi) Pharmacogenomics
- (vii) Immunopharmacology

(c) Target groups

For MSc toxicology option, university graduates of biological sciences, chemical sciences (chemistry, analytical chemistry), Engineering (civil, agricultural, chemical and environmental engineering), statistics, mathematics, pharmaceutical sciences, biomedical sciences, medicine, law and forensic sciences. For MSc. Pharmacology option, university graduates of biological sciences, pharmaceutical sciences, biomedical sciences and medicine.

MSc ToxPharm

Candidates for admission into the MSc ToxPharm programme must possess Bachelor's degree of University of Port Harcourt or from a recognized university with a minimum of second class lower division or its equivalent in any of the following disciplines- biological sciences, chemical sciences (chemistry, analytical chemistry), engineering (civil, agricultural, chemical and environmental engineering), pharmacy, medical sciences, statistics, law, forensic sciences, or other related disciplines. Candidates will be interviewed and assessed for their suitability before they are admitted.

Duration of Programme

LIST OF COURSES

MSc TOXICOLOGY/PHARMACOLOGY (MSc ToxPharm)

LIST OF COURSES

FIRST SEMESTER

Course Code	Course Title	Status	Credit Unit
TXP 800.1	Introduction to Biomedical Sciences	Core	3
TXP 801.1	Fundamentals of Toxicology	Core	2
TXP 802.1	Advances in Toxicology/Pharmacology Techniques and Instrumentation	Core	2
GW 800	Grant Writing/ Ethics in Research	Core	1
SGS 801.1	ICT and Research Methods	Core	2
TOX 800.1	Forensic/Analytical Toxicology	Core	2
TOX 801.1	Food Toxicology	Core	2
TOX 802.1	Aquatic and Ecotoxicology	Elective	2
TOX 803.1	Petroleum and Natural Gas Toxicology	Elective	2
PCL 800.1	Advances in Autonomic and Cardiovascular Pharmacology	Core	2

(i) MSc Toxicology/Pharmacology programme is minimum of 18 calendar months and maximum of 27 calendar months for Full-time. Minimum of 24 calendar months and maximum of 36 calendar months for Part-Time.

Mode of Study/Graduation

Students of the MSc. ToxPharm programme must meet satisfactory attendance at the course, offer and pass all the core courses listed for each semester. Attendance and the submission of the relevant reports pertaining to all laboratory courses are required. Examinations associated with each course shall be conducted mainly by means of written and or practical papers, normally taken at the end of the semester in which the candidate has registered for the courses concerned. However, oral examinations as well as performance in course work in the form of essays, in-course tests, projects, or continuous assessments of theoretical and/or practical work may contribute towards the final grade awarded in a course. The students must carry out laboratory-based research in areas of pharmacology or toxicology (depending on the student's option) specified by their supervisors and submits their dissertation before graduation.

Throughout the semester, MSc students will be provided with journal articles and expected to read and prepare for class discussions.

The pass mark for all graduate students is 50% (Grade of "C"). Any student that fails a course will be allowed to re-register for the course at the next available opportunity, but a student will not be allowed to register for a course more than twice. At the end of the first year of course work, the student is required to have a minimum CGPA of 3.0. A student who fails to meet up this minimum requirement shall be asked to withdraw.

PCL 801.1	Recent Advances in Chemotherapy	Core	2
PCL 802.1	Advances in Clinical Pharmacology and Therapeutics	Core	2
PCL 803.1	Reproductive Pharmacology.... Principles of Pharmacology & Drug Discovery	core	2
			26

N/B: “TXP”, “GW” and “SGS” are shared courses for all students. “TOX” is courses for only Toxicology Option Students. “PCL” are courses for only Pharmacology Option Students.
Total credits for either Toxicology or Pharmacology Option are 18.

SECOND SEMESTER

Course Code	Course Title	Status	Credit Unit
TXP 803.2	Special Topics/ Seminars	Core	2
SGS 801.2	Entrepreneurship and Management	Core	2
TOX 804.2	Immunotoxicology	Core	2
TOX 805.2	Systemic Toxicology	Core	2
TOX 806.2	Advances in Molecular Toxicology & Toxicogenomics	Core	2
TOX 807.2	Exposure Science and Risk Assessment	Core	2
TOX 808.2	Medical/Clinical Toxicology	Elective	2
TOX 809.2	Environmental/ Occupational Toxicology	Elective	2
PCL 803.2	Advances in Ethnopharmacology	Core	2
PCL 804.2	Advances in Molecular Pharmacology	Core	2
PCL 805.2	Advances in Pharmacokinetics	Core	2
PCL 806.2	Advances in Neuro- and Biochemical Pharmacology	Core	2
PCL 807.2	Advances in Nanopharmacology and Nanotoxicology	Elective	2
PCL 808.2	Advances in Pharmacoepidemiology	Elective	2
TXP 804.2	Research Project in Toxicology/ Pharmacology (Dissertation)	Core	6
			34

N/B: N/B: “TXP” is shared courses for all students. “TOX” is courses for only Toxicology Option Students. “PCL” is courses for only Pharmacology Option Students.
Total credits for either Toxicology or Pharmacology Option is 20.

(ii) COURSE DESCRIPTION FOR MSc TOXPHARM

FIRST SEMESTER

TXP 800.1 Introduction to Bio-medical Sciences 3 Credit Units

- (a) Definition of basic concepts in Biochemistry. Introduction to biophysical chemistry, Review of metabolic pathways, biochemistry of carbohydrate, lipid and protein.
- (b) Definition of basic concepts in Physiology of mammalian systems. Review physiology of Blood, Immune System, Liver, Kidney, Respiratory System, Nervous System, Cardiovascular System, Skin, Reproductive System, Eye, and Endocrine System.
- (c) Basic concepts in Pharmacology. Review of Pharmacokinetics and processes: definition of pharmacokinetics. Absorption: different sites of absorption, pH-partitioning, factors that affect absorption. Distribution: Plasma-protein binding and other factors that affect distribution. Entry of drugs into special tissues: the brain and the foetus. Elimination of drugs: introduction to metabolism of

drugs. Excretion in urine: glomerular filtration, tubular reabsorption, tubular secretion. Other routes of elimination.

Basic concepts in Pharmacodynamics: Review of Receptors, Neurotransmitters, the adrenergic and cholinergic nervous systems; serotonin, histamine, agonists and antagonists of each of these neurotransmitters, neuropeptides.

TXP 801.1 Fundamentals of Toxicology 2 Credit Units

Definitions and scope of toxicology, history of toxicology, concepts of toxicology; how does toxicity develop? Fields of toxicology and sub-discipline of toxicology;
Classification of toxic agents: Heavy metals, solvents and vapour; radiation and radioactive materials; dioxins/furans, pesticides; plant toxins; subcategories of toxic substances; general classification of interest to communities.
Definition of absorption, distribution, metabolism and elimination of toxicants; mechanism of drug toxicity management of acute poisoning, plant, bacteria and animals poisons including snake bites. Pesticides, herbicides, insecticides, fungicides,

rodenticides and fumigants; Radiation toxicology. Airborne poisoning. Heavy metals and chelating agents. Toxicology of food additives and chemical preservatives. Environmental toxicology, pesticides, air pollution, lead, mercury and food additives. Evaluation of drug toxicity in lower animals and in man, clinical trials; Treatment of toxicity; principles of non-specific and antidotal treatment of toxicity; Pharmaceutical toxicology; forensic approach to the study of toxicology; Entomo-toxicology; the use of advanced physical and chemical techniques and electron microscopy in toxicology.

Toxicological information sources: Agencies with toxic substances and related diseases registry: National Environmental Standards and Regulations Enforcement Agency (NESREA);

National Agency for food and drug Administration (NAFDAC), Food and Drug administration (FDA), centre of disease control and prevention (CDC&P) Nuclear regulatory commission, Federal Environmental Protection Agency (FEPA) ; National Biosafety Management Agency (NBMA); National Environmental Standards and Regulations Enforcement Agency (NESREA); National Oil Spill Detection and Response Agency (NOSDRA); Nuclear Regulatory commission (NRC); The American Conference of Governmental Industrial Hygienist; Other Electronic databases

TXP 802.1b Advances in Toxicology/ Pharmacology Techniques 2 Credit Units

Introduction; Cell Culture Techniques; Suspension Cell Culture; Monolayer Cell Culture; Indicators of Toxicity in Cultured Cells; Use of Stem Cells; Cell Culture Models as "Alternative" Toxicity Tests; Molecular Techniques

Molecular Cloning; cDNA and Genomic Libraries; Northern and Southern Blot Analysis; PCR; Evaluation of Gene Expression, Regulation, and Function, Immunochemical Techniques; Proteomics; Metabolomics; Bioinformatics and Genomics.

Use of pharmacological techniques as they applied to pharmacological problems. Practical instructions and experiences in spectrophotometry; fluorimetry; chromatographic techniques; subcellular fraction; gel eletrophoresis; electron microscopy, iontophoresis; microelectrodes techniques, ligand binding and radioactivity; radioimmunoassay techniques. Techniques in experimentally induced diseases for pharmacological investigation.

GW 800 Grant Writing/Ethics in Research 1 Credit Unit

Ethical issues of scientific investigation, including intellectual property, plagiarism,

conflict of interest, human and animal subjects, and record keeping.

Grant /Proposal Writing Terminology (RFA, RFP, PRI, PI, NOFA, LOI, IRB, NOA, Rubric, Donee, grantee, summary, see Grant select); Type of grant application (Demonstration grant, discretionary grant, entitlement grant, support grant, pass-through grant, project/program grant etc.); Writing a grant application, How to present organizational qualifications, how to write an application that win grants; how to write programme blueprints, how to submit an application on grants.Gov; Components of grant application; helpful tools and resources in grant writing; strategy for developing a proposal, how to identify potential funding sources; how to read and understand grant guidelines, request for proposals and application (RFA/RFP), writing objectives, preparation and justification of budget; Components of grant application; helpful tools and resources in grant writing; strategy for developing a proposal, how to identify potential funding sources; how to read and understand grant guidelines, request for proposals and application (RFA/RFP), writing objectives, preparation and justification of budget; protocols of use of animal or human subjects in research, cost-sharing and sub-contract; procedure of grants submission and grant start-ups, grant review process, writing cover letter, preparing curriculum vitae and the job interview process. Focused Group Discussions on recent and trending Toxicology and Pharmacology concepts. Students will be expected to identify grant opportunities and successful complete the process of grant proposal

SGS 801.1 ICT and Research Methods 2 Credit Units

ICT and research methods will cover essentials of ICT such use of Microsoft Word, Spreadsheet, Power point, Access and Project. Statistical packages such as Grappa Prism6.5®, InStat® and other packages utilised in biological research.

Introduction to project design and planning will instruct on various methods in conducting scientific research in biomedical sciences. Experimental design will be quantitative and qualitative; Conduct of clinical trials and documentation; use of computer in data analysis; operational research and functional analysis will utilize in project design and evaluation. Designing of research projects, processes and methods: planning a Research a research work; Consideration of ethical Issues in Research and ethical clearance; Various study designs in biomedical sciences; considerations of aptness of topic; Introduction (Problem Definition, Objectives); Hypothesis design and testing; review of relevant literature; Materials & Methods;

Determination of sample Size and formula used in calculation; data collection instruments; Data Collection/Management; Results presentation (Data analysis and presentation, tables and figures and legends.); Discussion, Conclusion and Recommendations; Referencing; Project assemblage. Statistics from measures of central tendency to paired sample hypothesis. Multi-sample hypothesis and multiple comparisons; Two factor analysis of variance, linear correlation and multiple regressions; Testing for randomness inclusive of Poisson probabilities and serial randomness of nominal categories; Computer application in statistics.

TOX 800.1 Forensic/Analytical Toxicology 2 Credit Units

Introduction to Forensic Toxicology; Evidentiary Requirements; Sample Type and Chemical Classes Analyzed in Forensic Toxicology; Autopsy specimens and quantities required to be submitted for toxicological examinations; Classification of Poisons; Drugs of Abuse potentials; Alcohol and related substances of abuse available today; Toxicological Investigation of Drug-Facilitated Sexual Assaults; Standard operating procedures (SOP) in the collection, handling and preservation, and documentation of toxicological evidence; An overview of analytical methods used in the analysis of drugs and toxins e.g. GC, TLC, GC/MS, LC/MS and HPLC.

TOX 802.1 Food Toxicology 2 Credit Units

Nutrition and xenobiotic metabolism (a) Phase I and II detoxification processes (b) Metabolic activation (c) Conjugation and excretion; Nutrition and Alcohol (a) Alcohol metabolism (b) Effects of alcohol on nutrient availability- folate (c) Effects of alcohol on the metabolism of other xenobiotics; Nutrients as Toxins (a) Therapeutic Index (b) Vitamin A, selenium, tryptophan, fluoride, pyridoxine; Natural Toxins in Plant Products (a) Introduction to toxic substances in plant products (b) Glucosinolates- rapeseed and canola (c) Cyanogenic glucosides - almonds, cassava, lima beans (d) Antinutrients; glucosinolates, thiaminase, trypsin inhibitors, phytate; Pesticides: Man Made and Natural (a) Risk of toxicity from commercial pesticides in human populations; Emerging areas of concern in toxicity of plant products (a) Toxicity of nutraceutical and herbal products; Toxic Factors in Animal Products (a) Seafood toxins: neural sodium gate inhibitors; Chemical Carcinogenesis and Diet (a) Introduction to chemical carcinogenesis (initiation, promotion, progression), description of interactions with diet (b) Pyrrogonic toxicants (broiling, barbecuing, protection by fruits and vegetables (c) Other carcinogenic products formed during the cooking of foods (aromatic amines, browning reaction, Maillard reaction (d) Nitrites,

Nitrites, Nitrosamines (contaminated ground water, food processing, protection by vitamin C (e) Aflatoxin (mycotoxins are synthesized by moulds during food storage (f) Influence of nutrient status on carcinogenesis (oxidant defence and cancer? (vitamins C, E, selenium, β -carotene), retinoids, differentiation and cancer, folate status, gene expression and DNA integrity (h) Influence of dietary non-nutrients on carcinogenesis

TOX 802.1 Aquatic and Ecotoxicology 2 Credit Units

General introduction and historical perspective of aquatic toxicology; Aquatic life vulnerability to toxicity; factors affecting exposures: physical, chemical and environmental (aquatic) affecting exposures; toxic agents and contaminants in aquatic environment; uptake and elimination of contaminants and toxicants; bioaccumulation and bio-concentration; Phase I metabolism: overview of molecular aspect, activation and detoxification and biomarkers; CYP450's regulation and inducibility; phase I biotransformation in aquatic life; phase II biotransformation and sequestration; oxidative stress and antioxidant response; aquatic life and substrate pool shift; stress proteins and DNA modification; effects on cells tissues and organs; contaminants-induced sub-lethal effects; organisms of aquatic toxicity testing; toxicity testing: introduction, test, design; exposure system; factors affecting quantitative response/ sediments; quantitative estimator of effects; effect on population, community and ecosystem. Application of toxicity data for ecological risk assessment: ecological risk assessment, case studies. Ecotoxicology and biochemical effects of pesticides and carcinogens.

TOX 803.1 Petroleum and Natural Gas Toxicology 2 Credit Units

Petroleum exploration and exploitation in Niger Delta; Petroleum based products high complexity of chemical mixtures; Kinetics and metabolism; Toxicity of aromatic hydrocarbons, including the so-called BTEX group (benzene, toluene, ethyl benzene and xylenes) to microorganisms and plants; Petroleum products toxicosis; Acute and chronic exposure effects; Sources and routes of exposure; Clinical signs of petroleum toxicity; petroleum products as carriers for insecticides and implication for toxicity; Physical properties of petroleum (volatility increases at lower molecular weight and lower saturation or aromaticity) of petroleum prompting toxicity; extent of toxicity to the population, community and ecosystem; Local Communities activity sustaining petroleum toxicity- Pipeline breaks, vandalization of storage facility, tank-car accidents, and open or leaky containers are potential sources. Petroleum businesses (tank farm, haulage in truck and underground pipes; petroleum

dispensing stations) and potentials for toxicity; Petroleum products and additives (crude oil, gasoline, diesel, kerosene, lubricant) toxicity; petrochemicals products and additives toxicity. Comparative toxicity of petroleum hydrocarbons; poisoning to animals; Diagnosis of petroleum product poisoning in man and animals; treatment of petroleum product poisoning; effects of oil and gas field on health of humans and animal. Gas flaring and air pollution; Heavy metals impurities in natural gas.

PCL 800.1 Advances in Autonomic & Cardiovascular Pharmacology 2Credit Units

The autonomic Nervous System: neurochemical transmission; smooth muscle; receptor mechanism and neurochemical interaction; Peripheral Autonomics Cholinergic mechanisms; structural Activity relationship with cholinomimetic drugs; Peripheral Autonomic Adrenergic mechanism; The heart and drugs affecting cardiac functions; the blood and drugs affecting coagulation, fibrinolysis, hematopoiesis and the functioning of blood cells; the CVS drugs affecting the circulation. Drug used in hypertension and myocardial infarction.

PCL 801.1 Recent Advances in Chemotherapy 2 Credit Units

Mechanism of action of selected chemotherapeutic agents; host-parasite interactions. Life cycle of parasites in relation to chemotherapeutic action. Antimalarials, antiamoebics, giardiocidal, toxoplasmodicidal and trichomonocidal drugs; chemotherapy of African trypanosomiasis, leishmaniasis, ascariasis, trichuriasis, enterobiasis, taeniasis, fascioliasis,; chemotherapy of filariasis and loiasis, schistosomiasis. Chemotherapy of fungal diseases. Chemotherapy of rickettsial diseases, murine typhus and African tick typhus. Chemotherapy of HIV/AIDS, Ebola, SARS and Covid 19 and emerging variants.

PCL 802.1 Advances in Clinical Pharmacology and Therapeutics 2 Credit Units

Introduction and definition of scope of clinical pharmacology in drugs developments; Effects of drugs following administration; Preclinical and clinical evaluation of drugs; Elements of clinical investigations; Use and misuse of plasma concentrations of drugs; Variation in disposition and action of drugs in pregnancy, childhood and old age; pathologic and psychological factors in drug action; Pharmacological basis of therapeutics of communicable and non-communicable diseases.

PCL 803.1 Reproductive Pharmacology; Principles of Pharmacology & Drug Discovery

Reproductive Pharmacology: Life Cycle of the Ovary: Puberty, The Menstrual Cycle, and Menopause; Male Reproduction; Contraception; Menstrual Disorders and Other Common

Gynecology Problems; Normal Maternal Physiology: Implications for Prenatal Care; Physiology of Normal Labor and Delivery; preeclampsia induced hypertension (PIH) /Obstetrical Hemorrhage; Infertility; Pharmacology of Estrogens & Progestins; Sexually Transmitted Disease; Fertilization, Early Pregnancy and its Disorders. Assisted reproductive technology (ART). *Principles of Pharmacology:* Pharmacodynamics principles of receptor theory, drug-receptor interactions; ligand-receptor interactions, agonist and antagonist mechanisms of action (MOA), analysis of drug concentration-effect curves, types of receptors involved in signal transduction and signal transduction pathways as targets for drug action, functional selectivity/“biased signaling”, allosteric modulation of endogenous ligand-receptor interactions, regulation of receptors (e.g.,receptor desensitization, up- and downregulation), and general mechanisms that account for the toxic effects of drugs; pharmacokinetic principles of ADME processes; Endogenous signaling systems – *histaminergic* and *eicosanoids* (autacoids); Autonomic pharmacology

Drug Discovery: High throughput target pathway selection, Biologics, Pre-clinical animal testing, Species differences in responses to drugs, Translational pharmacology, Development of clinical proof of concept, Clinical trials– Phases 1 to 4 (safety, safety/efficacy, effectiveness, efficiency, treatment decisions, policy decisions, Post-market surveillance, Patient-reported outcomes (PROs),

SECOND SEMESTER

TXP 803.2 Special Topics/Seminars

2 Credits Units

The various special topics shall be topics contributed by all the lecturers on postgraduate programme. The students will present seminars on recent advances in their various specialties and shall be evaluated by all the lecturers on postgraduate programme present during the seminar presentation.

SGS 801.2 Entrepreneurship and Management 2 Credit Units

Covers concepts, history and development of entrepreneurship, the entrepreneur, qualities and characteristics. The Entrepreneur and Business Environment, Identifying Business Ownership and Registration, starting and developing business ventures, Legal forms of business ownership and registration. Types of business ownership, feasibility studies, Role of Small and Scale Enterprise (SME) in the economy, Role of Government in Entrepreneurship, Business location and layout. Accounting for SME, Financing, SME, managing of SME, Risk Management of SME, success and failure factors of SME, prospects, and challenges of Entrepreneurship in Nigeria

Entrepreneurship in Nigeria Entrepreneurship. This course would expose the students to the practice of applied management and entrepreneurship. The students would learn how to enhance their entrepreneurship skills and manage their own business. Business prospects for students in higher institution would be taught and the student would learn how to get into the right business

TOX 804.2 Immunotoxicology Credits Units

General course information and immunology survey; Innate vs Adaptive/Tissues & Organs/ Haematopoiesis; Cellular players, secreted molecules & their functions; Cell surface molecules Intercellular signalling & Immune networks; Intracellular interactions and signalling; Inflammation /Immunity; Tolerance; mucosal immunology (skin, lungs, gut); Chemicals Related to Autoimmunity; Chemicals Related to Hypersensitivity; Immunosuppression I: Benzene; Immunosuppression II: Dioxin; Immunogenetics & Immunotox. Susceptibility; Immuno-toxicology in Non-mammalian Models

TOX 805.2 Systemic Toxicology Credits Units

Organ Toxicity: Blood Immune System; Liver; Kidney; Respiratory System; Nervous System Cardiovascular System; Skin; Reproductive System; Eye; Endocrine System

TOX 806.2 Advances in Molecular Toxicology & Toxicogenomics 2 Credits Units

Principles of pharmacogenomics and pharmacogenetics.; Interaction between drugs and DNA; Motivation (Rapid advances in molecular biology and computation); Definitions (Ecogenetics, Toxicogenomics, etc); Molecular Biology Techniques; Experimental measurement methods organized along the central dogma of molecular biology; (DNA, RNA, Protein); Genetics/Genomics (Sequencing, SNP chips); Transcriptomics/Toxicogenomics (expression microarrays); Proteomics (protein arrays, HTP MS) ; Testing for genotoxicity; Recombinant DNA technology, protein chemistry, and in situ hybridization.

TOX 807.2 Exposure Science & Risk Assessment 2 Credits Units

1. Exposure Science

What are the key goals of exposure assessment and potential uses of the results of an exposure assessment? Types of data that are used in exposure assessment (the hierarchy of exposure data – from personal monitoring data, biomonitoring to proximity types of data), including pros and cons of each type of data; biomarkers of effect and biomarkers of exposure, etc.

Key questions in exposure assessment – type of exposure – acute, chronic or intermittent, route of

exposure (inhalation, oral, dermal, injection), exposure pathways, duration of exposure, frequency of exposure, characteristics of receptor population that are pertinent for exposure, exposure rates (inhalation and ingestion rates), etc.

Measuring exposure data in a variety of settings – epi study, environmental monitoring, modelling (use example of National-Scale Air Toxics Assessment for the US)

Calculating exposure in a risk assessment – illustrative case studies – using simple exposure formulae $((IR * Conc * EF * ED) / (BW * AT))$

Illustrative case study using made up scenario for maybe benzene; Dose-Response Assessment

What is the goal and utility of a dose-response assessment; Evaluating dose-response relationships in animal tox studies and epi studies; Understanding d-r information – shape and slope of the curve, background exposures, baseline susceptibility, linearity and non-linearity and issues with assumptions; Case Study - “Dose maketh the poison” – A re-evaluation using emerging data on Pb and endocrine disruptors

Risk Characterization: Tools for estimating risk – hazard quotient, hazard index, risk per population count using inhalation unit risk estimates for cancer; Summarizing the data from your risk assessment – Assuring that key information is included; Preparing a risk report for a decision maker; Case study maybe using benzene.

Risk management: Types of risk management decisions; Informing your decision using your data; Considerations in risk management – social, political, scientific, economic, equity, sustainability, etc.

Risk Assessment

Background: of risk assessment and exposure science. What is risk? What is risk assessment?

History of the evolution of risk assessment; Utility of risk assessment in decision making – Risk based decision making, development of reference concentrations, reference doses and cancer slope factors, use of the latter types of information to manage environmental hazards. Overview of the framework for risk assessment; Framework for Risk Based Decision Making:

(a) Planning and Scoping Relevance of designing a risk assessment to address risk management decisions. Setting up your risk assessment to be responsive to your risk management needs.

(b) Hazard Identification

What is hazard identification

What are the key questions (information outputs) of a hazard identification exercise

Assuring a thorough evaluation of toxicity – key concepts to consider and understand – direct effects, interactions and effect modification, vulnerability and susceptibility, cumulative effects and cumulative exposure.

Types of data used in hazard identification – animal toxicology studies, Toxicokinetic (TK) studies, Toxicodynamic (TD) studies, human studies (limited because of ethical issues but when available can be useful), epidemiological studies.

Evaluating mechanisms of toxicity – biotransformation, key xenobiotic pathways e.g. Cyp2E1, Phase 1 and Phase 2 metabolism basics, role of the liver, excretory mechanisms, etc

Weighting the evidence to support toxicity – Applying Hill's criteria

Case Study Review using an example from the USEPA's Integrated Risk Information System – benzene is rich in human epi data and cis 1,3-Dichloroethylene is not data rich. Another good source of data is the EPA "Integrated Science Assessment" documents for National Ambient Air Quality Standards pollutants using Pb as a good example.

TOX 808.2 Medical/Clinical Toxicology

2 Credits Units

Poisoning (drug & non-drug), Identification, detection, management and prevention. Principles and methods used in poison management. Vomiting, oral binders, Gastrointestinal dialysis, Antidotes, Poison information Centres. Poisoning Hospitalization. Poisoning induced hypotension. Toxicology: Snake venom. Spider and insect venoms. Plant poisons and management.

TOX 809.2 Environmental Toxicology/ Pharmacology 2 Credits Units

General introduction to environmental toxicology; National and International regulatory agencies and their roles. Dose-response relationships, Toxicity testing; Bio-accumulation; Major classes of Pollutants: fate and transport, bioavailability, and modifying factors; Metals and Metalloids: source, mode of action, and toxicity; Hydrocarbons and halogenated hydrocarbons: source, mode of action and toxicity; Pesticides: types, mode of action, and toxicity ;Endocrine Disruptors: source, mode of action, and toxicity; Radionuclides: source, mode of action, and toxicity; Gaseous pollutants: source, types, and toxicity; Nutrient pollution in natural waters; Toxicology of industrial effluents: an aquatic perspective; Assessment of pollutant effects at organism level: biochemical and molecular biomarkers, physiological, reproductive and behavioural indicators; Assessment of pollutant effects at population and community level; Pollution in the Niger Delta; Pharmaceuticals in the Environment ; Global Warming and Climate Change

PCL 803.2 Advances in Ethnopharmacology

2 Credit Units

The concepts of disease causation in tradition medicinal system, review of plants with medicinal properties, role of ethno-medicinal to public health delivery, pharmacological studies of ethno-

botanicals, herb-drug interaction. Definitions, historical and religious basis of ethnomedicine –The medicine of Avicenna, Esculapius and Galen. Traditional medicine in folklore (Calabar bean, South American arrow poison, Coca chewing and opium poppy smoking of the American Indians etc.). Race and cultural influences on traditional medicine, Herbal medicine and orthodox medicine – Homeopath Naturepath, Chinese acupuncture, African Medicine. Socio-economic, politico-religious and technological influence on drug development and medical practice. Important plant and animal sources of modern medicine from Belladonna to digitalis, from cinchona bark to opium poppy. Scientific methods of evaluation of herbal preparations. Desirability or not of merging orthodox and traditional medical practices. Indigenous pharmacopeoea (African, West African and Nigerian). Historical outlook of traditional medical practice.

PCL 804.2 Advances in Molecular Pharmacology

2 Credit Units

Introduction to molecular biology and biotechnological tools e.g. recombinant DNA technology, etc. Molecular basis of the pharmacology of genetically engineered drugs; molecular mechanism of drug actions. Binding forces in drug receptor interactions. Structural Activity Relationship study and the conformation of the receptor surface. Receptor types; Analysis of drug induced- Dose-Response Relationship, and characterization of Drug -Receptor interactions.

PCL 805.2 Advanced Pharmacokinetics

2 Credit Units

Review of concepts and application of pharmacokinetics. Linear- and non-linear pharmacokinetics models; dosage regimen design and pharmacokinetics; Pharmacokinetics and Pharmacodynamics; Pathophysiological factors in pharmacokinetics.

PCL 806.2 Advances in Neuro- and Biochemical Pharmacology 2 Credit Units

Neurotransmitters: physiology of noradrenalin, adrenalin, dopamine, histamine, serotonin, glutamate, aspartate, and GABA; synthesis, releases, uptake and metabolism of neurotransmitters. Methods of studying neurotransmitter (biochemical, histochemicals and autoradiologicals). Neurotransmitters in sleep mechanisms; diseases of central nervous system and drug therapy; Cyclic nucleotides and their importance in drug action. Radioisotopes in Pharmacology. Endocannabinoids-cannabinoids physiological control (CPCS); endocannabinoids and regulation of neurotransmission (retrograde neurotransmitters); therapeutic potentials of CPCS.

PCL 807.1 Advances in Nanopharmacology and Nanotoxicology 2 Credit Units

Nanotechnology in Pharmacology; History of Nanopharmacology. Drug delivery systems: liposomes, Noisome, emulsion, polymers, ceramics, metallic, gold shell, carbon nanomaterials and quantum dots, nanotherapy and nanomedicines in cancers. Nanotoxicology: toxicity of nanoparticles: allergy, fibrosis, organ failure, inflammation, cytotoxicity, tissue damage, ROS generation, DNA damage; diseases associated with nanoparticle exposure; classification of nanotoxicity- biological and environmental toxicity. Discussion current reviews and advances of latest journal articles.

PCL 808.1 Advances in Pharmacoepidemiology 2 Credit Units

Definition; Pharmacoepidemiological research, Aim, sources of data, types of data, epidemiological studies, design, observational and intervention studies, descriptive epidemiology, case control, case series, trend analyses (ecological studies), cross-sectional studies, case control study, cohort study, application of pharmacoepedmiology. Recent advances in current journal articles.

TXP 804.2 Research Project (Dissertation) 6 Credits Units

At the end of course work the students shall undertake a research work. Departmental and Faculty defense of the proposal shall be presented before the students proceed on the project work. After the project is conducted, the students shall present a dissertation to the departmental and faculty before final defense at the School of Graduate Studies.

PhD DEGREE PROGRAMMES IN EXPERIMENTAL TOXICOLOGY & PHARMACOLOGY

The objectives of the PhD Toxicology /Pharmacology (Toxicology Option) are to:

- i. provide students with sound foundation in all areas of toxicology.
- ii. train qualified candidates in applied toxicology and environmental health.
- iii. provide training to students on toxicokinetics, toxicodynamics and mechanism of actions of toxicants in the environment that can be exposed to humans and animals, which are common in many parts of Nigeria due to pollution from oil exploration activities and other industrial activities.
- iv. train students to evaluate and identify through fundamental and applied research (including qualitative and quantitative analysis) environmental toxicants that are potentially hazardous, whether chemical, biological or physical in nature

- v. develop in the students the skills to evaluate the impact caused by such exposure on health of man, animal and environment through risk assessment.
- vi. develop in the students the ability to evaluate the harmful effects of pharmaceutical compounds and other chemical compounds that are poisonous to humans using systematic approach.
- vii. provide the all-round training and skills in toxicology for students to be useful in the academics, research institution and regulatory bodies.

After completing the PhD Toxicology/ Pharmacology (Toxicology Option), the student will be able to:

- i. have in-depth knowledge about the different toxins, chemicals and their adverse effects on the health and environment.
- ii. Have skills in different advanced exposure assessment methods
- iii. design mitigation strategies for exposure assessment
- iv. analyse and interpret exposure measurements applying standard modelling tools
- v. design strategies for study of dose-response relations
- vi. apply methods for combining information from different studies to derive a dose-response relationship (meta-analysis)
- vii. have good understanding of risk assessment process and know how exposure limits and standards are derived

The objectives of the Ph.D. Toxicology/ Pharmacology (Pharmacology Option) are to:

- i. provide students with the opportunity to greatly enhance and expand their understanding of pharmacology and closely associated disciplines.
- ii. enable students have a good understanding of research and development of novel pharmacological agents, as well as evaluating their safety.
- iii. acquire knowledge and skills required for discovery of drugs in natural products from the flora and fauna of Niger Delta.
- iv. enable students be able to evaluate pharmacoeconomics impacts upon the drug discovery and development process.
- v. work in partnership with pharmaceutical industries to commercialize research findings by developing patentable drug products needed for treatment of tropical diseases.
- vi. promote collaborative research and training at national and international level to acquire competence needed for the advancement of pharmacology.

By the end of the ToxPharm (Pharmacology Option) programme, student will be able to:

- i. understand principles of pharmacology and drug discovery
- ii. critically appraise pharmacological drugs used in major disorders
- iii. show good understanding of the application of novel compounds in the pharmaceutical and biotechnology industries
- iv. have in depth understanding of the molecular mechanisms of toxicology, with perspectives on drug metabolism and pharmacokinetics and how these can lead to toxicity
- v. exhibit a high level of competence in the application and use of important research tools in the field of pharmacology.
- vi. Plan and conduct toxicity studies and clinical trials
- vii. develop competence, confidence and an enquiring, investigative approach.

2. AVAILABLE PROGRAMME

- (i) PhD Toxicology/Pharmacology (PhD ToxPharm)

3. PhD TOXICOLOGY/PHARMACOLOGY (PhD ToxPharm)

(a) Areas of Research in Toxicology

- (i) Clinical/Medical Toxicology
- (ii) Food Toxicology
- (iii) Molecular/Genomic Toxicology
- (iv) Environmental /Occupational Toxicology

(b) Areas of Research in Pharmacology

- (i) Ethnopharmacology or Pharmacology of Natural Products
- (ii) Cardiovascular Pharmacology
- (iii) Reproductive Pharmacology
- (iv) Biochemical Pharmacology
- (v) Neuropharmacology/Neurodegeneration
- (vi) Pharmacogenomics
- (vii) Immunopharmacology

(c) Target groups

University postgraduates of toxicology or pharmacology with good analytical and critical thinking capacity who have high interest in research.

(d) Entry Requirements

Admission to the PhD ToxPharm programme shall be opened to candidates who possess a minimum CGPA of 3.5 (on a scale of 5.0) in MSc Toxicology or Pharmacology degree of the University of Port Harcourt or of other Universities recognized by the University of Port Harcourt Senate. Candidates are expected to have independent learning ability. Candidates without MSc in Toxicology or Pharmacology but have a minimum CGPA of 3.5 out of 5.0 in other cognate biomedical disciplines shall be expected to audit MSc Courses in Toxicology or Pharmacology in two semesters and pass all examinations before proceeding on the PhD Toxicology or Pharmacology programme. This one year shall not be part of the eighteen (36) months required for the Doctor of Philosophy (PhD) programme. Until the candidate completes such requirement, he or she shall not commence the advanced courses in Toxicology or Pharmacology.

(e) Duration of Programme

Full-time candidates will be required to spend a minimum of 36 calendar months and a maximum of 48 calendar months. Part-time candidates will be required to spend a minimum of 48 calendar months and a maximum of 60 calendar months.

(f) Mode of Study/Graduation

The PhD programme will be based on independent but comprehensive research work embodied in a thesis. Students will be encouraged to engage largely in self-learning, and there will be less preponderance of didactic teaching. The students are expected to actively seek knowledge and skills on their own initiative. The study method during the programme is systematically fashioned to involve Lectures, Seminars and Journal Club, as well practical exercises. Students shall be expected to present periodic seminars to the Department/Faculty as part of progress reports on their research work. Each PhD student shall be expected to present at least 4 seminars every year on selected topics of interest. The course work system for the PhD programme applies. Thesis re to be orally defended. In addition, they are expected to satisfy all other requirements as stipulated in the University of Port Harcourt Graduate School regulations for graduate students. Summary mode of study will be by course work and research.

4. LIST OF COURSES

FIRST SEMESTER

Course Code	Course Title	Status	Credit Unit
TXP 900.1	Research Seminar I	Core	3

GW 900.1	Grant Writing	Core	1
TOX 900.1	Epidemiology/Public Health	Core	2
TOX 901.1	Exposure Science & Risk Assessment	Core	2
TOX 902.1	Advanced Nanotoxicology	Core	2
PCL 900.1	Advances in Pharmacogenomics	Core	2
PCL 901.1	Advances in Pharmacogenetics	Core	2
PCL 902.1	Advances in Drug Discovery	Core	2
			16

N/B: "TOX" is courses for only Toxicology Option Students. "PCL" is courses for only Pharmacology Option Students.

Total credits for either Toxicology or Pharmacology Option is 10.

SECOND SEMESTER

Course Code	Course Title	Status	Credit Unit
TXP 901.2	Research Seminar II	Core	3
TXP 902.2	Thesis in Toxicology/Pharmacology	Core	12
			15

N/B: "TXP" is shared courses for all students.

Total credits for either Toxicology or Pharmacology Option is 15.

(ii) COURSE OUTLINE

FIRST SEMESTER

TXP 900.1 Research Seminar I 3 Credit Units

Writing a seminar paper on a topic aligned with research focussed area. The seminar will be evaluated by oral defence.

GW 900.1 Grant Writing 1 Credit Unit

Writing a grant application, write an application that win grants; how to write programme blueprints, how to submit an application on grants. Gov; Components of grant application; helpful tools and resources in grant writing; strategy for developing a proposal, how to identify potential funding sources; how to read and understand grant guidelines, request for proposals and application (RFA/RFP), writing objectives, preparation and justification of budget. *Applying for a grant and winning a grant is prerequisite of passing the course with A grade.*

TOX 900.1 Epidemiology/Public Health

2 Credit Units

Epidemiology: Definition of terms; types of epidemiology e.g. Environmental / occupational epidemiology, Clinical epidemiology, epidemiology of cardiovascular diseases, environmental epidemiology, epidemiology of methods; epidemiology of infectious disease. Genetic Epidemiology and Statistical Genetics; nutritional epidemiology, pharmacoepidemiology, genetic epidemiology and statistical genetics, reproductive, perinatal and pediatrics epidemiology, biomonitoring epidemiology etc.

Public Health (PH): Definition of Public health, role of PH, PH as system, PH approaches, core functions, activities, achievements of PH, problems and diseases PH deal with; PH institutions and

organizations and PH professions. The intersection of PH with Epidemiology. One Health: Concept and application; One Health approach in the surveillance of zoonoses and foodborne diseases. The governance of One Health: as a science assisting the society in the translation of the environmental component of One Health. The institutionalization of One Health in risk assessment and biomonitoring and surveillance. The environment-farm interface: Animal Feeds, environment, One Health and sustainability; Farm to fork toxicology. From environment to human diet: the case study of perfluoroalkyl substances (PFAS).

Surveillance: Definition, steps in establishing and sustaining surveillance system and its application in mitigating toxicological hazards; Core functions of surveillance of any health event: case detection, reporting, investigation and confirmation, analysis and action (control, response and feedback); surveillance system. The role of Continental, regional or National Public Health Reference Laboratories in assessment and surveillance of Toxicological hazards in the environment, food, water, air, vector etc. Application of epidemiology in risk assessment of environmental contaminants in food based on surveillance and monitoring data. Epidemiology approach in risk assessment of pesticides in the environment and human health benefits. Use of epidemiology in risk assessment of highly contaminated sites

TOX 901.1 Exposure Science & Risk Assessment 2 Credit Units

Global climate change and human health; Weather and climate: changing human exposures Impacts on health of climate extremes; Climate change and infectious diseases; How much disease could climate change cause; Stratospheric ozone depletion, ultraviolet radiation; assessments of

health impacts of climate change: Monitoring the health effects of climate change; Adaptation and adaptive capacity in the public health context; developing responses to climate change. Climate change in animal Health; E-waste Exposure and management; The concept of Biomonitoring and safer environment and better management; Pollution and circular economy: advantages and drawbacks; Pollution and circular economy: advantages and drawbacks ; Environmental chemical and biological transport and transformation, exposure to environmental contaminants, and environmental risk assessment.

TOX 902.1 Nano-toxicology 2 Credit Units

Nanotoxicology: toxicity of nanoparticles: allergy, fibrosis, organ failure, inflammation, cytotoxicity, tissue damage, ROS generation, DNA damage; diseases associated with nanoparticle exposure; classification of nanotoxicity- biological and environmental toxicity. Discussion current reviews and advances of latest journal articles.

PCL 900.1 Advances in Pharmacogenomics 2 Credits Units

Introduction to pharmaceutical biotechnology and pharmacogenomics; Pharmacological and pharmacogenomics approaches to improve drug delivery; clinical Outcomes Genetic polymorphism of CYP isoenzymes and drug transporters. Advancements in molecular pharmacology, informatics, nanotechnology and genomics for the new drug development era New pharmacological classes of drugs (antibodies, antisense RNAs, siRNAs, aptamers); Personalized medicine and drug prescription; Pharmacology and pharmacogenomics of cardiovascular system; Clinical pharmacogenomics and drug interactions; Practical utility of various pharmacogenomics resources in the clinical setting. Protein drugs and the development of biotherapeutics. Pharmaceutical biotechnology of monoclonal antibodies (mAbs); Pharmacodynamics and pharmacokinetics of mAbs;

Pharmacogenomics of mAbs; Development of new innovative molecularly-targeted cancer therapeutics; Cancer pharmacogenomics and biotherapeutics; Recombinant Coagulation Factors and Thrombolytic Agents, Recombinant Human Deoxyribonuclease I, Hematopoietic Growth Factors: Focus on Erythropoiesis-Stimulating Agents, Interferons and Interleukins, Vaccines, Gene Therapy, Stem Cell Technology

PCL 901.1 Advances Pharmacogenetics 2 Credit Units

Pattern of transmission of single gene trait. Hardy-Weinberg Law Conditions for its Validity, application. On concepts of continuous and discontinuous variation. Pharmacogenetics (drug metabolism, tissue metabolism and receptor alterations).

PCL 902.1 Advances in Drug Discovery 2 Credit Units

High throughput target pathway selection, Biologics, Pre-clinical animal testing, Species differences in responses to drugs, Translational pharmacology, Development of clinical proof of concept, Clinical trials– Phases 1 to 4 (safety, safety/efficacy, effectiveness, efficiency, treatment decisions, policy decisions, Post-market surveillance, Patient-reported outcomes (PROs),

SECOND SEMESTER

TXP 900.2 Research Seminar II 3 Credit Units
Student will write a seminar on the progress of his work. This will be evaluated by oral examination

TXP 902.2 PhD Thesis 12 Credit Units
Students will be expected to write PhD thesis on their project work in their specialty either toxicology or pharmacology. This will be defended by oral examination.

LIST OF ACADEMIC STAFF

S/N	Name	Qualification	Specialization	Discipline	Rank
1	Dr C.N Obasi	B.Pharm (UNN) MSc (UPH) PhD (Manchester)	Pharmacokinetics Toxicology	Pharmacology/Toxicology	Senior Lecturer /HOD
2	Prof O.E Orisakwe	BSc (UNN) MSc, PhD (Lagos)	Toxicology Biochemistry Pharmacology	Toxicology	Professor
3	Prof J.S Aprioku	B.Pharm (Benin) MSc, PhD (UPH)	Reproductive Pharmacology/Toxicology	Pharmacology/Toxicology	Professor
4	Prof L.L Nwidu	B.Pharm (OAU, Ife) MSc (UPH) PhD (Uyo) Dip Public Health FPCPharm (WA)	Hepatology Natural product Drug Discovery Neurodegeneration Neuropharmacology	Pharmacology/Toxicology	Professor
5	*Prof V Idemyor	Bsc, Pharm D (Minnesota)	Clinical Pharmacology	Pharmacology	Professor
6	Prof A.N Ezejiiofor	BSc (Abraka) MSc, PhD	Toxicology Natural antidotes Pharmacology	Pharmacology/Toxicology	Professor
7.	Prof P.A Nwafor	B.Med Sc (UPH) MSc (UNN) PhD (Jos)	Reproductive Pharmacology/Toxicology	Pharmacology/Toxicology	Professor
8.	Dr O.A Shorinwa	B.Pharm (OAU, Ife) MSc, PhD (UPH) MBA (OSU) FPCPharm (WA)	Ethnopharmacology Pharmacology Inflammation	Pharmacology/Toxicology	Senior Lecturer
9	Dr B.D Dooka	B.Pharm (Uyo) MSc, PhD (UPH)	Environmental Toxicology, Pharmacology Natural products	Pharmacology/Toxicology	Lecturer I
10	Dr D.N Ajibo	B.Pharm (UNN) MSc, PhD (UPH)	Ethnopharmacology Pharmacology Neuropharmacology	Pharmacology/Toxicology	Lecturer II
11	*Dr O.E Afierofo	BSc (MOUAU) MSc (UNN) PhD (UI)	Natural Product chemistry	Phytomedicine	Associate Professor
12	*Dr K.M Ezealisiji	B.Pharm (Jos) MSc (UNN), PhD (UI)	Nanopharmacology and Nanotoxicology	Nanomedicine	Associate Professor
13	*Prof Franklin Banakuna Godson Tanee	BSc (Botany) MSc(Ecology) PhD Ecology (UPH)	Pollution & Restoration Ecology, Biodiversity&Conservation; Ecosystem Ecology, Waste management & Environmental Biotechnology	Ecology/Plant science Biotechnology	Professor

*Associate Lecturers

DEPARTMENT OF PHARMACEUTICAL & MEDICINAL CHEMISTRY

1. Introduction

Postgraduate study in the Department of Pharmaceutical and Medicinal Chemistry is designed to offer intensive training in special areas with emphasis on certain selected research programmes. The main objectives of this postgraduate programme are:

- (a) Training in the methods of scientific enquiry for candidates interested in and are capable of pursuing academic career in research and/or teaching.
- (b) To produce high calibre professionals via entrepreneurial research, innovative teaching and assessment methods; who will play leading roles in pharmaceutical and allied industries in solving practical problems in drug discovery and development (DDD), drug quality control and assurance (DQCA) and drug efficacy and action.
- (c) To provide postgraduate students with advanced knowledge and skills needed to meet the ever increasing national and international manpower need in pharmaceutical education and research.

2. Degrees Available

- (a) Master of Science (M.Sc.) in Pharmaceutical and Medicinal Chemistry with *options* in
 - i. Medicinal Chemistry
 - ii. Pharmaceutical Analysis
- (b) Doctor of Philosophy (Ph.D.)

3. Areas of Research

- iii. Drug Design and Synthesis
- iv. Pharmacokinetics, Drug Metabolism and Bioequivalence
- v. Natural Products Chemistry
- vi. Pharmaceutical Analysis and Drug Quality Evaluation

4.0 Specific Regulations

Master of Science (M.Sc.) Degree

4.1 Entry Requirements

A candidate for admission into the M.Sc. Programme should hold a B.Pharm or PharmD Degree of this University or any other approved university. Such a candidate shall also satisfy the general requirements for admission into the postgraduate study programme of the University of Port Harcourt.

Non-Pharmacist applicants in Chemistry, Biochemistry, Forensics, Pharmacology, and

Environmental Science may be considered for admission into the M.Sc. Degree Programme. Such candidate shall be a graduate of this University or any other approved university holding a Bachelor of Science (B.Sc.) degree or its equivalent with at least Second Class lower Division having a cumulative grade point average. Such candidate will be required to register and pass the following undergraduate courses in Pharmaceutical and Medicinal Chemistry:

- PCH 324.2: Medicinal Chemistry I (Introduction to Medicinal Chemistry)
 PCH421.1: Pharmaceutical Analysis II (Instrumental Methods of Analysis)
 PCH 423.2: Medicinal Chemistry II (Chemistry of the Pharmacodynamic Agents)
 PCH 521.1: Medicinal Chemistry III (Chemotherapeutic Agents and Drug Design)

4.2 Duration of Programme

The duration of the M.Sc. programme is a minimum of eighteen (18) months or three academic semesters. The maximum duration is thirty-six (36) or six academic semesters.

4.3 Courses

Candidate must register and take courses totalling not less than 28 units and not more than 32 units including a project. One unit is equivalent to a one-hour lecture or three hours of laboratory practical, per week per semester.

4.3.1 CORE COURSES

(M.Sc. Pharmaceutical and Medicinal Chemistry)

Candidates admitted for both Pharmaceutical Analysis and Medicinal Chemistry options shall be required to complete the following core courses.

First Semester

Course Code	Course title		Credit Unit
PCH 821.1	Advanced Organic Chemistry		2
PCH 822.1	Advanced Medicinal Chemistry		3
PCH 823.1	Modern Analytical Techniques		2
PCH 825.1	Biostatistics and Research Methodology		3
SGS 801.1	ICT and Research Methods		2
TOTAL			14

Second Semester

Course Code	Course title	Credit Unit
PCH 826.2	Pharmaceutical Analysis and Drug Quality Evaluation	2
PCH 828.2	Advanced Pharmacokinetics & Metabolic Chemistry	2
PCH 829.2	Advanced Pharmaceutical and Medicinal Chemistry Laboratory Practice	2
PCH 831.2	Seminar and Directed Reading	2
PCH 832.2	Dissertation	6
SGS 801.2	Entrepreneurship and Management	2
TOTAL		16
GRAND TOTAL		32

4.3.2 Electives
M.Sc. (Pharmaceutical Analysis Option)

Candidates admitted to the M.Sc. programme (Pharmaceutical Analysis Option) shall, in addition to the core courses, be required to take at least two from the following elective courses (one in each semester):

First Semester

Course Code	Course title	Credit Unit
PCH 833.1	Isolation Techniques in Natural Product Research	2
PCH 834.1	Metabolic Analysis and Toxicology of Drugs and Drug Metabolites.	2
TOTAL		2

Second Semester

Course Code	Course title	Credit Unit
PCH 835.2	Experimental Design in Drug Analysis	2
PCH 836.2	Nanochemistry in Drug Development.	2
TOTAL		2
GRAND TOTAL		4

Note: Students shall only choose a course per semester in the electives.

M.Sc. (Medicinal Chemistry Option)

Candidates admitted to the M.Sc. programme (Medicinal Chemistry Option) shall, in addition to the core courses, be required to take at least two from the following elective courses (one in each semester):

First Semester

Course Code	Course title	Credit Unit
PCH 833.1	Isolation Techniques in Natural Product Research	2
PCH 824.1	Chemistry of Natural Products	2
TOTAL		2

Second Semester

Course Code	Course title	Credit Unit
PCH 835.2	Experimental Design in Drug Analysis	2
PCH 827.2	Drug Design and Synthesis	2
TOTAL		2
GRAND TOTAL		4

Note: Students shall only choose a course per semester in the electives.

4.4. Mode of Study/Graduation

The Master's Degree Programme shall be prosecuted through coursework and dissertation. To graduate, a candidate is expected to pass all the relevant courses and dissertation with a minimum score of 50% each, in not more than two sittings.

Doctor of Philosophy (PhD) Degree
4.5. Admission to PhD graduate programme:

Admission is open to candidates who attained a minimum CGPA of 4.0 (Grade B or 60%) in the relevant written examinations and dissertation of the M.Sc. Course in Pharmaceutical and Medicinal Chemistry of the University of Port Harcourt, or of other Universities/Institutions recognized by the University Senate.

4.6. PhD Courses

Candidates admitted to this programme shall be required to complete the following core activities.

First Semester

Course Code	Course title	Credit Unit
PCH 921.1	Forensic Chemistry	4
PCH 922.1	Seminars and Directed Readings	4
TOTAL		8

Second Semester

Course Code	Course title	Credit Unit
PCH 923.2	Recent Advances in Pharmaceutical Analysis, drug Quality Evaluation and Drug Quality Assurance and	4

	Control (for Pharmaceutical Analysis Option)	
PCH 924.2	Recent Advances in Medicinal Chemistry, Drug design and Drug Synthesis (for Medicinal Chemistry Option)	4
PCH 925.2	Thesis	12
	TOTAL	20
	GRAND TOTAL	28

4.7. Duration of PhD Programme

Full-time candidates will be required to spend a minimum of 24 calendar months and a maximum of 60 calendar months.

Part-time candidates will be required to spend a minimum of 36 calendar months and a maximum of 84 calendar months.

4.8. Mode of Study/Graduation

The PhD Programme will be based mainly on independent but comprehensive research work embodied in a thesis. The thesis is to be defended by an oral examination.

Candidates shall, however, be expected to present periodic seminars to the Department and the Faculty as part of progress reports on their research work. In addition, they are expected to pass all the relevant courses with a minimum score of 50 % each, in not more than two sittings. They must satisfy all other requirements as stipulated in the Graduate School Regulations for graduate students.

5.0. Description of Courses

PCH 821.1: Advanced Organic Chemistry (2 Units)

Advanced mechanism of nucleophilic substitution reactions and factors affecting them; Elimination reactions: mechanism and factors affecting them; Organometallic compounds: Grignard synthesis, organo-aluminium, organo-zinc, organo-lithium compounds, preparation and uses. Synthetic uses of Free Radicals, Main types of radical reactions: Forming reactions; radical destroying processes, Radical transfer processes; new reduction methods: Electrochemical reduction, photochemical reduction; New oxidation methods: Electrochemical oxidation; Organic peroxide. Photochemical methods: Photo-addition reactions; Photocyclization reactions, photochemical rearrangement; Aromatic substitution reactions. New Synthesis of Aromatic Compounds, Ring syntheses; Syntheses was reactive, intermediates; Functional groups. Some specific organic reactions, Michael addition; Walden inversion; Woodward-Hoffmann-rule.

Recent methods for forming Heterocyclic Rings Syntheses using intermediates; 1,3-dipolar cyclo-addition reactions; Diels-Alder syntheses; Photochemical ring closures; Ring expansion reactions; Miscellaneous ring syntheses.

PCH 822.1: Advanced Medicinal Chemistry (3 Units)

Physico-chemical Properties of Medicinal Compounds: pKa, solubility and partition coefficient (Hanzsch's constant), surface activity, functional groups and electronic factors (Hammett constant) affecting biological action (isosterism and bioisosterism), oxidation/reduction potential, hydrogen bonding, polymorphism and stereochemistry.

Chemotherapeutic Agents: Recent advances, developments and review of the chemistry of antibiotics, antimalarials, sulphonamides, anticancer, antiviral, anthelmintic, antilepral and antiprotozoal agents and drug for tuberculosis HIV/AIDS.

Pharmacodynamic Agents: Recent advances and developments in the chemistry of analgesics, anti-asthmatics, oxytocic's, hypoglycaemic, prostaglandins, psychotherapeutics, steroids, drugs acting on the peripheral nervous system, vitamins and proteins of pharmaceutical and medicinal importance.

PCH 823.1: Modern Analytical Techniques (2 Units)

Principles of absorption and emission spectrophotometry and spectroscopy (flame emission spectrophotometry, atomic absorption spectroscopy, Fluorimetric, inductive coupled plasma spectroscopy, ultraviolet/visible light spectroscopy/spectrophotometry, infrared spectroscopy, nuclear magnetic resonance spectroscopy – $^1\text{H-NMR}$ & $^{13}\text{C-NMR}$ – and their applications in chemical structure elucidation and confirmation, and quantification of compounds/drugs (where applicable) in Pharmaceutical and Medicinal Chemistry. Mass spectroscopy in elucidation and confirmation of organic structures; and application of chromatographic methods (*e.g.* TLC, GC, LC-MS, VLC, GFC, FCC, PC, *etc.*) in the determination, purification and analysis of drugs and organic compounds. Electrochemical methods of analysis: Potentiometry, Conductimetry, Polarography, Amperometric and Coulometry and their applications in drug analysis. Applications of optical methods (polarimetry, spectropolarimetry and refractometry) in drug identification and quantification. Tracer Techniques, use of Geiger-Muller and scintillation counters and their application to various fields in Pharmaceutical Chemistry; and X-ray Diffraction Analysis.

PCH 824.1: Chemistry of Natural Drug Products (2 Units)

Study of drug development from natural sources: including study of the general characteristics, detection, assay, extraction, isolation and purification of important medicinal compounds of natural origin. Chemistry (physical and chemical Properties, isolation, structure elucidation, structure activity relationship and synthesis, where applicable), biological action and pharmaceutical applications of selected examples of secondary metabolites obtained from natural sources (plant or animal sources or microorganisms). The important naturally occurring medicinal compounds includes: polyketides, alkaloids, steroids, terpenes and terpenoids, flavonoids, isoflavonoids, anthocyanidins, quinones, anthraquinones, fatty acids and lipids, phenolics (simple phenols, phenylpropanoids and phenylpropenes and their derivatives), tannins, carbohydrates, proteins, glycosides (saponins, cardiac glycosides, cyanogenetic glycosides, flavonoid glycosides, anthracene glycosides, *et c.*),*etc.*

PCH 825.1: Biostatistics and Research Methodology (3 Units)

Study of the role and applications of statistics in Human Biology and Medicine. Data: Description, Types, and Presentation (Normal distribution, *etc.*). Descriptive statistics: Measures of convergence and variance. Inferential statistics: *Student t-Test*, Analysis of variance (ANOVA), Chi-square, F-Test, *etc.* and application in analysis and interpretation of biological, pharmaceutical and medicinal research. Elements of probability: Theory and Applications. Elements of Distribution: Theory and Application. Tests of hypothesis, multiple groups, comparison, basic Sampling procedures including estimation of sample size; construction of basic experimental designs. Design of Clinical and Preventive trials. Design of studies to evaluate effect of health programmes or control measures. Data editing, standardization, procedures, relative risks; errors and misclassification and observed variability; Analysis of vital statistical and demographic data; Survey of data processing.

PCH 826.2: Pharmaceutical Analysis and Drug Quality Evaluation (2 Units)

Importance of analysis and quality control of Drugs and Pharmaceuticals. Facilities, personnel and records needed to establish a quality control laboratory. Regulatory aspects of drug quality control and good manufacturing practices. Statistics in drug analysis and its importance in evaluation of results. Quality Control system and principles of Drug Quality Control. Design of Monographs and Specifications; The role of WHO, BP and USP Commissions and other

International and National (*e.g.* NAFDAC, FDA, *etc.*) Organizations in the Quality Control of Medicines. System (process) validation in Pharmaceutical Analysis. Statistical quality control and process validation, including a study of the applications of Control Charts in pharmaceutical quality assurance. Applications of selected official and non-official methods in the analysis of drugs and related compounds. Biological methods in the assay of drugs and medicinal agents as applied to antimicrobials, pharmacological and radiopharmaceuticals. Analysis and assay of biopharmaceuticals. Standardisation and evaluation of crude drugs. Determination of chemical and bioequivalence of pharmaceutical products. Development and validation of analytical methods for drug quality assurance and metabolic studies.

PCH 827.2: Drug Design and Synthesis (2 Units)

Principles of drug discovery and development. Approaches to rational drug design. Drug targets: Identification, Characteristics, Modulation and relationship with disease state. Estimation of drug-likeness using models such as Lipinski's Rule of Five, Lipophilic Efficiency, *etc.* Prediction of drug properties by Multi-Objective Optimization Methods. Virtual Screening. Molecular Docking. Recent advances in Quantitative Structure Activity Relationship (QSAR), Combinatorial Chemistry, and Chemoinformatics. Review of selected synthetic reactions for synthesis of drugs and other pharmaceuticals and related compounds.

PCH 828.2: Advance Pharmacokinetics & Metabolic Chemistry (2 Units)

Recent advances in drug metabolism: Protocols for *in vivo* and *in vitro* studies of drug and drug metabolites. Preparation of tissue homogenates and "pure oxidases". Specific examples of isolation, identification and characterisation of metabolites and/or their derivatives. Analytical metabolic chemistry of specific groups of drugs. Metabolic kinetics, biotransformation, use of specific inhibitors and indicators. Dosage regimen Design and evaluation of pharmacokinetic parameters. Compartmental and non-compartmental analysis. Time-course of drugs and their metabolites concentration in the body. Application of pharmacokinetics in Clinical settings.

PCH 829.2: Advanced Pharmaceutical & Medicinal Chemistry Laboratory Practice Course (2 Units)

The practical works are designed to illustrate the principles underlying the methods discussed in the theory syllabus, in order to increase the candidates' practical skills and improve the presentation of

reports. The students are expected to make use of modern instrumental and chemical methods in the synthesis, analysis and quality control of chemicals and pharmaceuticals. Important specific experiments to demonstrate the various facets of Metabolic Chemistry; will be performed by students.

PCH 831.2: Seminar and Directed Reading (2 Units)

Seminar and directed reading is designed to acquaint the candidate with current and relevant research topics and developments in Pharmaceutical and Medicinal Chemistry. Each candidate is expected to deliver at least three seminars, one of which being on his/her independent research work or area of interest.

PCH 832.2: Dissertation (6 Units)

Candidates will present a report incorporating a review of relevant literatures and an account of research work on a supervised topic. It will include research seminars and project defence.

PCH 833.1: Extraction & Isolation Techniques in Natural Product Research (2 Units)

Introduction to Natural Products Extraction and Isolation. Initial and Bulk Extraction of Natural Products. Extraction of Plant Secondary Metabolites, Isolation, Supercritical Fluid Extraction in Natural Products Analyses, Accelerated Solvent Extraction for Natural Products Isolation, Microwave-Assisted Extraction in Natural Products Isolation, Extraction and Isolation of Saponins, Extraction and Isolation of Phenolic Compound, An Introduction to Planar Chromatography and Its Application to Natural Products Isolation, Isolation of Natural Products by Low-Pressure Column Chromatography, Isolation of Natural Products by Ion-Exchange Method, Separation of Natural Products by Countercurrent Chromatography, Isolation of Natural Products by Preparative High Performance Liquid Chromatography (Prep-HPLC), Isolation of Natural Products by Preparative Gas Chromatography, Hyphenated Techniques and Their Applications in Natural Products Analysis, Isolation of Marine Natural Product, Isolation of Microbial Natural Products,. Scaling-Up of Natural Products Isolation, Follow-Up of Natural Products Isolation and Natural Products Isolation in Modern Drug Discovery Programs

PCH 834.1: Metabolic Analysis and Toxicology of Drugs and their Metabolites (2 Units)

Review of the role of enzymes in drug metabolic reactions; Drug metabolism & toxicity and the factors affecting them; Stereochemical aspects of

drug metabolism; Genetic polymorphism and the importance in drug development and use; Introduction to pharmacogenomics, etc.

PCH 835.2: Experimental Design in Drug Analysis (2 Units)

Importance of analysis from drug discovery to development; Analytical method selection for research and routine assays; Validation in Pharmaceutical analysis; Signals, measurements and data generations by analytical instruments; Principle of computing-automated analytical systems, information retrieval and data presentation; Statistics in drug analysis; Handling of body fluids and other matrices for drug analysis, forensics, sport, stability, bio-hazards etc.; Review of principles, scope and methods of bioassay for specific example of drug products (pharmacological bioassays, microbiological methods, immunoassays, nucleic acid-based assays (PCR detection methods) enzymatic analysis.

PCH 836.2: Nanochemistry in Drug Development (2 Units)

Introduction to Nano-science and Nano-technology; Concept of Nanochemistry and nanomaterials; conjugation chemistry and applications; Nanopharmacy: Concept, scope and applications; Design, synthesis, forms, variants, properties and application of organic and inorganic nanomaterials of pharmaceutical relevance: Fluorescent, magnetic, novel metal nanoparticles; Synthesis, characterization and development of novel Nano-biodegradable polymers and copolymers for pharmaceutical industries.

PCH 921.1: Forensic Chemistry (4 Units)

Introduction to forensic science; Forensic Chemistry: Theory and Principles; Techniques of forensic analysis; Toxicokinetics and molecular mechanism of toxicity; Criminalistics: Collection and analysis of crime-scene evidence (Blood spatter analysis, trace evidence, impression evidence, presumptive drug identification); Detection, determination and toxicity of metals and other inorganic substances; Detection, determination and toxicity of natural products of toxicological significance; Detection, determination and toxicity of illicit drugs, drugs of abuse and drugs of toxicological significance; Biological evidence and serology: Collection and storage of biological evidence; Chemical and microscopic analysis of biological stains; Biological markers of forensic significance; Introduction to blood spatter; Introduction to DNA analysis and Screening evidence for biological stains in forensic casework; Method development and quality control; Doping control

PCH 922.1: Seminars and Directed Readings (4 Units)

Doctoral seminars and directed readings is designed to acquaint the candidate with current and relevant research topics and developments in Pharmaceutical and Medicinal Chemistry. Each candidate is expected to deliver at least four seminars, three of which being on his/her independent research work or area of interest.

PCH 923.2: Recent Advances in Pharmaceutical Analysis, Drug Quality Evaluation and Drug Quality Assurance and Control (4 Units)

Review of recent advances in pharmaceutical analysis; Review of recent advances in drug

quality evaluation; Review of recent advances in quality assurance and quality control

PCH 924.2: Recent Advances in Medicinal Chemistry, Drug Design and Drug Synthesis (4 Units)

Review of recent advances in medicinal chemistry; Review of recent advances in drug design e.g. Computer-aided drug design; Review of recent advances in drug synthesis

PCH 925.2: Thesis (12 Units)

Candidates will present a report incorporating a review of relevant literatures and an account of research work on a supervised topic. It will include research seminars and project defence.

6.0. Summary of M.Sc. Courses Available

COURSE CODE [†]	COURSE TITLE	COURSE UNIT	REMARKS
SGS 801.1	ICT and Research Method	2	Compulsory
SGS 801.2	Entrepreneurship and Management	2	Compulsory
PHA 821.1	Advanced Organic Chemistry	2	Core
PCH 822.1	Advanced Medicinal Chemistry	3	Core
PCH 823.1	Modern Analytical Techniques	2	Core
PCH 824.1	Chemistry of Natural Products	2	Elective
PCH 825.1	Biostatistics and Research Methodology	3	Core
PCH 826.2	Pharmaceutical Analysis and Quality Evaluation	2	Core
PCH 827.2	Drug Design and Synthesis	2	Elective
PCH 828.2	Advance Pharmacokinetics & Metabolic Chemistry	2	Core
PCH 829.2	Advanced Pharmaceutical and Medicinal Chemistry Laboratory Practice	2	Core
PCH 831.2	Seminar and Directed Reading	2	Core
PCH 832.2	Dissertation	6	Core
PCH 833.1	Extraction & Isolation Techniques in Natural Product Research	2	Elective
PCH 834.1	Metabolic Analysis & Toxicology of Drugs and their metabolites	2	Elective
PCH 835.2	Experimental Design in Drug Analysis	2	Elective
PCH 836.2	Nanochemistry in Drug Development	2	Elective

LIST OF ACADEMIC STAFF AND THEIR AREAS OF SPECIALIZATION

S/N	Name	Qualifications	Designation	Specialisation
1*	Usifoh, Cyril O.	B.Pharm; M.Sc.; Ph.D.	Professor	Organic Synthesis & Medicinal Plant Research
2*	Eseyin Olorunfemi A	B.Sc.; M.Sc.; Ph.D.	Professor	Pharmacokinetics & Drug Metabolism, Natural Products Chemistry & Diabetology
3*	Obonga, Wilfred O.	B.Sc.; M.Sc.; Ph.D.	Professor	Medicinal & Natural Product Chemistry
4	Ukwueze, Stanley E.	B.Pharm; M. Pharm; Ph.D.	Professor	Natural Products Chemistry & Pharmaceutical Analysis
5	Johnson-Ajinwo Okiemute R.	B.Sc.; M.Sc.; Ph.D.	Reader	Natural Products Chemistry
6	Ezealisiji, Kenneth M.	B.Pharm; M.Pharm., PhD	Reader	Pharmaceutical Analysis & Drug Design
7	Afierofo, Ozadheoghene E.	B.Sc.; M.Sc.; Ph.D.	Reader	Phytomedicinal Chemistry & Standardisation
8	Omotoso, Abayomi E.	B.Pharm; M.Sc.; Ph.D.	Senior Lecturer	Pharmaceutical Analysis, & Natural Products Chemistry
9	Obasi, Cecilia	B.Pharm; M.Sc.; Ph.D.	Senior Lecturer	Pharmacokinetics

*Adjunct Lecturer:

DEPARTMENT OF PHARMACEUTICAL MICROBIOLOGY AND BIOTECHNOLOGY

MASTERS DEGREE PROGRAM IN PHARMACEUTICAL MICROBIOLOGY AND BIOTECHNOLOGY

A. Introduction and philosophy of the program

Postgraduate study in the Department of Pharmaceutical Microbiology and Biotechnology is designed to offer intensive training in these special areas with emphasis on selected research programs that incorporate various applications of molecular microbiology, biotechnology and immunology into Pharmacy practice. Pharmaceutical microbiology is an applied microbiological research area in pharmacy practice and industries dealing with microbial characterization, design, manufacture and quality control of pharmaceutical products. It covers detailed studies of current and advanced antimicrobial drugs: classes, synthesis, mechanisms of action, and applications. Pharmaceutical biotechnology on the other hand involves the design, evaluation and delivery of biopharmaceutical products and their applications in disease management.

B. Vision and Mission:

Vision: To build first class human capacity in Pharmaceutical Microbiology and Biotechnology in Africa

Mission: To impart cutting-edge skills in Pharmaceutical Microbiology and Biotechnology to our students, preparing them to make a difference as scientists to their societies

C. Objectives of the program

The aims of postgraduate program in Pharmaceutical Microbiology and Biotechnology are as follows:

- i. To train postgraduate students in relevant techniques in Pharmaceutical Microbiology and Biotechnology
- ii. To prepare graduates to serve as pharmaceutical, microbiological and biotechnological scientists and/or educators, to provide significant contributions in any chosen pharmaceutical or biotechnological career in the pharmaceutical/food industry, academia, research institutes, hospitals and related federal and state ministries.

Specific Objective: To produce Master's degree graduates with specialized training in Pharmaceutical Microbiology and Biotechnology

D. Available program

The Department will run the following postgraduate programs of study:

- i. Master of Science (M.Sc.) in Pharmaceutical Microbiology and Biotechnology (area of specialization).

E. Areas of Research Specialization

- i. Pharmaceutical Microbiology and Infectious Disease Chemotherapy
- ii. Pharmaceutical Biotechnology, Immunology and Vaccinology
- iii. Formulation Microbiology and Evaluation of Antimicrobial agents

F. Admission requirement

All candidates seeking admission into any of our postgraduate degree program must possess a minimum entry requirement of five ordinary level credits in English Language, Mathematics, Chemistry, Biology and Physics obtained from the West African School Certificate (WASC), Senior Secondary Certificate Examination (SSCE) or its equivalent in not more than two sittings.

a. M.Sc. Program

The following requirements shall qualify a candidate for the M.Sc. admission:

- i. Graduates of the Faculty of Pharmaceutical Sciences, University of Port Harcourt or other recognized universities offering a minimum of Bachelor's degree in Pharmacy with a B. Pharm. Qualification.
- ii. Graduates of related disciplines who have obtained a Bachelor's degree with at least a second-class honours, lower division or its equivalent from recognized universities offering Bachelor's degree in Microbiology, Biochemistry, Biological Sciences, Biotechnology, Medical Laboratory Science, Medicine, Parasitology, Veterinary Medicine, Zoology or other related disciplines.

G. Mode of admission

Admission into the graduate programs of the department shall be by:

- a. Part Time (PT)
- b. Full Time (FT)

H. Duration of M.Sc. Program

- a. Part time students will be required to spend a minimum of 24 calendar months or a maximum of 36 calendar months.

- b. Full time students will be required to spend a minimum of 18 calendar months or a maximum of 24 calendar months.

K. Mode of Study of M.Sc. Program

M.Sc. program shall be by taught courses, tutorials, seminars and laboratory work. Each taught course will be examined by a three (3) hour written examination. The pass mark shall be 50% for all courses.

L. Course requirements

a. M.Sc. in Pharmaceutical Microbiology and Biotechnology

Candidates for the M.Sc. degree must take all the compulsory courses and some electives relevant to their area of specialization over 2 semesters with a total credit load of a maximum of 36 in the entire academic session. Candidates shall be expected to give at least 2 seminar presentations on current topical literature review and laboratory skill assessment.

First semester core courses:

- PHA 800.1: Biostatistics
- SGS 801.1: ICT and Research Methodology
- PMB 801.1: Public Health Pharmacy I (Bacteriology & Mycology)
- PMB 802.1: Advanced Biotechnology I (Microbial and human genetics; recombinant DNA and RNA technology)
- PMB 806.1: Seminar I

First semester optional/elective courses:

- PMB 803.1: Immunology
- PMB 804.1: Formulation Microbiology

PMB 805.1 Microbiological Quality Control of Pharmaceuticals

Second Semester core courses

- SGS 802.2: Management and Entrepreneurship
- PMB 807.2: Basic Bioinformatics
- PMB 808.2: Public Health Pharmacy II (Virology & Parasitology)
- PMB 809.2: Advanced Biotechnology II (Diagnostics and Bio-therapeutics)
- PMB 813.2: Seminar II
- PMB 814.2: Dissertation

Second Semester optional/elective courses

- PMB 810.2: Vaccinology
- PMB 811.2: Advanced Antimicrobial Chemotherapy
- PMB 812.2: Advanced Evaluation Methods for Antimicrobial Agents

NOTE: Candidates must take all the core courses for each semester. They are expected to choose at least one optional/elective course for each semester.

M. Outline of courses

1. Master of Science (M.Sc.) in Pharmaceutical Microbiology and Biotechnology

Area of specialization:

- i. Pharmaceutical Microbiology and Infectious Disease Chemotherapy
- ii. Pharmaceutical Biotechnology, Immunology and Vaccinology
- iii. Formulation Microbiology and Evaluation of Antimicrobial agent

First Semester of M.Sc. Program

Course Code	Course Title	Credit Units	Areas of Specialization		
			Pharmaceutical Microbiology and Infectious Disease Chemotherapy	Pharmaceutical Biotechnology, Immunology and Vaccinology	Formulation Microbiology and Evaluation of Antimicrobial agents
PHA 800.1	Biostatistics	3	Core	Core	Core
SGS 801.1	ICT and Research Methodology	2	Core	Core	Core

N. COURSE DESCRIPTION

PHA 800.1 Biostatistics (3 credits)

Study of the role and applications of statistics in Human Biology and Medicine. Data: Description, Types, and Presentation (Normal Distribution; Confidence Limits; Meaning and uses of statistics; Frequency distribution). Descriptive statistics: Measures of convergence and variance. Inferential statistics: *Student t-Test*, Analysis of variance (ANOVA), Chi-square, F-Test, etc. and application in analysis and interpretation of biological, pharmaceutical and medicinal research. Elements of probability: Theory and Applications. Elements of Distribution: Theory and Application. Tests of hypothesis, multiple groups, comparison, basic Sampling procedures including estimation of sample size; construction of basic experimental

designs and questionnaire design. Simple non-parametric and parametric tests, estimation, Point and interval estimation, Test of hypothesis, Regression and correlation. Design of Clinical and Preventive trials. Design of studies to evaluate effect of health programmes or control measures. Data editing, standardization, procedures, relative risks; errors and misclassification and observed variability; Analysis of vital statistical and demographic data; Survey of data processing. Study of various computer packages relevant in solving pharmaceutical and biomedical problems.

SGS 801.1 ICT and Research Methodology (2 credits)

- This course should cover essentials of spreadsheets, internet technology, statistical packages, precision and accuracy of estimates,

principles of scientific research, concept of hypothesis, formulation and testing, organization of research and report writing.

PMB 801.1 Public Health Pharmacy I (3 credits)

- Biology of various infectious diseases caused by **bacteria and fungi**: Pathophysiology of the disease, symptoms, complications, epidemiology, diagnosis, prevention, treatment, management and socio-economic impacts of the different infectious diseases studied.
- Different infectious diseases to be studied include those associated with various organs e.g., ear, nose and throat; central nervous system, gastro-intestinal tract, respiratory tract; uro-genital tract; nail, skin and soft tissue etc.

PMB 802.1 Advanced Biotechnology I (3 credits)

- A study of the current status of microbial genetics and genomics; biochemical bases for antimicrobial action, biochemical and genetic basis of microbial resistance to antimicrobial agents; strategies for combating microbial resistance to antimicrobial agents. The structure, properties, functions and biosynthesis of DNA, RNA and proteins. The genetic code and its relationship to cellular function. Elements of genetic engineering such as cloning strategies and bacterial transformation. Applications of recombinant DNA technology in the production of pharmaceuticals, biomedical and agricultural products.

PMB 803.1 Immunology (2 credits)

- Immunology – Lines of defense, cells of the human immune system, innate and adaptive immune system, complement system, MHC molecules
- Components of human immune system. Host's defense mechanisms against infections and the microbial evasive mechanisms. Innate and adaptive immunity. T-cell and B-cell-mediated immune responses. A detailed treatise of immunoglobulins and antibody systems; antibody structure; complement system; blood groups; hypersensitivity reactions; tissue Transplantation and immune response to tumours; prophylactic and therapeutic applications of immunological products.
- The concept of immunogenicity and immunomodulation and their relationship to immunology. Evaluation of potential immunomodulators. Adjuvants-their nature, properties and mechanisms of action.

Medicinal plants as sources of potential adjuvants, immunomodulators and adaptogens.

- Polyclonal and monoclonal antibody technology, production and uses.

PMB 804.1 Formulation Microbiology and process validation (2 credits)

- Microbial contamination of pharmaceutical products. Design of clean areas, surfaces, pipes and ducts, drains and sinks, provision of clean air; air samples clothing; changing facilities, disinfectants, frequency of cleaning and disinfection of equipment and operation.
- Physico-chemical, biopharmaceutical and therapeutic considerations in the design of dosage forms. Control methods to ensure standardization of antimicrobial agents in oral, topical and rectal dosage forms. Detailed studies of formulation, production and technology of parenteral products (injections and non-injectable sterile fluids), water for injections, Ophthalmic preparation, contact lens solutions, sterile dressings, implants and absorbable haemostats etc. Quality of water, pyrogen and pyrogenic requirements. Preservation of Pharmaceuticals, including multiphase systems.
- Formulation of antimicrobial agents and probiotics from natural products into pharmaceutical dosage forms. Evaluation, quality control and quality assurance of formulated products.

PMB 805.1 Microbiological Quality Control of Pharmaceuticals (2 credits)

- Disinfection, sterilization, preservation and aseptic techniques
- Types of autoclaves: the steam autoclave, vacuum pump autoclaves and ballasted autoclaves, spray-cooled autoclaves. Continuous versus discontinuous autoclaving; the economics of continuous autoclaving. The hydromantic sterilizer. Advanced studies on Ethylene Oxide, B-propiolactone, Formaldehyde, Ozone, Peracetic acid, methyl bromide, propylene glycol. Inactivation by ionizing radiation; sterilization of biotechnological products. A review of various sterilization protocols. Kinetics of thermal destruction or inactivation. Time-survivor curves. D-value, Z-value, F-value, Inactivation factor.
- Microbiological quality of sterile and non-sterile pharmaceuticals including evaluation of microbial load, sterility tests, pyrogen tests, assay of drug potency; microbiological quality of cell culture and other biotechnological media; Quality control in industrial fermentation processes; Review of various

official and non-official microbiological regulatory standards for pharmaceuticals; quality control of laminar flow cabinet;

- Sources and types of contamination in factories and hospitals, available preservatives and mechanisms of preservation; Current Good Manufacturing Practices (cGMP) that enhance microbiological quality of pharmaceuticals; Design of clean areas: Surfaces, Pipes and ducts, Drains and Sinks. Provision of clean air; Air samplers. Clothing, changing facilities. Disinfectant policy in hospitals and factories.

PMB 806.1 Seminar I: (1 credit)

- Presentation of a seminar on a selected topic after the approval of the supervisor and/or the Departmental PG Coordinator.
- This should also include attendance and contributions to all Departmental and Faculty Seminars.

SGS 801.2 Management and Entrepreneurship (2 credits)

- The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

PMB 807.2 Basic Bioinformatics (2 credits)

- What is bioinformatics? History and origin of bioinformatics. Definitions and scope of bioinformatics. Glossary of terms. Overview of bioinformatics and applications in biomedical research. Primer design; DNA sequence analysis; Protein sequence analysis
- Visualization of biomolecules using PyMol etc. History of the human genome project and important tropical pathogens such as plasmodium. Students should prepare an updated table of important genome projects. Basic skills in using the Web in bioinformatics. Definition and discussion of the 'omics', gene annotation, genome association studies. Pharmaceutical significance of bioinformatics. Examples of their application in the pharmaceutical sciences e.g., DNA barcodes. Gene annotation, Protein structure prediction, sequence analysis and alignment using TCoffee, DaliLiteetc, evolutionary and phylogenetic analysis, algorithms in protein analysis. Introduction to biological and chemical databases, molecular modeling and bioinformatics-based drug design (*in silico* drug design).

PMB 808.2 Public Health Pharmacy II (3 credits)

- Biology of various infectious diseases caused by **viruses and protozoa**: Pathophysiology of the disease, symptoms, complications, epidemiology, diagnosis, prevention, treatment, management and socio-economic impacts of the different infectious diseases studied.
- Different infectious diseases to be studied include those associated with various organs e.g., ear, nose and throat; central nervous system, gastro-intestinal tract, respiratory tract; uro-genital tract; nail, skin and soft tissue etc

PMB 809.2 Advanced Biotechnology II (2 credits)

- Application of biotechnology in diagnostics, biotherapeutics and gene therapy
- Recombinant DNA technology, Polymerase Chain Reaction (PCR), gene sequencing, reporter gene-based assay techniques, ELISA, flow cytometry, Western, Southern and Northern blotting, agarose- and SDS-gel electrophoresis-based methods, microarray techniques; protein purification, bioinformatics, proteomic and genomic tools used in disease diagnosis or detection of microbial infection.
- Principle of Gene therapy; Historical perspectives and current status; viral and non-viral vectors used in gene therapy; applications of gene therapy in the treatment of various diseases; suicide gene therapy; regulatory aspects in the applications of gene therapy technology.
- Introduction into biotherapeutics and bioprocessing. Examples of biotherapeutics/ biotech / biologics and biopharmaceuticals. Biotherapeutics discovery and development. Application of advanced biotechnological processes such as immune therapeutics, recombinant gene and genetic engineering to achieve specific and targeted therapy. Application of biotechnology in biotherapeutics.

PMB 810.2 Vaccinology (2 credits)

- Vaccinology – antigens, antibodies, T cells, vaccines, adjuvants, vaccine development, immunotherapy
- The history of vaccination, the concept of vaccination, Description of various classes of vaccines including live-attenuated, inactivated, sub-unit vaccines and recombinant DNA/RNA vaccines. Recombinant subunit vaccine design, and development. New techniques for vaccine development. In vitro methods of evaluating vaccines such as gene expression studies, protein expression studies via Western

blotting, ELISA, flow cytometry; evaluation of immunogenicity in vitro and in animal models; preclinical evaluation of vaccines (safety and efficacy studies in animals); clinical trials of vaccines. Prophylactic and therapeutic applications of vaccines and immunological products.

- A concise review of various immunological products such as vaccines, immunosera, human immunoglobulins, adjuvants and monoclonal antibodies including techniques for their manufacture. Quality control of immunological products-in-process and final product control including identity tests, potency assay, safety tests, sterility tests, pyrogen tests and other tests of general application.

PMB 811.2 Advanced Antimicrobial Chemotherapy (2 credits)

- Antimicrobial chemotherapy for infectious diseases caused by bacteria, fungi, viruses and protozoa
- Structure, physiology and biochemistry of microorganisms (bacteria, fungi, viruses, protozoa) of biomedical importance with particular emphases on microbial targets of conventional and novel antimicrobials and possible economic importance of the microbes; Microbial isolation and characterization; classification and evaluation of antimicrobial agents; Sterile pharmaceuticals; immunity and immune responses; antigen-antibody reactions.
- Molecular basis of antimicrobial resistance. The genes and proteins that are involved in various antimicrobial resistance patterns. Consequences of antimicrobial resistance, prevention strategies, diagnosis, treatment and management of antimicrobial resistance. Stewardship programs in hospital and out-patient settings to monitor and control antimicrobial resistance.

PMB 812.2 Advanced Evaluation Methods for Antimicrobial Agents

- Evaluation of antimicrobial agents from microbes, synthetic compounds and natural products
- Evaluation of biotherapeutic agents e.g., probiotics, bacteriocins etc.
- A review of various sterilization protocols. Kinetics of thermal destruction or inactivation. Time-survivor curves. D-value, Z-value, F-value, Inactivation factor.
- A detailed discussion of the various diverse sources of antimicrobial agents including microorganisms, lower plants, higher plants, vertebrates, invertebrates and other miscellaneous sources such as chemical

synthesis, examples and properties/spectrum of antimicrobial agents from these sources would be highlighted. Properties of the ideal antimicrobial agent. In vitro methods of evaluating Disinfectants, Antiseptics, Preservatives, Antibiotics including (but not limited to) the phenol coefficient tests, Kelsey-Sykes and improved Kelsey-Sykes tests, Microbial Challenge Tests, MIC, MBC; evaluation of antimicrobial interactions using various methods- checkerboard, Decimal Assay for Additivity (DAA), Time kill, overlay inoculum susceptibility disc test method; Principles and applications of antibiotic bioassay; culture and sensitivity test. Animal models for evaluating the efficacy of various antibacterial and antifungal drugs.

- A survey of basic laboratory equipment; Preparation of buffers and culture media for bacteriological, mycological, virological and protozoal studies; Modern techniques for identification of microorganisms; A detailed study of theories and applications of various microbiological and biotechnological research techniques including agar diffusion assay, broth dilution assay, kill kinetics, etc.

PMB 813.2 Seminar II: Laboratory Skill Assessment (1 Credit)

- This involves participation in the preparation and instruction of undergraduate practical classes in Pharmaceutical Microbiology and Biotechnology as a teaching assistant followed by the submission of a written report in the form of a log book or term paper. Principles, practice, modes and methods of scientific communication, communicating scientific findings to the public, Manuscript preparation for scientific journal – philosophy and principles, multimedia presentations
- This should also include attendance and contributions to all Departmental and Faculty Seminars.

PMB 814.2 Dissertation (6 credits)

- Submission of a thesis after carrying out a research project. The review of literature, methods, results, discussions and relevance of the project must contribute to the overall knowledge and insight of Pharmaceutical Microbiology and Biotechnology.

Minimum Credits for Graduation

- a. Candidates for M.Sc. must complete and pass a minimum of 36 credits that includes a total of 28 credits of course work, 2 credits of seminar, and 6 credits of research work to be embodied in a written thesis.

- b. Minimum pass mark for all courses shall be 50%.
- c. Assessment for each course shall be via continuous assessment (which shall constitute 30%) and a final examination (which shall constitute 70%).

ACADEMIC STAFF

Name	Qualification	Ranks	Area of Specialization
Prof. C. N. Stanley	B. Pharm. (UNN), M.Sc. (Uniport), Ph. D. (UNN)	Professor	Pharmaceutical Biotechnology, Antimicrobial Resistance and Chemotherapy
Dr. N. E. Ezenobi	B.Sc. (Uniport), M.Sc. (Uniport), Ph. D. (Uniport)	Senior Lecturer	Microbiology
Dr. C. N. E. Ibezim	B.Sc. (Benin), B. Pharm (Benin), M. Pharm. (UNN), Ph. D (NAU, Awka).	Lecturer I	Pharmaceutical Biotechnology, Metagenomics and Probiotics
Dr. A. M. Awanye	B. Pharm. (UNN), M.Sc. (Sheffield-Hallam University, UK), Ph. D. (University of Manchester,UK)	Lecturer I	Immunology, Vaccinology, Biotechnology and Molecular Biology
*Prof. H. O. Stanley	B.Sc. (Uniport), M.Sc. (AAU, Akungba, Ondo State, Ph. D. (RSU, Port Harcourt)	Professor	Mushroom Biotechnology, Pollution studies, Bioremediation and waste management
*Dr. I. O. Okonko	B.Sc. Microbiology (FUNAAB), M.Sc. (Ibadan), Ph. D (EBSU).	Reader	Microbiology, Virology, Immunology
*Prof. K. C. Ugoeze	B. Pharm. (UNN), M. Pharm. (UNN), Ph. D. (UNN).	Professor	Pharmaceutics, Excipient Development and Formulation Science
*Prof. I. Chijioke-Nwuche	B. Pharm. (UNN), M.Sc. (Uniport), Ph. D (University of London). PharmD (Benin)	Professor	Clinical Pharmacy, Public Health Pharmacy
*Dr. K. Ezealisiji	B. Pharm. (Unijos), M. Pharm. (UNN), Ph. D. (UNN)	Reader	Nano-Biotechnology

* External facilitators

INSTITUTE OF NATURAL MEDICINE (INM) FACULTY OF PHARMACEUTICAL SCIENCES

INTRODUCTION OF POST GRADUATE DIPLOMA PROGRAMME IN NATURAL MEDICINE TECHNOLOGY

Background

The Senate of the University of Port Harcourt at its 396th meeting held in February, 2014 approved the establishment of the Institute of Natural Medicine (INM) to be coordinated by the Faculty of Pharmaceutical Sciences (See attached: UPH/REG.178). The core mandate of the institute is to undertake research and training of requisite manpower to tackle some of the diseases that either currently defy orthodox clinical approaches or could be well managed using alternative medical practices, INM was therefore established to coordinate research in various faculties and departments that have to do with natural medicines.

The institute is to actualize this core mandate by providing operational structure for collaboration that would offer opportunity for the University to be involved in the training, developing, grading and certifying of Traditional Medicine Practitioners (TMPs) and other health care providers involved in the science and art of herbal and other forms of alternative and complementary medicines as well as serve as a hub for documenting, systematizing and rationalizing the use of African traditional medicine in tackling emergent diseases that seem to defy orthodox treatment.

In pursuance of the mandate of the institute (which is still at the formative state), the Faculty of Pharmaceutical Sciences, through her Department of Pharmacognosy and Phytotherapy's collaboration initiatives with some private partners, have established a Central Research Laboratory for Phytomedicines which will be made available and accessible for use in this collaboration with the INM for the take-off of the Post-Graduate Diploma programme in Natural Medicine Technology (PGDNMT) when approved by the University Senate. The Laboratory would be made accessible to the institute for the practical aspect of the taught PGDNMT programme. Other laboratories include Drug Quality Control, as well as Microbiology and Biotechnology and the animal housing facility in the faculty of Pharmaceutical Sciences.

Considering the multi-disciplinary nature of this PGDNMT programme, the manpower would be drawn from the existing academic staff from the various departments and faculties in the University of Port Harcourt that have course related to natural

and alternative medicines sourcing, cultivation, propagation, production, standardization, drug design, dosing and administration. Registered Traditional medicine Practitioners in Nigeria would also be involved in the training of candidates enlisted for the programme. A memorandum of Understanding initiative is currently on-going through the office of the Deputy Vice Chancellor (Academic).

COURSE REQUIREMENTS FOR THE POST-GRADUATE DIPLOMA IN NATURAL MEDICINE TECHNOLOGY (PGDNMT) PROGRAMME

OVERVIEW, PURPOSE AND JUSTIFICATION FOR THE PROGRAMME

This program is designed for individuals with degree and Higher National Diploma in life, chemical, agricultural, health and pharmaceutical sciences or those with other equivalent degrees with at least 5 years of verifiable experience in traditional medicine practice who are interested in public health education, alternative/traditional medicine practice and herbal product production and sales.

The use of plants as source of relief from pain or illness is doubtless an art that is as old as mankind. Virtually all the drugs (synthetic and semi-synthetic) in clinical use today have their ancestry from plants or other natural sources. Notable among them are the antibacterial penicillin analogues, antimalarial quinine and artemisinin analogues, the anticoagulant warfarin analogues, and the anticancer podophyllotoxin and taxol analogues just to mention a few.

In recent decades, there is an increased demand for alternative medicines. The efficacy of a number of herbal recipes used in traditional medicine practice for the treatment of diseases, have been partly responsible for this renewed interest in the use of herbal medicines.

Herbal medicine is one of the most popular aspect of traditional and alternative medicine. Though an integral part of cultural practice, it is the most accessible and amenable to scientific research. However, the main limitation to its incorporation as an integral part of mainstream health care in Nigeria is the problem of acceptability, standardization of products, appropriate dosing and apparent absence of good manufacturing practices.

Pharmacy has many disciplines and specializations that deal with drugs from natural sources (plants, animals, micro-organisms, inorganic matter).

Pharmacognosy and Phytotherapy is one of such and has the teaching of herbal and other natural/alternative medicine as the bulk of its curriculum. Other disciplines and specializations like: Pharmaceutical and Medicinal Chemistry, Pharmacology/Toxicology, Pharmaceutics/Pharmaceutical Technology, Pharmaceutical Microbiology & Biotechnology, and Clinical Pharmacy Administration/Management extensively covered and routinely taught under pharmacy, are equally involved in the integral science and technology involved in the sourcing, processing, manufacturing, packaging, distribution, quality assessment and standardization, safety, stability on storage, and administration of natural and alternative medicines. Thus the Faculty of Pharmaceutical Sciences qualifies as the most appropriate host to coordinate the programme.

The philosophy of the programme is to produce alternative healthcare professionals who provide health care using locally available resources. The programme will equip participants with the necessary tools on how to apply the knowledge of science and technology for sustainable development of natural medicines in Nigeria. The curriculum will emphasize on the sourcing, and standardization of natural medicines in addition to the introduction of good manufacturing, formulation and dosing practices to practitioners. This is in a bid to achieve the “Health for all” Millennium development goal (MDG) by the World Health Organisation (WHO) which is geared towards bringing health care services closer to the grassroot by the introduction of standardized alternative medicines alongside orthodox medicines.

Objectives of the programme

The main objectives of the programme are:

1. To modernize the practice of natural/alternative medicines in Nigeria through the introduction of science and technology
2. To provide a platform for the training of alternative health care providers in Nigeria in good manufacturing practice, standardization, safe and efficacious use of natural medicinal products and dietary supplements in Nigeria

GOALS/LEARNING OUTCOMES

Individuals who complete the Postgraduate Diploma in Natural Medicine Technology will be able to:

1. Describe the safe and appropriate use of a limited number of natural medicinal products such as herbs, products from animals, and nutraceutical/dietary supplements within the framework of a wellness-based model of healthcare.

2. Identify local herbs in the field for harvesting and manufacturing of herbal and food preparations.
3. Determine safety concerns of herb-herb and herb-drug interactions for herbal product users.
4. To identify other natural products in the environment used for the management of diseases.
5. To develop techniques and skills used for the formulation of natural products as medicines

PROGRAM FORMAT

This program shall be taught in semester modules. Each of the two semester modules contains required credits courses aggregating to 39 **Required Credits**. It can be completed in twelve (12) calendar months.

MODULE I- FIRST SEMESTER

Course Code	Course Title	Credit Units
ING 700.1	Introduction to Traditional and Alternative Medicine	3.0
ING 701.1	Fundamentals of Botany (Plant taxonomy, physiology and Sustainability strategies)	3.0
ING 702.1	Fundamentals of Clinical Nutrition	3.0
ING 703.1	Basic Human Biology (Anatomy and Physiology)	3.0
ING 704.1	Ethics and Regulation in Traditional medicine Practice	2.0
ING 705.1	Alternative Medicine Financing	2.0
ING 706.1	Fundamentals of Research methods, ICT and Biostatistics	3.0
ING 707.1	Introduction to Public Health	2.0

MODULE II- SECOND SEMESTER

Course Code	Course Title	Credit Units
ING 708.2	Natural Medicinal Products Formulation and Manufacturing	3.0
ING 709.2	Standardization and Toxicological evaluation of Natural Medicines	3.0
ING 710.2	Natural Medicinal Products Chemistry	3.0
ING 711.2	Ethnomedicines: Symptoms evaluation and treatments	3.0
ING 712.2	Research Project	6.0

Total Credits Units for the Post-Graduate Diploma in Natural Medicines Technology -39.0

ADMISSION REQUIREMENTS

To be considered for admission to the professional post graduate diploma in Natural Medicine Technology, applicants must have a Bachelor's degree or HND from a recognized institution in life, chemical, agricultural, health and pharmaceutical sciences. Also to be considered for admission is a candidate with any other Bachelor or equivalent degrees who must have had at least 5 years of verifiable experience in traditional medicine and showing verifiable interest in public health education, alternative/traditional medicine practice and herbal medicines production and sales.

COURSE CONTENT/DESCRIPTION

ING 700.1: Introduction to Traditional and Alternative Medicine (3.0 Credit Units)

Introduction to traditional medicines. Definitions; incantation, medicinal plants, herbalist traditional medical practitioners. Advantages and limitations of traditional medicines. Methods and techniques. Definition of terms, Traditional Medicine: Past and Present. Role of traditional medicine in health care delivery in Africa. African Traditional Healer, The Categorization of Traditional Healers: The Diviner, The Herbalist, Spiritual or Faith Healers, Traditional Birth Attendants. Specialists. General Features Common to all Categories: The Healer's Fee, The Traditional Healer's Medicines.

Herbal Medicine Practice: History & Background, Some Terminologies used in Herbal Medicine such as: Abortifacient, Acrid, Adaptogen, Alexeritic, Alterative, Antibilious, Anticatarrhal, Antidote, Antifungal, Antiemetic, Antihelmintic, Antihydrotic, Anti-inflammatory, Antibiotic/antimicrobial, Materia medica/Therapeutic herbalism. Traditional medicine as a veritable source of new drugs, lead compounds and new methods of treatment.

Faith healing: Various Belief System such as 1. Christianity: Overview, New testament, Pentecostalism/Christianity movement, Catholicism, Christian science, The church of Jesus Christ of latter day saints. Criticism of faith healing, Negative impact of faith healing on public health • Christian theological criticism of faith healing. Islam, Scientology and Scientific investigation

Hands-on practical/skill exposure on topics covered in ING 700.1 shall be undertaken through collaborative field-trips visitations to registered

traditional/alternative and complementary medicine centres.

ING 701.1: Fundamentals of Botany (Plant taxonomy, physiology and Sustainability strategies) (3.0 Credit Units)

Historical background of taxonomy: the natural system and the value of character. Phonetic and phylogenetic concept in taxonomy including rules and nomenclature, the categories in taxonomy. Evolution, identification of flowering plants. Taxonomic data processing and presentation which will include collection of plants; preparation of herbarium specimens. Geographical and morphological methods in presentation of data, literature mapping, tabulation, symbolic and graphical methods. Identification: keys, comparison with named materials, nomenclature. Use of methods of numerical taxonomy in construction of taxonomic groups. Relevance of taxonomy in plant identification and usage.

The microscope and its use. Optical principles and techniques; macroscopy, microscopy and chemomicroscopy. Basic plant histology, micromorphology and anatomy of barks, roots, herbs, leaves, fruits, flowers, seeds and rhizomes. Examples from Nigerian flora. The cell and cell wall structure. Cell inclusions.

Laboratory exposure on topics covered in ING 701.1 such as use of microscope, techniques in microscopy and chemomicroscopy of organized vegetable drugs.

ING 702.1: Fundamentals of Clinical Nutrition (3.0 Credit Units)

Nutrients: Macro and Micro nutrients. Essential and Non-essential nutrients. Carbohydrates foods, Proteins foods, Vitamins-rich foods, Water-rich foods, Fats (saturated and unsaturated fats) containing foods. History of human Nutrition and the concept of nutritional Medicine. Overview and strategies of Nutritional medicine in the tropics. Anthropometric measurement. Diets and Nutritional medicine: Nutritional reversal of chronic low grade inflammation, Nutritional therapy for Diabetes, Nutritional therapy for Hypertension, Nutritional therapy Auto immune disease, Nutritional therapy for Cancer, Principles of therapeutic juicing, clinical Nutrition Therapy, Clinical Nutrition Ethics. Alkaline therapy, Mineral therapy, Vitamin therapy, Water therapy, Relevant exercises and Nutritional Therapy, Acid-Base balance in the body, detoxification using foods, Gut science, pre-biotics and probiotics, Antioxidants, Concept of super foods, Immunity and immune boosters.

Laboratory investigation and interpretation on topics covered in ING 702.1

ING 703.1: Basic Human Biology (Anatomy and Physiology) (3.0 Credit Units)

Introduction to anatomy, basic organization of the human body; a study of human biological structure at various levels of complexity, from sub-cellular to gross and microscope structure of individual organ systems; structure-function correlations are emphasized. Integument system, circulatory system, lymphoid system, alimentary system, musculoskeletal system, respiratory system, genital system, endocrine system, organs of special senses.

Introduction and Blood Physiology; body fluids, Cell Physiology, Transport system, Excitable cells, Contractile tissues; Homeostasis, Control system; Introduction to Autonomic Nervous system. Cardiovascular and Respiratory Physiology; cardiac muscle, ECG, Homodynamic. Systemic circulations; Events in cardiac cycle; Heart rate and its control; Blood pressure; Cardiac output. Respiratory Physiology; introduction to mechanics of respiration; lung volume; Gas tensions; oxygen transport; oxygen dissociation curve; carbon dioxide transport; carbon dioxide dissociation curve; Nervous regulation of respiration; Chemoreceptor; Hypoxia; Hyperpnoea; Periodic respiration; Dyspnoea; Cyanosis.

ING 704.1: Ethics and Regulation in Traditional medicine Practice (2.0 Credit Units)

Regulatory requirements for standardization of natural medicinal products (WHO, NAFDAC and other regulatory bodies). The role of the alternative medicine practitioner in health care. Concepts of clinical practice. Inter-professional relationship; medical terms abbreviations, laboratory values and interpretations as related to disease. Patient education and counseling, rational use of drugs. The alternative and complimentary medicine Practitioner and the Law. Code of Ethics and Rules of Practice in relation to biodiversity prospecting and conservation on medicinal plants and other sources of natural medicines.

ING 705.1: Alternative Medicine Practice Financing (2.0 Credit Units)

Management Essentials for Alternative and Complimentary Health Practitioners: Fundamental principles of business management, managerial skills required for effective and sustainable traditional and natural medicine practice. Creating and managing Health Care Value by Alternative Medicine practitioners.

Marketing and Promotion: Essential Principles of marketing, marketing strategies in health care, the Four "Ps" of marketing, Market segmentation, Branding and relationship marketing. Purchasing and inventory management.

Finance: Basic principles of organizational budget planning, funding and financial management as applicable to sustainable alternative and natural medicine practice. Basic accounting principles. Understanding income statements and balance sheets for financial reporting. Cost control strategies, record keeping and ratio analysis.

Entrepreneurship and intrapreneurship: Entrepreneurship success indicators, micro and macro views of entrepreneurship, process approaches, starting a new enterprise; venture routes, financing and plans, venture idea generation and evaluation. Creating and developing the venture. Business plan development.

ING 706.1: Fundamentals of Research methods, ICT and Biostatistics (3.0 Credit Units)

Basic computing skill (MS Office), Literature search, and surveys, Basic principles of statistics and their application in public health research. Data collection and analysis, measure of central tendencies (Mean mode, median), measures of dispersion (variance, standard deviation). Pictorial statistics (Histogram, bar chart, pie chart), Probability testing, student test, ANOVA, Chi square, regression analysis. Use of statistical softwares and packages

ING 707.1. Introduction to Public Health

Principles and concept of Primary Health Care (PHC); Drug use and abuse of alternative medicines, public health concerns about the abuse of complementary and alternative medicines.

Integrated and well-articulated Information, Education and Communication in Primary Health Care.

Family planning management; contraception and infertility.

Preventive Medicine: Communicable and non-communicable diseases including: malaria, HIV/AIDS; STIs; Tuberculosis etc. with emphasis on the roles of Complementary and alternative Medicines practitioners in their effective management.

New Drug development: Pre-clinical and clinical stages of new drug development. Design and development of clinical trials. Post marketing surveillance and adverse drug reaction reporting

ING 708.2: Natural Medicinal Products Formulation and Manufacturing (3.0 Credit Units)

Parts of a prescription. Common pharmaceutical Latin phrases. Some fundamental measurement and calculations of doses, dilution and concentrations, density, specific gravity and

volumes. The concepts of solution and their types: Isotonic solutions, electrolyte solutions, constituted solutions etc.

Classes of pharmaceutical preparations, liquid-aromatic waters, aqueous and non-aqueous solutions, infusions, liquid extracts, lotions, gargles, douches, flavours, tinctures, adjuvants, colours, astringents, stock solutions and dilution techniques. Suspensions, emulsions, aerosols, solid and semi-solid, powders, granules, tablets, capsules, creams, gels, ointments, paste and suppositories.

Sterilization - Principles and processes; sterilization methods, etc. Sterile preparations - Types of sterile products; quality control and quality assurance of sterile products (bioburden, sterility, pyrogen,

The principles and practical aspects of pilot scale preparation/manufacturing of herbal lotions/creams, infusions, decoctions, suppositories, pessaries, solid dosage formulation like: tablets, hard/soft gelatin capsules (emphasis on granulations, direct compression, description of types of tablets available as dosage forms etc) and inhalation products. Packaging- (glass, plastic, metallic and paper). Importance of packaging-protection transportation and friability testing and stability. Packaging determined by product type and mode of administration on packages. Kinetics and stability studies of drug products. Shelf life of drugs. Pharmacokinetic principles in dosage form design and evaluation: Dissolution and disintegration of drug products in-vitro, in-vivo correlation. Dosage calculations based on age, surface area and weight.

Laboratory/practical exposure for topics covered in ING 708.2

ING 709.2: Standardization and Toxicological Evaluation of Natural Medicines (3.0 Credit Units)

Evaluation and standardization of vegetable drugs and herbal remedies. Biomarker identification. Quality assurance with respect to identity, purity and potency. Ash determinations Extractive values. Determination of residual moisture in dried vegetable drugs using Dean-Stark apparatus, Karl-Fischer titrimetric methods. Microbiological safety evaluation such as coliform count. Biological and physico-chemical assays of herbal products. Toxicological safety evaluation: Introduction; origin and scope of toxicology. Toxicological Evaluation; Purpose and value of LD₅₀ determination. Evaluation of some environmental toxic substances; Pesticides residues; cyanides etc. Monograph compilation. The Traditional medicine pharmacopoeia.

Prospects and problems of standardization of herbal remedies. Chemical races and variations Laboratory/practical exposure for topics covered in ING 709.2

ING 710.2: Natural Medicinal Products Chemistry (3.0 Credit Units)

Introduction to basic natural products chemistry: review of indigenous methods of extraction of chemical components from natural products in the form of infusions, decoctions and other extraction methods such as steam extraction of volatile oils for therapeutic inhalation.

Chemical nature, classification, sources, biogenesis and therapeutic relevance of chemicals (metabolites) produced by medicinal plants and other organisms such as: alkaloids, essential oils, resins, triterpenoids, phenolics, cardenolides, saponins etc.

Modern methods of extraction, detection and separation of natural products constituents using basic instruments.

Laboratory exposure on the application of the methods taught in ING 710.2 in the chemical analysis of drugs of natural origin.

ING 711.2: Ethnomedicines, Symptoms evaluation and treatments (3.0 Credit Units)

Ethnomedicinal uses of natural products such as plants, animals, etc in Africa and other continents. Some common medicinal plants of local importance. Methods of obtaining information on medicinal plants. Scientific evidence supporting some remedies. Common poisonous plants and fungi in Nigeria.

Diagnostics Methods: physical Inspection, mental status, Skin colour, General appearance, Tongue, Inspection of infants finger venules, Chills/ fever, Perspiration, Excretion and secretion, Auscultation and Olfaction: Auscultation, Voice, Respiratory sounds, Cough, Olfaction, Pulse taking and palpation. • Inquiry: General approach, Contents of inquiry, Major complain, Present illness, Past history, Personal life style and preferences, Family history etc.

Clinical diagnosis and application of phytotherapy in endocrine and hormonal disorders, GIT disorders, inflammation and diseases of Nervous system, degeneration and ageing, cardiovascular, respiratory and renal health, Infectious diseases-bacterial, fungal and viral, Gynaecology, Pediatric and fertility disorders, malaria, haematological and dermatological disorders, ENT, Eye and mental health.

Clinical Laboratory exposure/field trips to alternative medicine homes to acquire practical

skills on the application of the methods taught in ING 711.2

ING 712.2: Research Project (6.0 Credit Units)

Each student is expected to carry out an individual research project supervised by an academic staff.

Such project **which must be product development based**, will be assigned after successful completion of module I (First Semester).

ACADEMIC STAFF LIST FOR THE PGDNMT PROGRAMME

S/N	Name	Degree	Area of Specialization	Designation
1	Prof. Jonah Sydney Aprioku	B.Pharm. M.Sc, Ph.D, MPSN	Pharmacology and Toxicology	Professor (Dean Faculty of Pharmaceutical Sc.)
2	Prof. Buniyaminu A. Ayinde	B.Sc, M.Sc, Ph.D	Medicinal plant research, drug discovery from nature and standardization of phytomedicines	Professor
3	Prof. Ogbonna Okorie	B.Pharm, M.Pharm. Ph.D, MPSN	Drug formulation and delivery	Professor
4	Prof. Vincent Idemyor	Pharm.D	Clinical pharmacy	Professor
5	Prof. L. Nwidu	B.Pharm. M.Sc, Ph.D MPSN,	Ethnopharmacology	Professor
6	Prof. A.R.O Kilani	B.A, M.A, Ph.D	Islamic studies and contemporary issues	Professor
7	Prof. K. Owete	B.A, M.A, Ph.D	African Traditional Religion and contemporary issues	Professor
8	Prof. A. Oladele	B.Sc., M.Sc. Ph.D	Ethnobotany	Professor
9	Prof. (Mrs) C.N Stanley	B.Pharm, M.Pharm. Ph.D, MPSN	Microbiology and Biotechnology	Professor
10	Prof. K.C. Ugoeze	B.Pharm, M.Pharm. Ph.D, MPSN	Pharmaceutical Raw materials Development/Drug/Phytopharmaceutical/nutraceuticals formulation & delivery	Professor
11	Prof. I.N. Chijioke-Nwauche	B.Pharm, M.Sc. PGD. MI, Ph.D,	Clinical Pharmacy/Management	Professor
12	Prof. Stanley E. Ukwueze	B.Pharm, M.Pharm. Ph.D, MPSN	Natural Medicinal Product Chemistry, Drug Quality Control & Analysis	Professor
13	Prof. B. Ordinioha	MB.BS, FMCPh, MD	Environmental Health, History of Medicine	Professor
14	Dr Ozadheoghene E. Aferoho	B.Sc, MSc, Ph.D, MRSC, MNSP, MICCON	Natural Products/Phytomedicinal/ functional foods Chemistry and Pharmaceutical Analysis	Reader
15	Dr. K.M. Ezealisiji	B.Pharm, M.Pharm. Ph.D, MPSN	Nanodrug formulation	Reader
16	Dr Nkechi Ezenobi	B.Sc, MSc, Ph.D	Microbiology and Biotechnology	Senior Lecturer
17	Dr. Chimezie Ekeke	B.Sc., M.Sc. Ph.D	Plant Taxonomy and Biosystematics	Senior Lecturer
18	Dr. O.E. Bui	B.Sc, MSc, Ph.D	Biostatistics	Senior Lecturer
19	Dr. M. Suleiman	B.Sc, MSc, Ph.D, MNSP,	Medicinal plant research, drug discovery from nature, standardization of herbal and alternative medicine practice	Lecturer I
20	Dr Blessing A. Odogwu	B.Sc., M.Sc. Ph.D	Plant Science and Biotechnology	Lecturer I
21	Dr M. Alagala	Pharm.D, MBA, Ph.D, MPSN	Clinical Pharmacy and Management	Lecturer I
22	Mr. N.A. Elechi	B.Pharm, M.Sc. MPSN	Pharmacognosy and Phytotherapy	Lecturer I
23	Mr. B.A. Adewoyin	B.Pharm, M.Sc MPSN	Pharmacognosy and Phytotherapy	Lecturer I

24	Mr. L. Okwubie	B.Pharm, M.Pharm. MPSN	Pharmacognosy Phytotherapy	and	Lecturer 1
25	*Registered Traditional/Altern ative medicine practitioners				

*Seasoned practitioners registered with the Rivers State traditional medicine board shall be incorporated to provide hands on practical and mentoring skills. A MOU initiative is currently on-going through the office of the Deputy Vice Chancellor (Academic).

FACULTY OF AGRICULTURE

DEPARTMENT OF CROP AND SOIL SCIENCE

A. M.SC PROGRAMME IN CROP SCIENCE

Introduction

The programme is designed for students wishing to pursue a higher degree in Crop Science with specializations in Crop Breeding and Genetics, Field Crop Production/Farming Systems, Crop Physiology, Horticulture and Weed Science. Consequently, the degree shall be awarded in the five broad areas or options thus:

Crop Breeding and Genetics
Crop Physiology
Field Crops Production and Farming Systems
Horticulture and Landscaping)
Weed Science

Philosophy

The philosophy of Academic Master's Degree programmes in Crop Science in the University of Port Harcourt; is to produce quality and competent graduates with broad-based skills and capacity to contribute in developing practical solution to the problems of Agriculture, as it relates to crop production and food security .

Vision/Mission

A graduate from this programme would have acquired sufficient knowledge and practical skills to enable him to:

- Engage in teaching, research and community outreach activities in the field of Crop Production at various levels (private sector, ministries of agriculture, research organizations, universities, NGOs, etc.)
- Work as professionals in farms, research institutes and other governmental and nongovernmental organizations
- Advise decision makers in formulating agricultural policies
- Generate appropriate technologies for crop production through research

Rationale/Justification

The Niger Delta region hosts a number of Higher Education Institutions (HEIs) and many of these have agriculture as a major discipline. In addition, agriculture is the main occupation of the inhabitants of the region. However, there is a dearth of experts to promote agripreneurship and train the manpower required in the region. Also, the HEIs currently offering agriculture in the region lack the necessary curriculum that would

provide trainees with specialized skills and knowledge that are relevant in today's technology-driven society. This is why this programme is apt.

Objectives of the programme

The objectives of postgraduate training in Crop Science are to:

- Produce well qualified and competent graduates having strong theoretical knowledge and practical skills in Crop Production for providing service to farmers and industry in crop management and to conduct quality research in agriculture, rangeland, forestry and biodiversity.
- Generate highly skilled manpower that is capable of developing appropriate technologies in different aspects of crop production and management through problem-oriented and need-driven research work.
- Improve national food security through the availability of adequate number of crop production and management experts that will provide efficient crop improvement options to increase food security conserve populations of beneficial species and improve biodiversity.

Admission requirement

Candidates seeking admission into the programme must:

- Have a Bachelor of Agriculture or a Bachelor of Science in Crop Science, Horticulture, Agronomy and Forestry or in related fields from a recognized University with at least a second class lower division.
- Have a Bachelor degree in any of the agricultural disciplines listed above with a CGPA of less than 3.00 on a 5-point scale or Bachelor degree in a related science with a CGPA of 3.00 plus a PGD in Crop and Soil science with a minimum CGPA of 3.50 or HND (Upper credit) in a relevant agricultural discipline plus PGD in Crop and Soil science with a minimum CGPA of 3.50.
- Fulfill the general requirements as contained in the brochure of the College of Graduate Studies

Programme duration

Candidate may register for full-time or part-time studies.

- **Full time students:** -12 calendar months minimum and 24 months max.

- **Part-time students:** 24 calendar months minimum and 48 months max.

Graduation requirement

The student is expected to pass the prescribed courses and defend the thesis.

Requirements for Graduation

Students must have fulfilled the following conditions to be awarded the Academic Master's Degree in Crop Science:

- a) Pass a minimum of 36 Credits made up of the following

Course	Units
Core	12
Electives	12
Project	10
Special topics	2
Total	36

However, Students may register for additional courses from any option, as elective, to meet research needs

- b) Carried out a research project relevant to the area of specialization and submitted an acceptable project report.

Option 1: Crop Breeding and Genetics

First Semester

Course Code	Course Title	Units
Compulsory Courses		
SGS 801.1	ICT and Research method	2
CSS 802.1	Biometrics and Experimental Design	2
Core Courses		
CPS 801.1	Biometrical genetics	2
CPS 803.1	Breeding for pests and diseases resistance	2
CPS 804.1	Advanced plant breeding	2
*Electives		
CSS 801.1	Research and Communication in Agriculture	2
CPS 802.1	Crop Plant Evolution	2
CPS 805.1	Advanced genetics/cytogenetics	2
CPS 806.1	Tissue culture techniques in relation to Plant Breeding	2
Total		18

*Note: Students are to select a minimum of two (2) electives per semester

Second Semester

NEW COURSE STRUCTURE

CODE	Course Title-NEW	Units
Compulsory Courses		
CSS 800.2	Seminars	2
SGS 801.2	Entrepreneurship and Management	2
CPS 899	Thesis/Dissertation	10
*Electives		
CPS 807.2	Physiological Genetics in Plant Breeding	2
CPS 808.2	Seed science and technology	2
CPS 809.2	Plant genetic resource conservation	2
CPS 810.2	Crop modeling	2
TOTAL		22

*Note: Students are to select a minimum of two (2) electives per semester

Option 2: Crop Physiology

First Semester

Course code	Course title	Units
Compulsory Courses		
SGS 801.1	ICT and Research method	2
CSS 802.1	Biometrics and Experimental Design	2
Core Courses		
CPS 812.1	Crop Physiology	2
CPS 813.1	Plant nutrition	2
Electives		
CSS 801.1	Research and Communication in Agriculture	2
CPS 814.1	Plant Metabolism and Bioenergetics	2
CPS 815.1	Crop Ecology	2
CPS 816.1	Seed Physiology	2
TOTAL		18

Note: Students do not have to take all Crop Physiology electives. Also, students may select course from other options or programme where necessary. For molecular basis of physiology, elective(s) may be picked from Genetics and Breeding option.

SECOND SEMESTER COURSES

NEW COURSE STRUCTURE

Code	Course Title	Units
Compulsory Courses		
CPS 800.2	Seminars	2
SGS 801.2	Entrepreneurship and Management	2
CPS 899	Thesis/Dissertation	10
Core Courses		
CPS 819.2	Instrumentation and Methods in Agronomy	2

Electives		
CPS 817.2	Post-harvest Physiology	2
CPS 818.2	Impact Assessment in Agroecosystem	2
CPS 820.2	Crop Growth and Yield Analysis	2
Total		22

CPS 820.2	Crop Growth and Yield Analysis	2
CPP 820.2	Advanced Crop Disease Management	2
Total		22

*Students are expected to choose electives not less than 6 units in consultation with their supervisors

Note. Students do not have to take all Crop Physiology electives. Also, students may select course from other options or programmes where necessary. For molecular basis of physiology, elective(s) may be picked from Genetics and Breeding option.

Option 3: Field Crops Production and Farming Systems

COURSES CODE AND TITLE

First Semester

Course Code	Course Title	Units
Compulsory Courses		
SGS 801.1	ICT and Research Method	2
CSS 802.1	Biometrics And Experimental Design	2
Core Courses		
CPS 811.1	Advance Farming Systems	2
CPS 812.1	Crop Physiology	2
Electives		
CSS 801.1	Research and Communication in Agriculture	2
SOS 808.1	Soil Fertility and Plant Nutrition	2
CPS 829.1	Weed Systems and Management	2
CPS 804.1	Advanced plant breeding	2
CPS 823.1	Advanced Fruit Production	2
Total		18

*Students are expected to choose electives not less than 6 units in consultation with their supervisors Considering specialty.

Second Semester

Course code	Course Title	Units
Compulsory Courses		
CSS 800.2	Seminars	2
SGS 801.2	Entrepreneurship and Management	2
CPS 899	Thesis/Dissertation	10
Core Courses		
CPS 821.2	Advanced Crop Production	2
Electives Courses		
CPS 808.2	Seed Science and Technology	2

Option 4: Horticulture and Landscaping

First Semester

Course code	Course Title-New	Credit units
Compulsory Courses		
SGS 801.1	ICT and Research methods	2
CSS 802.1	Biometrics and Experimental Design	2
Core Courses		
CPS 822.1	Advanced Olericulture	2
CPS 823.1	Advanced Fruit Production	2
Electives		
CSS 801.1	Research and communication in Agriculture	2
CPS 824.1	Floral Arrangement and Post-Harvest Handling of Cut Flowers	2
CPS 811.1	Advanced Farming Systems	2
CPS 813.1	Plant Nutrition	2
CPS 829.1	Weed Systems and Management	2
Total		19

*Students are expected to choose electives not less than 6 units in consultation with their supervisors considering specialty.

Second Semester

Course code	Course Title	Credit units
Compulsory Courses		
CSS 800.2	Seminar	2
CPS 899	Thesis	10
SGS 801.2	Entrepreneurship and management	2
Core Courses		
CPS 826.2	Advanced Floriculture and Landscaping	2
Electives		
CPS 817.2	Postharvest Physiology	2
CPS 825.2	Horticulture Enterprise Development	2
CPS 827.2	Production Technology of Spices, Aromatic and Medicinal crops	2

Total **22**

Option 5: Weed Science

First Semester

Course code	Course Title	Units
Compulsory Courses		
SGS 801.1	ICT and Research Method	2
CSS 802.1	Biometrics And Experimental Design	2
Core Courses		
CPS 828.1	Weed Biology and Ecology	2
CPS 829.1	Weed Systems and Management	2
Electives		
CSS 801.1	Research and Communication in Agriculture	2
CPP 801.1	Pesticides in Agriculture and Environment	2
CPS 811.1	Advanced Farming Systems	2
SOS 808.1	Advanced Soil Fertility and Plant Nutrition	2
Total		16

*Students are expected to choose electives not less than 6 units per semester in consultation with their supervisors considering specialty.

SECOND SEMESTER

Course code	Course Title	Units
Compulsory Courses		
CSS 800.2	Seminar	2
SGS 801.2	Entrepreneurship and Management	2
CPS 899	Thesis /Dissertation	10
Core Courses		
CPS 830.2	Herbicide Application and Mechanism of Action	2
Electives		
CPS 831.2	Weed Research Techniques	2
CPS 806.2	Pests and Beneficial Organisms in Agriculture	2
CPS 820.2	Crop Growth and Yield Analysis	2
SOS 818.2	Pesticides in Soils	2
Total		24

*Students are expected to choose electives not less than 6 units per semester in consultation with their supervisors considering specialty.

COURSE AND DESCRIPTION

SGS 801.1 ICT and Research Method (2 units)

CSS 801.1 Research and Communication in Agriculture (2 units)

Over-view of Agricultural Research for Development – types of research (basic and applied). The Research – Development Nexus. The challenges of Agricultural Research and Technology Development in Nigeria. Key considerations for Agricultural Research. . Presentation of research results – types of experimental design data and type of presentation – tabular, line graph, bar chart, etc. Communication channels in Agricultural Research (Journals, proceedings, technical or annual reports, book chapters, etc.). Oral presentation-power point, slide presentation etc. Nature of communication - research articles, review, bulletins, functions of the components of a typical scientific communication (title, author and address, abstract/ summary, introduction, materials and methods, results, results/ discussion, references). Reference styles in agricultural research. Participatory Research and Extension Approach (PREA)?

CSS 802.1. Biometrics and Experimental Design (2 units)

The scientific method of research-Observations, and characteristics of well-planned experiments. Steps and technical considerations in Experimentation. Experimental designs Data transformation. Data analysis- the Analysis of variance: one-factor and two-factor (ANOVA). Simple linear regression, comparing simple linear regression equations, simple linear correlation. One-sample and two-sample hypotheses (student's t test). Indices for evaluation of multiple cropping systems- LER, Relative crowding coefficient and Aggressivity. Test of significance and mean comparison- The least significant difference test; multiple, Comparison– Duncan's Multiple Range Test (DMRT) and others. The Tukey test; The Newman – Keuls Test. Non-parametric tests- Mann–Whitney test, Wilcoxon paired-sample test; Kruskal–Wallis test. Toxicological statistics; probity analysis. On-farm Experimentation

CPS 801.1 Biometrical genetics (2 units)

Biometrical genetics and use of biometrical methods in plant breeding research. Study and analysis of quantitative variation components of heritable variation. Heritability, heterosis, epistasis and correlated responses. Design and analysis of diallel experiments. Maternal inheritance. Other

statistical concepts used for the analysis of polygenic variation.

CPS 802.1 Crop plant evolution (3 units)

Origin of cultivated plants; centers of diversity, sources of variability mutation/hybridization; changes in chromosome number, polyploidy and aneuploidy. Breeding systems. The role of the environment.

CPS 803.1 Breeding for pest and diseases resistance (2 units)

Breeding methodologies for horizontal and vertical resistance, Gene-by-gene concept, Van der Plank concept. Screening methodologies, Boom-bust concept.

CPS 804.1 Advanced plant breeding (2 units)

Aims and procedure for improvement. Genetic basis for selection; breeding system, concepts of heterosis and heritability. Conventional strategies for improvement of quantitative inheritance and evidence in support, in – breeding, out- breeding and vegetatively propagated crops. Specialized techniques, Polyploidy, hybridization and mutation breeding, chromosomes addition and substitution, lines, breeding for disease resistance. Multiplication, evaluation, registration and maintenance of improved varieties. Breeder's right. Biotechnology applied to crop improvement; plant tissue culture, Molecular strategies for crop improvement; crop genetic transformation.

CPS 805.1 Advanced genetics/cytogenetics (2 units)

Quantitative genetics, Chemistry of the nuclei and chromosomes. Chromosomes replication and cell division. Ultrastructure of cell organelles. Gene control and regulation; heterochromatization, B Chromosomes, gene amplification and DNA redundancy. Chromosome pairing rules, changes in structure and number, recent advances in cytogenetics.

CPS 806.1. Tissue culture techniques in relation to Plant Breeding (2 units)

CPS 806.2 Tissue culture techniques in relation to plant breeding (2 units)

Definition of tissue culture. The tissue culture laboratory, design, equipment and supplement, maintenance, culture media, composition, preparation, choice of media. Limitation and maintenance of callus. Choice of explants. Preparations and sterilization of explants. Callus induction, subculture and maintenance suspension cultures. Tissue culture techniques, anther and pollen culture techniques, plantlets regeneration techniques, protoplast fission. Root cultures, meristem cultures, micropropagation in the shoot

apex. Embryogenesis, organogenesis and plant regeneration. Isolation, manipulation of plant protoplast. Somatic hybridization. Selection of somatic hybrid plants. Transformation of plants using protoplast systems. Selection of plant cells for desirable characteristics. Haploid cell culture embryo rescue and uses. Secondary metabolites production by cell suspension cultures. Cryopreservation and storage of germplasm.

SGS 801.2 Entrepreneurship and Management (2 units)

CSS 800.2 Seminars (2 units)

Students will review and present topics relevant to their areas of specialization. The selection of topics shall be done in consultation with their supervisors.

CPS 807.2 Physiological Genetics in Plant Breeding (2 units)

A consideration of genetics, biochemical and molecular mechanisms influencing variation in plant physiological processes such as photosynthesis, respiration, self-incompatibility, heterosis and yield. Role of environmental factors and their mediation through biochemical and molecular processes in phenotypic expressions, emphasis through the course will be on application in plant breeding.

CPS 808.2 Seed Science and Technology (2 units)

Seed and its importance in crop production, physiology and genetic qualities of seed. Types of seed and production techniques. Breeders, Foundation and Certified seed production and their maintenance. Seed multiplication, field management and maintenance practices for crop seed production. Seed processing and quality evaluation. Seed treatments, seed storage and marketing.

CPS 809.2 Plant Genetic Resource Conservation (2 units)

Status of genetic diversity in Africa. The need to conserve PGRs. Exploration, collection, characteristics and evaluation of germplasm. In situ germplasm conservation; parks, ranges, reserves etc. Ex situ gene bank establishment. Orthodox and recalcitrant seed storage and cryopreservation of embryo seed and in vitro culture.

CPS 810.2 Crop modeling (2 units)

Crop modeling; **Concept of crop modelling**, stages of model building, types and properties of models, **limitations of models**, crop models for modeling flowering times, crop growth and development etc.

CPS 811.1. Advanced Farming systems (2 units)

Concepts of a farming system, factors determining farming systems – physical, biological, socioeconomic and technological environment. Basis for farming systems in the tropics. Shifting cultivation system, semi-permanent cultivation system, ley farming system, mixed farming system, Alley farming system, permanent cultivation system under rain-fed situation, irrigation, irrigation farming system, tropical small-scale farming – general characteristics, strength and weakness, case studies including nomadic pastoralism, fallow rotation, dairying. Effects of systems on soil productivity, development possibilities for tropical farming systems. Technique for design and analysis of on-farm experimentation; and diagnosis in farming system research and field practices. Major cropping system in the tropics: cropping systems based on spatial factors – sole cropping, intercropping; systems based on temporal factors – phased planting, crop rotation; system based on spatial/temporal factor – relay cropping. Alley – cropping, agro-forestry (taungya systems), ratoon cropping. Evaluation of mixed cropping (intercropping) and other systems. Upland cropping system, wet land cropping (fadama) system, irrigated cropping system

CPS 812.1 Crop Physiology (2 units)

Physiological processes in crop growth and development, Crop responses to internal and environmental factors, *i.e.*, light, temperature, humidity, day length etc. Crop stress physiology.

CPS 813.1 Plant Nutrition (2 units)

Mineral uptake and metabolism, deficiencies and toxicities, energetics and metabolic coupling of active transport, genetic and ecological aspects of plant nutrition. Recent advances in plant nutritional physiology and soil-root nutrient interactions in relation to plant metabolism and crop yield.

CPS 814.1 Plant Metabolism and Bioenergetics (2 units)

Biological architecture; mitochondria and chloroplast, oxidation and reduction reactions, oxidizing and reducing sugars, thermodynamics of energy in plant systems, biosynthesis of carbohydrates, fats, proteins etc., respiration and its regulation, agricultural application of bioenergetics.

CPS 815.1 Crop Ecology (2 units)

Definition, Crop ecology and its division, Different fields of ecology, plant ecology and other branches of science, Application of crop ecology. Main environmental or ecological factors -

climatic, edaphic or soil factors, physiographic factors, biotic factors, Ecosystem - components and functions of ecosystem, Energy and its flow in ecosystem. Study of communities – community compositions and classification. Plant community structure. Plant adaptations – hydrophytes, xerophytes, mesophytes, halophytes and mangrove vegetation, Environmental pollution – water pollution, Air pollution, agricultural pollution, Radiation pollution, thermal pollution, Acid Rain, air quality and air quality index.

CPS 816.1 Seed Physiology (2 units)

Physiology of seed development; seed formation, maturity. Source/sink relation and the supply of nutrients affecting seed yield, quality, tolerance, seed storage, longevity, deterioration, germination, and imbibition, and reserve mobilization, hormonal and environmental regulation. Advances in seed technology.

CPS 817.2 Post harvest physiology (2 units)

Field cultural practices in relation to the reduction of post-harvest losses. Factors that affect the postharvest life of produce. Pre-cooling, sorting, grading, packing and transit handling operations in relation to quality and storage life of produce. Respiration, heat building up and moisture loss in harvested produce. Physical and chemical indices of quality in fruits, seeds, vegetables and other crop products. Preservation methods: storage atmosphere and technology of storage. Climacteric and non-climacteric fruits. Ripening and senescence. The importance and role of ethylene and other plant hormones in fruit industries. Prolonging the shelf life and storage life of fruits, vegetables and flowers. Traditional methods of vegetables processing and storage. Storage and shelf life problems. Controlled environment for transit and long term storage. Protective treatments, design and operation of equipment for storage and preservation.

CPS 818.2 Impact assessment in agroecosystem (2 units)

Concept of sustainable crop production. Types and methods of impact assessment. Environmental impact assessment: principle, application and process. Practical: perform EIA of the conversion of arable crop land to energy crop production, use known methods, e.g. GMP-RAM to carry out EIA of a new GM crop, evaluate the impact of the introduction of a new crop or of a named natural disaster.

CPS 819.2 Instrumentation and Methods in Agronomy (2 unit)

Field and laboratory methods of soil/plant tissue analysis: sampling, sample preparation and analyses, routine and special methods of soil /plant tissue analyses. Principles of photometry,

spectrometry, microscopy, measurement of leaf chlorophyll, leaf area, leaf temperature etc., and control environment crop production techniques. Assessment of current technological introductions in crop growth evaluation- use of sensors and artificial intelligence *etc.* Crop physiological techniques in crop improvement.

CPS 820. 2 Crop Growth and Yield Analysis (2 units)

Sigmoid growth curve, Leibig law of the Minimum, Blackman optima and limiting factors, Mitscherlich law of diminishing returns, Macy critical percentage. Physiological basis of crop yield, leaf area development, concept of optimum leaf area index (LAI), leaf number, size, orientation, photosynthetic efficiency, effect of canopy architecture on crop yield, factors affecting sink capacity and strength, sink-source relationship, grain growth and development and senescence. Measurements: leaf area, LAI and seed growth rate, effective seed filling duration from linear regression, economical and biological yields. Yield analysis.

CPS 821. 2 Advanced Crop Production (2 units)

Physiological origins of crop yield. Management practices employed in crop production for crops including cereals, legumes, vegetables, roots and tubers, tree crops, ornamentals, fibre crops, forages and pastures and turf, herbs and spices. Soil and nutrient management practices for crop production. Farming systems – traditional and modern concepts. Fertiliser management in cropping systems. Research methods in cropping systems. Role of environmental factors in management practices involving crop production. . Enhancement and measurement of productivity, sustainability, stability and equitability of cropping systems.

CPS 822.1 Advanced Olericulture (2 units)

Definition of Terms; Importance of vegetables and mushroom in human diet; Vegetable regions and climatic requirements; Seed treatment, preparation of germination media; Containers and growing of nurseries of different vegetables and mushroom species; Hardening of seedlings; Soil requirement, planting and after care, manures, fertigation, irrigation, intercultural operations such as; weeding, mulching, training and pruning. Use of plant growth regulators, harvesting, post-harvest handling, curing, storage, marketing and exports of leafy, fruit, root vegetable crops and mushrooms. Types of vegetable gardening and site selection for vegetable production; Fundamentals of mycoscience. **PRACTICAL**, Identification and description of different varieties of vegetables; Planning and layout of commercial vegetable

garden; Visit to commercial vegetable gardens, identification of different species of mushrooms.

CPS 823.1 Advanced Fruit Production (2 units)

THEORY: Selection of varieties, commercial propagation methods, root stocks for different purposes, preparation of field, digging and filling of pits, role of high density planting, training and pruning, nutrient, water requirements through open as well as drip irrigation. Weed control, mulching, flowering and fruit set. Use of growth regulators of various purposes, harvest indices, harvesting techniques, pre-harvest treatments, post-harvest management, grading and packing for internal and export markets and storage of major fruit crops like mango, banana, citrus, guava, papaya and apple. **PRACTICAL:** Commercial propagation methods in Avocado Pear, mango, citrus and guava; fertilizer application and field observation of deficiency symptoms of micro nutrient in major fruit crops; irrigation and fertigation practices in fruit crops. Canopy management in Avocado Pear (pruning, training, application of paclobutrazol *etc.*); Training and pruning studies in grape; Studies on flower and fruit drop and their control in mango and citrus; papain extraction in *Papaya*; Hormonal application to improve fruit set, fruit thinning, fruit size and quality in major fruit crops; Harvest indices in selected fruits; harvesting methods in fruit crops; Desaping, pre-cooling, grading and pelletization and storage in mango; Ripening methods in mango, banana; cold storage studies for different fruits. Visits to commercial orchards, local cold storage and export units of fruits. Working out cost: benefit ratios for mango, citrus, banana and other fruit crops.

CPS 824. 1 Flower Arranging and Post-Harvest Handling of Cut/Dried Flowers (2 units)

Significance of post-harvest technology in curbing the post-harvest losses for extending the post-harvest vase of cut and dried flower; Pre-harvest and post-harvest factors in determining the post-harvest quality of cut and dried flower; Water relations, ultra-structural and biochemical changes in extending the vase life of cut and dried flowers; Ethylene and senescence; Micro-organisms and their role in water relations of cut and dried flowers; Pre-cooling and pulsing. Different holding solutions for extending vase life of cut and dried flowers; Temperature and respiration on cut flowers; Methods of transport of cut and dried flowers to domestic, long distance and international markets; Post-harvest physiological disorder and control measures in extending the post-harvest quality of cut and dried flowers; Flower arranging for different occasions and principles underlying basic floral designs.

PRACTICAL: Harvesting techniques for different cut and dried flowers to prolong the post-harvest vase life period; Preparation of different holding solutions, growth regulators, natural floral preservatives and trade products; Determination of water uptake, transpiration loss of water, water balance and fresh weight change in cut and dried flowers during vase life period; Visits to commercial greenhouses / high-tech floriculture projects, local flower markets and cold storages.

CPS 825. 2 Horticulture Enterprise Development (2 units)

Concept of commercial mushroom farm; Science of bioconversion; Design of mushroom houses; Techniques in mushroom production. Value addition and advances in mushroom production. Importance of mycorium, design and planning.

CPS 826.2 Advanced Floriculture and Landscaping (2 units)

Definition and classification of plants -Botanical nomenclature and plant morphology; Classification of ornamental plants based on location/site and aesthetic parts; Urban environments and plants that grow in urban landscape; Recognition, identification of representative ornamental plants, selection and use of ornamental plants in designed landscapes and urban horticulture; planting plans, planting design, design use of major plant groups; Establishment and management of ornamental plants; Introduction to floral arrangement. General importance of flowers, economic importance of flower production; classification of flowers and ornamental plants; Planting material and seed production in flower plants, cut flower species, culture, flower arranging, dried flowers, growing of succulents, Cacti – propagation, growth requirements, care; Growing potted plants; Growing bedding plants; Growing cut flowers: Roses; Importance of ornamental gardens; Planning of ornamental gardens; Types and styles of ornamental gardens; Use of trees, shrubs, climbers, palms, house plants and seasonal flowers in the gardens; Package of practices for propagation of major commercial flowers:- Rose, Jasmine, Chrysanthemum, gladiolus, gerbera, marigold and tuberose; Home care of cut flowers.

CPS 827. 2. Production Technology of Spices, Aromatic and Medicinal Crops (2 units)

Importance and cultivation technology of spices – ginger, turmeric, pepper, garlic, cardanion, coriander, cumin, black pepper; Aromatic crops - lemon grass, *Ocimum*, Aidon tree, *Gongronima latifolium*; Medicinal plants – *Ocimum*, periwinkle, aloe. **Practical:** Botanical description and identification of aromatic plants, varieties in spices and medicinal crops; propagation

techniques in aromatic and spice crops. Distillation procedures for aromatic crops. Propagation and planting methods in turmeric and ginger. Harvesting procedures in aromatic plants; Processing and curing of spices (ginger, turmeric and black pepper); Procedures for oleoresin extraction. Visit to local and commercial plantations. Aromatic and medicinal plant nurseries and seed spices field.

CPS 828.1 Weed Biology and Ecology (2 units)

Reproduction and dispersal of weeds. Principles of weed ecology and physiology. The physio-chemical and biotic factors affecting weeds and plant community in nature and ecological method. Persistence and survival mechanisms of weeds. Competition between crops and major weeds. Crop losses due to critical periods and densities of weeds. Weed Taxonomy and identification. Description of major weeds prevalent in Nigeria agro-ecological systems and other weed systems. Weed population dynamics

CPS 829.1 Weed Systems and Management (2 units)

Importance of weed in the ecosystem. Environmental weeds, Aquatic weeds, Rangeland weeds, and cropping weeds. Principles and practices of weed management in field, horticultural and plantation crops; wasteland and waterways. Strategies and tools of weed management, Influence of climatic, biotic and abiotic factors on the effectiveness of different weed management strategies. Management of invasive weeds.

CPS 830.2: Herbicides: Application and Mechanism of Action (2 units)

Classification and characteristics of herbicides, herbicide formulations and scope of use; and mode of action, herbicide metabolism and translocation (plant system (Organ, tissue and cell) and development). Herbicides, chemical structures, properties and methods of synthesis of the major groups of herbicides, herbicide selectivity and mechanism of herbicides activity (including plant response to herbicide combinations) .Methods of estimation of herbicides fate, residue and ecological problems of persistence. Toxicity, persistence, resistance, limitations in the use of herbicides, hazards, precautions and effect on environment (soil and plant interaction and movement). Application equipment, principles, use and maintenance. Field application of herbicides and safety requirement.

CPP 831.2 Weed Research Techniques (2 units)

Techniques in laboratory, greenhouse, and field experimentation in weed science. Experimental designs, data collection and measurement of plant

response, data processing, analysis and reporting. Modern techniques in herbicide absorption, translocation and sorption, metabolism and degradation studies. Herbicide assay and formulation experiments.

CPP 801.1 Pesticides in Agriculture and Environment (2 units)

The different kinds of pesticides and pests, historical development of chemical pesticides - the growth in global use and the shape of the industry. Application equipment, principles, use and maintenance. Physico-chemical factors – The design of a pesticide, formulation, selectivity. Method of application – Dusting, seed treatment, spraying, fumigation. Translocation of pesticides in plants. Behavior of pesticides in soil. Important biochemical reactions in pesticides. The cell and its components; Respiration; Photosynthesis. Transmission of nervous impulses. Transport and biological processes in plants. Biosynthesis of nucleic acids and protein, some pesticides acting by interference with biosynthesis. Classes of pesticides – Insecticides, Herbicides, fungicides, their chemical structure and characteristics, mode of action, methods of application. Pesticides in the environment - Effects on non-target organisms (mammals, birds, fish). Effect on natural enemies, wildlife; Induction of resistance in pests. Accumulation in food chain and biomagnifications. Pesticide residue and hazard to ecosystems; contamination of air, soil and water. Method of estimation of herbicide residues. Field application of pesticides and safety requirement. Application equipment, principles, use and maintenance.

CPP 821.2 Advanced Crop Disease Management (2 units)

Principles of plant disease control. The disease triangle. Epidemiology. Phytotoxicity. How plants defend themselves. A review of the various methods of plant disease control. Merits and demerits of the various methods

SOS 808.1 Advanced Soil Fertility and Plant Nutrition (2 units)

Description of soil-plant continuum. Plant system: root-uptake-translocation of nutrients. Mechanism of nutrient absorption and translocation. Absorption (osmosis, diffusion, mass flow, cation exchange). The carrier hypothesis, solute transport at the cellular level, energy sources for active transport. Role of organic matter in soil-fertility. Evaluation of soil nutrient supply (Laboratory, Green house and Field methods). Fertilizers: their use, environmental effect and evaluation, cropping systems, and soil management.

SOS 818.2 Pesticides in soil (2 units)

Major groups of pesticides, processes affecting pesticides in soil including sorption. Degradation and elimination; transport of pesticides in soil and uptake by plants; pesticides persistence; effects on soil organisms and crop damage, techniques involving analysis of pesticides residue in soils.

CPS 899: Thesis/Dissertation (10 units)

B. M. SC PROGRAMME IN CROP PROTECTION

Introduction

The programme is designed for students wishing to pursue a higher degree in crop protection with specializations in Agricultural Entomology, Crop Pathology, Plant Nematology and Weed Science. Consequently, the degree shall be awarded in the three broad areas namely:

Agricultural Entomology
Crop Pathology
Plant Nematology

Philosophy

To train students with broad-based skills and capacity to utilize scientific knowledge in developing practical solutions to the problems of agricultural pests and diseases.

Vision/ Mission

A graduate from this programme would have acquired sufficient knowledge and practical skills to enable him to:

- Engage in teaching, research and community outreach activities in the field of Crop Protection and general pest management at various levels [private sector, ministries of agriculture, research organizations, universities, Non-Governmental Organizations (NGO) etc.]
- Work as professionals in farms, research institutes and other NGOs
- Advise decision makers in formulating agricultural policies
- Generate appropriate technologies for crop protection through research

Rationale/justification

The Niger Delta region hosts a number of Higher Education Institutions (HEIs) and many of these have agriculture as a major discipline. In addition, agriculture remains the main occupation of the inhabitants of the region. There is dearth of experts who can promote agripreneurship and train required manpower in the region. The HEIs currently offering agriculture in the region lack the necessary curriculum that would provide trainees with a specialized skills and knowledge that are

relevant in today's technology-driven society. This is why the proposed programme is apt.

Objectives of the Programme

The objectives of postgraduate training in Crop Protection are to:

- Produce well qualified and competent graduates having strong theoretical knowledge and practical skills in Crop Protection for providing service to farmers and industry in pest management and to conduct quality research in agriculture, rangeland, forestry and biodiversity.
- Generate highly skilled manpower that are capable of developing appropriate technologies in different aspects of pest management through problem-oriented and need-driven research work.
- Improve national food security through the availability of adequate number of pest management experts that will provide efficient control of crop pests, conserve populations of beneficial species and protect the environment and biodiversity.

Admission requirements

Candidates seeking admission into the programme must:

- Have a Bachelor of Agriculture or a Bachelor of Science in Crop Science, Horticulture, Agronomy and Forestry or in related fields from a recognized University with at least a second class lower division.
- Have a Bachelor degree in any of the agricultural disciplines listed above with a CGPA of not less than 3.00 on a 5-point scale or Bachelor degree in a related science with a CGPA of 3.00 plus a PGD in Crop and Soil science with a minimum CGPA of 3.50 or HND (Upper credit) in a relevant agricultural discipline plus PGD in Crop and Soil science with a minimum CGPD of 3.50.
- Fulfill the general requirements as contained in the brochure of the College of Graduate Studies

Programme duration

The programme is available on both full-time and part-time basis. For full-time studies, the programme shall last for a minimum of 12 calendar months and a maximum of 24 calendar months; while the part-time programme shall last for a minimum of 24 calendar months and a maximum of 48 calendar months.

Graduation requirements

The student is expected to pass the prescribed courses and defend the research project

Requirements for Graduation

A candidate must have fulfilled the following conditions to be awarded the MSc in Crop Protection Degree:

- a) Pass a minimum of 36 Credits made up of the following

Course	Units
Core	12
Electives	12
Project	10
Special topics	2
Total	36

- b) Carried out a research project relevant to the area of specialization and submitted an acceptable project report.

OPTION 1: Agricultural Entomology

First Semester

NEW COURSE STRUCTURE

Course Code	Course title	Units
-------------	--------------	-------

Compulsory Courses

SGS 801.1	ICT and Research Method	2
CSS 802.1	Biometrics And Experimental Design	2

Core Courses

CPP 802.1	Insect Morphology	2
CPP 803.1	Insect Physiology and Biochemistry	2

COURSE TITLES AND DESCRIPTION				
Students will review and present topics relevant to their areas of specialization. The selection of topics shall be done in consultation with their supervisors.				

SGS 801.1 ICT and Research Method (2 units)

CSS 801.1 Research and Communication in Agriculture (2 units)

Over-view of Agricultural Research for Development – types of research (basic and applied). The Research – Development Nexus. The challenges of Agricultural Research and Technology Development in Nigeria. Key considerations for Agricultural Research. . Presentation of research results – types of experimental design data and type of presentation – tabular, line graph, bar chart, etc. Communication channels in Agricultural Research (Journals, proceedings, technical or annual reports, book chapters, etc). Oral presentation-power point, slide presentation etc. Nature of communication - research articles, review, bulletins, functions of the components of a typical scientific communication (title, author and address, abstract/ summary, introduction, materials and methods, results, results/ discussion, references). Reference styles in agricultural research. Participatory Research and Extension Approach (PREA)?

CSS 802.1. Biometrics and Experimental Design (2 units)

The scientific method of research-Observations, and characteristics of well-planned experiments. Steps and technical considerations in Experimentation. Experimental designs Data transformation. Data analysis- the Analysis of variance: one-factor and two-factor (ANOVA). Simple linear regression, comparing simple linear regression equations, simple linear correlation. One-sample and two-sample hypotheses (student's t test). Indices for evaluation of multiple cropping systems-LER, Relative crowding coefficient and aggressivity. Test of significance and mean comparison- The least significant difference test; multiple, Comparison– Duncan's Multiple Range Test (DMRT) and others. The Tukey test; The Newman – Keuls Test. Non-parametric tests- Mann–Whitney test, Wilcoxon paired-sample test; Kruskal–Wallis test. Toxicological statistics; probity analysis. On-farm Experimentation

CPP 801.1 Pesticides in Agriculture and Environment (2 units)

The different kinds of pesticides and pests, historical development of chemical pesticides - the growth in global use and the shape of the industry. Application equipment, principles, use and maintenance. Physico-chemical factors – The design of a pesticide, formulation, selectivity. Method of application – Dusting, seed treatment, spraying, fumigation. Translocation of pesticides in plants. Behavior of pesticides in soil. Important

biochemical reactions in pesticides. The cell and its components; Respiration; Photosynthesis. Transmission of nervous impulses. Transport and biological processes in plants. Biosynthesis of nucleic acids and protein, some pesticides acting by interference with biosynthesis. Classes of pesticides – Insecticides, Herbicides, fungicides, their chemical structure and characteristics, mode of action, methods of application. Pesticides in the environment - Effects on non-target organisms (mammals, birds, fish). Effect on natural enemies, wildlife; Induction of resistance in pests. Accumulation in food chain and biomagnifications. Pesticide residue and hazard to ecosystems; contamination of air, soil and water. Method of estimation of herbicide residues. Field application of pesticides and safety requirement. Application equipment, principles, use and maintenance.

CPP 802.1 Insect Morphology (2 units)

Basic organization and evolution of the insect head and mouthparts, antenna, other appendages and their functions. Modifications of the insect neck and thorax including adaptations of legs and wings; major modifications of spiracles and tracheae. Appendages and processes of the abdomen, including detailed treatment of the genitalia. Stridulation. Morphological modification of the alimentary, respiratory, reproductive and nervous system in insects.

CPP 803.1 Insect Physiology and Biochemistry (2 units)

Embryonic and post-embryonic development. The insect integument; the molting process and development. Locomotion with emphasis on flight. Feeding in insects. Excretion, circulation, respiration and reproduction. Nervous system and its integration with the endocrine system. Perception in insects. Bioluminescence. Colours in insects, with emphasis on mimicry and camouflage. Other defense mechanisms. General introduction to insect metabolism: Production of energy from carbohydrates, lipids and amino acids. Energy utilization in biosynthesis, flight (flight muscle) and light generation. Metabolism of nitrogenous compounds including purines, pteridines, pyrroles, proteins and nucleic acids. Insect hormones, their structure and modes of action and their biochemical activities: moulting hormones e.g ecdysone, juvenile hormones. Pheromones, use of pheromones in pest management. Mode of action of insecticides, with emphasis on the biochemistry of nerve impulse conduction. Biochemistry of insecticide resistance mechanisms.

CPP 804.1 Insect Ecology (2 units)

Practical and theoretical aspects of ecology. Properties of populations; methods of estimating population size and population dispersion. Sampling techniques. Measurement and description of factors regulating populations. Construction and analysis of life tables and their application. Biotic associations and community structure. Intra and inter - specific competition, prey-predator, and host-parasite relations as applied to pest management. Insect-plant interactions, multilevel interactions and their underlying theories. Social systems and behaviour in insects. Seasonal phenomena in tropical insects: Pest migrations and over seasoning. Impact of pesticides on the environment and community: environmental impact assessment, environmental laws. Ecological foundations of the analysis of biological control. Population modeling and systems analysis, climate change and insect populations and communities.

CPP 805.1 Agricultural Soil Biology (2 units)

The role of soil biota in agriculture. Organisms composing the soil biota - microbes (bacteria, fungi actinomycetes, etc.), algae, arthropods, earthworms, etc. The physiology and biochemistry of soil microbial population; the general ecology of the soil biota. The association between plants and microorganisms: rhizosphere, hydrosphere, mycorrhiza. Influence of agriculture on soil biota activity; strategies for the management of beneficial and noxious soil biota. Assessment and monitoring of soil biota population, pesticides and soil biota. Remediation of polluted soils by soil biota; soil biota as bio-indicators.

CSS 800.2 Seminar (2 units)

SGS 802.2 Entrepreneurship and Management (2 units)

CPP 806.2 Pests and Beneficial Organisms in Urban Agriculture (2 units)

Characteristics and practice of urban and peri-urban agriculture – vegetable, fruit and fruit-tree cultivation market, gardening, etc, Pests (insects, disease organisms and weeds) associated with urban agriculture with emphasis on biology, damage and management; conservation of natural enemies and pollinators. Pollination biology. Social insects (honey bee, termite and ant) their organization and economic importance. Identification, biology and management of household, structural, stored product and processed food pests and their natural enemies.

CPP 807.2 Insect Systematics and Bioinformatics (2 units)

Taxonomy, Classification and Nomenclature. The species concept and its application, speciation. Taxonomic hierarchy and higher systematics of

insects. Phylogenetic. Sources of published taxonomic data. Taxonomic research and nature of taxonomic data. Taxonomic characters and techniques: biosystematics, cytotaxonomy, bioacoustics, numerical taxonomy, chemical taxonomy and molecular taxonomy. New trends in taxonomic methods and techniques. Automated taxonomic tools and information system. Construction and uses of taxonomic keys. Classification and identification of major orders of insects of agricultural importance. International conventions and biodiversity. Importance of taxonomy and curatorial techniques.

CPP 808.2 Insect Pest Management (2 units)

The concept of pest; pest status and appreciation of pest situation; the concept of damage (action) threshold and economic injury level. Categories of pest; yield loss assessment. Origin of pest problems. Seasonal cycles in insects, seasonal survival among insects. Insect pest forecasting and surveillance, tackling insect pest problems. Insect pest and vector management options – Plant Quarantine, Plant varietal resistance, Cultural control, Mechanical control, Physical control; Biological control, Case studies in biological control, Bio-technical control. Novel methods farming systems, use of insect growth regulators, repellents, and attractants including pheromones. Uses of computers in pest management.

The rationale, philosophy and history of IPM. Definition, principles, design and challenges of implementation of IPM in the management of insect pests in different environments. Modeling and Systems Analysis. Social Aspects and Farming Systems. Decision-making Behaviour. Decision Tools and Technique, Implementation and Adoption. IPM- Research, Needs and future prospects. Case studies.

CPP 809.2 Insect Pests of Cultivated Crops (2 units)

Survey of major insect pests of selected cultivated crops from the following: cereal, legumes, vegetable, fruit root and tuber, tree crops, etc. biology, ecology, damage and management of such pests. Study of pests of major economic importance that are pandemic in Africa, locusts, grasshoppers, armyworms, etc. Transmission of plant viruses, phytopathogenic fungi, bacteria and mycoplasma like organisms by insect and mite vectors.

CPP 810.1 Morphology, Anatomy and Physiology of Nematodes (2 units)

General nematode morphology (structure and function), external cylinder-the external morphology, body wall (cuticle, epidermis, somatic musculature).The internal cylinder-stomodaeum, mesenteron and rectum, cuticular

structures, nematode hydrostatic skeleton, nematode movement, ontogeny, moulting, organs and systems (digestive, excretory, nervous and reproductive). Morphological characters of major nematode orders.

CPP 811.1. Nematode Systematics and Taxonomy (2 units)

Morphological characters and nematode taxonomy, nematode relationships and classification, taxonomic methods in nematology (morphological, biochemical, cytogenetic, evolutionary and experimental), taxonomic trends in nematology, molecular phylogeny of nematodes, use of taxonomic keys, molecular characterization of nematodes, biosystematics, nomenclature and classification of major nematode orders and genera

CPP 812.1. Nematode Ecology (2 units)

Ecological studies in nematology, Nematode associations and relationships, Nematode interactions, types and mechanisms of interaction, Nematode adaptation and survival, dispersal and distribution (geographical, local and temporal). Population dynamics, population parameters, population structure strategies (K and R), population genetics, population indices, nematode population densities and crop response. Modeling: types and classification of models, model construction and application, sampling methods, Ecology computer software.

CPP 813.2. Techniques in Nematology (2 units)

Diagnosing nematode problems, sampling for nematodes - consideration (diagnostic and predictive assays), procedure, tools, handling and storage of samples. Extraction methods and tools, extraction efficiency. Counting of nematodes, killing, identification, and handling, fixing, staining and mounting of nematodes. Interpreting results of nematode assays. Culturing of nematodes, crop loss assessment, pathogenicity and histopathology studies, host differential tests, molecular aids to nematode identification (Protein electrophoresis, DNA-based technologies (Dot-blot assays), Restriction Fragment Length Polymorphism (RFLP), AFLP; Polymerase Chain Reaction (PCR), molecular diagnostic services.

CPP 814.2. Advanced Nematology Management (2 units)

Economic importance of nematodes in agriculture, nematode orders and genera of agricultural importance, agricultural practices and nematode distribution, general management of plant-parasitic nematodes (prevention, physical, resistance, cultural practices, organic amendments, improved crop husbandry, chemical, biological), uses of nematodes

CPP 815.2. Nematodes of Cultivated Crops (2 units)

Nematode genera of importance on crops, host range and distribution, symptoms and damage, crop loss estimate, management decisions and options.

CPP 816.2. Non-Nematode Pathogens of Crops (2 units)

Fungi- Fungal structure, modification and organization of the mycelium. Growth, reproduction, inoculum production and dissemination in fungi. Infection - the infection court, mode of infection, penetration etc. Fungal diseases of national and international importance. Management and control of fungal diseases. Bacteria - Classification and properties of plant pathogenic bacteria; host range, dissemination, mode of infection, and symptomatology. Identification of phytopathogenic bacteria. Management and control of bacterial diseases. Bacterial diseases of national and international importance. Viruses - The nature, growth and reproduction of viruses. Purification, characterization and classification of viruses. Structural organization of RNA and DNA viruses. Transmission of plant viruses; vector-host relationships. Management and control of viral diseases.

CPP 817.1 Plant Mycology and Fungal Diseases (2 units)

Importance of fungi to man. Fungal structure, modification and organization of the mycelium. Growth and reproduction in fungi. A general survey of pathogenic fungi – their genetics and inoculum production and dissemination. Infection – the infection court, mode of infection, penetration etc. Fungal diseases of national and international importance. Management and control of fungal diseases.

CPP 818.1 Plant Bacteriology and Bacterial Diseases (2 units)

Classification and properties of plant pathogenic bacteria; geographical distribution of phytopathogenic bacteria, host range, dissemination, mode of infection, and symptomatology. Identification of phytopathogenic bacteria. Management and control of bacterial diseases. Bacterial diseases of national and international importance.

CPP 819.1 Plant Virology and Viral Diseases (2 units)

The nature, growth and reproduction of viruses. Purification, characterization and classification of viruses. Structural organization of RNA and DNA viruses. Transmission of plant viruses; vector-host

relationships. Management and control of viral diseases. Viral diseases of national and international importance.

CPP 820.2 Advanced Crop Disease Management (2 units)

Principles of plant disease control. The disease triangle. Epidemiology. Phytotoxicity. How plants defend themselves. A review of the various methods of plant disease control. Merits and demerits of the various methods.

CPP 821.2 Fundamentals of Seed Pathology (2 units)

Seed-borne pathogens. Plant diseases caused by seed-borne pathogens. Seed diseases of some national and international crops. Transmission of seed disease agents and disease development. Seed health, mycotoxins and human health. Control and management of field and storage diseases of seeds

CPP 822.2 Plant Nematology and Nematode Diseases (2 units)

History of phytonematology, and distribution of phytonematodes. Morphology. Life cycle and types of reproduction. Survival mechanisms in adverse conditions. Classification. Spread of nematodes. Survival mechanisms. Response of plants to nematode attack and symptomology. Host-parasite relationship. Management and control of nematode diseases. Nematode diseases of national and international importance.

CPP 823.2 Molecular Plant Pathology (2 units)

Molecular basis of pathogen manipulation. Introduction of cloned DNA into plants. RFLP and AFLP analysis and gene tagging for pathogen identification. Gene transformation in plant pathogens. Nucleic acid isolation and hybridization techniques. Analysis of defense mechanisms.

CPS 899: Thesis/Dissertation 10 units

C. M. SC PROGRAMME IN SOIL SCIENCE

(a) Philosophy

The philosophy of the Master of Soil Science Degree Programme is to provide advanced professional training for upgrading knowledge and skills of Bachelors (Honours) degree holders employed in industry, the Public Service or those on self-employment.

(b) Objectives

The Masters programme in Soil Science is structured in line with the UN "3 Rio Convention" and the millennium Goals to produce graduates with knowledge and skills in solving practical and

theoretical problems in the field of Soil Science for modern agriculture, climate change, loss of biodiversity and land degradation, The knowledge and skills gained will enable the graduates to understand and solve agronomic, environmental and engineering problems relating to soil water resources, drainage, land degradation and pollution in regional, national and international levels.

(c) Areas of Specialization

The areas of specialization are:

- i. Soil Physics and Conservation
- ii. Soil Survey and Land-use Planning
- iii. Soil Chemistry and Mineralogy
- iv. Soil Fertility and Plant Nutrition
- v. Soil Microbiology
- vi. Environmental Soil Science

(d) Admission Requirements

- i. Graduates of the University of Port Harcourt or any other recognized Universities who have obtained the approved Degree of Bachelor in related fields with at least Second Class Honours Degree, with CGPA of 3.0 on 5-point scale or 2.50 on 4-point scale.
- ii. Higher National Diploma in Agriculture with a Postgraduate Diploma of the University of Port Harcourt or other recognized Universities with at least a Credit Pass of 3.0 CGPA on a 5-point scale.
- iii. 3rd Class degree with PGD passed at Credit level

(e) Duration

- Full- Time: 2 Semesters Minimum
6 Semesters Maximum
Part- Time: 4 Semesters Minimum
8 semesters Maximum

(f) Requirements for Graduation

The Masters of Soil Science Programme consists of course work, seminars and Research work to be embodied in a Thesis.

To be awarded the Master of Soil Science Degree, a candidate must have fulfilled the following conditions:

- (a) Passed a minimum of 36 Credit Units, as follows: Core Courses 18, Electives 6, Project 10, and Seminar 2.
- (b) Carried out a research project relevant to the area of specialization and submitted an acceptable thesis/dissertation.

(f) Course Structure

Option 1: Soil Physics and Conservation

Over-view of Agricultural Research for Development – types of research (basic and applied). The Research – Development Nexus. The challenges of Agricultural Research and Technology Development in Nigeria. Key considerations for Agricultural Research. . Presentation of research results – types of experimental design data and type of presentation – tabular, line graph, bar chart, etc. Communication channels in Agricultural Research (Journals, proceedings, technical or annual reports, book chapters, etc). Oral presentation-power point, slide presentation etc. Nature of communication - research articles, review, bulletins, functions of the components of a typical scientific communication (title, author and address, abstract/ summary, introduction, materials and methods, results, results/ discussion, references). Reference styles in agricultural research. Participatory Research and Extension Approach (PREA)?

CSS 802.1. Biometrics and Experimental Design (2 units)

The scientific method of research-Observations, and characteristics of well-planned experiments. Steps and technical considerations in Experimentation. Experimental designs Data transformation. Data analysis- the Analysis of variance: one-factor and two-factor (ANOVA). Simple linear regression, comparing simple linear regression equations, simple linear correlation. One-sample and two-sample hypotheses (student's t test). Indices for evaluation of multiple cropping systems- LER, Relative crowding coefficient and Aggressivity. Test of significance and mean comparison- The least significant difference test; multiple, Comparison- Duncan's Multiple Range Test (DMRT) and others. The Tukey test; The Newman – Keuls Test. Non-parametric tests- Mann-Whitney test, Wilcoxon paired-sample test; Kruskal-Wallis test. Toxicological statistics; probity analysis. On-farm Experimentation

CPP 801.1 Pesticides in Agriculture and Environment (2 units)

The different kinds of pesticides and pests, historical development of chemical pesticides - the growth in global use and the shape of the industry. Application equipment, principles, use and maintenance. Physico-chemical factors – The design of a pesticide, formulation, selectivity. Method of application – Dusting, seed treatment, spraying, fumigation. Translocation of pesticides in plants. Behavior of pesticides in soil. Important biochemical reactions in pesticides. The cell and its components; Respiration; Photosynthesis. Transmission of nervous impulses. Transport and biological processes in plants. Biosynthesis of

COURSE DESCRIPTIONS

SGS 801.1 ICT and research Methods

CSS 801.1 Research and Communication in Agriculture (2 units)

nucleic acids and protein, some pesticides acting by interference with biosynthesis. Classes of pesticides – Insecticides, Herbicides, fungicides, their chemical structure and characteristics, mode of action, methods of application. Pesticides in the environment - Effects on non-target organisms (mammals, birds, fish). Effect on natural enemies, wildlife; Induction of resistance in pests. Accumulation in food chain and biomagnifications. Pesticide residue and hazard to ecosystems; contamination of air, soil and water. Method of estimation of herbicide residues. Field application of pesticides and safety requirement. Application equipment, principles, use and maintenance.

SOS 801.1 Advanced Soil and Water Conservation (2 units)

Soil structure, soil strength and aggregate stability: methods of assessment, physics of rainfall: rainfall intensity, rainfall prediction and rainfall erodibility. Infiltration and runoff. Soil erosion processes: soil detachment by raindrop impact, soil erodibility, sediment transport and deposition. Types of erosion and methods of control. Water conservation methods.

SOS 802.1 Advanced Soil Physics (2 units)

Review of soil as a dispersed system. Soil water consistency, plasticity and puddling. Thermodynamic basis of soil moisture potential concept. The application of Darcy's law of saturated hydraulic conductivity. Water infiltration and the application of Philips equation in the analysis of infiltration rate. Soil aeration, Gas exchange, mass flow and diffusion. Soil temperature, heat capacity, heat transfer and soil temperature profiles.

SOS 803.1 Advanced Soil – Water- Plant Relations (2 units)

Review of physics of soil water, water uptake by plants; water movement through the plant, water loss from the leaven, water stress and plant growth; soil water availability to plants; soil temperature and plant growth, soil aeration and plant growth; nutrient transfer in the soil-plant systems; root development, distribution and density

SOS 804.1 Advanced Soil Genesis and Classification

Geologic weathering as a prelude to soil formation, Geomorphology in pedology; soil relationships with drainage basins; criteria for characterizing and evaluating soil development, soil development in various geo-climatic regions of Nigeria and the world system of soil classification.

SOS 805.1 Advanced Soil Survey and Land-Use Planning (2 units)

Principles of soil survey, soil survey methods, remote sensing and GIS techniques in soil survey; land systems mapping, soil survey interpretations; concept of land use planning/land evaluation; land use planning and management of nonagricultural projects; land use land cover change and Impacts of climate change; field and practical project.

SOS 806.1 Advanced Soil Microbiology (2 units)

The study of soil microorganisms, their environment, form and functions. Organic matter decomposition and the Carbon cycle; organic nitrogen transformation and the carbon cycle; organic nitrogen transformations and the nitrogen cycle. Microbial transformation of P, S, Fe and other mineral elements. Transformations of hydrocarbon and pesticides in soils.

SOS 807.1 Advanced Soil Chemistry (2 units)

Soil formation, soil minerals, the structure, properties and classification of silicate minerals. Formation, structure and classification of clay minerals. Ion exchange in soils, exchange materials; cation exchange principles. The chemistry of nutrient fixation in soils; K and P fixation, soil acidity and liming. Soil salinity, humic substances in soils.

SOS 808.1 Advanced Soil Fertility and Plant Nutrition (2 units)

Description of soil-plant continuum. Plant system: root-uptake-translocation of nutrients. Mechanism of nutrient absorption and translocation. Absorption (osmosis, diffusion, mass flow, cation exchange). The carrier hypothesis, solute transport at the cellular level, energy sources for active transport. Role of organic matter in soil-fertility. Evaluation of soil nutrient supply (Laboratory, Green house and Field methods). Fertilizers: their use, environmental effect and evaluation, cropping systems, and soil management.

SOS 809.1.1 Soil Biochemistry (2 units)

Source of soil organic matter. Biological mediators of soil organic transformation. Humification and organic matter stability. Biochemistry of lignin decomposition, formation and decomposition of humic substance. Soil organic matter as plant nutrient reservoir: organic matter and soil physical structure, concern of organic matter management. Sources of soil pollution. Agricultural sector-pesticides and chemical fertilizers. Heavy metal pollution in soil, urban and domestic waste management.

SOS 810.1 Advanced Agro-Climatology (2 units)

Precipitation process; spatial and temporal variations; duration of extreme precipitation; river

regimes, ground water, open channels flows and soil moisture in relation to evaporation and transpiration evaporation boundary layer climate and growth of particular crops. Growing seasons and trends in the food production.

SGS 801.2 Entrepreneurship and Management (2 units)

CSS 800. 2 Seminar (2 units)

Each Student is expected to attend all seminars specified and make presentation on selected topics relevant to current research needs. Each student is expected to make at least one presentation and also present a full write-up of the presentation for another assessment.

SOS 811.2. Advanced Soil and Plant Analysis (2 units)

Soil sampling techniques and handling of samples; Extraction and determination of parameters pertinent in soil characterization; Plant sampling techniques for fertility studies. Determination of nutrient content in plant samples; Principles and instrument used in the analysis of soils and plant, spectrophotometers, flame photometer, atomic absorption spectrophotometer. GC and infra-red instruments, pH and electrical conductivity meters. Soil fertility evaluation based on laboratory data. Interpretation of critical levels of available nutrients.

SOS 812.2. Advanced Irrigation and Drainage (2 units)

Selection of land for irrigation, basic principles and physical factors; selection of irrigation systems; soil determinants of irrigation needs; quality of irrigation water, water and salt balance; irrigation with saline water; effect of irrigation and drainage on soils; land preparation, problems associated with irrigation; management of problem soils under irrigation

SOS 813.2 Soil Erosion and Reclamation (2 units)

Principles, types, forms and causes of soil erosion. Analysis and measurements of water and wind erosion. The universal soil loss equation, predicting water and wind erosion. Cropping systems and residue management. Conservation tillage systems and their effects, the physical, chemical and biological properties of the soil, ameliorating soil acidity. Salinity and drainage problems.

SOS 814.2 Advanced Remote Sensing and GIS (2 units)

Development of remote sensing from air photography to sophisticated sensor systems. Techniques of remote sensing, use of

panchromatic infrared black and white, infrared false and true colored films, Image enhancement, multispectral photography, use of side looking radar and satellite imagery.

SOS 815.2 Soil Mineralogy (2 units)

The mineralogy of sand, silt and clay fractions. The principle and use of X-ray. Differential thermal analysis, electron microscopy and Nicol prism in the study of minerals in soils. Extraction of soil clays and preparation of clay samples for X-ray diffraction and fluorescence analysis, quantitative estimation of clay minerals.

SOS 816.2 Soil Pollution and Remediation (2 units)

Heavy metals and radio-nuclides in soils and sediments: definition of heavy metals, hazardous elements in soils and sediments, (cadmium, lead, zinc and iron); mining and smelting sites, landfill sites, sewage sludge; Accumulation of hazardous elements in plants.

SOS 817.2 Soil Resources and Climate Change (2 units)

Basic soil and geologic processes; impact climate change and are impacted by it. Soil processes that address climate change issues. Soil carbon(c) stock: Determinant of global warming. The Carbon cycle, land use and soil carbon stock (e.g., current afforestation efforts). The effects of climate change on soil. Soil moisture and temperature. Desertification. Application of soil properties to: (i) Greenhouse effect, geologic climate changes, and abrupt climate change, (ii) Global carbon cycle (geologic, current), (iii) Gaseous emissions (CO₂, CH₄, N₂O), (iv) Biogeochemical cycles, Carbon cycles, Nitrogen cycle, Phosphorous cycle, Sulphur cycle and H₂O cycle (v) Carbon sequestration, processes. Measurement of soil Carbon pool and fluxes. Soil Quality and Carbon sequestration. Biofuels. Trading of Carbon credits and the Kyoto Treaty.

SOS 818.2 Pesticides in soil (2 units)

Major groups of pesticides, processes affecting pesticides in soil including sorption. Degradation and elimination; transport of pesticides in soil and uptake by plants; pesticides persistence; effects on soil organisms and crop damage, techniques involving analysis of pesticides residue in soils.

DOCTOR OF PHILOSOPHY (Ph.D) IN CROP PRODUCTION

Introduction:

The Ph.D programme in the Department of Crop and Soil Science consists of course work, seminar and research project. The seminar courses will require students to critically review and present

topical issues that are relevant to their areas of specialization.

Philosophy:

The Ph.D programme is aimed at producing world-class graduates skilled in research, creativity and innovation and vested with great problem-solving abilities in the key areas of Agronomy, Crop Physiology, Horticulture and Landscaping, Plant Breeding and Genetics and Weed Science.

Vision: To be globally rated among the top in training, research and community outreach in the fields of Crop and Soil Sciences.

Mission: To provide competent manpower with adequate knowledge and skills to enable them undertake leadership roles in the fields of Crop and Soil Sciences.

Objectives:

The various skills imparted should enable graduates of the programme to fill critical niches in both public and private institutions and corporations to provide high quality service as teachers, researchers, policy makers, crop production and management experts, environmental and agricultural consultants in national and international organizations.

Admission requirements:

Candidates seeking admission into the Ph.D programme in the Department of Crop and Soil Science must meet the following requirements:

- i. Hold M.Agric or M.Sc or M.Phil in Agronomy, Crop Physiology, Horticulture/Landscaping, Plant Breeding/Genetics, Crop Protection, Entomology, Nematology, Plant Pathology or Weed Science of an approved University.
- ii. Passed the masters' degree in the specialized areas specified with a minimum CGPA of 3.50 on a 5.00 point scale or 2.80 on a 4.00 point scale.
- iii. Comply with the general regulations, conditions and policies guiding graduate studies as specified by the School of Graduate Studies of the University of Port Harcourt.
- iv. Candidates must submit a short research proposal to the Head of Department, at least 2, weeks to the date of interview and present themselves at the interview. Only candidates who score a minimum of 60% on average at the interview will be recommended for admission.

Duration:

The Ph.D programme in Crop Production is available on full-time and part-time bases. The

minimum duration for full-time students is 36 months and a maximum of 60 months; corresponding durations for part-time students are 60 and 84 months years, respectively.

Graduation requirements

The student is expected to pass all the prescribed courses, make seminar presentations and defend the research thesis.

Areas of Specialization:

Successful candidates in the admission exercise will specialize in one of the following areas of Crop Production:

- i. Crop Physiology
- ii. Farming Systems/Field Crops Production
- iii. Horticulture and Landscaping
- iv. Plant Breeding and Genetics
- v. Weed Science

Eligibility:

Admission is open to candidates who have obtained a M.Sc. degree in Crop Production, Agronomy, Agriculture with a CGPA of, at least, 3.50 or 2.80 on a 5.00 or 4.00 point scale, respectively. Candidates may specialize in various fields of Crop Production.

Candidates must submit no more than a three page concept note along with the application for admission into this programme.

Selection procedure:

Admission will be based on the recommendation of the Department's Graduate Studies Committee.

Duration:

Candidate may register for full-time or part-time studies.

Full time students: -minimum of 36 months and maximum of 60 months.

Part-time students: minimum of 60 months and maximum of 84 months.

- To undertake research (i.e. CPS 999.2) a student must have passed all prescribed taught and seminar courses.
- In the second semester of years two and three, each student must submit a progress report to the Department for assessment.
- Every student must present research proposal and post-field seminar to the Department. This shall precede the research presentation in the School of Graduate Studies of the University of Port Harcourt.

**CROP PHYSIOLOGY SPECIALTY
COURSE CODES AND TITLES**

FIRST SEMESTER CORE COURSES

Course Code	Course Title	Units
-------------	--------------	-------

CPP 901.1	Pesticide Biochemistry and Toxicology	3
CPS 901.1	Crop Physiology	3
CPS 902.1	Crop Ecology	3
CPS 903.1	Seed Physiology	3
CSS 901.1	Biometrics and Experimental Design	3
CPS 904.1	Plant Nutrition	3
CPS 900.1	Seminar I	1
Total		19

Definition, Crop ecology and its division, Different fields of ecology, plant ecology and other branches of science, Application of crop ecology. Main environmental or ecological factors - climatic, edaphic or soil factors, physiographic factors, biotic factors, Ecosystem - components and functions of ecosystem, Energy and its flow in ecosystem. Study of communities – community compositions and classification. Plant community structure. Plant adaptations – hydrophytes, xerophytes, neophytes, halophytes, mangrove vegetation, etc. Environmental pollution – water pollution, Air pollution, agricultural pollution, Radiation pollution, thermal pollution, Acid Rain, air quality and air quality index.

SECOND SEMESTER CORE COURSES

Course Code	Course Title	Units
CPS 905.2	Instrumentation and Methods in Physiology	3
CPS 906.2	Impact Assessment in Agroecosystem	3
CPS 907.2	Biometry and Crop Modeling	3
CPS 908.2	Crop Growth and Yield Analysis	3
CPS 900.2	Seminar II	1
CPS 999.2	Thesis	16
Total		29

CPS 903.1 Seed Physiology

Physiology of seed development; seed formation, maturity. Source/sink relation and the supply of nutrients affecting seed yield, quality, tolerance, seed storage, longevity, deterioration, germination, imbibition, and reserve mobilization, hormonal and environmental regulation. Advances in seed technology.

CSS 901.1 Biometrics and Experimental Design

The scientific method of research-Observations, characteristics of well-planned experiments. Field experimentation and layout. Data transformation and analysis. Indices for evaluation of multiple cropping systems-*LER*, Relative crowding coefficient and Aggressivity. Test of significance and mean comparison, Parametric and Non-parametric tests. Probit analysis. On-farm Experimentation – Technology-generation experiments and technology-verification experiments.

COURSE TITLES AND DESCRIPTION

CPP 901.1 Pesticide Biochemistry and Toxicology

Important biochemical reactions in pesticides. Transmission of nervous impulse. Transport and biological processes in plants. Biosynthesis of nucleic acids and proteins. Some pesticides acting by interference with biosynthesis. Structure-activity relationships, mode of action, metabolism of different pesticide groups (insecticides, herbicides, fungicides, etc.). Resistance to pesticides. Detoxication mechanisms. Chemical genetics and evolution. Toxicology of pesticides.

CPS 901.1 Crop Physiology

Internal and Environmental factors affecting crop growth and yield, Crop responses to light, temperature, humidity, day length etc, including stress levels. Physiological processes in crop growth and development.

CPS 902.1 Crop Ecology

CPS 904.1 Plant Nutrition

Mineral uptake and metabolism, deficiencies and toxicities, energetics and metabolic coupling of active transport, genetic and ecological aspects of plant nutrition. Recent advances in plant nutritional physiology and soil-root nutrient interactions in relation to plant metabolism and crop yield.

CPS 905.2 Instrumentation and Methods in Agronomy

Field and laboratory methods of soil/plant tissue analysis: sampling, sample preparation and analyses, routine and special methods of soil /plant tissue analyses. Basic understanding of principles of photometry, spectrometry, microscopy; measurement of leaf chlorophyll, leaf area, leaf temperature etc. Glasshouses crop production.

CPS 906.2 Impact Assessment in Agroecosystem

Concept of sustainable crop production. Types and methods of impact assessment. Environmental impact assessment: principle, application and process. Practical: perform EIA of the conversion of arable crop land to energy crop production, use known methods, e.g. GMP-RAM to carry out EIA of a new GM crop, evaluate the impact of the introduction of a new crop or of a named natural disaster.

CPS 907.2 Biometry and Crop Modeling

Crop modeling; Concept of crop modeling, stages of model building, types and properties of models, limitations of models, crop models for modeling flowering times, crop growth and development etc.

CPS 908.2 Crop Growth and Yield Analysis

Sigmoid growth curve, Leibig law of the Minimum, Blackman optima and limiting factors, Mitscherlich law of diminishing returns, Macy critical percentage. Physiological basis of crop yield, leaf area development, concept of optimum leaf area index (LAI), leaf number, size, orientation, photosynthetic efficiency, effect of canopy architecture on crop yield, factors affecting sink capacity and strength, sink-source relationship, grain growth and development and senescence. Measurements: leaf area, LAI and seed growth rate, effective seed filling duration from linear regression, economical and biological yields, photosynthate partitioning and contribution of various plant parts to economic yield – Phloem loading and unloading, growth analysis, yield analysis- Harvest index.

CPS 900.1 Seminar I

Students will review and make presentation on contemporary issues in Crop Physiology.

CPS 900.2 Seminar II

Research findings and challenges in the area of specialization.

CPS 999.2 Thesis

Students are expected to meet the Departmental, Faculty and Graduate School requirements for research and thesis.

COURSE TITLES AND DESCRIPTION

CPP 901.1 Pesticide Biochemistry and Toxicology

Important biochemical reactions in pesticides. Transmission of nervous impulse. Transport and biological processes in plants. Biosynthesis of nucleic acids and proteins. Some pesticides acting by interference with biosynthesis. Structure-activity relationships, mode of action, metabolism of different pesticide groups (insecticides, herbicides, fungicides, etc.). Resistance to pesticides. Detoxification mechanisms. Chemical genetics and evolution. Toxicology of pesticides.

CPS 901.1 Crop Physiology

Internal and Environmental factors affecting crop growth and yield, Crop responses to light, temperature, humidity, day length etc, including stress levels. Physiological processes in crop growth and development.

CPP 904.1 Pest Management in Urban Agriculture

Students will review and present selected topics on the development and application of pest management technologies in urban agriculture.

CPS 911.1 Advanced Farming Systems

Concepts of farming systems, factors determining farming systems: physical, biological, socioeconomic and technological environment. Basis for farming systems in the tropics. Tropical small scale farming – general characteristics, strength and weakness. Technique for design and analysis of on farm experimentation, and diagnosis in farming systems research. Major cropping systems in the tropics: Cropping systems based on spatial factors – sole cropping, intercropping; systems based on temporal factors – phased planting, crop rotation; systems based on spatial/temporal factors – relay cropping, shifting cultivation, alley cropping, and agroforestry. Evaluation of mixed cropping and other systems. Concept, Principle and modalities of different cropping systems. Measurement and analysis of multiple-cropping systems and crop yield indices and its importance. Sustainable Crop production in different agro-ecosystems and cropping systems.

CSS 901.1 Biometrics and Experimental Design

The scientific method of research-Observations, characteristics of well-planned experiments. Field experimentation and layout. Data transformation and analysis. Indices for evaluation of multiple cropping systems-*LER*, Relative crowding coefficient and Aggressivity. Test of significance and mean comparison, Parametric and Non-parametric tests. Probit analysis. On-farm Experimentation – Technology-generation experiments and technology-verification experiments.

SOS 912.1 Advanced Soil Fertility and Plant Nutrition

Description of Soil-Plant Continuum, Plant System: Uptake and Translocation of Nutrient through Root. Mechanism of Nutrient Absorption (osmosis, diffusion, mass flow, cation exchange) and Translocation. Carrier hypothesis, solute transport at the cellular level, Energy sources for active transport. Role of Organic matter in soil Fertility. Evaluation of soil Nutrient supply (Laboratory: Green house and Field methods). Fertilizers, Their Uses, Environmental effect and evaluation, Cropping system and Sol Management.

CPS 900.1 Seminar I: Students will review and make presentation on contemporary issues in Farming Systems and Field Crop Production.

CPP 906.2 Advances in Crop Loss Assessment

Approaches and objectives; measurement of yield loss. Techniques in yield loss assessment; experimental field trials; infestation/infection, yield and economics.

CPP 914.2 Principles and Practices of Plant Disease Control

Basic strategies (reduce inoculum, infection rate, and duration of epidemic); basic principles-exclusion, eradication and reduction of inoculum, protection, resistance, and therapy; integrated disease management. Practices of disease control-cultural practices for reducing crop diseases; symptoms and signs of fungal, bacterial, viral and nematode diseases

SOS 908.2 Advanced Soil-Water-plant Relations

Water balance and balance components, Dependence of man on water in the context of world agriculture, Measurements of soil water, Movement of water in soils, Movement of water towards and into the root system, Movement of water out of the soil-plant system, Soil water potentials, Water loss from the soil-plant interface.

CPS 908.2 Crop Growth and Yield Analysis

Sigmoid growth curve, Leibig law of the Minimum, Blackman optima and limiting factors, Mitscherlich law of diminishing returns, Macy critical percentage. Physiological basis of crop yield, leaf area development, concept of optimum leaf area index (*LAI*), leaf number, size, orientation, photosynthetic efficiency, effect of canopy architecture on crop yield, factors affecting sink capacity and strength, sink-source relationship, grain growth and development and senescence. Measurements: leaf area, *LAI* and seed growth rate, effective seed filling duration from linear regression, economical and biological yields, photosynthate partitioning and contribution of various plant parts to economic yield – Phloem loading and unloading, growth analysis, yield analysis- Harvest index.

CPS 919.2: Advanced Weed Systems and Management

Importance of weed in the ecosystem. Environmental weeds, Aquatic weeds, Rangeland weeds, and cropping weeds. Principles and practices of weed management in field, horticultural and plantation crops with emphasis on the economics and extension of the practices; wasteland and waterways. Strategies and tools of weed management for undesirable plant species in native and agro ecosystems. Interference and allelopathy, undesirable plant invasion and spread, noxious weed eradication principles and practices, integrated plant and weed management strategies, herbicide interactions with weeds and crops. Non-

chemical innovations in weed management; Ecology of invasive weed species, their distribution, global impact and management; management and control of rangeland weeds. Influence of climatic, biotic and abiotic factors on the effectiveness of different weed management strategies. Influence and impact of climate change on weed management practices, crop-weed interaction, with reference to policies, regulations and international conventions on climate events.

CPS 900.2 Seminar II:

Research findings and challenges in the area of specialization.

CPS 999.2 Thesis

Students are expected to meet the Departmental, Faculty and Graduate School requirements for research and thesis.

COURSE TITLE AND DESCRIPTION:

CPS 901.1 Crop Physiology

Internal and Environmental factors affecting crop growth and yield, Crop responses to light, temperature, humidity, day length etc, including stress levels. Physiological processes in crop growth and development.

CPP 901.1 Pesticide Biochemistry and Toxicology

Important biochemical reactions in pesticides. Transmission of nervous impulse. Transport and biological processes in plants. Biosynthesis of nucleic acids and proteins. Some pesticides acting by interference with biosynthesis. Structure-activity relationships, mode of action, metabolism of different pesticide groups (insecticides, herbicides, fungicides, etc.). Resistance to pesticides. Detoxication mechanisms. Chemical genetics and evolution. Toxicology of pesticides.

CPS 909.1 Innovations in Horticulture/Landscape

Innovations in horticultural crop breeding, physiology, weed control, crop and soil management. Recent innovations in landscaping, newly developed ornamental plants; Equipment, implements and tools used in landscaping. Students will review and make presentations on topics relating to the course title.

CPS 910.1 Green House Crop Production

Concept of greenhouse; Types of greenhouses; Choice of crops for cultivation under greenhouse; Problems/constraint of greenhouse cultivation; Growth media and Fertilizer application, greenhouse pests and diseases; detailed production technology of vegetables. Cut flowers and Hydroponics System: Cultivation in peat moss and mixtures, rock wood and other inert media, nutrient film technique (NFT). **PRACTICAL:** Greenhouse construction, cladding materials used for covering the greenhouse; Various equipment used in the greenhouse; growing media used in raising greenhouse crops and their preparation; Nutrient requirements calculations for different crops for fertilization; fertilization requirements for various greenhouse crops; Visits to commercial greenhouses.

CPS 911.1 Advanced Farming Systems

Concepts of farming systems, factors determining farming systems: physical, biological, socioeconomic and technological environment. Basis for farming systems in the tropics. Tropical small scale farming – general characteristics, strength and weakness. Technique for design and analysis of on farm experimentation, and diagnosis in farming systems research. Major cropping systems in the tropics: Cropping systems based on spatial factors – sole cropping, intercropping; systems based on temporal factors – phased planting, crop rotation; systems based on spatial/temporal factors – relay cropping, shifting cultivation, alley cropping, and agroforestry. Evaluation of mixed cropping and other systems. Concept, Principle and modalities of different cropping systems. Measurement and analysis of multiple-cropping systems and crop yield indices and its importance. Sustainable Crop production in different agro-ecosystems and cropping systems.

SOS 912.1 Advanced Soil Fertility and Plant Nutrition

Description of Soil-Plant Continuum, Plant System: Uptake and Translocation of Nutrient through Root. Mechanism of Nutrient Absorption (osmosis, diffusion, mass flow, cation exchange) and Translocation. Carrier hypothesis, solute transport at the cellular level, Energy sources for active transport. Role of Organic matter in soil Fertility. Evaluation of soil Nutrient supply (Laboratory: Green house and Field methods). Fertilizers, Their Uses, Environmental effect and evaluation, Cropping system and Soil Management.

CPS 900.1 Seminar I: Students will review and make presentation on contemporary issues in Horticulture and Landscaping.

CPS 912.2 Bonsai: The Art of Miniature Plant Culture

Review of concept of bonsai. General principles:- plant selection, design, pruning and training, management. Management – pruning of roots and branches to maintain the shape of the bonsai, watering, fertilizing, placement under appropriate environmental conditions at all times. Tools, containers, plants selection. Plant shape and primary pruning, secondary (maintenance pruning), wiring, aging, repotting bonsai:-preparing the container, root pruning, securing the plant, watering and fertilizing. Post establishment care: pruning and repotting, sanitation, pest control, disease control, seasonal maintenance. **Practical.** Identification and selection of plant species for bonsai, selection of suitable containers for bonsai. Identification of needed tools for

bonsai. Care and maintenance of bonsai. Visits to museum or public buildings where bonsais are displayed.

CPS 913.2 Instrumentation and Techniques in Horticulture and Landscaping

Practical and extensive course lectures on the use of different equipment, instruments and tools as necessary work tools of research in horticulture and landscaping. The course will also consider literature (resources, documentation and retrieval) as useful research tools as well as preparation of scientific illustrations.

CPS 914.2 Mycoscience

Concept and importance of mycostudy; techniques of bioconversion of wastes. Mushrooms in the tropics, advances in mushroom production technology; environmental impact assessment in mushroom production. Application of remote sensing in mushroom production. Effects of Climate change in mushroom production. Review of mushroom production in Nigeria. **Practical:** Identification of indigenous and exotic mushrooms; Use of molecular tools in mushroom identification.

CPS 915.2 Planning and Design of Parks and Residential Estates

Objectives and purposes of the design; Residential Estate Assessment of the estate and the home owner's needs; Recreational facilities (e.g. golf course, park, tennis court or swimming pool) green belt, walkways and bicycle paths. Non plant materials in the landscape-benches, playground equipment and statues. Plants used to complement objects-trees and shrubs ground and spaced randomly. Information from site analysis. **Practical:** Visits to well-designed estates and residential areas such as GRAs, club houses and polo ground, parks and gardens, football pitches, game villages, golf courses etc. Identification of grasses, trees and shrubs used in the arenas and study of the maintenance culture of the arenas.

CPS 900.2 Seminar II:

Research findings and challenges in the area of specialization.

CPS 999.2 Thesis

Students are expected to meet the Departmental, Faculty and Graduate School requirements for research and thesis.

PLANT BREEDING AND GENETICS SPECIALTY COURSE CODES AND TITLES

First Semester Core Courses

Course Code	Course Title	Units
--------------------	---------------------	--------------

CPS 922.1	Biometrical Genetics	3
CPS 923.1	Crop Plant Evolution	3
CPS 924.1	Breeding for Pest and Disease Resistance	3
CPS 925.1	Advanced Plant Breeding	3
CPS 926.1	Advanced Genetics/Cytogenetics	3
CPS 927.1	Tissue Culture Techniques in Relation to Plant Breeding	3
CPS 900.1	Seminar I	1
Total		19

Second Semester Core Courses

Course Code	Course Title	Units
CPS 928.2	Physiological Genetics in Plant Breeding	3
CPS 929.2	Seed Science and Technology	3
CPS 930.2	Plant Genetic Resource Conservation	3
CPS 907.2	Biometry and Crop Modelling	3
CPS 931.2	Introduction to Molecular Breeding	2
CPS 900.2	Seminar II	1
CPS 999.2	Thesis	16
Total		31

COURSE TITLES AND DESCRIPTION

CPS 922.1 Biometrical Genetics

Biometrical genetics and use of biometrical methods in plant breeding research. Study and analysis of quantitative variation components of heritable variation. Heritability, heterosis, epistasis and correlated responses. Design and analysis of diallel experiments. Maternal inheritance. Other statistical concepts used for the analysis of polygenic variation.

CPS 923.1 Crop Plant Evolution

Origin of cultivated plants; centers of diversity, sources of variability mutation/hybridization; changes in chromosome number, polyploidy and

aneuploidy. Breeding systems. The role of the environment.

CPS 924.1 Breeding for Pest and Disease Resistance

Breeding methodologies for horizontal and vertical resistance, Gene-for-gene concept, Van der Plank concept. Screening methodologies, Boom-bust concept.

CPS 925.1 Advanced Plant Breeding

Aims and procedure for improvement. Genetic basis for selection; breeding system, concepts of heterosis and heritability. Conventional strategies for improvement of quantitative inheritance and evidence in support, in – breeding, out- breeding and vegetatively propagated crops. Specialized techniques, Polyploidy, hybridization and mutation breeding, chromosomes addition and substitution, lines, breeding for disease resistance. Multiplication, evaluation, registration and maintenance of improved varieties. Breeder’s right. Biotechnology applied to crop improvement; plant tissue culture, Molecular strategies for crop improvement; crop genetic transformation.

CPS 926.1 Advanced Genetics/Cytogenetics

Quantitative genetics, Chemistry of the nuclei and chromosomes. Chromosomes replication and cell division, ultrastructure of cell organelles. Gene control and regulation; heterochromatinization, B Chromosomes, gene amplification and DNA redundancy. Chromosome pairing rules, changes in structure and number, recent advances in cytogenetics.

CPS 927.1 Tissue Culture Techniques in Relation to Plant Breeding

Definition of tissue culture. The tissue culture laboratory, design, equipment and supplement, maintenance, culture media, composition, preparation, choice of media. Limitation and maintenance of callus. Choice of explants. Preparations and sterilization of explants. Callus induction, subculture and maintenance suspension cultures. Tissue culture techniques, anther and pollen culture techniques, plantlets regeneration techniques, protoplast fission. Root cultures, meristem cultures, micropropagation in the shoot apex. Embryogenesis, organogenesis and plant regeneration. Isolation, manipulation of plant protoplast. Somatic hybridization. Selection of somatic hybrid plants. Transformation of plants using protoplast systems. Selection of plant cells for desirable characteristics. Haploid cell culture embryo rescue and uses. Secondary metabolites production by cell suspension cultures. Cryopreservation and storage of germplasm.

CPS 900.1 Seminar I

Students will review and make presentation on contemporary issues in Crop Physiology.

CPS 907.2 Biometry and Crop Modeling

Parametric and non-parametric statistical methods commonly used in agricultural research and experimental biology. Hypothesis testing. Principles of experimental designs. Crop modeling: stages of model building, types and properties of models, crop models for modeling flowering times, crop growth and development etc.

CPS 928.2 Physiological Genetics in Plant Breeding

A consideration of genetics, biochemical and molecular mechanisms influencing variation in plant physiological processes such as photosynthesis, respiration, self-incompatibility, heterosis and yield. Role of environmental factors and their mediation through biochemical and molecular processes in phenotypic expressions, emphasis through the course will be on application in plant breeding.

CPS 929.2 Seed Science and Technology

Seed and its importance in crop production, physiology and genetic qualities of seed. Types of seed and production techniques. Breeder's, Foundation and Certified seed production and their maintenance. Seed multiplication, field management and maintenance practices for crop seed production. Seed processing and quality evaluation. Seed treatments, seed storage and marketing.

CPS 930.2 Plant Genetic Resource Conservation

Status of genetic diversity in Africa. The need to conserve PGRs. Exploration, collection, characteristics and evaluation of germplasm. *In situ* germplasm conservation; parks, ranges, reserves etc. *Ex situ* genebank establishment. Orthodox and recalcitrant seed storage and cryo-preservation of embryo seed and *in vitro* culture.

CPS 931.2 Introduction to Molecular Breeding

Use of marker assisted and QTLs in plant breeding programme Genotyping / fingerprinting of segregating populations of crops using PCR techniques such as RAFLP, RAPD, SSR, SNPs markers.

CPS 900.2 Seminar II:

Research findings and challenges in the area of specialization.

CPS 999.2 Thesis

Students are expected to meet the Departmental, Faculty and Graduate School requirements for research and thesis.

COURSE TITLES AND DESCRIPTIONS

CPP 901.1 Pesticide Biochemistry and Toxicology

Important biochemical reactions in pesticides. Transmission of nervous impulse. Transport and biological processes in plants. Biosynthesis of

nucleic acids and proteins. Some pesticides acting by interference with biosynthesis. Structure-activity relationships, mode of action, metabolism of different pesticide groups (insecticides, herbicides, fungicides, etc.). Resistance to pesticides. Detoxication mechanisms. Chemical genetics and evolution. Toxicology of pesticides.

CPS 901.1 Crop Physiology

Internal and Environmental factors affecting crop growth and yield, Crop responses to light, temperature, humidity, day length etc, including stress levels. Physiological processes in crop growth and development.

CPS 911.1 Advanced Farming Systems

Concepts of farming systems, factors determining farming systems: physical, biological, socioeconomic and technological environment. Basis for farming systems in the tropics. Tropical small scale farming – general characteristics, strength and weakness. Technique for design and analysis of on farm experimentation, and diagnosis in farming systems research. Major cropping systems in the tropics: Cropping systems based on spatial factors – sole cropping, intercropping; systems based on temporal factors – phased planting, crop rotation; systems based on spatial/temporal factors – relay cropping, shifting cultivation, alley cropping, and agroforestry. Evaluation of mixed cropping and other systems. Concept, Principle and modalities of different cropping systems. Measurement and analysis of multiple-cropping systems and crop yield indices and its importance. Sustainable Crop production in different agro-ecosystems and cropping systems.

CPS 916.1: Advanced and Applied Weed Biology and Ecology

Ecological principles emphasizing interactions of weeds with their environment and neighbouring plants, in crop and various non-crop habitats. Weed biology and ecology in the context of weed management-covering theory, current information, investigative approaches and experimental techniques; weed population biology and dynamics, modeling, weed community ecology. Weed seed bank dynamics; invasive agricultural weeds in Nigerian environments. Climate change and weed emergence pattern. The role of weeds for supporting biodiversity. Mechanisms and impacts of herbicide resistance in weeds and crops.

CPS 917.1: Physiology and Biochemistry of Herbicide Action and Application

Herbicide chemistry, classification of herbicides, characteristics of herbicides, herbicide formulations and scope of use; and mode of action; herbicide selectivity and mechanism; herbicide

metabolism and translocation. Herbicides fate and behaviour in the air, plants, soils and water bodies Herbicide weed resistance; herbicide interactions with herbicides, Adjuvant, synergists, and safeners. Mechanism of herbicides activity. Methods of estimation of herbicides residue and ecological problems of persistence. Toxicity, persistence, resistance, limitations in the use of herbicides, hazards, precautions and effect on environment.

CPS 918.1: Research Methods in Weed Science

Techniques in laboratory, greenhouse, and field experimentation in weed science. Experimental designs, data collection and measurement of plant response, data processing, analysis and reporting. Modern techniques in herbicide absorption, translocation and sorption, metabolism and degradation studies. Herbicide assay and formulation experiments. Techniques weed cover and vegetation analysis-measurement of species abundance.

CPS 900.1: Seminar I

Students will review and make presentations on topics relating to their specialization

SOS 911.2 Pesticides in Soil

Major groups of pesticides, processes affecting pesticides in soil including sorption, degradation and elimination; transport of pesticides in soil and uptake by plants; pesticide persistence; effects on soil organisms and crop damage techniques involving analysis of pesticides residue in soils.

CPS 919.2: Advanced Weed Systems and Management

Environmental weeds, aquatic weeds and rangeland weeds management. Principles and practices of weed management in field, horticultural and plantation crops wasteland and waterways with emphasis on the economics and extension of the practices. Non-chemical innovations in weed management. Ecology of invasive weed species, their distribution, global impact and management. Influence of climatic, biotic and abiotic factors on the effectiveness of different weed management strategies. Influence and impact of climate change on weed management practices, crop-weed interaction, with reference to policies, regulations and international conventions on climate events.

CPS 920.2: Weed-Crop Interaction and Economic Threshold

Methods of studying weed-crop interaction; Resource competition in weed-crop mixture. Understanding mechanism of interspecific and intraspecific in plants. Concept and application of critical period of weed competition. Response of

crops and weeds to competition. Principles and application of threshold of weed competition. Economics of weed control, and methods of economic assessment. Approaches to weed-crop yield loss measurement. Techniques in weed weed-crop yield loss assessment experimentation.

CPS 921.2: Weed Seed-bank Methods and Analysis

Methods of weed seed bank analysis: field sampling, sample preparation, germination (laboratory and screen house) and analyses. Viability and longevity studies of weed soil seed bank. Students will review and make presentations on topics relating to the course title.

CPS 900.2 Seminar II

Research findings and challenges in the area of specialization.

CPS 999.2 Thesis

Students are expected to meet the Departmental, Faculty and Graduate School requirements for research and thesis.

DOCTOR OF PHILOSOPHY (PhD) DEGREE IN CROP PROTECTION

Introduction:

The Ph.D programme in Crop Protection consists of course work, seminar and research project. In seminar courses, students will critically review and present topical issues that are relevant to their areas of specialization.

Philosophy:

The Ph.D programme in Crop Protection aims at producing world-class graduates skilled in research, creativity and innovation and invested with great problem-solving abilities in the key areas of agricultural entomology, plant pathology and applied nematology.

Vision: To be globally rated among the top in training, research and community outreach in the fields of Crop and Soil Sciences.

Mission: To provide competent manpower with adequate knowledge and skills to enable them undertake leadership roles in the fields of Crop and Soil Sciences.

Objectives:

The various skills imparted should enable graduates of the programme to fill critical niches in both public and private institutions and corporations to provide high quality service as teachers, researchers, policy makers, pest management experts, environmental and agricultural consultants in national and international organizations.

Admission requirements:

Candidates seeking admission into the Ph.D programme in Crop Protection must meet the following requirements:

- i. Hold M.Agric or M.Sc or M.Phil in crop protection, entomology, nematology, plant pathology or weed science of an approved university
- ii. Passed the master's degree in the specialized areas specified with a minimum CGPA of 3.50 on a 5.00 point scale or 2.80 on a 4.00 point scale.
- iii. Comply with the general regulations, conditions and policies guiding graduate studies as specified by the College of Graduate Studies of the University of Port Harcourt
- iv. Candidates must submit a short research proposal to the Head of Department at least 2 weeks to the date of interview and present themselves at the interview. Only candidates who score a minimum of 60% on average at the interview will be recommended for admission

Duration:

The Ph.D programme in Crop Protection is available on full-time and part-time basis. The minimum duration for full-time students is 36 months and a maximum of 60 months; corresponding durations for part-time students are 60 and 84 months, respectively.

Graduation requirements

The student is expected to pass the prescribed courses, make seminar presentations and defend the research thesis

Areas of Specialization:

Successful candidates in the admission exercise will specialize in one of the following areas of Crop Protection.

- i. Agricultural Entomology
- ii. Plant Pathology
- iii. Applied Nematology

AGRICULTURAL ENTOMOLOGY SPECIALTY COURSE CODES AND TITLES

FIRST SEMESTER

Course codes	Course title	Units
CPP 901.1	Pesticide Biochemistry and Toxicology	3
CPP 902.1	Ecological Processes and Pest Management	3

CPS 917.1	Physiology and Biochemistry of Herbicide Action	3
CPP 904.1	Pest Management in Urban Agriculture	3
CPP 905.1	Advances in Field and Storage Pest Control Technique	3
CPS 924.1	Breeding for Pest and Disease Resistance	3
CPP 900.1	Seminar I	1
Total credit units		19

Natural processes of pest regulation and improve agricultural production; ecologically based pest management concept and economics. Management of ecological problems and pest management; Selected topics on the intricate relationship between the practice of pest management and ecological processes in their areas of specialization. Environmental imbalance due to human activities and pest management; social issues and the environment in pests management; pesticide regulations and implementation in Nigeria; Selected topics on pesticides and environmental sustainability, laws, regulations, EIAs, etc.

SECOND SEMESTER

Course codes	Course title	Units
CPP 906.2	Advances in Crop Loss Assessment	3
CPP 907.2	Biotechnology and Pest Management	3
CPP 908.2	Climate Change and Pest Management	3
CPP 909.2	Extension in Pest Management	3
CPP 914.2	Principles and Practices of Plant Disease Control	3
CPP 900.2	Seminar II	1
CPP 999.2	Thesis	16
Total Credit		32

CPP 904.1 Pest Management in Urban Agriculture

Organic agriculture pest management; urban ecology and integrated pest management; negative concept interactions between people, pests and pesticides in urban areas. Other selected topics on the development and application of pest management technologies in urban agriculture.

CPP 905.1 Advances in Field and Storage Pest Control Technique

Latest innovations in field and storage pest control techniques; biorational control and challenges of pest control for the twenty-first century. Insecticides by cell-based; novel biotechnology control strategies (the genetic approach). Utilization of nanotechnology for development of potent insecticides.

CPS 917.1: Physiology and Biochemistry of Herbicide Action and Application

Herbicide chemistry, classification of herbicides, characteristics of herbicides, herbicide formulations and scope of use; and mode of action; herbicide selectivity and mechanism; herbicide metabolism and translocation. Herbicides fate and behaviour in the air, plants, soils and water bodies Herbicide weed resistance; herbicide interactions with herbicides, Adjuvant, synergists, and safeners. Mechanism of herbicides activity. Methods of estimation of herbicides residue and ecological problems of persistence. Toxicity, persistence, resistance, limitations in the use of herbicides, hazards, precautions and effect on environment.

CPS 900.1 Seminar I

Students will review and make presentation on contemporary issues in Entomology.

CPP 906.2 Advances in Crop Loss Assessment

Approaches and objectives; measurement of yield loss. Techniques in yield loss assessment; experimental field trials; infestation/infection, yield and economics.

COURSE TITLES AND DESCRIPTION

CPP 901.1 Pesticide Biochemistry and Toxicology

Important biochemical reactions in pesticides. Transmission of nervous impulse. Transport and biological processes in plants. Biosynthesis of nucleic acids and proteins. Some pesticides acting by interference with biosynthesis. Structure-activity relationships, mode of action, metabolism of different pesticide groups (insecticides, herbicides, fungicides, etc.). Resistance to pesticides. Detoxication mechanisms. Chemical genetics and evolution. Toxicology of pesticides.

CPP 902.1 Ecological Processes and Pest Management

CPP 907.2 Biotechnology and Pest Management

New biological and genetic approaches in agricultural pest control; Naturally occurring biological control agents; plant-derived target-specific insecticides, and pest-resistant plants, pest-specific compounds and resistant crops. Advances in biotechnology as a tool for environment-friendly pest management.

CPP 908.2 Climate Change and Pest Management

Current knowledge of the impact of climate change on pest management. Biologically based methods with reference to ecological, physiological and behavioural responses of pests. Insect responses to climate changes (temperature, solar radiation, precipitations, relative humidity and CO₂) and other ecological processes important for plant protection; IPM approaches and climate change; influence of climate change on pest management practices, policies, regulations and international conventions.

CPP 909.2 Extension in Pest Management

Students will review and present selected topics on development in the critical linkage between extension and pest management knowledge, technologies and adoption by farmers and other end-users such as produce merchants, store managers, produce distributors, etc.

CPS 924.1 Breeding for Pest and Disease Resistance

Breeding methodologies for horizontal and vertical resistance, Gene-by-gene concept, Van der Plank concept. Screening methodologies, Boom-bust concept.

CPP 914.2 Principles and Practices of Plant Disease Control

Basic strategies (reduce inoculum, infection rate, and duration of epidemic); basic principles-exclusion, eradication and reduction of inoculum, protection, resistance, and therapy; integrated disease management. Practices of disease control-cultural practices for reducing crop diseases; symptoms and signs of fungal, bacterial, viral and nematode diseases

CPS 900.2 Seminar II

Research findings and challenges in the area of specialization.

CPS 999.2 Thesis

Students are expected to meet the Departmental, Faculty and Graduate School requirements for research and thesis.

PLANT PATHOLOGY SPECIALTY

DURATION

Candidates may register for full-time or part-time studies only for PhD programme for a normal duration of not less than six semesters after initial registration or nine semesters in the case of part-time registration. The registration of a candidate shall normally lapse if he has not submitted his thesis for examination after ten-semesters of full-time twelve semesters in the case of part-time registration or an equivalent period pro-rata for an examination of part-time and full-time registration.

Admission Requirements

To be eligible for admission to the Doctor of Philosophy degree programme, a student must have obtained a Masters' degree from this University or its equivalent from any other University recognized by Senate. For holders of one year degree of Master's the minimum duration on the Ph.D. programme shall be three years and candidates will need to take M.Sc courses on the advice of the supervisors or supervisory committee, in addition to oral interview.

Examination

External Examiners are recommended to the Postgraduate Committee based on the advice of the Supervisor or Supervisory Committee.

	Total	33

Genetics, genomics; Physiology and parasitism of fungal plant pathogens; genetic models *Aspergillus nidulans* and *Neurospora crassa*. Current knowledge of fungal genetic and sexuality; plant-fungal interactions; physiology of the nutrition, growth, and reproduction of fungi; analysis of physiological and biochemical processes associated with penetration, development of host-parasite relations and disease development; plant-fungal interactions at the molecular level, molecular basis for disease resistance.

CPP 912.1 Plant-Bacterial Interactions

Interactions between bacteria and plants; physiology; genetics and ecology of bacterial pathogens, epiphytes and symbionts of plants; Representatives of bacterial plant diseases and factors affecting their control severity, distribution and economic importance, methods used in studying plant pathogenic bacteria.

COURSE DESCRIPTION

CPP 901.1 Pesticide Biochemistry and Toxicology

Important biochemical reactions in pesticides. Transmission of nervous impulse. Transport and biological processes in plants. Biosynthesis of nucleic acids and proteins. Some pesticides acting by interference with biosynthesis. Structure-activity relationships, mode of action, metabolism of different pesticide groups (insecticides, herbicides, fungicides, etc.). Resistance to pesticides. Detoxication mechanisms. Chemical genetics and evolution. Toxicology of pesticides.

CSS 901.1 Biometrics and Experimental Design

The scientific method of research-Observations, characteristics of well-planned experiments. Field experimentation and layout. Data transformation and analysis. Indices for evaluation of multiple cropping systems-*LER*, Relative crowding coefficient and Aggressivity. Test of significance and mean comparison, Parametric and Non-parametric tests. Probit analysis. On-farm Experimentation – Technology-generation experiments and technology-verification experiments.

CPP 910.1 Computer Applications in Agriculture

Introduction to computer hardware, software and operating systems. Microsoft office, data management and analysis packages. Internet connectivity, browsing, virtual libraries. Computer-based modeling packages in agricultural science.

CPP 911.1 Fungal Physiology and Genetics of Parasitism

CPP 913.1 Methods and Techniques in Phytopathology

Identification, isolation, culture and inoculation of susceptes with fungi, bacteria, viruses and nematodes; bioassays, advanced research techniques.

CPS 900.1 Seminar I: Students will review and make presentation on contemporary issues in Crop Pathology.

CPP 906.2 Advances in Crop Loss Assessment

Approaches and objectives; measurement of yield loss. Techniques in yield loss assessment; experimental field trials; infestation/infection, yield and economics.

CPP 914.2 Principles and Practices of Plant Disease Control

Basic strategies (reduce inoculum, infection rate, and duration of epidemic); basic principles-exclusion, eradication and reduction of inoculum, protection, resistance, and therapy; integrated disease management. Practices of disease control-cultural practices for reducing crop diseases; symptoms and signs of fungal, bacterial, viral and nematode diseases

CPP 915.2 Advanced Mycology

General introduction, historical development and advances in mycology; Recent taxonomic criteria, morphological criteria for classification; Chemotaxonomy, molecular and numerical taxonomy; Interaction between groups; morphology and reproduction of representative plant pathogenic genera from different groups of fungi; Sexual reproduction in different groups of fungi; Population biology, pathogenic variability/vegetative compatibility; Heterokaryosis and

parasexual cycle. Sex hormones in fungi. Mechanism of nuclear and extra-nuclear inheritance

CPP 916.2 Ecology and Epidemiology of Plant Diseases

Disease development in populations, monitoring, modeling, and predicting rates of development. Environmental factors in the development and spread of diseases, pathogen variability, and genetics of disease resistance and principles of disease control.

CPP 918. 2 Advanced Extension and Practicum in Crop Protection

Course focuses on diseases of economic importance in Rivers state and issues faced in the home landscape; diagnose and properly treat plant diseases; provide educational and diagnostic resources for clientele; train extension agent and detectors to identify, monitor and respond to invasive pests; ,rapid detection, diagnosis and communication about pests outbreaks to protect our agricultural bio-security. Instructional orientation to teaching at the higher educational level in agriculture; direct teaching experience under academic staff supervision, experience in evaluating students and analysis of teaching performance.

CPS 919.2: Advanced Weed Systems and Management

Environmental weeds, aquatic weeds and rangeland weeds management. Principles and practices of weed management in field, horticultural and plantation crops wasteland and waterways with emphasis on the economics and extension of the practices. Non-chemical innovations in weed management. Ecology of invasive weed species, their distribution, global impact and management. Influence of climatic, biotic and abiotic factors on the effectiveness of different weed management strategies. Influence and impact of climate change on weed management practices, crop-weed interaction, with reference to policies, regulations and international conventions on climate events.

CPS 900.2 Seminar II

Research findings and challenges in the area of specialization.

CPS 999.2 Thesis

Students are expected to meet the Departmental, Faculty and Graduate School requirements for research and thesis.

APPLIEDNEMATOTOLOGY SPECIALTY

Introduction:

The PhD programme in Applied Nematology consists of course work, seminar and research project. In each of the seminar courses, students will critically review and present topical issues that are relevant to Applied Nematology.

Philosophy:

The Ph.D programme in Applied Nematology aims at producing high level resourceful manpower and world-class graduates skilled in teaching, research, creativity and innovation and invested with great problem-solving abilities. The programme aims at providing the highest degree of specialization in nematology in the context of expanding knowledge globally.

Vision: To be globally rated among the top in training, research and community outreach in the fields of Crop and Soil Sciences.

Mission: To provide competent manpower with adequate knowledge and skills to enable them undertake leadership roles in the fields of Crop and Soil Sciences.

Objectives:

The various skills imparted should enable graduates of the programme to fill critical niches in both public and private institutions and corporations to provide high quality service as teachers, researchers, policy makers, pest management experts, environmental and agricultural consultants in national and international organizations.

Admission requirements:

Candidates seeking admission into the Ph.D programme in Applied Nematology must meet the following requirements:

- i. Hold M.Agric or M.Sc or M.Phil in crop protection, entomology, nematology, plant pathology of an approved university
- ii. Passed the master's degree in the specialized areas specified with a minimum CGPA of 3.50 on a 5.00 point scale or 2.80 on a 4.00 point scale.
- iii. Comply with the general regulations, conditions and policies guiding graduate studies as specified by the College of Graduate Studies of the University of Port Harcourt
- iv. Candidates must submit a short research proposal to the Head of Department at least 2 weeks to the date of interview and present themselves at the interview. Only candidates who score a minimum of 60% on average at the interview will be recommended for admission

Duration:

The Ph.D programme in Applied Nematology is available on full-time and part-time basis. The minimum duration for full-time students is 36 months and a maximum of 60 months; corresponding durations for part-time students are 60 and 84 months, respectively.

Graduation requirements

The student is expected to pass the prescribed courses, make seminar presentations and defend the research thesis

Requirement for research

Each student will have a major supervisor and also three members of supervisory committee. Every student is expected to present the Ph.D research proposal and subsequently progress report at the beginning of each session to supervisory committee. Presentations to the Department Graduate Committee and for examination will be hinged on the advice of the supervisory committee and supervisor.

COURSE CODES AND TITLES

FIRST SEMESTER

Course codes	Course title	Units
CPP 901.1	Pesticide Biochemistry and Toxicology	3
CPP 903.1	Environment and Pest Management	3
CPP 919.1	Nematodes and Ecosystem Services	3
CPP 920.1	Molecular Plant Nematology	3
CPP 921.1	Phytonematodes threat of Horticulture and Forestry	3
CPP 922.1	Techniques in Nematological Research	3
CPP 900.1	Seminar I	1
Total		19

SECOND SEMESTER

Course codes	Course title	Units
CPP 906.2	Advances in Crop Loss Assessment	3
CPP 923.2	Agronematology	3

CPP 924.2	Economics Management of Phytonematodes	3
CPP 925.2	Population Dynamics of Nematodes	3
CPP 900.2	Seminar II	1
CPP 999.2	Thesis	16
Total		29

COURSE CODES AND DESCRIPTION

CPP 919.1 Nematodes and Ecosystem services

Importance of nematodes in the ecosystem, Ecosystem services by nematodes, Important genera of free living nematodes in the ecosystem and their functions, Environmental nematology, Nematodes as bioindicators of environmental pollution, Important non plant-parasitic nematode genera in man, animals and other organisms, Application of nematodes for diverse ecosystem services such as bioremediation and biotechnology e.t.c.

CPP 920.1 Molecular Plant Nematology

Molecular techniques and diagnostic tools in plant nematology, molecular biology of nematode resistance, molecular characterization, biochemical and molecular basis of plant nematode interaction, molecular diagnosis of phytonematodes, Genetic analysis, Genetic variation among nematode species, Genetically engineered antibodies for nematode identification, Nucleotide sequences in nematode systematic and major plant parasitic nematodes in molecular nematology.

CPP 921.1 Phytonematodes: Threat to Horticulture and Forestry

Economic importance of phytonematodes on horticultural crops and trees, Major phytonematodes associated with horticultural crops, forest trees and soils, Management of phytonematodes of horticultural crops and trees.

CPP 922.1 Techniques in Nematological Research

Sampling and population assessment methods for nematodes, extraction of nematodes from soil and plant parts, Specimen preparation. Stain technology. Theory and use of microscope and microtomes. Photography and photomicrography. Greenhouse experimentation for pathogens, Diagnostic programmes in nematology. Experimental designs, Statistical analyses with softwares such as Statistical Analysis System, Genstat, e.t.c.

CPP 900.1 Seminar I

Students will review present selected topics on the recent advances in Nematology topics

CPP 923.2 Agronematology

Description of the agro-ecological differences between temperate and tropical agricultural systems and the effects of these differences on the occurrence of plant-parasitic nematodes. Importance of injury and disease caused by plant-parasitic nematodes to agricultural Crops in the (sub) tropics. Geographical distribution, reproductive and damage potential, host plant interactions and economic importance of the most important nematode species associated with: cereals (rice, maize, sorghum, millets), root and tuber crops (cassava, sweet potato, yam), food legumes (bean, cowpea, chickpea, pigeon pea, groundnut soybean), fruit crops (banana and plantain, pineapple, citrus), oil palm, coconut, cotton, rubber, tobacco, sugarcane, coffee, cocoa, tea, vegetables and spices. Emerging diseases caused by plant-parasitic nematodes in the (sub) tropics and Challenges facing tropical nematology.

CPP 924.2 Economics of Nematode Pests Management

Importance of nematode diseases in crop production, Biological and cultural management, nematode resistance in crops, Challenges in application of botanical pesticides, chemical control of nematodes, biosafety, food contamination, nematicides and residues, economically important plant parasitic nematodes of cereals, legumes, fibre crops, Cost/benefit analysis of nematode management options, application of sensitivity analysis in profitability assessment of nematode management etc

CPP 925.2 Population Dynamics of Phytonematodes

Distribution patterns for phytonematodes, plant growth and population dynamics of phytonematodes, Phytonematodes population dynamics and other soil fauna, soil fertility and phytonematode population, Modelling population dynamics of Phytonematodes on crops, Climatic conditions and population dynamics of phytonematodes, Influence of nematicides on nematode population

CPS 900.2 Seminar II

Research findings and challenges in the area of specialization.

CPS 999.2 Thesis

Students are expected to meet the Departmental, Faculty and Graduate School requirements for research and thesis.

DOCTOR OF PHILOSOPHY DEGREE (Ph.D) IN SOIL SCIENCE

Philosophy

The philosophy is to develop high level manpower to pursue careers in academics and research. It is to provide the highest degree of specialization in a particular field in the context of expanding knowledge globally and solving real life problems.

Vision: To be globally rated among the top in training, research and community outreach in the fields of Crop and Soil Sciences.

Mission: To provide competent manpower with adequate knowledge and skills to enable them undertake leadership roles in the fields of Crop and Soil Sciences.

Objectives:

The Ph.D programme in Soil Science is structured in line with the UN “3 Rio Convention” and the Millennium Goals to:

- (i) To equip students with research skills through the conduct of supervised research, seminar presentations and thesis preparation.
- (ii) Produce training for those whose future careers lie in teaching and research.
- (iii) Produce graduates with knowledge and skills in solving practical and theoretical problems in soil science for modern agriculture, climate change, loss of biodiversity and land degradation. The knowledge and skills gained will enable the graduates to understand and solve agronomic, environmental and engineering problems relating to soil water resources, drainage, land degradation and pollution at the national regional and global levels.

Admission Requirements

1. Graduates of the University of Port Harcourt or of other recognized Universities who have obtained an appropriate Master’s degree for the proposed area of study with a minimum of 3.50 Grade Point Average on a 5-Point Scale or 2.80 on the old 4-point scale, provided that satisfactory research work formed part of the Master’s Degree.
2. Candidates who hold qualifications other than the above, and are acceptable to the Senate of the University of Port Harcourt.
3. Candidates from recognized Universities where grade point average (CGPA) is not given would be required to have average Master’s Degree score of 60% or above
4. Qualified candidates shall present themselves for interview and score at least

60% at the interview to be recommended for admission.

(a) Requirements for Graduation

The programme consist of course work, thesis and seminars or special topics

To be awarded the Doctor of Philosophy Degree in Soil Science, *a candidate must have passed a minimum of 48 Credit Units of which not more than 21 credit units may be transferred from Masters.*

Carried out a research relevant to the area of specialization and submitted an *acceptable and approved thesis.*

Duration:

The Ph.D programme in Soil Science is available on full-time and part-time basis. The minimum duration for full-time students is 36 months and a maximum of 60 months; corresponding durations for part-time students are 60 and 84 months, respectively.

Areas of Specialization

- i. Soil Physics and Conservation
- ii. Soil Survey and Land-Use Planning
- iii. Soil Chemistry, Fertility and Mineralogy

SOIL PHYSICS AND CONSERVATION SPECIALTY

COURSE CODES AND TITLES

FIRST SEMESTER

Course Code	Course Title	Units
SOS 900.1	Seminar I	1
SOS 901.1	Advanced Soil Physics	3
SOS 902.1	Advanced Soil and Water Conservation	3
SOS 903.1	Crop Weather Relations	3
SOS 904.1	Remote Sensing Techniques	3
SOS 905.1	Advanced Soil Survey and Land Use Planning	3
SOS 913.1	Advanced Soil Microbiology	3
Total		19

SECOND SEMESTER

Course Code	Course Title	Units
-------------	--------------	-------

SOS 900.2	Seminar II	1
SOS 906.2	Advanced Soil Mineralogy	3
SOS 907.2	Soil Erosion Control	3
SOS 908.2	Advanced Soil-Water-plant Relations	3
SOS 911.2	Pesticides in Soil	3
SOS 999.2	Thesis	16
Total		29

COURSE CODES AND DESCRIPTION

SOS 901.1 Advanced Soil Physics

Soil-water Balance factors: Rainfall characteristics, infiltration and runoff, water storage, evaporation and evapotranspiration, energy and mass balances, saturated and unsaturated flow in porous media.

SOS 902.1 Advanced Soil and Water Conservation

Review of Soil Physical Properties and their place in Water Conservation (Soil structure, soil strength and aggregate stability, etc); Methods of assessment, physics of rainfall: rainfall intensity, rainfall prediction and rainfall erodibility. Infiltration and runoff. Soil erosion processes: soil detachment by raindrop impact, soil erodibility, sediment transport and deposition. Types of erosion and methods of control. Water conservation methods; Advances in Soil and Water Conservation.

SOS 903.1 Crop-Weather Relations

Climate and Crop Production, energy and water balance. Penological stages of some tropical crops. Weather influence on phenological stages and crop yields. Models for protecting these relationships for selected crops. Application of growth degree days and heat units in crop production.

SOS 904.1 Remote Sensing Techniques

Development of remote sensing from air photography to sophisticated sensor systems. Techniques of remote sensing, use of panchromatic infra-red black and white, infra-red false and true colour films, image enhancement, multispectral photography, use of side-looking radar and satellite imagery.

SOS 905.1 Advanced Soil Survey and Land-Use Planning

Review Soil survey methods; Applications of Remote sensing and GIS techniques in soil survey; land systems mapping, soil survey interpretations;

concept of land use planning/land evaluation; land use planning and management of nonagricultural projects; land use land cover change analysis; Impacts of climate change; Field Exercise in Soil Survey and Land Evaluation; Advances and Recent developments in Soil Survey and Land use Planning.

SOS 913.1 Advanced Soil Microbiology

Review of the study of soil microorganisms, their environment, form and functions. Organic matter decomposition and the Carbon cycle; organic nitrogen transformation and the carbon cycle; organic nitrogen transformations and the nitrogen cycle. Microbial transformation of P, S, Fe and other mineral elements. Transformations of hydrocarbon and pesticides in soils. Practical Exercise in Soil Micro-biology

SOS 906.2 Advanced Soil Mineralogy

Mineralogy of sand, silt and clay fractions. Principles and use of X-ray. Differential thermal analysis, Electron microscopy and Nicol prism in the study of mineral in soils. Extraction of soil clays and preparation of clay samples for X-ray diffraction and fluorescence analysis. Quantitative estimation of clay minerals.

SOS 907.2 Soil Erosion Control

Principles, types and causes of soil erosion, Measurements of water erosion, Measurements on wind erosion, Analysis of water and wind erosion in the field, Soil loss equation and soil erosion calculator, Measurement of soil loss, Soil erosion control measures vis a-viz: biological and engineering structures. Soil erosion mapping;

SOS 908.2 Advanced Soil-Water-Plant Relations

Water balance and balance components, Dependence of man on water in the context of world agriculture, Measurements of soil water, Movement of water in soils, Movement of water towards and into the root system, Movement of water out of the soil-plant system, Soil water potentials, Water loss from the soil-plant interface.

SOS 911.2 Pesticides in Soil

Major groups of pesticides, processes affecting pesticides in soil including sorption, degradation and elimination; transport of pesticides in soil and uptake by plants; pesticide persistence; effects on soil organisms and crop damage techniques involving analysis of pesticides residue in soils.

SOS 900.1 Seminar I

Students will review and make presentation on contemporary issues in Soil Science.

SOS 900.2 Seminar II

Research findings and challenges in the area of specialization.

SOS 999.2 Thesis

Students are expected to meet the Departmental, Faculty and Graduate School requirements for research and thesis.

SOS 903.1 Crop-Weather Relations

Climate and Crop Production, energy and water balance. Phenological stages of some tropical crops. Weather influence on phenological stages and crop yields. Models for protecting these relationships for selected crops. Application of growth degree days and heat units in crop production.

SOS 909.1 Advanced Soil chemistry:

Chemistry of Soil Formation, Soil Minerals, Structure, properties and classification of Silicate Clay Minerals. Ion Exchange in Soils, Exchange Materials, Principles of Cation Exchange. Chemistry of Nutrient Fixation in Soils: Phosphorus and Potassium Fixation, Soil Acidity and Liming. Humic substances in soil, Evaluation of soil nutrient supply and Soil Salinity. Applications of Soil Chemistry in every day agriculture; Recent developments in Soil Chemistry.

SOS 902.1 Advanced Soil and Water Conservation

Review of Soil Physical Properties and their place in Water Conservation (Soil structure, soil strength and aggregate stability, etc); Methods of assessment, physics of rainfall: rainfall intensity, rainfall prediction and rainfall erodibility. Infiltration and runoff. Soil erosion processes: soil detachment by raindrop impact, soil erodibility, sediment transport and deposition. Types of erosion and methods of control. Review of the study of soil microorganisms, their environment, form and functions. Organic matter decomposition and the Carbon cycle; organic nitrogen transformation and the carbon cycle; organic nitrogen transformations and the nitrogen cycle. Microbial transformation of P, S, Fe and other mineral elements. Transformations of hydrocarbon and pesticides in soils. Practical Exercise in Soil Micro-biology.

SOS 906.2 Advanced Soil Mineralogy

Mineralogy of sand, silt and clay fractions. Principles and use of X-ray. Differential thermal analysis, Electron microscopy and Nicol prism in the study of mineral in soils. Extraction of soil clays and preparation of clay samples for X-ray diffraction and fluorescence analysis. Quantitative estimation of clay minerals.

SOS 907.2 Soil Erosion Control

Principles, types and causes of soil erosion, Measurements of water erosion, Measurements on wind erosion, Analysis of water and wind erosion in the field, Soil loss equation and soil erosion calculator, Measurement of soil loss, Soil erosion control measures vis a-viz: biological and engineering structures. Soil erosion mapping;

SOS 908.2 Advanced Soil-Water-plant Relations

Water balance and balance components, Dependence of man on water in the context of world agriculture, Measurements of soil water, Movement of water in soils, Movement of water towards and into the root system, Movement of water out of the soil-plant system, Soil water potentials, Water loss from the soil-plant interface.

SOS 910.2 Advanced Soil Genesis and Classification

Review Soil Formation; Geologic weathering as a prelude to soil formation, Geomorphology in pedology; soil relationships with drainage basins; criteria for characterizing and evaluating soil development, soil development in various geoclimatic regions of Nigeria and the world system of soil classification. Non-agricultural applications of Soil Classification; Advances in Soil Classification.

SOS 900.1 Seminar I

Students will review and make presentation on contemporary issues in Soil Science.

SOS 900.2 Seminar II

Research findings and challenges in the area of specialization.

SOS 999.2 Thesis

Students are expected to meet the Departmental, Faculty and Graduate School requirements for research and thesis.

COURSE TITLE AND DESCRIPTION

SOS 903.1 Crop-Weather Relations

Climate and Crop Production, energy and water balance. Penological stages of some tropical crops. Weather influence on phenological stages and crop yields. Models for protecting these relationships

for selected crops. Application of growth degree days and heat units in crop production.

SOS 909.1 Advanced Soil chemistry:

Chemistry of Soil Formation, Soil Minerals, Structure, properties and classification of Silicate Clay Minerals. Ion Exchange in Soils, Exchange Materials, Principles of Cation Exchange. Chemistry of Nutrient Fixation in Soils: Phosphorus and Potassium Fixation, Soil Acidity and Liming. Humic substances in soil, Evaluation of soil nutrient supply and Soil Salinity. Applications of Soil Chemistry in every day agriculture; recent developments in Soil Chemistry.

CSS 901.1 Biometrics and Experimental Design

The scientific method of research-Observations, characteristics of well-planned experiments. Field experimentation and layout. Data transformation and analysis. Indices for evaluation of multiple cropping systems-LER, Relative crowding coefficient and Aggressivity. Test of significance and mean comparison, Parametric and Non-parametric tests. Probit analysis. On-farm Experimentation – Technology-generation experiments and technology-verification experiments.

SOS 905.1 Advanced Soil Survey and Land-Use Planning

Review Soil survey methods; Applications of Remote sensing and GIS techniques in soil survey; land systems mapping, soil survey interpretations; concept of land use planning/land evaluation; land use planning and management of nonagricultural projects; land use land cover change analysis; Impacts of climate change; Field Exercise in Soil Survey and Land Evaluation; Advances and Recent developments in Soil Survey and Land use Planning.

SOS 912.1 Advanced Soil Fertility and Plant Nutrition

Description of Soil-Plant Continuum, Plant System: Uptake and Translocation of Nutrient through Root. Mechanism of Nutrient Absorption (osmosis, diffusion, mass flow, cation exchange) and Translocation. Carrier hypothesis, solute transport at the cellular level, Energy sources for active transport. Role of Organic matter in soil Fertility. Evaluation of soil Nutrient supply (Laboratory: Green house and Field methods). Fertilizers, Their Uses, Environmental effect and evaluation, Cropping system and Soil Management.

SOS 913.1 Advanced Soil Microbiology

Review of the study of soil microorganisms, their environment, form and functions. Organic matter

decomposition and the Carbon cycle; organic nitrogen transformation and the carbon cycle; organic nitrogen transformations and the nitrogen cycle. Microbial transformation of P, S, Fe and other mineral elements. Transformations of hydrocarbon and pesticides in soils. Practical Exercise in Soil Micro-biology

SOS 906.2 Advanced Soil Mineralogy

Mineralogy of sand, silt and clay fractions. Principles and use of X-ray. Differential thermal analysis, Electron microscopy and Nicol prism in the study of mineral in soils. Extraction of soil clays and preparation of clay samples for X-ray diffraction and fluorescence analysis. Quantitative estimation of clay minerals.

SOS 915.2 Soil Pollution and Remediation

Heavy metals and radio-nuclides in soils and sediments; hazardous elements in soils and sediments, (cadmium, lead, zinc and iron): mining and smelting sites, landfill sites, sewage sludge; Accumulation of hazardous elements in plants; Treatment of contaminated land, radio-nuclides in the soil and the environment. Hydrocarbons in soils

SOS 911.2 Pesticides in Soil

Major groups of pesticides, processes affecting pesticides in soil including sorption. degradation

and elimination; transport of pesticides in soil and uptake by plants; pesticide persistence; effects on soil organisms and crop damage techniques involving analysis of pesticides residue in soils.

SOS 914.2 Advances in Fertilizer Technology and Use

Review of fertilizer use locally and globally. Physical and chemical properties of various fertilizers, types. Principles of manufacture of nitrogen, phosphorus, potassium, fertilizer handling and storage. Residual effects of various fertilizer types. Use of fertilizers on varying soil types. The economics of fertilizer use. Comparative analysis of fertilizer and non-fertilizer types of farming.

SOS 900.1 Seminar I

Students will review and make presentation on contemporary issues in Soil Science.

SOS 900.2 Seminar II

Research findings and challenges in the area of specialization.

SOS 999.2 Thesis

Students are expected to meet the Departmental, Faculty and Graduate School requirements for research and thesis.

**LIST OF ACADEMIC STAFF ON THE GRADUATE PROGRAMMES
IN CROP AND SOIL SCIENCE DEPARTMENT**

S/No.	Name	Rank	Qualifications	Specialization
1.	Prof. A. A. Tanimola	Professor/Head of Department	PhD 2014 Nematology (Ibadan); MSc. 2003 Crop Protection and Environmental Biology (Ibadan); BSc.2000 (Agriculture, Crop Protection and Environmental Biology) (Ibadan)	Plant Nematology
2.	Prof. N. E. S. Lale	Professor	PhD 1987 Agricultural Entomology (Newcastle UponTyne, UK), B.Sc 1981 (Hons) Agriculture (Crop Science) (Unimaid, Nigeria)	Agric. Entomology
3.	Prof. E. C. Wokoma	Professor	PhD 1986 Plant Pathology, (Ohio State); M.Sc 1982 Plant Pathology (Wash State); B.Sc Ed/Biology 1976 (ABU Zaria)	Plant Pathology
4.	Prof. M. I. Godwin-Egein	Professor	PhD 1999 Plant Science and Biotechnology (Plant Pathology and Mycology) (Uniport); MSc. 1991 Plant pathology and Mycology (Uniport); B. Ed 1988 Biology (Educational Mgt and Planning) (Uniport); NCE 1979 (RIVCO, Port Harcourt)	Plant Pathology
5	Prof. D. F. Uwah	Professor (Adjunct)	PhD Agronomy (ABU, Zaria); MSc Crop Science (Ibadan); B. Agric. (Calabar)	Crop Science
6.	Prof. D. A. Okpara	Professor (Adjunct)	PhD UNN; MSc 1985 UNN; B. Sc. 1982 (Uniport)	Crop Science/ Crop Physiology
7.	Prof. U. E. Udensi	Professor	PhD. 2006 Weed-Crop Ecology & Mgt (Ibadan); PGD. 1994 Agric. Dev. (Wye College, London); MSc. 1994 Agronomy, Crop Science (Ibadan); BSc. 1985 Botany (Uniport)	Weed Science (Weed-Crop Ecology& Mgt.)
8.	Prof. A. O. Asimiea	Professor	PhD 2009 Environmental Management (RSUST); MSc Applied Nematology (UGent Belgium); MSc. 1988 Hydrobiology and Fisheries, (Uniport); B.Sc. 1981, Zoology (Uniport)	Agro-Nematology

9.	Prof. E. I. Hamadina	Professor	PhD. 2004 (Reading, UK); MSc. 1998 Environmental Biology (Physiology) (Ibadan); BSc. 1995 Crop Science (RSUST)	Crop Physiology/Environmental
10.	Prof. O. M. Adedokun	Professor	PhD. 2008 Mycology and Plant Pathology (Uniport); MSc. 1997 Agronomy (Horticulture) (Ibadan); BSc. 1994, Botany (UNILAG)	Horticulture/ Mycology Science
11.	Prof. U. Zakka	Professor	PhD. 2012 Entomology (Uniport); MPhil 2005 Entomology (Legon, Ghana); BSc Agric. 2002 (Unimaid); Nigeria, NCE Agric. DM 1994 (KICOE, Maiduguri)	Agricultural Entomology
12.	Prof. C. C. Wokocho	Professor	PhD 2015 Soil Survey and land use planning & GIS/Remote Sensing (FUTO); MSc 2004 Soil Survey and Land Use (MOUAU); B. Tech. Geography/ Remote Sensing (FUT Minna)	Soil Survey and Land Use Planning
13.	Prof. J. A. Orluchukwu	Professor	PhD 2010 Plant Breeding (RSUST); MSc. 2005 Crop Science (RSUST); BSc. 1987 Crop Science (RSUST)	Plant Breeding/Agronomy
14.	Dr. O. J. Kamalu	Reader	PhD 2015 Pedo-Environmental Mgt. (RSUST); M.Phil 1989 Soil Science (Pedology) (RSUST); HND 1983 Agronomy (RSUST)	Soil Pedology
15.	Dr. B. E. Udom	Reader	PhD 2008 Soil Physics/Conservation (UNN); MSc. 2000 Soil Physics/ Conservation (UNN) PGD, 1998 Land/Water Res. Mgt. (UNN); HND 1992 Soil Fertility (Fed Soil Cons, Kuru Jos)	Soil Physics and Conservation
16.	Dr. A. A. Efisue	Reader	PhD. 2007 Plant Breeding (UKZN, South Africa); MSc. 1994 Plant Breeding (Ibadan); BSc. 1987 Crop Science (Ibadan)	Crop Breeding and Genetics

17.	Dr. J. A. Chukwumati	Senior Lecturer	PhD. Soil Chemistry and Environmental Mgt. (RSUST) MSc. Soil Conservation & Fertility (Wye College, London) BSc. Soil Sci. (RSUST),	Soil Chemistry/Fertility and Environment
18.	Dr. L. C. Nwosu	Senior Lecturer	PhD 2015, Storage Entomology (FUTA); MSc. 2007 Entomology (MOUAAU); B.Sc. 2002 Zoology (MOUAAU)	Agricultural Entomology
19.	Dr. O. M. Azeez	Senior Lecturer	PhD 2012 Agricultural Entomology (FUNAAB); MSc 2006 Crop Science (Uniben); B. Agric. (Univ. Ilorin)	Agricultural Entomology
20.	Dr. V. C. Okereke	Reader	PhD 2015 Plant Pathology (Reading, UK.); MSc. 2004 Plant Pathology (MOUAAU); B. Agric. 2000 Crop Protection (MOUAAU)	Plant Pathology
21.	Dr. P. O. Abam	Senior Lecturer	PhD 2019 Soil Chemistry and Mineralogy (RSU); MSc. 2008 Soil Fertility and Fertilizer Technology (MOUAAU); B. Agric. 2000 Soil Science (Unical)	Soil Chemistry and Fertility
22.	Dr. S. R. Atijegbe	Senior Lecturer	PhD 2019 (Lincoln University New Zealand); M. Phil. 2004 Entomology (Legon, Ghana); BSc. Agriculture 1998 (Crop Science) (Unimaid)	Agricultural Entomology
23.	Dr. A. O. Nengi-Benwari	Senior Lecturer	PhD 2020 Soil Microbiology (RSUST); MSc. 2008 Soil Science (RSUST); BSc. Soil Science 1994 (Calabar).	Soil Microbiology
24.	Dr. H. I. Anozie	Lecturer 1	PhD 2023 (Calabar); MSc 2007 Soil Science (Ibadan); B. Agric Tech. 2004 (FUTO)	Soil Microbiology
25.	Engr. Dr. B. F. Sasanya	Lecturer I	Ph.D. 2022 Water Resources and Environmental Engineering (Ibadan); MSc 2015 Agricultural and Environmental Engineering (Ibadan); B. Tech. 2011 (Hons) Agricultural and Engineering (LAUTECH)	Agricultural, Water Resources and Environmental Engineering

DEPARTMENT OF FORESTRY & WILDLIFE MANAGEMENT

POSTGRADUATE PROGRAMMES IN FORESTRY AND WILDLIFE MANAGEMENT

INTRODUCTION

Philosophy

This is a form of in-service training for personnel, working at the Federal, State and Local Governments' Forestry Departments/Sector and those with Non-Governmental organizations involved in the conservation of forest resources. This is to enable them meet the forest products needs of the society.

Mission

To address the knowledge gap of personnel who are employed to manage the forest resources, without previous training in Forestry and Wildlife Resources Management. Such include; Botanists, Geographers, Crop Scientists, Microbiologists, Biologists, Agriculturists, etc.

Rationale/Justification

The programme will provide opportunity to professionals from other related disciplines who may wish to have training in Forestry and Wildlife Management.

Objective

To engender sustainable capacity building in the forestry sub-sector, which would invariably translate into sustainable management of forest resources and maintenance of healthy environment.

Admission Requirements

Without prejudice to the University minimum requirements, the prospective candidate must possess at least a second class (Lower Division) Bachelors' degree in Forestry or Botany, Biology, Agriculture, Biochemistry, Geology and other related disciplines earned from any recognized University. In addition, candidates must have the matriculation requirements of the Faculty of Agriculture, University of Port Harcourt. Candidates with third class degree may be admitted for a terminal diploma programme (i.e.), they will not be considered for admission to pursue Master's degree thereafter.

Programme Duration

A minimum of two semesters and maximum of four semesters are required to complete the full-time programme.

Graduation Requirements

The student is expected to pass the prescribed courses and successfully defend the research project.

List of Courses, Codes and Credit units

FIRST SEMESTER

Core Courses

Course Code	Course Title	Units
FWL 701.1	Forest Economics and Management	3
FWL 702.1	Advanced Measurements and Biometrics	3
FWL 703.1	Forest and Wildlife Policy, Law and Administration	3
FWL 704.1	Natural Ecosystems and Forest Regeneration	3
FWL 705.1	Silviculture	3
FWL 706.1	Environmental Impact Assessment	3 (E)
FWL 707.1	Seminar	2
Total		17

SECOND SEMESTER

Course Code	Course Title	Units
FWL 708.2	Agroforestry	3
FWL 709.2	Wood Formation and Properties	3
FWL 710.2	Wildlife Ecology, Management and Utilization	3
FWL 711.2	Forestry and Wildlife Extension	3
FWL 712.2	Landscape Practices	3 (E)
FWL 713.2	Field Study and Report Writing	3
FWL 799.2	Research Project	6
Total		21

(E) Elective

COURSE DESCRIPTION

FWL 701.1 Forest Economics and Management (3 Units)

Growth models and growth curves. Estimation of stand structure, density. Site quality and yield. Construction of volume table. Goods and services in forestry, value system in conservation, forest management. Application of economic principles to forest resources, planning and decision making in resource use, cost-benefit analysis as applied to forest operations, budget and financial analysis.

FWL 702.1 Advanced Measurements and Forest Biometrics (3 Units)

Measurements (linear, time weight, area volume), measurement of form, forest inventory/design field measurements/planning, forest resources sampling and enumeration techniques, methods of data collection and sampling techniques methods of data analysis using forestry examples CRD, RCBD, Poission Model, principal component analysis, cluster analysis. Data Interpretation.

FWL 703.1 Forest and Wildlife Policy, Law and Administration (3 Units)

Forest and wildlife related natural resources: planning effective use of natural resources; structure of wildlife administration; problems of forests conservation and endangered species. Review of Nigerian Forest and Wildlife laws and policies. Administration of Forest and wildlife Laws in Nigeria. Effectiveness of forest and Wildlife laws in conservation of species. Laws and policies on economic and recreational uses of Forest and Wildlife Resources. Problems of forest and wildlife conservation in Nigeria.

FWL 704.1 Natural Ecosystems and Forest Regenerations (3 Units)

Types of ecosystems: aquatic, coastal, rainforest, savanna and desert. Disturbances in forest ecosystem, competition, succession, nutrient cycling, energy flow, vegetation survey and analysis; forest regeneration methods; cultural operations.

FWL 705.1 Silviculture (3 Units)

Tree growth and development, regeneration methods: natural/ artificial, thinning, multiplication methods, tending techniques and cutting methods.

FWL 706.1 Environmental Impact Assessment (3 Units) - Elective

Definition, concepts and objectives of Environmental Impact Assessment; development of Environmental Impact Statement, structure and basic contents; project rating; adequacy of documents, communication of Impact statements; review of documents.

FWL 707.1 Seminar (3 Units)

Seminar presentation on the project methodology, results and conclusion.

FWL 708.2 Agroforestry (3 Units)

Definition, importance of Agroforestry in land management, soil fertility and other aspects of

environmental protection. Major Agroforestry practices including compound farming, alley farming, agrisilviculture, silvopastoral, agro-silvopastoral.

FWL 709.2 Wood Formation and Properties (3 Units)

Sources of wood, primary and secondary growth and their derivatives, cell development in wood, multiplication, division of the cambium, thickening of the wall, lignifications, formation of growth rings, wood density and specific gravity, anatomy, wood chemistry, mechanical properties, wood conductivity (thermal/electrical).

FWL 710.2 Wildlife Ecology, Management and Utilization (3 Units)

Different wildlife resources, wildlife and environment, management of wildlife resources, species distribution and abundance as affected by environmental factors, food and feeding habits of wildlife, population and reproductive characteristics. Utilisation of wildlife resources. Methods of population studies and age tables. Wildlife and its conservation. Range management and assessment, classification, structure and economic importance of birds of Africa. Distribution and identification of game birds and management techniques.

FWL 711.2 Forest and Wildlife Extension (3 Units)

Communication for forestry and wildlife extension; Methods of forestry and wildlife Extension: extension approaches; information and education; changing attitude; extension administration; Managing forestry and wildlife extension organization.

FWL 712.2 Landscape Practice (3 Units) - Elective

Importance of landscaping, elements of design selection of landscape plants, lawn making, ornamental trees and shrubs, pruning system, landscaping in homes, offices, road sides, parks, airports, etc. maintenance of techniques.

FWL 713.2 Field Study and Report Writing (3 Units)

Study visits to forestry project sites and forest-based industries.

FWL 799.2 Research Project (6 Units)

A practical research work, with orientation in forestry and wildlife management.

POSTGRADUATE PROGRAMME FOR THE DEGREE OF MASTER OF SCIENCE (M.Sc.) FORESTRY

Philosophy

To conduct outstanding researches and develop excellent human resources in the areas of Silviculture and Forest Biology, Forest Economics and Management, Wood Science, Biometrics and Measurement, Wildlife Management and Ecotourism, the Department of Forestry and Wildlife Management intends to offer postgraduate programmes leading to the award of Master of Science (M.Sc.) degree.

Mission

The mission of the programme is to train and equip students in learning and research to manage and utilize forest resources in a manner that is ecologically and environmentally sound; with high ethical conduct in line with modern conservation practices.

Objectives

The programme is designed to equip students academically for improved professional research work in forest resources and to develop capacity for biodiversity conservation.

Admission Requirement

A candidate for admission into the M.Sc. Programme must have a good Bachelor Degree in Forestry/Forest Resources Management/Wood Science or Wildlife Management. The prospective candidate must possess at least a second class (Lower Division) Bachelors' degree in Forestry/Forest Resources Management/Wood Science, Wildlife Management or Agriculture, and other equivalent fields earned from any University recognized by the Senate of the University of Port Harcourt. Candidates must have full ordinary level certificate with a credit level pass in English Language. In exceptional cases, candidates with Bachelor's degree in Environmental/Biological Science or related field who meet the above stated requirements, but have minimal deficiencies in Forestry, may be admitted. Such deficiencies through approved courses recommended by the Departmental Board of Postgraduate Studies will be remedied.

Areas of Specialization

- i. Silviculture and Forest Biology
- ii. Forest Economics and Management
- iii. Biometrics and Measurement
- iv. Wood Science

Programme Duration: A minimum of three semesters and maximum of six semesters are required to complete the full-time programme.

M.Sc. Forestry (Silviculture and Forest Biology)

FIRST SEMESTER

General (Compulsory) courses

Course Code	Course Title	Units
SGS 801.1	ICT and Research Method	2
FWL 801.1	Ecological Principles for Economic Development	3
FWL 802.1	Principles and strategies of Environmental Impact Assessment	3
FWL 803.1	Statistical Techniques in Renewable Resources Mgt.	3
FWL 804.1	Research Methodology	3
Core courses		
FWL 805.1	Advanced Silviculture	2
FWL 806.1	Forest Nutrient Relations	2
FWL 807.1	Advanced Landscaping	2 (E)
FWL 808.1	Forests in Environmental Protection	2
Total		22

SECOND SEMESTER

SGS 801.2	Entrepreneurship and Management	2
FWL 809.2	Seminar	1
FWL 810.2	Biotechnology	2
FWL 811.2	Advanced Forest Genetics	2
FWL 812.2	Quantitative Plant Ecology	2
FWL 813.2	Agroforestry: Concept, systems and practices	2
FWL 814.2	Forest Micro Meteorology and Hydrology	2 (E)
FWL 898.2	Field Trip and Report Writing	2
FWL 899.2	Research Dissertation	6
Total		21

M.Sc. Forestry (Forest Economics and Management)

FIRST SEMESTER

General (Compulsory) courses

Course Code	Course Title	Units
SGS 801.1	ICT and Research Method	2
FWL 801.1	Ecological Principles for Economic Development	3

FWL 802.1	Principles and strategies of Environmental Impact Assessment	3 (E)
FWL 803.1	Statistical Techniques in Renewable Resources Mgt.	3
FWL 804.1	Research Methodology	3
Core Courses		
FWL 815.1	Social forestry	3
FWL 816.1	Advanced Forest Policy Law and Administration	3
FWL 817.1	Advanced Urban Forestry	2
Total		19

SECOND SEMESTER

SGS 802.2	Entrepreneurship and Management	2
FWL 818.2	Advanced Forest Management	2
FWL 819.2	Advanced Marketing	1(E)
FWL 820.2	Advanced Forest Resources Economics	2
FWL 821.2	Valuation of Forest Resources & Project	2
FWL 822.2	Economic Analysis & Control of Forest Operation	1(E)
FWL 823.2	Forest Enterprises Development	2
FWL 809.2	Seminar	1
FWL 898.2	Field Trip and Report Writing	2
FWL 899.2	Research Dissertation	10
Total		23

M.Sc. Forestry (Biometrics and Measurement)
FIRST SEMESTER

General (Compulsory) courses		
Course Code	Course Title	Units
SGS 801.1	ICT and Research Method	2
FWL 802.1	Principles and strategies of Environmental Impact Assessment	3
FWL 803.1	Statistical Techniques in Renewable Resources Management	3
FWL 804.1	Research Methodology	3
Core Courses		
FWL 824.1	Advanced Mensuration and Modelling	3
FWL 825.1	Remote Sensing /GIS Applications in Forest Resources Management	3

FWL 826.1	Advanced Sampling Techniques	3
Total		20

SECOND SEMESTER

SGS 801.2	Entrepreneurship and Management	2
FWL 827.2	Advance Resources Inventory Analysis	3
FWL 828.2	Multivariate Analysis	3(E)
FWL 829.2	Advanced Experimental Designs	3
FWL 809.2	Seminar	1
FWL 898.2	Field Trip and Report Writing	2

Course Code	Course Title	Units
SGS 801.1	ICT and Research Method	2
FWL 802.1	Principles and strategies of Environmental Impact Assessment	3 (E)
FWL 803.1	Statistical Techniques in Renewable Resources Management	3
FWL 804.1	Research Methodology	3
Core Courses		
FWL 830.1	Anatomy and Properties of Wood	3
FWL 831.1	Wood quality	3
FWL 832.1	Wood in Relation to Moisture	2(E)
FWL 833.1	Advanced Mechanical Wood Processing	3
Total		17

SECOND SEMESTER

SGS 801.2	Entrepreneurship and Management	2
FWL 834.2	Wood Degradation and Protection	3
FWL 835.2	Advanced Forest Operations	3
FWL 836.2	Pulp and Paper Production	2
FWL 837.2	Adhesion and wood products	1(E)
FWL 809.2	Seminar	1
FWL 898.2	Field Trip and Report Writing	2

FWL 899.2	Research Dissertation	10
Total		23

COURSE DESCRIPTION

FWL 801.1 Ecological Principles for Economic Development (3 Units)

Development and environment; advanced analyses of ecological processes in natural ecosystems; energy production and productivity estimates in the ecosystem. Relationship between farming systems and the environment; ecological services and forest resources for sustainable economic development.

FWL 802.1 Principles and Strategies of Environmental Impact Assessment (3 Units)

Concepts and objectives of EIA; Principles and theory of environmental impact assessment and statements of impacts required by law, sources and means of obtaining authoritative information. Development of Environmental Impact Statement, structure and basic contents; project rating; adequacy of documents, communication of Impact statements; review of documents. Sources of impact; Project activities and actions. Linking impacts to system intervention – direct and indirect, Impact and their key considerations; E.I.A. procedure and Problems Associated with EIA and how to overcome them. Methods of evaluating and analyzing ecosystems for environmental management applications.

FWL 803.1. Statistical Techniques in Renewable Resources Management (3 Units)

Basic parametric and non-parametric statistics; probability theory; common experimental designs (CRD, RCBD, Latin-Square, Factorial Experiments and Split plot); Correlation and regression analyses. Analysis of covariance (ANCOVA).

FWL 804.1 Research Method (3 Units)

Principles, philosophy and types of scientific research; planning and conducting research; data collection strategies and analysis; forest project planning, administration, monitoring and evaluation; common ethical issues in research; scientific report writing and research funding.

FWL 805.1 Advanced Silviculture (2 Units)

Tree growth and development, regeneration methods: natural/ artificial, thinning, multiplication methods, tending techniques and cutting methods. Current issues covering the broad areas of Silviculture

FWL 806.1 Forest Nutrient Relations (2 Units)

Mineral nutrient cycling; gains and losses of mineral nutrient in systems; topics and the mineral nutrition of trees; maintenance of soil fertility

FWL 807.1 Advanced Landscaping (2 Units)

Relationship between land aesthetics and environmental concerns. Identification and use of plant materials for environmental aesthetics; use and maintenance of urban trees including ecological basis for their selection and planting, production, maintenance and management.

FWL 808.1 Forests in Environmental Protection (2 Units)

Features and ecological components of forests with emphasis on tropical rainforest, biological mechanism for controlling environmental menace e.g. erosion, flood, desertification, the phenomena of atmosphere purification and climate amelioration by the forest. Pest and Diseases.

FWL 809.2 Seminar (2 Units)

Students are to present seminars in their areas of specialization and assessed accordingly

FWL 810.2 Biotechnology (2 Units)

Principles and management techniques of biotechnology. Issues and scope of environmental biotechnology. Genetic engineering practices. Biotechnology in biodiversity conservation. Genetically modified organisms (GMOs). The goals of bio-safety. Moral and legal implications of genetically modified products.

FWL 811.2 Advanced Forest Genetics (2 Units)

Current issues covering the broad areas of forest genetics

FWL 812.2 Quantitative Plant Ecology (2 Units)

Methods of vegetation assessment and description, Computation of species frequency, measurement of species abundance, cover, importance value, alpha and beta diversities, etc.

FWL 813.2 Agroforestry: Concepts, systems and practices (2 Units)

Definitions of agroforestry components (Viz: woody perennials; agronomic crops; animals); system sustainability; multidisciplinary. Identification of agroforestry systems. Criteria for Agroforestry system classification (Viz: - structural criteria; functional criteria; socio-economic criteria Agroforestry system performance and management. Identification/ classification of agroforestry practices; e.g. taungya, multilayer tree gardens; multipurpose tree on farmlands; crop; combination role of trees in soil conservation.

FWL 814.2 Forest Micro Meteorology and Hydrology (2 Units)

Physical processes of the atmosphere as they relate to the exchange of energy and moisture; the components of the water budget exudation in relation to watershed management.

FWL 815.1 Social Forestry (3 Units)

The involvement of socio-cultural groups such as religious organizations, schools, NGOs, CBOs and traditional institutions in forest resources conservation Eco-Development practices; application of indigenous/traditional knowledge in sustainable forest management. Utilisation patterns of forest resources in specific socio-cultural settings and their effects on forests conservation. Establishment and management of community nurseries and woodlots. Tenure (ownership) issues in forest resources: legal and policy implications. Self-employment in forestry. Ethical standards in exploitation and urbanization of forest resources.

FWL 816.1 Advanced Forest Administration and Policy (3 Units)

Theoretical concepts in forest resources policy making and administration; their application in the analyses and appraisal of alternative government strategies for regulating use of resources. Case studies of Forest Administration and Policy challenges in African Countries.

FWL 817.2 Advanced Urban Forestry (2 Units)

Concepts relevant to increasing use of natural environments for leisure needs; identification, functions and ecological basis for selecting, planting and management of urban trees, protection, maintenance and utilization; interaction of urban trees with the environment. A case study if urban forestry structure.

FWL 818.2 Advanced Forest Resources Management (2 Units)

Principles and practice of forest resources management; case studies of forest management challenges in specific forest resources and multiple use forests as applicable in public forests.

FWL 819.2 Advanced Forest Products Marketing (2 Units)

Forest product identification; Analysis of forest product market system; Types of market and implications on marketing of forest product; Government policies and forest product marketing; Pricing mechanism for forest products; Strategies for forest product market development and impacts on job creation/poverty reduction; Planning marketing programmes; Marketing information system in forestry; Analyses of forest products marketing problems; and International

conventions and their impacts on forest products marketing.

FWL 820.2 Advanced Forest Resource Economics (2 Units)

Advanced lessons on forest resources decisions, allocation of resources and use of produce; analysis of challenges of forest products marketing, and solutions.

FOR 821.2 Valuation of Forests Resources and Projects (2 Units)

Theory of valuation and application to forest, land, timber stand, stumpage and non-market goods; project appraisal methods and application to forestry; problems in project appraisals in development countries.

FWL 822.2 Economic Analysis and Control of Forestry Operation (2 Units)

Model building techniques; production theory; simple maximization models-marginal analysis, break even analysis; constrained maximization models Lagrangian multiplier, linear programming, simulation, inventory control, costing.

FWL 823.2 Forestry Enterprises Development (2 Units)

Classifications of Forest enterprises, forest enterprises-entrepreneurship nexus; establishment of small scale forest based enterprises with practical examples from Nigeria.

FWL 824.1. Advanced Mensuration and Modelling (3 Units)

Units and scale of measurement; measurement of tree growth variables; growth and yield increment of individual trees and stands; concept of stand structure and site quality assessment ; growth and yield modeling and prediction; matrix algebra for predictive yield and growth models.

FWL 825.1. Remote Sensing /GIS Applications Resources Management (3 Units)

Remote sensing; biophysical consideration; the aerial camera and film-filter combinations; geometrical characteristics of serial photographs; thermal characteristics of aerial photo-graphs; thermal scanning, SLAR, remote sensing by satellites; GIS Applications to forest resources management.

FWL 826.1 Advanced Sampling Techniques (3 Units)

Application of specialized sampling techniques in natural resources studies, holistic view of pertinent probability and non-probability sampling techniques.

FWL 827.2 Advance Resources Inventory Analysis (3 Units)

Manual and electronic data processing, application common software for inventory data analysis, introduction to computer programming for forestry and wildlife applications.

FWL 828.2 Multivariate Analysis (3 Units)

Common multivariate statistical distributions; component analysis; factor analysis, canonical analysis; discriminant analysis; multiple regression; path analysis and multiple analysis of variance (MANOVA) with special consideration of SAS, Strata and SPSS.

FWL 829.2 Advanced Experimental Designs (3 Units)

Compounding and fractional replication in factorial experiments; incomplete block design, response surface analysis; split-split design and nested design

FWL 830.1 Anatomy and Properties of Wood (3 Units)

Advanced wood structural analysis; anomalous structure; secretory minerals; ecological anatomy and morphology chemotaxonomy; application of statistics and computing in wood anatomy; Physical, mechanical chemical and anatomical properties of wood including variation within and between trees. Classification of wood into end use categories based on micro structural analysis

FWL 831.1 Wood quality (3 Units)

Advanced anatomy and ultra structure; wood quality variations; influence of growth conditions on wood properties; factors affecting wood quality; techniques of wood quality evaluation; wood quality and end user requirements. Ways of improving wood quality.

FWL 832.1 Wood in Relation to Moisture (2 Units)

Moisture in wood; processes of moisture exchange; movement of water and vapour; advanced wood drying, Drying defects and

correction devices; preservation of wood.

FWL 833.1 Advanced Mechanical Wood Processing (3 Units)

Theory and practice of mechanical wood processing; theory of wood cutting in various operations; factors influencing cutting operations; analysis of cutting tool behaviour; Applications in major mechanical processing industries; Small diameter wood utilization, time management, energy utilization and efficiency; Lumber recovery and correlates; integrated operation in wood processing

FWL 834.2 Wood Degradation and Protection (3 Units)

Natural degradation of wood by fungi and insects, types of decay organisms, decay conditions, mechanisms and consequences, alternatives for wood protection against deterioration, chemicals used for wood preservation and techniques employed for applying wood preservatives. Challenges encountered in the use of chemical preservatives.

FWL 835.2 Advanced Forest Operations (3 Units)

Harvesting and transportation systems; labour in the preparation of plans and work study; ergonomics and economics of forest operations. Challenges in logging operations

FWL 836.2 Pulp and Paper Production (2 Units)

Manufacturing of pulp; raw materials; Principles and processes; theory, practice and processes involved in Paper manufacturing; environmental pollution, inclusive

FWL 837.2 Adhesion and wood products (2 Units)

Physical and chemical principles of adhesion; factors influencing gluing stresses in glued joints; Testing failure patterns. Application of Adhesives in major wood-based Industries.

POSTGRADUATE PROGRAMME FOR THE DEGREE OF MASTER OF SCIENCE (M.Sc.) - Wildlife and Ecotourism Management

Philosophy

To conduct outstanding researches and develop excellent human resources in the areas of Wildlife Management and Ecotourism, the Department of Forestry and Wildlife Management intends to offer postgraduate programmes leading to the award of

Master of Science (M.Sc.) degree in Wildlife and Ecotourism Management

Mission

The mission of the programme is to train and equip students in learning and research to manage and utilize forest resources in a manner that is ecologically and environmentally sound; with high ethical conduct in line with modern conservation practices.

Objectives

The programme is designed to equip student academically for improved professional research work in forest resources and to develop capacity for biodiversity conservation.

Admission Requirement

A candidate for admission into M.Sc. Programme must have a good Bachelor Degree in Forestry/Forest Resources Management/Wood Science or Wildlife Management, the prospective candidate must possess at least a second class (Lower Division) Bachelors’ degree in Forestry/Forest Resources Management/Wood Science, Wildlife Management or Agriculture, and other equivalent fields earned from any University recognized by the senate of the University of Port Harcourt. Candidates must have full ordinary level certificate with a credit level pass in English Language. In exceptional cases, candidates with Bachelor’s degree in Environmental/Biological Science or related field who meet the above stated requirements, but have minimal deficiencies in Forestry, may be admitted. Such deficiencies through approved courses recommended by the Departmental Board of Post Graduate Studies will be audited.

Programme Duration: A minimum of three semesters and maximum of six semesters are required to complete the full-time programme

COURSE DESCRIPTION

FWL 801.1 Ecological Principles for Economic Development (3 Units)

Development and environment; advanced analyses of ecological processes in natural ecosystems; energy production and productivity estimates in the ecosystem. Relationship between farming systems and the environment; ecological services and forest resources for sustainable economic development.

FWL 802.1 Principles and Strategies of Environmental Impact Assessment (3 Units)

Concepts and objectives of EIA; Principles and theory of environmental impact assessment and statements of impacts required by law, sources and means of obtaining authoritative information. Development of Environmental Impact Statement, structure and basic contents; project rating; adequacy of documents, communication of Impact statements; review of documents. Sources of impact; Project activities and actions. Linking impacts to system intervention – direct and indirect, Impact and their key considerations; E.I.A. procedure and Problems Associated with EIA and how to overcome them. Methods of evaluating and analyzing ecosystems for environmental management applications.

FWL 803.1. Statistical Techniques in Renewable Resources Management (3 Units)

Basic parametric and non-parametric statistics; probability theory; common experimental designs (CRD, RCBD, Latin-Square, Factorial Experiments and Split plot); Correlation and regression analyses. Analysis of covariance (ANCOVA).

FWL 804.1 Research Method (3 Units)

Principles, philosophy and types of scientific research; planning and conducting research; data collection strategies and analysis; forest project planning, administration, monitoring and evaluation; common ethical issues in research; scientific report writing and research funding.

FWL 809.2 Seminar (1 Units)

Students are to present seminars in their areas of specialization and will be assessed accordingly.

FWL 838.1 Advanced Wildlife Management and Conservation (3 Units)

Design, surveys and siting of conservation areas in compliance with IUCN criteria. Construction of roads, camping sites and trails, ecotourism facilities, jeep tracks; protection patrols. Management of parks, games reserves, wildlife sanctuaries, strict nature reserves, etc. Marine wildlife forms, factors affecting sustainable marine ecosystem; prospects of effective marine conservation in the tropics with emphasis on Nigeria.

FWL 839.1 Advanced Biodiversity Science (2 Units)

Principles of bioresources and environments; biodiversity monitor corridors and hotspots; global distribution of species with reference to the Amazon, Congo basin and other areas, international affiliations, co-operation research Aid Agencies, International donors and granting techniques

FWL 840.1 Park, Zoo and Museum Design Management and Administration (3 Units)

Park survey, Park resources, citing and construction of roads and tourist facilities, supervision of patrol. Environmental studies, political set-up, legislation and local institutional management. Range of grazing ecology. Zoo design and layout technique for museum. Health and Welfare requirements of wild species in captivity, principle of collecting, preserving animal specimens in museum for educational purposes.

FWL 841.1 Ecotourism (3 Units)

Definition of Tourism, Types of tourism, Concept of Ecotourism, Identification of ecotourism assets; community-based ecotourism; factors militating against the tourism industry; criteria for effective development of ecotourism in Nigeria (to include field tours, case studies), Ecotourism Resources and management; Interrelationship between Tourism and natural resources management. Ecotourism planning and development, Ecotourism and Rural development; Economic costing of tourism; Tourism global growth trend. National park zonation and utilization by tourists. Coastal tourism, Cost benefit analysis of tourism in protected areas; Gross Domestic Products (GDP) and Foreign Interest (FI) on Tourism Management, Multiplier effect of tourism management, Regulation and monitoring of Ecotourism projects.

FWL 842.2 Participatory Management and Conservation of Wildlife Resources (2 Units)

Causes of conflicts in protected areas. Conflict resolution strategies. Advanced analyses of Stakeholders in protected areas. Participation of host communities in management of protected areas and eco-developmental projects. Various ways of involving local households in management of renewable resources. Monitoring performance of host communities, Indigenous knowledge approach in resource utilization and conservation information dissemination. Ethics and moral issues in Resource conservation. Learning outreach methods in Rural Africa. Methods of changing the attitude of host communities in favour of wildlife resources conservation. Case studies of conflicts in protected areas around the globe and resolution strategies.

FWL 843.2 Advanced Game Ranching and Domestication Techniques (2 Units)

Various wildlife resources and their exploitation, uses and sustainability. Wildlife domestication and problems and prospects. Strategies for sustainable use. Captive breeding, domestication and husbandry techniques. Ranching techniques; wildlife species as a source of protein, domestication of African rodents, birds and large mammals; husbandry techniques; problems and prospects

FWL 844.2 Ecosystem Approach to Range and Tourism Management (2 Units)

The niche concept, principles, populations, communities and energy systems in a natural ecosystem. Nutrients cycling mechanisms, natural regulation of animal abundance. Wildlife adaptation to habitats; the role of prey/predators; involvement of man in biology communities; Nigerian plants and animals.

FWL 845.2 Animal Ethology (1 Unit)

Social organization; breeding seasons and social behaviour; food habits and territorialism of some principal wildlife species (Emphasis should be laid on managerial problems and solutions). Social behaviour of species such as elephant, lion and buffalo.

FWL 846.2 Ornithology and Herpetology (2 Units)

Identification, Principles of classifications, importance, ecology, distribution, biology and life history of birds, reptiles and amphibians, their migration; counts; survey and potentials.

FWL 847.2 Fire and Wetland Ecology (2 Units)

Fire and natural phenomenon and its significance in the evolution of vegetation, fire as a tool in range management; causes and control. Ecology of wetlands, structure and functions of wetland ecosystems, their importance and management. Biodiversity of wetlands with emphasis on the biology and adaptations of the organisms. Monitoring and conservation, management goals, methods and problems.

FWL 848.2 Physiological Adaptations of wild Animals (1 Unit)

Physiological adaptations of species in various habitats. Brief discussion of the physiology of growth, reproduction and lactation. Changes in body metabolites, hepatic enzymes of wild animals in captivity. Issues in physiological adaptation of animals in captivity. Adaptations.

POSTGRADUATE PROGRAMME FOR DOCTOR OF PHILOSOPHY (Ph. D.)

Philosophy

To carry out ground breaking researches and produce excellent human resources in the areas of Silviculture and Forest Biology, Forest Economics and Management, Wildlife Management and Ecotourism, Biometrics and Measurement and Wood Science. The Department of Forestry and Wildlife Management intends to offer postgraduate programmes leading to the award of Doctor of Philosophy (Ph. D) degree.

Mission

The mission of the programme is to train and equip graduate students in learning and research to manage and rationally utilize forest resources in a manner that is ecologically sustainable and environmentally friendly; with high ethical conduct in line with modern conservation best practices.

Objectives

The programme is designed to equip graduate students academically for improved professional research work in forest resources and to develop capacity for biodiversity conservation.

Admission Requirement

A candidate for admission into Ph.D. Programme must have a good Mater's Degree in Forestry/Forest Resources Management/Wood Science or Wildlife Management, with a minimum CGPA of 3.5 in the M.Sc. from the University of Port Harcourt or any other approved University. In exceptional cases, candidates with Master's degree in Environmental or Biological Science who meet

the above stated requirements, but have minimal deficiencies in Forestry, may be admitted. Such candidates will audit approved courses recommended by the Departmental Board of Studies to remedy the deficiencies. In addition, the candidate must have obtained a second class lower degree and have the matriculation requirements of the Faculty of Agriculture, University of Port Harcourt

Areas of Specialization

- i. Silviculture and Forest Biology
- ii. Forest Economics and Management
- iii. Wildlife Management and Ecotourism
- iv. Biometrics and Measurement
- v. Wood Science

Duration of Study

A minimum of six semesters and maximum of ten semesters are required to complete the full-time programme

Degree Requirements

To qualify for the award of the Ph.D in any of the above stated areas of specialization, a minimum of six semesters of full-time graduate work is required. The programme involves an intensive independent research work and submission of a thesis. In addition, candidates will be expected to take some approved courses recommended by the Departmental Postgraduate Board of Studies.

Ph.D. Silviculture and Forest Biology

FIRST SEMESTER

Course Code	Course Title	Units
FWL 901.1	Scientific Writing	3

FWL 902.1	Advanced Agroforestry System	3
FWL 903.1	Ecological Interactions in Agroforestry	3
FWL 904.1	Mineral Cycling and Vegetation Productivity	3
Total		12

SECOND SEMESTER

FWL 905.2	Topical Issues in Forest and Wildlife Resources Management	3
FWL 906.2	Field Course	1
FWL 907.2	Advanced Forest Protection	2 (E)
FWL 908.2	Forest Watershed Management	2 (E)
FWL 999.2	Thesis	16
Total		20

Ph.D. Forest Economics and Management

FIRST SEMESTER

Course Code	Course Title	Units
FWL 901.1	Scientific Report Writing	3
FWL 909.1	Indigenous Conservation Techniques	3
FWL 910.1	Economics of Forest Services	3 (E)
FWL 911.1	International Trade in Forest and Wildlife Products	3
FWL 912.1	Applied Forest Resources Management	3(E)
Total		9

SECOND SEMESTER

FWL 905.2	Topical Issues in Forest and Wildlife Resources Management	3
FWL 906.2	Field Course	1
FWL 913.2	Organization and Management of Wood Based Industries	3(E)
FWL 914.2	Advanced Conservation and production of Non-Timber Forest Products	3
FWL 915.2	Economic Analysis of Agroforestry projects	3(E)
FWL 999.2	Thesis	16
Total		23

Ph.D. Wildlife Management and Ecotourism

FIRST SEMESTER

Course Code	Course Title	Units
FWL 901.1	Scientific Report Writing	3
FWL 916.1	Biodiversity Conservation and Ecotourism	3
FWL 917.1	Indigenous Wildlife Conservation Approaches and Coastal Tourism	3 (E)
FWL 918.1	Herpetology and Primatology	3 (E)
Total		6

SECOND SEMESTER

FWL 905.2	Topical Issues in Forest and Wildlife Resources Management	3
FWL 906.2	Field Course	1
FWL 911.2	International trade in Forest and Wildlife Products	1 (E)
FWL 919.2	Conservation of Migratory and Marine Wildlife Resources	1 (E)
FWL 920.2	Wildlife Habitat Analysis and Anti-Poaching Strategies	2
FWL 999.2	Thesis	16
Total		22

Ph.D. Biometrics and Measurement

FIRST SEMESTER

Course Code	Course Title	Units
FWL 901.1	Scientific Report Writing	3
FWL 921.1	Forest System and Information Analysis	3
FWL 922.1	Ecological modeling and Programming	3
FWL 923.1	Advanced Biometrics	3
Total		12

SECOND SEMESTER

FWL 905.2	Topical Issues in Forest and Wildlife Resources Management	3
FWL 906.2	Field Course	1
FWL 924.2	Optimization Models in Forest Resources Management	3 (E)
FWL 999.2	Thesis	16
Total		20

Ph.D. Wood Science

FIRST SEMESTER

General (Compulsory) courses

Course Code	Course Title	Units
FWL 901.1	Scientific Report Writing	3
FWL 913.2	Organization and Management of Wood Based Industries	3
FWL 925.1	Wood Energy Development	3(E)
FWL 926.1	Ecology and Management of Wood in Nigeria	3(E)
FWL 927.1	Wood Craftsmanship	2
Total		8

SECOND SEMESTER

FWL 905.2	Topical Issues in Forest and Wildlife Resources Management	3
FWL 906.2	Field Course	1
FWL 913.2	Organization and Management of Wood Based Industries	2(E)
FWL 928.2	Advanced Wood Anatomy and Properties	2
FWL 929.2	Advanced Wood Machinery and Saw-Milling	2 (E)
FWL 999.2	Thesis	16
Total		22

COURSE SYNOPSES

FWL 901.1 Scientific Report (3 Units)

Processes in writing journal papers, conference papers and proposal for grants, Ethical issues in report writings.

FWL 902.1 Advanced Agroforestry system (3 Units)

Agroforestry systems, designs and practices- alley farming, farm trees, shelterbelts, homegardens (agrisilvisculture, silvopastoral, agrosilvopastoral). Case studies. Ethno-agroforestry.

FWL 903.1 Ecological Interactions in Agroforestry (3 Units)

Agroforestry systems. Indigenous environmental knowledge in the formulation of sustainable agroforestry systems. Interactions between species, interactions of limited resources, classification of interactions in agroforestry. Key issues in agroforestry; overyielding, reduction in yield variance, maintenance of resources.

FWL 904.1 Mineral Cycling and Vegetation Productivity (3 Units)

Review of principles and processes of biomass production, accumulation and biogeochemical cycling as affected by environmental conditions; measurement and analysis of production.

FWL 905.2 Topical Issues in Forest resources Management (3 Units)

Special investigation and analysis of forest resources management problems arising from multiple use of forestlands e.g. agro forestry, management of natural forests, plantation establishment, forest revenue sources, pricing and ethics. Emphasis should be placed on identification and application of relevant concepts and theories to specific forest resources problems with proposals for investigating and solving such problems.

FWL 906.2 Field Course (1 Units)

Students are expected to visit places of significant importance to their field of study and submit a report.

FWL 907.2 Advanced Forest Protection (2 Units)

Principles and concepts of forest plants protection. Survey of major pests and diseases of plants: ornamental plants, vegetable crops, fruit trees, forest trees and their control, with emphasis on Nigerian species and prevailing cases (should entail field laboratory studies on diagnosis and infection biology).

FWL 908.2 Forest Watershed management (2 Units)

Role of forest in water cycle, effects of logging, mining and other forest land uses on water resources

FWL 909.1 Indigenous conservation techniques (3 Units)

Importance of tradition/culture in the development of forests and environment. Sacred forests and indigenous management practices. Roles of culture (taboos and totems) in conservation of plants and animals. Application of indigenous technical knowledge in sustainable management of forests. Effects of demographic characteristics and traditional land use practices on forests conservation programmes. Impacts of religion on environmental conservation

FWL 910.1 Economics of Forest Services (3 Units)

Theories of valuation and application to forest services; cost analysis of forest services; measurement of regional impacts, (should include

group studies and student reports on the economic aspects of erosion control and outdoor recreation).

FWL 911.1 International Trade in Forest and Wildlife Products (1 Unit)

Theory of international trade; items of trade, e.g timber and related products, wildlife and related products; trade growth; commercial policy; analysis of marketing problems (should include group discussions).

FWL 912.1 Applied Forest Resources management (3 Units)

Principles and practices of forest resources management as applied to specific forest properties. Field studies of forest conditions, organizations, operation and problems to acquaint students with the latest and most efficient forest management practices in office and forest.

FWL 913.2 Organization and Management of Wood Based Industries (1 Unit)

Application of communication theories in wood manufacturing industries. General modern human resources management techniques e.g. motivation theory, personnel safety, etc. analysis of production management as applied to wood-based industries.

FWL 914.2 Advanced Conservation and production of Non-Timber Forest products (3 Units)

Importance of non-timber forest products (NTFPs) such as canes (Rattans) medicinal plants, dyes, silk, Chemical and extractives, gum Arabic and tannin. Some wildlife products. Processing of forest food plant species for production. Edible land snails and mushroom production. Management of apiculture in integrated agroforestry systems.

FWL 915.2 Economic Analysis of Agroforestry project (3 Units)

Farmers expectation from adoption of agroforestry; measurement of costs and benefits in agroforestry; some tools for determining costs and benefit of agroforestry models; rates of returns on investments; decision making through multi-valued choices; models for time adjustment of costs and revenues.

FWL 916.1 Biodiversity Conservation and Ecotourism (3 Units)

Identification of eco-tourism assets; Ecotourism assets in different parts of Nigeria; community-based eco-tourism; Management of ecotourism destinations; current state of ecotourism in Nigeria; factors militating against the tourism industry; criteria for effective development of ecotourism in Nigeria.

FWL 917.1 Indigenous wildlife conservation approaches and Coastal Tourism (3 Units)

The role of tradition/culture on the development of forests and environment and maintenance of wildlife habitats. Sacred forests and their management practices. Conservation functions of culture (taboos and totems) on plants and animals. Capturing indigenous technical knowledge for the sustainable management of forests and wildlife species. Effects of demographic characteristics and traditional land use practices on forests conservation programmes. Impacts of religion on environmental conservation. Tourism in coastal areas; Modes of operation, development and marketing. Growth and Challenges of tourism in coastal areas (Emphasis should be in Niger Delta region).

FWL 918 Herpetology and Primatology (3 Units)

Principles for classifying amphibians and reptiles; social and organizational structure, distribution, migration and population ecology of amphibians and reptiles; life history of frogs, toads and snakes. Herpetofauna and environmental monitoring; safety and community health, with introduction to anti-venom therapy. Principles for classification of primates; organizational structure distribution and ecology; migration and life history of primates.

FWL 919.2 Conservation of Migratory and Marine Wildlife Resources (1 Unit)

Marine wildlife forms, factors affecting sustainable marine ecosystem; prospects of effective marine conservation in the tropics with emphasis on Nigeria. Review of international conventions on biodiversity conservation and trade in endangered species. Essence of migratory species in conservation; species and habitats involved; biological and ecological basis for migratory behaviour and its value in the natural ecosystem balance. The Nigerian experience and efforts aimed at migratory species conservation.

FWL 920.2 Wildlife Habitat Analysis and Anti-Poaching Strategies (2 Units)

Animal evolution and ecological succession, climax vegetation and associated wildlife forms, wildlife habitat types and research approaches. Different forms of poaching in protected areas. Consequences of poaching in protected areas. Strategies for controlling poachings. Causes of poaching.

FWL 921.1 Forest system and information analysis (3 Units)

Advanced forest inventory, evaluation and monitoring for future forest development patterns and flow of benefits

FWL 922.1 Ecological modeling and programming (3 Units)

Application of the principle of linear and goal programming in decision making, Advance approach to ecological models in solving current issues in forestry

FWL 923.1 Advanced Biometrics (3 Units)

Computer programming and more advanced topics on multivariate analysis

FWL 924.2 Optimisation Models in Forest Resources Management (3 Units)

Application of quantitative methods in forestry and wildlife management, management planning models, operation research

FWL 925.1 Wood Energy Development (3 Units)

Conversion of wood into energy, processing methods, determination of calorific values and other properties, comparison of different biofuels, environmental aspects, emissions.

FWL 926.1 Ecology and Management of Wood in Nigeria (3 Units)

Knowledge about wood in external and internal environmental conditions, Interaction of biotic and abiotic factors with wood under indoor and outdoor applications, Role of wood in ecosystem management

FWL 927.1 Wood Craftsmanship (2 Units)

Skills acquisition in; carving, turning, weaving and joinery.

FWL 928.2 Advanced wood anatomy and properties (2 Units)

Growth in trees. Primary and secondary growth of trees and their derivations. Anatomy and division of cambium. Formation of normal wood. Cell development in cambium; division of the vascular cambium to produce xylem and phloem. Formation of heartwood, growth rings in monocotyledonous and dicotyledonous trees.

FWL 929.2 Advanced wood Machinery and Sawmilling (2 Units)

Small, medium and larger-scale sawmills. Sawmill machines. Movement of lumber yield and sawmilling waste. Lumber grading. Methods of seasoning sawn timber. Utilization of timber waste. Saw milling industries as sources of environmental pollution. Saw doctoring. Advanced concepts on theory of wood cutting. Waste collection and its equipment. Pollution and methods of control. Working principles of wood processing machines, cinematic diagrams and working parameters determination e.g. cutting spade, feeding speed, etc. automation and mechanization of wood products transportation in production lines. Essential and elements of wood manufacturing flow processes.

ACADEMIC STAFF LIST

S/No.	Name	Rank	Qualifications	Specialization
1	Dr U.D. Chima	Reader/Ag. HoD	B.For (Makurdi); MF, PhD (Abeokuta)	Forest Ecology and Conservation

2	Prof. A.A. Aiyeloja	Professor	NCE (Ilesa); B.Agric (Benin); M.Sc, PhD (Ibadan)	Forest Economics and Management. Forest Enterprises Development
3	Prof. G.E. Omokhua	Professor	B.Sc (RSUST); M.Sc (Ibadan); PhD (RSUST)	Silviculture and Tree Improvement
4	Prof. H.M. Ijeomah	Professor	DPA, B.Agric (Uyo); M.Sc, (IMSU); MSc, PhD (Ibadan)	Biodiversity Utilization, Wildlife Management and Ecotourism
5	Prof. S.L. Larinde	Professor	OND, B.Sc, M.Sc, PhD (Ibadan)	Forest Economics and Management, Forest Industry development
6	Prof. B.A. Oyebade	Professor	B.Agric Tech (Akure); MSc, PhD (Ibadan)	Forest Biometrics and Measurement
7	Prof. A.T. Oladele	Professor	B.Sc, M.Sc, PhD (Ibadan)	Forest Economics and Management (Forest Taxonomy and NTFPs utilization)
8	Dr. S.S. Odunlami	Senior Lecturer	B.Sc, M.Sc, PhD (Ibadan), MSc (Netherlands)	Wildlife Management, Biodiversity Conservation and Tourism
9	Dr F.S. Eguakun	Senior Lecturer	B.Agric (UniBen), M.Sc, PhD (Ibadan)	Forest Biometrics and Measurement
10	Dr G.A. Adedeji	Senior Lecturer	NCE (Ijebu-Ode), B.Sc, M.Sc, PhD (Ibadan)	Wood and Fibre Science, Wood Utilization
11	Ms. E.A.U. Ofodile	Research Fellow I	B.Sc (UNN), M.Sc (Ibadan)	Agroforestry and Forest Biology
12	Dr C. Fredrick	Lecturer I	B.Sc (UniPort), M.Sc (Kenya) PhD (RSU)	Research Methodology, Silviculture and Forest Biology
13	Mr A. Amininim	Lecturer I	BFor & Wild (UPH), MSc (Ibadan)	Silviculture and Forest Biology
14	Dr O.D. Efenakpo	Lecturer I	B.Sc (UniPort), M.Sc, PhD (Ibadan)	Wildlife Management and Herpetology
15	Ms Q. Aguma	Lecturer II	B.Sc (UniPort), M.Sc (Ibadan)	Wood and Fibre Science
16	Mr O.P. Choko	Assistant Lecturer	B.Sc, M.Sc (UniPort)	Forest Economics and Management
S/No.	Name	Rank	Qualifications	Specialization

DEPARTMENT OF ANIMAL SCIENCE

POSTGRADUATE DIPLOMA IN ANIMAL SCIENCE

INTRODUCTION/PREAMBLE

The Faculty of Agriculture with its diverse disciplines was created about fifteen (15) years ago (2005), with mandates to produce high level manpower needed for achieving food sufficiency and related activities. The Department of Animal Science, as an intrinsic component of the Faculty, addresses the vital aspects of manpower development through teaching, research and extension with the aim of improving the Animal Industry and contributing to food security.

i. Philosophy

The philosophy of the postgraduate diploma (PGD) in Animal Science is to provide postgraduate training for Bachelor of Science (B.Sc) /Bachelor of Agric (B.Agric) and Higher National Diploma (HND) graduates in Animal Science, professionals in related disciplines acceptable to the department, who otherwise would not qualify for admission into the Masters Degree Programmes in the Department. The purpose is to develop skilled manpower for the agricultural and relevant sectors of the economy.

ii. Vision

To produce world class graduates in the discipline targeted at actualizing the ideals of higher education in shaping the perception, thinking, emotional and intellectual dimensions and capacity of the graduates. The candidate will, therefore, be adequately armed with requisite intuition and originality of thought to achieve the extension of the frontiers of knowledge in the Animal Science discipline.

iii. Mission

The programme is designed to address the training needs of the personnel who will address the extant problems of animal malnutrition along with many other challenges impacting the Animal Production Industry in Nigeria. The coursework and research-based training are to guide the candidates in developing appropriate academic skills needed to delve into the unknown to seek and elicit suitable and befitting responses to the various questions encountered in the animal production process.

iv. Rational/Justification

The animal production industry in Nigeria is confronted with a maze of production puzzles militating against the effective discharge of its mandates. Among these are high cost of production (caused mainly by high cost of feeds), alternative feed resources, policy instability,

animal welfare, production environment and poor genetic stock. The postgraduate programmes are designed to address these challenges, through the provision of clear understanding and appreciation of the implications of such problems.

v. Aim

To train Animal Scientists that will be competent in all aspects of their job as it relates to the Animal industry.

vi. Programme Objectives

- To provide advanced professional training in Animal Science/Animal Production for industry personnel, public service or self-employment with relevant skills and knowledge in basic and applied Animal Science and related aspects of the discipline.
- To offer opportunity for the acquisition of appropriate skills in the conduct of supervised research for seminar and workshop presentations as well as preparing a research project.

viii. Admission Requirements

Generally, candidates seeking admission into graduate programmes in Animal Science in the University of Port Harcourt shall, normally, be graduates of the University or any other similar Institutions recognized by the University for the purposes. They must possess a first degree, preferably, Bachelor of Agriculture (B.Agric, Animal Science option), Bachelor of Science (B.Sc, Animal Science) or in a related area. The degrees must, ordinarily, be registrable with the Nigerian Institute of Animal Science (NIAS).

To qualify for admission into the Postgraduate Diploma programme, a candidate must satisfy the following requirements:

- i. Matriculation requirements for admission into the Animal Science programme for the University of Port Harcourt including credits in Mathematics, English Language, Chemistry, Biology or Agricultural Science and any one of Physics, Economics or Geography at not more than two sittings.
- ii. Minimum of 3rd Class honours degree in Animal Science/Animal Production or related discipline
- iii. Pass degree in Animal Science/Animal Production with a minimum of 5 years cognate post-qualification experience in a managerial position in an Animal Science or related establishment
- iv. HND (Upper Credit) in Animal Science/Animal Production or HND (Lower Credit) with 5 years cognate post-qualification experience.

vm. Programme Duration

The PGD programme is full-time with a minimum duration of two (2) semesters and a maximum of four (4) semesters

iv. Graduation Requirements

To be awarded the PGD in Animal Science, the student is expected to pass the prescribed courses and defend the research project.

Prescribed Courses, Codes and Credit Units

First Semester

Course Code	Course Title	Credit Units
ANS 701.1	Computer Application in Animal Production	3
ANS 702.1	Livestock Farming Systems	3
ANS 703.1	Applied Animal Physiology	3
ANS 704.1	Applied Animal Breeding	3
ANS 705.1	Forage Science	3
ANS 706.1	Applied Animal Nutrition	3
ANS 707.1	Statistics and Research Techniques in Animal Science	3
Total		21

Second Semester

Course Code	Course Title	Credit Units
ANS 708.2	Micro Livestock Production	3
ANS 709.2	Non-Ruminant Animal Production	3
ANS 710.2	Ruminant Animal Production	3
ANS 711.2	Entrepreneurship and Management in Animal Science	3
ANS 700.2	Special Topics! Seminar	2
ANS 799.2	Project	6
Total		20

**Given 6 Units as specified in the NUC minimum benchmark for PGD in Animal Science (and Agriculture in general)*

COURSE DESCRIPTION

ANS 701.1 Computer Application in Animal Production 3 Units

Introduction to the computer; Hardware, Software, Peripherals, Operating Systems. Microsoft Office Suite. Statistical and Database Packages. Introduction to the Internet: Wired LAN, Wireless

LAN, Browsers, Virtual Libraries. Other on-line Resources and their uses. Livestock Farm Management Software. World trade in Animal Products and Services.

ANS 702.1 Livestock Farming Systems 3 Units

Analysis of Livestock Production Systems for different non-ruminant and ruminant animal species. Mixed Crop-Livestock Production Systems and Technologies. Appropriate enterprise mix in livestock production. Management of livestock farms. Regional policy levels. Traditional Technologies in Animal Production.

ANS 703.1 Applied Animal Physiology 3 Units

Haematology and blood biochemistry. Oestrus detection and synchronization. Artificial insemination. Pregnancy diagnosis. Introduction to embryo transfer. Principles of controlled breeding.

ANS 704.1 Applied Animal Breeding 3 Units

Characters of concern to the animal breeder. Variation and co-variation. Statistical tools for studying inheritance, genetic parameters and their estimation. Selection principles and methods. Breeding systems. Foundation stock establishment. Lethality.

ANS 705.1 Forage Science 3 Units

Pasture productivity indices; herbage yield measurement. Quality indices and evaluation techniques; measuring dry matter yields of shrubs and trees used as forage. Range ecology, range conditions, rangeland productivity, rangeland resources; influence of man on rangeland productivity. Forage conservation methods, problems and methods of enhancing feed quality in the dry season, Intensive feed garden, fodder bank and their uses. Strategic utilization of pasture, forage conservation and agro-industrial by-products.

ANS 706.1 Applied Animal Nutrition 3 Units

Feed nutrients. Water in relation to nutrition. Nutrient requirements and feeding standards. Feed formulation. Measurement of nutrient utilization; growth trials, digestion trials, balance trial, rumen digestion techniques. Microbiology of the rumen, physiology of rumen action. Non-protein nitrogen (NPN) utilization. Nutritional disorders.

ANS 707. 1 Statistics and Research Techniques in Animal Science 3 Units

Summary of statistical data; mean, variance, standard deviation, coefficient of variation. Presentation of data; tabulation, graphs. Attributes of population and samples. Sampling techniques. Experimental designs. Analysis of data; analysis of variance, F- and t-tests; correlation and regression, Techniques for studying physiology of

reproduction and nutritive value of feeds. Instrumentation in nutrition research.

ANS 708.2 Micro-Livestock Production 3 Units

Definition and scope of micro-livestock (including other lesser known species) production. Development of micro-livestock industries in Nigeria. Benefits of micro-livestock, Description of breeds of rabbits and other micro-livestock (like snail; quail; grasscutter; guinea pig). Feeding, management, breeding, housing, healthcare. Housing and equipment. Record keeping. Establishing and managing commercial micro-livestock enterprises, processing and marketing.

ANS 709.2 Non-Ruminant Animal Production 3 Units

The poultry and pig industries in Nigeria: Problems and prospects. Production systems for poultry and pigs. Breeds of poultry and pigs and their performance. Breeding, feeding and general management of animals of different ages. Building and equipment. Diseases and disease control. Incubation and hatchery management for poultry. Record keeping, judging and selection.

MASTER OF SCIENCE (M.Sc) DEGREE IN ANIMAL SCIENCE

Areas of Specialization

1. M.Sc Animal Nutrition and Agricultural Biochemistry
2. M.Sc Animal Breeding, Genetics and Biotechnology
3. M.Sc Livestock Production, Pasture and Range Management

Options: (a) Livestock Production and Management (b) Pasture and Range Management

INTRODUCTION/PREAMBLE

The Department of Animal Science, as an intrinsic component of the Faculty of Agriculture (established August 2005) in the University of Port Harcourt. The Department is one of six departments in the Faculty of Agriculture and the only one with the mandate to address the vital aspects of manpower development through teaching and research with the aim of improving the Animal Industry and ensuring animal-source protein supplies for food and nutrition sufficiency.

i) Philosophy

The M.Sc programmes are designed to provide advanced training in specialized areas of Animal Science aimed at developing high level manpower to pursue careers in academics, research and development both in the public, private and non-formal sectors.

ANS 710.2 Ruminant Animal Production 3 Units

The large and small ruminant industries in Nigeria; problems and prospects. Production systems for different ruminant animal species. Feeding and management, breeding, housing, health care. Record keeping, judging, selection. Establish and manage large and small ruminant enterprises.

ANS 711.2 entrepreneurship and Management in Animal Science 3 Units

Farming as a business, general management, financial management, entrepreneurship development, feasibility studies and business plan, marketing and managerial problem solving.

ANS 700.2 Special Topics/Seminar 2 Units

Special topics and modern trends in Animal Science.

ANS 799.2 Project 6 Units

A practical research work, with focus on any aspect of Animal Science.

ii) Vision

Graduates from the programmes shall be trained to acquire sufficient theoretical and practical skills to engage in teaching, research, extension and other agricultural development activities in the Animal and related Industry, which will enable them work as competent professionals in the areas of breeding, nutrition, production and management of different farm animals.

iii) Mission

The programmes are designed to address the training needs of high cadre personnel who will address the extant problems of Animal Agriculture vis-a-vis the many challenges impacting the Animal and related Industry in Nigeria. The course work and research-based trainings are to guide the candidates in developing appropriate academic skills needed to delve into the unknown to seek and elicit suitable and befitting responses to the various questions encountered in the animal production process.

iv) Rationale/Justification

The M.Sc curriculum in Animal Science is designed to address the several challenges in the Animal and related Industry and provide sound academic and research knowledge required to develop Animal Agriculture competences that,

will enable the graduates contribute to food and nutrition security in Nigeria and beyond.

v) Aim

To train Animal Scientists that, will be competent in all aspects of their job as it relates to the Animal Industry and especially, in their chosen areas of specialization.

vi) Programme Objectives

- To expose candidates to advanced courses in various areas of Animal Science and related academic disciplines that, will produce qualified and competent graduates with advanced theoretical knowledge and practical skills in Animal Agriculture.
- To equip candidates with research for development (R4D) skills through supervised research activities, seminar presentations, industry-based internships and reports embodied in project reports for their dissertation(s).

vii) Admission Requirements

Generally, candidates seeking admission into graduate programmes in Animal Science in the University of Port Harcourt shall normally be graduates of the University or any other similar accredited institution recognized by the University for the purposes. They must possess a first degree, preferably, Bachelor of Agriculture (B.Agric, Animal Science option), Bachelor of Science (B.Sc, Animal Science) or in related area. The degrees must, ordinarily, be registrable with the Nigerian Institute of Animal Science (NIAS).

To qualify for admission into the Master of Science (M.Sc) programme, a candidate must possess the following requirements:

- (i) A good honours degree in Animal Science or related discipline (of the University of Port Harcourt or similar accredited recognized institution) with a minimum of Second Class Lower division.
- (ii) Higher National Diploma (HND) Upper Credit in Animal Science/Animal Production plus Post Graduate Diploma (PGD) at Upper Credit in Animal Science/Animal Production. In addition, satisfy the matriculation requirements of the University of Port Harcourt and make a minimum CGPA of 3.5 points or at Credit Level.

viii) Programme Duration

The programmes shall run on full time with minimum of twenty-four (24) calendar months and maximum of thirty-six (36) calendar months, as specified in the NUC Benchmark Minimum Academic Standards (BMAS) for Post Graduate

Programmes in Animal Science and Agriculture in Nigerian Universities.

ix) Graduation Requirements

To qualify for an award of the Masters Degree in Animal Science, a student must pass all prescribed courses and defend his/her dissertation. The candidate must pass a total of 43 Credit Units.

x) Areas of Specialization

1. Animal Nutrition and Agricultural Biochemistry
2. Animal Breeding, Genetics and Biotechnology
3. Livestock Production, Pasture and Range Management

Options: (a) Livestock Production and Management (b) Pasture and Range Management

Tables with course codes and titles with credit units for specialized areas are shown below.

1. M.Sc Animal Nutrition and Agricultural Biochemistry

First Semester

Course Code	Course Title	Credit Units
ANS 802.1	ICT and Research Methods	2
ANS 803.1	Statistical Methods and Experimental Design	3
ANS 804.1	Livestock Farming Systems	3
ANS 806.1	Research Techniques in Animal Science	3

COURSE SYNOPSIS

SGS 801.1 ICT and Research Methods (2 Units)

ANS 801.1 Statistical Methods and Experimental Design (3 Units)

Planning of experiments and increasing accuracy of experiments such as: Comparing means; t-test. Analysis of Variance and F-test. Means separation. Analysis of covariance. Correlation and Regression. Analysis of categorical data; Chi-square. Importance of designing experiments. Design elements; randomization, replication, blocking, local control. Experimental designs. Completely Randomized, Randomized Complete Block, Incomplete block, Latin Square, Fractional Experiments, split-plot, split-split plot, lattice. Missing data, confounding effects.

ANS 802.1 Livestock Farming Systems (3 Units)

Analysis of Livestock Production systems for different non-ruminant and ruminant animal species. Mixed Crop-Livestock Production Systems and Technologies. Appropriate enterprise mix in livestock production. Management at Farm. Regional and Policy Levels. Traditional Technologies in Animal Production. Crop-Livestock Technologies.

ANS 803.1 Research Techniques in Animal Science (3 Units)

Techniques in physiology experiments, breeding and biotechnology, nutrition experiments. Use of various instruments in the analysis of feeds, feeding stuffs and animal products. Principles and techniques of chromatography, electrophoretic

methods calorimeters, thiorimeters, fermentation vats, etc. Recent advances instrumentation.

ANS 804.1 Advanced Nutritional Biochemistry (3 Units)

Advanced treatment of biological processes, enzyme, vitamin, mineral, protein, amino acid, lipid and carbohydrate metabolism; Integration of metabolic pathways: coenzyme, nucleic acid, control of cells and organisms, biochemistry of genetic information transfer, biochemistry of membrane transportation, oxidative phosphorylation and metabolism control, biochemistry of blood, muscles, liver and kidney; Trends biochemistry of animal feeds and nutrition.

ANS 806.1 Energy and Bioenergetics (3 Units)

Intermediary metabolism of carbohydrates, minerals, vitamins and fats as it relates to various monogastric species. Recent trends in carbohydrate and lipid research. Special techniques for metabolic studies. Importance of energy and energy efficiency; Energy systems; Estimation and prediction of energy values of feeds. Partitioning of energy and utilization for body functions. Physiology and biochemical aspects of energy metabolism.

ANS 809.1 Advanced Poultry Production and Feeding Standards (3 Units)

The origin and genetic improvement of different poultry species (the domestic fowl, guinea fowl, duck, goose, quail, dove, ostrich, emu); maximizing their performance through application of indigenous knowledge and modern technology. Planning and execution of modern poultry enterprises. Feeding standards for different species of poultry.

ANS 811.1 Principles and Practice of Micro-Livestock Production and Management (3 Units)

Establishment of rabbit and other micro-livestock enterprises. Production systems, Management, feeding and health care of different types of micro-livestock. Housing and equipment. Record keeping, judging selection and breeding. Reproductive and environmental physiology of micro-livestock production. Advances in micro-livestock production and management.

ANS 812.1 Principles and Practice of Monogastric Animal Production and Management (3 Units)

Establishment of poultry enterprises. Production systems. Parent and grandparent production. Management. Feeding and health care of day-old chicks, growers, Pullets cockerels, broilers and layers. Housing and equipment. Record keeping, judging selection and breeding, incubation and hatchery management. Handling and marketing of poultry products. Turkey, duck and guinea fowl production. Establishment of Swine enterprise Production Systems. Management, feeding and health care of different classes of pigs. Farrowing and litter management. Housing and equipment. Records keeping, judging selection and breeding. Pig handling, slaughter and processing.

ANS 814.1 Radioactive Tracers in Metabolism and Radioactive Pollution (3 Units)

Techniques of using radioactive tracers to study animal and plant metabolic pathways; Experimental methods, physiology and mathematical basis to interpretation of tracer experiments. Safe handling of radioisotopes for application to research problems, emphasizing radioactive samples preparation for accurate calibration and counting.

ANS 815.1 Feed Quality, Feed Additives and Supplements (3 Units)

Feed microscopy, identification, characteristics and properties; Storage quality control of feedstuffs and feeds; Commercial feed production; Proximate analysis and mineral analysis, Fibre characterization; Biochemical evaluation of feed ingredients; Toxic substances in feed ingredients. Historical development and classification of feed additives, supplements and antibiotics. Formulation of additives, natural and synthetic feed additives. Role of national and regional organizations in feed regulation, standards and coordination (FAO CODEX Alimentarius and Hazard Analysis and Critical Control Points, HACCP).

ANS 821.1 Methods in Quantitative Genetics and Animal Breeding Research (3 Units)

Frequencies of Genes and Genotypes; quantitative treatment of changes of gene frequencies, sampling from small population; values and means, variances. Resemblance between relatives; heritability, selection response and its prediction. Inbreeding and cross breeding. Threshold and correlated characters. Linear models: Statistical principles behind the use of mixed models - least squares, maximum likelihood, breeding value prediction BLUP, REML; Variance component estimation; introduction to computers and computer programming.

ANS 822.1 Advanced Animal Biotechnology (3 Units)

Animal cell and tissue culture, Maturation of oocytes. In Vitro oocytes fusion, Cloning, species hybridization interspecies embryo transfer DNA sequences, blood group analysis and genetic polymorphism, electrophoretic techniques, Genes and genetic markers. Linkage mapping by recombination. Mapping and map distances, Chi-square test, mitotic segregation and recombination, analysis of single meiosis, sex chromosome and sex linkages.

ANS 825.1 Animal and Avian Genetics (3 Units) Mode of inheritance of common traits in farm animals and their utilization in the development of a framework of theory for the study of genetics of populations; Recombination DNA and genetic engineering.

ANS 826.1 Genetic Engineering of Domestic Animals (3 Units)

Aspects of Recombinant DNA Technology. Identification of trait genes, cleavage of DNA. Cloning, selection of recombinant clones, insertion and regulation of inserted DNA or gene. Production of transgenics. Problems associated with genetic engineering of domestic animals.

ANS 827.1 Animal Breeding Theory and Programme Design (3 Units)

Theoretical basis of animal improvement programmes, population structure, design of breeding programmes and repeated measurements. (Variance components, Heritability and Repeatability estimates), Performance and progeny testing, Generation intervals, Dissemination of improvement, Genes and genotype x environmental interaction. Prediction and evaluation of genetic changes, Prediction of breeding values, selection indices, BLUP), Breed evaluation, Problems and applications.

ANS 832.1 Advanced Pasture and Range Management (3 Units)

Pasture productivity indices; herbage yield measurement, sampling techniques, relationship between herbage yield and animal productivity. Quality indices and evaluation techniques;

measuring dry matter yields of shrubs and tress used as forage. Range ecology, range conditions, range land productivity, range land resources; influence of man on range land productivity.

ANS 833.1 Pasture Breeding and Genetics (3 Units)

Characters of concern to the pasture breeder. Selection principles and methods for plants and forage. Establishment and production of pasture plants. Pasture improvement techniques; proper uses of tropical pastures; methods of enhancing quality and utilization.

SGS 801.2 Entrepreneurship and Management (2 Units)

ANS 800.2 Seminar (2 Units)

Students will present, at least, one review related to the area of specialization. The selection of such topic shall be done in consultation with their supervisors.

ANS 805.2 Feeds, Feed Production, Feedmill Design and Management (3 Units)

Classification of feeds, feeding stuffs and feed supplements. Chemistry and nutritive value of feeding stuffs. Concentrate feeds, cereals, legumes and oil seeds. Conventional, alternative and novel feed resources. General aspects of livestock feed formulation. Methods of formulation for various classes of livestock. Computers in ration formulation and least-cost diets. Design of feedmill equipment, machines and buildings, feedmill engineering principles, grains storage and handling: Feed production and flow processes; Milling, batching, mixing, bagging and sales, pelleting, drying, weighing; Economics of feedmill operations; Quality assessment and standardization.

ANS 807.2 Pasture and Range Management (3 Units)

Establishment of dairy and beef cattle, sheep and goat enterprises. Production systems for the different ruminant animal species. Breeding, feeding, housing and health care. Record keeping, judging and selection.

ANS 808.2 instrumentation in Animal Nutrition (3 Units)

Use of various instruments in the analysis of feeds, feeding stuffs and animal products. Principles and techniques of chromatography, electrophoretic methods, calorimeters, thiorimeters, fermentation vats, etc. Recent advances in instrumentation.

ANS 810.2 Ruminology (3 units)

Biochemical, physiological and microbial activities occurring in the rumen. Relations of rumen function to animals. Regulation of rumen

functions. Methanogenesis and its control measures.

ANS 813.2 Principles and Practice of Ruminant Animal Production and Management (3 Units)

Establishment of sheep, goat, beef and dairy industries. Production systems. Management of lambs, kids and calves. Housing and equipment. Record keeping, judging, selection, breeding and health management practices. Dairy goat production, ram fattening, feed lot fattening of beef, milk parlour, milking, milk handling and processing.

ANS 816.2 Livestock Products, Processing and Marketing (3 Units)

Preparation for slaughtering, evisceration and dressing care of carcass and its cuts; processing and care of hides, skin and wool. Vrocessing and storage of meat and milk; milk processing and microbiology; milk hygiene. Egg quality and grading; chemistry and nutritive quality of meat and eggs. Illnesses traced to animal products and preventive/control measures. Hazard Analysis and Critical Control Points (HACCP) in animal processing. Advances in livestock products Agencies, functions and trends pertaining to the marketing of livestock products, types of markets, agents in livestock markets. Marketing and distribution of animal products. The effects of market on animal production.

ANS 820.2 Molecular and Biochemical Genetics (3 Units)

Cytology, basis of inheritance, genetic material and the gene, biochemical basis of gene action. Protein sythesis, mutation, genetic control of metabolism: genetic engineering.

ANS 823.2 Immunogenetics (3 Units)

Monoclonal antibodies, antigens, immune systems. Genetics regulation of immune systems. Genetics of disease resistance and screening of genetic diseases. Immuno-deficiencies.

ANS 824.2 Population Genetics (3 Units)

Genetics structure of populations. Drawing revolution, Variation/evolutionary changes, sources/forces of variation and evolutionary changes, Hardy-Weinberg equilibrium, Attributes of a genetic population (means, variances, gene frequencies). Changes of gene frequencies in large and small populations, inbreeding, Effects of sexual reproduction on variation, Variability among finite populations, synthesis of forces, random drift and assortative mating. Assortative mating based on phenotypic resemblance; Inbreeding; Heritability and genetic correlation; Selection indexes; Path coefficients; Biometric relationships and mating systems

ANS 828.2 Evolution, Heredity and Stock Improvement (3 Units)

Evolutionary theories; Hereditary mechanisms that are bases for variation; biological communication between generations; Genetic bases and interrelationships of ecologically important traits in the principal livestock species; Breeding objectives and development of the breeding plans; Breeding and selection programmes.

ANS 829.2 Applied Animal Breeding (3 Units)

Application of quantitative genetic principles to animal breeding; Breeding parameters; Testing of animal performance; Selection methods and breeding values; Systems of breeding different farm animal species.

ANS 830.2 Principles of Animal Improvement through Breeding (3 Units)

Economic characters in different livestock species and their inheritance. Variations in population. Genetic parameters and their estimation. Tools for genetic improvement; selection, breeding systems. Breeding strategies for different livestock species.

ANS 831.2 Animal Health and Disease Control (3 Units)

Principles of Animal Health Management. Causative agents of livestock diseases: Viruses, bacteria, fungi, mycoplasma, protozoa, endo- and ecto-parasites. Important diseases of different livestock species: causes, symptoms, prevention and control, treatment. Nutritional deficiencies; metabolic diseases.

**DOCTOR OF PHILOSOPHY (Ph.D)
DEGREE IN ANIMAL SCIENCE**

(Ph.D Animal Nutrition and Agricultural Biochemistry)

INTRODUCTION / PREAMBLE

The Department of Animal Science, as an intrinsic component of the Faculty of Agriculture (which was established in August 2005), addresses the vital aspects of manpower development through teaching, research and community service with the aim of improving the Animal Industry and ensuring food and nutrition sufficiency.

i) Philosophy

The Ph.D programme in Animal Science seeks to train high level manpower with the capacity to expand the frontiers of knowledge through the pursuit of careers in academic and research organizations. Candidates are expected to achieve the highest level of specialization in the discipline to function as consultants and experts for solving

practical problems in the Animal Production Industry and international food agencies.

ii) Vision

Graduates from this programme will acquire sufficient trainings and practical skills to engage in teaching, research and other extension activities in the Animal Industry which will enable them to work as industry- relevant graduates and professionals.

iii) Mission

The programme is designed to address the training needs of the personnel who will address the extant problems of animal malnutrition along with many other challenges impacting the Animal production industry in Nigeria. The coursework and research based training are to guide the candidates in the development of appropriate academic skills needed to delve into the unknown to seek and elicit suitable and befitting responses to the various questions encountered in the animal production process.

iv) Aim

To train Animal Scientists with entrepreneurial research skills that will be competent in all aspects of their job as it relates to advancement of the Animal Industry.

v) Objectives

- To equip candidates with research skills through the conduct of supervised research, seminar presentations, industry-based internships and thesis report.
- To provide training to develop high level manpower for national development, especially, careers in teaching, research and outreach at tertiary educational levels
- To produce highly skilled persons with entrepreneurial competence and capability to serve in the research and development space of public, private and non-formal sectors.

vi) Admission Requirements

Generally, candidates seeking admission into graduate programmes in Animal Science in the University of Port Harcourt shall normally be graduates of the University or any other similar institutions recognized by the University for the purposes. They must possess a first degree with a minimum of second class lower division, preferably Bachelor of Agriculture (B.Agric, Animal Science option), B.Agric. (Animal Production) or Bachelor of Science (B.Sc, Animal Science). Such bachelors degree must, ordinarily, be registrable with the Nigerian Institute of Animal Science (NIAS).

To qualify for admission into the Doctor of Philosophy (Ph.D) programme, the candidate must also be a holder of an academic Masters degree in Animal Science or Animal Production of the University of Port Harcourt or other recognized accredited similar institutions with a minimum CGPA of 3.50 points on a 5-point grading system.

vii) Programme Duration

The full-time Doctor of Philosophy Degree Programme in Animal Science shall run for a minimum duration of 24 calendar months and maximum of 60 calendar months.

viii) Graduation Requirements

To qualify for the award of the degree of Doctor of Philosophy (Ph.D) in Animal Science (Animal Nutrition and Agricultural Biochemistry) the candidate must have fulfilled the following conditions. The candidate must pass all prescribed courses and defend his/her thesis. The candidate must pass a total of 48 Credit Units courses as shown for each area of specialization in line with the minimum 48 Credit Units stipulated in the NUC BMAS and made up of the following:

Courses for Ph.D in Animal Nutrition and Agricultural Biochemistry

Course Code	Course Title	Credit Units
	Courses transferred from M.Sc Programme	21
	Electives in the area of specialization	9
ANS 900.2	Special Topics/Seminar	2
ANS 999.2	Thesis	2
	Total	48

**As specified in the NUC BMAS for Ph.D in Animal Science (and Agriculture in general)*

Details of Courses transferable from M.Sc Programme to make 21 units

Course Code	Course Title	Credit Units
SGS 801.1	ICT and Research Method - faculty-wide course	2
ANS 801.1	Statistical Methods and Experimental Design	3
ANS 802.1	Livestock Farming Systems	3
ANS 803.1	Research Techniques in Animal Science	3
ANS 804.1	Advanced Nutritional Biochemistry	3
ANS 806.1	Energy and Bioenergetics	3

SGS 801.2	Entrepreneurship and Management - faculty-wide course	2
ANS 805.2	Feeds, Feed Production, Feedmill Design and Management	3
ANS 807.2	Pasture and Range Management	3
ANS 808.2	Instrumentation in Animal Nutrition	3
	Total	28

NB: Students are expected to have passed the above courses at MSc level.

Details of electives for Ph.D Animal Nutrition and Agricultural Biochemistry

Course Code	Course Title	Credit Units
ANS 814.1	Radioactive Tracers in Metabolism and Radioactive Pollution	3
ANS 815.1	Feed Quality, Feed Additives and Supplements	3
ANS 816.2	Livestock Products, Processing and Marketing	3
ANS 901.1	Advanced Animal Nutrition	3
ANS 902.1	Metabolism of Proteins and Nucleic Acids	3
ANS 903.1	Metabolism of Minerals and Vitamins	3
ANS 904.1	Metabolism of Energy	3
	Total	28

NB: Each Ph.D candidate is to pick three (3) electives from the above listed courses.

In addition, the candidate:

- i. Shall be required to defend his/her research proposal at the Departmental and Faculty Postgraduate Seminar.
- ii. Shall present seminars at the completion of his/her research work to the Department, Faculty and School of Graduate Studies.
- iii. The candidate must defend his/her thesis. The format and submission of thesis shall be in conformity with existing guidelines laid down by the School of Graduate Studies (SGS), University of Port Harcourt.

COURSE SYNOPSIS

SGS 801.1 ICT and Research Methods (2 Units)

ANS 801.1 Statistical Methods and Experimental Design (3 Units)

Planning of experiments and increasing accuracy of experiments such as: Comparing means; t-test. Analysis of Variance and F-test. Means separation. Analysis of covariance. Correlation and Regression. Analysis of categorical data; Chi-square. Importance of designing experiments. Design elements; randomization, replication, blocking, local control. Experimental designs. Completely Randomized, Randomized Complete Block, Incomplete block, Latin Square, Fractional Experiments, split-plot, split-split plot, lattice. Missing data, confounding effects.

ANS 802.1 Livestock Farming Systems (3 Units)

Analysis of Livestock Production systems for different non-ruminant and ruminant animal species. Mixed Crop-Livestock Production Systems and Technologies. Appropriate enterprise mix in livestock production. Management at Farm. Regional and Policy Levels. Traditional Technologies in Animal Production. Crop-Livestock Technologies.

ANS 803.1 Research Techniques in Animal Science (3 Units)

Techniques in physiology experiments, breeding and biotechnology, nutrition experiments. Use of various instruments in the analysis of feeds, feeding stuffs and animal products. Principles and techniques of chromatography, electrophoretic methods calorimeters, thiorimeters, fermentation vats, etc. Recent advances in instrumentation.

ANS 804.1 Advanced Nutritional Biochemistry (3 Units)

Advanced treatment of biological processes, enzyme, vitamin, mineral, protein, amino acid, lipid and carbohydrate metabolism; Integration of metabolic pathways: coenzyme, nucleic acid, control of cells and organisms, biochemistry of genetic information transfer, biochemistry of membrane transportation, oxidative phosphorylation and metabolism control, biochemistry of blood, muscles, liver and kidney; Trends in biochemistry of animal feeds and nutrition

ANS 806.1 Energy and Bioenergetics (3 Units)

Intermediary metabolism of carbohydrates, minerals, vitamins and fats as it relates to various monogastric species. Recent trends in carbohydrate and lipid research. Special techniques for metabolic studies. Importance of energy and energy efficiency; Energy systems; Estimation and prediction of energy values of feeds. Partitioning of energy and utilization for

body functions. Physiology and biochemical aspects of energy metabolism.

ANS 814.1 Radioactive Tracers in Metabolism and Radioactive Pollution (3 Units)

Techniques of using radioactive tracers to study animal and plant metabolic pathways; Experimental methods, physiology and mathematical basis to interpretation of tracer experiments. Safe handling of radioisotopes for application to research problems, emphasizing radioactive samples preparation for accurate calibration and counting.

ANS 815.1 Feed Quality, Feed Additives and Supplements (3 Units)

Feed microscopy, identification, characteristics and properties; Storage quality control of feedstuffs and feeds; Commercial feed production; Proximate analysis and mineral analysis, Fibre characterization; Biochemical evaluation of feed ingredients; Toxic substances in feed ingredients. Historical development and classification of feed additives, supplements and antibiotics. Formulation of additives, natural and synthetic feed additives. Role of national and regional organizations in feed regulation, standards and coordination (FAO CODEX Alimentarius and Hazard Analysis and Critical Control Points, HACCP).

SGS 801.2 Entrepreneurship and Management (2 Units)

ANS 805.2 Feeds, Feed Production, Feedmill Design and Management (3 Units)

Classification of feeds, feeding stuffs and feed supplements. Chemistry and nutritive value of feeding stuffs. Concentrate feeds, cereals, legumes and oil seeds. Conventional, alternative and novel feed resources. General aspects of livestock feed formulation. Methods of formulation for various classes of livestock. Computers in ration formulation and least-cost diets. Design of feedmill equipment, machines and buildings, feedmill engineering principles, grains storage and handling; Feed production and flow processes; Milling, batching, mixing, bagging and sales, pelleting, drying, weighing; Economics of feedmill operations; Quality assessment and standardization.

ANS 807.2 Pasture and Range Management (3 Units)

Establishment of dairy and beef cattle, sheep and goat enterprises. Production systems for the different ruminant animal species. Breeding, feeding, housing and health care. Record keeping, judging and selection.

ANS 808.2 Instrumentation in Animal Nutrition (3 Units)

Use of various instruments in the analysis of feeds, feeding stuffs and animal products. Principles and techniques of chromatography, electrophoretic methods, calorimeters, thiorimeters, fermentation vats, etc. Recent advances in instrumentation.

ANS 816.2 Livestock Products, Processing and Marketing (3 Units)

Preparation for slaughtering, evisceration and dressing care of carcass and its cuts; processing and care of hides, skin and wool. Processing and storage of meat and milk; milk processing and microbiology; milk hygiene. Egg quality and grading; chemistry and nutritive quality of meat and eggs. Illnesses traced to animal products and preventive/control measures. Hazard Analysis and Critical Control Points (HACCP) in animal processing. Advances in livestock products Agencies, functions and trends pertaining to the marketing of livestock products, types of markets, agents in livestock markets. Marketing and distribution of animal products. The effects of market on animal production.

ANS 901.1 Advanced Animal Nutrition (3 Units)

Nutrient requirements of pigs, poultry, rabbits, cattle, sheep and goats for various productive processes. Utilization of industrial by-products, farm wastes and unconventional feedstuffs in ration formulation.

ANS 902.1 Metabolism of Proteins and Nucleic Acids (3 Units)

Metabolism of proteins and nucleic acids. Amino acids, amino acid precursors and function of nucleic acids in protein synthesis. Recent trends in protein and nucleic acid research. Special techniques for protein and nucleic acid determination and identification.

ANS 903.1 Metabolism of Minerals and Vitamins (3 Units)

Chemistry of vitamins and minerals. Function of vitamins and minerals in the metabolism and physiology of farm animals and their deficiency symptoms. Interrelationships between vitamins and minerals.

ANS 904.1 Metabolism of Energy (3 Units)

Metabolism of carbohydrates and fats as it relates to various livestock species. Recent trends in carbohydrate and lipid research. Special techniques for metabolic studies relating to carbohydrates and lipids.

ANS 900.2 Special Topics I Seminar (2 Units)

Students will present, at least, two reviews related to the area of specialization. The selection of such topic shall be done in consultation with their supervisors.

ANS 999.2 Thesis (16 Units)

Students will do a set of practical research works in their area of specialization, under the supervision of their supervisor(s) and defend it in the presence of an external examiner or as specified by the School of Graduate Studies.

ACADEMIC STAFF LIST

S/No.	Name	Rank	Qualifications	Specialization
1.	Prof. Anthonia I. Ukanwoko	Head of Department /Professor	B. Agric, MSc, PhD Animal Science (MOUAU)	Dairy Science
2.	Prof. Monica O. Ironkwe	Honourable/Professor	BSc Agric Edu(RSUST); MSc, PhD Animal Science (RSUST)	Monogastric Nutrition & Production
3.	Prof. Ibisime Etela	Professor	BSc Animal Science, MSc Animal Science (RSUST); PhD Animal Science (UNIBEN)	Ruminant Nutrition & Production
4.	Prof. Folashade O. Ajayi	Professor	BAgric, MSc Animal Production (UNILORIN) PhD Animal Breeding & Genetics (RSUST)	Animal Breeding & Genetics
5.	Prof. Letorn A.F. Akinola	Professor	BSc, MSc, PhD, Animal Science (RSUST)	Monogastric Nutrition & Production
6.	Prof. Brilliant O. Agaviezor	Director/Professor	BTech, Animal Production & Health (FUTA); MAgric, PhD Animal Breeding & Genetics (Abeokuta)	Animal Breeding & Genetics & Animal Molecular Biology
7.	Prof. Opuda A. Ekine	Professor	HND Animal Health & Production (Vom); PGD; MSc, Animal Science, PhD Animal Science (RSUST)	Animal Production & Nutritional Physiology
8.	Dr. Otokini S. George	Reader	BSc, MSc, PhD Animal Science (RSUST)	Micro-Livestock Nutrition & Production

9.	Dr. Julius N. Ingweye	Reader	BAgric Animal Science (UNICAL); MSc Animal Nutrition & Biochemistry (UNICAL); PhD Animal Prod.& Nutrition (UNICAL)	Micro-Livestock Nutrition and Livestock value chains
10.	Dr. Isaiah S. Oruene	Lecturer I	DVM (ABU)	Theriogenology
11.	Mr. Humphrey N. Benneth	Lecturer II	B. Agric. Animal Science (UPH)	Animal Breeding & Genetics
12.	Mr. Boma V. Iriso	Asst. Lecturer	B. Agric.(UPH); MSc Animal Science (ABU, Zaria)	Ruminant Nutrition & Production
13.	Mrs. Ihuoma C. Adje	Asst. Lecturer	B. Agric. (UPH); MSc. Animal Nutrition and Forage Science (MOUA, UMUDIKE)	Forage Production & Utilisation
14.	Mrs. Abigail A. Ere – Richard	Asst. Lecturer	B. Agric. (UPH) M. Agric. Animal Physiology (FUNAAB)	Animal Reproductive Physiology

DEPARTMENT OF AGRICULTURAL EXTENSION AND DEVELOPMENT STUDIES

POSTGRADUATE DIPLOMA (PGD) IN AGRICULTURAL ECONOMICS AND EXTENSION

Objectives

The objectives of the programme include to:

- a. offer opportunity to graduates of agricultural economics and extension with a 3rd class degree to upgrade.
- b. provide a platform for graduates of agriculture and related fields or holders of HND in agricultural economics and Extension with lower credit who wish to undertake a career in agricultural economics and extension.

Admission Requirements

An applicant should be a graduate of University of Port Harcourt, or a graduate from any other University recognized by the senate of University of Port Harcourt.

Candidate seeking admission into the (PGD) programme in agricultural economics and extension shall possess at least a second class lower Degree in a non-agricultural based discipline or a third class/pass Degree in Agricultural Economics and Extension option. Candidates seeking admission with HND must have an upper credit pass. In addition, candidates must possess the matriculation requirements of the Faculty of Agriculture, University of Port Harcourt

Programme Duration

The PGD programme in Agricultural Economics and Extension shall run for a minimum of 12 calendar months.

Graduation requirements

In addition to passing stipulated courses, the students shall be required to complete and defend a research project.

List of Courses, Codes and Credit Units.

First Semester:

Course Code	Course Title	Units
AEE 701.1	Introduction to Agricultural Economics Theories	2
AEE 702.1	Introduction to Research Methods in Agricultural Economics and Extension	2
AEE 703.1	Agricultural Projects, Planning and Analysis.	2

AEE 704.1	Principles of Agricultural Extension and Rural Sociology	2
AEE 705.1	Communication and Diffusion Process	2
AEE 706.1	Organization and Management of Extension Services	2
AGE 707.1	Scientific communication process	2
Total		14

Second Semester:

Course Code	Course Title	Units
AEE 708.2	Farm Management	2
AEE 709.2	Agricultural Finance and Records.	2
AEE 710.2	Agribusiness Management	2
AEE 711.2	Extension Teaching Methods and Aids	2
AEE 712.2	Women and Youth Programmes in Agriculture	2
AEE 713.2	Comparative Extension Systems	2
AGE 714.2	Project.	4
Total		18

Minimum Graduation requirements: Core courses **Core 10; Electives: 8; Project 4; Seminar: 2. Total 24**

COURSE DESCRIPTION

AEE 701.1: Introduction to Agricultural Economic Theories I (2 units)

Selected economic theories relevant to agriculture. Demand and supply, consumer theories, market structure, theory of the firm, production function.

AEE 702.1: Introduction to Research Methods Statistics in Agricultural Economics and Extension (2 units)

Meaning, scope and functions of extension research. Types and examples of research in agricultural extension. Sampling techniques. Tools and methods of data collection. Basic statistical concepts and their application in extension. Techniques of data interpretation. Reporting research results. Classification, types and methods of data collection in agricultural research; meaning and uses of frequency distribution; measures of central tendency and dispersion, moving averages; simple linear regression, tests of hypothesis.

AEE 703.1: Agricultural Project Planning and Analysis (2 Units)

Characteristics of agricultural and agro-industrial projects; the project cycle; non-discounted and discounted appraisal methods; importance of discount rates, annuity and project life; cash flow preparation.

AEE 704.1: Principles of Agricultural Extension and Rural Sociology (2units)

Agricultural extension: meaning, objectives, principles, philosophy and history, role and contribution of extension in national and economic development. The concept of learning and training. Sociology/rural sociology as sciences, scope and importance of rural sociology; role of rural sociologist, basic sociological concepts applied to rural situation, structure of rural situations, structure of rural community; basic social institutions, social organizations, ecological entities and collectivities (social structure).

AEE 705.1: Communication and Diffusion Process (2units)

Theory and principles of communication. Communication in extension. Characteristics/determinants of effective diffusion. Characteristics of innovation. Innovation-decision (adoption) process. Innovation and adopter categories and characteristics.

AGX 715.1: Organization and Management of Extension Services (2units)

Basic concepts in extension administration. Bureaucracy in extension. Coordination, organization. Organization of extension services in Nigeria. Types of extension organization. Functions of extension administrators, principles of office management.

AEE 707.1 Scientific communication process (2 Units)

The art and science of scientific writing. Journals, conferences, seminars. How to get a paper published in a journal. The editorial process. Visibility process. Mentorship process in scientific communication

AEE 708.2: Farm Management (2 Units)

Farm decision-making process; enterprise combinations; enterprise budget; break-even analysis, sensitivity analysis, graphical approach to linear programming. Case studies

AEE 709.2: Agricultural Finance and Records (2 Units)

Sources of finance to agriculture; farm firm capitalization; agricultural credit; loan payment terms; interest rate determination; cost of capital;

review of farm records and valuation methods; problems of recording and accounting.

AEE 710.2: Agribusiness Management (2 Units)

Managerial roles; executive responsibilities; external and internal environments of enterprise; structural characteristics of organizations; areas of management; authority and responsibility in organizations; conflict and leadership; managerial functions and processes including decision-making, planning, and management of objectives. Case studies

AEE 711.2: Extension Teaching Methods and Aids (2units)

The concept of teaching. Extension teaching methods classification, techniques and device, relative effectiveness of methods. Audio-visuals in extension teaching. Preparation of visual aids for extension delivery

AEE 712.2: Women and Youth Programmes in Agriculture (2units)

The concepts of rural youth. Philosophy and objectives of youth extension programmes; characteristics of rural youth. Youth clubs. Problems of youth work. The concept of rural women. Characteristics of rural women. Extension strategies and methods appropriate to rural women leadership in women programmes.

AEE 713.2: Comparative Extension System (2units)

Evolutionary development of agricultural extension (Pre-colonial to post-independence periods). Current trends; Training and Visit (T&V) system, unified Agricultural Extension System (UAES). Concept of participation theories, typology (general and farmers participation) social capital, participatory extension (thesis, principles, methods characterizing participation, participatory methodologies and practice (PTD, FFS, local agricultural research committees (LARC) PRA, FPR etc. Emerging trends (decentralization, economic liberalization, privatization, contracting, democratization etc) research extension linkages).

AEE 714.2: Project Report (4 Units)

A guided scientific investigation of a selected topic/problem. This involves identification of researchable problem, statement of specific objectives and hypotheses, data collection and analysis. These processes will lead into a special project report.

(ii) MASTER OF SCIENCE (M.Sc.) DEGREE PROGRAMME IN AGRICULTURAL EXTENSION

Introduction

The programme is designed for students seeking for a higher degree in agricultural extension with specialization in agricultural extension administration, agricultural programme planning and evaluation, rural sociology, agricultural extension and rural development, agricultural communication/information communication technology. Consequently, the degree of Master of Science (M.Sc.) in agricultural extension shall be awarded in the three (3) broad areas as:

- (a) M.Sc. Agricultural Extension (Agricultural Extension Administration and Programme Planning)
- (b) M.Sc. Agricultural Extension (Agricultural Extension and Rural Development)
- (c) M.Sc. Agricultural Extension (Agricultural Extension Communication/Information Communication Technology in Agriculture)

Objectives

The programme is designed to expose students to advanced courses in agricultural extension and equip students with research skills through the conduct of supervised research, seminar presentations and thesis preparation in agricultural extension and its related fields.

Admission Requirements

Candidates seeking admission into the Master of Science degree programme in Agricultural Extension shall possess:

- (i) A Bachelor's degree in Agricultural extension or related disciplines with a minimum of Second Class (Lower division).
- (ii) Appropriate Post Graduate Diploma of the University of Port Harcourt or other recognized Universities with at least a credit pass of 3.00 CGPA on a 5-point scale.
- (iii) HND Upper Credit plus a PGD in agricultural extension and related fields.

Areas of Specialization

- (a) Agricultural Extension Administration and Programme Planning
- (b) Agricultural Extension and Rural Development
- (c) Agricultural Extension Communication/Information Communication Technology in Agriculture

Programme Duration

Candidates may register for full-time or part-time studies.

- a) The Full-time Master of Science Degree Programme in Agricultural Extension shall

run for a minimum duration of 12 calendar months and maximum of 24 months.

- b) The Part-time Master of Science Degree in Agricultural Extension shall run for a minimum duration of 24 calendar months and maximum of 48 months.

Requirements for Graduation

The student is required to pass all prescribed courses, present and defend the dissertation.

OPTION 1: M.Sc. IN AGRICULTURAL EXTENSION AND RURAL DEVELOPMENT

First Semester

Course Code	Title	Unit
SGS 801.1	ICT and Research Methods	2
AGX 802.1	Extension Teaching and Communication Methods	3

COURSE DESCRIPTION

SGS 801.1: ICT and Research Methods (2 Units)

Philosophy guiding research; organization of research; scientific methods of research observations; essentials of spreadsheet; internet technique, statistics packages; precision and accuracy estimates; hypothesis testing; research report writing; research proposal format; successful research project; developing methodology and presenting experimental results; developing fundable research proposal; research ethics; referencing format; web 2.0 and social media for research; scientific writing tips

AGX: 802.1: Extension Teaching and Communication Methods (3 Units)

Setting up of effective learning situations in rural areas. Motivation principles of adult learning Communication and diffusion processes; practice of selected extension methods including demonstrations, meetings, Tours exhibit and audio-visual aids.

AGX 803.1: Research Methods and Statistics in Agricultural Extension Research (3 Units)

Characteristics of scientific method. Selection and formulation of a research problem and hypothesis. Exploratory and descriptive research studies. The survey, questionnaire and interview observational techniques, critical incident techniques, action research, etc.

Developmental and growth studies; experimental designs for testing casual hypothesis, one group pretest-post test design, randomized control group

Note: A student is required to take at least two elective courses in each semester.

ELECTIVES

First Semester

design, etc. Methods for data collection. Sampling techniques, tabulation, analysis and interpretation of data. Concept of evaluation of extension project. Preparing a research report.

AGX 804.1: Rural Social Changes and Human Ecology (3 Units)

History of rural development, perspective of rural settlement patterns, rural –urban interaction, models of community development; integrated rural development concept, rural communities and development agency, leadership structure in rural communities, development efforts in rural communities in Nigeria; challenges of rural development; mobilization of rural institution for development. General sociology theory, analysis of rural social systems, relation of the individual to his social environment, group dynamics, leadership patterns, social change and community organization, demography, Rural-urban migration. Sociological concepts and theories selected theories of social change and their potential for modernization of rural society’s structures of rural community. Social and grassroots organization, ecological entities and collectivities/social structure understanding human practices the example of farming.

AGX 805.1: Psychology for Extension Personnel (2 Units)

Concepts of human development, intelligence, individual differences, teaching, learning, motivation and emotion relation to extension education. Intelligence Quotient (IQ) and its application to extension learning. Concepts of remembering. Social psychology attitudes, personality, group behavior and social influence. Implication of psychology to extension practice.

AGX 806.1: Comparative Extension System. (2 Units)

Evolutionary development of agricultural extension pre-colonial to post-independence periods). Current trends; training and visit (T&V) system, unified Agricultural Extension System (UAES). Concept of participation theories, typology (general and farmers participation) social capital, participatory extension (thesis, principles, methods characterizing participation, participatory methodologies and practice (PTD, FFS, local agricultural research committees (LARC) PRA, FPR etc. Emerging trends (decentralization, economic liberalization, privatization, contracting, democratization etc) research extension linkages).

AGX 807.1: Strategic human resource management for Agribusiness (2units)

The concept of strategic management and its application to agribusiness; human resource

strategic goals; internal and external situational analysis; agribusiness human resource (HR) SWOT analysis; development of agribusiness human resource strategies, plans and programs; agribusiness organizational culture development; determination of the right number of personnel; development of human resource policies; determination of the right job grades and salary structures; preparation of agribusiness HR strategic and annual operational plans and budgets; HR performance measures; monitoring and control systems; globalization and its impact on strategic human resource management.

AGX 808.1: Scientific communication process (2unit)

How to write scientific publication. Disseminating channels for publications; the art of manuscript preparation. Editorial process. Ethical provisions. International and national publishers. Indexing agencies. Visibility in the research process (relevance of google scholar, research gate, academia.edu, in the research process and how to get connected). Networking and the research process. Mentorship issues.

AGX 809.1: Open data in managing agricultural information systems (2units)

Concept of open data; benefits of open data in agricultural development; how to make data open ; open data policy; making data social; role of Management Information System (MIS)in the management of agricultural extension programmes; designing an MIS in an agricultural extension organization.; types of information system; information system development; channels of MIS for the agricultural extension programme.

SGS 801.2 Management and Entrepreneurship (2 Units)

AGX 810.2: Seminar (2 Units)

A student will select a topic of current interest in agricultural extension and rural development and prepare, present and defend the report.

AGX 811.2: Women, Youths and Children in Agriculture (2 Units)

Perspectives on women and youth situation in developing countries. Theories of child and youth policies, instruments and programmes. Capacity building needs in women youth organizations. Local and international NGO’s involved in women and youth development, youth, women and the world of work, understanding livelihood, dynamics and diversification of livelihood. Social inclusion, exclusion and access to livelihood options and resources. Youth and women livelihood analysis, women in agriculture.

AGX 812.2: Planning and Evaluation of Agricultural and Rural Development Programmes (3 Units)

Concepts of programme development, procedures for developing extension programme; procedures for programme development. Relevant concepts in programme planning, concepts and process of monitoring in extension, extension indicators for monitoring purposes; impact assessment in agricultural research and extension; summary of evaluation landscape; design and conduct of evaluation programme; evaluation of extension training programmes situation analysis. Needs identification, creating local support and organizing resources. Analysis and evaluation of some rural development projects in Nigeria (seminar presentation).

AGX 813.2: Participatory research approaches in agricultural extension Research (3Units)

Rationale for participatory learning and action in agricultural extension. Benefits of participatory research methodologies. Principles. Requirements. Participatory tools (transects, village social map, daily activity charts, resources picture cards, flow charts, venn diagrams, gender analysis framework, sustainable livelihood analysis, preference ranking, focus group discussion, etc

AGX 814.2 Social Media Applications in Extension (2 Units)

Concept of social media. Types of social media. Web 2.0 and social media in agricultural development. Developing social media policy. Social networking and agricultural development. Practical application of social media tools in agriculture.

AGX 815.2: Photography Media Use and Documentation in Agriculture (2units)

Photographical concepts and application in agriculture, techniques and principles of the photographing. Techniques principles in media use (print and electronic media) information transfer media.

AGX 816.2: Agricultural Journalism (2Units)

Review of communication process; techniques and principles of print and electronic media; information transfer media information sources in agriculture, preparation and delivery of agricultural needs material; news, programmes and features presentation, agricultural journalism and extension work; audio- visual workshops.

AGX 817.2: Agricultural Extension Organization and Institutions (2Units)

Concepts of Extension Organizations Contemporary organization in agricultural and developmental works. Agricultural research institutes; university of agriculture, approaches to

both physical and human management, policy and administrative leadership, roles of these institutions to agricultural extension services and rural development.

AGX 818.2: Extension Administration and Supervision (2 Units)

Overview of administration, theories of management and supervision, the administrative organization, the administrative process; personnel administration and management, the supervision function; managerial decision making model in agriculture assessment of work accomplishment and special issues. Concepts of Extension Organizations; contemporary organization in agricultural and developmental works. Agricultural research institutes; university of agriculture, approaches to both physical and human management, policy and administrative leadership, roles of these institutions to agricultural extension services and rural development.

AGX 819.2: Planning and Evaluation of Agricultural and Rural Development Programmes (3 Units)

Concepts of programme development, procedures for developing extension programme; procedures for programme development. Relevant concepts in programme planning, concepts and process of monitoring in extension, extension indicators for monitoring purposes; impact assessment in agricultural research and extension; summary of evaluation landscape; design and conduct of evaluation programme; evaluation of extension training programmes situation analysis. Needs identification, creating local support and organizing resources. Analysis and evaluation of some rural development projects in Nigeria (seminar presentation).

AGX 830.2 Dissertation: A student shall be required to write, present, defend and submit a dissertation on an issue that is current and relevant to his or her area of specialization.

(iii) DOCTOR OF PHILOSOPHY (Ph.D) DEGREE PROGRAMME IN AGRICULTURAL EXTENSION

INTRODUCTION

The programme is designed for students seeking for a doctoral degree in agricultural extension with specialization in agricultural extension administration, agricultural programme planning and evaluation, rural sociology, agricultural extension and rural development, agricultural extension communication. The above areas shall form the core areas of research focus and supervision.

Philosophy

The Ph.D degree in Agricultural Extension is designed to provide highly skilled manpower to plan, administer and conduct research in Agricultural extension. The programme will equally produce competent scientists and researchers for Universities and Research Centers as well as the Public and Private Sectors able to compete globally and to act as change agents within the Nigerian economy.

Vision

To produce a world class professionals, scholars and researchers in agricultural extension capable of generating innovative principles for an effective agricultural information dissemination and advisory services.

Mission

The mission of this programme is to train and equip individuals with professional and sufficient knowledge and practical skills to enable them to:

- (a) Engage in teaching, research and community outreach activities in the field of agricultural extension at various levels (Extension agencies, private sector, ministries of agriculture, research organizations, universities, NGOs, etc.)
- (b) Work as professionals and consultants in farms, institutions of higher learning, research institutes and other governmental and nongovernmental organizations
- (c) Formulate and design sound agricultural extension and rural development policies applicable in Nigeria and any other country.
- (c) Advise decision makers in formulating agricultural extension policies

Aim

The programme is aimed at:

- a. Producing persons with professional knowledge in the principles, theories and practices of agricultural extension.
- b. Exposing professionals in related disciplines to knowledge, skills and practices in the field of agricultural extension. .

Objectives

The programme is designed to expose students to advanced courses in agricultural extension and development studies and equip students with research skills through the conduct of supervised research, seminar presentations and dissertation writing in agricultural extension and its related fields.

Admission Requirements

Candidates seeking admission into the Ph.D degree programme in Agricultural Extension will be required to possess:

- (i) M.Sc. degree in Agricultural Extension of the University of Port Harcourt or any other recognized University with a minimum CGPA of 3.50 on a 5-point scale or 2.50 on a 4-point scale and a thesis score not lower than 60% (B) at the M.Sc. level.
- (ii) Shortlisted candidates shall be required to submit a proposal on their intended research area of interest to the Departmental Graduate Studies Committee. Candidates shall be interviewed by the committee and candidates scoring 60% and above will be admitted into the programme.

Area of specialization

- (a) Ph.D in Agricultural Extension and Rural Development
- (b) Ph.D in Agricultural Communication/Information Communication Technology in Agriculture

Programme Duration

The programme shall be run on either full time or part time basis.

- a) Candidates for the full time Doctor of Philosophy Degree Programme in Agricultural Extension shall be required to spend a minimum duration of 24 calendar months (2 years) and maximum of 48 months (4 years).
- b) Candidates for the part time Doctor of Philosophy Degree Programme in Agricultural Extension shall be required to spend a minimum duration of 36 calendar months (2 years) and maximum of 72 months (6 years).

Requirements for Graduation

The student is required to pass all prescribed courses, attend and present all relevant seminars and defend the thesis.

Students are expected to pass a minimum of 48 units thus:

Course	Unit
Core courses	21
Electives	9
Thesis	16
Seminar	2
Total	48

COURSE LIST

First Semester

Course Code	Course Title	Unit
AGX 901.1	Advanced Research Methods and Statistics in Agricultural Development Studies	3

AGX 902.1	Design and Administration of Agricultural Training Programmes	3	research, organization and presentation of data. Review of methods of central tendencies, variability, ANOVA, chi-square, linear regression and other correction techniques. Multiple regression, ANOVA, t-test, non-parametric statistics. Procedure for selecting appropriate statistical methods and steps involved in hypothesis testing. Practical application of statistical methods to relevant specimen research data. Review of meaning and scales of measurements, factors influencing the choice of appropriate parametric tests, principles of tests construction. e.g questionnaire, item analysis, and measurement of reliability and validity. Techniques for attitude scale construction methods of paired comparison, equal-appearing interval, successive intervals, summated ratings and scalegram analysis.

AGX 908.2	Advanced Agricultural Extension Communication Methods and Audiovisual Aids	3	
AGX 930.2	thesis	16	
Total		27	

Note: A student is required to take at least three elective courses.

ELECTIVES:

Course Code	Course Title	Unit
AGX 909.1	Agricultural Extension Policy and Development	3
AGX 910.1	Agricultural Knowledge Information Systems and Social Media	3
AGX 911.2	Advanced Agricultural Journalism	3
AGX 912.2	Advanced Leadership	3
AGX 913.2	Television and Radio Programmes in Agriculture.	3

COURSE SYNOPSES

AGX 901.1: Advanced Research Methods and Statistics in Agricultural Extension and Development Studies (3 Units)

Review of scientific methods in agricultural Extension and development research: research problems and objectives formulation/hypothesis and data collection techniques, sampling techniques and sample. Research designs, data analysis methods and presentation of research reports. Review of methods and procedures for conducting social research, statistics as a tool for

AGX 902: Design and Administration of training programmes (3 Units)

Theory and principles in extension administration, linkage between organizational structure and extension practices; Practical Training, training through discussion, in service and training the trainer. Public relations skills.

AGX 903.1: Advanced Agricultural Extension Administration Programme Planning and Evaluation (3Units)

Review of administrative theories, manpower planning and development in agricultural analysis of the organization of modern bureaueragy and pubic services. Theoretical concepts and empirical analysis of complex organizations with particular reference to the extension services. Problems of organizing, staffing, control and managing development and research organizations. Policy and administrative leadership in the extension service. Analysis and evaluation of some rural development programmes projects in Nigeria. Review of the concepts of development, analysis of current theories, concepts, principles, objectives, criteria, procedures and sources of information for planning, implementation and evaluation of agricultural and rural development projects. Review of the concepts of monitoring and evaluation. Alternative planning and evaluation models, problems associated with programme planning and evaluation situation analysis. Myths about evaluation and uses of evaluation reports. Students are required to collect and critique at least 4 programme plans and their evaluation reports. The report would be presented in the class.

AGX 904.1: Current Global Issues in Agricultural Extension Delivery (3 Units)

Issues that are both current and global in nature should be highlighted. For example, HIV/AIDS, global warming and climate change, health care

delivery, poverty, environmental degradation, etc. Their effects or interrelationship with agricultural extension programme delivery in the various continents, in Nigeria and other countries should be discussed. Strategies being adopted and best practices should be pointed out. Examination of problems of extension service delivery - including organization, functions, and responsibilities, programme determination, grassroots involvement and participation, staff training and field performance. Analysis of historical, philosophical, social and logistic factors affecting these issues.

AGX 905.2: Seminar for Doctoral Students (2 Units)

A student will select a topic of current issues in any area of agricultural extension and rural development, such as agricultural extension administration, agricultural programme planning and evaluation, rural sociology, and agricultural communication/information technology, and prepare, present and defend the report.

AGX 906.2: Advanced Rural Sociology and Social Changes (3 Units)

Review of basic sociological concepts. Social and human factors in agricultural technology transfer. Rural institutions and functions. Rural-urban relations. Theories of social changes. Influencing factors and consequences of social changes. Theoretical and empirical problems in introducing social changes. Rural-urban interaction, agricultural development, education, occupation mobility and migration and other elements of social change. Analysis of social changes in Nigeria in the past one century. Review of indigenous technologies that are related to crop and animal production, soil conservation, health and health care, etc. constraints to effective use of indigenous technologies in agricultural production. Procedure for developing new technologies. Constraints to development of modern technologies that are appropriate. Procedure for selecting appropriate technologies, effective transfer of technologies. Gender issues in technology development and transfer. Case studies of farming-related technologies developed in advanced countries and in Nigeria, their transfer adoption and appraisal. Participatory technology. Integration of indigenous knowledge and innovation in agriculture and rural development.

AGX 907.2: Advanced Agricultural Extension and Rural Development (3 Units)

Concept of agricultural extension and rural development. Agricultural extension/rural development as an educational process. Nigeria's agricultural extension/rural development policy. Various agricultural extension/rural development

approaches/systems implemented or being implemented in Nigeria and other countries of the world. Cases of success or failure of agricultural extension/rural development programmes. Appraisal of agricultural extension programmes in Nigeria. Leadership and rural development role, types and problems. Review of history of extension in the World and in Nigeria, the place and role of extension in rural community development. Extension training, objectives and extension resources, survey of extension methodology. Major activities of extension services, extension concept of programming, major constraints of extension organization and education. Case studies of agricultural extension systems in some advanced and developing countries emerging extension systems across the world.

AGX 908.2: Advanced Extension Communication Methods and Audio-Visual Aids (3 Units)

Communication process, and environment, skills of communication, design selection and utilization of audio-visual extension teaching aids. The laws of teaching and learning. Communication strategies for different audience groups-policy makers, programme planners, village leaders and rural farmers, case studies of extension communication systems in the world and in Nigeria. Theory and practice of agricultural writing. Preparation of research materials for scientific journals. Planning, writing, editing and production of educational publications, agricultural exhibit techniques and advertising. The use of computers in designing and production of extension information.

AGX 909.1: Agricultural Extension Policies and Development (3 Units)

Development of policy briefs; policy cycle. Historical and analytical treatment of government systems affecting agricultural policies and programmes in Nigeria and developing countries in general. Agricultural policies in Europe and America. Agricultural planning and project appraisal as related to agricultural development, evaluation of agricultural policies and development. Seminar on topical development and policy issues.

AGX 910.1: Agricultural Knowledge Information Systems (3 Units)

Basic concepts – data versus information, characteristic of information; Concept of Agricultural Knowledge and Information System (AKIS), Training of Stakeholders of AKIS; Role of Management Information System in extension organization; Need for automation; Networking

and interactive processing; Establishing a Management Information System; Social Media Strategy; How to use social media for extension services; Factors to consider in selecting social media in extension work – awareness, interest and doable (AID); Cyber extension, ICT enabled extension services; Market Led Extension

AGX 911.2: Advanced Agricultural Journalism (3 Units)

Principles of writing, structure of news story, procedure in writing the news story and the elements of style. Success stories & feature articles; writing for success & feature articles, Types of Feature articles. Information materials; Types of information materials and user; Techniques in book Publishing. Editing Principles, Tools & Techniques and art of Proof Reading Techniques, Measuring Readability of writing; Developing communication & Media Strategy for selected developmental programme. Exercise of editing & proof reading the Farm News for Newspapers and different types of intro and leads.

AGX 912.2: Advanced Leadership (3 Units)

Leadership theories and their application to rural community settings.; effective leadership roles and relationships in small groups and community settings, analysis of processes in leadership development with specific reference to principles applicable to discovering and educating potential leaders for social change, evaluation of leadership development programmes.

AGX 913.2: Televisions and Radio Programmes in Agriculture (3 Units)

Principles of writing agricultural articles, news and reports for extension work; Principles and methods of communication media administration related to rural population; Analysis and applied techniques; communication media suitable to rural situation; Principles of presenting agricultural information, radio and TV programs; article writing and preparation of radio programs for farmers; Influence, importance and profitable mass communication for extension, selection techniques in other categories of mass communication for extension.

AGX 930.2: Thesis (16 Units)

A student shall be required to undertake an empirical study on a current and relevant area of choice in the field of Agricultural Extension and rural development culminating to writing a thesis.

ACADEMIC STAFF LIST

S/No.	Name	Rank	Qualifications	Specialization
1.	Dr. Angela I. Emodi	Reader/Ag. Head of Department	B.Sc (Home Econs Edu.), UNN PGD (Agric Econs & Ext); MSc (Agric Ext & Rural Sociology), RSUST; PhD (Agric Ext & Admin), UNN	Home Economics Education
2	Prof. O.M. Adesope	Professor	BSc Agric. Ext (Ibadan), TTC Agric. Science Educ. (FCETOM) MSc Agric. Ext (FUTO), PhD Agric. Ext (FUTO)	Agric. Ext. (Rural Development)
3.	Prof. Olajire S. Olatunji	Professor	NCE, Agric/Edu. (SACOED) B.Sc. Agric/Edu (ABSU), MSc Agric Extension Services (UI); PhD Agric. Extension and Rural Development (MOUAU); M.Ed & PhD -Measurement & Evaluation (ABSU)	Agric. Ext, Rural Sociology & Development
4.	Prof. B.I. Isife	Professor (Adjunct)	B. Agric (UNN); MSc. Agric Extension (UNN);PhD Agric Extension (UNN)	Agric Extension & Administration
5.	Prof. O. N. Nwaogwugwu	Professor	NCE (Alvan). BSc Agric Educ (RSUST); MSc (Agric Ext (RSUST), PhD Agric. Extension (FUTO)	Agric Extension & Rural Sociology
6.	Dr. Clara C. Ifeanyi-Obi	Senior Lecturer	BSc (Agric Econs & Ext) FUTO, MSc (Agric Ext & Rural Sociology, RSUST; PhD, Agric Extension, FUTO	Rural Community Development
7.	Dr U. Akwiwu	Lecturer I	BSc (Agric. Econs & Ext) Imo State University. MSc, PhD, Ibadan.	Rural Sociology
8	Mr. Chimkanma C. Wigwe	Lecturer II	B. Agric (Agric Extension) UPH. MPhil Agric. Extension (UCC), Ghana	Agricultural Extension
9	Dr Ugochi G. Okorie	Lecturer II	HND (Agric. Mgt & Ext), PGD (Agric. & Applied Economics/Extension), MSc (Agric. Ext & Rural Soc. (RSUST), PhD (Community & Rural Dev.)	Community and Rural Development

DEPARTMENT OF AGRICULTURAL ECONOMICS AND AGRIBUSINESS MANAGEMENT

The Department of Agricultural Economics offers the following programmes:

- A. PGD IN AGRICULTURAL ECONOMICS AND AGRIBUSINESS**
- B. MSc. IN AGRICULTURAL ECONOMICS**

Areas of Specialization

1. Farm Management and Production Economics
2. Agricultural Finance and Project Analysis
3. Agribusiness Management
4. Agricultural Resource and Environmental Economics

C. PhD IN AGRICULTURAL ECONOMICS

Areas of Specialization

1. Farm Management and Production Economics
2. Agricultural Finance and Project Management
3. Resource and Environmental Economics

A. Postgraduate Diploma (PGD) in Agricultural Economics and Agribusiness

The programme is designed for candidates seeking to remedy their deficiencies to qualify for a Master's degree in agricultural economics and others intending to improve their skills for better performance in the field.

Philosophy

The philosophy of the postgraduate diploma programme is to provide postgraduate training in Agricultural Economics for Higher National Diploma graduates of Agriculture. It is also to provide training for professionals in related disciplines, and graduates in agriculture who otherwise would not qualify for admission into Master's Degree Programmes in agricultural economics and Agribusiness

Vision

To produce experts and consultants in agricultural economics to analyze and interpret agricultural policies in critical sectors in ministries of agriculture, Agricultural Development Programmes (ADPs), Non-Governmental Organization, private and public agencies and farms to bridge the knowledge gap.

Mission

To provide excellence in agricultural economics and Agribusiness research. To train and develop world class manpower in agricultural economics

Rationale/Justification

The programme will provide opportunity for such individuals with 3rd class degree in Agricultural economics who need to remedy their bachelor's degrees to enable them pursue higher degrees in agricultural economics professionals from related disciplines who wish to change careers to agricultural economics and Agribusiness

Aim

The Postgraduate Diploma Programme in agricultural economics and Agribusiness is aimed at:

- a. Producing persons with advanced knowledge and skills in basic and applied agricultural economics and Agribusiness in principles, theories and practices.
- b. Exposing professionals in related disciplines to knowledge, skills and practices in the field of farm economics and policies required in managing farm business enterprises.
- c. Providing training in specific aspects of agricultural production and Agribusiness.

Objectives

The objectives of the programme include to:

- a. offer opportunity to graduates of agricultural economics with a CGPA of less than 2.50 for further studies at the higher degree level.
- b. provide a platform for graduates of agriculture and related fields or holders of HND in agricultural economics with lower credit who wish to undertake a career in agricultural economics.

Admission Requirements

An applicant should be a graduate of University of Port Harcourt, or a graduate from any other University recognized by the senate of University of Port Harcourt.

Candidate seeking admission into the (PGD) programme in agricultural economics shall possess at least a second class lower Degree in a non-agricultural based discipline or a third class/pass Degree in Agricultural Economics. Candidates seeking admission with HND must have an upper credit pass. In addition, candidates must possess the matriculation requirements of the Faculty of Agriculture, University of Port Harcourt

Programme Duration

The PGD programme in Agricultural Economics shall run for a minimum of 12 calendar months.

Graduation requirements

In addition to passing stipulated courses, the students shall be required to complete and defend a research project.

List of Courses, Codes and Credit Units.

First Semester:

Course Code	Course Title	Units
AEE 701.1	Introduction to Agricultural Economics Theories	2
AEE 702.1	Introduction to Research Methods in Agricultural Economics	2
AEE 703.1	Agricultural Projects, Planning and Analysis.	2
AEE 704.1	Principles of Agricultural Micro Economics	2
AEE 705.1	Agricultural Marketing	2
AEE 706.1	Mathematical Economics	2
AGE 707.1	Scientific Communication Process	2
Total		14

Second Semester:

Course Code	Course Title	Units
AEE 708.2	Farm Management	2
AEE 709.2	Agricultural Finance and Records.	2
AEE 710.2	Agribusiness Management	2
AEE 711.2	Principles of Macro Economics	2
AEE 712.2	Production Economics	2
AEE 713.2	Seminar	2
AGE 714.2	Project.	4
Total		18

Minimum Graduation requirements: Core courses **Core 26; Project 4; Seminar: 2. Total 22**

COURSE DESCRIPTION

AEE 701.1: Introduction to Agricultural Economic Theories I (2 units)

Selected economic theories relevant to agriculture. Demand and supply, consumer theories, market structure, theory of the firm, production function.

AEE 702.1: Introduction to Research Methods Statistics in Agricultural Economics (2 units)

Meaning, scope and functions research. Types and examples of research in agricultural economics. Sampling techniques. Tools and methods of data

collection. Basic statistical concepts and their application agricultural economics. Techniques of data interpretation. Reporting research results. Classification, types and methods of data collection in agricultural research; meaning and uses of frequency distribution; measures of central tendency and dispersion, moving averages; simple linear regression, tests of hypothesis.

AEE 703.1: Agricultural Project Planning and Analysis (2 Units)

Characteristics of agricultural and agro-industrial projects; the project cycle; non-discounted and discounted appraisal methods; importance of discount rates, annuity and project life; cash flow preparation.

AEE 704.1: Principles of Micro Economics (2units)

The theory of consumer behavior and demand. The theory of value and prices, the theories of cost and production. The theory of perfect competition. The theory of distribution. Market Equilibrium.

AEE 705.1: Agricultural Marketing (2units)

Concepts in Agricultural Marketing - Characteristic of Agricultural product and Production – Problems in Agricultural Marketing from Demand and Supply and Institutions sides. Market intermediaries and their role - Need for regulation in the present context -Marketable & Marketed surplus estimation. Marketing Efficiency

AEE 706.1: Mathematical Economics (2units)

Differentiation. Maxima and minima and their applications. Integration applications to economics. Difference equations and applications. Matrix algebra and applications in Economics.

AEE 707.1 Scientific Communication Process (2 units)

The art and science of scientific writing. Journals, conferences, seminars. How to get a paper published in a journal. The editorial process. Visibility process. Mentorship process in scientific communication

AEE 708.2: Farm Management (2 units)

Farm decision-making process; enterprise combinations; enterprise budget; break-even analysis, sensitivity analysis, graphical approach to linear programming. Case studies.

AEE 709.2: Agricultural Finance and Records (2 units)

Sources of finance to agriculture; farm firm capitalization; agricultural credit; loan payment terms; interest rate determination; cost of capital; review of farm records and valuation methods; problems of recording and accounting.

AEE 710.2: Agribusiness Management (2 units)

Managerial roles; executive responsibilities; external and internal environments of enterprise; structural characteristics of organizations; areas of management; authority and responsibility in organizations; conflict and leadership; managerial functions and processes including decision-making, planning, and management of objectives. Case studies

AEE 711.2: Principles of Macro Economics (2units)

Measuring Macroeconomic activity. National Income, Aggregate supply demand. Government and the theory of aggregate demand. Consumption function hypotheses. Investment function. Equilibrium in the product market. The supply of money, demand for money and the money market. Simultaneous Equilibrium or the money and product markets. Theory of the labour market

AEE 712.2 Production Economics (2units)

The methodology of production function analysis. Different forms of production functions. The profit function. Optimization under perfect knowledge. Optimization over time. Optimization under risk and uncertainty.

AEE 713.2: Seminar (2units)

Seminar presentations on current issues in Agricultural Economics and Agribusiness

AEE 714.2: Project Report (4 Units)

A guided scientific investigation of a selected topic/problem. This involves identification of researchable problem, statement of specific objectives and hypotheses, data collection and analysis. These processes will lead into a special project report.

B. MSc. IN AGRICULTURAL ECONOMICS

Introduction

The programme is designed for students seeking for a higher degree in agricultural economics with specialization in Farm management and Production Economics, Agricultural Finance and Project Analysis, Agribusiness Management and Agricultural Resource and Environmental Economics. Consequently, the degree of Masters of Science (M.Sc.) in agricultural economics shall be awarded in the four (2) broad areas as:

1. M.Sc. in Farm Management and Production Economics
2. M.Sc. in Agricultural Finance and Project Analysis
3. M.Sc. in Agribusiness Management
4. M.Sc. in Agricultural Resource and Environmental Economics

Philosophy

The M.Sc. degree in Agricultural Economics is designed to provide highly skilled manpower to plan, administer and conduct research in Agricultural Economics. The programme will equally produce competent scientists and researchers for Universities and Research Centres as well as the Public and Private Sectors able to compete globally and to act as change agents within the Nigerian economy.

Vision

To produce a world class professionals, scholars and researchers in agricultural economics and policies, capable of generating solutions and guiding policy makers in effective agricultural policy directions.

Mission

The mission of this programme is train and equip individuals with professional and sufficient knowledge and practical skills to enable them to:

- (a) Engage in teaching, research and community outreach activities in the field of agricultural economics at various levels (Extension agencies, private sector, ministries of agriculture, research organizations, universities, NGOs, etc.)
- (b) Work as professionals and consultants in farms, research institutes and other governmental and nongovernmental organizations
- (c) Advise decision makers in formulating agricultural economic policies

Objectives

The programme is designed to expose students to advanced courses in agricultural economics and equip students with research skills through the conduct of supervised research, seminar presentations and thesis preparation in agricultural economics and its related fields.

Admission Requirements

Candidates seeking admission *into the Master of Science degree programme in Agricultural Economics shall possess:*

- (i) A Bachelor's degree in Agricultural economics or its related disciplines with a minimum of Second Class (Lower division).
- (ii) Appropriate Post Graduate Diploma of the University of Port Harcourt or other recognized Universities with at least a credit pass of 3.0 CGPA on a 5-point scale.
- (iii) HND Upper Credit plus PGD.

Programme Duration

Candidates may register for full-time or part-time studies.

- a) The Full-time Master of Science Degree Programme in Agricultural Economics shall run for a minimum duration of 12 calendar months and maximum of 24 months.
- b) The Part-time Master of Science Degree in Agricultural Economics shall run for a minimum duration of 24 calendar months and maximum of 48 months.

AGE 809.1	Research Methodology and Statistical Methods	3
AGE 810.1	Microeconomic Theory	3
AGE 811.1	Macroeconomic Theory	3
AGE 812.1	Econometrics	3
AGE 813.1	Agricultural Policy Planning and Development	3
AGE 827.1	Scientific Communication Process	3
Total		20

Requirements for Graduation

The student is required to pass all prescribed courses, earn a CGPA of 3.00 and defend the dissertation.

OPTION 1: M.Sc. IN FARM MANAGEMENT AND PRODUCTION ECONOMICS

First Semester

Compulsory/Core Courses

Course Code	Course Titles	Units
SGS 801.1	ICT and Research Methods	2
AGE 809.1	Research Methodology and Statistical Methods	3
AGE 810.1	Microeconomic Theory	3
AGE 811.1	Macroeconomic Theory	3
AGE 812.1	Econometrics	3
AGE 813.1	Agricultural Policy Planning and Development	3
AGE 827.1	Scientific Communication Process	3
Total		20

Second Semester

Course Code	Course Titles	Units

AGE 899.2	Dissertation	6
	Total	28

COURSE DESCRIPTION

FIRST SEMESTER

SGS 801.1 ICT and Research Methods (2 Units)

Philosophy guiding Research; Organization of Research; Guiding Principles of Scientific Research; Scientific Methods of Research Observation; Essential of spreadsheet; Internet technology; Statistical packages; Precision and accuracy of estimates; Principles of scientific research; Concept of hypothesis testing; Organization of research and report writing and proposal format; Principles of successful project (titles, goals and objectives); Developing methodology and presenting experimental results; Research ethics; Referencing

research writing; Web 2.0 and social media; Scientific writing tips; Visibility actions for research output.

AGE 809.1: Research Methodology and Statistical Methods (3 Units)

Science and the scientific method. Research problems, objectives and research hypothesis; sampling theory and practice, data processing; analysis and reporting. Selected case studies in the various sub-disciplines of agricultural economics. Presentation of research proposals and reports.

AGE 810.1: Microeconomic Theory (3 Units)

The theory of consumer behavior and demand. The theory of value and prices, the theories of cost and production. The theory of perfect competition. The theory of distribution. Market Equilibrium.

AGE 811.1: Macroeconomic Theory (3 Units)

Measuring Macroeconomic activity. National Income, Aggregate supply demand. Government and the theory of aggregate demand. Consumption function hypotheses. Investment function. Equilibrium in the product market. The supply of money, demand for money and the money market. Simultaneous Equilibrium or the money and product markets. Theory of the labour market. Derivation of Aggregate demand and Aggregate supply curves. General equilibrium of the commodity, money and labour markets. New classical economics.

AGE 812.1: Econometrics (3 Units)

Simple and multiple regression analysis. Econometric problems and methods. Generalized least squares. "Instrumental variables and errors in variables. Discriminate Analysis: Methods and principal components/factor analysis.

AGE 813.1: Agricultural Policy Planning and Development (3 Units)

Meaning and scope of Development, causes and characteristics of economic growth. Poverty, population and economic growth. Unemployment. Migration. Agrarian change. Structural Adjustment Programme. Agribusiness research policy.

AGE 827.1: Scientific Communication process (2Units)

How to write scientific publications. Disseminating channels for publications; the art of manuscript preparation. Editorial process. Ethical provisions. International and national publishers. Indexing agencies. Visibility in the research process (relevance of google scholar, research gate, academia.edu, in the research process and how to get connected). Networking and the research process. Mentorship issues.

SECOND SEMESTER

SGS 801.2 Entrepreneurship and Management (2Units)

Concept of Entrepreneurship in agriculture; feasibility report writing, cash flow analysis .

AGE 806.2: Seminar (2 Units)

A student will select a topic of current interest and prepare and defend the report

AGE 818.2: Agricultural Project Analysis and Evaluation (3 Units)

Aspects of project preparation and analysis. The project cycle. Project costs and benefits. Financial analysis of projects. Farm investment analysis. Economic aspects of project analysis. Measures of project worth. Meaning and scope of monitoring and evaluation. Techniques in data collection and information system. Monitoring of physical and financial progress.

AGE 819.2 Agricultural Production Economics (3 Units)

The methodology of production function analysis. Different forms of production functions. The profit function. Optimization under perfect knowledge. Optimization over time. Optimization under risk and uncertainty.

AGE 822.2: Mathematical Economics (3 Units)

Differentiation. Maxima and minima and their applications. Integration applications to economics. Difference equations and applications. Matrix algebra and applications in Economics.

AGE 823.2: Farm Management (3 Units)

Principles and concepts of Farm Management. Valuation and depreciation of assets. Analysis of farm business performance. Gross margin analysis. Farm Budgeting. Farm Assessment and Planning. Linear and dynamic programming. Investment Appraisal. Budgetary Control.

AGE 815.2: Farm Accounting and Financial Management (2 Units)

Accounting principles and applications. Farm records, banking and credit procedures. Financial analysis, scope and methods of financial management Ratio analysis. Profit planning, financial forecasting, planning and control. Capital budgeting techniques. Investment decision under uncertainty.

AGE 814.2: Agribusiness Finance and Risk Management (3 Units)

Modeling, risk adjustment); return on capital. Nature of risk to business; areas of risk; sources of risk in agribusiness; managing risks in agribusiness; global demands and trends; security and strategic factors. Introduction to insurance; life assurance laws; insurance of the person; marine and aviation insurance; property and pecuniary insurance; motor

insurance; underwriting and claims; insurance broking; re-insurance and marketing of insurance services.

AGE 816.2: Agricultural Cooperatives (3 Units)

Concept of cooperatives. Principles and types of cooperatives. Cooperatives in Nigeria. Formation, admission and registration of cooperatives. Conduct of meetings fund raising, loan application and administration. Management of cooperatives. By-laws of cooperative societies. Cooperatives in rural development. Evaluation in rural development. Evaluation of cooperatives, case studies.

AGE 817.2: Agricultural Finance and Insurance (3 Units)

Definition and scope. Classification of agricultural credit. Loan repayment. Interest rates and loan costs. Survey of credit institutions and programme in Nigeria. External finance in Nigeria agriculture. Risk and uncertainty. Risk situations in agriculture. Risk and insurance and agriculture. Loss Assessment.

AGE 820.2: Agricultural Resources Economics (3 Units)

The concept of Resource Economics, Scarcity of resources: theories, mathematical concepts ; Resource Sustainability, Land as a resource: Availability, use and valuation of resources: Demand for the supply of land, land use planning, land tenure, valuation of land, availability, use and scarcity, resource conservation, desertification, erosion control, formulation and implementation of land policies, Water resource: supply and availability of water, irrigation and water management, water salinization, drainage, quality and hygiene of drinking water. Energy and Forest Resource: availability and use of energy; farm internal and external sources of energy, Forestry: wood, importance of forests, deforestation, optimal rotation, forest, Policies etc, Labour as a Resource: Supply; availability, types, improvement, use and demand for labour. Capital as a resource: Forms of capital, availability, use, types and scarcity of different forms of capital, Livestock/wildlife/fisheries as a resources: procurement, availability and uses; degradation, optimal management, forests, fossil fuels and mineral resources as well as their over exploitation.

AGE 821.2: Environmental Economics (3 Units)

The concept of Environmental economics. The economy and the environment. Economic efficiency and markets. The economics of environmental quality. Environmental Analysis- Environmental Impact Assessment, Benefit-Cost Analysis, Net Present Value etc, Environmental Policy Analysis, International Environmental Issues, Trade and the environment, Energy transition,

Sustainability, Environmental Pollution, Climate change issues.

AGE 824.2: Agricultural Marketing and Price Analysis (3 Units)

Review of Concepts in Agricultural Marketing - Characteristic of Agricultural product and Production – Problems in Agricultural Marketing from Demand and Supply and Institutions sides. Market intermediaries and their role - Need for regulation in the present context -Marketable & Marketed surplus estimation. Marketing efficiency - Structure Conduct and Performance analysis - Vertical and Horizontal integration - Integration over space, time and form-Vertical coordination. Marketing Co-operatives – APMC Regulated Markets - Direct marketing, Contract farming and Retailing - Supply Chain Management - State trading, Warehousing and other Government agencies – Performance and Strategies – Market infrastructure needs, performance and Government role - Value Chain Finance. Role of ICT in marketing of agricultural products. Spatial and temporal price relationship – price forecasting – time series analysis – time series models – spectral analysis. Price policy and economic development – non-price instruments. Theory of storage – Introduction to Commodities markets and future trading – Basics of commodity futures – Operation Mechanism of Commodity markets – Price discovery -Hedging and Basis – Fundamental analysis - Technical Analysis – Role of Government in promoting commodity trading and regulatory measures.

AGE 825.2 Strategic human resource management for Agribusiness (2 Units)

The concept of strategic management and its application to agribusiness; human resource strategic goals; internal and external situational analysis; agribusiness human resource (HR) SWOT analysis; development of agribusiness human resource strategies, plans and programs; agribusiness organizational culture development; determination of the right number of personnel; development of human resource policies; determination of the right job grades and salary structures; preparation of agribusiness HR strategic and annual operational plans and budgets; HR performance measures; monitoring and control systems; globalization and its impact on strategic human resource management.

AGE 829.2: Operations Research (3 Units)

Matrices, Game theory, Decision theory under different kind of uncertainties, Uncertainty modelling, Supply chain decisions, linear programming, inventory management, use of ICT for operations management, risk management, production and quality management, simulation modelling and analysis, mathematical optimization,

stochastic modeling, probability and statistics, operations research practices.

AGE 899.2: Dissertation (6 Units)

Students are expected to write, present, defend and submit a scientific work on contemporary issues in agricultural economics.

D. Ph.D. IN AGRICULTURAL ECONOMICS INTRODUCTION

The programme is designed for students seeking for doctoral degree in Agricultural Economics with specialization in **Farm Management and Production Economics and Agricultural Finance and Project Analysis**. Consequently, the core areas of Specialization shall be:

1. PhD in Agricultural Economics (Farm Management and Production Economics)
2. PhD in Agricultural Economics (Agricultural Finance and Project Analysis)
3. Ph.D in Agricultural Economics (Resource And Environmental Economics)

Philosophy

The Ph.D degree in Agricultural Economics is designed to provide highly skilled manpower to plan, administer and conduct research in Agricultural Economics. The programme will equally produce competent scientists and researchers for Universities and Research Centres as well as the Public and Private Sectors able to compete globally and to act as change agents within the Nigerian economy.

Vision

To produce a world class professionals, scholars and researchers in agricultural economics and policies, capable of generating solutions and guiding policy makers in effective agricultural policy directions.

Mission

The mission of this programme is train and equip individuals with professional and sufficient knowledge and practical skills to enable them to:

- (a) Engage in teaching, research and community outreach activities in the field of agricultural economics at various levels (Extension agencies, private sector, ministries of agriculture, research organizations, universities, NGOs, etc.)
- (b) Work as professionals and consultants in farms, research institutes and other governmental and nongovernmental organizations
- (c) Advise decision makers in formulating agricultural economic policies

Objectives

The programme is designed to expose students to advanced courses in Agricultural Economics and

equip students with research skills through the conduct of supervised research, seminar presentations and thesis preparation in agricultural economics and its related fields.

Admission Requirements

Candidates seeking admission into the Ph.D degree programme in Agricultural Economics will be required to possess:

- (i) M.Sc. degree in Agricultural Economics of the University of Port Harcourt or any other recognized University with a minimum CGPA of 3.50 on a 5-point scale or 2.80 on a 4-point scale and a dissertation score not lower than 60% (B) at the M.Sc. level.
- (ii) Shortlisted candidates shall be required to submit a proposal on their intended research area of interest to the Departmental Graduate Studies committee. Candidates shall be interviewed by the committee and candidates scoring 60% and above will be admitted into the programme.

Programme Duration

The programme shall be run on either full time or part time basis.

- a) Candidates for the full time Doctor of Philosophy Degree Programme in Agricultural Economics shall be required to spend a minimum duration of 24 calendar months and maximum of 60 months.
- b) Candidates for the part time Doctor of Philosophy Degree Programme in Agricultural Economics shall be required to spend a minimum duration of 36 calendar months and maximum of 84 months.

Requirements for Graduation

The student is required to pass all prescribed courses, attend and present all relevant seminars and defend the thesis.

Students are expected to pass a minimum of 48 units thus:

Course	Unit
Core courses	21
Electives	9
Thesis	16
Seminar	2
Total	48

OPTION 1. PhD IN FARM MANAGEMENT AND PRODUCTION ECONOMICS

COURSE LIST

First Semester: (Core Courses)

Course Code	Course Titles	Credit Units
AGE 901.1	Advanced Microeconomic theory	3
AGE 902.1	Advanced Macroeconomic theory	3
AGE 903.1	Advanced Econometrics	3

ELECTIVES

OPTION 3. PhD IN AGRICULTURAL ECONOMICS (RESOURCE & ENVIRONMENTAL)

First Semester:

(Compulsory/Core Courses)

Course Code	Course Titles	Credit Units
AGE 901.1	Advanced Microeconomic theory	3
AGE 902.1	Advanced Macroeconomic theory	3
AGE 903.1	Advanced Econometrics	3
AGE 904.1	Advanced Agricultural Development Policy and Planning	3
AGE 921.1	Advanced Agricultural Marketing	3
Total		15

Total for First semester =15 Units

Note that SGS 801.1 will be taken by any student who did not offer it at MSc degree level.

Second Semester

Students are required to take six (6) courses.

(Resource and Environmental Economics)

Course Code	Course Titles	Credit Units
AGE 905.2	Seminar	2
AGE 913.2	Advanced Natural Resource Economics	3
AGE 914.2	Advanced Environmental Economics	3
AGE 915.2	Advanced Welfare Economics and Policy	3
AGE 916.2	Advanced Ecology and Energy Economics	3
AGE 900.2	Thesis	16
Total		30

Total for second semester = 30Units + 3 Units from electives = 33 Units

ELECTIVES (Only one elective is required)

Course Code	Course Title	Credit Units
AGE 909.2	Advanced Production Economics	3
AGE 906.2	Advanced Agricultural Project Analysis	3
Total		6

COURSES SYNOPSES

AGE 901.1: Advanced Microeconomic Theory (3 Units)

Recent development in the theory of market demands. Decision-making and utility theory. Theories of imperfect competition, monopoly, monopsony, duopoly, oligopoly and monopolistic competition. Elements of welfare economics. Critique of the neoclassical theory of the firm. General and partial equilibrium analysis.

AGE 902.1: Advanced Macroeconomic Theory (3 Units)

Revision of National income accounting, multiplier, product, money and labour markets. Simultaneous equilibrium of product, money and labour markets. IS-LM External Trade Model. New classical economics. Theories of business cycle. Exchange rate determination. Balance of payment theories and policies. Theories of inflation, unemployment and stagnation. Economic policy. Current issues in macroeconomics.

AGE 903.1: Advanced Econometrics (3 Units)

The general linear model and problems associated with its use in Econometric research in Agriculture. Errors in variables, auto-correlation and miscellaneous single-equation problems, the theory of simultaneous equation approach, model construction and estimating techniques in agriculture. Solutions of simultaneous equation bias. Time series models and forecasts: choice of econometric Techniques. Monte Carlo studies on demand, production costs and investment, etc. Current advances in econometric modeling.

AGE 904.1: Advanced Agricultural Policy, Planning and Development (3 Units)

Agriculture in economic growth and development. Theories of agrarian change. The global food problem. Rural-Urban terms of trade. Theory and evidence of trade and development. Investment and foreign aid. Development planning. The Aggregate Growth models. Choice of planning techniques in national development plans. Consideration and analysis of planning models. Planning problems involving manpower demand and supply, regional development, foreign trade, monetary and fiscal

policy. IMF structural adjustment. Agricultural trade liberation. Agriculture and environmental management. Energy policy. Sustainability issues in development planning.

AGE 921.1: Agricultural Marketing (3 Units)

The role of agricultural marketing in economic development, international aspects of agricultural marketing. The measurement and use of various types of elasticities, methodology in price analysis. Application of economic theory to analysis of market structure and its impact on conduct and performance of agricultural industry in relation to the other sectors of the economy. Evaluation of the effects of current public policies and arrangements under which the marketing system operates in agriculture.

AGE 905.2: Seminar for Doctoral Students (2 Units)

A student will select a topic of current issues in any area of agricultural economics, such as, farm management and production economics, agricultural finance and project analysis and resource and environmental economics and prepare and present a report.

AGE 906.2: Advanced Agricultural Project Analysis (3 Units)

External effects and public goods. The social rate of discount. The opportunity cost rate of discount. Equilibrium social time preference and social opportunity cost. Institutional barriers, formulae for project choice. Risk and uncertainty. Demand and supply analysis. Shadow pricing. Welfare economics and ease studies in cost benefit analysis. Environmental accounting.

AGE 907.2: Advanced Operations Research (3 Units)

Quantitative tools in operations research. Inventory models. Replacement models. Competitive problems and models, decision theory and applications to agriculture. Mathematical programming models (linear, quadratic, non-linear, dynamic, integer, programming, etc.). Inter-industry analysis, system simulation and Markov chain analysis.

AGE 909.2: Advanced Production Economics (3 Units)

Application of economic analysis to agricultural production problems. Static and dynamic production theories. Supply functions. Applying mathematical programming to production planning, simulation and input-output analysis, location and spatial analysis in agriculture, Advanced treatment of production functions in agribusiness ventures, application of linear programming to farm production problems, recursive programming.

Return to scale and farm size. Time factor, rewards and resource allocation. Decision making under imperfect knowledge, agricultural supply and demand functions.

AGE 910.2: Advanced Farm Management (3 Units)

Application of concepts and tools of farm business management in farm planning and farm management. Business analysis and planning, interpretation and use of information for decision making in organizing and operating farm business to achieve goals; planning under risk and uncertainty, farm finance and appraisal, capital requirements in agriculture;

AGE 911.2: Advanced Agricultural Credit and Rural Finance (3 Units)

Distinction between agricultural finance and credit. Role of credit. Farm financial accounting system. Analysis of farm financial statements. Time value of money and capital budgeting. Risks in investment decision-making, legal consideration in agricultural finance. A survey of the place of credit and rural finance in agricultural development. Credit targeting and loan portfolio regulations and rural development strategies.

AGE 912.2: Money and Capital Markets (3 Units)

Development of money market in Nigeria. Money market instruments, trade credit. Short term financing. Financing receivable, inventory financing. Use of security in short term financing. The market for long term securities. Common stock. Fixed income securities. Term loans and leases. Warrants and convertibles.

AGE 913.2: Advanced Natural Resource Economics (3 Units)

Dynamic resource allocation; Resource scarcity; application to renewable and nonrenewable resources; land tenure issues; natural resources overexploitation; irrigation; water use; forestry resources; practicum on natural resource issues (fisheries, forests, land degradation, pollution). Sustainability, the substitution capability between human-made and natural capital, and the appropriate application of economics to sustainable development analysis and policies. Resource use conflicts and sustainability objectives. Role of property and related institutions in natural resource stewardship. Introduction to economic concepts for management of the environment and specific natural resources. Potential applications of these perspectives of natural resource policy, both in Nigeria and internationally are considered.

AGE 914.2: Advanced Environmental Economics (3 Units)

The economy and the environment. Economic efficiency and markets. The economics of environmental quality. Environmental Analysis-Environmental Impact Assessment, Benefit-Cost analysis, Net Present Value, etc, Environmental Policy Analysis, International Environmental Issues, Trade and the environment, Environmental Pollution, Pollution Control Policies, Climate change. Social science and perspectives on environmental issues (emphasis is on interactions among market relationships; policy action and legal rights of institutions); The role of scientific evidence in the resolution of environmental disputes. Law of contracts, tort, wills, executorship and Trust; externalities and market failure, Valuation of environmental goods.

AGE 916.2: Advanced Ecology and Energy Economics (3 Units)

Investment appraisal, cost-benefit analysis, cost-effectiveness analysis, internalization of external costs. The principles of demand and supply, consumption, investment, labour demand and productivity in an ecological context; A review of population, community, and ecosystem ecology; implications of these areas for methods of resource management and environmental assessment. Management strategies and policies to achieve sustainable flows of energy and materials in the

economy; Eco-efficiency strategies reduce these flows while resource substitution strategies seek more environmentally benign flows. Applies expertise from economics, ecology, agriculture, behavioral sciences; A review of population, community, and ecosystem ecology; implications of these areas for methods of resource management and environmental assessment; Material Balance model; Ayres-Kneese's Material balance model; Economy, Ecology and Environment Interaction. Abatement model: Leontief's Abatement model. Biodiversity Crisis: Value of Biodiversity, Measures of Conservation and Sustainable use of Biodiversity. Recycling and Waste Management:

AGE 922.2 Agricultural Data Systems and Processes (3 Units)

Economics and other characteristics of modern agricultural data gathering and storage processes. Relationship between agro-industrial structure, business conduct and data base and data bank. Evaluation of data processing performance. Data management.

AGE 900.2 Thesis (16 Units)

A student shall be required to undertake an empirical study on a current and relevant area of choice in the field of Agricultural Economics culminating to writing a thesis.

ACADEMIC STAFF LIST

S/No.	Name	Rank	Qualifications	Specialization
1	Prof. Adanna Henri-Ukoha	Professor	B. Agric Economics (Calabar) MSc. Agric Economics (Port Harcourt) Ph.D Agric Economics (Owerri) PGD Agribusiness (UK)	Resource & Environmental Economics: Agribusiness Mgt
2	Prof. Data I. Ekine	Professor (Adjunct)	BSc, MSc (Ibadan) PhD (Newcastle upon Tyne, UK)	Farm Mgt & Prod. Econs
3	Prof. Peter A. Ekunwe	Professor	B. Agric (Benin) MSc. Agric Economics (Benin) Ph.D Agric Economics (Benin)	Farm Management and Production Economics
4	Prof. Anthony O. Onoja	Professor	B.Sc. (Agric. Education), UNN MSc (Agric. Econs. Finance), UNN MSc, PhD (Agric. Econs ; Resource & Environmental Economics, UNN	Agric Finance & Project Analysis; Resource & Environmental Economics
5	Prof. Mercy E. Ndubueze-Ogaraku	Professor	NCE Agric. Sc. Edu. RSCOE; B.Sc Agric. Econs. & Ext, MSc Agric. Economics (RSUST); PhD, Agric. Economics (RSUST)	Agric. Marketing; Farm Mgt & Production Economics
6	Dr Monday G. Nyienakuna	Reader	BSc, MSc (Tashkent); PhD (Uyo)	Farm Management
7	Dr. Zelda A. Omasanuwa	Reader	B. Agric. Fisheries (UNIBEN); MSc. Agric. Econ. (Imperial College, London); PhD Agric. Econ. (Tamil Nadu, India)	Agric. Finance & Production Economics
8	Dr. Henry. C Unaeze	Senior Lecturer	B. Agric. MSc Agric. Econ (UNN)	Resource & Environmental Economics
9	Dr. Vivian C. Ugwuja	Senior Lecturer	B. Agric. (UNN); MSc Agric. Econ (UST); PhD Agric. Econ. (UNN)	Agric. Finance
10	Dr. Uche Chima	Senior Lecturer	BSc, Agric. Econ. & Extension, MSc. Agric. Economics (RSUST)	Farm Management Production & Economics

			PhD, Agric. Economics UNN	
11	Dr Linda C. Familusi	Lecturer II	B Agric Agric Econs (UPH); MSc Agric Econs (Univ Eduardo Mondlane, Mozambique)	Agribusiness Management
12	Mr Samuel U. Nwokugha	Assistant Lecturer	B. Agric. Agric. Econ. (UPH); MSc (Ibadan)	Agricultural Policy and Administration
13	Mrs Oyoburuoma N. Ihunwo	Assistant Lecturer	B. Agric. Agric. Econ. (UPH); MSc	Farm Management & Production Economics

DEPARTMENT OF FISHERIES

PREAMBLE

The Department was established to equip her graduates with the right technical and entrepreneurial skills / capacity necessary for the advancement of the fisheries and aquaculture sub-sectors, and also for the sustenance of the aquatic environments in the mandate area, Niger Delta. This area is largely aquatic and the epicenter of petroleum exploration and exploitation. It is thus exposed to incessant pollution from the associated activities coupled with natural environmental challenges, resulting in the loss of agro-related livelihoods and invariably cause food insecurity. Also, the level of environmental degradation in the area is monumental, and the major fallout is an escalation in food demand. These key challenges facing the present and next generations need to be confronted systematically in order to avert the dire consequences. Solutions to meet these challenges can only be realized through advanced education, research and technological developments that lead to increased fish production, enhanced livelihoods and environmental sustainability. In order to respond to these societal needs of fostering high environmental quality, promotion of aquaculture technological innovations and sustainable exploitation of fisheries and other aquatic resources, it is expedient to develop graduate programmes anchored on systems-oriented research, field experiences and sound theoretical knowledge.

PHILOSOPHY

The programmes will focus on providing training that will enable students acquire discipline-specific skills that are problem-solving and invaluable both for careers in academic research and outside of academia. Graduates from these programmes will thus acquire competencies that will enable them function as academics, managers in aquaculture and fisheries enterprises as well as field environmental officers.

VISION

To be a leading Centre in innovative research, education, and community engagement that provides solutions needed in tackling the challenges of fish production, and the management of aquatic environments.

MISSION

Commitment to develop capacities required to manage aquatic resources and enhance aquaculture production sustainably, through life-enriching research and learning.

RATIONALE

The environmental perturbations and the challenges of fish production in the Niger Delta region, are serious concerns that can only be resolved through advanced manpower development and research. It is envisaged that the proposed post-graduate programmes in the Department will provide significant technological advances that will drive the fisheries economy of the region, and thus contribute to food security and sustainability of the aquatic environment.

OBJECTIVES

The objectives of the programmes are to offer quality programmes that address contemporary needs of the region; produce high level manpower equipped with the right technical and entrepreneurial skills and capacity required to develop practical solutions that will drive the advancement of fisheries and aquaculture sub-sectors; and develop appropriate technologies that would be demand-driven, in response to local needs and ecological challenges.

PROGRAMMES

- Postgraduate Diploma (PGD) in Fisheries and Aquaculture
- Master of Science (M.Sc.) in Fisheries and Aquatic Resources Management
- Master of Science (M.Sc.) in Aquaculture

ADMISSION REQUIREMENTS

- Postgraduate Diploma**
Candidates seeking admission into the Postgraduate Diploma programme should possess either a minimum of 2nd Class (Lower Division) Bachelor's degree in relevant non-agricultural based discipline or a third class/pass in fisheries or a upper credit in HND or equivalent qualification in relevant fields earned from Universities, Polytechnics or similar institutions, recognized by the University of Port Harcourt.
- Master of Science**
The minimum qualification shall be a Second Class (Lower Division) Bachelor's degree from the University of Port Harcourt or any recognized tertiary institution; or HND Upper Credit with Distinction at PGD level.

DURATION OF PROGRAMMES

Postgraduate Diploma

The Postgraduate diploma programme shall normally take a minimum of 12 months and a maximum of 24 months to complete for full-time

students; and a maximum of 36 months for Part-time. The candidate shall follow the prescribed courses and shall be required to complete a research project before graduation.

Master of Science

The programme shall run for a minimum of 24 months and a maximum of 48 months. Candidates shall take prescribed courses for 2 semesters in the first year. The research work might run concurrently with the coursework. A thesis of acceptable standard shall be written up by the student under the supervision of qualified academic staff following completion of the research component.

LIMITS OF DURATION

The University regulations on the maximum length of time to complete all requirements for the award of Diplomas and M.Sc degrees shall apply.

The candidate shall deliver a pre-data collection seminar to the Department for methodological check and approval before field data collection, and shall deliver periodic progress report

seminar(s), leading to the post-data collection seminar at the Department and Faculty before the mandatory Graduate Studies seminar.

GRADUATION REQUIREMENT

The student is expected to pass the prescribed courses and defend the research project, and this should not be less than a total credit of 36 for the Masters, and 26 for the PGD.

LIST OF COURSES

GRADUATE LEVEL COURSES

- i. Postgraduate Diploma (PGD) in Fisheries and Aquaculture: all 700 Level Courses.
- ii. M.Sc in Aquaculture and M.Sc in Fisheries and Aquatic Resources Management Programmes: all relevant 800 Level Courses.

The prescribed courses and their units for each programme are listed and described below:

Course Codes, Titles and Units for PGD in Fisheries and Aquatic resources management

FIRST SEMESTER			SECOND SEMESTER		
Course Code	Units	Course Title	Course code	Units	Course Title
FSH 701.1	2	Oceanography and Estuarine Ecology	FSH 705.2	2	Principles of Fish Breeding and Genetics
FSH 702.1	2	Fish Biology and Systematics	FSH 706.2	2	Limnology
FSH 703.1	2	Fisheries Resources Management	FSH 707.2	2	Fish Farm Engineering
FSH 704.1	2	Fish Processing, Preservation and Marketing	FSH 708.2	2	Statistical Methods and Research Techniques
FSH 705.1	3	Principles of Aquaculture	FSH 709.2	2	Seminar
FSH 706.1	2	Fishing Gear Technology	FSH 710.2	2	Fisheries Economics and Extension
			FSH 799.2	6	Research Project
Total	13		Total	18	

Course Codes, Titles and Units for Master of Science (M.Sc) in Fisheries and Aquatic Resources Management

FIRST SEMESTER			SECOND SEMESTER		
Course Code	Units	Course Title	Course code	Units	Course Title
FSH 801.1	3	Advanced Fish Biology and Systematics	FSH 807.2	3	Climate Change and Aquatic Sustainability
FSH 802.1	3	Fisheries Management and Administration	FSH 808.2	3	Limnology and Oceanography
FSH 803.1	3	Capture Fisheries and Fishing Gear Technology	FSH 809.2	3	Seminar

Course descriptions

FSH 701.1 Oceanography and Estuarine Ecology (2)

Topography of the sea. Physical and chemical properties of the sea and their effect on fish behavior and abundance. Water currents, circulation, tides and waves. Survey of marine organisms and their biological interactions. Species composition, distribution and adaptation of marine organism, planktons, invertebrates, fish, reptiles and mammals. Nutrient cycles and productivity. Fish forecasting. Physiological problems of estuarine organisms.

FSH 702.1 Fish Biology and Systematics (2)

Classification and identification of major groups of West African and Nigeria fish species. The gross external and internal anatomy of typical bony and cartilaginous fishes. Basic function of each system and organ in the fish. Food and feeding habits - methods of study and analysis. Age and growth studies. Reproduction and life cycles of commercially important local species e.g tilapia, catfish, mullets, carp. Fish behaviors-migration, shoaling and their effects on fisheries.

FSH 703.1 Fisheries Resources Management (2)

Challenges and economics of fisheries management; Population dynamics; Catch and effort statistics, growth parameters, recruitment and yield studies. Estimation of survival rate and mortality coefficients, Techniques of management.

FSH 704.1 Fish Processing, Preservation & Marketing (2)

Fish handling and storage, fish preservation; Physico-chemical and biological changes in fish; Fish spoilage; Assessment of fish quality. Off-flavour in fish: causes, effects and control; Processing and packaging; Transportation and marketing strategies of fishery products; Current technological developments in Post Harvest Technology; Quality control and regulation

FSH 705.1 Principles of Fish Breeding and Genetics (2)

Concepts of fish breeding, and genetics; Basis of inheritance, Mendelism, Genetics of populations; Quantitative inheritance; Principles of selection, breeding methods, molecular biology and genetic engineering; application of biotechnology in fish breeding

FSH 706.1 Fishing Gear Technology (2)

Fishing gear materials-characteristics and components; classification, terminology and numbering systems of twines. Fishing gear design, and construction in relation to fish behavior and habitat. Fishing crafts and engines. Gear and craft efficiency/coefficient. Fish location and detection equipment.

FSH 705.2 Principle of Aquaculture (2)

Spectra of aquaculture systems; Organizational and operational systems; aquaculture development in Nigeria; Site and Species selection for aquaculture; Design and construction of aquaculture facilities; Fish production in different culture systems; Care and maintenance of culture systems; Fish nutrition and feeding; Breeding and genetic selection; Fish health; Weeds; pests and parasites; Socio-economics, environment and public health, and aquaculture; Post harvest technology and marketing of aquaculture products

FSH 706.2 Limnology (2)

Classification of aquatic systems, Physio-Chemical parameters of aquatic environment, plankton and benthos; Stratification; Hydrology and water cycles; Biological activities in freshwater system; species composition, distribution and mode of life of plankton, invertebrates and fin fishes with emphasis on Nigerian and West African waters. Primary and Secondary production in freshwater; Inland waters of Nigeria

FSH 707.2 Fish Farm Engineering (2)

Aquaculture production systems; Design of different culture (pond, tanks, recirculating

aquaculture systems, etc.) and supporting systems (water supply, pump station, treatment system, aeration, etc.); Surveying

FSH 708.2 Statistical Methods and Research Techniques (2)

Experimental design and statistical analyses, sampling from populations and test of hypothesis, information review, general laboratory techniques. Planning of experiments; Data transformation; Parametric and Non-Parametric tests; Analysis of qualitative data; report writing and presentation,

FSH 709.2 Seminar (2)

Oral presentation and discussion of research on contemporary aquaculture and fisheries issues.

FSH 710.2 Fisheries and Aquaculture Economics and Extension (2)

Humanistic understanding and goals of human welfare. The economic theory of fisheries models. Basic aquaculture business concept, planning and financial management; marketing and trade in fisheries and aquaculture products. Principles and practice of extension education, role of community participation in conservation of fish including demonstration meetings, exhibitions, visual aids etc.

FSH 799 Research Project (6 credit units)

Independent and original research project undertaken by the student under the supervision of lecturers in topics selected by students or if need be, by the lecturers.

FSH 801.1 Advanced Fish Biology and Systematics (3)

Taxonomy and detailed study of major fish species of Nigerian waters; Identification of species using taxonomic keys; Application of molecular techniques in systematics and taxonomy. External and internal morphology of major groups. Food and feeding habits. Important commercial species. Biotic and abiotic factors of aquatic environment and their effects on fish and fisheries. Trophic relations in aquatic system, bioenergetics. Biotic relationships in fishes: Physiological adaptations of fish to the aquatic environment.

FSH 802.1 Fisheries Management and Administration (3)

Problems and economics of fisheries management. Biological basis of management- analytical models, fishing effort, yields, etc. Management techniques of natural stocks/populations in marine, brackish and inland waters. Population genetics and fisheries management. Flood plains fisheries management. Concepts and administrative theories-international and national fishery laws and regulations. Right of ownership of aquatic

resources: Basis for formulation of fisheries policies.

FSH 803.1 Capture Fisheries and Fishing Gear Technology (3)

Design of fishing gears, factors affecting fishing gear design, types, general structure of gear, characteristics of fishing vessels and accessories of trawlers. Destructive and prohibited fishing practices, Bycatches, reduction devices and principles of operation; Environmental impacts of fishing gear, Policy and regulatory framework on the fishing gear, relevant management strategies, Reservoir and Lacustrine fisheries: Major reservoirs and lakes in Nigeria; Marine fisheries resources, Quantitative techniques to assess and manage fish populations; Quantitative techniques for the assessment and management of fish populations

FSH 805.1 Statistical Methods and Research Techniques (3)

Sampling methods, Population parameters and sample statistics, Density and distribution functions, Confidence intervals, Hypothesis testing, Review of biometrical concepts in agriculture: Experimental design; Aquaculture and fisheries research methodology; Parametric and non-parametric tests

FSH 806.1 Aquaculture production systems (2)

Overview of aquaculture (objectives, scope, history, etc.); Trends in the development of aquaculture; Global trends in aquaculture production and value; Aquaculture systems, their characteristics and function; Characterization and categorization of the production systems (shellfish culture, cage culture, pond culture, recirculating aquaculture systems, etc.); Organic aquaculture; Water quality and fish health; Aquaculture economics and financing.

FSH 811.1 Aquaculture Engineering (3)

Engineering principles applied to aquacultural systems; biological, ecological and environmental aspects of aquacultural engineering design. Design and construction of culture facilities and ancillary structures - inland fish farms, pumping station and fish hatcheries, pens, cages, recirculating aquaculture system;. Pond preparation - liming and fertilization, supplementary Feeds, water quality management in fish culture; aquatic weeds; pond sanitation and fish health management; instrumentation in aquaculture systems; Waste management techniques in aquaculture production

FSH 812.1 Advanced Genetics and Fish Breeding (3)

Reproduction and reproductive cycles in bony and cartilaginous fishes. Concepts of breeding and

genetics in aquaculture; Breeding biology of fishes; Management of brood-stock and spawning techniques. Structure and care of eggs; nursing and management of larvae and fingerlings; Artificial propagation of selected fish and shell-fish species in Nigeria. Principles of selective breeding, hybridization and polyploidy in fish; Sex determination; application of genomics in aquaculture

FSH 813.1 Advanced Fish Nutrition (3)

Feeding ecology of fishes; Macro and micro-nutrients in fish, Digestion and metabolism; bioenergetics; Dietary requirements of cultivated fish species; Nutritional biochemistry and feeding physiology in fish; Feed stuff evaluation and diet formulation. Feed processing and manufacture and storage; Live food in aquaculture; Nutritional pathology;

FSH 814.1 Fisheries and Aquaculture Economics and Extension (3)

Economic constraints in fisheries development; free access to fishery, sustainable yield curve and total revenue curve. Bionomic equilibrium, factor rents, welfare economic theory and its relevance for fisheries externalities in fisheries capital investment and depreciation of equipment; consumption price theories; fishery resources and right of ownership. Market models, Business planning, operations and farm management; Farm records and accounting; Incentives in aquaculture; Principles and methods of programme planning, extension need and educational objectives, etc.; organizing associations and cooperatives, concepts of evaluation applied to fisheries extension; Cooperatives

FSH 807.2 Climate Change and Aquatic Sustainability (3)

Theories of climate change; Concept of sustainability within the context of aquatic resources management; Climate science and future predictions; implications for sustainable aquaculture and fisheries production. Global warming and climate change; Climate change and aquatic resources management. Environmental Impact (physical and ecological) analyses; Mitigation; current thinking adaptation strategies. Case studies

FSH 808.2 Limnology and Oceanography (3)

Tidal levels, substrate types, salinity zones and river types. Physicochemical and biological processes in aquatic environments. Physiological problems of estuarine organisms. Estuarine food chain and productivity. Primary producers (phytoplankton, macroalgae, mangroves and other macrophytes). Consumers: local taxonomic groups and communities. Ecological characteristics of the

main freshwater habitats: rivers, flood plains, man-made lakes and ponds.

FSH 809.2 Seminar

Oral presentation and discussion of research on contemporary fisheries issues.

FSH 810.2 Water Quality, Bio-Assessment and Management (3)

Physical properties of water bodies; water chemistry, nutrient cycles and aquatic productivity. Effects of contaminants e.g. hydrocarbons, heavy metals, pathogens, excess nutrients, chemical stressors, harmful algal blooms on fish, crustaceans and molluscs within Nigerian coastal waters; and methods for maintaining and improving water quality (chemical, mechanical and biological). Ecological toxicology.

FSH 812.2 Ornamental and Recreational Fisheries (2Units)

Science of Recreational fisheries. Economic, social and ethical aspects of recreational fisheries. Opportunities, challenges, International and National perspectives. Management in recreational fisheries; impacts, status of inland fisheries and future for recreational fisheries. Economics of operation, development of a credible project; Aquarium use and maintenance. Trade and transportation of ornamental fishes.

FSH 813.2 Fish Health Management (2 credit units)

Maintenance of health quality in fish culture; Pathogenic diseases in aquaculture (bacteria, parasites, viruses, etc.); Principles of disease diagnosis, and diagnostic techniques; Use of chemotherapeutants, and biological control: Nutritional pathology.

FSH 814.2 Innovations and Sustainable Aquaculture (2)

Overview of aquaculture, and its contribution to global fish production; Aquaculture production systems; Contemporary issues in aquaculture; Concept of sustainability, and sustainable aquaculture; Conceptualization and management of innovations in aquaculture; Innovation and sustainability of aquaculture; Technological innovations in aquaculture

FSH 815.2 Shellfish Culture (2 credit units)

General biology with respect to the culture of culturable crustacean and molluscan species, with particular reference to indigenous species. Site selection; Cultivation of specific shellfish species (Oyster, shrimp, clam, etc.); Public health aspects, and environmental impact of shellfish culture.

FSH 816.2 Advanced Post Harvest Technology and Marketing (2credit units)

Handling, transportation and storage of live and fresh fish; The principle components of fish muscle and factors affecting their composition. Fish spoilage; Quality assessment of fish; Techniques of fish preservation and processing; Quality control and international standards for fisheries products. Marketing of fisheries products.

FSH 899 Research (6 credit units)

Independent and original research project undertaken by the student under the supervision of lecturers in topics selected by students or if need be, by the lecturers.

DEPARTMENT OF FISHERIES STAFF LIST

S/No.	Name	Rank	Qualifications	Specialization
1	Prof Adaba T. Ibim	Professor/Head of Department	BSc Zoology (UPH); MTech, Fisheries (FUT Minna); PhD Aquaculture (UPH)	Aquaculture, Fish Reproduction and Health
2	Prof Ebere S. Erondu	Professor	BSc Zoology (UNN); MTech (RSUST); PhD Fisheries (UNN)	Aquaculture
3	Prof Nenibarini Zabbey	Professor	BSc Zoology (UPH), MSc, PhD Hydrobiology & Fisheries (UPH)	Benthic Ecology and Biomonitoring
4	Prof Olaniyi A. Olopade	Professor	BSc, MSc, PhD Fisheries Mgt (Ibadan)	Aquaculture & Fisheries Management
5	Prof Nene A. Jamabo	Professor	BSc Fisheries (RSUST); MPhil. Fisheries (RSUST); PhD Aquaculture & Aquatic Ecology (RSUST)	Aquaculture & Aquatic Ecology
6	Prof Amiye Francis	Professor	BSc Zoology (ABU); PGDE, MSc. Parasitology (UPH); PhD Fisheries (UPH)	Fisheries Management
7	Dr Justin A. Akankali	Senior Lecturer	BSc, MSc Fisheries (UNIBEN); PhD Environmental Management (RSUST)	Fisheries Management
8	Dr Sylvanus A. Nwafili	Senior Lecturer	B Agric Animal Science (UNN) MTech Fisheries (Minna); PhD Fisheries (China)	Population Genetics
9	Dr Henry E. Dienye	Senior Lecturer	OND Food Technology (ILARO); BSc Aquaculture & Fisheries (Abeokuta); MSc Hydrobiology & Fisheries (UPH)	Aquaculture & Fishing Gear
10	Dr Benjamin U. Akpoilih	Lecturer I	BSc Fisheries (FUTA); MSc Fisheries (Ibadan)	Environmental Toxicology
11	Dr. Inienebo C. Davies	Lecturer I	B Fisheries (UPH); MSc Hydrobiology & Fisheries (UPH)	Aquaculture & Fisheries Biology
12	Dr Joy O. Aiyeloja	Lecturer II	B.Agric Fisheries (UNIBEN); MBA	Aquaculture & Fish Postharvest Technology

			Financial Management (LAUTECH); MSc, Ph.D Aquaculture (RSU)	
13	Mr Goodluck N. Nwipie	Assistant Lecturer	B. Fisheries (UPH)	Aquaculture
14	Mr Effiong I. Idongesit	Assistant Lecturer	BFisheries (UPH); MSc Environmental Technology & Mgt (UPH)	Fisheries Statistics & Management

UNIVERSITY OF PORT HARCOURT SCHOOL OF SCIENCE LABORATORY TECHNOLOGY (SSLT)

The Graduate Programmes in the School of Science Laboratory Technology seeks to inspire and equip students for innovative laboratory technological advancement, leadership, scholarship, and service. Students from a wide range of disciplines are invited into a community of scholars and passionate educators who are committed to the life of science, technology, laboratory and service. University of Port Harcourt is the first Nigerian University that started the first degree programme in SLT in 2005. In 2018, the Senate of the University of Port Harcourt approved the establishment of Graduate Programmes in the School of Science Laboratory Technology making the University of Port Harcourt again to be the first institution in Nigeria to run Post Graduate Programmes in Science Laboratory Technology from 2018/2019 academic session under the leadership of Professor Michael Horsfall Jnr as Dean.

At the moment, Post-Graduate Diploma in Science Laboratory Technology (PGD-SLT) and the Master of Science Laboratory Technology (MSLT) are available in the following options:

- Biochemistry/Chemistry Technology
- Biomedical/Physiology/Pharmacology Technology
- Geology/Mining Technology
- Microbiology/Virology Technology
- Industrial Chemistry/ Petrochemical Technology
- Physics with Electronics Technology
- Physics with Production Technology

1. Postgraduate Diploma in Science Laboratory Technology (PGD-SLT)

The Postgraduate Diploma in Science Laboratory Technology (PGD-SLT) will have specialization in the following areas:

- (a) Biochemistry/Chemistry Technology
- (b) Biomedical / Physiology / Pharmacology Technology
- (c) Geology/Mining Technology
- (d) Microbiology/Virology Technology
- (e) Industrial Chemistry/Petrochemical Technology
- (f) Chemical/Petroleum Technology
- (g) Physics with Electronics/Production Technology

1.2 Programme Duration

The duration of the PGD-SLT programme shall be a minimum of 12 months (2 semesters) and maximum of 24 months (4 semesters) for Full-Time and a minimum of 18 months (3 semesters)

and a maximum of 24 months (4 semesters) for Part-Time

1.3 Admission Requirements for PGD Set

Candidates seeking admission into the PGD-SLT programme in the School of Science Laboratory Technology must have BSc, BTech, BSLT degree not lower than a Third Class with minimum CGPA of 1.50 or HND with a minimum of upper credit in any of the following areas: Biochemistry/ Chemistry Laboratory Technology, Biochemistry, Chemistry, Medical Biochemistry, Pure and Industrial Chemistry, Pure & Applied Chemistry, Agricultural Technology, Biomedical Technology, Biochemistry Technology, Physiology/ Pharmacology Technology, Virology Laboratory Technology, Microbiology Laboratory Technology, Nursing, Medical Laboratory Science, Physiology, Anatomy and Pharmacology, Geology, Geology/Mining Laboratory Technology, Mining Science, Mining Engineering Technology and Mineral Resources Engineering Technology, Microbiology, Biology, Biology/ Biotechnology Laboratory Technology, Industrial Chemistry/Petrochemical Laboratory Technology, Chemical/Petroleum Laboratory Technology, Food Science Technology, and any of the Science Laboratory Technology degree obtained from institutions recognized by the Senate of the University of Port Harcourt.

1.4 Compulsory Courses for All Science Laboratory Technology Options in the PGD-SLT Programme

Students admitted into the various options of the Postgraduate Diploma in Science Laboratory Technology (PGD-SLT) must register and pass the following compulsory courses.

First Semester

Course Code	Course Title	Credit Units
SGS 701.1	ICT and Research Methods	2
SLT 701.1	Introduction to Biostatistics	3
SLT 702.1	Seminar	3
	Total	8

Second Semester

Course Code	Course Title	Credit Units
SGS 701.2	Entrepreneurship & Management	2
SLT 703.2	Laboratory management Administration	3

SLT 704.2	Equipment Reliability	3
SLT 705.2	Scientific Instrumentation	3
SLT 706.2	Research project	6
	Total	17
Total units for compulsory courses		25

1.5 COURSE DESCRIPTION FOR PGD-SLT COMPULSORY COURSES

FIRST SEMESTER

SGS 701.1 ICT and Research Methods

This course covers essentials of spread sheets, internet technology, statistical packages, precision and accuracy of estimates, principles of scientific research, concepts of hypotheses, formulation and testing, organization of research and report writing. (2 Units)

SLT 701.1 Introduction to Biostatistics

Definition and Introduction to the course, Data representation and plotting, Arithmetic mean, Geometric mean, Measure of Variability, Standard deviation, ZScore, Box plot, Kurtosis Correlation and Regression, Interpolation and extrapolation, Variance and Covariance, Sampling distributions and Central limit and Confidence intervals, Confidence intervals, Test of Hypothesis, T-test, Chi-square test, Analysis of Variance (ANOVA) (Unit 3)

SLT 702.1 Seminar

Candidates must extensively review current or novel topic complementary to their area of training to broaden their knowledge. (3 Units)

SECOND SEMESTER

SGS 701.2 Entrepreneurship and Management

This course covers business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving. (2 Units)

SLT 703.2: Laboratory Management and Administration

Laboratory Planning: Various types of laboratories — industrial, research, hospital, teaching. Location, design, cost an acceptability of laboratories. Layout, organization and installation of suitable essential services and physical facilities, fixtures and fittings to achieve the desired and specialized rooms. Staffing the Laboratory, Managing Laboratory Personnel, and Work Management, Laboratory Records and Information Management, Store Management, Budgeting the Cost Control, Laws Affecting Laboratory Practice, General Laboratory Maintenance (3 Units)

SLT 704.2: Equipment Reliability

Basic concept of reliability. Reliability production causes and remedies of component failure. Maintainability. Specifications. (3 Units)

SLT 705.2: Scientific Instrumentation

Refrigerators and freezers, water bath, autoclave, incubator, anaerobic chamber, microscope, centrifuge, laboratory balance, water stills, deionizers, heater, photometer, spectrophotometer. Transducers as input elements to instrumentation system; Feed Backs and Operational Amplifiers; Analog and Digital Data Acquisition; Computer Controlled Test; Spectrophotometer Instrumentation; Types of chromatography and applications of the various techniques. Simple mathematical treatment of the chromatographic process, Definitions of efficiency and resolution; Instrumentation for UV/VIS. Laboratory Work: Instrumentation Workshop Practice Design Construction of simple electronic circuits/systems. Repair/serving of teaching and research equipment, Coil winding. (3 Units)

SLT 706.2 Research Project

Research is a vital part of University life and all of our graduate degrees have, as a vital component, a research project. In our graduate research project, students work independently within a research group or in area of specialization of a staff member. A research project to be carried out by the candidates following stringent scientific procedures that will yield results acceptable by experts worldwide. Each project must contribute to knowledge. (6 Units)

1.6 COURSES FOR THE PGD. SLT (BIOCHEMISTRY / CHEMISTRY TECHNOLOGY)

In addition to the general compulsory course for the postgraduate diploma in Science Laboratory Technology (PGD-SLT), Students admitted into the programme for Biochemistry/Chemistry Technology must register and pass the following first semester courses

Course Code	Course Title	Credit Units
BCT 711.1	Analytical Instrumentation & Techniques in Chemistry	3
BCT 712.1	Techniques in Biochemistry and Immunochemistry	3
BCT 713.1	Bioanalytical Techniques	3
	Total	9
TOTAL UNITS = 34		

1.7 COURSE DESCRIPTION FOR PGD-SLT PROGRAMME IN BIOCHEMISTRY! CHEMISTRY TECHNOLOGY

FIRST SEMESTER

BCT 711.1: Analytical Instrumentation & Techniques in Chemistry

Introduction: Types of Analysis. Steps in Analytical process. Statistical Evaluation of Analytical Results. Gravimetric analysis, Electrogravimetry and Coulometry; Coulometric titration. Applications. Voltammetry: Dropping mercury electrode. Polarographic currents. Stripping voltammetry. Anodic stripping analysis. Amperometry. Amperometric titration. Applications. Complexometry: Classification of ligands. Masking and demasking. Complexometric titration. Metal ion indicators. Application. Thermal Analysis: Principle, Types, instrumentation and analytical applications. X-Ray Methods: Production of X-ray and X-ray spectra, x-ray methods, resolution, use of stable isotopes, quantitative analysis. Radiochemistry: measurement of radioactivity, applications of radionuclides, analytical applications. (3 Units)

BCT 712.1: Techniques in Biochemistry and Immunochemistry

Principles of instrumentation, paper, thin-layer and high performance liquid chromatographic techniques. Membrane transport system (active and passive). Ionophores. Chemical work of biosynthesis. Mechanism of contraction, action and applications. Gel filtration techniques and applications. Spectrophotometric methods and application. Centrifugation techniques and applications. Fluorimetry and applications. Electrophoresis and application. Radioimmunoassay and fluoroimmunoassay techniques and application. Nuclear magnetic resonance and electron spin resonance and applications in biochemistry and immunochemistry. Qualitative analysis. X-ray fluorescence method. Immunology, immunochemistry and immunochemical reactions and specificity. Humoral and cellular immunity. Classes, structures and properties of immunoglobulins. Toxoids, vaccination. (3 Units)

BMT 713.1 Bioanalytical Techniques

Chromatographic methods: Definition, principle, types and terminologies, Absorbent, ion exchanges and methods of development of chromatograms, Processes of TLC, gel-permeation, chromatography and bases for biological significance, Matrices for gel-affinity/linkage of ligand, GLC and different types of detectors, LLC determination of column efficiency and RF value, Kovat indices and Reynold constants. Electrophoresis:

Definition, principle, theory, effect of the mobility particles (pH, osmotic flow and diffusion), Methods of sampling application, detection and estimation of sample components, also types of support media, List application of electrophoresis. Potentiometric methods: Nernst equation, Description and theory of pH meter and the setup of potentiometric measurements, List of applications. Spectrophotometry: Explain electromagnetic emission spectrum, Beer Lambert law, UV/visible spectrophotometer; sections of spectrophotometer, Describe the operation of the spectrophotometer (3 Units)

1.8 COURSES FOR THE PGD-SLT (BIOMEDICAL AND PHYSIOLOGY! PHARMACOLOGY TECHNOLOGY)

In addition to the general/compulsory course for the postgraduate diploma in Science Laboratory Technology (PGD-SLT), Students admitted into the programme for Biomedical Technology and Physiology/Pharmacology Laboratory Technology must register and pass the following first semester courses.

Course Code	Course Title	Credit Units
BCT 711.1	Analytical Instrumentation & Techniques in Chemistry	3
BCT 712.1	Techniques in Biochemistry and Immunochemistry	3
BCT 713.1	Bioanalytical Techniques	3
	Total	9

TOTAL UNITS = 34

1.9 COURSE DESCRIPTION FOR PGD-SLT PROGRAMME IN BIOMEDICAL/PHYSIOLOGY/PHARMACOLOGY TECHNOLOGY

BMT 721.1 Biomedical/Physiology & Pharmacology Techniques

Electrocardiography, Immunohematology - blood grouping, cross matching, & Rhesus, typing, anti-sera diagnosis, pregnancy test. Techniques on major instruments such as organ bath, spectrophotometer, flame photometer, centrifuges electrocardiogram (ECG), erythrocyte sedimentation rate (ESR), kymograph, blood pressure recorder, pycnometer, electrophoresis, coagulation profiles, urine microscopy/urinalysis, haematological analysis (full blood count), colourimetric analysis, haemoptometry, haemostasis and fibrinolysis (3 Units)

BMT 722.1 Experimental Methods & Animal Management

It include the design of animal house for various colonies of laboratory animals and their breeding methods. Diseases and control of infections. Handling of laboratory animals. Environmental Hazards of laboratory animals. The use of animals for Research and Teaching. Laws governing the use of laboratory animals: Humane killing methods. General anaesthesia and theories of anaesthesia. Various available anaesthetics and sites of action. Volatile and gaseous anaesthetics. Methods of preparation and handling of animals for anaesthesia. Routes of drug administration: intravenous (iv), intraperitoneal (ip) subcutaneous, etc. Signs and different stages of anaesthesia. (3 Units)

BMT 723.1 Anatomy and Histology Techniques

This is a course in microscopic anatomy; the branch of anatomy that deals with cells and minute structure of the tissues and organs. The general goals of this course will include an overview of both fast and concept of microscopic anatomy sufficient to serve as a meaningful background for subsequent basic and clinical science in which the functional aspects are taken up in greater details. The course will include both lectures and laboratory work, Specific objectives will include: (A) The proper use of the light microscope in order to gather enough information to recognize cells, tissues and organs; (B) Interpretation of basic cellular structure as seen by electron microscopy; (C) The ability to correlate subject material given in histology with the other disciplines of anatomy; and (D) The ability to use the vocabulary of this subject. (3 Units)

1.10 COURSES FOR THE PGD.-SLT IN GEOLOGY/MINING TECHNOLOGY

COURSES FOR THE PGD.-SLT (GEOLOGY/MINING TECHNOLOGY)

In addition to the general/compulsory course for the postgraduate diploma in Science laboratory Technology (PGD-SLT), Students admitted into the programme for Geology/Mining Technology must register and pass the following first semester courses.

Course Code	Course Title	Credit Units
GMT 731.1	Mining Method & Mineral Processing	3
GMT 732.1	Geological Methods in Mineral Exploration & Mining	3
GMT 733.1	Field Geology	3
	Total	9

TOTAL UNITS = 34

1.11 COURSE DESCRIPTION FOR PGD-SLT PROGRAMME IN GEOLOGY/MINING TECHNOLOGY

GMT 731.1 Mining Methods and Mineral Processing

Definition of mining methods and systems. Mine development workings and their constructions. Surface mining methods: open-pit, open cast and quarrying operations and their parameters. Equipment used in surface mining and their application. Various systems of mine field development and face advancement in surface mines. Underground Mining of steeply dipping ore bodies and seams. Attention should be given to specific mining methods like level and sublevel caving and shrinkage methods. Methods of longwall advancing in coal mines. Various methods of roof support. Definition of mineral processing and ore beneficiation. Stages of comminution. Various concentration methods, magnetic gravity and heavy media concentration. Case studies of processing of iron ore at national iron ore mining company limited at Itakpe, Nigeria. Chippings production and explanation of the plant as a closed system. Various systems of mine plant design. Explanation of mechanism of aggregate separation at the multi-deck screen. Chippings business in Nigeria. (3 Units)

GMT 732.1 Geological Methods in Mineral Exploration & Mining

The principles of mineral prospecting and exploration. Exploration indicators. Stages in Exploration process. Exploration philosophy and management. Grid setting, borehole drilling and prospect generation. Ore reserve estimation. Environmental and legal issues in mineral prospecting and exploration. Cut-off grade estimation and its relationship to reserve estimation. Planning of exploration programme. Environmental and legal issues in mineral exploration. (3 Units)

GMT 733.1 FIELD GEOLOGY

Mapping of basement and basin terrain. Field note taking and geologic report writing. The different sedimentary basin and basement complexes of Nigeria. Stratigraphic evolution of basin in Nigeria. (3 Units)

1.12 COURSES FOR THE PGD-SLT IN MICROBIOLOGYTECHNOLOGY

COURSES FOR THE PGD-SLT (MICROBIOLOGY TECHNOLOGY)

In addition to the general/compulsory course for the postgraduate diploma in Science Laboratory Technology (PGD-SLT), Students admitted into the programme for Microbiology Technology must register and pass the following first semester courses.

Course Code	Course Title	Credit Units
MCT 741.1	Basic Microbiological Instrumentation	3
MCT 742.1	Microbiological Techniques	3
MCT 743.1	Techniques in Biology	3
	Total	17

TOTAL UNITS = 34

1.13 COURSE DESCRIPTION FOR PGD-SLT PROGRAMME IN MICROBIOLOGY TECHNOLOGY

MCT 741.1 Basic Microbiological Instrumentation

Staining techniques, sterilization techniques, preparation and uses of buffer and dilution fluids, cell suspension, centrifugation and diluting fluids. Microbiology and Photomicroscopy; Preparation of Microscope slides; Photometry, Colorimetry; chromatography, Conductometry, Centrifugation, Experimental Design and Data Interpretation; Preparation of Report. Preparation of culture Media, and cells for Tissue and Organ Culture; Preparation and preservation of Stock Cultures; Care and management of experimental Animals, Safety in Microbiology laboratory. Preparation and use of stains for bacteriology, parasitology, mycology and virology. Bioassay: symptomatology on original host and test plants. (3 Units)

MCT 742.1 Microbiological Techniques

Principles and techniques of sera diagnosis of infections: immunological assays- Agglutination reactions, ELISA, CFT, FAI tests, etc. bacteriophage assays, Bioassay, Hyperimmune sera preparation, Blood grouping, Rh typing, cross-matching. HLA typing. Estimation of antibodies, Tests for hypersensitivity reactions, Tests for autoimmune diseases. Biological standardization. Principles and techniques of Anaerobic Cultivation. Maintenance of equipment Microscopes, centrifuges, Autoclave, etc. (3 Units)

MCT 743.1 Techniques in Biology

Plant collection, identification and storage collection and preservation of plant specimens.

Identification of plants and animals procedure for the observation of living tissues. Procedure for the observation of dead tissues (Microtomy). The microscope—its structure, use and care. Cytological techniques. Electrophoretic techniques chromatographic techniques. Principles of colorimetry/spectrophotometry. Preparation of simple reagents and stains. Simple Histochemical techniques. Palynology. Photographic techniques, Laboratory hazards and safety measures. Experimental designs. Population sampling: Transects, quadrants sampling in the lab. Collection and preservation of animal specimens 9a) Collection apparatus (b) Soil organisms killing and preservation of animal specimens. Introductory experimental design and analysis: (a) completely randomized (b) randomized complete block (c) factorial. (3 Units)

1.14 COURSES FOR THE PGD-SLT IN INDUSTRIAL CHEMISTRY/ PETROCHEMICAL TECHNOLOGY & CHEMICAL/PETROLEUM TECHNOLOGY

In addition to the general/compulsory course for the postgraduate diploma in Science laboratory Technology (PGD-SLT), Students admitted into the programme for Industrial Chemistry/ Petrochemical Technology & Chemical/ Petroleum Technology must register and pass the following first semester courses.

Course Code	Course Title	Credit Units
ICP 751.1	Petrochemistry	3
ICP 752.1	Chemical Technology of Petroleum	3
ICP 753.1	Process Technology	3
	Total	17

TOTAL UNITS = 34

1.15 COURSE DESCRIPTION FOR PGD-SLT PROGRAMME IN INDUSTRIAL CHEMISTRY/ PETROCHEMICAL TECHNOLOGY & CHEMICAL/ PETROLEUM TECHNOLOGY

ICP 751.1 Petrochemistry

Introduction; brief chronological history of oil and gas. The origin of petroleum. Nature of oil and gas: definition of crude oil. Composition of crude oil. Analysis and properties of crude oil. Classification of crude oil. Gaseous petroleum (natural gas). Composition of natural gas. Chemical used for oil drilling. Environmental implications of oil and gas production. Oil refinery processes. Separation processes: crude oil distillation. Catalytic reforming. Catalytic isomerization. Hydrocracking. Dehydrodesulphurization. Lubricating oils. Basic

test for petroleum products and quality control. (3 Units)

ICP 752.1 Chemical Technology of Petroleum

Desalination processes. Atmospheric and vacuum distillation of petroleum. True boiling point and equilibrium flash vaporization curves for petroleum and petroleum fractions. Gasoline stabilization and sweetening. Properties of fuels octane number, octane number etc. hydrocarbon gas purification and separation. LPG Production. Gas processing-alkylation and polymerization. Thermal processes- cooking, thermal cracking and pyrolysis. Catalytic reforming and isomerization. (3 Units)

ICP 753.1 Process Technology

Fundamental concepts and equations in heat, mass, and momentum processes. Mass transfer with and chemical reaction. Single and multiple isothermal chemical reactors. Non-isothermal chemical reactor. Selected topics in heat conduction and in mass and modal concentration diffusion processes. Ideal-stage and non- ideal stage separation techniques in chemical process operations. Ideal (or equilibrium) — Stage calculations of trayed and packed columns (or towers). Studies of process techniques for separation mixtures of chemical species in the petroleum/petrochemical, natural gas liquid and chemical industries. Real (or non-ideal) — stage approach of separation techniques, Non- equilibrium stage approach determination of the performance of distillation columns, hydrocarbons absorbers, trayed and packed absorbers and strippers for the removal of acidic components like CO, H₂S and CO from gas streams. (3 Units)

1.16 COURSES FOR THE PGD-SLT IN PHYSICS ELECTRONICS TECHNOLOGY & PHYSICS PRODUCTION TECHNOLOGY

COURSES FOR THE PGD-SLT (PHYSICS ELECTRONICS TECHNOLOGY & PHYSICS PRODUCTION TECHNOLOGY)

In addition to the general/compulsory course for the postgraduate diploma in Science Technology (PGD-SLT), Students admitted into the programme for Physics with Electronics Technology & Physics Production Technology must register and pass the following first semester courses.

Course Code	Course Title	Credit Units
PET 761.1	Electronics & Instrumentation	3
PET 762.1	Circuits Analysis & Electronics	3
PET 763.1	Laboratory Practice	1

PET 764.1	Semiconductor Technology	2
	Total	9

TOTAL UNITS = 34

COURSE DESCRIPTION

PET 761.1 Electronics and Instrumentation

The transistor as a switch, power dissipation base over drive storage drive and switching speed, logic gates: Nano or with close logic, the TTL and gate, Truth table, noise margins, television pole, open collector and tristate, TTL CMOS, NMOS,ECL combinational systems. Boolean algebra, identities, De-Morgan’s law, Karnaugh maps, QuineMcCluskey minimization by computer aided techniques. The half and full adder. Fliflop; R-S, J-K and D types edge and level trigger, maser slave types, the shift register. Circuit techniques. Oscillation sine wave amplitude control, sequencing frequencing stability. Waveform discrimination. Practical ramp generators. Conversion techniques, frequency to voltage staircase generators, analogue to digital D to A termination of pulse lines, Beargon diagram, low noise amplifier design use to discrete components for minimum noise. (3 Units)

PET 762.1 Circuits Analysis and Electronics

Outline of linear circuit analysis. Linear transformations. One port and two port networks, single-phase sinusoidal alternating current circuits. Lock diagrams, poly-phase circuits, network topology. The methods of symmetrical components; some properties of three phase systems, example of networks of unbalanced impedances. Distribution parameter networks, periodic non- sinusoidal currents in linear circuit, Fourier series, harmonic in three phase systems. Conventional filter design and operation. Operational methods of transient analysis of distributed parameter networks, non-linear A.C circuits, frequency response of electrical networks. Bode plots. Poles and zeros and time delay root-locus concepts. Frequency response analysis of electronic amplifiers, oscillators. Power feedback instrumentation amplifiers. Operational amplifier. Field effect transistor circuits, stabilized power supplied and voltage regulation circuits. Transducers, noise and interference in systems. Multistage amplifiers. Differential amplifier circuits. (3 Units)

PET 763.1 Laboratory Practice

Multi-meters and Oscilloscopes. Auto-ranging in measuring instruments. A survey of the use of electronic circuit devices, eg, diodes, transistors including FET, integrated circuits, photocells. Selection, use and maintenance of test instruments. Survey of pick-ups and transducer devices. Basic

circuit synthesis and analysis. Pulse circuits. Instrumentation and measuring techniques: impedance matching, Probes active and input and output impedance using the scope. (1 Units)

PET 764.1 Semiconductor Technology

The chemical physics of semiconductor; preparation, purification, growth of simple crystals, evaluation of chemical structural properties, dropping effects, mechanical and metallurgical properties. Thermodynamic and kinetic consideration in crystal growth from met and by chemical vapour transport techniques. Si, De, Ga, As and measurements of electrical properties. Processing of semiconductor materials for device fabrication. Formation of pn junction luminescence and luminescent materials, photo emissive and photoconductive materials. Materials for IC's and their fabrication. (2 Units)

2. MASTER OF SCIENCE LABORATORY TECHNOLOGY (MSLT) PROGRAMME

The Master of Science Laboratory Technology (MSLT) will be in the following options:

- (a) Biochemistry/Chemistry Technology
- (b) Biomedical/Physiology/Pharmacology Technology
- (c) Geology/Mining Technology
- (d) Microbiology/Virology Technology
- (e) Industrial Chemistry/Petrochemical Technology
- (f) Chemical/Petroleum Technology
- (g) Physics with Electronics/Production Technology

2.1 Admission Requirements for Master of Science Laboratory Technology (MSLT)

Candidates seeking admission into MSLT in the various options must possess a BSc or BTech. Or BSLT with not less than CGPA of 2.40 on a 4 point scale and CGPA of 3.0 on a 5 point scale. Candidates with FIND Degree must possess Upper Credit and those with the PGD-SLT must have a CGPA of 3.50 on a 5 point scale in any of the Science Laboratory Technology options.

2.2 Programme Duration

The Master of Science Laboratory Technology (MSLT) for Full-Time shall be a minimum of 12 calendar months and a maximum of 24 calendar months for Full-Time. Part-Time will be a minimum of 24 calendar months and a maximum of 48 calendar months for

2.3 Academic Work/courses for MSIT

Full-Time Students: Full-time students will register for four taught courses and a seminar in the first semester and three taught courses and a research project in the second semester.

Part-Time Students: Part-time students will register for two taught courses in the first semester of the first year and two taught courses in the second semester of the first year. Two taught courses with a seminar in the first semester of second year and one taught course with a research project in the second semester of second year.

Both Full-Time and Part-Time Students: Graduate students are also mandated to register and pass one SGS course per semester. Candidates must pass all the prescribed courses before graduation

2.4 COMPULSORY COURSES FOR MASTER OF SCIENCE LABORATORY TECHNOLOGY (MSLT) PROGRAMME

Students admitted into the various options of the Master of Science Laboratory Technology (MSLT) must register and pass the following compulsory courses.

First Semester

Course Code	Course Title	Credit Units
SGS 801.1	ICT and Research Methods	2
SLT 801.1	Advanced Laboratory Management	3
SLT 802.1	Seminar	3
	Total	8

Second Semester

Course Code	Course Title	Credit Units
SGS 801.2	Entrepreneurship & Management	2
SLT 803.2	Biostatistics & Research Methods	3
SLT 804.2	Dissertation	6
	Total	11

TOTAL UNITS FOR COMPULSORY COURSES = 19

2.5 COURSE REQUIREMENTS FOR MASTER OF SCIENCE LABORATORY TECHNOLOGY (MSLT)

A. BIOCHEMISTRY/ CHEMISTRY TECHNOLOGY

In addition to the compulsory courses for the Master of Science Laboratory Technology (MSLT), Students admitted into the programme for must pass the following courses.

First Semester

Course Code	Course Title	Credit Units
-------------	--------------	--------------

BCT 811.1	Advanced Analytical Instrumentation	3
BCT 812.1	Advanced Bioanalytical Techniques	3
BCT 813.1	Advanced Environmental Technology	3
Total		9

Second Semester

Course Code	Course Title	Credit Units
BCT 84.2	Spectroscopic Methods in Chemistry	3
BCT 815.2	Advanced Biochemical Technology	3
Total		6

B. BIOMEICAL TECHNOLOGY

In addition to the compulsory courses for the Master of Science Laboratory Technology (MSLT), Students admitted into the programme for must pass the following courses.

First Semester

Course Code	Course Title	Credit Units
BMT 821.1	Biomechanics, Ergonomic and Occupational Safety	3
BMT 822.1	Biomedical Devices Manufacturing Processes	3
BMT 823.1	Health, Safety and Environment	3
Total		9

Second Semester

Course Code	Course Title	Credit Units
BMT 824.2	Biomedical Instrumentation	3
BMT 825.2	Biosafety	3
Total		6

C. PHYSIOLOGY/PHARMACOLOGY TECHNOLOGY

In addition to the compulsory courses for the Master of Science Laboratory Technology (MSLT), Students admitted into the programme for must pass the following courses.

First Semester

Course Code	Course Title	Credit Units
BMT 831.1	Pharmacological Techniques	3

BMT 832.1	Advance Physiological concepts & Techniques	3
BMT 833.1	Anatomical Techniques	3
Total		9

Second Semester

Course Code	Course Title	Credit Units
BMT 834.2	Advance Animal and Store Management Techniques	3
BMT 825.2	Biosafety	3
Total		6

D. GEOLOGY/JMINIT4GTECIINOLOGY

In addition to the compulsory courses for the Master of Science Laboratory Technology (MSLT), Students admitted into the programme for must pass the following courses.

First Semester

Course Code	Course Title	Credit Units
GMT 841.1	Mining Method and Unit Operations	3
GMT 842.1	Drilling Practice	3
GMT 843.1	Advanced Field Geology	3
Total		9

Second Semester

Course Code	Course Title	Credit Units
GMT 844.2	Oil and Gas Exploration Geology	3
GMT 845.2	Geologic Exploration, Mining and Mineral Processing	3
Total		6

E. MICROBIOLOGY/VIROLOGY TECHNOLOGY

In addition to the compulsory courses for the Master of Science Laboratory Technology (MSLT), Students admitted into the programme for must pass the following courses.

First Semester

Course Code	Course Title	Credit Units
MCT 851.1	Advanced Food Processing and Packaging Techniques	3
MCT 852.1	Advanced Microbiological Laboratory Techniques	3

MCT 853.1	Advanced Molecular Techniques in Biotechnology	3
Total		9

Second Semester

Course Code	Course Title	Credit Units
MCT 854.2	Fermentation and Brewing Technology	3
MCT 855.2	Advanced Environmental Microbiology and Techniques	3
Total		6

**C. INDUSTRIAL CHEMISTRY/
PETROCHEMICAL TECHNOLOGY**

In addition to the compulsory courses for the Master of Science Laboratory Technology (MSLT), Students admitted into the programme for must pass the following courses.

First Semester

Course Code	Course Title	Credit Units
BCT 811.1	Advanced Analytical Instrumentation	3
ICP 861.1	Advanced Petrochemical Science and Technology	3
ICP 862.1	Unconventional Hydrocarbon Sources	3
Total		9

Second Semester

Course Code	Course Title	Credit Units
ICP 863.2	Petroleum Refining Technology	3
ICP 864.2	Computational Techniques for Process Systems	3
Total		6

**C. CHEMICAL/PETROCHEMICAL
TECHNOLOGY**

In addition to the compulsory courses for the Master of Science Laboratory Technology (MSLT), Students admitted into the programme for must pass the following courses.

First Semester

Course Code	Course Title	Credit Units
CPT 871.1	Chemical Reaction Technology	3
ICP 861.1	Advanced Petrochemical Science and Technology	3

CPT 872.1	Chemical Technology Process Analysis	3
Total		9

Second Semester

Course Code	Course Title	Credit Units
CPT 873.2	Technology of Process Equipment	3
ICP 864.2	Computational Techniques for Process Systems	3
Total		6

**D. PHYSICS/ELECTRONICS
TECHNOLOGY OPTION**

In addition to the compulsory courses for the Master of Science Laboratory Technology (MSLT), Students admitted into the programme for must pass the following courses.

First Semester

Course Code	Course Title	Credit Units
PET 881.1	Electrical Circuits and Electronics	3
PET 882.1	Electronics Laboratory Practice I	3
PET 883.1	Application of Electrical/Electronic Principles	3
Total		9

Second Semester

Course Code	Course Title	Credit Units
PET 884.2	Electronics and Instrumentation	3
PET 885.2	Electronic Laboratory Practice II	1
PET 886.2	Semiconductor Technology	2
Total		6

E. PHYSICS/PRODUCTION TECHNOLOGY

In addition to the compulsory courses for the Master of Science Laboratory Technology (MSLT), Students admitted into the programme for must pass the following courses.

First Semester

Course Code	Course Title	Credit Units
PPT 891.1	Electromagnetic Materials Technology	3
PPT 892.1	Production Laboratory Practice I	3
PPT 893.1	Power Plant Technology	3
Total		9

Second Semester

Course Code	Course Title	Credit Units
PPT 894.2	Solar Energy	3
PPT 895.2	Automatic Technology	1
PPT 896.2	Production Laboratory Practice II	2
	Total	6

2.6 COMPULSORY COURSES DESCRIPTION FOR MSLT

The courses described below are compulsory for MSLT options

FIRST SEMESTER

SGS 801.1 ICT and Research Methods

This course covers essentials of spread sheets, internet technology, statistical packages, precision and accuracy of estimates, principles of scientific research, concepts of hypotheses, formulation and testing, organization of research and report writing. (2 Units)

SLT 801.1 Advance Laboratory Management

Management Techniques and functions: The concept and relevance of management to laboratory practice. Record keeping in the laboratory. Selection and management of staff: Job description; the advertisement; application forms - references, interviewing and selection- final selection; Organization of laboratory practice: Elements of law. Common and statutory laws and relevance to laboratory practice such as health and safety, welfare of employees, and cruelty to animals. Import and exercise duties. Nature of contract. Elements of contract. Contract in relation to purchase of laboratory materials, employment etc. Legislation regulating the science laboratory practice in Nigeria (NISLT Act no.12 of 2003). Structure of NISLT and functions. Legal and professional responsibilities of technologists. Organization of laboratory services in Nigeria.- Public and private laboratories. Professional code of ethics. Types of business organization. Small business management. Production, Entrepreneurship and business development. (3 Units)

SLT 802.1 Seminar

Candidates must extensively review current or novel topic complementary to their area of training to broaden their knowledge. How to prepare and conduct a presentation with Power-Point, Creating a PowerPoint, Step by Step: Scientific Poster making (3 Units)

SECOND SEMESTER

SGS 801.2 Entrepreneurship And Management

This course covers business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving. (2 Units)

SLT 803.2 Biostatistics and Research Methods

Biostatistics: Definition, scope and applications. Presentation of data. Overview of measure of central tendency. Chi square test. (a) Biostatistics; Population and sample size. Sampling distribution. Tests of significance. Student's t test. Analysis of variance (ANOVA). One way or two way ANOVA. Regression analysis. Simple and multiple regression. Overview of non-parametric tests. Likert Scale. Statistical packages, Graphpad, Minitab, SAS, Epi Info, Sigma Plot and SPSS. Scientific writing techniques, How to make PowerPoints, How to make posters, Referencing styles (3 Units)

SLT 804.2 Dissertation

Research is a vital part of University life and all of our graduate degrees have, as a vital component, a research project. In our graduate research project, students work independently within a research group or in area of specialization of a staff member. A research project to be carried out by the candidates following stringent scientific procedures that will yield results acceptable by experts worldwide. Each project must contribute to knowledge. (6 Units)

2.7 COURSE DESCRIPTION FOR MSLT IN THE DIFFERENT OPTIONS

COURSE DESCRIPTION FOR BIOCHEMISTRY/CHEMISTRY TECHNOLOGY COURSES

BCT 811.1 Advanced Analytical Instrumentation

General principle of chemical and physical quantification. Comparison of various methods for identification and quantification of biomolecules. Electrochemical principle in quantification and separation of biomolecules. Electrochemical instruments. Chromatographic principles of separation, identification and quantitative analysis. Chromatographic Instrumentations, HPLC, Gas Chromatography, Liquid Chromatographic. Techniques for cell disruption, centrifugation, conventional filtration, membrane filtration, solvent extraction, aqueous two phase extraction, adsorption, precipitation, distillation and crystallization. (3 Units)

BCT 812.1 Bioanalytical Techniques

The purpose is to perform the pharmacokinetics, toxicokinetics, bioequivalence and exposure

response like pharmacokinetic/pharmacodynamic studies. Various bioanalytical techniques are performed in bioanalytical studies such as hyphenated techniques, chromatographic techniques, and ligand binding assays, bioanalysis of the drugs, Liquid-liquid extraction, and some techniques commonly used in bioanalytical studies include: Hyphenated techniques: LC-MS (liquid chromatography-mass spectrometry; GC-MS (gas chromatography-mass spectrometry; CE-MS (capillary electrophoresis-mass spectrometry; Chromatographic methods: HPLC (high performance liquid chromatography, GC (gas chromatography)

Electrophoresis

Ligand binding assays: Dual polarisation interferometry; ELISA (Enzyme-linked immunosorbent assay; MIA (magnetic immunoassay); RIA (radioimmunoassay) Mass spectrometry and Nuclear magnetic resonance (3 Units)

BCT 813.1 Advanced Environmental Technology

Pollution and the environment-definitions and interrelationships, natural and man-made pollution, the economics of pollution. Air pollution-gaseous and particulate pollutant and their sources. Effects on weather, vegetation materials and human health. Legislation relating to air pollution. Methods of control of gaseous emission and destruction, cyclones, inertial, separators, electrostatic precipitators, bag filters, wet washers, etc. dispersal from chimneys and method of calculating chimney height. Flare stacks. Water pollution-river pollution by industrial effluents Legislation and standards for effluents on the ecosystems. Treatment processes including precipitation, flocculation, coagulation sedimentation, clarification and colour removal. Principles of biological treatment processes. Cost treatment. Treatment of water re-use, on exchange. Cooling water treatment. Land pollution- disposal of solid wastes by incinerator and dumping. Possible future trends including conversion of solid waste into useful materials or energy. Treatment of other types of pollution-noise. Thermal and Nuclear pollutions. Waste management: Management of liquid waste, solid waste and gaseous waste (3 Units)

SECOND SEMESTER

BCT 814.1 Spectroscopic Methods in Chemistry

Spectrophotometric methods and instruments in quantitative analysis. Absorption spectroscopy: UV/Visible spectrometry: instrumentation, sources of radiant energy, sample handling, detection devices, amplification and readout of detector signals, single- beam and double-beam

operation, Emission and Atomic Absorption Spectrometry: radiation sources and operational system, typical instrumentation. Mass Spectrometry: Instrumentation and interpretations of results, NMR spectrometry: Instrumentation and interpretations of results, X-ray Spectrometry: Instrumentation and interpretations of results (3 Units)

BCT 815.1 Advanced Biochemical Technology

Aspect of living processes. Microbiology and control of microorganisms. Microbial kinetics. The Biochemistry and physic-chemical properties of biological compounds. Biochemical pathways and metabolism of simple substrates. Fermentations. Enzymes and enzymes kinetics. Biochemical reactors. Design of microbial culture processes in the manufacture of pharmaceuticals, commercial enzymes and alcoholic beverages. Batch and continuous culture. Biological waste disposal. (3 Units)

COURSE DESCRIPTION FOR MSLT IN BIOMEDICAL TECHNOLOGY

BMT 821.1 Biomechanics, Ergonomic and Occupational Safety

Basics concepts of statics, dynamics of particles and rigid bodies in a plane; analysis of forces; distributed force vectors, flexible cables, friction, Static and Dynamic Equilibrium of a particle and equilibrium of rigid bodies; areas of centroids, masses, centre of gravity; analysis of structure; internal forces, Newton's third law; shearing forces; moments, trusses and frames. Forces system resultants; structural analysis, kinematics and kinetics of particles and rigid bodies in motion. Methods of impulses and momentum; linear and angular momentum; work and energy. Occupational health standards; Occupational exposure to hazardous chemicals and blood-borne pathogens; Stress, fatigue and the work environment; Precautions in equipment handling in the industries; Workman compensation act. (3 units)

BMT 822.1 Biomedical Devices Manufacturing processes

The lathe and its function. Driving and feeding work. Holding devices. Turning on centers, taper turning, screw-cutting; eccentric turning, form-turning. Boring and saddle. Button bearing. Automatic lathe. Copy turning and capstan lathe. Types of milling machines; milling cutters. Machine feed and rotation. The driving head; linear indexing and linear graduating. Gear cutting, rack cutting attachment. General principle of machining, using point and multi — point cutting tools. Chip formulation, cutting forces cutting parameters. Tools temperature, life and wear.

Cutting threads, surface roughness. Tools materials. Design of single point and multiple — point cutting tools. Drills and milling cutters; causes of vibration and chatter in machine tools operation. Principles of casting; sand casting, plaster and mould casting; shell moulding, investment cast; permanent mould casting; centrifugal casting, die casting, continuous casting. Defects in casting. Design of casting; riser designer and placement; solidification control. (3 Units)

BMT 823.1 Health, Safety and Environment

Introduction, Definition, Scope and Application, Group standards and Requirements, Unsafe Acts and Unsafe Conditions, Management system, HSE Responsibilities and Competence, Job Safety Analysis, Personal Protective Equipment, Procurement and Assurance of PPE, introduction to Security, Security Survey and Risk Assessment, Security Plan, Permit to Work, Complementary Certificate, Fire Prevention, Protection and Evacuation Procedure, Classes of Fire, Starvation, Identification of Fire Extinguishers, Size and Colour codes, First Aid, Cardiopulmonary Resuscitation (CPR) Practical (3 Units)

BMT 824.2 Biomedical Instrumentation

Blood pressure measurement; Blood flow measurements; Measurement of the respiratory system; Clinical laboratory instrumentation; Electrical safety in instrumentation. Study of medical equipment used in health care, especially critical care; Sources of hioelectric potentials and use in electrocardiograms, electroencephalograms and electromyograms; Operating principles of patient monitors, defibrillators, pace makers etc.; Electrical hazards and patient/user safety. (3 Units)

BMT 825.2 Biosafety

This course is an introduction to the principles of biosafety, how to work safely with biological agents, microorganisms and genetic modified organisms in laboratory. In Hospitals and (Biomedical) Science biological materials (micro-organisms, eukaryotic cells, tissues, body fluids, faeces...) are intensively used in both basic research and diagnostics. In many situations these biological materials are genetically modified or originated from genetic modified organisms. The biological materials can be pathogenic and therefore one should know the rules how to handle these material in a safe way to avoid any harm to yourself or the environment. For working with genetic modified organisms additional legislation applies. In this course the importance of working safely and responsibly with biological materials and genetically modified materials are stressed. Guidelines and regulation, decontamination and disinfection, disposal and sterilization, facility and

equipment design will be discussed. During the practical assignments the participants can train some basic biosafety principles for proper handling of microorganisms. In the case studies some realistic laboratory situations are depicted by which the participants are forced to think about how to handle these situations in a (bio) safe way. (3 Units)

2.8 COURSE DESCRIPTION FOR PHYSIOLOGY/ PHARMACOLOGY TECHNOLOGY

BMT 831.1 Pharmacological Techniques

The course is designed to provide an in-depth knowledge in analytical techniques in Pharmacology. These include titrimetry, chromatography, spectroscopy, capillary electrophoresis and hyphenated techniques. (3 Units)

BMT 832.1 Advance Physiological concepts and Techniques

Opportunity for students to acquire knowledge in neuroendocrinology and environmental physiology, Analytical methods in physiology, flame photometry, spectrophotometry, vitalography, electrocardiography, encephalography, ultrasonography, radiography, transducers, kymographyetc (3 Units)

BMT 833.1. Anatomical Techniques

This course will deal with tissue preparations and staining techniques, general principles of electron microscopy and preparation and preservation of anatomical specimen. (3 Units)

BMT 834.2 Advanced Animal and Store Management Techniques

This course provide information about the standards of design and management of a range of common animal housing and care facilities, breeding methods of such as rats, guinea pigs etc., Animal ethics in research, animal care, common laboratory animal infectious diseases and control of infections., Environmental Hazards of laboratory animals, the use of animals for Research and Teaching. Laws governing the use of laboratory animals:

Humane killing methods. General anaesthesia and theories of anaesthesia. Various available anaesthetics and sites of action. Volatile and gaseous anaesthetics. Methods of preparation and handling of animals for anaesthesia. Routes of drug administration: intravenous intrapritoneal, oral, subcutaneous, etc. Signs and different stages of anaesthesia. (3 Units)

2.9 COURSE DESCRIPTION FOR GEOLOGY! MINING TECHNOLOGY

GMT 841.1 Mining Method and Unit Operations

Drilling and blasting operation in surface and underground mine. Loading and haulages systems in underground and surface mine. Waste dump Construction. Auxiliary work in mines. Mining methods and system for underground mining; open pit mining method, open cast mining method for surface mines. Room and pillar method for underground coal mines, sub-level caving and shrinkage methods for underground coal mines. (3 Units)

GMT 842.1 Drilling Practices

Element of rock mechanics; Basic drilling methods: cable and rotary drilling methods, advantages and disadvantages of Equipment and Drilling techniques used in cable tools drilling; Introduction to other drilling methods: Rotary drilling practices for oil and gas well: Basic rotary components, their functions and Selection; formation pressures prediction, Fracture gradient prediction, drilling fluid function; properties and testing, types of drilling fluid or mud additives, Drilling hydraulics; function; drilling cost analysis and control. Well completion and safety techniques used in drilling and completion operation; offshore drilling. Storage and transportation problems prediction of wind, wave current force, equipment employed in Marine environment. Drilling on hard rock; selection of types of drilling and blast hole diameter. Drilling in water; drilling for community water services and borehole completion (3 Units)

GMT 843.1 Advanced Field Geology

Mapping of basement and basin terrain. Field note taking and geological report writing. The different sedimentary basin and basement complexes of Nigeria. Stratigraphic evolution of basin in Nigeria. (3 Units)

GMT 844.2 Oil and Gas Exploration Geology

Completion of oil and gas well- single and multiple completion; open holes, perforation methods, interval selection, productivity consideration. Well head bottom hole equipment-check and starting up of oil and gas well. Well surveillance diagnosis, well bore damage (drawdown and build -up), production logging. Critical completion conditions-seizing of tabular goods. Forum on tubing and packers (Anchored and unanchored tubing helical buckling). Wire line operation. Workover techniques-perforating, depth control squeeze cementing, well treatments (Acidizing, Fracturing, Sand control). Fundamentals of vertical flow for multiphase, system (Krislov's Poetmann and Carpenter, Gilbert's Ross and other theories). Single and two phases flow through

choke. Flowing oil well. Types and control of flowing wells. (3 Units)

GLY 845.2 Geologic Exploration, Mining and Mineral Processing

The idea of mineral prospecting and exploration. Exploration indicators. Stages in exploration process. Exploration philosophy and management. Grid setting, borehole drilling and prospect generation. Ore reserves estimation environmental and legal issue in mineral prospecting and exploration. Cutoff grade estimation and its relation to reserve estimation. Planning of exploration Programmes. The meaning of mining engineering; branches of mining; mining methods and systems. Mining equipment selection-and mine parameter estimation; environmental and legal issues in mining operation; elements of mine planning and design; mineral processing basics, mine unit operation. (3 Units)

2.10 COURSE DESCRIPTION FOR MICROBIOLOGY TECHNOLOGY

FIRST SEMESTER

MCT 851.1 Advanced Food Processing and Packaging Techniques

Principles and practice of food processing, techniques of processing and preservation of Nigerian food with regard to their physio-chemical properties; Food packaging and microbial dynamics. Chemical preservative/additive. Legislation and control. Plant sanitation. Canning containers; outline of canning operation; principal spoilage organisms in canned foods. Use of radiation in food, preservation; insect contamination as spoilage organisms; laboratory examination of canned foods; method of detecting contaminants in foods, Food enzymes, their production and biochemistry. Emerging nutraceutical/functional food industry with emphasis on the analysis, production, control, quality assurance, and development of natural health products. Indices of food quality and Microbial standards. Some advance food analytical methods. (3 Units)

MCT 852.1 Advanced Microbiological Laboratory Techniques

Introduction and safety aspects of microbiology lab, Instructions and handling of microbiology equipments & tools, Sterilization techniques, Microbial culture media and its importance, Isolation of microorganisms from soil, Air and water, plating techniques, Streaking methods, Pure culture preparation, Sub culturing of microbes in solid and liquid media, Screening of desired organism. Morphological behavior of microbes, Staining techniques, Identification by biochemical test, Production of secondary metabolites,

Antibiotic sensitivity assay, Isolation and identification of fungi, LCB Mount, Growth studies of microbial cultures at shake flask UV-VIS, Spectrophotometer Estimation, Effect of Physical stress, Shake flask Fermentation techniques, Upstream and downstream processing, Milk analysis & Water analysis, Methods of anaerobic bacteriology (3 Units)

MCT 853.1 Advanced Molecular Techniques in Biotechnology

Principle of molecular biology techniques, DNA Molecular Techniques, Southern Blotting, RNA/DNA Technologies, isolation and characterization, Northern Blotting, Application of Molecular Biotechnology, Restriction digestion, Detection of antibodies resistance gene in bacteria, Polymerase Chain reaction (PCR), DNA sequencing, Primer design, Metagenomics, DNA library construction, Enzyme Technology, Bioinformatics etc.

SECOND SEMESTER

MCT 854.2 Fermentation and Brewing Technology

Principles of fermentation, element, element of biochemical engineering, fermentators and fermentator design, continuous and batch system, process control, fermentation kinetics, Microbial enzymes, cell and enzyme immobilization. Application of immobilized cells. Scale up of fermentation process and computer control, Trends in genetic engineering, Microbial proteins (SCP process) Food Enzymology. Use of water in brewing, effects of specific ions and water purification, matting and washing to include a study of barley, its chemical composition the malting process, milling and mashing, adjuncts, hops and wort treatment. Fermentation to include yeast growth, biochemistry and post-fermentation techniques. Traditional fermentation of alcoholic beverage and method of up-grading. (3 Units)

MCT 855.2 Advanced Environmental Microbiology and Techniques

Microbial aspects of the genesis of petroleum, Microbial indicators on oil. Prospecting, Microbial enhance oil recovery (MEOR). Microbial metabolism of straight- chain, branched and cyclic alkane. Microbial metabolism of gaseous hydrocarbons. Pathway for hydrocarbon degradation. Microbial degradation of petroleum products and use of microorganisms in oil clean-up operations. Bioremediation of heavy metals. Application of anoxic/anaerobic processes to environmental problems. Anaerobic digestion of municipal solid wastes and biogas generation. Composting. (3 Units)

2.11 COURSE DESCRIPTION FOR INDUSTRIAL CHEMISTRY/ PETROCHEMICAL TECHNOLOGY)

BCT 811.1 Advanced Analytical Instrumentation

General principle of chemical and physical quantification. Comparison of various methods for identification and quantification of biomolecules. Electrochemical principle in quantification and separation of biomolecules. Electrochemical instruments. Spectrophotometric methods and instruments in quantitative analysis. Chromatographic principles of separation, identification and quantitative analysis. Techniques for cell disruption, centrifugation, conventional filtration, membrane filtration, solvent extraction, aqueous two phase extraction, adsorption, precipitation, distillation and crystallization. (3 Units)

ICP 861.1 Advanced Petrochemical Science and Technology

Petrochemical Precursors. Socio-economic, socio-political and geographical implications of the petrochemical industry. Planning petrochemical industry for a developing country. Petroleum Hydrocarbon Solvents, Petrochemical Industry; Primary petrochemicals; intermediates and derivatives; Major End use Products including, 2-Ethylhexanol, Acetone, acetylene, ethylene, Polyethylene, Isopropyl Alcohol, Propane, Polypropylene, ethanol, Vinyl chloride and Polyvinyl chloride. (3 Units)

ICP 862.1 Unconventional Hydrocarbon Sources

Coal; The formation of coal, different ranks of coal, the analysis of coal, coal preparation technology, secondary processing, carbonization, gasification and catalytic process. The Fischer-Tropsch synthesis. Shale oil; Definition and formation, properties and composition, production, oil-shale retorting. Above ground retorting, in-situ retorting and shale oil refining. Tar sands; Definition, occurrence and reserves, schools of thought regarding the- origin of the oil. Tar sand recovery technology. In-situ processes. combustion steam drive, emulsion-steam drive process. Mining of tar-sands, Bitumen recovery, direct coking and anhydrous solvent extraction. Biomass; Introduction to biofuel classification, thermochemical, biochemical and agrochemical processes. Alcoholic fermentation, ethanol fuel use, conversion of methanol to Hydrocarbons Anaerobic digestion for biogas. Pyrolysis and Gasification of biomass to liquid fuel (3 Units)

ICP 863.2 Petroleum Refining Technology

Chemistry of Petroleum, the Petroleum refinery, Desalination processes, The tank farm and oil storage, Distillation processes, Gasoline sweetening, Reforming Processes, Catalytic cracking, Isomerization, Polymerization, Alkylation, Coking Process, Hydrocracking, Lubricating oil Production, Grease and wax production, Refinery layout, Transfer of different Petroleum products, safety and environmental protection in the petroleum refinery. Corrosion in equipment and pipelines and control techniques. (3 Units)

ICP 864.2 Computational Techniques for Process Systems

Application of analysis data to obtain solutions using linear transformation, complex analysis, system of linear equations, numerical analysis techniques. Use and application of ANOVA, Correlation, regression and other statistical tools in interpretation of process systems. Computational methods and software for analysis of process technology. Modeling and simulation. (3 Units)

2.12 COURSE DESCRIPTION FOR CHEMICAL/PETROLEUM TECHNOLOGY

CPT 871.1 Chemical Reaction Technology

Heterogeneous reactions: fluid-solids interacting systems. Noncatalytic, and solid catalysed gas-phase reaction. Tubular reactors-design equation based on plug flow for isothermal and adiabatic cases. Transport effects, packed bed design. Fluidized and slurry-phase reactors and their uses. Factors affecting choice of reactor, Optimization-output and yield problems. Conditions of stability of reactors. Rate-controlled regime in gas-solid reactions catalysed by porous catalysts. Scale-up procedure-batch and continuous flow reactors. Economic evaluation and comparison of reactor types. (3 Units)

CPT 872.1 Chemical Technology Process Analysis

Introduction to Engineering calculations Process and Process variables. Processes and process descriptions. Process data representation and analysis industrial stoichiometry (counting reactant excess reacted, degree of completion, percentage conversion). Material of Energy balances on batch, semi batch and continuous systems, in steady and (or) unsteady state. Gases vapours liquids and solids. Their mixtures vapours liquid equilibrium (Raoult's law, relative and percent saturation, condensation dew point). Steam (enthalpy temperature chart and steam table). Combustion calculations (solid, liquid and gaseous fuels, excess air, waste gas analysis. Applications to the chemical process industries. Sources of data. Dimensional analysis. (3 Units)

CPT 873.2 Technology of Process Equipment

Operations and maintenance of items and parts of process equipment. Fluid-flow measurement equipment: orifice plate meter, ultrasonic flowmeter and coriolisflowmeter, densitometers. Valves, valve-fittings, piping and pipelines. Pumps. Pump performance and characteristics. Types of pumps: dynamic pumps, axial and mixed flow pumps, submersible pumps, seal-less pumps, disc pumps, positive displacement pumps, rotary pumps, gear pumps and screw pumps. Heat exchangers: double pipe heat exchanger, shell and tube heat exchanger, tube arrangement, types of shells, baffle types in shell-and-tube heat exchangers. Plate heat exchangers, air-cooled heat exchangers. Agitated vessels, spray condensers, direct-contact condensers. Distillation and ancillary equipment. Distillation columns: plate columns, types of trays, factors that determine column performance. Bubble cap trays, sieve trays, valve trays. Plate efficiency. Packed columns for distillation. Types of packing. Reflux divides, condensers and reboilers. (3 Units)

2.13 COURSE DESCRIPTION FOR PHYSICS/ELECTRONICS TECHNOLOGY OPTION

PET 881.1 Electrical Circuits and Electronics

Outline of linear circuit analysis. Linear transformations. One port and two port networks, single-phase sinusoidal alternating current circuits. Lock diagrams, poly-phase circuits, network topology. The methods of symmetrical components; some properties of three phase systems, example of networks of unbalanced impedances. Distribution parameter networks, periodic non-sinusoidal currents in linear circuit, Fourier series, harmonic in three phase systems. Conventional filter design and operation. Operational methods of transient analysis of distributed parameter networks, nonlinear A.C circuits, frequency response of electrical networks. Bode plots. Poles and zeros and time delay root-locus concepts. Frequency response analysis of electronic amplifiers, oscillators. Power feedback instrumentation amplifiers. Operational amplifier. Field effect transistor circuits, stabilized power supplied and voltage regulation circuits. Transducers, noise and interference in systems. Multistage amplifiers. Differential amplifier circuits. (3 Units)

PET 882.1 Electronics Laboratory Practice 1

Practical use of d.c ammeters and voltmeters. Simple a.c/d.c test with meters-condenser testing techniques. Construction of resistances boxes, Meter Bridge and Potentiometer Bridge.

Application of bridges to experiments. Wiring techniques-lamps and switching arrangements in wiring. Fuses connection. Fault finding techniques, eg trouble shooting techniques. Colour coding of resistors and condensers. Simple experiments involving electromagnetic inductances. Connection of cables to a.c sources (American, Britain and European cable colour codes). Simple experiments to show how electricity is controlled by using IC's to illustrate the principles of circuit designing. Circuit testing, soldering and case study of a mini designed and tested circuit. Introduction to Instrumentation workshop practice design and construction of simple electronic circuit/systems. (1 Unit)

PET 884.2 Application of Electrical/Electronics principles

The course deals with a survey of industries, institutions or organizations that use electrical/electronic principles in its operation. The institution include but not limited to NNPC instrumentation laboratory, Communication industries, Telecommunication companies, ground stations of satellites in orbit, instrumentation laboratories of universities. A report is expected on operations and experience gained. (3 Units)

PET 885.2 Electronics and Instrumentation

The transistor as a switch, power dissipation base over drive storage drive and switching speed, logic gates: Nano or with close logic, the TTL and gate, Truth table, noise margins, television pole, open collector and tristate, TTL CMOS, NMOS, ECL combinational systems. Boolean algebra, identities, De-Morgan's law, Karnaugh maps, QuineMcCluskey minimization by computer aided techniques. The half and full adder. Fliflop; R-S, I-K and D types edge and level trigger, maser slave types, the shift register. Circuit techniques. Oscillation sine wave amplitude control, sequencing frequency stability. Waveform discrimination. Practical ramp generators. Conversion techniques, frequency to voltage staircase generators, analogue to digital D to A termination of pulse lines, Beargon diagram, low noise amplifier design use to discrete components for minimum noise. (3 Units)

PET 886.2 Electronics Laboratory Practice 2

Multi-meters and Oscilloscopes. Auto-ranging in measuring instruments. A survey of the use of electronic circuit devices, eg, diodes, transistors including FET, integrated circuits, photocells. Selection, use and maintenance of test instruments. Survey of pick-ups and transducer devices. Basic circuits synthesis and analysis. Pulse circuits. Instrumentation and measuring techniques: impedance matching, Probes active and input and output impedance using the scope. (1 Unit)

2.14 COURSE DESCRIPTION FOR IN PHYSICS/PRODUCTION TECHNOLOGY

PPT 891.1 Electromagnetic Materials Technology

Electrical conducting materials; conductor and properties, factors affecting the resistivity of electrical materials, materials of low resistivity and high conductivity, materials of low conductivity and high resistivity, materials for lamp filaments and for transmission lines, fuse, soft and hard solders, thermocouple materials. Temperature effect in electrical conductivity of metals. Semiconductors and examples of semiconducting materials. Electrical insulating materials; characteristics of good insulating materials, classification of insulating materials, solid and liquid insulating materials, insulating gases. Properties of insulating materials; electrical, thermal, chemical and mechanical properties. Effect of moisture on insulation. Special purpose materials; high frequency materials, permanent magnetic materials, ceramic magnetic materials. Magnetic materials; terms associated with magnetic materials, classification and properties of magnetic materials, magnetically soft and hard materials. (3 Units)

PVT 892.1 Production Laboratory Practice 1

Conditions and synthesis of Accuracy. Interchangeability and limit systems. Identification and use of common work materials metals, alloys ferrous and non-ferrous metal and their characteristic utilization for the construction of tool bits. Measurement and precision work slip gauges. Comparator vernier height gauge making out vernier micrometer. Examples of measurement. Sine bar. Angular testing: use of rollers — Tapers projection. 1-land tools, power operated hand tools and machine tools. Drills and drilling machines. Drilling and Boring Techniques countersinking. Grinding, off hand grinding and precision grinding. Sawing and cutting machines. (1 Unit)

PPT 893.1 Power Plant Technology

'The World and Nigeria's energy demands. Methods of electrical power generation. Steam power generation cycles, steam generators and generation cycles, gas turbines combustors and auxiliary equipment. Nuclear power generation. Hydropower generation. Alternative energy sources and their power cycles. Energy storage. Economics of power generation. Computer aided power engineering. Industrial visits to at least one each of the hydro, steam-and gas-turbine power stations in the country. (3 Units)

PPT 894.2 Solar Energy

Solar radiation: solar declination. hour angle, apparent solar time, clock time, structure of the sun, motion of the earth in respect of incident solar energy on earth atmosphere, direct radiation, diffused radiation, total radiation (global) solar constant air mass, methods of estimating total, direct and diffused radiation, distribution curves for solar radiation collection iso- radiation map (solar map), pyranometer, pyheliometer. Fundamentals of heat transfer; heat conduction through flat plate, the wall of a cylinder, lamberts laws. Properties of collectors; structure of flat plate collector, structure and uses of concentrators, liquid heating by solar energy, porous and non-porous solar air- heaters, solar pond, solar furnace, application of solar pond. Solar storage: Mechanical solar energy storage, thermal energy storage and chemical energy storage and chemical energy storage. Solar energy utilization; solar cells, solar powered refrigerators and air conditioner. Solar energy conversions techniques; solar energy to electrical energy (using fuel cells), device that convert thermal energy to electrical energy, natural conversion of solar energy to chemical energy in plants, conversion of solar to electrical energy in photovoltaic cells. Application of various solar energy conversion techniques. (3 Units)

PPT 895.2 Automatic Technology

The cooling, lubricating, ignition and fuel supply systems. Valves and valve train design, operating mechanism and valve timing. Engine cylinder block and head design. Pistons and connecting rods. Crankshaft and engine balancing. The automobile, body, chassis and engine design. Frame and suspension systems. Steering, braking and transmission systems. Drive shafts, differentials and axles. Analysis and design algorithms and programs for computer treatment of automotive Engineering problems. (2 Units)

PPT 896.2 Production Laboratory Practice 2

Tree Related properties and structure of wood, Composition and variability of wood, Wood — moisture relations. Strength and elasticity of wood Lumber, Gluanus and Veneer, Wood- Based Panels, Thermal Properties and fire performance of structural wood. Wood deterioration and its prevention. Wood finishing and wood construction Wood adhesives, preservatives and protective coatings. Bench tools- hammers, bench vice, files, chisels, punches, drifts, scrapes and hacksaws etc. Sowing machines, cutting machines, and planning machines used in wood work. Construction of science apparatus to acquaint students with methods of planning, sawing, shaping, joining wood, polishing and painting etc. Safety in the wood workshop. (1 Unit)

DOCTOR OF PHILOSOPHY (PhD) DEGREE PROGRAMME IN SCIENCE LABORATORY TECHNOLOGY (SLT)

1.0 Introduction

Doctoral training is an important aspect of the tertiary education system. The School of Science Laboratory Technology of the University of Port Harcourt hereby proposes a PhD programme in Science Laboratory Technology (SLT).

2.0 Objective

Vision

The vision of the PhD programme is to contribute to national development and self-reliance through the training of world class science laboratory technologists who will be creative and innovative to propagate knowledge for service to the community and to humanity.

Mission

The School of Science Laboratory Technology has a mission to be a centre that is technologically and professionally sound, committed to pursuit of academic innovation and practical skills through excellence in teaching, research and community service.

Philosophy

The philosophy of the School of Science Laboratory Technology is to produce Science Laboratory Technology graduates with requisite practical skill, knowledge and competence to manage institutional, industrial and research laboratories and workshops.

Objectives:

The objectives of the School are to:

- i. Educate and train science laboratory technologists with the requisite practical skills, knowledge and competence to manage institutional, industrial and research laboratories and workshops;
- ii. Produce science laboratory technologists with capacity to design, develop, test, produce and maintain devices, systems and products that are beneficial to the human race;
- iii. Ensure socio-economic relevance of the academic programme with particular reference to the capacity of graduates for self-employment and the needs of employers of labour.
- iv. Enhance sustainable national development through research

3.0 Area of Specialization in the PhD Programme

The School of Science Laboratory Technology proposes to run post-graduate programmes leading

to the award of Doctor of Philosophy (PhD) in Science Laboratory Technology in the following areas of specialization:

- (a) Biology/Biotechnology
- (b) Biochemistry/Chemistry Technology
- (c) Biomedical Technology
- (d) Physiology/Pharmacology Technology
- (e) Geology/Mining Technology
- (f) Microbiology Technology
- (h) Industrial Chemistry/Petrochemical Technology
- (i) Chemical/Petroleum Technology
- (j) Physics with Electronics/Production Technology

4.0 Admission Requirements for Doctor of Philosophy (PhD) in Science Laboratory Technology

Candidates seeking admission into the PhD of the various options must possess an MSc, MTech, MSLT or MEng with a CGPA not less than 2.8 on a 4 point scale and CGPA of 3.5 on a 5 point scale in any of the following areas: Biology/Biotechnology, Biochemistry/Chemistry Technology, Biomedical Technology, Physiology/Pharmacology Technology, Virology Technology, Microbiology Technology, Geology/ Mining Technology, Geological Technology, Biology/Biotechnology Laboratory; Industrial Chemistry/Petrochemical Technology, Chemical/ Petroleum Technology, Physics with Electronics Technology or Physics with Production Technology, all areas of Science programme; all areas Engineering programme

5.0 Admission Process

On completion of the appropriate School of Graduate Studies (SGS) application forms, candidates will be invited by the School of Science Laboratory Technology Academic Board for oral/presentation interview. Candidates who score 70 % and above will be recommended to the School of Graduate Studies for admission into the PhD programme.

6.0 Registration

Registration of PhD students will be done at the beginning of every new academic session. At the beginning of every new academic session, PhD students will be strongly advised to proceed to the School of Graduate Studies, pay all requisite fees and return to the Chairman, School of Science Laboratory Technology Graduate Committee (SSLT-GC) for registration.

7.0 Duration of Programmes

Students admitted into the PhD programme will require a minimum of 2 years and maximum of 4 years to complete the programme for full time and

a minimum of 3 years and maximum of 6 years for part-time students.

8.0 Academic Work/Courses for PhD

Students admitted to PhD programme of the School of Science Laboratory Technology shall take and pass the following courses as the minimum requirements for a PhD (Doctoral) degree in SLT as part of the partial fulfillment for graduation.

The minimum benchmark for PhD programme in the School of Science Laboratory Technology consists of:

Course Code	Course Title	Credit Units
SLT 901.1	Advanced Laboratory Management	3
SLT 902.1	Advanced Techniques in Laboratory Administration	3
SLT 903.1	Research Techniques in Science Laboratory Technology	3
SLT 904.2	Advanced Workshop Technology & Practice	3
SLT 905.2	Advanced Laboratory Safety Techniques	3
SLT 906.2	Research Seminar 1	3
SLT 907.2	Research Seminar 2	3
SLT 908.2	Research Seminar 3	3
SLT 910	Thesis	16
TOTAL Credit Units		40

Note: There will be a School of Graduate Studies Seminar. Students must score a similarity index of 15 in the Anti-plagiarism Screening of their Research Thesis before they will be permitted to present the School of Graduate Studies (SGS) Seminar

9.0 Course Descriptions for PhD Programme in SSLT

SLT 901.1 Advanced Laboratory Management

Laboratory Regulations; Good Laboratory Practice ; Standards, Good Practices and laboratory quality management systems; Laboratory Information Management ;Laboratory and Research Ethics Scientific methodology, data handling, and management practices in research and manufacturing laboratories. Laboratory safety and health compliance; and management of laboratory personnel, space, inventory, and equipment. Assignments will address laboratory operating systems, finances and recordkeeping, safety regulations and procedures, data management, project planning, problem solving, procurement, personnel training, and

communication with a broad array of stakeholders. (3 Units)

SLT 902.1: Advanced Techniques in Laboratory Administration

Laboratory Planning: Various types of laboratories – industrial, research, hospital, teaching. Location, design, cost and acceptability of laboratories. Layout, organization and installation of suitable essential services and physical facilities, fixtures and fittings to achieve the desired and specialized rooms. Staffing the Laboratory, Managing Laboratory Personnel, and Work Management, Laboratory Records and Information Management, Store Management, Budgeting the Cost Control, Laws Affecting Laboratory Practice, General Laboratory Maintenance (3 UNITS)

SLT 903.1: Research Techniques in Science Laboratory Technology

Overview of a Research Proposal, Problem definition and Conceptualization, Hypothesis formulation and Objectives, Analysis of Objectives and formulation of questionnaire, review of related literature, types and sources of data, methods of data collection, conducting surveys, data processing, overview of appropriate methods analysis, result presentation and discussion, referencing, writing a research report, computer application in SLT research. Power point Preparation and presentation style, Poster preparation, Excel worksheet and statistical data analysis, formulation of scientific hypothesis, Anti-plagiarism, How to write scientific papers, How to write research proposal for a grant, How to make Poster presentation for conferences, A research proposal will be submitted as part of the course requirement. (3 UNITS)

SLT 904.2: Advanced Workshop Technology & Practice

Conditions and synthesis of accuracy. Interchangeability and limit systems. Identification and use of common work materials - metals, alloys ferrous and non-ferrous metal and their characteristic utilization for the construction of tool bits. Measurement and precision work slip gauges. Comparator vernier height gauge making out - vernier micrometer. Examples of measurement. Side bar. Angular testing use of rollers - tapers projection. Hand tools, power operated hand tools and machine tools. Drills and drilling machines. Drilling and boring Techniques countersinking. Grinding, offhand grinding and precision grinding. Sawing and cutting machines. Techniques in metal cutting and sheet metal forming. Hard and soft soldering, gracing and ways joints. Welding techniques. The lathe machine, planning machines and the milling

machines. Surfacing, taper turning and thread cutting on the lathe. Shaping, planning and slotting. Metal characteristics, heat treatment of metals. Metal finishes. High energy rate forming, chipless machining. Electro machining processes. Powder metallurgy. Cryogenic applications. Jigs and fixtures. Hydraulic power transmission. Workshop practice should focus on the construction and graduation of a variety of teaching, research and industrial tools, standard weight of mass, lever system, meter rules, calorimeters (3 UNITS)

SLT 905.2 Advanced Laboratory Safety Techniques

Culture of Laboratory Safety; Environmental Health and Safety Management System; Emergency Planning; Evaluating Hazards and Assessing Risks in the Laboratory; Management of Chemicals; Working with Chemicals; Working with Laboratory Equipment; Management of Waste; Laboratory Facilities; Laboratory Security; Laboratory Safety Plan, Radiation safety; Safety Awareness; Safety Shielding; Compressed safety, Cold Traps and Cryogenic Hazards; Glassware; Needles and Sharps Safety; Electrical Safety; Controlled Substances; Safe Handling of Peroxidizable Compounds; Safe Handling of Laboratory Animals; Safe Handling Of Biological Hazards; Biological Safety Cabinets; Laboratory Hoods; Safe use of Nanomaterials and potential health hazards; Safety Laws and Standards Pertinent to Laboratory (3 UNITS)

SLT 906.2: Research Seminar 1

Topical issues in Science Laboratory Technology research. (3 UNITS)

SLT 907.2: Research Seminar 1

Topical issues in Science Laboratory Technology research. (3 UNITS)

SLT 908.2: Research Seminar 1

Topical issues in Science Laboratory Technology research. (3 UNITS)

SLT 910 Thesis

Research is a vital part of University life and PhD students would be required to undertake advanced research project work that may positively impact society. In our graduate research project, students work independently within a research group or in area of specialization of a staff member. A research project to be carried out by the candidates following stringent scientific procedures that will yield results acceptable by experts worldwide. Each project must contribute to knowledge. (16 Units)

**LIST OF ACADEMIC STAFF PARTICIPATING IN THE
SLT POST-GRADUATE PROGRAMME**

LIST OF ACADEMIC STAFF IN SSLT

S/No	Name in Full	Present/ Position
1.	Prof. Michael Horsfall Jnr	Professor/Dean
2.	Dr. Lucky Nsirim Edwin-Wosu	Associate Dean Senior Lecturer/Coordinator, BBT/
3.	Dr. David Lekpa	Senior Lecturer/Coordinator, BMY
4.	Dr. Stev. Omeodu	Senior Lecturer/Coordinator, BCT
5.	Dr. Selegba Abrakasa	Senior Lecturer/Coordinator, GMT
6.	Dr. Hubert O. Stanley	Senior Lecturer/Coordinator, MCT
7.	Engr. John Lander Ichendu	Senior Lecturer and Coordinator, ICPT
8.	Dr. Hilary Obong	Senior Lecturer/Coordinator, PET/PPT

**FOR BIOCHEMISTR/CHEMISTRY TECHNOLOGY OPTION
DEPARTMENT OF BIOCHEMISTRY**

S/NO	NAME	QUALIFICATION	FIELD OF SPECIALIZATION	RANK
1	Onyeike, E. N.	B.Sc, M.Sc, Ph.D (UPH) PGDE (UNN)	Nutritional Biochemistry/Toxicology	Professor
2	Monanu, M. O.	B.Sc (Nigeria) Ph.D (Alberta)	Enzymology/Protein chemistry	Professor
3	Akaninwor J. O. (Mrs.)	B.Sc, M.Sc (Benin), Ph.D (UPH)	Nutritional Biochemistry	Professor
4	Monago- Ighorodje, C. C.	B.Sc, M.Sc, PhD (UNN) AIMLS	Medical Biochemistry/Toxicology	Professor
5	Wegwu, M. O.	B.Sc, M.Sc, PhD (UPH)	Environmental Biochemistry	Professor
6	Essien, E. B.	B.Sc (Uyo), M.Sc. PhD	Nutritional Biochemistry/Toxicology	Professor
6	Ogunka-Nnoka, C. U	B.Sc, M.Sc, Ph.D (UPH)	Nutritional Biochemistry/Toxicology	Professor
7	Abariku, S	B.Sc. M.Sc Ph.D (Ibadan)	Medical Biochemistry	Professor
8	Anacletus, F	B.Sc, M.Sc, (UPH) Ph.D (Calabar)	Medical Biochemistry	Professor
9	Onwuka, F.	B.Sc, M.Sc, Ph.D (Calabar)	Medical Biochemistry	Professor

LIST OF TECHNOLOGISTS IN SSLT

S/No	Name in Full	Present Position	Dept./ Discipline	Academic Qualifications
1.	Umirih, Williams Oyovwikigho	Senior Technologist	Microbiology Technology	BTech.
2.	Olu-Tima, Belema Afolabi	Technologist I	Industrial Chemistry/ Petrochemical Technology	BTech. MSc
3.	Ajinwo, Solomon	Technologist II	Biochemistry/Chemistry Technology	BTech.
4.	Amadi, Gift Victor	Technologist II	Biomedical Technology	BTech.
5.	Eruotor, Taiye	Technologist II	Microbiology Technology	BTech.
6.	Adah, Jennifer	Technologist II	Biomedical Technology	BTech.
7.	Omani, Miracle Chika	Technologist II	Geology/Mining Technology	BTech.
8.	Ateli, Rufus Dennis	Technologist II	SSLT/Industrial Chemistry/ Petrochemical Technology	BTech.
9.	Abel Onyekachi	Technologist II	SSLT/Industrial Chemistry/ Petrochemical Technology	HND
10.	Alex Precious Isa	Technologist II	SSLT/Industrial Chemistry/ Petrochemical Technology	BTech
11.	Onoja, Christian	Technologist II	SSLT/Microbiology Technology	HND MCB (SLT)
12.	Chuku Gift Chiza	Technologist II	SSLT/Microbiology Technology	BTech.
13.	Francis Victor Akoma	Technologist II	SSLT/Physics with Electronics	BTech
14.	Chikezie, Oporum Justice	Technologist II	SSLT/Physics with Production Technology	BTech.
15.	Okala, Valentine Victor	Technologist II	SSLT/Physics with Production Technology	BTech.

INSTITUTES AND CENTRES

UNIVERSITY OF PORT HARCOURT SPORT INSTITUTE (UPSI)

GRADUATE PROGRAMMES (M.Sc) IN SPORTS SCIENCE AND SPORT MEDICINE.

1. MSc in Sports Science

(Option):

- (A) Exercise Science
- (B) Fitness and Recreational Management
- (C) Sports Coaching and Administration
- (D) Sports Broadcasting/Journalism.

II. MSc in Sports Medicine

1. Introduction

The University of Port Harcourt Sports Institute (IJPSI) was established in 2014 through collaboration between the University and national and international sports institutes and academies, in partnership with sports industries. Its establishment is viewed as a paradigm shift from school sports to grow talents for competitive sports, including healthy recreation and sustainable development of the sports industry.

It is worthy of note that the University of Port Harcourt has impressive facilities certified by international bodies such as IAAF, FINA, FIBA, International Tennis Federation, International Federation of Swimming Organisation, and has dominated school sports in the West African sub-region for close to two (2) decades.

The collaborating institutes and academies include: National Institute for Sports and Lawn Tennis Academy in Nigeria, National Sports Institutes in South Africa National Institute of Sports Expertise and Performance (NTSEP), United States of America China, Inna Japan and South Korea, amongst others. It is heart-warming to state that UPSI is a member of an international consortium of institution that bring together different cultures training programmes and best operating practices, including best available technologies.

The Institute has successfully commenced its Diploma programmes in Sports Science and will, in the next few weeks, graduate its first batch of graduate students. It was this success story that informed the decision of UPSI Board of Management (BoM) to submit the proposal for the

commencement of Masters programmes in Sports Science. The Institute has renowned professors and other senior academics who have published widely in high impact journals and are the finest in their areas of expertise. We are also collaborating with the best brains in the West African sports industries.

2. Philosophy

The philosophy of MSc. Programme in Sports Science is the promotion of culture of excellence in sustained learning, leadership, internationalism, professionalism and the advancement and propagation of knowledge in the sports industry.

3. Vision

The vision of MSc. Programme in Sports Science is to project the University of Port Harcourt as the foremost International Centre of Excellence in Sports and Recreation in Africa.

4. Mission

The mission of MSc. in Sports Science is to produce graduates that 'will meet the needs of sports industry through a commitment to excellence in training, applied research, continuing education, capacity building and community service.

5. Rationale

It is common knowledge that in recent times, international sports are purely scientific and countries such as Nigeria that are yet to key into this highly sophisticated sports have consistently performed abysmally poor in international sports competitions. For Nigeria to be numbered among the great sporting nations, it is pertinent that current scientific trends must be adopted and the MSc. Programme in sports Science promises to provide this needed missing link.

6. Aim

The aim of MSc. Programme in Sports Science is to produce innovative and highly motivated and competitive professionals equipped with sharpened competencies, technical expertise, multidisciplinary skills, professional ethics, cost efficiency, soft skills, including principles of clear communication and team skills for optimum productivity.

7. Objectives

The primary objective of the programme is to provide graduates with broad-based training required for sustainable sports development and recreation. On completion of the programme, the elite sports graduate will, among other skills, effectively:

- Compete globally and practice professionally in their respective areas of specialization.
- Project the University of Port Harcourt as a Centre of Excellence in Sports Science
- Train future athletes for better performance.

8. Admission Requirements

Candidates seeking admissions for Master's degree in Sports Science must have the following qualifications from recognised institutions:

- Five Credit passes, including English Language and Mathematics at the O' Level or its equivalent.
- Bachelor's degree with a minimum of Second Class Lower and with a CGPA of 3.00 or above, on a 5-point grading system or its equivalent.
- A Postgraduate Diploma with a minimum of 3.50 in Sports Science or related discipline, including diploma in Basic Medical Sciences (Biochemistry, Anatomy and Physiology) and Human Kinetics and Health Education from a recognised university.

Duration of Programmes

The duration of Programme for all the options are as follows:

- Full-time: A minimum of twelve (12) calendar months and maximum of 24 calendar months.
- Part-time: A minimum of 24 calendar months and maximum of 48 calendar months.

10. Requirements for Graduation

In addition to the compulsory course work, candidates are expected to carry out original Dissertation in partial fulfilment for the award of Master of Science degree in the relevant options, in line with Graduate School guidelines.

In general, the MSc programme shall consist of course work, seminars and dissertation.

11. Masters in Sports Science

The following conditions must be fulfilled by the student before the award of Masters in Sports Science.

- The student must pass a minimum of 35 credit units as shown below

Course	Units
Core Courses	27
Dissertation	6
Seminar	2
Total	35

- He/she must carry-out a dissertation relevant to Sports Science and must defend his/her dissertation before School of Graduate Studies Board of examiners.

12. Examination

- In line with school of Graduate Studies Policy, the minimum pass score in course work shall be 50%. Also, the written semester examination shall constitute 70% of the examination while Continuous Assessments shall be 30% of the examination. Most importantly, a student must have a cumulative Grade Point Average (CGPA) of not less than 3.00 in each semester, to be in a good standing. A student whose CGPA fell below 3.00 at the end of the first year of study shall be asked to withdraw from the programme.

Scoring and grading of course shall follow the School of Graduate Studies approved pattern as shown:

MARKS %	LETTER GRADES	GRADE POINTS
70 and Above	A	5
60 - 69	B	4
50 - 59	C	3
0 - 49	F	0

15. Course Description

➤ **General Courses**

SGS: 801.1: ICT and Research Methodology:

This course deals with the essentials of spreadsheets, Microsoft excel, basic computing knowledge, window 2018, Internet technology, statistical packages, precision and accuracy estimates, principles of statistics research, basis of power point presentation, concepts of hypotheses formulation and testing, organization of research and technical report writing.

SCI 801.2: Overview of Nutrition

- The Nutrients – (i) Energy – yielding nutrients (ii) Vitamins (iii) Minerals (iv) water
 - Reasons for eating the way we do
 - The body's stress response
- Energy Balance and weight control
- Energy in: The Kcalories in food
 - Energy out: The Kealories the body spends
 - Energy balance: Weight loss and gain
 - Hunger, satiety and Anorexia
- Shifting the balance
- Body weight and body Composition
 - Problems of obesity — causes of obesity, genetics verses environment, inactivity etc.

SCI 802.1: Fundamentals of Biomechanics:

The course examines the mechanics of motion, principles of stability and motion, law of motion and effects of forces upon movement in different directions. The anatomical and physiological fundamentals of human motion, fundamentals of region of the musculoskeletal structures and application of kinesiology to human motion.

SCI 803.1: Advanced Concepts in Sports Science:

The course deals with the concepts and conditions which influence the historical and philosophical basis of sports science, objectives and scope of sports science, the structure of sports science, sports implements and materials used in sports participation.

SCI \$04.1: Advanced Concepts in Sports Anatomy:

The course deals with the study of Anatomy and its relationship to Sports Science. Liver muscles involved in sports, cardio respiratory system, exercise and sports.

SCI 805.1: Advanced in Sports Physiology:

The course deals with the structure of functional physiology to physical activities.

SCI 806.1: Current trends in Preventing and Management of Sports Injury:

Treatment

principles of the scene of injury and emphasis on head injuries, cardiovascular problems, chest injuries and other causes of mortality in sports. Various methods and prevention of sports injury will be identified.

SRM 807.1: Research Methods in Sports Science: The course deals with the nature and scope of Research methods in sports science and statistics. The basic descriptive statistical data collection, measures of frequency, distribution, control tendency and dispersion. Also inferential statistics of parametric and non-parametric tests as a means for scientific study.

SGS 801.2 Entrepreneurship and Management: The course deals with business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

SCI: 801.2 Sports, Media and Society/Corporate Communication: This course is structured to teach the students how social issues would influence sports and how sports may influence the society. The course covers media reportage of how certain social issues such as gender, gambling, racism, politics, and hooliganism, commercialization of sports and the influence of the *media* on sports among others are affecting sports administration. The students are equally taught how the interrelationship between media and society influence sports.

SCI 890.2: Seminar — Students shall select topics approved by the course lecturer (s) from their area of specialization. They are expected to demonstrate ability to prepare logical and in-depth papers on the approved topics and make formal presentation of the paper to the Academic Board of the Institute.

SCI 899.2: The dissertation shall be a written report of original research completed under the supervision of the supervisor(s).

Options

(A) Sports Nutrition

- a) **SCI: 811.2 The Science of Eating and Exercise:**
- Fueling before Exercise
 - Fueling During and after exercise
 - Supplements, performance Enhancers and Engineered Sports Funds
 - Building a High-Energy Eating Plan
 - Winning Recipes for Peak Performance: Bread and Breakfasts, Potatoes, Rice, Vegetables, Salads, Chicken and Turkey, Fish, Sea Food, Beans, Tofu,

Beverages, Smoothies, Snacks and Desserts.

b) **SCI: 812.2: Sports Foods, Supplements, and Ergogenic Aids and Vegetarianism for Athletes**

- ❖ Sports Foods and Supplement Concepts
- ❖ Sports-Foods: Bars, Drinks, and Gels
- ❖ Supplements
- ❖ - Physiological Ergogenic Effects
- ❖ Sports Doping
- ❖ Doping Drug Classification
- ❖ Vegetarianism for active people and Athletes
- ❖ Protein quality and quantity,
- ❖ Vitamins and Minerals.

c) **SCI: 813.2 Sports Specific Training and Nutrition and Exercise, Nutrients, and Body Adaptation:**

- ❖ Nutrition for Ice Hockey
- ❖ Nutrition for Base-ball/Soft ball
- ❖ Nutrition for Football
- ❖ Nutrition for Basketball
- ❖ Nutrition for Volleyball
- ❖ Nutrition for Tennis
- ❖ Nutrition for Golf Wrestling.
- ❖ Nutrition for Swimmers
- ❖ Nutrition for Cycling and Endurance Runners
- ❖ Nutrition for Body builders
- ❖ The essentials of exercise
- ❖ Exercise and the Body's use of fuels
- ❖ ATP and PC, the first-fuels of Exercise
- ❖ Fat and Protein use in exercise
- ❖ Vitamins and Performance
- ❖ Minerals and Performance

(B) **Exercise Science**

a) **SCI 821.2: Exercise and health, Exercise Testing and Training:** The course deals with the development of conceptual and laboratory competencies needed for work in adult *fitness*, cardiopulmonary rehabilitation programmes and physical therapy, including stress testing and prescription.

b) **SCI 822.2: Energy Balance and Weight control:** The course deals with Blood energy needs, biological system throughout the life cycle with consideration of socio-psychological factors. Food composition and manipulation for weight control.

c) **SCI 807.1: Advanced laboratory work and Exercise Laboratory:** Course deals with development of skills in the use of exercise and physical fitness apparatus in the laboratory.

Advanced Laboratory Work: Exercise machines, work loads and measuring

equipment, treadmill, cycle ergometer, dynamometer, sphygmomanometer, gas analyses, spirometer, ECG. Simple test of enzymes in the human body at rest and during exercise. Evaluation of physical fitness of athletes and individual research work in the laboratory.

(C) Fitness and Recreational Management

a) **SCI 831.1:** Overview of Fitness and Recreation, Exercise and Recreational management: An overview of fitness concepts, social and economic background of present viewpoints of play and recreation and consideration of new points based on the production capacity of Nigeria.

Exercise and Recreational Adaptation: General practice in selected sports and games, critical study of motor ability through various training methodologies, adaptation, process of training, Periodization and recreational planning.

b) **SCI 832.2: Organization and Administration of Recreational Managements:** Administrative policies for recreation on a national, state, or local basis .Suggested needed enabling laws, charter provisions and school codes A survey and establishment of an administrative procedure of selected situations

c) **SCI 8312: Supervision of Recreational Programmes and Leadership Techniques in Recreation:** Course deals with personal interviews, supervisory conferences, in-service training programmes, supervision of activities, purchasing and maintenance of supplies and equipment. An analysis of the objectives of youth agencies in Nigeria, the role of their leadership in the fulfillment of those objectives.

(I) Sports Coaching and Administration (OPTION)

a) **SQ 841.1 Principles and Theory of Sports Training and Administration of Sports Coaching:**

- The subject will deal with the process of sports theory and principles in training, methods and various types of tests on athletes' assessment.
- Problems and standards connected with the administration of sports club, relationship with state and national sporting federation.

b) **SCA: 843.1: Problems and Issues in Sports Coaching:** A critical study of sports in context of culture, believes or gender with reference to social system educational economic, political and mass media and process changes. Also problems in sports

c) **SCI 891:2: Planning and design of Sports Coaching and Supervision Coaching Programme:**

- Standards for indoor facilities, their design and construction. Administrative norm and facility development.
- Personal interview and supervisory conference in-service training programme, supervision of activities, purchasing and maintenance of supplies and equipment.

(E) Sports Journalism

a) **SCI: 853.1: Social Media and Sports Communication Reporting:** Social media have affected all the spheres of humans. This programme explores the role of social media in the sports industry. In this course, students will investigate the sociological impact of these new media platforms on sports as well and develop the skills necessary to create integrated, ethical, and professional social media campaigns. Sports as burgeoning business and entertainment are reported through various media platforms. The student will learn the various ways.

b) **SCI 856:2 Contemporary issues in sports journalism and Sports reporting and rural development:**

- This is not a taught course, but designed for students to develop and research on certain contemporary problems in sports for presentation to colleagues. Students' topics should be approved by a supervisor/lecturer.
- This course focuses on how to exploit the power of sports in gathering youths to effect rural change. The course will cover areas such as participatory' communication for development, community self-help, behavior change, entertainment education, social marketing, rural transformation, among others.

c) **SCI 857.2: Art of public speaking and Investigative reporting:**

- This course focuses on oral communication or- presentation of speech & it is targeted at taking students through oral presentation skills.
- Investigative journalism course focuses on digging deeper to unravel certain scandals, crimes and unethical activities going on in the society especially as they concern sports.

LIST OF LECTURERS

S/N	Names	Qualification	Field of Specialization	Status
1	Anugweje, K.C.	MBBCH, (Nigeria) DSM, (London, M PhD (UPH)	Sports Science and Medicine	Professor I
2	Wegwu, M.O	B.Sc, M.Sc, PhD, (UPH)	Nutritional Biochemistry and Toxicology	Professor I
3	Dpper, D. V.	MBBS, B. Med. Sc, MD (UPTH)	Human Physiology	Professor I
4	Ihejirioka, W. C.	BA M.A; MED; Ph.D (Rome)	Communication Theory; Development Communication; New Information and Communication Technology; Media, Religion and Communication Culture	Professor I
5	Onyeano C. O.	BDS (U), FWACS	Dentistry (orthodontics)	Professor I
6	Okpako, J. E. F.	B.ed., M.e.d, Ph.D (Ibadan)	Environmental, Health and Safety	Professor I
7	Mrs. I. C. Anochie	MBBS, (Benin), FWACP-(2001)	Paediatncs	Professor I
8	Amasiatu, A.A	B.ed., M.e.d, (Nigeria); Ph.D (Lagos) BSBA, MBA, MS, Ph.D	Exercise and Sports Psychology	Professor I
9	Kalu, S. E.	M.Sc, Ph.D, IDPM, PGD, MARS	Strategic Marketing Management	Professor I
10	Umoh,G.I.	B.Sc (UST); MBA M.Sc, Ph.D (UP) FCIPIA	Operations Management/Quantity Analysis	Professor I
11	Nwinee, B. F.	BBA, MBA, MS, Ph.D (U.I)	Sports Psychology and Sociology	Professor I
12	Akuru,G.B	B.ed., M.e.d, Ph.D (UI)	Organizational Leadership and Factor Analysis	Professor I
13	Ukohia Ojiabo	B.Sc (Ilorin) M.Sc (Lagos) Ph.D (ABSU)	Developmental Anatomy and Anthropometry	Professor I
14	Oladipo, G.S	B.Sc, MBA, Ph.D	Marketing	Professor I
15	Amue, J.G	B.Med. Sc (Pharm) MBBS (UPTH), FWACS (1991), FWACS (2003)	Radiology	Professor I
16	Agi, C.E	MBBS (Benin), M.Sc (Sports Med) (London)	Neurophysiology	Professor I
17	Akpa M.R	B.Sc, MSc. (Ilorin) Ph.D (UPH)	Clinical and Experimental Anatomy	Professor I
18	Olorunfemi, O.I	B.Sc, (UPH) M.Sc, MBBS (Benin), Ph.D (UPH)	Mass Communication Development Communication and Corporate	Professor I
19	Paul, C.W	B.A; M.A; (UNN) Ph. D (UPH)	General Linguistics	Professor I
20	Ochonogor, C.I	B.A; M.A; (UNN) Ph. D (UPH)	Exercise Physiology and Rehabilitation Therapy	Senior Lecturer
21	Obikudo, E.F.	B.Sc (LASU) M.Sc (Lagos) Ph.D (U.I)	Medical and Molecular Biochemistry	Senior Lecturer

22	Ogunleye V.A.	B.Sc (RSU) Ph.D (Lagos)	Toxicology	Senior Lecturer
23	Onyegeme-Okerenta K.C.	B.Sc, MBA (UNN) Ph.D (UPH)	Insurance management and Public Finance and Entrepreneurial Finance	Senior Lecturer
24	Patrick-Iwuanyanwu	BBA, MBA, Ph.D	Marketing	Senior Lecturer
25	Torbira, L.L	B.Sc (DELSU),	Nutritional Biochemistry	Senior Lecturer
26	Ozuru H.N	BBA, MBA, Ph.D (UPH)	Toxicology	Senior Lecturer
27	Amadi, B.A.		Gastrointestinal Physiology	Senior Lecturer
28	Okoro, Samson Eruke		Pharmacological Biochemistry and Toxicology	Lecturer II
29	Obia, O			Lecturer I
30	Ogbonnaya, E. Anthony	B.Sc, MBA (UNN) M.Sc, Ph.D (UNIBEN)		Lecture I

Lecturers from international collaborating sports institute and industries shall be part of the teaching crew.

INSTITUTE OF PETROLEUM AND ENERGY STUDIES UNIVERSITY OF PORT HARCOURT

INTRODUCTION

The Institute of Petroleum Studies (IPS) is an international post graduate institution established through collaboration between École du Pétrole et des Moteurs (IFP School) France and the University of Port Harcourt Nigeria in the year 2003. IPS is sponsored by the TOTAL E & P Nigeria Limited/NNPC Joint Venture. IFP School is in international collaboration & partnership with world renowned universities spread across the globe. These universities include the Imperial College of Science & Technology, London (UK); Colorado School of Mines (USA); McGill University (Canada); Technical University, Delft (The Netherlands) and Universite Gubkin (Russia). The University of Port Harcourt is also in international collaboration with leading universities in South Africa, United States of America and Canada. These collaborations have brought together different cultures, academic programmes and technology applications. In addition to pursuing an aggressive policy of home-grown human capital development in line with world standards by offering internationally recognized, industry-relevant and professionally sound and certified programmes, IPS saves the industry and the government huge foreign exchange investments in postgraduate training. IPS promotes international and national academic collaborations and linkages, partnership with industry and collaboration with national and international professional bodies. The healthy relationship between town and gown makes it possible for the industry and professional bodies to be actively involved in driving the programme life-cycle of IPS from curriculum development to course delivery/joint project supervision. IPS is also a registered member of the Oil and Gas Trainers Association of Nigeria (OGTAN) rendering continuing education to the oil and gas industry.

MISSION, PHILOSOPHY AND VISION

Mission: To meet the needs of the Petroleum Industry through a commitment to excellence in training, applied research, continuing education and capacity building

Philosophy: The institute believes in sustained learning, internationalism and professionalism; advancement and propagation of knowledge in the Petroleum Industry

Vision: To become the foremost International Centre of Excellence in Petroleum Geosciences

and Technology, Petroleum Economics and Management, and Petroleum Policy & Strategic Studies in Africa

CORE VALUES

1. We are **COMMITTED** to life-long learning for entrepreneurial and leadership skills
2. We are committed to academics and professional **EXCELLENCE**
3. We uphold **INTEGRITY** and **TRANSPARENCY** in all our operations
4. We encourage **TEAM WORK** and **EFFECTIVE COMMUNICATION** in the exchange of ideas and opinions to achieve set goals
5. We **RESPECT** each individual's unique talents and uphold the rights of all.

CENTRE FOR CONTINUING EDUCATION

This Centre is aimed at providing a platform for specialized and in-depth training to enable participants perform as specialists and professional experts in their chosen career. We have a multidisciplinary pool of consultants and experts in Nigeria and abroad who have many years of experience as Lecturers. With such a high caliber expertise, we deliver professional and high quality Short Courses to enable the participants perform with high competence at local and international levels. IPS is strategically positioned to offer the necessary training services to the industry. In conjunction with IFP Continuing Education Company, ENSPM France, and other local content service providers, the Institute offers broad based continuing education programmes to professionals in the petroleum industry. The courses are designed to meet the needs of managerial, engineering and technical staff in oil and gas, refining, petrochemical and chemical companies.

INDUSTRY PARTNERSHIPS

IPS is in partnership with the Nigerian Institute of Management (NIM), the Nigerian Environmental Society (NES), the Society of Petroleum Engineers (SPE), the National Registry of Environmental Practitioners (NREP), TOTAL E&P Nigeria, the Nigerian National Petroleum Corporation (NNPC), FUGRO Consultants Nigeria Limited, Pollution Control & Environmental Management (POCEMA) Consultants, the Nigerian Society of Engineers (NSE), the International Well Control Forum (IWCF), the Nigeria Institute of Safety Professionals (NISPP), Emerald Energy Resources Ltd, the Energy Information Services (EIS) and the Society for Underwater Technology (SUT).

STATISTICS

As at January 2022, IPS has graduated 368 Masters Students and 260 Post Graduate Diploma Students in our Center for Oil and Gas Technology. Most of these graduates are employed by International Companies like Baker Hughes, Halliburton Energy Services, Shell Petroleum Development Company (SPDC), Trans Ocean, Nigerian National Petroleum Company (NNPC), Statoil Norway, Chevron Nigeria Ltd, Exxon Mobil, Schlumberger and TOTAL E&P Nigeria to name a few.

IPS ALUMNI

Every graduate of the Institute automatically becomes an Alumnus and is expected to be an active participant in the Institute's Alumni activities.

ADMISSION PROCEDURE

- Advertisements are placed on a national daily, state and community based newspapers by TOTAL announcing the sales of forms.
- Forms are sold for candidates from the TOTAL facility areas specified by their MOUs
- At the close of sales of forms, a computer based aptitudes test is conducted to screen candidates.
- Oral interview is conducted for those shortlisted from the aptitude test that scored a certain minimum scores.
- Successful candidates from the oral interview with a certain minimum scores are then chosen according to the number of candidates expected to be admitted from that community.
- 20 candidates are selected by the panel at the end of the oral interview, signed, sealed and copies distributed to all stakeholders
- Members of the panel are drawn from TOTAL (Sustainable Development), Institute of Petroleum Studies and others (Uniport and professional bodies)

ADMISSION REQUIREMENTS

Candidates must possess a minimum of Second Class (Lower Division) honours bachelor's degree in any branch of Engineering and the physical sciences and should have completed their NYSC.

GRADUATION REQUIREMENTS

- The student must pass all the courses in every module of the different specializations which are in the syllabus of the IPS PGD Programme either once in first sitting or through resits:
- The students must have research and EIA projects to write and produce for defence which is part of the last module of the session for graduation.
- The students must be supervised by an

authority in the specialization which could either be a University lecturer or an industry facilitator or consultant.

- The project must be written, typed and produced for defence afterwards some copies are brought forth to the library for storage.
- All projects and other IPS materials such as PPE and training tools under their custody must be returned to the institute also.
- The student(s) must not be guilty of questionable character before graduation because such might not possibly graduate despite the academic success.

POST GRADUATE DIPLOMA IN PETROLEUM TECHNOLOGY (PGDPT)

Objective: The objective of this operations-oriented post graduate Diploma programme is to improve the technical competence and skills of the graduates to be employable in the petroleum industry. The students will be taught jointly by lecturers from the University of Port Harcourt (Uniport) Nigeria, IFP School, France as well as experts from the petroleum industry both in Nigeria and abroad.

- On completion of this Programme, the graduates will among other skills, be able to:
- Supervise the drilling of exploration and development wells and carry out drilling optimization programmes
- Supervise, and evaluate well completion, workover and well stimulation programmes
- Operate onshore and offshore oil and gas production facilities
- Carry out well performance enhancement programmes

Duration: The duration of the programme shall be 12 calendar months of intensive full time study.

Award of Diploma: Successful students at the end of the programme shall receive a Diploma of the University of Port Harcourt, Nigeria.

Admission Requirements: Candidates must possess a minimum of Second Class (Lower Division) honours bachelor's degree in **any branch of Engineering and the physical sciences** and should have completed their NYSC.

Sponsorship: Candidates should be sponsored by OPCOs, Service companies, PTDF and other sponsoring agencies.

PGDPT COURSE STRUCTURE AND PLAN

1. SOFT SKILLS (GENERAL SKILLS)

SSM 700.1 Time management/Learning

SSM 700.2	and Leadership skills Management and Business skills/ Team building
SSM 700.3	Entrepreneurial skill 1 (software/ Hardware maintenance)
SSM 700.4	Entrepreneurial skill 2 (Embedded Automation)
SSM 709.1	Entrepreneurship
SSM 710.1	Communication skills/ Technical writing
SSM 710.2	Project/ Field Studies Report
SSM 710.3	Presentation/ Bidding Skill
SSM 720.1	HSE in Energy Industry/ HSE in Occupational Health
SSM 720.2	Environmental Consideration in E & P Industry/Energy
SSM 720.3	Ethics & Governance/ Community Relations
SSM 730.2	Probability & Applied Statistics
SSM 740.1	Introduction to Computer Technology
SSM 740.2	Introduction to ICT/Internet skills
SSM 740.3	Computer programming for Engineers & Scientists
SSM 740.4	Autocad - Design and Application

2. ENGINEERING SKILLS

GEM 730.1	Engineering Mathematics
GEM 730.3	Applied Mathematics for Petroleum Engineers and Geoscientists
GEM 750.1	Basic Thermodynamics
GEM 750.2	Basic Electrical Engineering
GEM 750.3	Fluid Mechanics
GEM 751.1	Transport Phenomena I
GEM 751.2	Transport Phenomena II
GEM 751.3	Engineering Drawing I
GEM 752.1	Engineering Drawing II
GEM 752.2	Workshop Practice
GEM 752.3	Strength of Materials

3. PETROLEUM TECHNOLOGY

DPT 709.1	Introduction to Oil and Gas Industry
DPT 710.1	Fundamentals of Geosciences
DPT 710.2	Wellsite Geology
DPT 710.3	Geology Practical skills
DPT 720.1	Rock and Fluid Properties
DPT 720.2	Reservoir Engineering I
DPT 720.3	Reservoir Engineering II
DPT 721.1	PVT/CORE Analysis
DPT 722.2	Research Methodology in Petroleum Engineering.
DPT 730.1	Petroleum Engineering Rock Mechanics
DPT 730.2	Drilling Operations

DPT 730.3	Drilling/ Cementing fluids/ Cementing Laboratory
DPT 731.1	Well Logging and Interpretation

DETAILED COURSE DESCRIPTION

1. SOFT SKILLS (GENERAL SKILLS)

SSM 700.1 Time Management, Learning and Leadership Skills Definition of personal time management, the ways of winning the “Eff” words; effective, efficient and effortless in time management, emphasizing their daily routine application, ways of managing time; always define your objectives as clearly as possible, analyze your use of time, have a plan, action plan analysis. Facets of personal time management, symptoms of poor time management, identification of common time stealers; the telephone, lack of priorities/objectives, attempting too much, drop in visitors, ineffective delegation. How to be an effective learner, ways of achieving effective learning, how to tackle assignments, projects and writing of reports. Qualities of good leadership, roles of a good leader.

SSM 700.2 Management and Business skills/ Team building Definition of a team, features of good teams, ways of team building, stages involved in team building; clarification of collective goals, identification of inhibitors to reach desired goals and their removal, ways of assessing and monitoring team progress, ways of improving team performance using feedback strategy from team assessment. Roles of managers,

SSM 700.3 Entrepreneurial Skills 1 (Software and Hardware maintenance)

The instructor should highlight that to become a successful entrepreneur the following basic and fundamental general skills are desired such as: communication (oral and writing), software development and hardware maintenance, team building and creative-thinking (finding new ways to solve problems) skills. Planning and research, good decision making, organization (set priorities and organize to achieve them), financial management, record keeping, ways of goal setting and business management skills.

SSM 700.4 Entrepreneurial Skills 2 (Embedded Automation) Essentials of Embedded System, Microprocessor and Microcontroller, Development process in Embedded System. Introducing the Embedded System Software, System Architecture and learning tools, The LPC1768 Microcontroller, getting started with the embedded System software and Programming. Introduction to the Development Environment. Digital input and Output. Analog input and output.

Entrepreneurial Embedded System, Design and construction of Automated Systems, Entrepreneurial Projects.

SSM 710.1 Communication skills /Technical Writing.

The different components of a proposal writing: the introduction, literature review, methodology and reference, detailed description of each of these components and the numbering of adjoining subsections in each component. Difference between Paid and unpaid proposal writing formats, presentation of diagrams, graphs, tables and equations.

SSM 710.2 Project/ Field Studies Report

Writing of feasibility report (FR), detailed project report (DPR) and presentation of working drawings (WD). Basic definition of FR, DPR, Project report and WD for small, medium and large-scale industries. Writing of technical briefs. Preparation of bill of quantities, introduction to Risk analysis.

The power of good listening and observation in field trips, identification of Key elements to be reported. Discussion of the different components of a field report: writing of abstract, acknowledgment, table of contents, the observation at different locations of the trip, presentation of figures and tables, conclusion and citing of references.

SSM 710.3 Presentation/ Bidding Skill

Oral technical presentation: via giving seminar symposiums, conference and workshop papers and the difference between these forms. Use of overhead projector, slides, blackboards, etc for presentation. Radio and Television presentation. Requirements for individual and team presentations, interview skills. Preparation of bid: profile of the company, services, proof of experience presentation of materials and equipment; pictures, list of past and current jobs executed, cost of previous jobs and the cost of anticipated project.

SSM 720.1 HSE in Energy Industry / HSE in Occupational Health Safety and Security Considerations in E&P Industry/Energy Industry.

Development of industrial safety, definition of safety, safety regulations measures of implementing safety, unsafe acts, definition of accident, causes of accidents, flame and flame propagation, fire and explosion, limits of flammability, industrial fire protection, labeling and identification of hazardous materials, Use of PPE's, instructional safety signs, alarm signals. Use of security gadgets: on well heads, in flow stations, on flow lines, armed personnel.

SSM 720.2 Environmental Considerations in E & P Industry/ Energy Industry

Gas flaring and venting, oil pollution, causes of gas flaring and oil pollution; blowout, pipeline and flowline leakages, sour gas production, sea transportation hazards, need for oil spillage prevention and control, prevention and control of gas flaring, impact on the environment, ecology; global warming, pollution of water, land, air. Methods of control: mechanical, chemical and biological. Global pollution problems, government regulations and contingency plans.

SSM 720.3 Ethics & Governance/ Community Relations

Definition of sustainable industry, anticipated economic, environmental and social trends, new ways of doing things (business) that improve economic, environmental and social performance. Sustainable industry initiatives; impact of government policies, industry project and eco-efficiency. Sustainable tools and resources, Conservation of raw materials, non-renewable energy sources, alternative sources of energy (solar, wind, nuclear), biofuel technology, recycling schemes to generate energy.

SSM 730.2: Probability & Applied Statistics

Axiomatic definitions of probability. Basic rules of probability. Bayes formula. Permutations and combination. Tabular and graphical representation of samples. Measures of central tendency and dispersion. Random variables. Probability distributions, rectangular, hyper-geometric, binomial, poisson and normal distribution and Mathematical expectation. Mean and variance of a distribution, Bivariate distributions, Joint, marginal and conditional distributions covariance; correlation coefficients. Regression and correlations. Method of least squares, Regression curves. Random sampling, Sampling distributions, Expected value, and Standard error. The control limit theorem. Student's t, X² and F-distributions. Confidence intervals for mean, proportion, difference of means, difference of proportion and ratio of variances. Elements of tests of hypothesis: critical regions, significance level, type I and type II errors.

SSM 740.1 Introduction to Computer Technology

This covers basic computer appreciation. Introduction to hard and softwares, visual identification of the components. Applications of Microsoft Word, Excel in programming and mathematical analysis and the introduction of Microsoft Power Point for slide preparation for presentation.

SSM 740.2 Introduction to ICT/Internet Skills

Browsing skill; use of different search engines, downloading and uploading of articles and papers, navigational skills during subscriptions, local information transfer skill, development of web addresses, signing-up of e-mail address, chatting.

SSM 740.3 Computer Programming for Petroleum Engineers and Scientists

Algorithms, flow chart and pseudo code. Computer languages, programming in Fortran 77, Visual Basic, and C++. Debugging techniques, computer code security.

SSM 740.4 Autocad –Design and Application

Introduction to AutoCAD; Installation and Launching of AutoCAD, Introduction to AutoCAD Environment and learning tools. Introduction to Workspace; Isometric Drawing, Orthographic Drawing, Isocircles, Tangent. Layouts, Exporting DWG Files to PDF, Creating Blocks, Primitives, 3D Tools (Extrude, Loft, Presspull, Revolve, Sweep etc). Visual Styles, Annotation, Surface Finishing, Plotting of Drawings.

2. GENERAL ENGINEERING SKILLS

GEM 730.1: Engineering Mathematics

Partial differentiation, directional derivatives, gradient differential, infinite series, matrix algebra, solutions of systems of linear equations and numerical techniques. Multiple Integrals: Double and triple integrals, analysis in Cartesian coordinates, change of variable to polar, cylindrical and spherical coordinates. Expansion of power series, application of Taylor's series, Fourier series orthogonal systems of functions, Fourier integral, Fourier transformation, applications. Special functions, gamma, Beta, Bessel, Legendre and hypergeometric functions. Euler's equations, geometrical and physical interpretation of solutions. Operators and operator method of solving equations, system of linear equations. Operational calculus, Laplace transform, theory and application to initial value problems.

GEM 730.3 Applied Mathematics for Petroleum Engineers and Geoscientists

In this course the lecturer should teach the students the following: the derivation of fluid flow equations in the reservoir using the law of conservation of mass, transport equation, equation of state and the equilibrium equation. Derivations should consider both single and multiphase flow in Cartesian and radial systems with emphasis on the dimensions, the classification of boundary conditions and the use of initial conditions. Solution methods for first and higher order

differential equations, the application of Fourier equation, Laplace transform, Bessel function, Gamma function and the Green function in petroleum engineering.

GEM 750.1 Basic Thermodynamics

Basic concepts definitions, thermodynamic properties, the thermodynamic system units, equations of state for the perfect and real gases; the First law of thermodynamics, energy equations and analysis; basic thermodynamic processes and cycles for ideal gas, pure substance and mixtures; reactive systems; thermodynamic relations; the Second law of thermodynamics and introduction to irreversible processes.

GEM 750.2 Basic Electrical Engineering

Heat transfer basic concepts, heat transfer modes and rate processes, Fourier's law of heat conduction; Newton's law of cooling, Stephane-Boltzmann law of thermal radiation and configuration factor algebra; stationary heat conduction in simple geometries and composite bodies; correlational: equations for convection heat transfer, boiling and condensation; heat transfer by combined modes, insulation and intensification of heat transfer; electrical and triple analogies and introduction to heat exchangers.

GEM 750.3 Fluid Mechanics

Fundamentals, physical characteristics and properties of fluids, viscosity, surface tension, pressure. Fluid static's manometry, forces on submerged surfaces, buoyance and floatation, stability of floating bodies. Fluid masses subject to acceleration. Kinematics of fluid motion, continuity equation, circulation and vorticity. Flow of ideal incompressible fluid, Euler's equation, Bernoulli's equation, Application of Bernoulli's equation and 2-D flow systems. Impulse and momentum principle, elementary and simple flow machines applications. Some aspects of a real flows, laminar and turbulent flow, flow in pipes, flow in open channels.

GEM 751.1 Transport Phenomena I

Fluid mechanics, Microscopic and macroscopic material, momentum and energy balances, Momentum transfer in fluids in laminar and turbulent flow. Dimensional analysis: flow in conducts, pumps and fluid metering. Heat and mass transfer, heat transfer rate: conducting, convection and radiation mechanisms of heat transfer; heat exchanger design. Molecular diffusion; Mass transfer mechanisms, phase mass transfer coefficients, prediction of mass transfer rates.

GEM 751.2 Transport Phenomena II

Momentum energy and mass transfer in solids, in laminar and turbulent fluid in and between two

phases; theory of molecular and eddy viscosity, thermal conductivity and diffusivity, microscopic and macroscopic equations of motion, radiant heat transfer.

GEM 751.3 Engineering Drawing I

Introduction to drawing instruments, scales, drawing aids and their proper use, Size of paper and drawing layout. Dimensioning, line work and lettering, Geometrical constructions and engineering graphics. Development of Geometrical figures and intersection of solids and curves. Introduction to projections.

GEM 752.1 Engineering Drawing II

Orthographic projections in first and third angles, isometric Projection; sectioning, auxiliary views and staggered sectioning. Freehand sketching, conventional practices with simple examples including threads and threaded fasteners, cam profiles and Assembly drawing from detailed components.

GEM 752.2 Workshop Practice

Introduction to workshop practice with inherent characteristics of inculcating the spirit of teamwork: Use of measuring devices and bench tools. Manufacturing methods with metal materials (cold and hot workings) such as deep drawing; wire drawing; spinning and rolling extrusion. Machine-tool manufacture (turning, milling and shaping etc), Fabrication by welding and threaded fasteners and riveting, etc, metal-casting; manufacture of plastic products (moulding and blowing). Fitting and joining processes (soldering, brazing), wood-working and machinery. Surface finishes, forging.

GEM 752.3 Strength of Materials

Basic concepts and principles of mechanics, definition of movements and couples. Friction problems, determination of structures (frames, machines, shear forces, moment of inertia). Thin cylindrical spherical and conical pressure vessels, cylindrical shells with rings, torsion of circular shafts and power transmission of shafts. Axial force, shear force and bending moment diagrams. Pure bending of beams, bending stresses in composite beams, shearing stresses in beams, complex stresses, principal stresses.

3. PETROLEUM TECHNOLOGY

Petroleum Geoscience & Reservoir Engineering
This course covers general geosciences, applied Petroleum Geology and practical skills in Geology. The description of each of these components is given below:

DPT 709.1 Introduction to Oil & Gas Industry

This course is designed to acquaint participants with an awareness level of the structure,

Operations of the Nigerian and international Oil and Gas Industry. It will expose the participants to the different segments of the Oil and Gas industry and their interrelationship so as to provide a basis for further detailed study of the operations of Oil and Gas Industry. The course further introduces the participants to development of Oil and Gas assets and presents the issues of profitability in petroleum exploration and development

DPT 710.1 Fundamentals of Geosciences

The scope of geophysics: solid earth geophysics; the shape of the earth; geomagnetism, marine geophysics isostasy. Geophysical instruments, field data processing interpretation and application of different geophysical methods (gravity, magnetic, electrical, seismic, radiometric, etc). Geophysical logging of bore holes. Geophysical prospecting and exploration.

DPT 710.2 Wellsite Geology

This covers introductory geology, petroleum geology and formation evaluation: specifically, the following areas are emphasized: Geologic map interpretation. Simple geologic structures. Organic movements, volcanism and mountain building. Introduction to paleontology and stratigraphy, historical geology. Introduction to petrology. Elementary geology of Nigeria. Economic minerals of Nigeria. Applied aspects of geology. Physical and chemical characteristics of petroleum, reservoir geology. Chemistry and origin of formation water. Origin, migration and accumulation of petroleum. Structural stratigraphic and combined traps. Basin analysis and the Niger Delta petroleum prospect. Other Nigerian petroleum deposits. Global distribution of petroleum in time and space. The energy problem. Subsurface methods in petroleum exploration and exploitation. Well-logging methods and interpretations. Open-hole and cased-hole logs, their mechanics and manipulations. Labs and/or field trips will accompany course.

DPT 710.3 Geology Practical Skills

This covers Mapping/Map interpretations, identification outcrops, identification/classification of rocks and minerals accompanied with a Field Trip.

DPT 720.1 Rock and Fluid Properties

This course covers rock and fluid properties, reservoir engineering and the water and gas flooding aspects of enhanced oil recovery. Participants are exposed to the petrophysics of reservoir rocks. Discussion of porosity, permeability, saturation, electrical conductivity, capillary pressure and relative permeability. Reservoir fluid properties and behaviour under high pressure and relatively high temperature. Gas

laws, pressure-volume-temperature (PVT). Characteristics of binary and complex hydrocarbon systems and equation of state. The K-Value concept and its use in stage separation. The use of fluid properties in reservoir engineering.

DPT 720.2 Reservoir Engineering I

Description and classification of natural underground oil and gas reservoirs. Fluid flow in porous media. Reservoir drive mechanisms. Engineering calculations of fluid content of reservoirs and predicted recoveries of oil, natural gas geothermal, and water reservoirs, material balances, steady and unsteady flow equation. Water flooding and gas injection aspects of enhanced oil recovery.

DPT 720.3 Reservoir Analysis II

Mathematical basis for pressure transient tests. Theory and Practice of pressure tests, techniques for oil and gas well. Pressure build-up, Pressure drawdown; pressure fall-off, interference, multi-rate, injectivity and pulse testing. Determination of average reservoir pressure, reservoir heterogeneities and rock properties. Test design, etc.

DPT 721.1 PVT/CORE Analysis

Introduction to Coring, Core Screening, Routine Rock Properties, including Full Diameter Analysis and Overburden Measurements, photography and Imaging Liquid Permeability, Wettability, Electrical Resistivity, Acoustic Properties, NMR, Capillary Pressure Relative Permeability and Summary.

DPT 730.1 Petroleum Engineering Rock Mechanics

Fundamentals of rock mechanics, crater formation: plastic and pseudo-plastic characteristic of rocks. Load rate mechanism statistic and impact leading; tooth penetration as a function of differential and overburden pressures. Effects of differential pressure on drilling rate, Rock properties and earth stresses.

DPT 730.2 Drilling Operations

Well drilling methods, rheology of Newtonian and Non Newtonian fluids, chemical properties and carrying capacity of drilling fluids, rotary drilling hydraulics, prediction and control of abnormal pressures: pressure loss calculations in rotary drilling, surge and swab pressures and hole problems encountered in drilling operations. Coiled Tubing Drilling, Slim hole and monobore aerated fluid Drilling. Measurement While Drilling (MWD).

DPT 730.3 Drilling/Cementing Fluids/Cementing Laboratory

Functions and composition of drilling fluids. Mud

properties; testing classification and chemical analysis. Drilling mud calculations, control of mud properties. Well completion fluids. Drilling mud performance. Cementing and Cement calculations, instrumentation, Laboratory Work.

DPT 731.1 Well Logging and Interpretation

Open hole and Cased Well logs; logging devices, principles and technology. Electrical, radioactive, acoustic velocity, caliper, inclinometer, dip meter and thermometer logs. Well log interpretation. Use of combination logs, cross plots. Production logging. Computer processing of logs. Measurements-while-drilling systems. Logging While Drilling (LWD)

DPT 731.2 Onshore/Offshore Drilling Operation

Participants are exposed to the following areas: Casing design and selection, tubing design and selection, primary and secondary cementing methods, sand control, perforation, formation testing and initial well completion.

DPT 731.3 Well Completion and Workovers

Participants are exposed to the following areas: Casing design and selection, tubing design and selection, primary and secondary cementing methods, sand control, perforation, formation testing, initial well completion, and workovers/Through Tubing (TT) Re-entry such as stimulation, acidizing, hydraulic fracturing etc.

DPT 740.1 Subsurface Production Operations

Participant in this course are expected to be conversant with the Analysis, specification and characteristics of production systems. Introduction to Production Engineering, Well Performance (IPR, RI Concepts), Design Factors of Well completion, Well Completion; Well Analysis; Inflow Performance relationships. Study of flow in pipes; sucker rod pumping; gas lift; submersible pumping; traverse curves hydraulic pumping. Production logging, offshore technology. Formation damage assessment; production optimization. Use of Software: PERFORM, PROSPER, PIPESIM.

DPT 740.2 Surface Production Operations

Participants are exposed to surface equipment: Gathering Systems, Design and Testing of flow lines, service and cleaning of systems; Phase separation: Separation process, separators and component design and construction of separators, dehydration, emulsion problems: Oil emulsion, emulsifying agents and emulsifiers. Choice and dosage of emulsifiers; Corrosion and controls; Storage fiscalization and custody transfer, offshore surface operations.

DPT 740.3 Natural Gas Engineering

This course covers natural gas engineering and

processing. Specifically, the following topics are emphasized: Estimation of reserves and Well performance, Production and transportation of natural gas, natural gas metering and compression. Field handling of natural gas and Sour gas problems. Study of gas condensate fields and underground storage. Application of the concepts of thermodynamics transport phenomena, and phase behaviour in processing; utilization and conservation; gasoline plant design; Liquefied Petroleum Gas (LPG), Liquefied Natural Gas (LNG) and other gas utilization techniques. Others sources of gas.

DPT 750.1 Fundamentals of Petroleum Economics

In this course, the instructor should teach: volumetric estimation of hydrocarbon reserve, Profitability analysis in oil and gas investments; inter-relationship of technical and economic data; Decline curve analysis, Cash Flows, Depreciation, Amortization, Depletion and Tax credit, Time value of money, profitability indices, present value of declining income, profitability of a development well, short cut profitability methods, accelerated projects, capital and budgeting, projects evaluation.

DPT 750.2 Practical EIA Review and Monitoring

This course will cover evaluation of risk and uncertainty in oil and gas exploitation. Decision tree analysis; Utility theory, Probability, Expected Monetary Value (EMV), Expected Utility value maps, Monte Carlo simulation; preference theory; pricing and bidding strategies; optimum development of oil and gas fields.

DPT 750.3 Energy Law and Policy

Laws and Regulations: The Nigerian Legal system, Industrial safety law, electricity supply laws, water and public health laws; laws company and partnership law; copy writes and trademarks. The relating to employer – employee; contract law; land acquisition law.

4. PETROLEUM PROJECTS

DPT760 Field Development Projects (Team Projects) DPT 760.1 Team Project – Reservoir Study

Students in teams will investigate petroleum reservoir problems and proffer likely solution using industry based software in the study. Reports shall be written and defence shall be made for onward grading.

DPT 760.2 Team project–Drilling and Well Completion/ Workover Project

Students will engage in drilling, well completion and workover projects. A typical problem shall be studied with a view of solving problems. At the end of the study, a report and oral presentation shall be made to assess the performance of each team.

DPT 760.3 Team Project – Production/ Economics Project.

Petroleum production software shall be used to design and select some accessories such as tubing size, choke size, best completion method and other accessories in the complete producing system. Detailed economic analysis to select best alternatives as a guide in decision making should also be incorporated.

DPT 770 INDUSTRIAL PROJECTS (INDIVIDUAL PROJECTS)

Independent investigation of petroleum projects under the supervision of an academic staff.

Elective Courses:

DPT 790.3 Petroleum Engineering Design Project

The projects will cover field and/or laboratory studies. Every student is required to submit a project report on the solution of an integrated petroleum-engineering problem. Analysis and evaluation of surface production processing fluid separation, storage, measurement, treating, custody transfer, transmission, disposal, corrosion, other operations.

CHM 741 Electrochemistry (3 Units)

Chemical equilibria: Ionic equilibria. Conductance, theory and measurements, interpretation of data for strong and weak electrolytes. Conductance and transport processes. Thermodynamics and galvanic cells. Standard electrode potentials. Practical electrodes. Molecular forces in solid and liquids. Dipole moments interaction potentials and forces. Reversible galvanic cells, measurement of emf. Electrode potentials and the electrochemical series. Standard state and the nernst equation. Applications of emf measurements (excluding thermodynamic relationships). Potentiometric titration including measurement of pH Redox reactions. The electrical double layer and its applications.

PEE 702: Introduction to Structure Programming (2 Units)

Language definition structure, data type structure review of basic data type including list and trees control structure and data flow. Computer structure and machine language, file manipulation techniques for updating, deleting and inserting records in sequential files. Random access. Tree traversal and balance, high-level language data management facility. Words processing.

ME 716 Law and Management I (2 Units)

Basic Management: Functions of Management, management principles and practices. Location of industry. Introduction to production management – scope of production management. Types (scales) of production. Basic concept of production planning and control.

PEE 711: Oil Pollution and Control (2 Units)

Causes of oil pollution; blowout, pipeline and flow line leakages, sour-gas production, sea transportation hazards. Need for oil spill prevention and control; impact on the environment-ecology. Methods of control; mechanical, chemical and biological methods. Global pollution problems; government regulations.

PEE 517: Enhanced Oil Recovery (Elective) (3 Units)

Principles of displacement; rock properties fluid properties in reservoir; phase behaviour; displacement efficiencies. Gas methods; miscible slug; enriched gas; high-pressure lean gas; carbon dioxide; nitrogen and other inert. Chemical methods micellar – polymers; polymer augmented water flood; permeability alteration; caustic. Thermal methods; steam stimulation; steam drive; in-situ combustion.

ME 761 Power Plants and Energy Studies

(Elective) (3 Units) Revision of problems in thermodynamics cycles and irreversibility, criteria of excellence combined cycles, Gas turbine cycles, Boilers and heat exchangers, large thermal power plant, nuclear plant and its cycles. Hydro power plants, Electric power generation, supply and distribution. Power system structure, transformers, lines, cables and generators. Energy sources. Energy and civilization, renewable and non-renewable energies. Solar energy solar collectors, solar tracking systems, wind power, photovoltaic panels, satellite and beaming systems.

**MASTER OF SCIENCE IN PETROLEUM
ENGINEERING AND PROJECT
DEVELOPMENT**

PROGRAM OVERVIEW

Program presentation

The Institute of Petroleum Studies (IPS) is an international post graduate institution established through a collaboration between IFP School (France) and the University of Port Harcourt (Nigeria) in the year 2002.

IFP School in France has for many years established international collaboration and partnership with world-renowned Universities in

different parts of the world (Imperial College of Science & Technology, London (UK); Colorado School of Mines (USA); Texas A & M (USA); Oklahoma University (USA); McGill University (Canada); Technical University Delft (Netherlands) and Université Gubkin (Russia)).

This brings together different cultures, academic programs and technology applications. Through its association with IFP School, IPS now belongs to this international consortium of Institutions.

Program Objective

The University of Port Harcourt and IFPEN have associated their experience in teaching and research in the fields of petroleum exploration, reservoir characterisation, petroleum engineering and field management to create a Master's degree dedicated to petroleum engineering and project development.

The oil industry is greatly interested in increasing knowledge and integrating know-how into the architecture and management of petroleum reservoirs, in view of a more efficient recovery. For this reason, oil companies, service companies and governmental agencies are looking for professionals able to join efficiently multidisciplinary teams associated in oil or gas field development and management. Furthermore, in the context of energy transition, the oil industry is interested in developing competencies and know-how to move ahead on the path of decreasing the carbon footprint of oil and gas projects, while ensuring their sustainability and limiting their environmental impact.

The Master of Science in Petroleum Engineering and Project Development is designed to develop professional engineers with a high level of competency in drilling, reservoir engineering, well production and process. It prepares engineers with a good and sound knowledge of the basics of petroleum engineering and capable of fast adaptation to the needs of the Petroleum Industry, particularly in the frame of the energy transition.

By associating Nigerian and European cultures the program also prepares the student to work in an international environment, as required now by the energy industry.

Upon Completion of this program the graduates will be able to:

- Master the basic techniques needed to properly evaluate and manage oil and gas fields.
- Design and supervise the drilling of producing wells in an efficient way. Carry well maintenance programs to improve

hydrocarbon recovery, design work over and stimulation programs.

- Master the basic techniques needed to design and realise hydrocarbon-producing facilities from well head to loading terminal. (On and Offshore)
- Carry out Production optimisation and field performance enhanced programs.
- Participate effectively in multidisciplinary oil and gas field review and field development teams.
- Integrate HSE into all engineering, construction, operations and facility management work. In order to instill this 'HSE' culture, this theme is addressed across the entire program. In particular, safety is very present in the lessons and during site visits.
- Situate their future profession within a sustainable development approach (increased energy efficiency, reduction of the carbon footprint, importance of regulation, ethics and societal aspects).

Organisation of the Institute

The Institute of Petroleum Studies (IPS) is situated within the University of Port Harcourt in Choba (Rivers State). It is managed by both UNIPORT and the IFP School in France through a close collaboration between the Director of the Institute (appointed by UNIPORT) and the co-ordinator (appointed by IFP School). Teachers will either come from IFP School or UNIPORT or will be specialist engineers from the oil industry. Courses are held in English. The Institute will provide students with efficient computer hardware and software similar to what can be found within the oil companies.

Admission requirement: For admission into the program candidates must possess a minimum Second Class (Upper Division) honours Bachelor's Degree in Engineering. Engineers with 5 years working experience in the petroleum industry who graduated with Second Class (Lower Division with CGPA > 3) honours Bachelor's degree will also be considered.

Award of Degree: Successful students at the end of the program shall receive a Master's Degree jointly awarded by the IFP School, France and the University of Port Harcourt (UNIPORT), Nigeria.

Programme structure

Duration: The program will extend over a 48 weeks full time study and be devised in 5 Modules:

- General Module (6 weeks)
- Geosciences & Reservoir Module (12 weeks)
- Drilling Module (12 weeks)
- Production Module (11 weeks)
- Project Module and Project Presentation (7 weeks)

Degree Awarded

After successful completion of the course, graduates will receive a **Master of Science in Petroleum Engineering and Project Development**. This degree will be jointly awarded by UNIPORT, Nigeria and IFP School, France and is credited 53 credits hours corresponding to 96 ECTS (European Credit Transfer System).

One course corresponds to 1 credit hours.

Using the European standards one course is also called UE (Unit of Education). The European Credit Transfer System (named ECTS) is used for European students. It is based on the student's workload required for completing successfully the academic program objectives. These objectives are based on examination results and competencies gained.

Summary of the requirements to get the Master of Science in Petroleum Engineering and Project Development is given in the following table:

	Number of weeks	Credits	
		Credit hours	ECTS
General Module	6	6	6
Geosciences and Reservoir (GSR) Module	12	12	24
Drilling Module	12	12	24
Production Module	11	11	22
Project Module and FDP report and presentation. Industrial Project/Thesis	7	12	20
Total	48	53	96

Courses organisation

The courses will be given 5 days a week from Monday to Friday. 6 ¼ Hours of daily course: From 8:00 to 12:00 (with a 30 mns break). From 13:00 to 16:00 (with a 15 mns break).

The Institute will be open daily from 08:00 AM to 17:30 PM and students will be allowed outside the courses hours to review their studies, consult documents or books, and work on computers.

Course examinations are conducted on Saturday and merged by group of two exams organized every two weeks. Re-sit of failed exams will be organised at specific dates decided by IPS administration

The Field Development Project (FDP) study will be organised in work groups and will be managed

by specialist engineers from the oil industry. This method will familiarise the students with teamwork spirit that is needed in the industry.

The Industrial Project (Industrial Thesis) is an independent study by students to find engineered solutions to oilfield problems. The projects are supervised by Lecturers from the University of Port Harcourt and industrial experts.

Computer Software: Most widely used specialised software (as used by the industry) will be available to the students for practice.

Final Project: A three weeks final project on field development will terminate the Program. This Teamwork will be a synthesis study covering all the aspects of the petroleum engineering.

Project Presentations/Seminars: Both the industrial projects and Field Development Projects are presented to examination boards made up of lecturers from IFP School, Uniport and industry experts. The presentation takes the form of Seminar/Technical Forum.

Grading of exams

Each course is sanctioned by an exam or an assignment or a project and is graded on a percent scale with the following classification:

Grade higher than 70 %: letter Mark is A and number of points is 5

Grade between 60 % and 70 %: letter mark is B and number of points is 4

Grade between 50 % and 60 %: letter mark is C and number of points is 3

Grade less than 50%: The course assessment must be re-taken and the re-sit must be successful

A maximum of two re-sits are allowed during each module. When the res-sit is successful the grade will be a C.

The CGPA calculation takes into account the number of points for each assessment and the Credit Hour of the course. It is calculated on a 0 to 5 scale.

Classroom Rules

1. Lecture starting time is 08:00 am Monday to Friday.
2. Presence to lecture is compulsory.
3. Attendance sheet should be signed when entering the building.
4. Any health related issues should be reported ASAP to IPS Administration
5. Any other absences should be requested by e-mail and duly authorized by the admin Secretary.
6. Absolute silence must be maintained during lectures.

7. Eating, drinking and other acts of distractions are prohibited.
8. All mobile phones should be on silent mode during lectures.
9. Exams are usually organized on Saturday Morning from 09 am to 12pm. All phones must be switched off during exams
10. Presence to exam is compulsory
11. Students are responsible for the cleanness of the white board and the good condition of the Flip-Chart
12. Lecturer Evaluation forms should be returned before Monday morning.

MODULE DESCRIPTION

2.1 General Module (6 weeks)

The goal of this general module is a reminder and should bring to the same level all the students on mathematics, computational, thermodynamic, presentation and communication skills

This module is divided into 2 courses: PPD 801 and PPD 802.

PPD 801: Entrepreneurship, Introduction to Petroleum Industry and HSE (3 weeks)

This Program includes the following subjects:

Week 1	PPD 801-1	Management and Entrepreneurship
Week 2	PPD 801-2	Subsurface role in energy transition
Week 3	PPD 801-3	HSE and EIA (3 days)
Week 3	PPD 801-4	Ethics, Governance and Social Responsibilities (2 days)

PPD 802: Computational and Communication Skills (3 weeks)

This Program includes the following subjects:

Week 1	PPD 802-1	Applied Mathematics/ Applied Statistics for Petroleum Engineers
Week 2	PPD 802-2	Programming skills
Week 3	PPD 802-3	Communication Skills (Writing and Presentation)

MANAGEMENT AND ENTREPRENEURSHIP GENERAL MODULE PPD 801-1 (UNIPORT)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	1

OBJECTIVES

This course provides business and non-business majors with the skills necessary to succeed as an entrepreneur. The fundamentals of starting and operating a business, developing a business plan, obtaining financing, marketing a product or service and developing an effective accounting system will be covered.

PROGRAM

- An Overview of Entrepreneurs and Entrepreneurship /Start your small business Basic
- Forms of Ownership, Becoming an Owner, Planning, Organizing, and Managing Joint
- Managing Human Resources - Employee Relationships
- Obtaining the Right Financing, Developing Marketing Strategies
- Basic Financial Planning

SUBSURFACE ROLE IN ENERGY TRANSITION

GENERAL MODULE PPD 801-2 (UNIPORT)		
NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	1

OBJECTIVES

The purpose of this course is to give a general overview of the subsurface role for energy transition, including hydrocarbon exploration and production, usage of the subsurface for gas storage and CO2 geological sequestration, the assessment and exploitation of geothermal resources. It will emphasise the necessity to move toward a low carbon industry, while limiting the environmental footprint. This teaching unit develops an understanding of the energy industry trends and its impact at an engineer’s level, and the confidence and professional enthusiasm which comes with that understanding. It focuses on practical applications, and includes classroom exercises.

PROGRAM

The International Energy/Petroleum Industry/Organisations

Basic Structure of Worldwide Oil & gas Industry
International Politics of Petroleum

The Oil & Gas Industry in Nigeria

Joint ventures
Policies and legislations
Producing companies
Host communities
Nigerian LNG Industry

Towards a low carbon industry

The climate change context
Challenges of the energy world to reduce carbon emissions

How the subsurface can contribute to a low carbon future:

Some practical examples
New subsurface engineering needs

HSE AND EIA

GENERAL MODULE PPD 801-3 (UNIPORT)		
NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
3	0.6	0.6

OBJECTIVES

This course will introduce students to the fundamental concepts and techniques in Health Safety and Environment (HSE) in the upstream petroleum industry

PROGRAM

Introduction to Safety, Health and Environment in the oil Industry

- The Oil Industry and the Environment
- Overview of the risks associated with oil research and production
- Review of hazards (fire, chemical, handling and stepping, electrical, noise, explosives etc)
- Accident causation, Role of supervisor in accident prevention
- Accident reporting recording and investigation.
- Job safety analysis.
- Permit-to work system (PTW)
- HSE Performance Monitoring

HSE Statutory Requirements

- HSE Regulatory Framework in E & P Operations
- HSE Legislations and Policies
- The Role of DPR, Federal Ministry of Environment /FEPA
- State and Local Government Environmental Pollution Authorities Sustainable Development /HSE Depts. in Oil & Gas Companies

Environment considerations in E&P operations

- Environmental Considerations in Exploration, in Production Operations, Oilfield Drilling and Production Waste Management
- How to conduct EIAs and Other Environmental Studies (PPA, PIA, SIA etc)
- Environmental Management Policy (EMP), Strategic Environmental Assessment (SEA)

Overview of HSE Management Philosophy

- HSE Management
- Waste management.
- Risk management. Accident prevention

- Implementation of procedures and Monitoring
- Assessment and continuous improvement

ETHICS, GOVERNANCE AND SOCIAL RESPONSIBILITIES

GENERAL MODULE PPD 801-4 (UNIPORT)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	1

OBJECTIVES

To introduce how engineers employed by large companies should be concerned with holding the balance between economic and social goals and between individual and communal goals. The governance framework is there to encourage the efficient use of resources and equally to require accountability for the stewardship of those resources.

PROGRAM

- The concepts, essential principles, and stakeholders of corporate governance
- Corporate Social Responsibility, citizenship and performance
- Board and committee functions and structures and company officers' training, induction, and behaviour
- Corporate governance in Nigeria: background and regulations
- Principles of good corporate governance and corporate disclosure requirements corporate governance disclosure in practice
- Future directions for corporate governance and considerations in corporate decision-making
- Develop an understanding of the nature of entrepreneurship & determine whether you want to be an entrepreneur with your own business or a corporate entrepreneur (entrepreneur in someone else's business)
- Understand how to identify opportunities (problems), develop creative solutions and build a viable business model around these
- Identify and understand the driving forces of new venture success
- Understand the ethical and legitimacy challenges that face entrepreneurs with new ventures

APPLIED STATISTICS FOR ENGINEERS

MATHEMATICS/APPLIED FOR PETROLEUM ENGINEERS

GENERAL MODULE PPD 802-1 (UNIPORT)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	1

OBJECTIVES

This course will help students develop mathematical skills particularly in the use of mathematics to evaluate fluid flow in porous media. The Course involves Philosophy of solution of Engineering Problems; construction, solution and interpretation of mathematical models applicable to the study of petroleum engineering problems.

The Applied Statistics for Petroleum Engineers' course will enable students to effectively use statistics in their work and know the vital role of risk uncertainty analysis in exploration.

PROGRAM

Interpolation

- Theory and Applications
- Piecewise Polynomial Interpolation, Curve-fitting (Regression)

Integrals and Differential Equations

- 1st degree Differential Equations
- 2nd degree Differential Equations

Partial Derivatives equations

Numerical differentiation and Integration, derivation and solutions of Fluid Flow Equations

- Fourier Transforms, Laplace Transform
- Green's function
- Bessel Functions

Vectors and vectorial calculations

Applied statistics for petroleum engineers

- Introduction, Basic probability concepts, analysis of data quality, most common probability distributions (discrete, continuous).
- Basic statistics, definitions, equations of best fit, exercises
- Regression and Correlations, Auto and Cross Correlation, exercises.
- Test of Hypothesis ad significance, General approach to data analysis
- Design and analysis of experiments, sampling techniques, exercises

PROGRAMMING SKILLS

GENERAL MODULE PPD 802-2 (IFP)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	1

OBJECTIVES

The course is designed to develop confidence in the use of productivity software and industry software in petroleum engineering, and to

introduce the latest approaches in the processing of the petroleum industry data.

PROGRAM

- Computer programming, Languages, Software, Data management
- Introduction to Python
- Basics of Machine Learning
- Overview of machine learning
- Regression approaches
- Classification
- Clustering

through lectures during the morning sessions, and practical applications to geosciences data in the afternoon, with Python coding

COMMUNICATION (Writing and Presentation)

GENERAL MODULE PPD 802-3 (UNIPORT)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	1

OBJECTIVES

This course aims:

- to provide an overview of Concept and Dynamics of Communication
- to acquaint the participants with Verbal Communication Techniques
- to introduce the participants to Presentation Techniques
- to equip the participants with the basic skill for use of Power Point

PROGRAM

Effective Engineering Report Writing

- Preparing to write an engineering proposal
- How to write an effective technical report
- Report structure and the essence of good writing
- Writing research study
- Format of proposals: funded and unfunded/International & National
- Company Study Proposals/Terms of Reference
- Common Pitfalls in Proposal Writing

Technical Presentation Skills

- The purpose of a presentation
- Types of Technical Presentation
- The Essence of Good Presentation: Form & Content
- Organizing your Presentation
- Preparing for a Presentation
- The Use of Computer in Presentation: PowerPoint Templates etc
- Practicing your Presentation
- The D-Day
- Handling Nervousness

- How to Answer Questions Effectively

Technical Presentation Skills Workshop

- Presentation Aids/Equipment: Flip Charts, Slide Projectors, Overhead Projectors, In-Focus (Paperless Presentation) etc
- Cases Studies
- Syndicate Sessions

2.2 Geosciences and Reservoir Module (12 weeks)

The Reservoir Module part aims to give students the ability to:

- Initiate acquisition, processing and interpretation of data used in reservoir characterisation.
- Evaluate the quantities of hydrocarbon in place by means that include probabilistic methods.
- Analyse Hydrocarbon reserves and drainage mechanisms, propose improved recovery systems
- Develop a plan to efficiently produce a reservoir with an optimum production profile, optimise the number of well, and predict production decline and secondary or tertiary recovery with associated work-over.

This Module is composed of 4 Courses: PPD 803, PPD 804, PPD 805 and PPD 806.

PPD 803: Petroleum Geosciences (3 weeks)

This Program includes the following subjects:

Week 1	PPD 803-1	Fundamentals of Geosciences
Week 2	PPD 803-2	Geology Field Trip
Week 3	PPD 803-3	Reservoir Geology and Geophysics

PPD 804: Introduction to Reservoir Analysis (3 weeks)

This Program includes the following subjects:

Week 1	PPD 804-1	Rock and Fluid Properties
Week 2	PPD 804-2	Well Logging and Interpretation
Week 3	PPD 804-3	Fundamentals of Reservoir Engineering

PPD 805: Reservoir Modelling (3 weeks)

This Program includes the following subjects:

Week 1	PPD 805-1	Well Testing and Interpretation
Week 2	PPD 805-2	Data Integration & Reservoir Modeling
Week 3	2PPD 805-3	OOGIP Calculation with uncertainties

PPD 806: Applied Reservoir Engineering and Simulation (3 weeks)

This Program includes the following subjects:

Week 1	PPD 806-1	Reservoir Management
Week 2	PPD 806-2	Reservoir Simulation
Week 3	PPD 806-3	Reservoir Simulation Project

Project: The Reservoir Project involves an actual field case with Reservoir Simulation and Determination of a production profile including uncertainties and comparison with observed field performance.

**FUNDAMENTALS OF GEOSCIENCES
GEOSCIENCES AND RESERVOIR
MODULE PPD 803-1 (UNIPORT)**

NUMBER OF DAYS:	CREDIT HOURS:	ECTS: 2
5	1	

OBJECTIVES

The students not having any geosciences knowledge, the lectures aim to give them a broad overview of general geology as an introduction of the more specialised "petroleum geology" course.

At the end of this module, students are expected to

- have a broad understanding of the structure and composition of the earth and the Geologic Time Scale
- To recognize and distinguish between rock types and know what makes up source rocks and reservoir rocks
- Understand the principles of stratigraphy and correlation
- Understand the principles of Geophysics
- Become familiar with Geologic structures and different types of Petroleum Traps
- Understand the Geology of the Niger Delta

PROGRAM

General introduction

- The Earth – structure and Composition
- Plate Tectonics
- Geologic time Scale
- Basin Formation

Rock and Minerals

- The rock cycle
- Different types of rocks – igneous, metamorphic and sedimentary
- Mineral composition of rocks / Stable/Unstable minerals
- Geologic processes – Weathering, Transportation, and depositional lithification of Sediments to form sedimentary rocks.

Types of Sedimentary Rocks

- Classic and Non Classic Sediments
- Reservoir materials – carbonates, sandstones
- Sedimentary textures – effects on Reservoir types and Quality.

Principles of Stratigraphy and correlation

- Litho, Chromo and Biostratigraphy.
- A sequence Stratigraphy as application in oil exploration
- Principles of Correlation and use of Correlation in well planning and Field development

Structural Geology and Petroleum Traps

- Rock Deformation
- Faults, Folds, Unconformities, Joints, Diapirs etc
- Sedimentary Structures
- Basic Map Interpretation
- Types of Petroleum Traps – Structural, Stratigraphic and combination
- Seals and cap rocks

GEOLOGY FIELD TRIP

**GEOSCIENCES AND RESERVOIR
MODULE PPD 803-2 (UNIPORT)**

NUMBER OF DAYS:	CREDIT HOURS:	ECTS: 2
5	1	

OBJECTIVES

The geology field trip is used as an illustration of the first week. The students have the opportunity to see at a true scale, different geological outcrops covering the main geological aspects (geological landscapes, sedimentology, stratigraphy, structural geology etc...)

A visit to a company core storage is organised.

At the end of the course, students are able to:

- understand the main geological principles
- use the most common terms in geology
- classify the most common rocks met at earth surface
- recognise the main type of faults on cross sections and on maps

PROGRAM

Field Trip is to experience the nature of outcrops Mapping, Map interpretation.

This is a 7 days fieldwork where sedimentary succession within the lower Benue Trough (Anambra and Afikpo basins) will be visited. The rock successions have been selected to illustrate depositional environment analogous to the subsurface Niger Delta. Some rock exposures will be visited during the period.

**RESERVOIR GEOLOGY and GEOPHYSICS
GEOSCIENCES AND RESERVOIR
MODULE PPD 803-3 (IFP)**

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

At the end of this course module, the student is able to:

- list the different kind of sedimentary basins and understand the exploration process,
- list the elements and the functioning of a petroleum system leading to an accumulation and describe the different types of hydrocarbons,
- describe briefly the seismic tool as it is used in exploration and field description,
- describe briefly the geological data as they are used in reservoir and field description.

PROGRAM

Sedimentary basins, petroleum systems and exploration process

Sedimentary basins: types and locations

Petroleum systems

- Source rocks and types of hydrocarbons
- Reservoir/seal
- Traps
- Timing and entrapment

Geophysics: Seismic reflection

- Seismic tool: principles and limitations
- Seismic tool: Interpretation (Geological interpretation and limitations, Time to depth conversion)

Geophysics: Applications to reservoir description

- 3 D seismic acquisition, processing and interpretation
- Seismic amplitudes and attributes analysis and applications
- Seismic facies and applications
- Special seismic studies (seismic inversion, AVO, AVA) 4 D seismic and applications

Field geology

- Different kinds of maps for different use
 - Time/depth maps
 - Isopach, isobath maps etc.
- Definition of the architecture of the reservoir
 - Continuity of reservoir (sedimentology and stratigraphy)
 - Integration of seismic data
- Correlation and layering
 - Principles

- Exercises
- Fluids
 - Fluids and hydrocarbon-water contacts
 - Pressure data and integration

**ROCK AND FLUID PROPERTIES
GEOSCIENCES AND RESERVOIR
MODULE PPD 804-1 (INDUSTRY)**

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

This course provides fundamental knowledge of rock characterisation and reservoir fluid properties. The approach is practical/ industry oriented with laboratory visits.

At the end of the course, students will:

- understand the concepts used in rock characterisation and be familiar with porosity, permeability (absolute, effective or relative), saturation, wettability, capillary pressure parameters and know the basic equipment and practical aspects in laboratory measurements (Field Visit)
- be familiar with the behaviour of reservoir fluids at different pressures and temperatures (oil, gas, gas condensates and water), with equations of state and with phase diagrams and understand physical significance of parameters such as Formation Volume Factor, Gas-Oil Ratio, viscosity. (Field Visit)

PROGRAM

Fundamentals of Coring and Core Analysis

- Coring Programme, Coring Fluid; Coring Techniques Core Preservation; Core Preparation; Routine Core Analysis; Special Core Analysis

Structure and properties of porous materials

- Porosity (Definition, Measurement methods, Averaging porosity)
- Rock density and Specific surface: definition, measurements
- Permeability
- Compressibility of porous rocks
- Fluid saturation
- Wettability
- Capillarity Pressure
- Electrical properties of rocks
- Mechanical properties of rocks

Fluid Properties: Introduction/ generalities

Components of reservoir fluids: oil, gas, gas condensates and water - Thermodynamic of petroleum fluids: properties of pure components and simple mixtures: phase diagrams, viscosity.

Types of reservoir fluids

Properties of reservoir fluids: crude oil (Bo, Rs, GOR, compressibility, density, gas condensate). Natural gas (Bg, Z, density, specific gravity). Gas condensate. Pseudo critical pressure and temperature. Correlation of physical properties.

Computation of liquid-vapour equilibrium/ equations of state

Sampling.

PVT measurements - PVT laboratory report analysis

Description of reservoir fluids:

- Properties of reservoir waters: composition and salinity, resistivity, solubility
- Asphaltenic and waxy crude (intro),
- Hydrates (intro)

WELL LOGGING and INTERPRETATION GEOSCIENCES AND RESERVOIR ENGINEERING AND RESERVOIR GEOSCIENCES

MODULE PPD 804-2 (IFP)		
NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

At the end of this course module, the student:

- know the fundamental basics for the conventional geological and petrophysical log interpretation,
- know data acquisition and tools principles in order to highlight the impact of the uncertainties on the evaluation results,
- is able to make qualitative log interpretation,
- have an overview of the applications of the well data in geology, geophysics and reservoir engineering.

PROGRAM

Generalities- Definitions- Basic concepts and relationships

Wireline logging operations – The log. Practical (exercises and homework).

Basic tools Porosity and Resistivity tools

Principles, application and quality control

- Caliper, GR, SP
- Porosity tools (density, neutron, sonic)
- Resistivity tools (laterolog, Induction, microresistivity)

Quick look interpretation method

- Reservoir identification
- Determination of fluid contacts
- Determination of formation water resistivity
- Determination of porosity, lithology, water saturation

Crossplots techniques, special lithologies

Basics of quantitative interpretation methods

- Shaly formation
- Shale and gas effects on logs
- Water saturation equations

Other Logging tools and Techniques

- Nuclear Magnetic Resonance logging
- Dipmeter and Borehole Imaging
- Pressure measurements, fluid sampling and applications
- Overview of Cased Hole Logging
- Logging data Management

FUNDAMENTALS OF RESERVOIR ENGINEERING AND RESERVOIR GEOSCIENCES

MODULE PPD 804-3 (UNIPORT)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

To teach the fundamental concepts of reservoir engineering to prepare the students for the second phase of the Module (Reservoir Modelling & Oil in Place, Material Balance, EOR and Reservoir Simulation)

At the end of the week, students will have a working knowledge of

- Types of reservoir characteristics
- Method of obtaining oil in place
- Water influx models
- Decline curve analysis procedures
- Basic fluid flow concepts

PROGRAM

Introduction

- Opportunity of reservoir Lifestyles
- Field Development Criteria
- Economic Evaluation
- Optimizing HC Recovery – Process and Roles
- Concerns and Functions of the Reservoir Engineer
- Overview of Reservoir Characterization and Implication

Reservoir Energy and Characteristics

- Introduction – Reservoir Forces, Maximum Efficiency Rates
- Oil drives – Fluid Expansion, Solution Gas Drive, Gas cap Expansion Drive, Water Drive, Gravity Drainage

- Gas Drives: Fluid Expansion, Water Drive
- Gas Condensate Reservoir

Oil and Gas Reservoirs

- Definitions (Reservoir, Reserves, etc...)
- Overview of methods of Estimation
- Material Balance
- Forms of Material Balance and Applications
- Water Influx Calculation
- Decline Curves Analysis

Fluid Flow Concept

- Flow Potential
- Darcy’s law
- Multiphase flow concepts (wettability, relative permeability)
- Deliverability tests

**WELL TESTING and INTERPRETATION
GEOSCIENCES AND RESERVOIR**

MODULE PPD 805-1 (UNIPORT)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS: 2
5	1	

OBJECTIVES

At the end of the course, students will:

- understand the concepts used in well-test analysis for oil and gas reservoirs
- appreciate what information is gained from well testing
- be able to design and interpret well-tests with current industry software.
- understand the use and limitations of analytical interpretation models
- know the equipment and practical aspects of well testing.

PROGRAM

An overview of well testing: purpose of well testing.

- Methodology, Types of tests.
- Diffusion equations - Initial and boundary conditions
- Definitions & typical regimes, Productivity Index, Radius of Investigation.
- The analysis methods: Log-log plot – semi log plot.

Basic Well Testing Methodology

- Well bore storage – definition, effect of wellbore storage on pressure measurement computation
- Skin – Definition, effect on pressure profile
- Drawdown test: definition, calculations, advantage and limitation

- Superposition Principle – Bluid up Test – Calculations - examples
- Review of basic pressure plots (MDH, LOG-LOG, Horner, Multirate drawdown or bluid up)
- Pressure derivative: Definition, examples, Dimensionless Type Curves
- Influence of boundaries on type curves

Well Test Interpretation Models

- Well model (Wellbore storage and skin, infinite conductivity, limited well entry, horizontal well, etc.)
- Reservoir model (Homogenous, Dual porosity, dual permeability)
- Boundary model (Linear boundaries, circular boundaries, constant pressure, intersecting faults, parallel faults)
- Pressure derivative: Definition, examples, Dimensionless Type Curves
- Influence of boundaries on type curves

Gas Well Testing

- Pseudo pressures
- Pseudo time
- Pseudo skin
- Absolute open flow
- Isochronal test, Modified isochronal test.

Well Testing procedures and Equipment

- Review of gauge technology – DST and Production test Procedures
- Reporting and presentation of results, Example of interpretation report contents

DATA INTEGRATION AND RESERVOIR MODELING

**GEOSCIENCES AND RESERVOIR
MODULE PPD 805-2 (IFP)**

NUMBER OF DAYS:	CREDIT HOURS:	ECTS: 2
5	1	

OBJECTIVES

This course is largely illustrated on an example and is used for showing the methodology and the different steps for the building of a geological model. It is achieved through a case study.

This course is partially implemented using the PETREL® software package.

At the end of this course module, the student:

- know what kind of data are necessary to build a geological model and the methodology used for a deterministic and stochastic modelling,
- is able to list the main uncertainties associated with each step of building,
- is able to use the basics of geostatistics for a stochastic modelling,

- understand the evolution from a geological model to a reservoir model.

PROGRAM

The program is built as a simplified exercise for building a geological model from an industrial data set.

Available Data base

- Cultural data
- Well logs and cores
- Seismic data and maps

Data interpretation and correlation

- Core interpretation (sedimentology and petrophysics)
- Sequence and stacking patterns
- Correlation and stratigraphical model
- Associated uncertainties

Deterministic geological modelling

- Hydrocarbon-water contacts
- Associated uncertainties
- Facies definition – Assigning parameters

Stochastic geological modelling

- Basics of geostatistics
- Building of a stochastic model
- Associated uncertainties

From the geological model towards the reservoir model

- Upscaling of the model
- Associated uncertainties

OOGIP CALCULATION – UNCERTAINTIES

GEOSCIENCES AND RESERVOIR MODULE PPD 805-3 (IFP)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

At the end of the course, students will:

- know the main parameters involved in a volume calculation,
- be aware of uncertainties and of the possible data acquisition to mitigate those uncertainties,
- understand the process of OOGIP calculation (when done by geoscientists),
- be able to perform simple OOGIP calculations.

PROGRAM

Introduction

- Resource Classification System
- Definitions, abbreviations, units
- Volumetric calculation: global rules

- Well to well correlations

The different categories of oil and gas in place

- Reservoir shape and reservoir closure
- Oil water Contact and free water level
- Reservoir thickness consideration
- Gas cap

OOIP calculation - Proven Probable Possible

- Proven Oil in Place
- Probable Oil in Place
- Possible Oil in Place
- Exercises

OOIP: OGIP calculations

- Volumetric Method based on isobaths method
- Uncertainties and errors
- Reserves calculation: use of probabilistic distributions- Monte Carlo method

RESERVOIR MANAGEMENT

GEOSCIENCES AND RESERVOIR MODULE PPD 806-1 (UNIPORT)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

At the end of the course, students will:

- understand the concept of relative permeability's and methods to measure them,
- be able to determine flood characteristics using Buckley Leverett model,
- know factors influencing front stability,
- calculate recovery factors associated to natural depletion mechanisms,
- be familiar with design and implementation of water and gas injection,
- be aware of the enhanced oil recovery techniques,
- be able to recognise the drive mechanisms of a field, to recommend the optimum recovery mechanism and to assess the associated recovery factor,
- masters the basics of gas storage in natural reservoirs,
- understand the specific challenges associated to mature fields.

PROGRAM

Introduction: Importance of Multiphase Flow in Production Mechanisms (0,5 day)

- Multiphase flow: Surface forces, Capillary doublet, Genesis of drop and Jamin effect; wettability.
- Relative permeability: concept, variation with saturation, measurements, empirical equations.
- Theory of frontal displacement: front concept, Buckley Leverett model.

- Effect of capillary and gravity forces - Practical application.
- 2D/3D 2 phase flow: Mobility ratio, instabilities mechanisms.

Natural depletion: material balance and its use (0,5 day)

- OIL RESERVOIRS: Closed reservoir, undersaturated oil, rock and fluid expansion. Solution gas drive.
- Reservoir associated with an active aquifer, water drive, aquifer functions, calculation of water inflows.
- Gas Cap expansion.
- Combination drive and generalised material balance for an oil reservoir with gas cap and aquifer.
- GAS RESERVOIRS: Phase diagram: dry gas, wet gas and gas condensate reservoir. Material balance equation: active or inactive aquifer. Graphical representation of material balance. Recovery factor determination.

Secondary recovery: water and immiscible gas injection (2 days)

- Sweep efficiencies.
- Water flooding: Origin and treatment of injected water, well injectivity, water flooding implementation, flood pattern, practical example.
- Immiscible gas injection: injected gas sources, flood mechanism and well injectivity, gas injection implementation, practical example.

Mature Fields (1 day):

- Tertiary recovery and enhanced oil recovery: principles and field examples
- Presentation of several study cases to illustrate the different strategies for exploiting mature fields and the issues that condition companies' decisions to manage these fields: economic constraints, surface facilities, level of reservoir depletion, validity of the concession, etc. Field examples

Gas Storage Basics (1 day):

Tool to optimize gas distribution infrastructures, obtain geopolitical flexibility, have an efficient market mechanism. Different types of possible SKUs (Stock Keeping Units), porous media, advantages.

**RESERVOIR SIMULATION
GEOSCIENCES AND RESERVOIR
MODULE PPD 806-2 (IFP)**

NUMBER OF DAYS:	CREDIT HOURS:	ECTS: 2
5	1	

OBJECTIVES

At the end of the course, students will:

- understand the theoretical bases of a reservoir simulator,
- know the practical aspects of a reservoir simulation study: data to be input, initialisation, history match, predictive runs,
- be able to conduct a simple simulation study with a black oil model (with an industrial software),
- be aware of the actual trend of simulation techniques.

During all the week in parallel to formal lectures, a model is built.

PROGRAM

Generalities-principles

- Introduction, Description of reservoir simulation process
- Reservoir simulation, overview
- The reservoir simulator

Input data

- Porosity-permeability upscaling
- PVT
- Kr-Pc
- Hysteresis modelling
- 3 Phases relative permeability
- Pseudo Kr's and Pc's
- Aquifer Modelling

Numeric

- Physical equations
- Black- oil model
- Discretisation, numerical aspects
- Resolution: linear systems and computing
- Gridding
- Time step issue

Well representation

- Practical aspects of simulation
- Construction of a Simulation model

**RESERVOIR SIMULATION PROJECT
GEOSCIENCES AND RESERVOIR
MODULE PPD 806-3 (IFP)**

**GENERAL MODULE PPD 801-1
(UNIPORT)**

NUMBER OF DAYS:	CREDIT HOURS:	ECTS: 2
5	1	

OBJECTIVES

At the end of this course module, the student will:

- have a practical understanding of the use of a reservoir simulation,

- be able to propose and evaluate a simple field development strategy using reservoir simulation,
- be aware of uncertainties and their impacts,
- be able to perform adequate sensitivities.

PROGRAMME

The project and the objectives to be reached are explained. Then the students work in team of two or three on their project using ECLIPSE®. When needed, teachers provide an assistance to help the students to finalise their project.

The simulation will include

- natural depletion
- water injection
- gas injection

Each group will deliver a report that will be graded by the IFP reservoir team

2.3 Drilling Module (12 weeks)

PPD 807: Well Construction, Casing Design and Drilling Fluids (3 weeks)

This course aims to give the students the necessary knowledge to be able to:

Analyse the geological section of the formation and design the architecture of a well, including drilling program, drilling fluids program, casing calculations and cementing programs.

Supervise the construction of the well and face drilling, fishing and trajectory problems, control abnormal pressure behaviour.

Select a drilling rig, issue an invitation to tender and analyse a contract.

This course includes the following subjects:

Week 1	PPD 807-1	Overview of drilling and production operations with field trip
Week 2	PPD 807-2	Well Architecture and Well Design
Week 3	PPD 807-3	Drilling Fluids and Cementing Operations

PPD 808: Directional drilling and well control (3 weeks)

This course module provides the students with all the information required for successfully preparing, executing and controlling the drilling of a directional and horizontal well, and ensuring thorough knowledge of modern calculation techniques in relation to the use of different types of bottom hole assemblies. It also acquaints the students with conventional and advanced well control techniques for both onshore and offshore well control procedures

This course includes the following subjects:

Week 1	PPD 808-1	Drilling operations, equipment and optimisation
Week 2	PPD 808-2	Directional drilling
Week 3	PPD 808-3	Well control

PPD 809: Well Completion, Interventions and Performance (4 weeks)

This course module gives the main characteristics of Well Completions. At the end of the course the student will be able to manage the concept of Productivity Index and Inflow Performance Relationship. It also gives to the student knowledge of the completion equipment and artificial lift

This course includes the following subjects:

Week 1	PPD 809-1	Completion design and equipment, Tests
Week 2	PPD 809-2	Well Performance
Week 3	PPD 809-3	Artificial Lift Systems – Design and Operations
Week 4	PPD 809-4	Specific Operations (Stimulation, Perf. Sand Control)

PPD 810: Offshore Drilling and Drilling Project (2 weeks)

This course module gives the necessary knowledge of offshore drilling and HPHT drilling operations. It incorporates a drilling project which aims to synthesize the whole module.

This course includes the following subjects:

Week 1	PPD 810-1	Offshore Drilling and New Challenges
Week 2	PPD 810-2	Drilling Project – Design of an Optimized Well

OVERVIEW of DRILLING & PRODUCTION OPERATIONS WITH FIELD TRIP

PPD 807-1 (UNIPORT)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

The drilling field trip gives the students a good vision of the size of a rig and its components. It also focuses on the safety and environmental problems.

During the visit the three main functions: hoisting, pumping and rotating will be analysed. A particular attention will be given to the BOP and well control equipment.

After the visit, the students will design the three main functions of a standard onshore drilling rig:

- Introduction to drilling operations (Hoisting, pumping, rotating)
- Well Control and HSE in Drilling Operations
- Introduction to Production Operations (Separators, pump, compressors, pipelines)

Drilling and Production Field Trip

Hoisting function

Pumping function

Rotation

Introduction to Production

- Specification of exported products (rvp, H2S, water content in oil, oil content in water ...)
- Separation: principle of functioning, separator types, number of stages, separator pressure determination (Separation problems: emulsion and foams)
- Gas treatment overview
- Water treatment overview

WELL ARCHITECTURE and WELL DESIGN

DRILLING MODULE PPD 807-2 (IFP)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

At the end of this course module, the student is able to:

- manage the concept of pore pressure, fracture pressure and mud window,
- understand the role of conductor pipe, casing, liner and tubing,
- determine the depth of the casing shoe,
- know the different stresses applied on a casing string,
- manage the mechanical and physical parameters of casing,
- design a complete casing PROGRAM for different configurations,
- make the hook-up of the well head.

PROGRAM

Mud Window

- Normal and abnormal pore pressure
- Fundamental of rocks mechanics
- Fracture pressure and LOT procedure

Drilling and casing program

- Function and types of casing and liner
- Geometrical dimensions of casing and drift diameter
- Different programs

Depth of casing shoe

- Different methods:
 - Casing point

- Maximum allowable kick
- Maximum allowable mud weight

Casing stresses calculation

- Tension load
- Burst load
- Collapse load
- Bending load

Mechanical casing properties

- Coupling and Threads
- API Grades
- API strengths

Drilling and casing design

- Design for a standard vertical or deviated exploration well
- Design of a development well

DRILLING FLUIDS AND CEMENTING OPERATIONS

DRILLING MODULE PPD 807-3 (INDUSTRY)

GENERAL MODULE PPD 801-1 (UNIPORT)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

The course provides students with knowledge of the basic techniques used in characterising, selecting and preparing drilling mud and cementing operation and hence promote better understanding between drilling and mud engineers in view of improving control of drilling and cementing operations.

On completion of the module, students are able to:

- Design a drilling mud program,
- Understand the casing running procedures and make the calculation for a primary cementing job.

PROGRAM

Functions and different types of drilling fluid

- Functions, composition, characteristics and conditioning of different types of mud
- Water base mud
- Oil base mud, invert mud, aerated mud

Rheology

- Rheological parameters
- Pressure losses and equivalent mud weight

Mechanical treatment

- Selection of equipment and layout

- Separation ranges
- Overall efficiency and site reconditioning

Mud losses and treatment

- Losses mechanism and treatments

Characteristics of cements

- Cement chemistry and API cements
- Rheology and setting time

Primary cementing procedure and calculations

- Cement job design (casing running fluids and mud removal cementing calculations)
- Post-job evaluation:

Special cases

- Multistage cementing
- Liner
- horizontal wells

Remedial cementing (Squeeze and Plug cementing)

Lab Visit Mud and Cementing Labs

DRILLING OPERATION, EQUIPMENT and OPTIMISATION

DRILLING MODULE PPD 808-1 (IFP)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

At the end of this course module, the student is able to:

- select drilling and coring bits based on geology and drilling constraints,
- use the IADC/SPE roller cone bits and fixed cutter bits,
- evaluate the dull grading of the bit and fill the bit record,
- Select the WOB, RPM for optimisation of ROP,
- Optimise the hydraulic flow and select nozzles,
- prepare a coring program,
- design a drilling string with/without motor,
- understand the principles of fishing.

PROGRAM

Description of drilling bits and IADC/SPE classification

- IADC roller cone bit description and classification
- IADC fixed cutter drill bit description and classification
- Use of comparison tables

Dull grading and causes

- Roller cone drill bit dull codes
- Fixed cutter drill bit dull codes

- Analysis of dull and Remedial

Drilling parameters optimisation

- Optimisation of WOB and RPM
- Problems of whirling, bit balling
- Hydraulic losses in the drill string and nozzles
- Hydraulic optimisation
- Bit records

Design of drill string and motors

- Characteristics of drill pipes and heavy-weight drill pipes
- Drill collars
- Rules for design of drill string
- Overpull calculation

Rig characteristics and design

- Rig power
- Travelling Block and Travelling line sizing
- Mud pressure calculation
- Mud pump design

DIRECTIONAL DRILLING

DRILLING MODULE PPD 808-2 (IFP)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

This course module provides the students with all the information required for successfully preparing, executing and controlling the drilling of a directional and horizontal well, and ensuring thorough knowledge of modern calculation techniques in relation to the use of different types of bottom hole assemblies.

PROGRAM

Fundamentals of directional drilling

- Well profiles
- Representation of the wells
- Trajectory control
- Uncertainties calculations
- Factors affecting the deviation

Directional drilling equipment

- Standard drilling equipment
- Specific directional drilling equipment
- Measuring equipment
- Delayed time tools
- Real time tools
- Later directional drilling equipment

Directional drilling engineering

- Well planning & engineering
- Drill string design
- Drilling fluids program

Horizontal drilling

- Different types of horizontal wells

- Horizontal drilling engineering
- Multi-lateral wells
- Re-entry

Fishing

- Diagnostic of problems
- Fishing tools
- Under-reamers tools
- wash-over tools
- Milling and cutting tools
- Magnets

**WELL CONTROL
DRILLING MODULE PPD 808-3
(INDUSTRY)**

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

To acquaint the students with conventional and advanced well control techniques. The module is based on the international standards for well control for both onshore and offshore situations.

PROGRAM

Initial test

Pressures and well kicks analysis

- Normal and abnormal formation pressures
- Reasons for and indications of well kicks

Kick control procedures (Driller Method)

- Shut-in procedures
- Shut-in pressure observations
- Kick handling methods

Special cases

- Volumetric method
- Weight and Wait method
- Kick control bit off bottom
- Shallow gas formation
- Offshore well control – Riser margin

Equipment

- Accumulation unit, BOP
- Choke manifold, degasser
- Subsea BOP
- Calculations

**COMPLETION DESIGN and EQUIPMENT,
TESTS
DRILLING MODULE PPD 809-1 (IFP)**

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

At the end of this course module, the student:

- Is able to choose the appropriated well-completion equipment for a specific application
- Is able to write the corresponding running and operational procedures
- Has the knowledge of the principles and equipment of natural flowing wells
- Is aware about the specificities of gas wells.

PROGRAM

Equipment

- Perforations (Principle, guns, characteristics, etc.)
- Perforations: parameters (Density, penetration, hole size)
- Production wellhead (components, working pressure and diameter)
- Tubing (main characteristics, criteria of choice)
- Packers (drillable or permanent, retrievable)
- Bottom hole devices (landing nipples circulating sub,..) and wireline
- Subsurface safety valve (surface controlled, subsurface controlled)

Effects of Temperature & Pressure Changes on Tubing

- Main temperature & pressure effects
- Comprehension of buckling phenomena
- Field examples and exercises

Operational procedures

- Job preparation
- Safety recommendations during completion operations
- Operations recommendations
- Running-in and start-up procedures:
 - With a packer set directly with the tubing
 - With a packer set previously to the running-in of the tubing
- Special completion procedures:
 - Double completion
 - Gravel pack completion
 - Horizontal well completion
- High pressure gas well completions

Test

- DST, Main Equipment being used.
- DST, Operations and Interpretations
- Field examples

**WELL PERFORMANCE
DRILLING MODULE PPD 809-1 (UNIPORT)**

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

At the end of this course module, the student is able to:

- manage the concept of Productivity Index and Inflow Performance Relationship (IPR) for oil,
- design IPR curve above and below the bubble point,
- manage the concept of Gas Well performance,
- calculate the fluid flow in pipes for gas well and two-phase wells,
- use the traverse curves or equivalent computerised curves,
- identify the key factors for the proper design of a completion: naturally flowing wells or artificial lifted,
- use an appropriate software such as PERFORM® or PROSPER®.

PROGRAM

Overall approach of well flow capacity

- From reservoir to surface facilities: main parameters, order of magnitude
- Different way to increase the flow capacity, need for artificial lift on oil wells

Performance of productive Formation

- Productivity Index, global skin & flow efficiency for oil well
- Study of the completion skin: mechanical geometrical skins, order of magnitude of geometrical skins
- Inflow Performance Relationship, Vogel's curve, Patton & Golan method
- Gas well productivity
- Productivity of horizontal wells

Flow of Fluids in Pipes and Chokes

- General energy equation, Friction factor, Reynolds Number
- Application of general energy equation in calculating the static bottom hole pressure and in performing flow calculation in gas well
- Vertical and inclined two-phase flow, energy and pressure losses, flow regime
- Flow through chokes

Flowing Well performance

- Pressure gradient curves and traverses
- Graphical and computer-based determination

Practical exercises with software (Perform, Prosper)

**ARTIFICIAL LIFT
DRILLING MODULE PPD 809-2
(INDUSTRY)**

GENERAL MODULE	PPD 801-1		
(UNIPORT)			
NUMBER OF	CREDIT	ECTS:	
DAYS:	HOURS:		

5 1 2

OBJECTIVES

This course will provide the students with the ability to understand the techniques involved in well activation and the equipment needed for artificial lifts (Gas lift and pumps)

PROGRAM

Overview of artificial lift technology

- Artificial lift: Definition and introduction to the main systems
- Gas lift
- Criteria for selection of artificial lift systems
- Artificial lift screening
- Equipment of Artificially lifted wells (From tubing shoe to well head)

Gas lift design

- Mandrels, valves, injection gas requirement, temperature, chokes, spacing, equilibrium curve, continuous flow design

Rod-pump design

- Pumping unit
- Rods
- Pump
- Prime movers
- Gas anchor
- Pump off controls

ESP design

- Pump performance curves, pump intake curves, typical problems, installation, troubleshooting
- Best practices and for installation and maintenance for all methods
- Introduction to rod-pumping, gas lift and ESP systems

Economic Analysis

SPECIFIC OPERATIONS (Acidizing, Frac, Sand Control, WO)

DRILLING MODULE PPD 809-3 (IFP)			
NUMBER OF	CREDIT	ECTS:	
DAYS:	HOURS:		
5	1	2	

OBJECTIVES

At the end of this course, the student should be able to:

- evaluate the causes and control of formation damage
- evaluate the need for remedial cementing,
- evaluate the benefits of fracturing and acidizing,

- know the techniques and equipment for perforating,
- decide and design a sand- control system,
- manage the principles of Work-over.

PROGRAM

Overview of Formation damage

- Causes
- Evaluation
- Control

Acidizing

- Types of acid and types of acid treatments
- Matrix acidizing of Carbonates
- Matrix acidizing of Sandstone
- Placement techniques and productivity after acidizing

Fracturing

- Basic principles of hydraulic fracturing
- Fracturing materials
- Operation execution
- Post-job analysis

Sand stabilisation

- Sand production mechanisms
- Liners and screens
- Gravel-packing methods
- Chemical consolidation techniques
- Sand control in Horizontal wells
- Chemical sand control

Work-over

- Introduction to work-over
- For a well under pressure
- On a killed well
- Specific operations such as:
 - wire-line
 - coiled-tubing
 - snubbing

OFFSHORE DRILLING OPERATION and NEW CHALLENGES

DRILLING MODULE PPD 810-1 (INDUSTRY/ IFP)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

At the end of this course module, the student is able to:

- know the main characteristics of drilling with dry well head on:
 - fixed platform
 - swamp barge
 - jack-up
- know the drilling process from a floating vessel:
 - sub-sea well head
 - riser and relative equipment

- surface equipment (heave compensation, tensioners, ...)
- understand the specific points of the deep offshore
- has a general understanding of other techniques such as:
 - floating vessel with surface BOP
 - drilling from a SPAR
 - drilling from a TLP

PROGRAM

Surface BOP drilling

- Drilling from a platform
- Swamp barge
- Jack-up
- Compact rig and tender

Floating rigs

- General description
- Well-head suspensions
- Riser
- heave compensation

Deep offshore

- Drilling programme
- Specific well control

New challenges

- Floating rig with surface BOP

Specific wells (0.5 day taught by IFP)

- Geothermal wells
- HP/HT wells
- Smart completion

PROJECT - DESIGN OF AN OPTIMISED WELL

DRILLING MODULE PPD 810-2 (IFP)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

At the end of the Drilling Module, the students are able to design and optimised well with its relative completion and artificial lift if required from the technical point of view as well as on the economic parts.

It is an additional opportunity for a team work as the design is made by groups of 4 or 5 students. They will produce a written report corresponding to a casing and drilling programme as well as a completion programme.

An oral presentation will conclude the exercise.

PROGRAM

- Report and oral presentation.

- No formal courses, assistance of the teachers to help the students in their personal work.

2.4 Production Module (11 weeks)

This module aims to prepare students for designing surface oil and gas treating facilities from the well head to the unloading terminal on both land and marine environment. Safety and pollution free operations will be a very important part of this module.

The Module: This module is composed of 5 courses PPD 811, PPD 812, PPD 813, PPD 814 and PPD 818.

PPD 811: Production Engineering/Process Engineering (4 weeks)

During this course students will be prepared to:

- Understand the functioning all the elements composing the surface process: Test Separators, Production Separators, Heaters, Water Treaters, Pumps, Tanks, etc.
- Design and size all the element of the process installation (including power requirement and instrumentation).

This course includes the following subjects:

Week 1	PPD 811-1	Production Operations
Week 2	PPD 811-2	Production Equipment Design
Week 3	PPD 811-3	Utilities and Instrumentation
Week 4	PPD 811-4	Process Simulation with Software (HYSYS)

PPD 812: Production Optimisation (3 weeks)

At the end of this course, the student will be familiar with the problems associated with gas production (NLG plan, Gas compression and gas injection, Turbines). He will be able to design a production pipeline taking into account structure problems and fluid mechanics issues.

This course includes the following subjects:

Week 1	PPD 812-1	Multiphase Flow in Pipe and Flow Line Design
Week 2	PPD 812-2	Flow Assurance
Week 3	PPD 812-3	Well Surveillance and Production Enhancement

PPD 813: Terminals and Gas Utilization (2 weeks)

These courses will cover the oil and gas export. Students will be able to understand the major

issues in the problems of Oil export and Gas processing and Gas Utilization

Week 1	PPD 813-1	Terminals and Receiving Facilities
Week 2	PPD 813-2	LNG and Natural Gas Utilization

PPD 814: Introduction to Offshore Engineering and Subsea Architecture (1 week)

This Course will introduce the problems associated with the offshore oil and gas Production. Students will be able to:

- Knowledge of marine environment (Wind, Waves, Streams, Corrosion)
- Knowledge in the sizing and erecting of Steel Platforms
- Be familiar with the newest Production Technology used in Deep Water Production
- Understand the problems associated with field development using subsea wells

This course includes the following subjects:

Week 1	PPD 814	Offshore Production Engineering and Architecture
--------	---------	--------------------------------------------------

PPD 818: « Towards a low carbon energy world » (1 week)

During this course students will be prepared to:

- Describe the axes of reduction of greenhouse gas emissions from oil production and the storage of carbon dioxide in the basement.

This course includes the following subjects:

Week 1	PPD 818	Towards a low carbon energy world
--------	---------	-----------------------------------

PRODUCTION OPERATIONS			
PRODUCTION MODULE PPD 811-1 (IFP)			
NUMBER OF	CREDIT	ECTS:	
DAYS:	HOURS:		
5	1		2

OBJECTIVES

At the end of this course module, the student is able to:

- Understand the basic functioning of a Production Flow Station (Gas and Oil).
- Recognize the main elements composing the surface process.
- Understand the physical laws governing fluid behaviour during the production phase.
- Know the oil, gas and water required characteristics for transport

- Understand the principle and the basic functioning of all the elements composing the surface process.

PROGRAM

Introduction to Oil and gas process design:

Specification of exported products (rvp, H2S, water content in oil, oil content in water ...)
 Separation: principle of functioning – number of stages
 Separation problems: emulsion and foams
 Heaters:
 Desalting
 Dehydration

Oil processing

Vertical separator (two and three phases), function, internals, sizing - Horizontal separator (two and three phases), function, internals, sizing – Particularities of the floating production
 Heaters Treaters Electrostatic Separation
 Desalting Techniques,
 Pumping

Gas processing

Need for sweetening process Techniques in use
 Principle of Dehydration
 Principle of Condensate removal
 Compression

Water treatment (Injection water, Produced water)

Injection water description – sea water characteristics – water production deoiling (waters characteristics, deoiling systems) – re-injection of water formation – environmental aspects

Electricity production and energy efficiency

PRODUCTION EQUIPMENT DESIGN

PRODUCTION MODULE PPD 811-2 (IFP)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

At the end of this course module, the student is able to:

- Understand the physical laws governing fluid behaviour during the production phase.
- Know the oil, gas and water required characteristics for transport
- Understand the principle and the basic functioning of all the elements composing the surface process.
- Be able to design and the important parts of a surface facilities
- Choose and size the required equipment according to the process required.

PROGRAM

H2S Processing

Basic notions – Processes available, Circuits diagrams, Basic Calculation

Separators: Design and Sizing. Operational problems

Gas Dehydration

Basic notions – Processes available, Circuits diagrams, Basic Calculation

Gas – Condensate Removal

Basic notions – Processes available, Circuits diagrams, Basic Calculation

Heat exchangers: Functioning, description and calculation

Basic notions – heat exchanger elements – types – temperature calculation – shell exchanger – plate exchanger.

Pumps and Compressors: types, functioning and sizing

Turbo machine classification – velocity diagram – centrifugal pump and compressor – gas turbine – turbo expanders.

Flares Description Basic calculations

Tanks: Types and sizing

UTILITIES and INSTRUMENTATION

PRODUCTION MODULE PPD 811-3 (INDUSTRY)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

At the end of this course module, the student is able to:

- have a global knowledge of the functioning of the utilities and the instrumentation
- estimate the power balance,
- understand the principles of the control and the regulation,
- use different types of sensors,
- use different types of communication,
- understand PFS and PID diagramme

PROGRAM

Electric power: Different means of production and distribution.

- General power generation - example of oil production facilities (turbines)
- Electrical power distribution – types of distribution used in the oil production facilities

Electrical power balance calculation

- Power consumption in a oilfield production systems
- Gas calculation for power generation

Instrumentation: Types of sensors, control system technology, analog and digital systems

- Pressure sensors
- Temperature sensors
- Flowmeters (Water, oil and gas)
- Level controllers
- Data transmission

Control and regulation: Definition and objectives.

PFS and PID diagram

PROCESS SIMULATION

PRODUCTION MODULE PPD 811-4 (IFP)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

The objective of this course module is to present the HYSYS® software to the student. At the end of this module the student is able to use this software to design different kind of systems.

PROGRAM

Introduction to HYSYS®

- Generalities on process simulation
- Review of thermodynamics and phase envelopes

Data required for a simulation

- Valves
- Pump
- Compressor
- Turbine
- Heat exchanger
- Mixer
- Splitter
- Separator

Propane Cryogenic loop

- Simple loop
- Refrigeration loop

Crude oil and natural gas treatment

- Composition and specification
- Simulation (Oil stabilisation and gas dehydration and compression)

LPG and liquid extraction from natural gas

- Data
- Specification
- Assumption
- Simulation

Field examples of a complete process

- H2S treatments

MULTIPHASE FLOW in PIPE and FLOW LINE DESIGN

PRODUCTION MODULE PPD 812-1 (UNIPORT)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

This course exposes students to hydrodynamic behaviour in pipes. It develops the concept of multiphase flow in pipes and their application to petroleum production engineering. At the end of the course, students will be able to determine pressure drop and a thermal evolution in a single-phase line and a multiphase flow line; appreciate the multiphase flow metering and pumping; critical phenomena such as slugging, critical and subcritical multiphase flow, wet gas transportation.

PROGRAM

Introduction to the fluid Flow in Pipes

- General Energy Equation, Evaluation of Friction Losses-Friction Factor
- Single phase flow: Definitions (laminar, turbulent, balance equations for steady state and transient flows...) pressure drop calculation for laminar and turbulent flow – thermal evolution of the fluid.

Multiphase flow

- Definition of variables: Two phase Flow parameters, Liquid Holdup, Mixing Rules; Description of multiphase mixtures
- Determination of the flow patterns
- Determination of the pressure drop (closure laws)
- Hydrodynamic criteria affecting flow-line sizing (severe/terrain slugging phenomenon)

Vertical/Inclined/Horizontal Multiphase Flow

- Liquid Hold-up Correlations
- Flow patterns
- Flow Correlations
- Slugging
- Applications: Directional Wells, Pipelines, Pipelines in Hilly Terrain

Multiphase Flow Through Restrictions: Chokes and Subsurface safety valves (SSSV)

- Critical vs Subcritical Flow
- Flow Correlations: Analytical, Experimental and Empirical Bean Performance Correlations
- Bean Performance Optimization

- Design of SSSVs

Applications

- Oil Well Optimization
- Wet Gas Transport
- Multiphase Flow Pipeline Design
- Pipeline Pigging
- Introduction to Multiphase Flow Metering and Pumping

FLOW ASSURANCE

PRODUCTION MODULE PPD 812-2 (INDUSTRY)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

At the end of this course the student will have knowledge of the constraints and problems associated with flow assurance including deep sea operations

PROGRAM

Introduction

Terminology, Characterization of fluids, Sampling ...

Hydrate Control

Definitions, analysis, prevention, treatments

Paraffin and Asphaltene Control

Identification of problem, prevention and treatments

Emulsion & Foaming

Identification of problem, prevention and treatments

Scale

Identification of problem, prevention and treatments

Corrosion in pipes

Introduction, principles and prevention

Flow profile in pipes, Drag Reducers

Identification of problems related to the multiphase flow in surface pipes. Drags reducers,

Material and Design aspect of Flow Assurance

FPSO, Flowlines, Risers, umbilicals

Modelling and Studies

PVT envelopes, Hydrates formation models, paraffin/asphaltene deposition models, simulation software.

Deep Sea flow assurance issues

FPSO, design and operations. Preservation operations shut down

WELL SURVEILLANCE and PRODUCTION ENHANCEMENT

PRODUCTION MODULE PPD 812-3 (UNIPORT)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

At the end of this course, students will be:

- exposed to the principles of emerging Production Optimization Technologies
- exposed to state-of-the art well intervention practices
- able to diagnose the problems of sick wells, dying wells and dead wells using our software package
- able to evaluate well completion efficiency and current well potential
- able to screen candidates for well stimulation, through tubing well intervention and workover
- understand the management of mature fields

PROGRAM

- Production Practices, Problems and Prospects
 - type of well effluent,
 - reservoir system,
 - well completion etc.
- Well Diagnostics
 - Healthy Wells
 - Sick Wells
 - Dying Wells
 - Well Potential Determination
 - Well Inflow Quality/Performance Indicators
 - Evaluation of Well Completion/Production Efficiency using in-house Software
- Well Surveillance
 - Oil Wells
 - Waxy Crude Oil Well
 - Gas Wells
 - Artificial Lift wells;
- Production Performance Optimization
- Mature Field Management
- Application of PLT in Well Diagnostics

TERMINALS and RECEIVING FACILITIES

PRODUCTION MODULE PPD 813-1 (IFP) GENERAL MODULE PPD 801-1 (UNIPORT)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

- At the end of this course module the student will have a complete knowledge of the oil export, terminals, metering and the floating facilities.

PROGRAM

HSE

- Safety on Storage of large amount of hydrocarbon (onshore and offshore)
- Rules and policies

Terminals

- Terminals functions, Safety and Loading/Unloading

On Shore Tanks

- Types and Design
- Operations and Safety
- Operational Problems

Offshore Tanks - FPSO/FSO

- Type and Designs
- FPSO operations
- FPSO/FSO Tank safety

Mooring of Floating Units

- Offshore foundations
- FPSO mooring (Turret Type)
- Type and design of mooring lines

FPSO/FSO tank unloading

- CALM buoy
- Tandem Operations
- Unloading Operations

Metering

- Design of a metering unit
- Operation and maintenance

LNG and NATURAL GAS UTILIZATION PRODUCTION MODULE PPD 813-2 (INDUSTRY)

GENERAL MODULE PPD 801-1 (UNIPORT)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

- At the end of this course module the student will have a complete knowledge of the LNG and the special treatments associated.

PROGRAM

Upstream treatment

- Gas conditioning (Hydrate prevention, dehydration, sweetening)

- Condensate separation, stabilisation, treatment.

LNG recovery process

- Joule-Thomson expansion
- external refrigeration loop (sea water cooling)
- Production units (trains, sizes)
- Peak Shaving facilities

Process schemes

- Review of LNG Process Plants Worldwide
- Gas conditioning
- Mercury, Nitrogen removal
- fractionation
- cold section
- Flash gas production
- The process licensors (APCI, PHILLIPS, STATOIL/LINDE, AXENS, SHELL)

Terminals and Distribution

- LNG Carriers (Moss Rosenberg Spheres Technology, Membrane Technology, Gas Carrier Fuel)
- Terminal
- Regasification and distribution
- Loading and Unloading.
- HSE Considerations and Practices in LNG Processes

Gas to Liquid Treatment

- Definition
- Syngas Generation
- Fischer-Tropsch synthesis

OFFSHORE PRODUCTION ENGINEERING and ARCHITECTURE

PRODUCTION MODULE PPD 814 (IFP) GENERAL MODULE PPD 801-1 (UNIPORT)

NUMBER OF DAYS:	OF CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

The objectives of this module are to give knowledge of the specificity of the offshore oil and gas production activities and techniques

PROGRAM

Introduction to offshore oil and gas production – type of structures used Installation of platforms:

- History of offshore exploitation (Water depth, main zones of activity....)
- Main types of structures used (Small jackets, larges jackets, tension leg structure, floating structure...) Dry wells against wet wells.

Marine Environment and stresses on offshore structures

- Effect of wind and waves/swell on offshore structure (Sway and wave period – wave energy spectra)
- Movements of a floating platform
- Simple design of a platform (constraints, fatigue...) Numerical application

Design

- Type of platforms and explanations: Steel jackets, jack-up, gravity structure, TLP, Compliant platforms, floating platforms, arctic systems, others.
- Topsides construction and installation

Pipelines/ flexible installation

- Introduction – Conception – Installation technique.

Deep-sea installations

- Architecture of deep sea development (PLEM, Subsea well heads and Xmas trees, Templates, Manifolds and Subsea Hardware, Flowlines, Risers, Subsea Production Control Systems & Chemical Injection, Intervention barges and multi-purpose support vessels, ROV, ...)
- Flow Assurance Issues, Mitigation and Hydraulic Analysis
- Reliability Engineering and Risk Analysis
- Description of main subsea interventions: inspection, maintenance and repair methods, subsea wells operations and work overs.

Decommissioning

- Laws and regulations. Decommissioning techniques, examples

TOWARDS A LOW CARBON ENERGY WORLD

PRODUCTION MODULE PPD 818 (IFP)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

The objective of this module is to cover the new themes associated to the energy transition. These are already an important part of the activity of engineering contractors. They also represent an increasing share of the activity for the oil and gas operators.

At the end of this course module, the student is able to:

- describe the axes of reduction of greenhouse gas emissions from oil production and the storage of carbon dioxide in the basement.

PROGRAM

- Overview of the energy world and the challenges associated to the decarbonation of the economy, including paths to decarbonation
- Green House Gases – Methane review
- Carbon Capture Utilization and Storage (CCUS) (Note that 1 day is already planned on the topic of underground gas storage, including CO2 geological sequestration, in TU PPD 806-1)
- Renewal energies with:
 - a focus on solar energy (main issue), hydropower and wind power
 - basics on geothermal energy and hydrogen
- Power generation:
 - Project feasibility phase
 - Early development phase
 - Project financing
 - Project construction
 - Operations and Maintenance

2.5 Project Module (7 Weeks)

This module has two goals:

- Presents the Petroleum economics and project Management
- Supervise the students during their 5 weeks project

This module is composed of 2 courses PPD 815 and PPD 816.

PPD 815: Petroleum Economics and Project Management (2 weeks)

This module has the following objectives:

- Present the economic aspect of an oil field development.
- Introduce the risk analysis and the Project Management using a field example
- Familiarise students with cost analysis, cost control and budget preparation
- Provide the students with the concepts of Corporate Governance, business ethics and CSR

This course includes the following subjects:

Week 1	PPD 815-2	Contract, Planning & Project Management
Week 2	PPD 815-3	Petroleum Economics

PPD 816: Field Development Project (4 weeks)

During This course the students will be in small groups. They will study an oil or gas field

development project using different scenarios (number of wells, horizontal or vertical, type of completion, type of producing facilities, economics). Then each group will be assigned a scenario for which they will draw the drilling, the evaluation and completion Program. They will design the producing facilities and prepare a financial report based on the computed recoverable reserves.

In addition to the work on the FDP project, one week within PPD 816 will be devoted to the preparation of the personal project to be presented in PPD 817.

Week 1	PPD 816	Presentation Scenarios
Week 2	PPD 816	Process
Week 3	PPD 816	Process / Structure / HSE / Economy
Week 4	PPD 816	Work for personal thesis

PPD 817: Industrial Project (1 week) – Project presentation week

Presentation of the Personal Thesis given at the beginning of the year and presentation of the Production Final Project Development in PPD 816.

PLANNING, COST ESTIMATION and PROJECT MANAGEMENT

PROJECT MODULE PPD 815-1 (UNIPORT)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

The aim of this course is to familiarize students with cost analysis, cost control and budget preparation.

PROGRAM

Introduction to development projects

- Asset life cycle - Evaluation process –
- Time and cost objectives - Economic Studies-
- Contracting strategy - Project execution phases

Project cost estimation

- Scope and exclusions - Cost management process - Estimate classes - Capital expenditures - Operating Expenditures
- Software available on the market
- Cost evaluation during project evaluation phases
- Cost evaluation during basic engineering and contracting phases
- Cost escalation, cost indexes, inflation - Location factor
- Additional cost elements

- Risks and uncertainties - Provisions - Expenditure schedule - Particularities of cost estimation of brownfield projects

Cost control

- Cost Control framework
- Definitions, concepts and principles
- Cost control process Establishing a budget - Commitments vs. budget - Actuals vs. budget- Forecasts - Detecting adverse trends - Reporting

Project Management

- Introduction, Definition
- Interface management
- Human resources management, organization charts, role of project manager, project team organization
- Stakeholder management

Project control: cost and schedule

- Project control process, cost control principles, initial budget elaboration, final cost estimation, project reporting, documentation control systems
- Planning elaboration, progress curves, critical path, planning software, progress control, recovery plan
- Technical package and project planning, feed management, execution sequence, deliverables, process licensors packages, EPC phase schedule, CAPEX estimate

PETROLEUM ECONOMICS

PROJECT MODULE PPD 815-2 (UNIPORT)

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
5	1	2

OBJECTIVES

- Facilitate students’ understanding of why some economic decision variables such as oil and gas prices, reserves, production profiles, taxation and fiscal policies, and the environment are important in petroleum exploration and production decisions.
- Learn and apply principles of petroleum economics and the commonly used economic decision methods to facilitate the ability of E&P business to generate profit and grow.
- **Understand approaches to quantify uncertainty and risk in petroleum business decisions**

PROGRAM

Fundamentals of Global Petroleum Market and Pricing

- Basic petroleum economic concepts: supply, demand, and price equilibrium

- The global petroleum industry dynamics: understanding the structure, key players and the mechanics of the global oil market
- Review of basic petroleum economic evaluation concepts--cash flow items/models/analysis
- Elements and determinants of petroleum E&P investment decisions—resources, reserves and production profile

Petroleum Valuation Theory, Finance, & Methods; Project economics profitability; Decision to invest

- Capital budgeting techniques—Discounted cash flow (DCF) / Deterministic analysis & criteria
- Elements and determinants of petroleum E&P investment decisions—rent extractions and petroleum taxation theory

Parameters affecting the project economics

- Descriptions and classification of petroleum fiscal terms and contractual regimes: concessionary arrangements and petroleum sharing arrangements
- The arithmetic & mechanics of various kinds of petroleum fiscal regimes—fundamental criteria underlying efficient fiscal regime design
- The arithmetic & mechanics of various kinds of petroleum fiscal regimes—government and contractor take statistics; the strengths and weaknesses of take statistics
- Basic probability and statistics for E&P economic analysis and business decisions

Worldwide Petroleum Fiscal and Contractual Framework; Introduction to economics simulation. Optimisation

- Basic probability and statistics for E&P economic analysis and business decisions
- Expected value concepts and decision tree analytics

Risk and Uncertainty management Methods. Technical Discussion

- Review
- Simulation and decision analysis –Sensitivity & Monte Carlo overview
- Risk and E&P decision analysis using @Risk

FIELD DEVELOPMENT PROJECT PROJECT MODULE PPD 816 (IFP/INDUSTRY)

OBJECTIVES

This project consists in a field development study. This presentation should include the following subjects:

- Analyse reservoir characteristics, IOGIP, and reserves
- Select a field development scenario
- Define a drilling pattern and draw a typical drilling and completion program
- Define the production process
- Do some simple structure calculation and sizing
- Achieve the economic study
- Present a carbon balance of the project
- Achieve the environmental impact assessment

NUMBER OF DAYS:	CREDIT HOURS:	ECTS:
15	4	10

CONTENTS AND LECTURERS

PROGRAM

This is a team work underdone by a group of 10 students in which each individual will be assigned to a typical task under the control of the team leader.

Lecturers and professional from the industry will supervise the progress of the project and assist the students.

Week	Course
Week 1	Project Presentation – Choice of scenarios – Drilling and production Strategy (IFP)
Week 2	Process definition and simulation, Structure and pipeline calculations, carbon balance aspects of the project (Industry)
Week 3	Process definition and simulation, Structure and pipeline calculations HSE implications, planning, cost analysis and economical evaluation (IFP)

The final report will be evaluated by an oral presentation of each group member as well as an overall technical evaluation of the project by the IFP project team in France

INDUSTRIAL PROJECT PROJECT MODULE PPD 817 (UNIPORT) CREDIT HOURS: 6 ECTS: 6

OBJECTIVES

- To conduct independent study with the aim of finding engineered solutions to oilfield problems. The Project Topics are assigned by lecturers at the beginning of the GSR Module.

- Presentation of the projects is done on the last week of the programme

PROGRAM

NUMBER OF DAYS: Starts from Geosciences and Reservoir Module

SUPERVISION

- Thesis subject and choice of supervisor is done under the supervision of a Uniport professor

- The thesis delivery must follow the Uniport frame for master project

EVALUATION METHODS

Oral Presentation of the Thesis (Project Defence)

Report writing

- Introduction
- Literature Review
- Methodology
- Applications (Use of Software)
- Conclusions
- Recommendation

OFFSHORE TECHNOLOGY INSTITUTE (OTI)

INTRODUCTION

The Offshore Technology Institute (OTI) University of Port Harcourt was established in 2011 as a bold effort to address the dearth of local manpower for the exploitation of the vast energy resources in the deepwater of the Gulf of Guinea. OTI is an industry-oriented postgraduate energy institution offering educational support and direction to the Oil and Gas industry through the development of manpower and delivery of quality research and continuous professional development courses in support of the local content initiative. OTI partners appropriate governmental agencies and is open to academic collaborations and linkages, partnerships with oil industry operators and service providers. The teaching faculty of the institute consists of lecturers from the University of Port-Harcourt, other University within and outside Nigeria and professionals in the industry.

The institute offers M.Sc Programme in Pipeline Engineering, Offshore Engineering, and Subsea Engineering in one hand, a Post Graduate Diploma (PGD) Degree in Offshore Engineering and MSc in Energy Access and Renewable Energy Technology. The Institute also has PhD Programmes in Pipeline Engineering, Offshore Engineering, and Subsea Engineering which are the latest additions to the programmes housed in the Institute. All the eight programmes are run in a conducive environment in the Institute. OTI students are exposed to relevant industry software such as OrcaFlex, ANSYS, PIPEPHASE, PIPESIM and PDMS and undertake necessary safety and underwater training such as TBOSIET/HUET and are OPITO certified. In order to achieve a proper mix of theory and practice, OTI MSc and PGD students undergo supervised internship in relevant oil & gas companies / Renewable energy-related centres in Nigeria.

VISION

The vision of the institute is to be a competent capacity building institute of excellence in sustainable energy studies in Africa with specific focus in offshore & subsea development / renewable energy utilization.

MISSION

TABLE 1: LIST OF COURSES, CODE AND CREDIT UNITS

S/N	Course Code	Course Title	Credit Units
1	OTI 601	Introduction to Offshore Engineering and HSE Skills	3
2	OTI 602	Introduction to Pipeline and Subsea Engineering	3
3	OTI 603	Computational Skills and Methods	3

The mission statement of the institute is to bridge the knowledge and skills gap in the offshore oil & gas industry by providing quality training, applied research and capacity building for sustainable development of the offshore oil & industry and to provide manpower for the exploitation of renewable energy resources abundant in Nigeria.

PROGRAMMES

The Institute has one Post Graduate Diploma Programme, four MSc Programmes, and three Ph.D Programmes:

A. PGD Programme

Postgraduate Diploma programme in Offshore Engineering Technology

B. MSc Programmes

- i. MSc Subsea Engineering
- ii. MSc Offshore Engineering
- iii. MSc Pipeline Engineering
- iv. MSc Energy Access and Renewable Energy Technology

C. Ph.D Programmes

- i. Ph.D Subsea Engineering
- ii. Ph.D Offshore Engineering
- iii. Ph.D Pipeline Engineering

A. PGD PROGRAMME

Postgraduate Diploma programme in Offshore Engineering Technology

Admission Requirements, Programme Duration and Graduation Requirements

Candidates for the PGD in Offshore Engineering Technology must possess a Bachelors degree from a reputable university with a minimum of third class honours for graduates of engineering, or a minimum of second class lower from any other related science fields. All prospective candidates must go through the admission process of screening and selection (Aptitude Test / Oral Interview). The Post Graduate Diploma (PGD) is a Full-Time one (1) year programme that comprises eight (8) months of lecture and four (4) months of internship, including student project writing and defence. To be awarded a degree, the student must have at least a C grade in each of the courses, including internship and project.

4	OTI 604	Computer Aided Drafting and Simulation	3
5	OTI 605	Foundation and Structures	3
6	OTI 606	Marine Survey and Installation	3
7	OTI 607	Offshore Drilling Engineering	3
8	OTI 608	Corrosion in Offshore and Subsea Systems	3
9	OTI 609	Introduction to Management and Entrepreneurial Skills	3
10	OTI 610	Internship Reporting & Defense	3
11	OTI 611	Project Writing & Defence	6
Total			36

COURSE DESCRIPTION

OTI 601 - INTRODUCTION TO OFFSHORE ENGINEERING AND HSE SKILLS

Introduction to the oil and gas industry; petroleum geology; exploration; drilling and testing; production; reservoir mechanics and production management; transportation and storage; refining and petrochemicals; marketing; the structure of the industry; energy and the environment; future of the oil and gas industry. Overview of offshore operations; extracting resources & physical scales; types of offshore structures; hydrostatics and wave/body dynamics laboratory; offshore planning and development; decommissioning and environmental monitoring; waves and inertial-based fluid loading; Currents and viscous-based fluid loading; station keeping. Introduction to the International Standards associated with HSE, including the ISO 14000 family; environmental legislation and voluntary standards. Environmental impacts and prevention; occupational health and safety legislation and duty of care; human reliability analysis and accident causation: major accident sequences, risk perception and control of risk human reliability assessment tools. Offshore safety case and formal safety assessments: regulatory regime, safety case requirements, types of study, scenario development, examples of use of QRA methods, consequence analysis, vulnerability of essential systems, smoke and gas ingress, evacuation escape and rescue and typical output. Review of major offshore accidents: Sea Gem, Alexander Keilland, Star Canopus and Piper Alpha disaster.

OTI 602 - INTRODUCTION TO PIPELINE AND SUBSEA ENGINEERING

Overview of subsea engineering; subsea production systems; flow assurance and system engineering; subsea structures and equipment; subsea pipelines; overview of subsea field development; subsea distribution systems; subsea surveying, positioning and foundation; subsea installation and vessels; subsea cost estimation; subsea control; subsea power supply. Introduction to pipeline engineering; importance of pipelines; freight transport by pipelines; types of pipelines; components of pipelines; advantages of pipelines; single-phase

incompressible flow in pipes; single-phase compressible flow in pipe; principles of pipeline design and design approach; pipeline construction and risk assessment; pipeline operation; pipeline maintenance.

OTI 603 - COMPUTATIONAL SKILLS AND METHODS

Introduction to computational skills; Microsoft windows and explorer; word processing and report presentation with Microsoft Word, spreadsheet and data analysis and presentation on Microsoft Excel; Oral presentation using Microsoft PowerPoint. MATLAB Fundamentals: Working with the MATLAB user interface, entering commands and creating variables, performing analysis on vectors and matrices, visualizing vector and matrix data, working with data files, working with data types, automating commands with scripts, writing programs with logic and flow control, writing functions. MATLAB for data processing and visualization; importing data, organizing data, visualizing data and exporting data. MATLAB programming techniques; programming for correctness, structuring data, structuring code, classes and objects. MATLAB for building graphical user interfaces from the command line by using GUIDE, the GUI development environment. Simulink® for system and algorithm modeling: creating and modifying Simulink models and simulating system dynamics, modeling continuous-time, discrete-time, and hybrid systems, modifying solver settings for simulation accuracy and speed, building hierarchy into a Simulink model, creating reusable model components using subsystems, libraries, and model references.

OTI 604 - COMPUTER AIDED DRAFTING AND SIMULATION

Introduction to the concept of 2D and 3D; AUTOCAD and 3D, types of three-dimensional models, advantages of drawing in three dimensions; working with 3D coordinates; creating surfaced objects; creating solid models from two-dimensional shapes, extruding 2D geometry, creating solid models with solid primitives, revolved solids, controlling the appearance of solids. Composite solid models; working with solid models; editing solid models, filleting solid models,

chamfering solids, generating mass property reports, slicing a solid along a plane, cross-sectional views, moving faces, tapering faces, deleting faces and creating a shell, advanced solid editing options. Plotting 3d models Introduction to Google Sketch-Up; Sketch-Up Essentials; Using Google 3D Warehouse; adding information from Google Earth. Modeling Basics: Creating and editing components, Sharing your model using Google Earth, working with photographs, working with materials browser, stylizing your model, creating a scene-based walkthrough, presenting your design; Projects in Sketch-Up with emphasis on offshore equipment and structures.

OTI 605 - FOUNDATION AND STRUCTURES

Introduction to geotechnical engineering; the offshore environment and site investigation; soil mechanics; formation of offshore soils; classification and basic properties of offshore soils; Stress and strain in soils; fluid flow through soils; compressibility and yielding of soils; practical approaches for soil strength and cyclic loading; theory of applied elasticity and bearing capacity; sample integrity; shallow and deep foundations. Classical beam theory; linear theory of beam bending; general Euler – Bernoulli method; traditional approach and loading considerations; statically indeterminate beams; beam installed at the elastic foundation; fatigue crack initiation; fracture mechanics and evaluation of parameters; nondestructive testing methods

OTI 606 - MARINE SURVEY AND INSTALLATION

Introduction to subsea survey; subsea survey requirements; survey pattern for selected subsea fields; geotechnical study; survey vessel; gyrocompass; navigation computer and software; personnel; subsea survey equipment requirements; multibeam echosounder (MBES); high-resolution sub-bottom profiler; offshore surface positioning and underwater positioning; subsea metrology and positioning; subsea soil investigations and equipment; subsea foundation; pile- or skirt-supported structures; seabed-supported structures; Rigid pipeline installation methods; S-Lay, J-Lay, Reel-Lay; advantages and disadvantages of various lay methods; practical examples; catenary equations; tow & pull methods, difference between shallow and deep water pipe-lay; installation of pipeline end structures and in line tees; trenching and backfilling; marine warranty during pipe-lay. Introduction to flexible and umbilical; difference between rigid pipe and flexible pipeline installation; flexible and umbilical lay methods, flexible and umbilical spooling; installation of flexible and umbilical end structures; various types of flexible risers; flexible riser installation; practical examples.

OTI 607 - OFFSHORE DRILLING ENGINEERING

Industry operations; technology advancement; competition from non-fossil energy source; climate change policy; peak oil production; special problems of deepsea oil and gas engineering; characteristics of deepwater oil and gas field project environment; seabed temperature and instability; gas hydrates; internal waves; equipment combination programs for acquisition; processing, storage and transportation of deepsea oil and gas; equipment for deepwater operation; large scale vertical floating columns and wave load of column groups; special problems in beaches and shallow sea area: characteristics of the marine environment, shallow sea area; seawalls and artificial islands; construction and design; drilling equipment and its movement; problems in oil field development and production in beaches, shallow sea and deep water; oil spill cleanup; emerging challenges for the petroleum industry.

OTI 608 - CORROSION IN OFFSHORE AND SUBSEA SYSTEMS

Thermodynamics of corrosion; electrode reactions; potential. Simple cells; electrochemical series; galvanic series, Nernst equation; common cathodic reactions; general corrosion; Pourbaix diagram; corrosion kinetics; polarisation diagrams; practical measurements; passivity; corrosion mechanisms; effects of oxygen and carbon dioxide; galvanic corrosion; pitting and crevice corrosion; mechanical interactions; microbial induced corrosion; corrosion of welds; stress corrosion cracking; hydrogen embrittlement and effects of H₂S; high-temperature corrosion; corrosion rate measurements; Tafel analysis; polarization resistance; electrochemical impedance spectroscopy; cyclic polarization scans; corrosion of welded structures and micro-biological corrosion with offshore case studies; corrosion control- paints, cathodic protection, corrosion-resistant alloys, corrosion monitoring, control by design.

OTI 609 - INTRODUCTION TO MANAGEMENT AND ENTREPRENEURIAL SKILLS

Understanding management; the downside of management; organizational structures; management functions; management of time and stress; conflicts, conflict environment and conflict resolution; corporate social responsibility; effective project management in small business organization; megaprojects, morality; ethics, and the corporate culture; professional responsibilities; internal partnerships, external partnerships; variables for success; predicting project success; project management effectiveness; expectations and lessons learned; understanding best practices. Network scheduling techniques; network fundamentals;

graphical evaluation and review technique (GERT); dependencies, slack time, network re-planning; estimating activity time, estimating total project time, total PERT/CPM planning; crash times; PERT/CPM problem areas, alternative PERT/CPM models; precedence networks; lag; scheduling problems, with MS Project; Gantt chart; life-cycle costing (LCC); economic project selection criteria; financial modelling and risk analysis; the earned

value measurement system (EVMS); cost control problems; trade-off analysis in a project environment. Basic entrepreneurship concepts including product/service identification, feasibility studies, fundraising, corporate and social entrepreneurship; organising innovative terms; technology-based innovations; small- and medium scale engineering enterprises (SMEE) and how to register a business.

TABLE 2: ACADEMIC STAFF LIST

S/N	Academic	Qualification	Designation	Specialisation
1	Prof. A. Dosunmu	PhD	Professor	Drilling Engineering
2	Prof. A.O. Kuye	PhD	Professor	Computational Skills & Methods
3	Prof S. Ejezie	PhD	Professor	Foundation and Structures
4	Prof. H.U. Nwosu	PhD	Professor	Production and Industrial Engineering
5	Prof. Okonkwo	PhD	Professor	Management and Entrepreneurial Skills
6	Dr. J. Ugbebor	PhD	Senior Lect.	HSE Skills
7	Dr. M.M. Ojapah	PhD	Senior Lect.	Energy and Thermofluids
8	Dr. E.O. Diemuodeke	PhD	Senior Lect.	Computational Skills & Methods
9	Dr. E.G. Saturday	PhD	Senior Lect.	Thermofluids
10	Dr. S. Sule	PhD	Senior Lect.	Foundation and Structures
11	Dr. Adgizi	PhD	Senior Lect.	Foundation and Structures
12	Dr. Akobundu	PhD	Senior Lect.	Management and Entrepreneurial Skills
13	Dr. C.E. Ebieto	PhD	Lecturer I	Thermofluids and Combustion
External Resource Persons				
14	Dr. C. Akhigbemidu	PhD	CEO/PPML	Pipeline Engineering
15	Engr Dr. S.C. Ikpeseni	PhD	S/L DELSU	Corrosion Engineering
16	Dr. J. Andrew	PhD	C Lect./PTI	Marine Survey & Installations
17	Engr. J. Uzoewulu	MEng	Engrg Man./Shell	Marine Survey & Installations
18	Engr. Frank Egbon	MEng	Prod. Man./TOTAL	Offshore Drilling Engineering
19	Engr. T. Njoku	MEng	Design Engr/NNPC	Foundation and Structures

B. MSc PROGRAMMES

Category A:

MSc Offshore Engineering

MSc Subsea Engineering

MSc Pipeline Engineering

Admission Requirements, Programme Duration and Graduation Requirements

- Candidate must be Engineering Graduates with a minimum CGPA of 3.0 on a scale of 5.0
- Consideration may be given to sponsored company staff with a minimum of 3 years relevant experience with a minimum CGPA of 2.5 on a scale of 5.0
- Candidate must possess SSCE/WAEC/NECO with five (5) credits in Mathematics, English Language, Physics, Chemistry, Technical Drawing/ Further Mathematics

- Candidate must have completed their NYSC before applying for the programmes
- The duration of each of the programmes is 12 calendar months
- Candidate must pass all the taught courses do internship/present internship report, and do a MSc Dissertation successfully before he/she can obtain the degree.

COURSES

There are nineteen (19) general courses which are common to the three MSc Programmes in Category A. Sixteen of the general courses are taught courses, one is training, one is Internship while the last one is Dissertation. There are four courses in each area of specialization, making a total of twenty-three (23) courses in each MSc Programme. Table 3 shows the courses offered in the MSc Programmes.

TABLE 3: COURSES OFFERED IN THE THREE MSC PROGRAMMES

S/N	Course Code	Course Title	Credit Units
GENERAL COURSES			
OTI 801: General Module			
1	OTI 801.1	Introduction to Oil & Gas Industry / Offshore Engineering	2
2	OTI 801.2	HSE & Practical skills	1
3	OTI 801.3 / SGS 801.1	ICT & Research Methods (Includes Technical Report Writing)	2
OTI 802: Computational Skills and Methods Module			
4	OTI 802.1	Applied Mathematics	2
5	OTI 802.2	MATLAB & SIMULINK / SOLIDWORKS	1
6	OTI 802.3	ORCAFLEX / ANSYS Software Training	1
OTI 803: Foundation & Structures Module			
7	OTI 803.1	Civil & Geotechnical Engineering / Structural Response Analyses	2
8	OTI 803.2	Reliability Engineering / Structural Integrity of Pipes & Structures	2
OTI 804: Marine Survey & Installation Module			
9	OTI 804.1	Marine Hydrodynamics / Marine Survey	2
10	OTI 804.2	Umbilical, Riser & Pipeline Installations	2
OTI 805: Offshore Drilling & Production Module			
11	OTI 805.1	Introduction to Drilling Engineering & Geomechanics	1
12	OTI 805.2	Offshore Drilling / Introduction to Production & Flow Assurance	2
OTI 806: Corrosion & Power Supply Module			
13	OTI 806.1	Corrosion Inspection & Mitigation	1
14	OTI 806.2	Electrical Power Supplies in Oil and Gas Operations	2
OTI 807: Entrepreneurial Skills & Management Module			
15	OTI 807.1 /SGS 802.2	Introduction to Entrepreneurial Skills & Management	2
16	OTI 807.2	Contract Planning & Project Control / Maritime Law	1
OTI 808: Underwater Safety Module			
17	OTI 808.1	TBOSIET/ HUET	0
OTI 809: Project Module			
18	OTI 809.1	Internship	6
19	OTI 809.2	Dissertation	6
COURSES IN AREAS OF SPECIALIZATION			
OFFSHORE ENGINEERING COURSES			
OOE 801: Offshore Materials and Design Module			
1	OOE 801.1	Theory of Plates / Grillages and Design of Fixed Platforms	2
2	OOE 801.2	Offshore Materials / Failure of Materials & Structures	2
OOE 802: Subsea Equipment Module			
3	OOE 802.1	Subsea Oil & Gas Exploitation & Exploration	2
4	OOE 802.2	Underwater Vehicles Systems	2

SUBSEA ENGINEERING COURSES			
SSE 801: Subsea Equipment Design Module			
1	SSE 801.1	Introduction to Subsea Technology	2
2	SSE 801.2	Subsea Components & Equipment Design	2
SSE 802: Subsea Processing & Artificial Lifting Module			
3	SSE 802.1	Subsea Field Development	2
4	SSE 802.2	Subsea Flow Assurance / Subsea Processing	2
PIPELINE ENGINEERING COURSES			
PPE 801: Pipeline Fundamentals, Materials Fabrication & Welding Module			
1	PPE 801.1	Pipeline Engineering, Hydraulics & Defect Assessment	2
2	PPE 801.2	Pipeline Materials, Fabrication & Welding Engineering	2
PPE 802: Pipeline Design & Construction / Asset Management Module			
3	PPE 802.1	Pipeline Design & Construction	2
4	PPE 802.2	Pipeline Asset Management	2

COURSES DESCRIPTION

GENERAL COURSES

OTI 801 GENERAL MODULE

OTI 801.1: Introduction to Oil & Gas Industry / Offshore Engineering

Introduction and History of the Industry; Petroleum Geology; Exploration; Drilling and Testing; Production; Reservoir Mechanics and Production Management; Transportation and Storage; Refining and Petrochemicals; Marketing; Structure of the Industry; Energy and the Environment; Future of the Oil and Gas Industry.

General Overview of offshore operations; Extracting resources & physical scales ; Types of offshore structures ; Hydrostatics and wave/body dynamics laboratory ; Offshore planning and development ; Engineering systems ; Decommissioning and environmental monitoring ; General FSI framework; Waves and inertial-based fluid loading; Currents and viscous-based fluid loading ; Station keeping. **Special Features:** Laboratory testing the response of structures in waves; Overview of engineering offshore structures from cradle to grave ; Analysis methods for fluid structure interaction

OTI 801.2: HSE and Practical skills

Introduction to the International Standards associated with HSSE, including the ISO 14000 family; Environmental legislation and voluntary standards. Environmental impacts and prevention; Occupational health and safety legislation and duty of care; Human reliability analysis and accident causation: Major accident sequences, risk perception and control of risk human reliability

assessment tools, HEART and THERP. Offshore safety case and formal safety assessments: regulatory regime, safety case requirements, types of study, scenario development, examples of use of QRA methods, consequence analysis, vulnerability of essential systems, smoke and gas ingress, evacuation escape and rescue and typical output. Review of major offshore accidents: Sea Gem, Alexander Keilland, Star Canopus and Piper Alpha disaster.

OTI 801.3 /SGS 801.1: ICT & Research Methods (Includes Technical Report Writing)

Report presentation with Microsoft Word, Data analysis and presentation on Microsoft Excel; Oral presentation using Microsoft PowerPoint. Review of the history and basic concepts of scientific research, research and development, research and development techniques in engineering and physical sciences; Research design; Literature search and review; searching and researching on the world wide web (www); intellectual property, patent rights, patent infringements, software piracy, plagiarism; Scientific writing; Scientific presentation; Critical scientific review; Data types and data collection techniques; Quantitative and qualitative methods and data analysis; Ethical issues.

OTI 802 COMPUTATIONAL SKILLS AND METHODS

OTI 802.1: Applied Mathematics

Analysis and engineering applications of the following concepts: scalar and vector fields; analytic functions; operational calculus; linear and tensor algebra and fields; calculus of variations; systems of ordinary differential equations; autonomous systems, stability problems, and nonlinear

vibrations; equations of mathematical physics, partial differential and integral equations and their solution methods, separation of variables, integral and finite integral transform methods, etc., approximate analytical solution methods.

OTI 802.2: MATLAB & SIMULINK / SOLIDWORKS

MATLAB Fundamentals: Working with the MATLAB user interface, Entering commands and creating variables, Performing analysis on vectors and matrices, Visualizing vector and matrix data, Working with data files, Working with data types, Automating commands with scripts, Writing programs with logic and flow control, Writing functions. **MATLAB for Data Processing and Visualization:** Importing data, Organizing data, Visualizing data and Exporting data. **MATLAB Programming Techniques:** Programming for correctness, Structuring data, Structuring code, Classes and objects. **MATLAB for Building Graphical User Interfaces** from the command line by using GUIDE, the GUI development environment. **Simulink® for System and Algorithm Modeling:** Creating and modifying Simulink models and simulating system dynamics, Modeling continuous-time, discrete-time, and hybrid systems, Modifying solver settings for simulation accuracy and speed, Building hierarchy into a Simulink model, Creating reusable model components using subsystems, libraries, and model references.

Basic 3D Concepts. 3D Modelling of offshore / subsea equipment and structures using SOLIDWORKS.

OTI 802.3: ORCAFLEX/ANSYS Software Training

Introduction and General Overview of ORCAFLEX; Input Data with ORCAFLEX; Modeling simple offshore designs with ORCAFLEX software; Modeling of risers, umbilicals and mooring lines; Adjusting the design views; Performance and Dynamic Analysis; Generating output and results; Work Multiple views.

Introduction of ANSYS , ANSYS and Finite Element Analysis (FEA), ANSYS Basics, Starting ANSYS, ANSYS Workbench Environment, The GUI, Graphics and Picking, The database and files, Saving Files and Exiting ANSYS, File Types; Basics of Meshing with ANSYS; Nodes and Element types: Structural Analysis and Thermal Analysis; Linear Static Analysis and Non-Linear static Analysis; Modal Analysis

OTI 803 FOUNDATION AND STRUCTURES MODULE

OTI 803.1: Civil & Geotechnical Engineering / Structural Response Analyses

Introduction to geotechnical engineering, The offshore environment, Offshore site investigation, Soil mechanics: Formation of offshore soils, Classification and basic properties of offshore soils, Stress and strain in soils, Fluid flow through soils, Compressibility and yielding of soils, Practical approaches for soil strength and cyclic loading, Theory of applied elasticity, and Bearing capacity, Other stability analysis, Consolidation and other time-related processes, Sample integrity. **Deep foundations:** Piled and Drilled Shafts; **Shallow foundations,** Anchoring systems, Mobile jack-up platforms, Pipeline and Riser geotechnics, **Geohazards** Equation of Motion: Mass, Stiffness, and Damping, Ground Excitation and Rotational Motion. **Free Vibration, Single Degree of Freedom Systems (SDOF)** with and without damping: Simple harmonic motion, Dynamic Response Factors, Resonance, Transmissibility. **Response to Arbitrary, Step, and Pulse Excitations of SDOF systems** (with and without damping): Unit impulse, Arbitrary Force, Pulse Excitations. **Numerical Evaluation of Dynamic Response: Inelastic Systems.** **Blast-resistant Design:** Determination of Blast loads, Multiple Degree of Freedom Systems, Stochastic response analysis, long term response analysis, Nonlinear, time domain simulation of offshore structures and wind turbines subjected to extreme environmental actions.

OTI 803.2: Reliability Engineering / Structural Integrity of Pipes & Structures

Introduction: Asset management, overall equipment effectiveness (OEE), asset productivity. **Asset integrity:** Asset integrity management, Risk-based integrity, through-life engineering. **Maintenance engineering:** Maintenance regimes, Maintenance modeling, planning, scheduling, and optimization. **Reliability data analysis,** Probability of failure, Cost of failure, and risk of failure in offshore energy systems. **System's life-cycle:** Life-cycle cost (LCC) analysis, Warranty and service contracts analysis: guarantees, maintenance outsourcing. **Students will work in groups to analyze the reliability, availability and maintainability of various offshore systems and components,** Classical Beam Theory, Statically Indeterminate Beams. **Beam installed at the elastic foundation.** **Fatigue Crack Initiation; Fracture Mechanics,** Creep Deformation and Crack Growth; **Non Destructive Testing Methods; Inspection Reliability; Defect Assessment,** Corrosion Engineering. **Applications for Subsea Pipelines:** Computational Evaluations for Fixed beam on elastic bed: Symbolic Solutions for Point Force, Fixed Pipeline on elastic seabed in cold regions: Iceberg's Dragging Load, Free pipeline on elastic bed: Combined loads. **Installation of Subsea Pipeline at Shallow water,** Strength and stability of

the subsea pipeline, offshore pipeline in current: Subsea Current Dragging Force, Strength and Stability. Subsea Pipelines in Cold and Warm Regions: Perspective and Projects on Subsea Pipeline Installation and Operation Stages: Linear Theory of Bending of Pipeline, French Method of Installation with Lay Barge: Multi-Layers Pipe, Theory of bending of multilayers pipe: Historical view on Arctic regions (Norway, Barents Sea Russia: Prirazlomnoye (Off shore)).

OTI 804 MARINE SURVEY AND INSTALLATION MODULE

OTI 804.1: Marine Hydrodynamics/ Marine Survey

Fundamentals of fluid mechanics, Transport theorem and conservation principles, Navier-Stokes' equation, Dimensional analysis, Ideal and potential flows, Vorticity and Kelvin's theorem, Hydrodynamic forces in potential flow, D'Alembert's paradox, added-mass, slender-body theory, Viscous-fluid flow, Laminar and turbulent boundary layers, Model testing, Scaling laws, Application of potential theory to surface waves, Energy transport, Wave/body forces, Linearized theory of lifting surfaces.

Introduction to Subsea Survey; Subsea Survey Requirements: Survey Pattern for Selected Subsea Field and Each Pipeline Route, Geotechnical Study, Survey Vessel, Survey Aids, Gyrocompass, Navigation Computer and Software, Personnel; Subsea Survey Equipment Requirements: Multibeam Echo Sounder (MBES), Side-Scan Sonar, Sub-Bottom Profilers, High-Resolution Sub-Bottom Profiler, Low-Resolution Sub-Bottom Profiler, Magnetometer, Core and Bottom Sampler, Positioning Systems: Offshore Surface Positioning and Underwater Positioning; Subsea Metrology and Positioning; Subsea Soil Investigations and Equipment, Structural Design and installation, Suction Caissons, and Plate Anchors.

OTI 804.2: Umbilical, Riser & Pipeline Installations

Typical Installation Vessels: Transportation Barges and Tug Boats and Drilling Vessels, Jack-Up Rigs, Semi-Submersibles, Drill Ships, Pipe-Laying Vessels: S-Lay Vessels, J-Lay Vessels, Reel-Lay Vessels; Umbilical-Laying Vessels, Heavy Lift Vessels and Offshore Support Vessels. Vessel Requirements and Selection: Basic Requirements for Vessels and Barges; Vessel Performance and Vessel Strength; Functional Requirements: Vessel for Subsea Hardware Installation, Vessel for Pipe and Umbilical Laying. Installation Positioning: Surface Positioning, and Subsea Positioning. Installation Analysis: Subsea Structure Installation

Analysis, Pipeline/Riser Installation Analysis, Umbilical Installation Analysis

Rigid pipeline installation methods, S Lay, J Lay, Reel Lay, catenary equations, Tow & Pull methods, Shore Pull, Tie-in, Difference between shallow and deep water pipe-lay Lay Analysis, Operability Rosettes, Initiation, Normal lay, Abandonment & Recovery analysis, Installation fatigue analysis, Installation of pipeline end structures and In line Tees. Trenching and Back filling, Trenching Analysis, Marine Warranty during pipe-lay. Introduction to flexible and umbilical, Flexible and umbilical lay methods, Flexible and umbilical spooling, Installation of flexible and umbilical end structures, Various types of flexible risers, Flexible riser installation.

OTI 805 OFFSHORE DRILLING AND PRODUCTION MODULE

OTI 805.1: Introduction to Drilling Engineering and Geomechanics

Review of fundamentals, Mechanical Earth Model ; Anisotropy: Fundamentals, Mechanical properties, Wellbore applications, Effects on stress, Laboratory measurements; Reservoir geomechanics, Well integrity, Plasticity; Salt: Mechanics, Stress, Wellbore stability; Drilling: Bits, Fluids, Lost circulation, Leakoff tests, Wellbore strengthening; Sonic logging and other measurements for geomechanics; Fractures, faults and earthquakes. Geomechanical, geotechnical and petro-physical problems of interest to the petroleum industry: petroleum well drilling, borehole breakouts, wellbore stability, hydraulic fracturing, subsidence and compaction due to oil and gas withdrawal.

OTI 805.2: Offshore Drilling / Introduction to Production & Flow Assurance

Emerging challenges for the Petroleum Industry: Technology advancement, Competition from Nonfossil Energy Source, Climate Change Policy, Peak Oil Production, Industry Operations, Definition of Deep water, characteristics of Deepwater oil and gas field project environment, seabed temperature and instability, gas hydrates, Internal waves, Equipment combination programs for acquisition, processing, storage and transportation of deep sea oil and gas. Equipment for deep water operation: large scale vertical floating columns and wave load of column groups. Special problems in beaches and shallow sea area: characteristics of the marine environment, shallow sea area; Seawalls and Artificial islands: Construction and Design; Drilling Equipment and its movement. Problems in Oil field development and production in Beaches, Shallow Sea and Deep water. Oil Spill Cleanup.

Introduction to oil and gas fluid transport properties, Fluid property data and phase determination, Fluid flow analysis - single and multiphase, Slug formation and prediction, surge analysis, Hydrate formation and prevention, Wax formation and deposition, including prevention and mediation, Asphaltene prediction, Scale precipitation and sand production, Pigging operations, leak detection methods and SCADA, Start-up and shutdown issues.

OTI 806 CORROSION AND POWER SUPPLY MODULE

OTI 806.1 Corrosion Inspection and Mitigation

Thermodynamics of Corrosion, Pourbaix diagram. Corrosion Kinetics: Polarisation diagrams, practical measurements, passivity. Corrosion Mechanisms: Effects of oxygen and carbon dioxide, galvanic corrosion, pitting and crevice corrosion, mechanical interactions, microbial corrosion, corrosion of welds, stress corrosion cracking, hydrogen embrittlement and effects of H₂S, High temperature corrosion. Corrosion Rate Measurements, Tafel Analysis, Polarization Resistance, Electrochemical Impedance Spectroscopy, Cyclic Polarization Scans. Corrosion of welded structures and Micro-Biological Corrosion with offshore case studies. Corrosion Control: Paints, cathodic protection, corrosion resistant alloys, corrosion monitoring, control by design.

OTI 806.2: Electrical Power Supplies in Oil and Gas Operations

Power Generation for offshore operations: Gas turbines, Wind turbines, Application of electrical power in marine installations for production of oil and gas, and subsea process installations. Dynamic models of rotating machines, short circuit analysis, start-up of large motors, cable modeling and subsea cable networks. Subsea motors and subsea high voltage equipment. Electrical heating of subsea pipelines. Offshore power grid.

OTI 807 - ENTREPRENEURIAL SKILLS & MANAGEMENT MODULE

OTI 807.1 /SGS 802.2: Introduction to Entrepreneurial Skills & Management

Basic entrepreneurship concepts including product/service identification, feasibility studies, fund raising, corporate and social entrepreneurship, organizing innovative terms, technology-based innovations, small- and medium scale engineering enterprises (SMEE).

Understanding Management; Organizational Structures. Management Functions; Effective Project Management in Small Business

Organization, Mega Projects, Morality, Ethics, and The Corporate Culture, Professional Responsibilities, Internal Partnerships, External Partnerships, Variables For Success: Predicting Project Success, Project Management Effectiveness, Expectations, Lessons Learned, Understanding Best Practices, Network Scheduling Techniques: Understanding Project Management Software, Project Graphics And Software Application, Economic Project Selection Criteria, Risk Analysis, Capital Rationing, Project Financing. Cost Control, The Material Accounting Criterion, Material Variances: Price And Usage, Summary Variances, Status Reporting, Cost Control Problems, Trade-Off Analysis in a Project Environment.

OTI 807.2: Contract Planning & Project Control / Maritime Law

Contract Management; Procurements; Planning; General Planning; Life-Cycle Phases; Proposal Preparation; Project Specifications; Milestone Schedules; Work Breakdown Structure; WBS Decomposition Problems; Stopping Projects; Handling Project Phase-outs and Transfers; Detailed Schedules and Charts; Master Production Scheduling; Project Plan; Total Project Planning; The Project Charter; Management Control; Project Audits; Project Management Growth; Risk Management: Risk Analysis, Probability Distributions and the Monte Carlo Process, Risk and Concurrent Engineering; Learning Curves; Quality Management; Modern Developments in Project Management; The Business of Scope Changes; Managing Crisis Projects

Maritime Law: The Conflict Of Laws; Shipbuilding, Sale, Finance And Registration; International Trade And Shipping Documents; Charterparties; Cargo Claims And Bills Of Lading; Carriage Of Passengers; The Liabilities Of The Vessel; Public International Law Aspects Of Shipping Regulation; Safety And Compliance; Marine Pollution From Shipping Activities; Marine Insurance; Procedures For Enforcement; The Application Of The EU Competition Rules To The Marine Sector

OTI 808 UNDERWATER SAFETY MODULE

OTI 808.1: TBOSIET/HUET

Practical training on Tropical Basic Offshore Safety Induction and Emergency Training (TBOSIET); Social responsibility in the offshore environment; Sea Survival; Hazards and control measures. Introduction to Factors Influencing Offshore Helicopter Transport Safety; Development and Implementation of Helicopter Underwater Escape Training or Helicopter Underwater Egress Training (HUET) Programs; Psychological Factors in Underwater Egress and Survival; The

Physiological Responses to Cold-Water Immersion and Submersion. This course has no Credit Unit.

OTI 809PROJECT MODULE

OTI 809.1: Internship (16 Weeks in the field and Oral Defense)

16 weeks industrial training at oil and gas industries to enhance and develop the knowledge and skills gained through classroom lectures in the course of the programme. Written report and oral examination are required at the end of the internship.

OTI 809.2: Dissertation

Supervised research on a problem of current national, professional and academic interest chosen from the student's area of specialization, approved by the supervisor. The research should represent a significant level of the student's independent work and be such that culminate his/her efforts in applying the principles covered in the graduate programme. Written report and oral examination are required at the end of the research.

OFFSHORE ENGINEERING COURSES

OOE 801 - OFFSHORE DESIGN MODULE

OOE 801.1: Theory of Plates / Grillages and Design of Fixed Platforms

Introduction, Fundamentals of the Small Deflection Plate Bending Theory, Grillages, Rectangular and Circular Plates, Plate behaviour under lateral pressure or in-plate compression, structural dynamics, composite materials. Frames and grillages with emphasis on elastic and plastic responses of stiffened plate structures. Elastic plate theory and elasto-plastic plate theory. Buckling of plates and tripping of stiffeners, Flexural vibration of plates and beams. Design considerations and criteria for limiting vibrations. Design of structures made of composite materials. Introduction to structural dynamics; Plate Bending by Approximate and Numerical Methods; Thermal Stresses in Plates.

Loads on Offshore Structures; Calculation based on Maximum base Shear and Overturning Moments; Design Wave heights and Spectral Definition; Hydrodynamic Coefficients and Marine growth; Fatigue Load Definition and Joint Probability distribution; Seismic Loads, Concepts of Fixed Platform Jacket and Deck, Steel Tubular Member Design; Design for combined axial and bending stresses (API RP 2A guidelines).Tubular Joint Design for Static and Cyclic Loads; Submarine Pipelines and Risers, Design using DNV 81 code, Design against Accidental Loads Design of structures for high temperature; Blast Mitigation-Blast walls; Collision of Boats and energy

absorption; Platform survival capacity and Plastic design methods.

OOE 801.2 Offshore Materials / Failure of Materials & Structures

Introduction to materials: atomic structure, crystal structure, imperfections, diffusion, mechanical properties, dislocations and strengthening mechanisms, phase diagrams, phase transformations, solidification, corrosion. Introduction to materials in offshore structures: to materials usage in offshore engineering including C-Mn ferrite-pearlite steels; stainless steels; composites; concrete; etc. This should include discussion of heat treatment effects on microstructure and hence mechanical properties. Offshore failures: case studies.

Structure of materials. Imperfections in structures. Dislocations and strengthening mechanisms. Study of macro, micro, nano and atomic structures. Phase transformation in metals. Principles of structure-property relationships of materials; control through processing. Alloy theory, phase diagrams and microstructural development; application to ferrous and nonferrous alloys. Structures and properties in other materials. Role of structure in cyclic loading and high temperature applications. Role of structure in interaction of materials with environment. Role of structure in physical properties of materials.

OOE 802 - SUBSEA EQUIPMENT MODULE

OOE 802.1 Subsea Oil and Gas Exploitation and Exploration

Subsea Structures within Subsea Development Concepts, Categories and Functional Roles of Subsea Structures, General Arrangements and key components of subsea structures, Regional Characteristics. Subsea structure design: Functional Requirements, Regulatory and Design Code Framework, Key design drivers, Design methods and analysis tools/techniques. Design Examples: Multi Slot Manifold, Fishing Protection Structure, Manifold Template, In-Line Structures. Subsea exploration processes: Separation and pressure-boosting operations performed in subsea, whether downhole or on the seabed; two-phase and three-phase separation, Pressure-boosting using multiphase pumps and wet gas compressors, Water disposal and Reinjection.

OOE 802.2 Underwater Vehicle Systems

Operational Overview – Common to Both ROVs And AUVs:Connectors, Recovery,User error, Navigation – calibration / failures, Launch, Poor maintenance, Poor practices. System Software Architecture :Sub-system Interfaces, Architecture / Failure analysis, Health and Status data, Impact on data. Communication challenges.Weight and

Balance: Stability and Data impact. Data Analysis. Thrust and Altitude: Impact on instruments and data. System Safety: Personnel Safety and Consistency. ROV/AUV Maintenance Items in Common: Red Flags. ROV Operational Techniques: Vehicle class versus capability, Work space realm, Support, Modification/Upgrades, Form Factors, Costs. Control Room: Layout, Functions, Data capture vs real time display. Mission space (think ahead) On deck versus in water, Checklist, Buoyancy, Systems check, Limited Deck Operation. Maintenance considerations: Ground faults, DC versus AC. Lifting and Storage Facilities, Onshore and at Sea. Ancillary Equipment. Manipulators for ROV's, cameras for ROV's & AUV's. Dead Vehicle Recovery: What to do if your ROV is lost, Cost vs. risk. Location, Mission review, Boat instrumentation – monitoring. AUV Operational Techniques (Focus On Launch And Recovery Operations): Vehicle class versus capability, Work space realm, Support., Modification/Upgrades.

SUBSEA ENGINEERING COURSES

SSE 801: SUBSEA EQUIPMENT DESIGN MODULE

SSE 801.1: Introduction to Subsea Technology

Subsea production systems: Field architecture, Distribution systems, Subsea surveys, Installation and vessels; Flow assurance and system engineering: Subsea operators, commissioning and start-up, Production processing, Chemical injection, well testing, Inspection and maintenance; Subsea structures and equipment: Subsea manifold, Pipeline ends and in-line structures, Jumpers, Subsea wellheads, Subsea trees, Umbilical systems, Production risers; Subsea pipelines.

SSE 801.2: Subsea Components & Equipment Design

Subsea manifolds: Manifolds components, Manifolds design and analysis, Pile and foundation design, Installation of subsea manifolds; Pipeline ends and in-line structures: PLEM design and analysis, Design methodology, Foundation (Mudmat) sizing and design, PLEM installation analysis; Subsea connection and jumpers: Jumpers components and function, Subsea connections, Design and analysis of rigid jumpers, Design and analysis of a flexible jumpers, Subsea Wellheads and Trees: Subsea completion overview, Subsea wellhead system, Subsea Xmas trees; ROV Intervention and interface.

SSE 802: SUBSEA PROCESSING & ARTIFICIAL LIFTING MODULE

SSE 802.1: Subsea Field Development

Subsea field development overview, Deepwater or shallow- water development, Wet tree and dry tree-

systems, Subsea tie-back development, Stand-alone development, Artificial lift methods and constraints, Subsea processing, Template, clustered well system, and daisy chain, Subsea field development assessment.

SSE 802.2: Subsea Flow Assurance / Subsea Processing

Introduction to flow assurance, Flow assurance challenges, Flow assurance concerns, Typical flow assurance process: fluid condensation and property assessment, Steady-state hydraulic and thermal performance analysis, Transient flow hydraulic and thermal performance analysis; System design and operability: Well start-up and shut-down, Flowline blowdown, Hydrates, Wax and asphaltenes.,

PIPELINE ENGINEERING COURSES

PPE 801 PIPELINE FUNDAMENTALS, MATERIALS FABRICATION & WELDING MODULE

PPE 801.1: Pipeline Engineering, Hydraulics & Defect Assessment

Codes, standards in practice in pipeline engineering, Distribution Terminals, Measurement and flow control, Natural Hazards and Human Threats, Fire Hazards, Pipeline maintenance and repair techniques, Fluid Transients: Single liquid phase, Waterhammer, Two-phase vapour-liquid waterhammer, Non-condensable two-phase waterhammer, Defect assessment: visual examination, magnetic particle testing, liquid penetrant testing, radiographic testing, ultrasonic testing, eddy current testing, acoustic emission testing, thermography, pipeline pigs, smart pigs., leak and pressure tests.

PPE 801.2: Pipeline Materials, Fabrication & Welding Engineering

Pipeline materials: Ferrous and non-ferrous pipes, Mechanical properties: Strength, hardness, toughness, fracture toughness, fatigue strength, Physical properties, fabrication of steel pipe, fabrication of pipe fittings and components, Welding: shop and field welding, Welding processes, Weld defects, Codes, standards and practice, Post weld heat treatment, In-service welding, Surfacing techniques.

PPE 802: PIPELINE DESIGN & CONSTRUCTION / ASSET MANAGEMENT MODULE

PPE 802.1: Pipeline Design & Construction

Pipeline Design Considerations, Safety, Codes and standards, Pipeline coating, sizing, Internal and external pressure, over pressure protection, Valve spacing and rapid shut down, Pumps and pumping stations, Pigging, Subsea pipelines: Safety, Design

process, Internal pressure, External pressure, Pipe lowering, On-bottom stability, Pipeline floatation, fatigue design, Hook and pull, Scheduling, Preconstruction activities: Survey and mapping, Staging areas, Soil and geology studies; Construction: Movement and Staging of pipeline components and construction equipment, Clearing and grading, Stringing pipe joints along the ROW, Ditching, Pipe bedding material, Welding, Pipe bending, Pipe coating, Lowering the pipeline into the ditch/ ditch backfilling, Hydrostatic testing, Final Grading and reclamation.

PPE 802.2: Pipeline Asset Management

Pipeline asset integrity, Pipeline failures: causes, consequences and prevention; Threats to pipeline integrity, pipeline integrity management, Pipeline inspection, Emergency response, Developing an asset management plan, Implementing an asset management plan, financing an asset management plan, Government regulations, pipeline cost analysis, pipeline life cycle cost analysis and modeling.

TABLE 3: STAFF LIST – NAME, QUALIFICATION, DESIGNATION AND SPECIALIZATION

S/N	Academic	Qualification	Designation	Specialisation
1	Prof. R. Uhunmwangho	PhD	Professor	Power Systems Engineering
2	Prof. I. L. Nwaogazie	PhD	Professor	Water Resources Engineering
3	Prof. A. Dosunmu	PhD	Professor	Drilling Engineering
4	Prof. A.O. Kuye	PhD	Professor	Computational Skills & Methods
5	Prof. M. Onyekonwu	PhD	Professor	Petroleum Production
6	Prof S. Ejezie	PhD	Professor	Foundation and Structures
7	Prof. H.U. Nwosu	PhD	Professor	Production and Industrial Engineering
8	Prof. D. Appah	PhD	Professor	Petroleum Production
9	Prof. J. Akpobi	PhD	Professor	Applied Mechanics ad Design
10	Prof. T. A. Briggs	PhD	Professor	Industrial Engineering
11	Prof. C. V. Ossia	PhD	Professor	Applied Mechanics ad Design
12	Prof. A. O. Obi	PhD	Professor	Production and Maintenance Engineering
13	Prof. F. I. Abam	PhD	Professor	Industrial Engineering
14	Prof. Okonkwo	PhD	Professor	Management and Entrepreneurial Skills
15	Dr. Adgizi	PhD	Assoc.Prof..	Foundation and Structures
16	Dr. J. Ugbebor	PhD	Senior Lect.	HSE Skills
17	Dr. M.M. Ojapah	PhD	Senior Lect.	Energy and Thermofluids
18	Dr. E.O. Diemuodeke	PhD	Senior Lect.	Computational Skills & Methods
19	Dr. E.G. Saturday	PhD	Senior Lect.	Energy and Thermofluids
20	Dr. S. Sule	PhD	Senior Lect.	Foundation and Structures
21	Dr. A. Big-Alabo	PhD	Senior Lect.	Applied Mechanics ad Design
22	Dr. Akobundu	PhD	Senior Lect.	Management and Entrepreneurial Skills
23	Dr. S. Sule	PhD	Senior Lect.	Foundation and Structures
24	Dr. A. Big-Alabo	PhD	Senior Lect.	Applied Mechanics ad Design
25	Dr. Akobundu	PhD	Senior Lect.	Management and Entrepreneurial Skills
26	Dr. D. Aikhuele	PhD	Senior Lect.	Production and Maintenance Engineering
27	Dr. (Mrs.) A. Big-Alabo	PhD	Senior Lect	Power Systems Engineering
28	Dr. S. Esobinowu	PhD	Senior Lect	Power Systems Engineering
29	Dr. C. E. Ebieto	Ph.D	Lecturer I	Thermofluids and Combustion

31	Dr. J. Andrew	PhD	C Lect./PTI	Marine Survey & Installations
32	Engr. J. Uzoewulu	MEng	Engrg Man./Shell	Marine Survey & Installations

33	Engr. Frank Egbon	MEng	Prod. Man./TOTAL	Offshore Drilling Engineering
34	Engr. T. Njoku	MEng	Design Engr/NNPC	Foundation and Structures

CATEGORY B

MSc Energy Access and Renewable Energy Technology

The M.Sc Programme in Energy Access and Renewable Energy Technology is designed to equip students with the advanced knowledge and skills to develop a successful career in the rapidly growing energy access sector of Nigeria and Sub-Saharan African in general. Candidates for the MSc

programme shall possess a bachelor's degree in Engineering with a minimum of second-class lower grade or postgraduate diploma (PGD) in engineering with a minimum CGPA of 3.5 on a 5-point scale. An applicant with a postgraduate diploma must possess a BSc/B.Eng degree with at least a third class. The duration of the programme is: **Full-Time:** 18 Calendar Months, **Part-Time:** 36 Calendar Months

COURSES

S/N	Course Code	Course Title	Credit Units
CORE COURSES			
1	RET 801.1	Energy Access and Energy systems	
2	RET 802.1	Renewable energy fundamentals	
3	RET 803.1	Energy Policy and Regulation	
4	SGS 801.1	ICT and Research Methods	
5	SGS 802.2	Entrepreneurship and Management	
6	RET804.2	Solar energy conversion technology	
7	RET805.2	Bio-Mass energy conversion technology	
8	RET 806.2	Hydro Power Technology	
9	RET 810.3	Energy systems modelling	
10	RET 811.3	Design project and graduate seminar	
11	RET 812.3	Internship	
12	RET 813.3	MSc Dissertation	
ELECTIVE COURSES			
13	RET 807.2	Wind energy conversion technology	
14	RET 808.2	Geothermal energy conversion technology	
15	RET 809.2	Offshore renewable technology	

Detailed Courses description and Learning Outcomes are provided in: www.earetuniport.com.ng.

C. Ph.D PROGRAMMES

Ph.D IN OFFSHORE ENGINEERING

Admission/Graduation Requirements and Programme Duration

Candidates applying for the Ph.D programme in Offshore Engineering must fulfil the following requirements:

- i. Meet the general University requirements for admission into Ph.D programmes;
- ii. The candidate should possess a Master's degree in any of the following fields of Engineering: (a) Offshore Engineering, (b) Subsea Engineering and (c) Petroleum Engineering with a minimum CGPA of 3.5 (on a 5.0 scale)

or its equivalent. Candidates with Master's degree in any of Chemical Engineering, Civil Engineering, Electrical/Electronic Engineering, Marine Engineering, Mechanical Engineering and Pipeline Engineering plus up to 5 years' experience in offshore operations may be considered.

- iii. Score at least 60% in a proposal presentation/admission screening interview to be organised by the Institute.

To be awarded the degree of Doctor of Philosophy (Ph.D) in Pipeline Engineering, the Ph.D student is required to score at least 50% (C grade) in all the taught courses, seminar presentations and the Ph.D

Thesis defence. In addition, the Ph.D student must have two publications from his/her research.

The programme shall last for a minimum of 24 calendar months and a maximum of 48 calendar months of full time study, or a minimum of 36 calendar months and a maximum 60 calendar months of part-time study.

COURSES

Table 5: List of courses, codes ad credit units

Course Code	Course Title	Credit Units
Taught Courses		
OTI 901	Advanced Research Methods and Entrepreneurial Skills	3
OTI 902	HSE in Oil and Gas Operations	3
OTI 903	Offshore materials & materials failure	3
OTI 904	Design of offshore fixed platforms	3
OTI 905	Government Policies in Offshore Operations	3
Seminar Courses and Ph.D Thesis		
OTI 906	Seminar I	3
OTI 907	Seminar II	3
OTI 908	Ph.D Thesis	9
Total Credit Units for each Ph.D Programme		30

NB: OTI 901, OTI 902 , OTI 906 OTI 907 and OTI 908 are common to all programmes

DESCRIPTION OF COURSES

OTI 901: Advanced Research Methods and Entrepreneurial Skills

Research design/execution with ICT tools; Advanced research and development techniques in engineering and physical sciences; Research design; Data types and data collection techniques; Quantitative and qualitative methods and data analysis; Scientific writing/presentation; Thesis (Report) writing. Entrepreneurial opportunities in the oil and as sector; Entrepreneurial skills required in oil and gas business; The Challenges of entrepreneurial activities in the oil and gas sector: Oil theft and pipeline vandalism; causes, preventive measures and way forward.

OTI 902: HSE in Oil and Gas Operations

Environmental considerations in oil and gas exploration and production, Health and safety considerations in oil and gas exploration and production, Safety regulations in the oil and gas sector, Fundamental safety measures in oil and gas operations, Avoidable safety cost components and their effect in oil and production in Nigeria.

OOE 903: Offshore Materials & Materials Failure

The course entails exploring different materials applied in offshore oil and gas operations – including their selection and design. Also materials testing, failure detection and prevention of offshore materials will be exhaustively covered. Students will be required to carry out mini projects on materials testing or failure analysis as part of the course assessment.

OOE 904: Design of Offshore Fixed Platforms

The course will cover the design of different fixed platforms in offshore oil and gas operations. Design against fatigue, static and cyclic loads of fixed structures such as pipelines and risers. Also, design against accidental loading will be covered. Students will carry out design of any selected fixed structure against any loading as part of the course assessment.

OTI 905: Government Policies in Offshore Operations

Overview of main offshore platforms/ownership, Main regulatory agencies of the oil and sector- their formulations, roles and duties, Government legislations governing the operation of offshore platforms, Management of offshore operations.

OTI 906: Seminar I

Seminar I will be presented between 9 months and 12 months of the start of programme. It will consist of chapters one and two (Introduction and Literature Review) of the student's work. Also, timelines for the remaining work to be carried out will be part of the presentation. This presentation will be scored and the minimum pass mark is 50. Successful candidates will be allowed to go with their researches. If any candidate is not successful at this stage, the candidate will be allowed to repeat the presentation within three months from the date of the first presentation.

OTI 907: Seminar II

Seminar II will be presented between 15 and 18 months into the programme. Seminar II will cover Chapter Three (Materials and Methods or Methodology) in addition to Chapters one and two which should be improved versions of what is contained in **Seminar I**. The Ph.D student can also present preliminary or selected or few results. If the presentation is successful, the candidate can go ahead with his or her research to conclusion and thesis write-up.

OTI 908: Ph.D Thesis

The Ph.D thesis presentation follows successful presentation of Seminar I and Seminar II. The thesis presentation has three stages: Presentation at the Institute where staff drawn from the Faculty of Engineering and the Industry will be the examiners,

presentation at the school of graduate studies, then the external (final) examination by an external examiner. The external examination will come between 30 months and 36 months into the programme for full time study.

Ph.D IN SUBSEA ENGINEERING

Admission/Graduation Requirements and Programme Duration

The programme duration and graduation requirements are similar to that of Offshore Engineering. The admission requirements are as follows:

- i. Meet the general University requirements for admission into Ph.D programmes;
- ii. The candidate should possess a Master's degree in any of the following fields of Engineering: (a) Subsea Engineering, (b) Offshore Engineering and (c) Petroleum Engineering with a minimum CGPA of 3.5 (on a 5.0 scale) or its equivalent. Candidates with Master's degree in Chemical Engineering, Civil Engineering, Electrical/Electronic Engineering, Marine Engineering, Mechanical Engineering and Pipeline Engineering plus up to 5 years' experience in Subsea operations may be considered.
- iii. Score at least 60% in a proposal presentation/admission screening interview to be organized by the Institute.

COURSES

Table 6: List of courses, codes and credit units

Course Code	Course Title	Credit Units
Taught Courses		
OTI 901	Advanced Research Methods and Entrepreneurial Skills	3
OTI 902	HSE in Oil and Gas Operations	3
OTI 913	Subsea components and equipment design	3
OTI 914	Flow assurance in subsea operations	3
OTI 915	Government Policies in Subsea Operations	3
Seminar Courses and Ph.D Thesis		
OTI 906	Seminar I	3
OTI 907	Seminar II	3
OTI 908	Ph.D Thesis	9
Total Credit Units for each Ph.D Programme		30

DESCRIPTION OF COURSES

See the descriptions for OTI 901, OTI 902, OTI 906 OTI 907 and OTI 908 in Ph.D Offshore Engineering above).

OTI 913: Subsea Components and Equipment Design

The course covers the operation, maintenance principles and the design of subsea components such as drilling systems, Christmas trees, wellhead systems, manifolds and jumper systems, Umbilical and riser systems., Tie-in and flowline systems, Control systems and instrumentation, and vessels. Students will carry out design of any selected subsea equipment as part of the course assessment.

OTI 914: Flow Assurance in Subsea Operations

The course covers multi-phase flow, the flow assurance process, flow assurance challenges – Asphaltene deposition, wax deposition, formation of hydrates, corrosion and erosion, emulsions and slugging. Flow assurance risk management will also be covered. Students will carry out flow assurance risk management on any project ongoing or perceived as part of the course assessment.

OTI 915: Government Policies in Subsea Operations

Overview of main subsea platforms, Main regulatory agencies of the oil and sector- their formulations, roles and duties, Government legislations governing subsea operations, Management of subsea operations.

Ph.D IN PIPELINE ENGINEERING

Admission/Graduation Requirements and Programme Duration

The graduation requirements and programme duration are the same as those in Offshore Engineering. The admission requirements are as follows:

- i. Meet the general University requirements for admission into Ph.D programmes;
- ii. The candidate should possess a Master's degree in any of the following fields of Engineering: (a) Pipeline Engineering, (b) Offshore Engineering (c) Mechanical Engineering, and (d) Petroleum Engineering with a minimum CGPA of 3.5 (on a 5.0 scale) or its equivalent. Candidates with Master's degree in any of Chemical Engineering, Civil Engineering, Electrical/Electronic Engineering, Marine Engineering and Subsea Engineering plus up to 5 years' experience in Pipeline operations may be considered.

Score at least 60% in a proposal presentation/admission screening interview to be organised by the Institute.

Table 7: List of courses, codes ad credit units

Course Code	Course Title	Credit Units
Taught Courses		
OTI 901	Advanced Research Methods and Entrepreneurial Skills	3
OTI 902	HSE in Oil and Gas Operations	3
OTI 923	Pipeline Materials and Defect Assessment	3
OTI 924	Pipeline Design and Asset Management	3
OTI 925	Government Policies in Pipeline Installations & Operations	3
Seminar Courses and Ph.D Thesis		
OTI 906	Seminar I	3
OTI 907	Seminar II	3
OTI 908	Ph.D Thesis	9
Total Credit Units for each Ph.D Programme		30

DESCRIPTION OF COURSES

See the descriptions for OTI 901, OTI 902 , OTI 906 OTI 907 and OTI 908 in Ph.D Offshore Engineering above).

OTI 923: Pipeline Materials and Defect Assessment

The course covers the exploration of different materials for pipeline making and pipeline construction. It includes the testing of materials using modern test procedures and assessment of defects in pipeline materials. Students will be required to design tools for defect detection or modify existing tools for more efficient local applications as part of the course assessment.

OTI 924: Pipeline Design and Asset Management

Detailed design methodology of pipelines will be covered in this course. Also, the management of pipelines (procurement, inspection, estimation of failure times and maintenance) will be covered. Students will carry out design of pipeline network as part of the course assignment.

OTI 925: Government Policies in Pipeline Installations & Operations

Major oil and gas pipelines in Nigeria- their ownership, operations and challenges, Government agencies regulating pipeline construction & operations, Government legislations governing pipeline construction & operations, Management of pipeline operations.

TABLE 8: LIST OF STAFF FOR THE PHD PROGRAMMES

S/N	Name	Qualification	Designation	Specialisation	Affiliation
1	Prof. R. Uhunmwangho	B.Sc (Iasi), M.Tech, Ph.D (UST)	Professor	Electrical Engineering	UPH
2	Prof. J. A. Ajienka	B.Sc (UI), M.Eng, Ph.D (UPH)	Professor	Petroleum Engineering	UPH
3	Prof. I. L. Nwaogazie	B.Sc, M.Sc (Kansas) Ph.D (Oklahoma State)	Professor	Civil Engineering	UPH
4	Prof. H.U. Nwosu	B.Sc, M.Eng; D.Eng (Texas), MBA (Oklahoma)	Professor	Mechanical Engineering	UPH
5	Prof. D. Appah	B.Sc., Dip. Edu. (Baku), Ph.D (UPH)	Professor	Petroleum Engineering	UPH
6	Prof. S. U. Ejezie	B.Sc(UI), M.Sc (Cornell), Ph.D (Carnegie-Mellon)	Visiting Professor	Civil Engineering	UPH
7	Prof. A. O. Obi	B.Eng (Ilorin), M.Sc , Ph.D (ABU)	Professor	Mechanical Engineering	Umudike
8	Prof. B. Evbuomwan	B.Eng, M.Eng (Benin), Ph.D (FUTO)	Professor	Chemical Engineering	UPH
9	Prof. A. N. Okpala	B.Eng, M.Eng (FUTA), Ph.D (RSUST)	Professor / Industry	Mechanical Engineering,	NDU / Turret Engineering
10	Prof. T. A. Briggs	B.Eng, M.Eng (UPH) Ph.D (UNN)	Professor	Mechanical Engineering	UPH
11	Prof. C. V. Ossia	B.Tech, M.Tech (RSUST), Ph.D (Korea).	Professor	Mechanical Engineering	UPH
12	Prof. A. B. Oriji	B.Eng, M.Eng, Ph.D (UPH)	Professor	Petroleum Engineering	UPH
13	Dr. J. Ugbebor	B.Eng, M.Eng, Ph.D (UPH)	Reader	Environmental Engineering	UPH
14	Dr. E. Omorogiuwa	B.Eng, M.Eng, Ph.D (Uniben)	Reader	Electrical Engineering	UPH
15	Dr. A. Oji	B.Eng, M.Eng, Ph.D (UPH)	Reader	Chemical Engineering	UPH
16	Dr. E.O. Diemuodeke	B.Eng., M.Eng (UPH), PhD (Cranfield)	Reader	Mechanical Engineering	UPH
17	Dr. E.G. Saturday	B.Eng., M.Eng (UPH), PhD (Cranfield)	Senior Lect.	Mechanical Engineering	UPH
18	Dr. S. Sule	B.Tech, M.Tech (RSUST), Ph.D (FUTO)	Senior Lect.	Civil Engineering	UPH
19	Dr. A. Big-Alabo	B.Eng.(UPH), M.Sc., Ph.D (Glasgow)	Senior Lect.	Mechanical Engineering	UPH

NLNG CENTRE FOR GAS, REFINING AND PETROCHEMICAL ENGINEERING

Introduction

The Centre was established in August 2013 with the aim of providing industry based training required for sound refining and processing of crude oil. The centre is a research hub and propagates the culture of excellence through sustained learning. It also seeks to facilitate the Nigerian local content initiative.

The Centre is a post graduate institute that is forging viable collaborations and partnerships with renowned industries and universities across the globe. The centre offers programmes which reflect the global realities and therefore attaches great importance to students' participation in courses as well as analytic tools of refining and petrochemicals.

The Teaching faculty is drawn from University of Port Harcourt, Industry Professionals with cognate experience and other collaborating institutions. The ratio of teaching staff from university is (60%), other institutions (10%) and the industry (30%). This principle guides the selection of resource persons to teach in the centre. There are 5 senior administrative staff headed by an administrative secretary and 4 junior staff in the centre. The centre has graduated three batches of 45 students since inception with outstanding performances. The batch 4 students have long started their lectures.

Philosophy

The culture of excellence in sustained learning, leadership, internationalism and professionalism advancement and propagation of knowledge in the petroleum industry form our philosophy.

Vision

The vision of the NLNG Centre for Gas, Refining and Petrochemical Engineering is to become the foremost International Centre of Excellence in Gas Engineering, Petroleum Refining, and Petrochemicals Technology in Africa.

Mission

The mission of the Centre is to meet the needs of the petroleum industry through a commitment to excellence in training, applied research, continuing education, and capacity building.

PGD in Gas, Refining and Petrochemical Engineering

Admission Requirements

Candidates must possess a bachelor's degree in Engineering with minimum of Third Class Honours in Chemical Engineering, Petrochemical or Gas

Engineering and Second Class Honours (Lower Division) in other engineering disciplines from recognized universities. Industry/ company workers with 5 years cognate refining experience who possess third class honours with cumulative grade point average,(CGPA) of 1.5 or above will also be considered. Candidates must have also finished the National Youth Service Corps (NYSC) program as at the time of application.

Programme Duration

The duration of the programme will be 6-Calender months of intensive full time study. Industry/ company workers can equally attend modular/sandwich programmes and accumulate credits.

Graduation Requirement

Successful students at the end of the programme shall receive a PGD in Gas, Refining and Petrochemicals from the University of Port Harcourt.

List of Courses

The PGD programme is designed to be a 6 months intensive full time study which is structured into four (4) modules.

Table1: List of courses

Course Code	Course Title	Credit Units
GENERAL MODULE		
RPE 701	Basic Engineering Mathematics	2
RPE 702	Technical report writing and presentation	2
RPE 703	IT skills	2
RPE 704	Basic statistics	2
RPE 705	Entrepreneurial Management	2
PROCESS MODULE		
RPE 706	Process Engineering Analysis	2
RPE 707	Engineering Thermodynamics	2
RPE 708	Process reactor design, kinetics and catalysis	2
RPE 709	Process separation	2
RPE 710	Process control and dynamics	2
RPE 711	Heat and Mass transfer operations	2

RPE 712	Process Optimization	2
---------	----------------------	---

REFINING & PETROCHEMICAL PROCESS APPRECIATION MODULE		
RPE 713	Introduction to distillation system design	2
RPE 714	Introduction to Polymer Technology	2
RPE 715	Laboratory practices	2
RPE 716	Introduction to refining operation	2
RPE 717	Introduction to basic petrochemical processes	2
PROJECT MODULE		
RPE 718	Group design project	2
RPE 719	Individual project	4
Total		40

Course Description

RPE 701: Basic Engineering Mathematics

Differential Equations (Ordinary Differential Equations and Partial Differential Equations): Analytical and Numerical Solutions. Gradient solution of system of linear equations.

RPE 702: Technical report writing and presentation

Teach students to write in clear, concise and effective way. Understand basic Presentation skills

RPE 703: ICT skills

Computer appreciation which covers MS Word, MS Excel, MS Project, Power Point. Basic knowledge on application of computer skills in Engineering.

RPE 704: Basic Statistics

Regression analysis, T-test, Z-test, ANOVA, correlation, Chi-square, statistical test of significance, experimental design and other relevant statistical tools and their application

RPE 705: Entrepreneurial Management

Business start up, Business idea generation, fund raising, cash flow, SWOT analysis, Pestle analysis, Team work, Leadership.

RPE 706: Process Engineering Analysis

Introduction to process engineering. The role of Engineers in the society. Application of chemical science and engineering to socially and economically significant problems. Material and Energy balances on batch and flow systems in steady or unsteady state. Thermodynamic properties of gases, liquids, solids and mixtures; and their

application to the chemical process industries, sources of data, use of table and graphs; iteration methods; dimensional analysis.

RPE 707: Engineering Thermodynamics

Study of energy, entropy and equilibrium: their interrelations and the engineering relationships to which they give rise. Thermodynamics of energy conversion and fluid flow; physical and chemical equilibria in multi-component systems. Partial molar Gibbs free energy and the chemical potential. Ideal and non-ideal solution behavior. Phase separation and equilibrium between phases for reacting chemical and electrochemical systems. Surface chemistry

RPE 708: Process reactor design, kinetics and catalysis

General principles of reaction kinetics, Chemical Kinetics of elementary steps, transition state theory, thermodynamics formulation of rates, rates in solution. Steady-state approximation; catalysis systems, chain reactions, homogeneous and heterogeneous catalysis; Graphical treatment of complex kinetics. Analysis and design of reactors.

RPE 709: Process Separation

General view of separation. Motion of particles in fluid. Mixing and agitation; size reduction of solids (comminution); atomization, droplets and aerosols. Classification, separation and size measurement, sedimentation, flocculation. Thickener calculations; centrifugation; cyclone separation, flow through packed bed, fluid-solid, conveying filtration. Centrifugation filtration, fluidization, fluid-solid conveying. Pneumatic / Hydraulic Transportation. Fluid cleaning, electrostatic precipitator.

RPE 710: Process control and dynamics

Block and signal flow diagrams, proportional integral derivative controllers, frequency response techniques, analytical and graphical stability criteria. Introduction to modern control theory. Analog computation, time domain analysis, control of complex chemical systems, control of sample data system.

RPE 711: Heat and Mass transfer operations

Fluid mechanics, momentum transfer in fluids in laminar and turbulent flow, microscopic and macroscopic material, momentum and energy balances. Rheology, dimensional analysis; flow in conduits, pumps; fluid metering. Heat and mass transfer; heat transfer rate; conduction, convection and radiation mechanisms of heat transfer, heat exchanger design. Molecular diffusion, mass transfer mechanisms, phase mass transfer coefficients, prediction of mass transfer rates.

Momentum, energy and mass transfer in solids, laminar and turbulent fluid and between two phases, theory of molecular and eddy viscosity, thermal conductivity, air diffusivity, microscopic and macroscopic equations of motion, radiant heat transfer.

RPE 712: Process Optimization

Treatment of popular forms of the calculus of variations, maximum principles, dynamic programming, optimization of stage systems, optimum seeking methods. Network analysis and queuing theory.

RPE 713: Introduction to distillation system design

Solvent extraction. Distillation of multi-component mixtures. Computational procedures for rectification column. Extractive and azeotropic distillation. Multicomponent absorption and extraction design procedures crystallization.

RPE 714: Introduction to Polymer Technology

Polymer types, polymerisation mechanism, polymer modification and functionalization.

RPE 715: Laboratory practices

Introductory laboratory practices with inherent characteristics of inculcating the spirit of team work. Carry out basic laboratory operations, chemical storage, risk assessment, and prepare standard solutions. Use measuring and instrumentation equipment. Use of analytical equipment such as: Gas Chromatograph (GC), Fourier Transform Infra red (FTIR), X-Ray Diffraction (XRD), Scanning Electron Microscopy (SEM)

RPE 716: Introduction to refining operation

Principles and processes of refining operations in Nigeria. Integrated refining operations, desalting, and refining margins.

RPE 717: Introduction to basic petrochemical processes

Basic knowledge of the petrochemical technologies, petrochemical industry in Nigeria. Properties of various feedstocks and their products.

RPE 718 & 719: Group design project and Individual project

Students will be required to carry out research as a group and as individuals

STAFF LIST FOR THE PROGRAMME

S/N	Name	Qualification	Specialization	Designation
1	Kuye, A. O.	B.Sc ,M.Sc , Ph.D . FNShE, MNSE, R.Eng(3290)	Computer-aided design	Professor
2	Nwaogazie, I. L.	B.Sc ,M.Sc , Ph.D , FNSE, FNICE, FWAMASON, R.Eng.	Mathematical Modelling, Hydrology	Professor
3	Onyekonwu, M. O.	B.Sc, M.S, Ph.D, R. Eng (3536)	Reservoir & Gas Engineering	Professor
4	Dosunmu, A.	B.Sc, M.EngPh.D, MNSE, R.Eng (3562)	Drilling & Gas Engineering	Professor
5	Appah, D.	M.Sc, Dip.Edu., Ph.D, MNSE, R.Eng (79614)	Formation Evaluation	Professor
6	Iledare, O. O.	B.Sc, MS Ph.D	Oil & Gas Economics	Professor
7	Chukwuma, F. O.	B.Sc , M.Sc, Ph.D, MNSChE	Separation Processes and Process Control	Professor
8	Joel, O. F.	B. Tech, M.ScEng Mgt., Ph.D	Drilling & Environmental Engineering	Professor
9	Kemjika, O. C.	B.Sc , M.Sc, Ph.D	Education	Professor
10	Ikiensikimama, S. S.	B.Eng., M.Eng., Ph.D.	Reservoir Engineering	Professor
11	Okoye, I. P.	B.Sc , M.Sc, Ph.D	Industrial Chemistry	Professor
12	Nwaozuzu, C.	B Sc, MSc, PhD,	Petroleum Economics	Professor
13	Uyigwe, L.	B.Sc , M.Sc, Ph.D MNSE, R.158615	Polymer/Biodiesel Eng.	Associate Professor
14	Evbuomwan, B. O.	B.Sc , MEng, Ph.D, MNSChE , R. 13727	Separation Processes.	Associate Professor
15	Otaraku, I. J.	M.Sc, Ph.D, mAChE, Msic	Petrochemical, Reaction/Catalysis.	Senior Lecturer

MASTERS IN GAS, REFINING AND PETROCHEMICAL ENGINEERING

Objectives:

The objective of this graduate programme is to commit the student's talents to:

Understand different energy types and role of fossil fuels in global energy mix.

Grasp hydrocarbon chemistry and sequence of crude oil processing operations, including crude oil distillation, refinery equipment and flow sheet.

Work on systems of energy recovery networks for refinery and petrochemicals, including monitoring tools.

Learn about petrochemical and natural gas industry and processes, including economic and contractual aspects of the natural gas industry.

Understand major polymer types, plastics, additives and modifiers.

Appreciate conversion processes, including catalytic reforming and effect of catalysis on reaction rates.

Work on heat exchangers and their design systems.

Understand reaction systems, including process flow and control, corrosion and maintenance of equipment

Practice process modeling and simulation of refinery/petrochemical system.

Understand key goal settings in project management, process system optimization, energy economic and supply chain management, entrepreneurship, and some business theories and models.

Process of Curriculum Design

The MSc programme is designed to be a 12-month intensive full-time study which is structured into modules. This is done in compliance with the benchmark minimum academic standards (BMAS).

COURSES OFFERED

MODULE 1: GENERAL MODULE

Course Code	Course Title
RPE801	Team Building and Leadership Skills
SGS 801.1	ICT and Research Methods
RPE 803	Writing Skills /Technical Report
SGS 801.2	Management and Entrepreneurship
RPE 805-1	Applied Mathematics for Engineers
RPE 805-2	Applied Statistics for Engineers
RPE 806	Introduction to Oil & Gas Industry

MODULE 2: REFINING MODULE

Course Code	Course Title
RPE 807-1	Hydrocarbon Chemistry and Sequence or Processing Operation
RPE 807-2	Crude Oil distillation & Introduction to Refinery Equipment
RPE 807-3	Hydro-processing& Integrated Refinery Operations
RPE 807-4	Catalytic Cracking, Alkylation, Reforming Catalysis
RPE 808-1	Energy Systems

MODULE 3: GAS & PETROCHEMICAL MODULE

Course Code	Course Title
RPE 809-1	Crude Oil and Natural Gas Chain
RPE 809-2	LNG Chain, GTL vs. LNG exports
RPE 810-1	Polymer Technology
RPE 811-1	Reaction Kinetics & Catalysis
RPE 811-2	Conversion and Petroleum Processes

MODULE 4: MODELLING AND DESIGN MODULE

Course Code	Course Title
RPE 812-1	Distillation System Design
RPE 812-2	Heat Integration of Distillation Columns
RPE 813	Shell & Tube H/E: Reboilers, Condensers, Cooling Towers
RPE 814-1	Process Flow and Control
RPE 814-2	FCC Detailed Plant Analysis
RPE 814-3	Process variables and operating procedures
RPE 814	Reaction System Design
RPE 815	Process Modelling & Simulation

MODULE 5: PROJECT MODULE

Course Code	Course Title
RPE 816	Process System Optimization
RPE 817-1	Economics of Oil, Gas, and Energy
RPE 817-2	Energy Management
RPE 818-1	Reliability, Maintenance, Shutdown management
RPE 818-2	Environ. Management, Quality Control, Process Plant efficiency
RPE 819-1	Individual Research
RPE 819-2	Internship Training

Student Admission, Retention and Graduation Policy.

Candidates must possess a bachelor's degree in chemical/petrochemical engineering, gas

engineering, or related courses with a minimum of second-class lower division. Industry/ company workers with 5 years cognate refining experience may also be considered for admission.

Duration Of Programme

The duration of the programme will be 12-calender months of intensive full-time study. Industry/ company workers can equally attend modular/sandwich programmes and accumulate credits that will count towards graduation.

Criteria/Procedure for the Award of Degree

Successful students at the end of the programme shall receive an M.Sc. in Gas, Refining and PetrochemicalEngineering from the University of Port Harcourt.

Grading system

All examinations are graded out of 70% while continuous assessment same as home work (including paper) is out of 30%. The project (group or individual) is graded in two parts, viz: 50% for documentation submitted as technical report for group project or dissertation report as individual projects; and 50% presentation/defence. The defence whether internal or external (with external examiner) will involve a number of lecturers for the purpose of scoring. The total score for any examination attracts a letter grade. The distribution of letter grades are as follow:

S/N	SCORES	LETTER GRADE
i	70-100	A
ii	60-69	B
iii	50-59	C
iv	0-49	F

LIST OF ACADEMIC STAFF IN THE PROGRAMME

S/N	NAME	QUALIFICATION	SPECIALIZATION	DESIGNATION
1	Oji, Akuma Agwu	B.Eng., M.Eng., PhD ChE, MNSE, R. Eng. ()	Biochemical Engineering & Renewable Energy	Senior Lecturer/ Acting Director
2	Kuye, A. O.	B.Sc ,M.Sc , Ph.D . FNSChE, MNSE, R. Eng. (3290)	Computer-aided design	Professor
3	Nwaogazie, I.L.	B.Sc , M.Sc , Ph.D , FNSE, FNICE,FWAMASON, R.Eng.	Mathematical Modelling, Hydrology	Professor
4	Onyekonwu, M. O.	B.Sc, M.S, Ph.D, R. Eng (3536)	Reservoir & Gas Engineering	Professor
6	Ajienka, J. A.	B. Sc., M. Eng., Ph.D., R. Eng. (5285)	Petroleum Production Eng/Multiphase Fluid Flow in Pipes	Professor
7	Dosunmu, A.	B.Sc, M.EngPh.D, MNSE, R.Eng (3562)	Drilling & Gas Engineering	Professor
8	Appah, D.	M.Sc, Dip.Edu., Ph.D, MNSE, R.Eng (79614)	Formation Evaluation	Professor
9	Chukwuma, F. O.	B.Sc , M.Sc, Ph.D, MNSChE, R. Eng. (16966)	Separation Processes and Process Control	Professor
10	Joel, O. F.	B. Tech, M.Sc Eng Mgt., Ph.D	Drilling & Environmental Engineering	Professor
11	Otaraku, I. J.	M.Sc. (Combined Honours with Distinction), PhD ChE MNSE, mAIChE, mSCI, R. Eng (45540)	Process and Fine Chemical Engineering	Professor
12	Ugwu, A. N.	B.Sc , M.Sc, Ph.D	Education	Senior Lecturer
13	Ikiensikimama, S. S.	B.Eng., M.Eng., Ph.D.	Reservoir Engineering	Professor
14	Okoye, I. P.	B.Sc , M.Sc, Ph.D	Industrial Chemistry	Professor
15	Uyigwe, L.	B.Sc , M.Sc, Ph.D MNSE, R.158615	Polymer/Biodiesel Eng.	Professor

16	Enbuomwan, B. O.	B.Sc , MEng, Ph.D, MNSChE , R. 13727	Separation Processes.	Professor
17	Oduola, M. K.	M.Sc., Ph.D R Eng. 18680`	Reaction Engineering/Energy Management	Senior Lecturer
18	Nwaozuzu, C.	B Sc, MSc, PhD,	Petrol. Economics	Senior Lecturer
19	Orij, A. B.	B.Eng. M.Eng. Ph.D	Drilling Engineering	Professor
20	Joseph, A.	B.Eng.,M.Sc., Ph.D	Pet. Prod. Eng.& Pet. Econ	Senior Lecturer
21	Josiah, P. N.	B.Eng, M.Sc., MNSE	Chem. Engineering	Lecturer 1
22	Nwambo, P Y	B.Eng, M.Eng, MNSE	Chem. Engineering	Lecturer 1
23	Ajoku, GAO	B.Eng, M.Eng, MNSE	Chem. Engineering	Lecturer 1
24	Wachuku. P. O.	B.Eng., M.Eng., PhD	Reservoir Engineering.	Lecturer 1
25	Jerome, U.	B.Eng., M.Eng.	Chem. Engineering	Lecturer 11
26	Avwiri, E.	B Sc, MSc, PhD,	Education	Lecturer 1`
27	Ahaotu, J.O.	BA, MA	Humanities/Mgt.	Lecturer 11`
28	Muwarure, P. O.	B.Eng. ChE, M.Sc., GRPE	Process Simulation	Consultant
29	Mamman, Ajee	B.Sc. , M.Sc., Ph.D	Petrochemical Engr.	Consultant
30	Ogbonna, I.	B.Sc. , M.Sc., Ph.D	Env. Mgt.	Consultant
31	Olumati, I.	B.Sc. , M.Sc.,	Petrol. Refining	Consultant
32	Onyekwere, L.	B.Eng., MEng.	Chem. Engineering	Consultant
33	Dokubo, T. C.	B.Eng., MEng.	Chem. Engineering	Consultant
34	Okoro, E.	B.Eng., MEng.	Chem. Engineering	Consultant
35	Akoh, P.E.	Dipl., M.Sc.	Metallurgy/Heat Int.	Consultant
36	Ubaka, C.	B.Eng. ChE, M.Eng.(in view)	Process Simulation	Consultant

Ph.D. PROGRAMME IN CHEMICAL ENGINEERING OPERATIONS (GAS PROCESSING, REFINING AND PETROCHEMICAL OPTIONS)

The objectives of this programme are to commit the students' talents to:

- Develop different energy strategies/plans to sustainably utilise fossil fuels in the global energy mix.
- Analysis and evaluate hydrocarbon chemistry and sequence of crude oil processing operations, including crude oil distillation, refinery equipment and flow sheet.
- Co-create energy recovery networks for case studies on refinery and petrochemicals.
- Adequately apply economic and contractual knowledge to address technical challenges in the petrochemical and natural gas industry.
- Evaluate the major polymer types, plastics, additives and modifiers in the context of natural gas utilisation.
- Develop efficient and cost effective crude and natural gas conversion processes
- Technical and economic evaluations of catalytic reforming process and unit for improved product yield.
- Apply in-depth knowledge of process unit operations to design, analysis and evaluate heat exchangers.
- Develop in-depth understanding of reaction systems, including process flow and control, corrosion and maintenance of equipment, for technical improvement.
- Apply the knowledge of process modelling and simulation to improve refinery/petrochemical systems.
- Develop advanced skills and competencies in project management, process system optimization, energy economic and supply chain management, entrepreneurship, and business theories and models.

Admission Requirements

To be admitted into the PhD programme in Gas, Refining and Petrochemical Engineering Operations, each applicant must fulfil the following requirements:

- Satisfy the general University requirements for admission into PhD programmes.
- Possess a Master's degree in Gas, Refining and Petrochemical Engineering, and related disciplines acceptable to the Centre such as Chemical Engineering, Gas Engineering, Petrochemical Engineering, Industrial

- Chemistry, with a minimum CGPA of 3.5 (on a scale of 5.0) or a minimum score of 60% obtained from a recognized university.
- iii. Be successful in a proposal presentation/admission interview in the Centre.

Every candidate coming for the interview is expected to bring along the following:

- a) Two letters of reference from persons qualified to comment on his or her academic work.
- b) Four copies of his or her proposed research plan in the selected area of specialization.

1. Programme Duration

The programme shall last for a minimum of 36-calendar months (3 years) and maximum of 60-calendar months (5 years) of full-time study, or a minimum of 60-calendar months (5 years) and a maximum of 86-calendar months (7 years) of part-time study.

2. Graduation Requirement

The Gas, Refining and Petrochemical Engineering PhD programme consists of coursework and a thesis. The degree is awarded primarily on the basis of research conducted by the student, after he or she has fulfilled the general University requirements for the programmes leading to the Ph.D. degree. The following specific conditions apply:

- a. On provisional admission, the candidate is required to pass the taught coursework to continue the PhD. programme. It is compulsory for candidates to take the generally taught courses and any other course in the area of specialization. However, where the need arises the Centre would advise students to audit some relevant courses.
- b. The Centre shall also require the Ph.D. student to audit or select, in consultation with his/her supervisor, courses which will best assist him/her pass the taught courses and succeed in the research work and thesis in the area of specialization.
- c. Prior to being formally admitted to the candidacy of the PhD programme, the prospective student must demonstrate his or her knowledge of the engineering fundamentals by passing the qualifying examination to assess his/her eligibility for the programme.
- d. A successful Ph.D. candidate will be expected to present a research proposal not later than 3 months after the qualifying examination.
- e. A Ph.D. Student is expected to participate in seminar and should present at least three seminar papers in the course of the research work to the Centre.
- f. To qualify for the award of Ph.D, the candidate must publish at least three technical papers, two of which must be publications in reputable

- journals and one conference paper. In addition, or in the place of one journal article, candidates may have at least one patent
- g. On provisional completion of the research work, the candidate will be required to present a thesis based on the outcome of the research. He/she shall present the work in the following order:
 - i. Graduate Board of the Centre;
 - ii. Faculty Graduate Board; and
 - iii. School of Graduate Studies.
 Finally, upon presentation of the seminars, successful candidate will take an oral external defence of the work before a Board of examiners setup in accordance with the regulations of School of Graduate Studies.
 - h. The Ph.D. degree is awarded upon satisfactory performance in the oral examination and fulfilment of all University and Centre requirements.

Course List

The courses which will be taught on Modular basis are listed as shown in Table 1. One course will be taught in one month and the examination/assessment taken first week of the next month.

Table 1: List of courses

S/N	Course Code	Course Title	Unit
1	RPE 901	Research Methods	3
2	RPE 902	Energy/Environmental/ Project & Safety Policy	3
3	RPE 903	Advanced Oil and Gas Industry Management	3
4	RPE 904	Advanced Gas Processing/ Advanced Refining Operation/ Advanced Petrochemical Operation	3
5	RPE 905	Seminar I	3
6	RPE 906	Seminar II	3
7	RPE 907	Seminar III	3
8	RPE 908	PhD Thesis	6

11. Course Description

RPE 901: Research Methods

Course objectives: To give students in-depth knowledge on how to conduct, analyze and report their research results

Course content:

- Understanding the concept of research
- Choice and statement of a research problem,
- Research design
- Literature survey,

- Elementary scientific methods,
- Design of experiment and apparatus
- Statistical analysis of experimental data and associated error
- Mathematical modelling
- Report writing

RPE 902: Energy/Environmental/Project & Safety Policy

Course objectives: To critically evaluate energy, environment and safety policies in projects and develop strategies to energy, environmental and energy policies nationally and internationally. In addition, to adequately highlight the need for environmental protection

Course content:

- Energy industry (National and International): energy systems and management, legal framework, regulatory process and processes, regulatory bodies and roles, energy pricing and implications, Nigerian gas master plan and policies, renewable energy policy drive and its implications on future energy development and climate change, review of energy policies
- Environmental considerations and management in mid/downstream oil and gas industry operation
- Health and Safety consideration and management in mid/downstream oil and gas industry operation
- Process and project management in the mid/downstream oil and gas industry operation

RPE 903: Advanced Oil and Gas Industry Management

Course objective: To give students an in-depth knowledge and capacity to address strategic challenges of the oil and gas industry in Nigeria. To equip students with the requisite skills, character and frame to make positive impacts on the industry.

Course content

- Overview of the oil and gas industry
- Competitive issues and challenges
- Portfolio management issues and challenges
- Conflict management in the oil and gas industry
- Prospects and challenges of the oil and gas industry
- Economics of the oil and gas industry
- Energy mix and climate change mitigation technologies
- Entrepreneurial skills and financial management in the oil and gas industry

RPE 904: Advanced Gas Processing (Option)/ Advanced Refining Operation(Option)/ Advanced Petrochemical Operation(Option)

Course objective: To give students an in-depth knowledge and capacity to address strategic

challenges of the gas, refining, and petrochemical industries in Nigeria.

Course content

- Advanced knowledge of gas processing technology management and operation in Nigeria
- Advanced knowledge of refining operation technology and management in Nigeria
- Advanced knowledge of petrochemical technology operation and management in Nigeria
- Advanced process control and optimisation of gas and petrochemical plants

RPE 905 Seminar I

Seminar I, Research Proposal Defence will be presented between 6 months and 12 months of the start of programme. It will consist of critical literature review and gaps in the subject area of the topic. Also, timelines for the remaining work to be carried out will be part of the presentation. This presentation will be scored and the minimum pass mark is 50. Successful candidates will be allowed to go with their researches. If any candidate is not successful at this stage, the candidate will be allowed to repeat the presentation within three months from the date of the first presentation.

RPE 906 Seminar II

Seminar II will be presented between 12 and 15 months into the programme. Seminar II will cover Chapter Three (Materials and Methods or Methodology) in addition to Chapters one and two which should be improved versions of what is contained in Seminar I. The Ph.D student can also present preliminary or selected or few results. If the presentation is successful, the candidate can go ahead with his or her research to conclusion and thesis writeup.

RPE 907 Seminar III

The Third seminar will be presented after the successful presentation of Seminar I and Seminar II. This will include the full thesis presentation. After a successful presentation the student has three stages: Presentation to the Faculty of Engineering and the school of graduate studies, then the external (final) examination will follow.

RPE 908 Seminar IV

The Ph.D thesis presentation follows successful presentation of Seminar I and Seminar II. The thesis presentation has three stages: Presentation at the Institute where staff drawn from the Faculty of Engineering and the Industry will be the examiners, presentation at the school of graduate studies, then the external (final) examination by an external examiner. The external examination will come

between 30 months and 36 months into the programme for full time study.

LIST OF STAFF FOR THE PROGRAMME

S/N	Name	Qualification	Specialization	Designation
1	Kuye, A. O.	B.Sc,M.Sc(Unilag), Ph.D (UniStretclyde). FNSE, MNSE, R.Eng	Computer-aided design	Professor
2	Ajienka J. A	B.Sc.(UI),M.Eng., Ph.D(UPH),FNSE, FNIPetEFAEng, FIPS, R.Eng	Production Engineering	Professor
3	Nwaogazie, I. L.	B.Sc, M.Sc (Kansas) , Ph.D(Oklahoma State Uni), FNSE, FNICE, FWAMASON, R.Eng.	Mathematical Modelling, Hydrology	Professor
4	Chukwuma, F. O.	B.Sc , M.Sc, Ph.D (Tulsa), MNSChE. R.Eng	Separation Processes and Process Control	Professor
5	Joel, O. F.	B. Tech(RSU), M.Sc Eng Mgt.(UNIBEN), Ph.D(RSU), R.Eng	Drilling & Environmental Engineering	Professor
6	Ikiensikimama, S. S.	B.Eng., M.Eng. (UPH), Ph.D(UNILAG). R.Eng	Reservoir Engineering	Professor
7	Uyigüe, L.	B.Sc(UPH), M.Sc (UNIBEN), Ph.D (UPH) MNSE, R.Eng	Polymer/Biodiesel Eng.	Professor
8	Evbuomwan, B. O.	B.Sc , Meng (UNIBEN), Ph.D(FUTO), MNSChE , R.Eng	Separation Processes.	Professor
9	Otaraku, I. J.	M.Sc, Ph.D(Volgograd, USSR), mAChE, Msc, R.Eng	Petrochemical, Reaction/Catalysis.	Professor
10	Onyekonwu, M. O.	B.Sc,(UI) M.S, Ph.D(Stanford), R. Eng, R.Eng	Reservoir & Gas Engineering	Visiting Professor
11	Dosunmu, A.	B.Sc, M.EngPh.D, MNSE, R.Eng (3562)	Drilling & Gas Engineering	Visiting Professor
12	Oduola, M. K.	M.Sc.,Ph.D(Lviv, UKRAINE) R Eng.	Reaction Engineering/Energy Management	Senior Lecturer
13	Oji, A. A.	B.Eng(FUTY), M.Eng, Ph.D(UPH) MNSE. R.Eng	Chem. Engineering	Senior Lecturer
14	Edeh I.	B.Eng(ESUT), M.Eng(UPH), Ph.D (Birmingham) MNSE. R.Eng	Chem. Engineering	Senior Lecturer
15	Okeke, E.	B.Sc.(UI), Ph.D (Strathclyde)	Process Simulation	Industry Lecturer

16	Mamman, Ajee	B.Sc. (Cults, Scotland) , M.Sc., Ph.D (Swansea)	Petrochemical Engr.	Industry Lecturer

CENTRE FOR GEOTECHNICAL AND COASTAL ENGINEERING RESEARCH (CGCER)

Introduction

The Center for Geotechnical and Coastal Engineering Research, domiciled under the Department of Civil and Environmental Engineering, University of Port Harcourt proposes to revise the existing Graduate programmes for in Geotechnical and Coastal Engineering at Post Graduate Levels as part of its mandate on human capital development through research in the Geotechnical & Coastal Environment.

Philosophy

The Philosophy of the Graduate Programme is anchored on the drive of initiating, encouraging, promoting and sustaining advanced applied research and development in the various aspects of Geotechnical Engineering, Coastal Engineering.

Vision

To turn in internationally recognized Graduates whose professionalism would be of immense benefit in tackling the problems associated with the Geotechnical and Coastal Environments., in addition, the Programmes also have the vision of preparing interested Graduates for further studies.

Mission

To create, preserve and apply knowledge obtained through applied research to the service of humanity through comprehensive research and development in the Geotechnical and Coastal Engineering fronts.

Justification /Rationale

Flood, Erosion and Ocean encroachment around Coastlines have made infrastructural development in such environment highly challenging, hence man is forced to thinker ways of living with the Sea environment. Exploring challenging Soils, Marine and Coastal environment therefore becomes inevitable, both for Geotechnical research and Infrastructural development.

Besides, the harsh Onshore Oil and Gas exploration, exploitation and processing activities deriving from Security threats and militancy in the host Onshore communities has forced International Oil and Gas companies (IOCs) to extend the frontiers of their activities Offshore, into the deep waters region. This further necessitates advanced research activities into the Coastal environment.

Aim

The aim of the MSc programme in Geotechnical and Coastal Engineering is to prepare students for professional work in the respective research areas or

for further studies leading to the Doctor of Philosophy (Ph.D) in the relevant areas.

Objectives

To achieve the aim of the Post Graduate Diploma Programme in Geotechnical & Coastal Engineering, the following under listed objectives will be pursued:

1. Sourcing of highly qualified resource persons from both the academic and industrial worlds to deliver knowledge filled and experienced based lectures.
2. Organization of conferences, seminars and workshops in the relevant areas of interest.
3. Providing Internship opportunities for interested students in recognized industries.

Course Delivery

All lectures for every Programme shall be administered / delivered on modular basis from 08.00am to 04.00pm (with One Hour (12.00-01.00) break) from Mondays to Fridays. That is, 40 hours lecture per week per Course which is approximately equal to 14 weeks Semester of Academic work for a 3 Credit Units (2-Hours lecture plus one Hour Practical or Tutorial per week) Course. Examination for a Course is taken after the Lectures on Saturdays, while the Continuous Assessment is done within the lecture periods as Practical reports, Test, Group Discussions, Field Trips reports and Assignments.

Examination Regulations & Scoring / Grading System

To qualify for sitting for a final Examination in a Course student is expected to have 75% lectures attendance of ALL lectures in that Course. The overall Examination score in a Course shall be 100% which shall comprise of:

Examination	-	70%
Continuous Assessment	-	30%

Every student is expected to score a minimum of 50% in the overall evaluation for a Course in order to PASS; otherwise he or she shall be deemed to have failed the Course. In which case, the student is allowed a second final chance to retake a Supplementary Examination in the Course which cannot be scored above a C-Grade. The Examination Grading shall be:

Score (%)	Grade	Grade Points
70 – 100	A	5.00
60 – 69	B	4.00
50 - 59	C	3.00
0 - 49	F	0.00

Programme Structure

1. The full-time option is for a minimum of 12 calendar months and a maximum of 24 calendar months
2. The part-time option is for a minimum of 24 calendar months and maximum of 48 calendar months.

Career Opportunities

The main aim of the programmes of the Center is to produce a hands-on, Industry-ready Geotechnical Engineers and Coastal Engineers with a wide-range of Job Opportunities in Marine & Coastal Environment, Shore Protection, Artificial Intelligence, Dams, Port & labour, Geotechnical Services, Ocean Survey, Construction, Consultancy, and Coastal Infrastructure Research & Development.

Programme Requirement and Criteria for the Award of the PGD, MSc. And PhD Certificates

To realize the above objectives and qualify for the award of Graduate Certificates, students must take and pass all the prescribed courses in the chosen area of study, participate in any required field study, present research seminars and produce a supervised project, dissertation and thesis on an approved research topic relevant to the aim and purpose of the Center's establishment.

PGD in Geotechnical & Coastal Engineering Entry /Admission Requirements

To be admitted into the PGD in Geotechnical & Coastal Engineering programme a candidate must have graduated with at least a Third Class Degree in Civil, Mechanical, Marine Engineering or any other related Engineering and Physical Science discipline from any NUC Accredited University.

Course Listings

The course listing for the Post Graduate Diploma (PGD) programme consists of Compulsory and Electives Courses in Geotechnical & Coastal Engineering.

13.1 Course listing for Post Graduate Diploma (PGD) in Geotechnical & Coastal Engineering

These include:

Course Code	Course Title	Credit Units
GCE 701	Introduction to Geotechnical Engineering	3
GCE 702	Basic Coastal Engineering	3
GCE 703	Basic Structural Analysis	3
GCE 704	Basic Fluid Mechanics	3
GCE 705	Numerical Methods and Mathematical Modelling	3
GCE 706	Applied Statistics and Data Analysis	3

GCE 707	Engineering Geology	3
GCE 708	Engineering Hydrology and Hydrogeology	3
GCE 709	Foundation and Geotechnical Engineering Design	3
GCE 710	Coastal Engineering Design	3
GCE 711	Dynamics and Vibrations of Structures	3
GCE 712	Computer Aided Design in Coastal and Geotechnical Engineering	3
SGS 702	Management and Entrepreneurship	2
GCE 713	Technical Seminar	3
GCE 700	Research Project	6
TOTAL		45

PGD Geotechnical & Coastal Engineering Programme Course Details

GCE 701 - Basic Coastal Engineering (3 Credits).

Mechanics of wave motion; wave refraction, diffraction and reflection; wave forecasting; shore processes; planning of coastal engineering projects; design of seawalls, breakwaters, beach nourishment and fixed and floating installations; dredging; risk analysis.

GCE 702 – Introduction to Geotechnical Engineering (3 Credits).

Physical properties of soils, classification systems, soil exploration, permeability, consolidation, compaction, and shear strength; laboratory tests conducted to determine the physical and engineering soil properties needed for application in geotechnical engineering design.

GCE 703 - Basic Structural Analysis (3 Credits).

Introduction to structural analysis; classification of structures; general description of plane frame; joints; supports; stability and determinacy; Basic concepts and assumptions for structural analysis; Equilibrium; Analysis of Statically Determinate Structures. Plane trusses. Beams and Frames (Axial force, shear force and moment diagrams in beams and frames). Deflections, Method of Superposition, principles of virtual displacement; principle of virtual force using energy method in beams, frames and trusses, Influence lines and moving loads, Analysis of statically indeterminate structures; by force method (method of consistent deformation) – frames and trusses, Introduction to stiffness method of analysis; slope deflection method; Moment distribution method, introduction to matrix methods; 1 DOF systems, trusses. Sway in moment distribution; yield line analysis and strip methods for slabs. Plastic methods of structural analysis. Introduction to limit state analysis of reinforced concrete and steel structures.

GCE 704 – Basic Fluid Mechanics (3 Credits).

Fluid properties; statics; kinematics; ideal gas law; conservation of mass; linear momentum and Newton's Second Law; conservation of energy; Bernoulli's equation; control volume analysis, similitude and hydraulic models; homogeneous flow in pipes; fluid drag, boundary layer basics. Fluid measurements; determination of fluid properties; visualization of types of flow; experiments in closed conduit flow turbo machinery tests; open channel and gravity wave demonstrations

GCE 705 - Numerical Methods and Mathematical Modelling (3 Credits).

Application of numerical methods to geotechnical-related engineering problems; development, evaluation and comparison of various techniques for root finding, curve fitting, numerical integration, simultaneous linear algebraic equations, matrix methods; probability and statistics and ordinary differential equations in geotechnical-related engineering applications.

GCE 706 - Applied Statistics & Data Analysis (3 Credits).

An introduction to applied data analysis, designed to enable students to effectively collect data, describe data, and make appropriate inferences from data. Students are expected to communicate effectively about statistical results and to use a statistical software package for data analysis

GCE 707 – Engineering Geology (3 Credits).

Principles of physical and engineering geology; properties of minerals, rocks and soils; active surface and subsurface processes; applications to the siting, design, construction, operation and maintenance of engineered works and the protection of the environment. A three day field trip is required (a field trip fee is charged at registration).

GCE 708 - Engineering Hydrology & Hydrogeology (3 Credits).

Occurrence, distribution and properties of natural waters of the earth; measurement and engineering analysis of hydrologic phenomena including precipitation, stream flow and groundwater, hydrologic design of water resources development and management projects. Geologic conditions determining the distribution and movement of ground water and their effect on the hydrologic properties of aquifers.

GCE 709 - Foundation and Geotechnical Engineering Design (3 Credits).

A design course covering prediction of settlement, analysis of the stability of slopes, prediction of bearing capacity of shallow and deep foundation and determination of earth pressure acting on retaining

structures. A general course in Geotechnical Engineering design for undergraduate and for graduate students not primarily interested in the Geotechnical field but desiring additional study beyond the introductory undergraduate level.

GCE 710 - Coastal Engineering Design (3 Credits).

Loadings and Functions of ocean engineering structures, including sea walls, harbor structures, sea-going vessels, offshore structures and underwater vehicles; analysis of structures including trusses, beams, plates, shells and arches; introduction to stress and failure analysis; introduction to finite element analysis (FEA) including computational mechanics of ocean engineering structures, using FEA.

GCE 712 - Computer Aided Design in Coastal and Geotechnical Engineering (3 Credits).

The use of computer aided design packages in Coastal and Geotechnical engineering design – hydraulics, geotechnical engineering, work scheduling.

SGS 702 - Management and Entrepreneurship (3 Credits).

Business Environment, General Management, Financial Management, Entrepreneurship Development, Feasibility Studies, Marketing & Managerial Problem Solving.

GCE 713 – Technical Seminar (3 Credits).

Responsibilities and obligations of new Geotechnical & Coastal Engineers; professional ethics; membership in professional societies and professional registrations; case studies and lectures presented by staff and practicing engineers.

GCE 700 – Research Project (6 Credits).

Every Student will be required to carry out a Research Project related to Geotechnical and/or Coastal Engineering under the close Supervision of a Supervisor. This Research Project will be examined at the end of its completion.

Graduation Requirements

To be awarded the PGD degree in Geotechnical & Coastal Engineering, students must have passed all prescribed courses with a total credit unit of 66 units.

Masters of Science (MSc) Degree Programme in Geotechnical and Coastal Engineering

Programme Requirements & Criteria for the Award of the MSc Degree

To achieve the above objectives and qualify for the award of the MSc degree, the student must complete and pass all the prescribed courses in the chosen area

of interest, participate in and present seminars and produced a well supervised dissertation on an approved research topic relevant to the interest of the Center.

Entry / Admission Requirements

To be admitted into the MSc Degree in Geotechnical and Coastal Engineering research programme of the Center, a candidate must have one of the following;

- a. First Degree in Civil Engineering or other relevant Engineering and Physical Science disciplines from any NUC Accredited University with a Second Class Lower Division;
- b. PGD in Civil Engineering or Geotechnical and Coastal Engineering with a minimum CGPA of 3.00.

Course Listings

The course listings consist of compulsory courses and electives.

GCE 820	Computer Programme for Oceanographers	3

M.Sc Geotechnical and Coastal Engineering Course Details

GCE 801-Finite Element Method & Mathematical Modelling (3 Credits)

Finite Element Methods; discretization of domains; Elements numbering techniques; Element Assembly and Solution of banded matrices, tridiagonal, pentadiagonal, etc 1-D, 2-D, and 3-D elements, Galerkin’s weighted Residual Method (GWRM), collocation method, etc. Local and Global coordinates. Modeling, calibration, verification/validation and prediction. Computer/software applications to field and idealized problems, input data, output data interpretation with respect to. Geotechnical and Coastal Engineering problems for instance, flood prediction, solute transport wave prediction, stress and strains in structures.

GCE 802 – Engineering Behavior and Properties of Soils (3 Credits)

Continuum mechanics: principles, parameters and representation of soil properties; spaces, Framework of Critical state soil Mechanics; Behavior of simple soils; Critical state models; Quantitative models of pore pressure; Strength behavior of Dilative Soils; Residual strength; failure theories, strength behavior of simple contractive soils; stress-strain relationships of soils; Constitutive models; Effective stress design methods, SHANSEP Soil physics, Chemistry and Mineralogy; Conduction Phenomena: coupled and uncoupled consolidation, compression, creep, time effects, sensitive soils; sampling and disturbances; Transient and Dynamic loading response; Effective of cycle loading; Graduate soil laboratory.

GCE 803 - Earth Structures & Slopes (3 Credits)

Equilibrium of Retained soil:- Limiting equilibrium analysis; Earth pressure theories; Lateral earth;

Rigid retaining walls; sheet pile walls; anchored bulkhead. Deep excavations in soil; pressure distribution, base instability, bracing and other support methods; Earth anchored excavation; concrete diaphragm walls; Reinforced earth walls; cellular cofferdams; soft ground tunneling; Ground movement accompanying excavations and tunneling operations; Slope stability:- Design and analysis of slopes and embankments, circular and non-circular failure surfaces, concept of safety; Probabilistic slope stability analysis; stress strain and time-dependent behavior; Identification and control of slope stability problems; Graduate soil Laboratory.

GCE 804 - Embankments, Dam Engineering & Seepage (3 Credits)

Types of Dams, Design consideration; design details; site explorations; behavior of rockfills; stress-strain modeling, Finite element modeling, stresses, load transfer; Cracking; pore pressure; observations / monitoring; inspection and maintenance; foundation and abutment treatment, cut-off; causes of failure; Trailings dam, Permeability, flow equations; flow nets. Numerical analyses, Seepage analogies; unknown boundaries; Transfer conditions; Anisotropic seepage; layered systems; piping filters.

GCE 805 - Rock & Tropical Soil Engineering (3 Credits)

Introduction: Rock as an Engineering material; Geological classification; Engineering classification of intact Rocks; structural features in Rock masses; Engineering classification of in-situ Rock masses; in-situ state of stress; stress - strain - strength behavior. Analyses of stress and strain, Elastic relationships (isotropic, anisotropic); Deformability of discontinuities; failure criteria (intact, anisotropic, jointed); Property evaluation and Measurement:- Laboratory, field; Tropical soils: Chemical, physical, textural and engineering properties; Remote sensing and air photo applications to Tropical soils engineering properties; geophysical techniques in tropical site characterization; Prediction of Engineering performance of tropical soils. Case histories.

GCE 806 - Soil Dynamics & Earthquakes Engineering (3 Credits)

Introduction: Dynamic response characteristics, wave propagation; Dynamic soil properties; Foundation response to vibrations, Blasting vibrations, Seismic slope stability analyses, Seismic design of retaining walls; Liquefaction; Seismic response of clays; Risks analyses and stability; Offshore dynamics. Engineering earthquakes from engineering point of view; Earthquake mechanism; Basic characteristics of strong ground motion; Response of simple systems to earthquakes; structural design for earthquakes, Seismic codes;

Earthquake resistant designs; site effects; soil amplifications; Seismic risks & design decisions; Soil-structure interactions; nuclear reactor containment structures; Earth- - Dam Design (Seismic); fluids in tanks & reservoirs, blast loading.

GCE 807 - Probabilistic & Reliability Methods in Geotechnical Engineering (3 Credits)

Basic probability theory & applications; Common probability distributions and Geotechnical applications, Joint distributions; Moment approximations; Reliability of soil structures; system reliability and applications; Geotechnical applications of entropy and test biased distribution, the hazard function; Applications of diffusion theory to subsidence, consolidation and stress distribution (Probability consolidation, Probabilistic stress distribution); Markov Process and progressive slope failure; Time series analyses and groundwater fluctuation; Uncertainty and soil parameters; Decision making under uncertainty, site characterization.

GCE 808 - Geotechnical Investigation and Monitoring (3 Credits)

Site Planning and design density of boreholes, sampling technology and disturbance, in-situ and laboratory testing, geophysical methods. Various aspects of ground instrumentation - monitoring of ground movements, drawdown, excess pore pressures, strut forces, wall deflection and observational methods.

GCE 809 - Introduction to Coastal Engineering (3 Credits)

Characteristics & Physical behavior of the Coastal Environment; Two dimensional wave equations & wave characteristics; Wave refraction, diffraction & reflection; Coastal sediment transport including nearshore currents, longshore onshore-offshore transport, and shoreline configuration; equilibrium beach profile concept with application to shore protection; shoreline modeling; tidal inlet hydrodynamics and inlet stabilization; design criteria for soft structures; Coastal zone processes & field Investigations - Wind wave measurements, Wave investigation facilities.

GCE 810 - Coastal Infrastructure (3 Credits)

Planning and design criteria of coastal infrastructure, including breakwaters, jetties, sea walls, groins, piers, submerged pipelines, harbor design, and tsunami defense. Use of laboratory models, numerical simulations, and field observations for design.

GCE 811 - Applied Modeling of Nearshore Processes & Transport (3 Credits)

Numerical modeling of the nearshore ocean, Numerical models for wave propagation, nearshore

circulation, platform shoreline evolution and bathymetric profile evolution. Application to coastal phenomena, and the interpretation of model results; Coastal features - Nearshore morphology, Crenulate bays, Sand waves, Beach cusps, Offshore sandbars; Equilibrium beach profiles; Sediment Characteristics & Transport; Long-Term Processes, Analyses, Modeling and Predictions of beaches & Shorelines; Shoreline Modification & Analyses.

GCE 812 - Dynamics of Coastal Structures (3 Credits)

Different types of Coastal structures and Compliant towers; New generation Offshore & Coastal structures; Environmental forces & Currents; Characteristics of single degree-of-freedom (DOF) models; Free, Forced, Underdamped & Damped single DOF systems; Two DOF systems; Eigenvalues & Eigenvectors & Orthogonality of modes; Multi-DOF systems - Natural frequencies & Mode shapes; Stadia, Raleigh-Ritz & Influence Coefficient methods; Continuous systems; Fluid - Offshore structures interactions (Jackets, Platforms, etc); Dynamic analyses of Articulated towers; Iterative frequency domains; Experimental & Analytical studies of Multi-legged articulated towers (MLAT); Tension legged Platforms (TLP) - Geometrical optimization and Dynamic analyses; TLPs under seismic excitation & Direct integration method; Stochastic Dynamics of Coastal structures - Response spectrum & Narrow band process; Return periods & Fatigue prediction; Modal response method, Modal mass contribution & Missing mass correction; Duhamel's integrals.

GCE 813 - Coastal Engineering Measurements & Data Analysis (3 Credits)

Coastal Engineering Measurements: Hands-on experience in the conduct of field & laboratory observations, including waves, currents, wind, tides, tsunami, sediments, bathymetry, shore profiles, wave forces on structures, and structural response. Online data archival & retrieval systems. Data Analysis: Fourier transform applications to the processing of Coastal engineering related types of signals. Introduction to probability and statistics. Digital processing techniques. Laboratory work involving analysis of Coastal engineering-related signals using modern data acquisition systems.

SGS 801.1 - ICT & Research Methodology (2 Credits)

Essentials of Spreadsheets, Internet Technology, Statistical Packages, Precision & Accuracy of Estimates, Principles of Scientific Research, Concepts of Hypothesis, Formulation & Testing, Organisation of Research & report Writing.

SGS 801.2 - Management & Entrepreneurship (2 Credits)

Business Environment, General Management, Financial Management, Entrepreneurship Development, Feasibility Studies, Marketing & Managerial Problem Solving.

GCE 815 - Tunnel (Underground) Engineering (3 Credits)

Tunnel characteristics, clearances and ; Tunnel survey and preliminary investigation; soft ground tunneling; shield tunneling; Rock tunnels; mixed face tunneling, Tunnel-boring machines; Material handling and construction plant; shotcrete; cut and cover construction; safety provisions; drainage systems; tunnel operation and maintenance.

GCE 816 - Special Topics in Geotechnical Engineering (3 Credits)

Review of site appraisal & Engineering behavior of soils, foundation for structures - shallow foundations, deep foundations: piles, piers (caissons), bridge supports, Foundations in difficult ground conditions; Deep basements; Geotechnical Structures, Offshore Geotechnical Engineering; Offshore structures, Soil and Ground improvements; land reclamation; Earthworks & Soil stabilization, Geotextiles and Geosynthetics; Environmental Geotechnical Engineering - ground movements (subsidence); Effects of pollution on the properties & engineering behavior of soils, Advanced Soil Mechanics, laboratory principles & procedures.

GCE 817 - Groundwater Hydrology & Exploration (3 Credits)

Groundwater as a renewable resource; occurrence, disposal and historic background; types of aquifers; measurement of soil moisture; unsteady flows and measurement of hydraulic conductivity, transivity, and specific yield/storage coefficients; well hydraulics with considerations to Theis Jacob, Chow and Hantush methods; leaky aquifer, recovery methods, and Bolton's flow around fully and partially penetrating wells and well losses; well construction and drilling methods. Groundwater quality analyses, artificial recharge; surface and subsurface investigations and sea water intrusions.

GCE 818 - Numerical Solutions of Differential Equations (3 Credits)

Introduction, Gaussian elimination, LU factorization & Cholesky factorization; Mathematical preliminaries on linear space, QR factorization by Gram-Schmidt & Householder transformation; Least squares fitting, condition number and stability; Iterative methods for linear systems, conjugate gradient method; Eigenvalue & eigenvector problem; Initial value problem of Ordinary Differential Equations. Euler's method, Explicit Runge-Kutta methods, convergence rate

analysis, stiff equations & absolute stability; Quadrature integration & Implicit Runge-Kutta and multistep methods; Two point boundary value problems, finite difference & shooting methods. Partial Differential Equation -1: Poisson equations; Partial Differential Equation 2: Diffusion equations, consistency, order & stability. Lax Equivalence Theorem; Partial Differential Equation - 3: Stability analysis: eigenvalue approach & Fourier transform approach, advection equations.

GCE 819 - Hydrodynamics for Coastal Engineers (3 Credits)

Periodic wave pattern: the approach of differential calculus, the control volume approach. Wave effects on coasts. Wind generated waves: basic concepts. Analysis of the sea states: the time domain. The wave climate. Design waves and risk analysis. Analysis of the sea states in the space-time. The theory of Quasi- Determinism theory. Analysis of the wave forces on offshore structures. Stability analysis of coastal structures. Introduction to wave mechanics, a review of hydrodynamics and vector analysis, small amplitude water wave theory, formulation and solution, engineering wave properties, long waves, wave statistics and spectra, wave forces, waves over real sea beds, nonlinear properties derivable from small amplitude waves, nonlinear waves, a series of experiments for a laboratory course component in water waves.

GCE 820 – Computer Programme for Oceanographers (3 Credits)

Introduction to MATLAB desktop environment, Basic programming and data analysis skills, Matrix algebra & Vectorization of functions, Writing optimized routines to analyze data sets, Basic graphics & visualization, Two- dimensional & three-dimensional Graphing, Contouring & Movies; Scalar & Vector Space - Time Series at fixed locations & Moving locations (Shipboard surveys), Oceanographic characteristics varying in both three-dimensions & Time; Matlab-based Processing, Analyses & Visualization of large Oceanographic data-sets;

Graduation Requirements

To be awarded the MSc degree in Geotechnical and Coastal Engineering students must have passed all prescribed courses.

MSc Degree in Coastal Technology Management

Entry / Admission Requirements

To be admitted into the MSc Degree in Coastal Technology Management programme of the Center, a candidate must have one of the following;
a. First Degree in Engineering or other relevant Physical and Environmental Science disciplines

from any NUC Accredited University with a Second Class Lower Division;

- b. PGD in Civil, Geotechnical and Coastal Engineering or other related Physical and Environmental Science disciplines with minimum CGPA of 3.00.

TECHNICAL ELECTIVES (CHOOSE ONE)

- CTM 818 Numerical Solutions of Differential Equations
- CTM 819 Hydrodynamics for Coastal Engineers

MSc Coastal Technology Management Course Details

CTM 801 - Finite Element and Mathematical Modeling (3 Credits)

Finite Element Methods; discretization of domains; Elements numbering techniques; Element Assembly

and Solution of banded matrices, tridiagonal, pentadiagonal, etc 1-D, 2-D, and 3-D elements, Galerkin's weighted Residual Method (GWRM), collocation method, etc. Local and Global coordinates. Modeling, calibration, verification/validation and prediction. Computer/software applications to field and idealized problems, input data, output data interpretation with respect to Geotechnical and Coastal Engineering problems for instance, flood prediction, solute transport wave prediction, stress and strains in structures.

CTM 809 - Introduction to Coastal Engineering (3 Credits)

Characteristics & Physical behavior of the Coastal Environment; Two dimensional wave equations & wave characteristics; Wave refraction, diffraction & reflection; Coastal sediment transport including nearshore currents, longshore onshore-offshore transport, and shoreline configuration; equilibrium beach profile concept with application to shore protection; shoreline modeling; tidal inlet hydrodynamics and inlet stabilization; design criteria for soft structures; Coastal zone processes & field Investigations - Wind wave measurements, Wave investigation facilities.

CTM 821 - Coastal Vulnerability and Adaption Strategy (3 Credits)

The nature of the coastal environment. Coastal zones in the Niger Delta and Nigeria. Coastal resources; the nature and status of coastal resources. Coastal zones classification. Coastal zone management. Vulnerability assessment of coastal zones. Risk associated with Coastal development. Coastal zone adaptation planning. Adaptation strategies in the Coastal environment. Present climate realities and the coastal environment.

CTM 810 - Coastal Infrastructure (3 Credits)

Planning and design criteria of coastal infrastructure, including breakwaters, jetties, sea walls, groins, piers, submerged pipelines, harbor design, and tsunami defense. Use of laboratory models, numerical simulations, and field observations for design.

CTM 812 - Applied Modeling of Nearshore Processes & Transport (3 Credits)

Numerical modeling of the nearshore ocean, Numerical models for wave propagation, nearshore circulation, platform shoreline evolution and bathymetric profile evolution. Application to coastal phenomena, and the interpretation of model results; Coastal features - Nearshore morphology, Crenulate bays, Sand waves, Beach cusps, Offshore sandbars; Equilibrium beach profiles; Sediment Characteristics & Transport; Long-Term Processes,

Analyses, Modeling and Predictions of beaches & Shorelines; Shoreline Modification & Analyses.

CTM 811 - Dynamics of Coastal Structures (3 Credits)

Different types of Coastal structures and Compliant towers; New generation Offshore & Coastal structures; Environmental forces & Currents; Characteristics of single degree-of-freedom (DOF) models; Free, Forced, Underdamped & Damped single DOF systems; Two DOF systems; Eigenvalues & Eigenvectors & Orthogonality of modes; Multi-DOF systems - Natural frequencies & Mode shapes; Stadia, Raleigh-Ritz & Influence Coefficient methods; Continuous systems; Fluid - Offshore structures interactions (Jackets, Platforms, etc); Dynamic analyses of Articulated towers; Iterative frequency domains; Experimental & Analytical studies of Multi-legged articulated towers (MLAT); Tension legged Platforms (TLP) - Geometrical optimization and Dynamic analyses; TLPs under seismic excitation & Direct integration method; Stochastic Dynamics of Coastal structures - Response spectrum & Narrow band process; Return periods & Fatigue prediction; Modal response method, Modal mass contribution & Missing mass correction; Duhamel's integrals.

CTM 813 - Coastal Engineering Measurements & Data Analysis (3 Credits)

Coastal Engineering Measurements: First hands-on experience in the conduct of field & laboratory observations, including waves, currents, wind, tides, tsunami, sediments, bathymetry, shore profiles, wave forces on structures, and-structural response. Online data archival & retrieval systems.

Data Analyses: Fourier transform applications to the processing of Coastal engineering related types of signals. Introduction to probability and statistics. Digital processing techniques. Laboratory work involving analysis of Coastal engineering-related signals using modern data acquisition systems.

CTM 822 - Coastal Hazards Analysis (3 Credits)

Cascade of Natural, Biological & Human induced hazards; Perspectives on Coastal & Marine Hazards & Disasters; Tsunami Dynamics, forecasting & mitigations; Paleostorm surges & inundations; Storm surge warning, mitigation & adaptation; Sea level rise - Causes, impacts & scenarios for change; Storm induced morphology changes; Extreme waves, Rip currents; Sea Ice - hazards, risks & implications; Remote sensing of Coastal hazards; Mangroves, tropical cyclones & risk reduction; Coral reefs, Threats to marsh resources & mitigation; Living with harmful algae blooms.

CTM 820 - Computer Programme for Oceanographers (3 Credits)

Introduction to MATLAB desktop environment, Basic programming and data analysis skills, Matrix algebra & Vectorization of functions, Writing optimized routines to analyze data sets, Basic graphics & visualization, Two-dimensional & three-dimensional Graphing, Contouring & Movies; Scalar & Vector Space - Time Series at fixed locations & Moving locations (Shipboard surveys), Oceanographic characteristics varying in both three-dimensions & Time; Matlab-based Processing, Analyses & Visualization of large Oceanographic data-Sets;

CTM 823 - Project Management (3 Credits)

Project Management Overview; Identify project management processes, professional and social responsibilities, interpersonal skills required for a project management. Project Management Methodology, Project Management

Project management content, Examine project selection, Prepare a project statement of work, Create a project charter, Identify project stakeholders. The Planning Phase; Identify elements of the project management plan, Document stakeholder requirements, Create a scope statement, develop a work breakdown structure. Development Project Schedules; Create an activity list, Create a project charter, Identify the critical path, Optimize the project schedule, Establish a schedule baseline. The analysis phase, the design phase, the implementation phase, Evaluation phase, Changing information systems and Project management assessment.

CTM 824 – Coastal Risk Management (3 Credits)

Principles of Risk and Risk Management; introduction to the principles and concepts of risk and risk management, Identify the risk associated with the goals of an organization, history of risk management, development and impact of international standards. Practice of Risk Management; explores the impact of the global business environment on risk, examines issues relevant to specific sectors and geographical areas and the needs and demands of various stakeholder groups, including regulatory authorities. Risk Assessment; To quantify and prioritize the risk, nature of risk- losses and opportunities, sources and types of risk information that help identify, record and communicate risk effectively, examine the different techniques for identifying risks and explore common methods for analyzing risks and uncertainties. Risk Treatment; To develop appropriate responses to the prioritized risk. Role of risk treatment within the wider enterprise, risk management framework, different approaches to effectively respond to opportunities and treat threats, evolving risk management fundamental tools, monitoring the impact of risk on the organization. Risk, Governance and Culture; Examines issues of

corporate governance, risk oversight, internal control and assurance in a global marketplace. Role of the board and key stakeholders in ensuring that risk is integrated with strategy. Critical elements of organizational behaviours including culture, corporate social responsibility and business ethics. Crises, Resilience and Future Risks; A demonstration exercise to develop a framework to help organisations strengthen their resilience at strategic, tactical and operational levels to face current and future risks. Using case studies from different business sectors and geographical regions to analyze how crises are managed.

SGS 801.1 - ICT & Research Methodology (2 Credits)

Essentials of Spreadsheets, Internet Technology, Statistical Packages, Precision & Accuracy of Estimates, Principles of Scientific Research, Concepts of Hypothesis, Formulation & Testing, Organisation of Research & report Writing.

SGS 801.2 - Management & Entrepreneurship (2 Credits)

Business Environment, General Management, Financial Management, Entrepreneurship Development, Feasibility Studies, Marketing & Managerial Problem Solving.

CTM 818 - Numerical Solutions of Differential Equations (3 Credits)

Introduction, gaussian elimination, LU factorization & Cholesky factorization; Mathematical preliminaries on linear space, QR factorization by Gram-Schmidt & Householder transformation; Least squares fitting, condition number and stability; Iterative methods for linear systems, conjugate gradient method; Eigenvalue & eigenvector problem; Initial value problem of Ordinary Differential Equations. Euler's method, Explicit Runge-Kutta methods, convergence rate analysis, stiff equations & absolute stability; Quadrature integration & Implicit Runge-Kutta and multistep methods; Two point boundary value problems, finite difference & shooting methods. Partial Differential Equation -1: Poisson equations; Partial Differential Equation 2: Diffusion equations, consistency, order & stability. Lax Equivalence Theorem; Partial Differential Equation - 3: Stability analysis: eigenvalue approach & Fourier transform approach, advection equations.

CTM 819 - Hydrodynamics for Coastal Engineers

Periodic wave pattern: the approach of differential calculus, the control volume approach. Wave effects on coasts. Wind generated waves: basic concepts. Analysis of the sea states: the time domain. The wave climate. Design waves and risk analysis. Analysis of the sea states in the space-time. The

theory of Quasi- Determinism theory. Analysis of the wave forces on offshore structures. Stability analysis of coastal structures.

Introduction to wave mechanics, a review of hydrodynamics and vector analysis, small amplitude water wave theory, formulation and solution, engineering wave properties, long waves, wave statistics and spectra, wave forces, waves over real sea beds, nonlinear properties derivable from small amplitude waves, nonlinear waves, a series of experiments for a laboratory course component in water waves.

Graduation Requirements

To be awarded the MSc degree in Coastal Engineering Technology, students' must have passed all prescribed courses.

Doctor of Philosophy (PhD) Degree Programme in Geotechnical and Coastal Engineering

Course Delivery

All lectures for every Programme shall be administered / delivered on modular basis from 08.00am to 04.00pm (with One Hour (12.00 - 01.00) break) from Mondays to Fridays. That is, 40 hours lecture per week per Course which is approximately equal to 14 weeks Semester of Academic work for a 3 Credit Units (2-hours lecture plus 1 hour Practical or Tutorial per week) Course. Examination for a Course is taken after the Lectures on Saturdays, while the Continuous Assessment is done within the lecture periods as Practical reports, Test, Group Discussions, Field Trips reports and Assignments.

Programme Duration

1. The full-time candidates will be required to spend a minimum of 2 years and a maximum of 5 years.
2. The part-time candidates will be required to spend a minimum of 3 years and a maximum of 7 years.

Entry /Admission Requirements

To be admitted into the PhD Degree programme in Geotechnical and Coastal Engineering, candidates must satisfy one of the following categories;

- a. Candidates must have successfully completed the relevant M.Sc degree in the University of Port Harcourt with a minimum CGPA of 3.5 on a 5 point scale in Geotechnical and Coastal Engineering or any other relevant discipline.
- b. Candidates with equivalent qualifications from other Universities are also considered for admission.
- c. Qualified industry staff with relevant M.Sc. (in Civil Engineering or any other closely related discipline) degree can apply.

- d. Shortlisted candidates will be invited for interview /presentation of research proposals. Limited sponsorship opportunity is available for students however, candidates are encouraged to seek for sponsorship from other sponsoring agencies and employers.

Programme Requirements & Criteria for the Award of the PhD Degree

To achieve the above objectives and qualify for the award of the PhD degree, the student must complete and pass all the prescribed courses in the chosen area of interest, participate in and present seminars and produced a well supervised dissertation on an approved research topic relevant to the interest of the Center.

Course Listings

The course listings consist of: Compulsory courses and Electives. Details of the Courses are presented subsequently for the two research areas of the Center.

Courses Listing for PhD in Geotechnical and Coastal Engineering

Module Code	Module Title	Credit Unit
GCE 910	Advanced Concepts in Engineering Behavior of Soils	3
GCE 912	Finite Element and Mathematical Modelling Techniques in Geomechanics	3
GCE 913	Advanced Probability and Reliability of Geotechnical Systems	3
GCE 915	Advanced Earthquake Engineering and Foundation Vibrations	3
GCE 916	Advanced Earth Structures and Slopes	3
GCE 917	Advanced Concepts in Theoretical Soil Mechanics	3
GCE 918	Advanced Dam Engineering, Embankments and Seepage	3
GCE 920	Advanced Project Management	3
CTM 902	Advanced Coastal Infrastructure	3
CTM 904	Advanced Coastal Measurement and Data Analysis	3
GCE 905	ICT/Big Data Analysis	3
GCE 901	Technical Seminar	3

GCE 902 Thesis	6
TOTAL	42

COURSE DESCRIPTION

GCE 910 - Advanced Concepts in Engineering Behavior of Soils (3 Credits).

Parameters and representation of soil properties. Advanced concepts in Critical State Soil Mechanics – Limit and Critical State Models. Strength behavior of simple contractive soils. Strength behavior of dilative soils. Behavior of heavily over-consolidated clays including residual strength. Quantitative models of pore pressure. Volume change and compressibility behavior: Consolidation, compression, creep and other time effects. Conduction phenomena-uncoupled and coupled. Sensitive soils. Stress-Deformation of soils. Models for stress-strain and other constitutive laws. Transient and dynamic loading response. Effects of cyclic loading. Failure theories.

GCE 912 - Finite Element and Mathematical Modelling Techniques in Geomechanics

Introduction: Geotechnical Modelling of soil behaviour – Limit and Critical States (a Review); Constitutive Modelling: Elastic, elastic – plastic models; Numerical modelling: Finite Element modelling, Finite differences; Physical Modelling: Dimensional analysis, Soil – Structure Interaction; Centrifuge Modelling; Theoretical Modelling; Application of Modelling techniques in solving soil – Structure Interaction Problems.

GCE 913 - Advanced Probability and Reliability of Geotechnical Systems (3 Credits).

Basic probability theory and applications; common probability distributions and geotechnical applications; joint distributions; moment approximations; Reliability of soil structures; system reliability and applications; Geotechnical applications of entropy and least biased distribution, the hazard function; Applications of diffusion theory to subsidence, consolidation and stress distribution (Probability consolidation, probabilistic stress distribution); Markov Process and progressive slope failure; Time series analysis and groundwater fluctuation; Uncertainty and soil parameters; Decision making under uncertainty; site characterization.

GCE 915 - Advanced Earthquake Engineering and Foundation Vibrations (3 Credits).

Introduction: Dynamic Response Characteristics; Wave Propagation; Dynamic Soil properties; Foundation response to vibrations, Blasting Vibrations; Seismic slope stability analysis; Seismic design of retaining walls; Liquefaction; Seismic

response of clays; Risk analysis and stability; offshore dynamics. Engineering earthquakes from engineering point of view; Earthquake mechanism; Basic characteristics of strong ground motion; Response of simple systems to earthquakes; structural design for earthquakes; seismic codes; earthquake resistant design; site effects; soil amplification; seismic risk and design decisions; Soil-structure interaction; nuclear reactor containment structures; earth dam design (seismic); fluids in tanks and reservoirs; Blast loading.

GCE 916 - Advanced Earth Structures and Slopes (3 Credits).

Equilibrium of Retained soil: Limiting equilibrium analysis; Earth pressure theories; Lateral earth; Rigid retaining walls; sheet pile walls; anchored bulkhead. Deep excavations in soil; pressure distribution, base instability, bracing and other support methods; Earth anchored excavation; concrete diaphragm walls; Reinforced earth walls; cellular cofferdams; soft ground tunneling; Ground movement accompanying excavations and tunneling operations; Slope stability:- Design and analysis of slopes and embankments, circular and non-circular failure surfaces, concept of safety; Probabilistic slope stability analysis; stress strain and time-dependent behavior; Identification and control of slope stability problems; Graduate soil Laboratory.

GCE 917 - Advanced Concepts in Theoretical Soil Mechanics (3 Credits).

Stress distribution in soil: Concept of stress and strain; Elastic equations; Applications to various loading and boundary conditions in soil. Stability problems in soil: - Failure theories; Development of conventional stability methods; Effects of retaining wall movements; Sokolovski's methods of characteristics. Consolidation:-Theoretical development and solution of one dimensional consolidation; Higher-dimensional consolidation. Seepage: -Theory of groundwater movement; method of fragments.

GCE 918 - Advanced Dam Engineering, Embankments and Seepage (3 Credits).

Types of Dams, Design consideration; design details; site explorations; behavior of rockfills; stress-strain modeling, Finite element modeling, stresses, load transfer; Cracking; pore pressure; observations / monitoring; inspection and maintenance; foundation and abutment treatment, cut-off; causes of failure; Trailings dam, Permeability, flow equations; flow nets. Numerical analyses, Seepage analogies; unknown boundaries; Transfer conditions; Anisotropic seepage; layered systems; piping filters.

GCE 920 – Advanced Project Management (3 Credits).

Project Management overview: Identify project management processes, professional and social responsibilities, interpersonal skills required for a project management. Project Management Methodology. Project Management Toolset. Project Management Documentation. System Development Life Cycle. Initiating a project: Examine the project management content, examine project selection, prepare a project statement of work, create a project charter, Identify project stakeholders. The Planning Phase: Identify elements of the project management plan, Document stakeholder requirements, create a scope statement, develop a work breakdown structure.

CTM 902 - Advanced Coastal Infrastructure (3 Credits).

Review of planning and design of critical coastal infrastructure. Review of design criteria. Advanced design of break waters, jetties, seawalls, groins, piers, submerged pipelines, harbor design and Tsunami defense. Use of laboratory models, numerical simulation and observation for design.

CTM 904 - Advanced Coastal Management and Data Analysis (3 Credits).

Advanced coastal measurement. Advanced bathymetric survey. Online data archival and retrieval systems. Data analysis: Fourier transform applications to the processing of coastal related types of signal. Advanced statistics. Digital processing technique. Laboratory work involving analysis of coastal related signals using modern data acquisition systems.

GCE 905 – ICT/Big Data Analysis (3 Credits).

Overview of Big Data. Using Big Data in Businesses. Technologies for Handling Big Data. Understanding Hadoop Ecosystem. Dig Deep to understand the fundamental of MapReduce and HBase. Understanding Big Data Technology Foundations. Databases and Data Warehouses. Using Hadoop to store data. Learn to Process Data using Map Reduce. Testing and Debugging Map Reduce Applications. Learn Hadoop YARN Architecture. Exploring Hive. Exploring Pig. Exploring Oozie. Learn NoSQL Data Management. Integrating R and Hadoop and Understanding Hive in Detail.

GCE 901 - Technical Seminar (3 Credits).

This is a required course for all graduate students. Intensive review of the literature in the student area of specialization will be required. Series of seminars will be delivered by students in topic of interest.

GCE 902 - Research and Dissertation (6 Credits).

This is a directed research on problems in the student's area of specialization. Emphasis will be on the use of research methodology for scientific investigation leading to a written thesis.

Graduation Requirements

To be awarded the PhD degree in Geotechnical and Coastal Engineering, the student must fulfill the following requirements.

- Be registered in the School of Graduate Studies for equivalent of twenty-four (24) calendar months for full-time mode of study.
- Complete a total of forty-two (42) credit units. At least 6 credits must be on a dissertation devoted to managing Geotechnical and Coastal Engineering problems.
- Complete eight (8) core Geotechnical and Coastal Engineering courses and a graduate seminar course with at least a 'C' grade.

Resource Persons

Preamble

The resource persons for the PhD programme in Geotechnical and Coastal Engineering are a blend of university academics, industry and government representatives. The teaching is not only theory based but practical and industrial trainings. The ratio shall be 60% academics, 30% industry facilitators and 10% government representatives.

Doctor of Philosophy (Ph.D) Degree Programme in Coastal Technology Management

Course Delivery

All lectures for every Programme shall be administered / delivered on modular basis from 08.00am to 04.00pm (with One Hour (12.00 - 01.00) break) from Mondays to Fridays. That is, 40 hours lecture per week per Course which is approximately equal to 14 weeks Semester of Academic work for a 3 Credit Units (2-hours lecture plus 1 hour Practical or Tutorial per week) Course. Examination for a Course is taken after the Lectures on Saturdays, while the Continuous Assessment is done within the lecture periods as Practical reports, Test, Group Discussions, Field Trips reports and Assignments.

Programme Duration

- The full-time candidates will be required to spend a minimum of 2 years and a maximum of 5 years.
- The part-time candidates will be required to spend a minimum of 3 years and a maximum of 7 years.

Entry /Admission Requirements

Candidates for admission into the Ph.D programme in Coastal Technology Management must possess a Masters of Engineering or Science degree in any related Engineering, Physical and Environmental Science disciplines from the University of Port Harcourt or any other recognized University with at least a CGPA of 3.5. In addition, every applicant must provide:

- a. Two letters of reference (at least) from persons qualified to comment on his or her academic work (preferably, the supervisor of the Masters' programme should be one of the referees;
- b. A copy of his or her Master's degree transcript;
- c. Four copies of his or her proposed research plan.

Final selection of candidates will be based on the evaluation of the above documents as well as performance at interview.

Programme Requirements & Criteria for the Award of the PhD Degree

To achieve the above objectives and qualify for the award of the PhD degree, the student must complete and pass all the prescribed courses in the chosen area of interest, participate in and present seminars and produced a well supervised dissertation on an approved research topic relevant to the interest of the Center.

Course Listings

The course listings consist of: Compulsory courses listed below:

Course Listing for Ph.D. in Coastal Technology Management

Module Code	Module Title	Credit Unit
CTM 901	Advanced Modelling Techniques in Coastal Technology	3
CTM 902	Advanced Coastal Infrastructure	3
CTM 903	Advanced Vulnerability and Adaptation Strategy	3
CTM 904	Advanced Coastal Measurement and Data Analysis	3
CTM 905	Advanced Reliability and Risk Management	3
CTM 906	Advanced Programming in Oceanography	3
CTM 907	Coastal Hazard Analysis	3
CTM 908	Advanced Hydrodynamics for Coastal Engineering	3
CTM 909	Advanced Project Management	3
CTM 911	Advanced Statistics	3
CTM 912	ICT/Big Data Analysis	3
CTM 910	Technical Seminar	3
CTM 930	Thesis	6
TOTAL		42

COURSE DESCRIPTION

CTM 901 - Advanced Modeling Techniques in Coastal Technology (3 Credits).

Review of finite element; Discretization of river and coastal domains. Element numbering technique in

coastal environment. Element assembly and solution of banded matrices, tridiagonal, pentadiagonal etc. 1-D, 2-D, and 3-D elements. Computer/software application to field and idealized problems, input data, interpretation with respect to coastal environment for instance flood prediction, solute transport wave prediction.

CTM 902 - Advanced Coastal Infrastructure (3 Credits).

Review of planning and design of critical coastal infrastructure. Advanced design of break waters, jetties, seawalls, groins, piers, submerged pipelines, harbour design and Tsunami defense. Use of laboratory models, numerical simulation and observation for design.

CTM 903 - Advanced Vulnerability and Adaptation Strategy (3 Credits).

The nature of the coastal environment. Coastal zones in Nigeria. Coastal resources: the nature and status. Coastal zones classification. Coastal zone management. Vulnerability assessment of coastal zones. Risk associated with Coastal development. Coastal zone adaptation planning. Adaptation strategies in the Coastal environment. Present climate realities and the coastal environment.

CTM 904 - Advanced Coastal Management and Data Analysis (3 Credits).

Advanced coastal measurement. Advanced bathymetric survey. Online data archival and retrieval systems. Data analysis: Fourier transform applications to the processing of coastal related types of signal. Digital processing technique. Laboratory work involving analysis of coastal related signals using modern data acquisition systems.

CTM 905 - Advanced Reliability and Risk Management (3 Credits).

Review of state of the art computer methods, soft wares on structural reliability modelling; Principles of structural reliability analysis; Destructive and non-destructive examinations; and case studies. Advanced principle in risk management, history of risk management, development and impact of international standard. Review of risk assessment. Review of risk treatment. Review of risk, governance and culture.

CTM 906 - Advanced Programming in Oceanography (3 Credits).

Introduction to MATLAB desk environment. Advanced programming and data analysis skills, matrix algebra and vectorization of functions, writing optimized routines to analyze data sets, basic graphics and visualization. Oceanographic

characteristics varying in both three dimensions and time. MATLAB processing, analysis and visualization of large oceanographic data sets.

CTM 907 - Coastal Hazard Analysis (3 Credits).

Cascade of natural, biological and human induced hazards. Perspective on coastal hazard and disasters. Forecasting and mitigations. Sea level rise causes, impact and scenarios for change. Storm induced morphology changes. Remote sensing of coastal hazard.

CTM 908 - Advanced Hydrodynamics for Coastal Engineering (3 Credits).

Periodic wave patterns: the approach of differential calculus, the control volume approach. Waves effect on coasts. Wind generated waves. Advanced wave mechanics. Review of hydrodynamics and vector analysis.

CTM 909 – Advanced Project Management (3 Credits).

Project Management overview: Identify project management processes, professional and social responsibilities, interpersonal skills required for a project management. Project Management Methodology. Project Management Toolset. Project Management Documentation. System Development Life Cycle. Initiating a project: Examine the project management content, examine project selection, prepare a project statement of work, create a project charter, Identify project stakeholders. The Planning Phase: Identify elements of the project management plan, Document stakeholder requirements, create a scope statement, develop a work breakdown structure.

CTM 911 - Advanced Statistics (3 credits).

Linear statistical models. General regression theory and industrial applications. Design of orthogonal experiments and industrial applications. Correlation coefficient analysis. Elementary time series analysis. Finite population sampling and survey methods.

CTM 912 – ICT/Big Data Analysis (3 Credits).

Overview of Big Data. Using Big Data in Businesses. Technologies for Handling Big Data. Understanding Hadoop Ecosystem. Dig Deep to

understand the fundamental of MapReduce and HBase. Understanding Big Data Technology Foundations. Databases and Data Warehouses. Using Hadoop to store data. Learn to Process Data using Map Reduce. Testing and Debugging Map Reduce Applications. Learn Hadoop YARN Architecture. Exploring Hive. Exploring Pig. Exploring Oozie. Learn NoSQL Data Management. Integrating R and Hadoop and Understanding Hive in Detail.

CTM 910 - Technical Seminar (3 Credits).

This is a required course for all graduate students. Intensive review of the literature in the student area of specialization will be required. Series of seminars will be delivered by students in topic of interest.

CTM 930 - Thesis (6 Credits).

This is a directed research on problems in the student's area of specialization. Emphasis will be on the use of research methodology for scientific investigation leading to a written thesis.

Graduation Requirements

To be awarded the PhD degree in Coastal Technology Management, the student must fulfill the following requirements.

- d. Be registered in the School of Graduate Studies for equivalent of twenty-four (24) calendar months for full-time mode of study.
- e. Complete a total of forty-two (42) credit units. At least 6 credits must be on a dissertation devoted to managing Coastal Technological problems.
- f. Complete eight (8) core Coastal Technology and Management courses and a graduate seminar course with at least a 'C' grade.

Resource Persons

Preamble

The resource persons for the PhD programme in Coastal Technology Management are a blend of university academics, industry and government representatives. The teaching is not only theory based but practical and industrial trainings. The ratio shall be 60% academics, 30% industry facilitators and 10% government representatives.

PARTICIPATING LECTURERS/INSTRUCTORS

S/Nos	Names	Qualifications	Specialization	Rank
1	Ejezie, S.U.	Ph.D, MSc., BSc., R.Engr (COREN).	Geotechnical Engineering	Visiting Professor
2	Nwaogazie, I.L.	Ph.D, MSc., BSc., R.Engr (COREN).	Engineering Modeling	Professor
3	Teme, S.C.	Ph.D, MSc., BSc., (FNMGS).	Geology & Geotechnical Engg	Visiting Professor
4	Jimoh, Y.	Ph.D, MSc., BSc., R.Engr (COREN).	Geotechnical Engg	Visiting Professor
5	Johnary, T.	Ph.D, MSc., BSc., R.Engr (COREN).	Engineering Structures	Visiting Professor
6	Igwe, E.A.	Ph.D. MTech., BTech., R.Engr (COREN)	Highway Engineering	Visiting Professor
7	Ossia, O.V.	Ph.D, MTech.,BTech., R.Engr (COREN).	Applied Mechanics	Professor
8	Nwofor, T. C.	Ph.D, M.Tech.,B.Tech. R.Engr (COREN).	Engineering Structures	Reader
9	Eme, D.B.	Ph.D, M.Te.ch.,B.Tech., R.Engr (COREN). •	Highway Engineering	Reader
10	Nwaobakata, E.	Ph.D, M.Tech.,B.Tech., R.Engr (COREN).	Highway Engineering	Reader
11	Sule, S.	Ph.D, M.Tech., B.Eng., R.Engr (COREN).	Engineering Structures	Reader
12	Orji, C.U.	Ph.D, MSc., BTech., R.Engr (COREN)	Marine Engineering	Senior Lecturer
13	Tamunodukobipi, D.	Ph.D, MTech.,BTech., R.Engr (COREN).	Applied Rotodynamics	Senior Lecturer
14	Akandu, E.	Ph.D, MTech., BTech	Marine & Offshore Structures	Senior Lecturer
15	Awodigi, C. T.	Ph.D, M.Eng., B.Eng., R.Engr (COREN).	Engineering Structures	Senior Lecturer
16	Ugwoha, E.	Ph.D, MSc, BTech., R.Engr (COREN)	Environmental Engineering	Senior Lecturer
17	Kamalu, U.A.	Ph.D, MEng., BEng., R.Engr (COREN)	Electronics Engineering	Senior Lecturer
18	Ukpong, E.U.	Ph.D, MSc, BSc., R.Engr (COREN)	Geotechnical Engineering	Senior Lecturer
19	Ikebude, C.	Ph.D., MEng., BEng., R.Eng (COREN)	Water Resources	Senior Lecturer
20	Nwaigwe, C.	Ph.D, MSc., BSc.	Computation Fluid Dynamics	Lecturer-1
21	Ibekwe, A.U.	Ph.D, M.Tech.,B.Tech., R.Engr (COREN).	Marine Engineering Platforms	Industry

22	Tam-Jones, Atuboyedia	Ph.D, M.Tech., B.Tech., R.Engr (COREN)	Highway Engineering	Industry
23	Henshaw, T.	Ph.D., MEng., BEng., R.Eng (COREN)	Water Resources	Industry

Personnel

Being multi-disciplinary in nature, academic Faculty is drawn from different academia and from relevant disciplines at the University of Port Harcourt, other Sister Universities and Industry. The current list of proposed teaching faculty is shown above. However, more Teachers, Instructors and Researchers of high professional repute shall be co-opted as collaborators to build a center of Excellence in Geotechnical and Coastal Engineering. Besides, there are two Professorial Chairs domiciled in the Center, namely: Enoch George Professorial Chair in Geotechnical Engineering and the Gesi Assamaowei Professorial Chair in Coastal Engineering Research.

CENTRE FOR OCCUPATIONAL HEALTH, SAFETY AND ENVIRONMENT (OHSE)

POST GRADUATE DIPLOMA (PGD) IN OCCUPATIONAL HEALTH, SAFETY & ENVIRONMENT (OHSE) AT THE CENTRE FOR OCCUPATIONAL HEALTH, SAFETY & ENVIRONMENT (COHSE)

1. INTRODUCTION

The programme is designed for candidates seeking to remedy their deficiencies to qualify for a master's degree in either Environmental Technology and Management (ETM) or Occupational Health and Safety (OHS) as well as others intending to improve their professional skills for better performance in the industry.

2. PHILOSOPHY

The philosophy of the postgraduate diploma programme is to provide postgraduate training in Occupational Health, Safety and Environment for bachelor's degree and HND holders in Science, Engineering and related disciplines who do not qualify for admission into master's degree programme in Occupational Health, Safety and Environment.

3. VISION

To produce PGD graduates in Occupational Health, Safety and Environmental who can design safe work procedures and provide safe working environment for safe operations in workplaces.

4. MISSION

To provide postgraduate diploma training that will enable beneficiaries to be more effective in their workplaces.

5. RATIONALE

The programme will provide opportunity for individuals with 3rd Class degrees in Science, Engineering and related disciplines who desire to remedy their bachelor's degrees in order to pursue higher degrees in Occupational Health, Safety and Environment. It will also provide opportunity for HND holders with Upper Credit to equally pursue higher degrees in Occupational Health, Safety and Environment.

6. AIM AND OBJECTIVES

The aim of the programme is to provide PGD graduates of Occupational Health, Safety and Environment (OHSE) with broad based training required in industrial safety and environmental management.

The objectives of the PGD programme are to train graduates to perform the following:

- Promote health and safety awareness among workers;
- Prescribe suitable means for the evaluation and control of hazards;
- Provide guidance for compliance with global, federal, state, and local regulations;
- Drive purposeful environmentally friendly projects.

7. ADMISSION REQUIREMENTS

Candidates who possess a bachelor's degree from a recognized University with a minimum of 3rd Class and candidates who possess Higher National Diploma (HND) from a recognized Polytechnic with a minimum of Upper Credit, would be considered for admission.

8. PROGRAMME DURATION

The programme is for one-year, during which students are expected to take the complete modules and carry out individual projects.

9. GRADUATION REQUIREMENTS

A student is presented for graduation after passing all fourteen courses as well as settling all fees.

10. COURSE OUTLINE

Course Code	Course Title	Credit Unit
HSE 701	Entrepreneurship and Management	2
HSE 702	Introduction to Health, Safety and Environment	3
HSE 703	HSE Audits and Monitoring	2
HSE 704	Accident Investigation and Reporting	2
HSE 705	Occupational Health, Diseases and Hygiene	2
HSE 706	Introduction to Ergonomics	2
HSE 707	HSE Management System	2
HSE 708	Introduction to Environmental Pollution	2
HSE 709	Introduction to Environmental Management	2
HSE 710	Introduction to Water and Wastewater Treatment	2
HSE 711	Technical Writing and Presentation	3
HSE 712	Statistics	3
HSE 713	ICT and Research Method	3
HSE 714	Individual Project	6
	Total	36

11. COURSE DESCRIPTION

HSE 701 - Entrepreneurship and Management (2 units)

Meaning of entrepreneurship. Entrepreneurship mind-set. Evolutionary trend of entrepreneurship. Identifying and recognizing opportunities. Entrepreneurship process. Issues and challenges. Business plan, model & financing. How to setup a business with little capital. How to grow a business.

HSE 702 - Introduction to Health, Safety and Environment (3 units)

Basic Definitions for HSE and HSE terminologies. Health & Safety Foundations. Moral, Social & Economic Reasons for HSE at Work. Introduction to Major Occupational Health & Safety management System. The Nature & Sources of HSE Information. The Legal Framework for HSE management & the role of national government / agencies and international bodies in formulating a framework for the regulation of HSE. HSE policy. The Roles, Responsibilities & functions of HSE Practitioners and advisers. Hazard identification, Risk Assessment and Principles of Control. Promoting a positive Health & Safety Culture. Introduction to Manual handling & control of substances Hazardous to Health- (COSHH)

HSE 703 – HSE Audits and Monitoring (2 units)

Why Measure HSE Performance. The traditional Approach to Measuring HSE performance. Proactive/Active Monitoring. Reactive Monitoring. Frequency of monitoring & Inspections. How to conduct an HSE Audit. Preparing & writing Audit reports. Presentation of Audit Findings. The place of Audit & monitoring in the HSE Management System.

HSE 704 - Accident Investigation and Reporting (2 units)

Reasons for incident/accident investigation. Which incidents/accidents should be investigated/ reported. Loss causation and analysis. Explanation of Domino and multi-causality theories & Swiss cheese model. Immediate and underlying/Root causes of accidents. Introduction to Incident/Accident Investigation Methods & Procedures. Reporting & recording of injuries, ill health & dangerous occurrences. Accident investigation preparation & reporting. Internal systems for collecting and analyzing incident data.

HSE 705 - Occupational Health, Diseases and Hygiene (2 units)

Why occupational health & hygiene. Occupational diseases and steps for the prevention of occupational diseases. The costs of occupational and work-related diseases. Health promotion programmes at work places. Introduction to Work

place stress and work-related stress. Occupational health hazards and risks across major industries. Introduction to Musco-skeletal disorders and the causes. Impact of Occupational health and Occupational disease on HSE performance.

HSE 706 – Introduction to Ergonomics (2 units)

What is behaviour based safety (BBS). Why adopt behaviour based safety. Introduction to behaviour based safety process. Introduction to behaviour based safety implementation process. Introduction to critical safe behaviours needed at work. Why BBS programmes may fail. How to sustain BBS programs. Introduction to ABC Tool. BBS and HSE Performance. BBS and Work place culture.

HSE 707 - HSE Management System (2 units)

Reason for the implementation of HSE-MS. Introduction to HSG 65. Introduction to OHSAS 18001:2007 & Gap Analysis with ISO 45001:2018. Introduction to ISO 45001:2018. Introduction to ISO 14001:2015. Introduction to HSE Performance Improvement. Introduction to HSE-MS Certification/Audits. HSE policy & HSE systems documents.

HSE 708 – Fundamentals of Environmental Pollution (2 units)

The Meaning of Pollution. Types of environmental pollution. Types of pollutants and factors facilitating the spread of pollutants. The sources of pollution. Environmental components & their vulnerability to pollution. Introduction to air, water and land pollution. Introduction to environmental nuisance- noise and odour. Past incidents and case studies of environmental pollution. Introduction to the impacts of pollution and the importance of pollution prevention.

HSE 709 - Fundamentals of Environmental Management (2 units)

Reasons for environmental management. Introduction to environmental management tools. Introduction to best available techniques. Waste management options- an introduction. Environmental risk assessment. Principles of Environmental sustainability & Introduction to sustainable development. Environmental Performance Monitoring & Performance indicators. Introduction to ISO 14001 as an Environmental Management tool.

HSE 710 - Fundamentals of Water and Wastewater Treatment (2 units)

Introduction to water supply and wastewater. Why treat water and wastewater. Water quality parameters and standards. Sedimentation, flocculation & filtration. Chemical treatment by softening, adsorption and ion exchange.

Disinfection, wastewater screening and primary treatment. Biological reaction kinetics. Activated sludge treatment. Trickling filters, biological contactors. Sludge handling and sludge digestion. Stabilization ponds & nutrient removal.

HSE 711 - Technical Writing and Presentation (3 units)

Basic definitions for technical writing and presentation. Principles of technical writing. The seven Cs of technical documents. Organization and delivery of technical reports. Principles of presentation. Using the “You Attitude”. Graphics in technical documents. Introduction to interpersonal communication skills. Various methods adopted for presentation. The art of public speaking. Channels of presentation.

HSE 712 – Statistics (3 units)

Basic probability concepts. Probability distributions and analyses. Basic statistics: an approach to data analysis. Regression and

correlation: an approach to mathematical modeling. Test of hypothesis and significance. General approaches to data analyses.

HSE 713 - ICT and Research Method (3 units)

Use of computer programs and softwares. Methods of data collection. Methods of data analysis. Meaning, scope and functions of occupational health, safety and environment (OHSE) research. Types and examples of research in OHSE. Sampling techniques. Tools and methods of data collection. Basic statistical concepts and their application in OHSE. Techniques of data interpretation. Reporting research results.

HSE 714 - Individual Project (6 units)

A guided scientific investigation of a selected topic. This involves the identification of researchable topic, statement of specific objectives and hypotheses, data collection and analysis. These processes will lead to an individual project report.

12. LIST OF ACADEMIC STAFF

12.1. Uniport Staff

S/No	Name	Qualification	Field of Specialization	Designation
1	Nwaogazie, I. L.	B.Sc; M.Sc (Kansas); Ph.D (Oklohoma State)	Hydrology/Water Resources and Mathematical Modeling	Professor
3	Abu, G.O.	B.Sc (ABU) Ph.D (Maryland)	Environmental Microbiology & Biotech. Designation	Professor
5	Nwachukwu, E.O.	B.Sc (IMO); M.Sc & Ph.D (UPH)	Mycology / plant pathology and Environmental Management	Professor
7	Joel, O. F.	B.Tech, Chem. Engg. (UST), M.Sc Eng Mgt. (UNIBEN), Ph.D (Pet./Chem. RSU)	Drilling & Environmental Engineering	Professor
8	Ugbebor, J. N.	B.Sc (UPH); M.Sc (UPH); Ph.D (UNN)	Safety, Environmental Issues and Pollution Control in the Oil and Gas Industry	Reader
9	Douglas, K.E.	MBBS (UPH); FMCPA (Nigeria); DOceMed (London)	Occupational Health Hygiene	Professor
10	Alabere, I.D.	MBBS (Ibadan); MPH (Iagos); FMCPH (Nigeria)	Epidemiology	Professor
11	Ugwoha, E.	B.Tech (RSU); M.Sc (Newcastle); Ph.D (Nottingham)	Fate and Transport of Contaminants in the Environment	Reader
12	Momoh, Y.	B.Sc (UNIBEN); M.Sc (UPH); PhD (UNIBEN)	Bioenergy, Biofuels, and Bio-remediation	Senior Lecturer
13	Moore, B.M.	MBBS (Ibadan); MPH (UPH)	Biostatistics	Lecturer I

14	Amah, V.E..	B.Eng, M.Eng (UPH)	Environmental Engineering/Water Resources	Lecturer I
----	-------------	--------------------	-------------------------------------------	------------

12.1. Visiting Lecturers

S/No	Name	University	Field of Specialization	Designation
1	Agunwamba, J.C	University of Nigeria, Nsukka	Civil/Environmental Engineering	Professor
2	Okereke, C.D.	Federal University of Technology Owerri	Environmental Engineering	Professor

12.3. Industry Facilitators

S/No	Name	Occupation
1.	Dr. G.I. Oyet	GM, HSE Oando OBH Energy
2.	Dr. C. Anyanwu	President, Nigeria Industrial Safety Council of Nigeria. Accident investigation expert.
3.	Mrs. C.J. Eze	Research Consultant, EU water project in Anambra State
4.	Mr. F. Onuoha	Chairman, Institute of Safety Professionals of Nigeria, Rivers Branch
5.	Mr. R. Obele	Chairman, Institute of Safety Professionals of Nigeria, Bayelsa Branch
6.	Mr. S. Ayoola	MD, Fire Training Centre, Port Harcourt
7.	Mr. L.C. Akubue	Computer Analyst, Centre for Petroleum Geoscience

13. FACILITIES

The university library stocks varieties of books. In addition, students can assess electronic journals, databases and e-books via the university portal. The Centre also has a library, computer studio, Environmental & Safety laboratory and conducive lecture rooms.

POST GRADUATE MASTERS PROGRAMMES IN OCCUPATIONAL HEALTH, SAFETY & ENVIRONMENT (COHSE) AT THE CENTRE FOR OCCUPATIONAL HEALTH, SAFETY & ENVIRONMENT (COHSE)

1. INTRODUCTION

The programme is designed for candidates seeking to qualify for a master's degree in either Environmental Technology and Safety (ETS) or Occupational Health and Safety (OHS) as well as others intending to improve their professional skills for better performance in the industry.

2. PHILOSOPHY

The philosophy of the postgraduate masters programme is to provide postgraduate training in Occupational Health, Safety and Environment for bachelor's degree holders in Science, Engineering and related disciplines who qualify for admission into the master's degree programme.

3. VISION

To produce MSc graduates in Occupational Health, Safety and Environment who can design

safety work procedures and provide safe working environment for safe operations in workplace

4. MISSION

To provide postgraduate MSc training that will enable beneficiaries to be more effective in their workplace.

5. RATIONALE

The programme will provide opportunity for individuals with low 2² (CGPA = 3.00) bachelor's degree in Science, Engineering and related disciplines who desires to pursue higher degrees in Occupational Health, Safety and Environment.

6. AIM AND OBJECTIVES

The aim of the programme is to provide Bachelor degree graduate and holders of Post graduate diploma in Occupational Health, Safety and Environment (OHSE) with broad based training required in the Safety and Environmental industries.

The objectives of the MSc programme are to train graduates to perform the following:

- Promote health and safety awareness among workers;
- Prescribe suitable means for the evaluation and control of hazards;
- Provide guidance for compliance with global, federal, state, and local regulations;
- Drive purposeful environmentally friendly projects.

7. ADMISSION REQUIREMENTS

Candidates who possess a Bachelor's degree from a recognized University with a minimum 2.2 or who possess Post Graduate Diploma (PGD) of a related course with 3.5 CGPA in 5.0 from a recognized University would be considered for admission.

8. PROGRAMME DURATION

The programme is for one-year, during which students are expected to take the complete modules and carry out individual projects.

9. GRADUATION REQUIREMENT

A student is presented for graduation after passing all Twenty-six courses as well as settling all fees.

10. COURSE OUTLINE AND COURSE CODES.

GENERAL COURSES FOR BOTH OHS AND ENS

Module Code	Module Title	Credit Unit
SGS 801.1	ICT and Research Methodology	2
SGS 801.2	Management and Entrepreneurship	2
HSE 802	Environmental Concept and Issues	1
HSE 803	Safety and Environmental Laws	1
HSE 804	Chemical Handling and Toxicology	1
HSE 805	Waste Management and Sustainable Development	1
HSE 806	Hazard and Risk Assessment Techniques	1
HSE 807	HSE-MS, Standards and Tools	1
HSE 808	Human Factor and Behavior Based Safety	1
HSE 809	Process Safety Management and Audit	2
HSE 810	Incident Management	2
HSE 811	Disaster Management	2
HSE 812	Transport Safety and Journey Management	2
HSE 813	Fire Safety and Management	2
HSE 814	Construction Safety	2
HSE 815	Statistical Methods and Software Applications	2
HSE 816	Group Project	3
ETS/OHS 824	MSc Dissertation	6
TOTAL		34

COHSE Specific Environmental Technology and Safety (ETS) MSc Courses

COURSE OUTLINE AND COURSE CODES.

GENERAL COURSES FOR BOTH OHS AND ENS

SGS 801.1: ICT and Research Methodology

This course covers essentials areas of general Introduction to ICT (focus on emerging trends in ICT), Hardware/software fundamentals, Internet / online tools (focus on search engine), productivity tools (google suite), word processing (Ms word), data processing (Ms Excel), data analysis (Ms Excel/SPSS), introduction to computer programing (Excel VBA/ macros), presentation tools (Ms power point), graphics (focus on infographics), group work, presentation

It also covers what is research, research process and characteristics, types of research, formulating a research problem, research design, principles of

scientific research, concepts of hypothesis , research techniques, formulation and testing, organization of research and report writing, literature review, document management – content and layout in report writing , understanding data and data types, referencing and bibliography.

SGS 801.2: Management and Entrepreneurship

This course covers business Environment, general Management, financial Management, entrepreneurship Development, feasibility Studies, marketing and managerial problem solving

HSE 802: Environmental Concepts & Issues

This module seeks to introduce students to contemporary environmental concepts and issues. It will cover introduction to environment & sustainable development, understanding the biophysical and socio-economic environment, introduction to global warming and climate change, biodiversity conservation, principles of environmental chemistry, introduction to contamination and types of environmental pollution & pollutants, environmental quality monitoring and assessment, introduction to environmental biology & microbiology, introduction to environmental performance indicators.

HSE 803: Safety Environmental Laws

This module seeks to align students to basic principles of environmental law and how to manage environmental cases. It will acquaint students to both local and international environmental legislation. It covers introduction to the fundamental principles and concepts of environmental law, introduction to applicable legal and other requirements in Nigeria, introduction to environmental regulatory agencies in Nigeria (FMEnv, NESREA, and DPR), introduction to EGASPIN and the EIA act (Decree 86 of 1992), historical evolution of environmental law (Local and international), introduction to major multilateral environmental agreements, decisions, treaties and conventions, environmental law implementation and compliance enforcement, civil liability in relation to environmental pollution-duties owed and defenses in common law.

HSE 804: Chemical Handling and Industrial Toxicology

This course covers what is toxicology/ history of toxicology/ the dose makes the poison as the concept of toxicology, industrial toxicology and occupational toxicology-man made toxins/ : environmental toxicology/ animal and plant toxins, toxicity/ types of toxicity, xenobiotics and toxicity/ factors governing toxicity/ fundamental rules of toxicity, the exposure concept-route, amount,

duration / dose response curves, toxicological experimentation/ body metabolism of xenobiotics/ role of a toxicologist in the society, work place chemicals/ workplace exposure limits/ chemical handling hazard awareness, identifying chemicals/ forms of chemical and biological agents/ signage / labeling and storage requirements, disposal of hazardous chemicals/ hazard control / risk assessment/, routes of entry/ health hazards of specific agents, understanding emergency procedures for spills and exposures, personal protective equipment (PPE)/emergency first aid/ emergency procedures, developing standard operating procedures (SOPs), safety and legislation / safety data sheets (SDS).

HSE 805: Waste Management and Sustainable Development

This module will introduce to students the basic concerns of waste management especially as it relates to solid and hazardous waste. It covers Introduction to basic principles of waste management (The waste management hierarchy and basic definitions), waste categorization and waste classification, applicable laws and regulatory requirement for the management of solid and hazardous wastes, duty of care (generator/producer, transporter, contractor etc), solid and hazardous waste treatment and disposal methods, electrical and electronic wastes, health care wastes, waste management plan for solid and hazardous wastes, handling & management of waste from source to disposal- A life cycle assessment of waste, waste to wealth & economics of waste management, introduction and history: Brundtland, Rio, SDGs, basic concepts, strategies and measurement, instruments for SD, climate change, biodiversity.

HSE 806: Hazard and Risk Assessment Techniques

This module seeks to guide students on how to conduct an HSE Risk assessment for different activities and work. It will also acquaint students with the risk assessment process steps and methodology. Through this module students will come to terms with the meaning and examples of occupational health and safety hazards & risks associated with different work activities. This will covers introduction to risk assessment and risk management, what is a hazard and what is a risk, risk assessment process and methodology, the place of risk assessment in the HSE- MS model, why risk assessment: A legal framework, hazard Identification & classification, HSE risk management process, defining controls from risk assessment, occupational Health & Safety Hazards/ risks for selected work and processes, environmental aspects & environmental impact assessment.

HSE 807: HSE-MS Standards & Tools

This module seeks to align students with the management system standards and tools used in solving HSE problems in the workplace. It will also define basic practical applications of such standards and tools in the workplace. Courses covered will include introduction to EMS ISO 14001:2015, Introduction to ISO 45001:2018, gap analysis and comparison between ISO 14001:2004 and 14001:2015, gap analysis and comparison between ISO OHSAS 18001: 2007 and ISO 45001:2018, introduction to HSE MS tools & documents, work procedures & work Instructions, HSE Plan & HSE supervision, HSE policy, HSE reporting, safe systems of work, introduction to HSE performance indicators and statistics, HSE audits & Inspections, HSE training, HSE Information communication – tool box talk, induction etc.

HSE 808: Human Factor & Behaviour Based safety

This module seeks to create a sound understanding on the role of human factor element and behaviors in workplace safety. It focuses strongly on understanding the reasons behind behaviours, the fact that 90% of accidents are due to behaviours. This course will cover ABC analysis, why adopt behaviour based safety, introduction to behaviour based safety implementation process, understanding BBS and OHS performance, introduction to human failure (Errors & violations), risk perception, analysis of contribution of human error to major disasters, probability of human failure based on organizational and job factors.

HSE 809: Process Safety Management and Audit

This module seeks to guide students with fundamental knowledge and issues regarding process safety management. It will discuss key process safety methods and their industry-wide applications and future opportunities. The courses include introduction to risk assessment methods, introduction to Hazard Identification (HAZID) and detection, introduction to HAZOP, introduction to failure tracing methods - fault tree & event tree analysis (FTA/ETA), introduction to FMECA, introduction to safety integrity level (SIL), introduction to layers of protection analysis (LOPA), process audit.

HSE 810: Incident Management

This module seeks to introduce the basics of incidents management including accident investigation and reporting and the various accident causation theory. It covers introduction to loss causation and analysis, explanation of domino

and multi-causality theories & swiss cheese model, immediate and underlying/root causes of accidents, introduction to incident/accident investigation methods & procedures, introduction to event tree and fault tree analysis, accident investigation reporting and report template, introduction to root cause analysis method, steps to investigate a loss event & Interview tips.

HSE 811: Disaster Management & Emergency Preparedness/ Response

In this module, the students are taught to understand how to prepare and how to deal with, and manage or handle every crisis situation, disasters and emergencies that may arise during everyday activity. This course will cover what is disaster & crisis situation, introduction disaster management, types and classification of disasters and emergencies, causes of disasters and emergencies, proactive methods for disaster prevention and control, disaster prediction and its benefits, preparing for emergencies and responding to emergencies, the composition of disaster and emergency management team, responsibilities of disaster management personnel and emergency responders, an introduction to NEMA- National Emergency Management Agency, emergency preparedness, planning and personnel competence development.

HSE 812: Transportation Safety & Journey management

This module will bring to the students an opportunity to ensure that planning for the movement of people and materials through the road, air and water are safe and adequate. It covers introduction to transportation safety management system requirement, introduction to land transport safety, land transportation safe practices and lifesaving rules, introduction to marine transportation safety, introduction to air transportation safety, introduction to journey planning and journey management, OHS hazards and risks of transportation, transportation incidents and human factor contributions, elements of a proactive journey management plan & Introduction to a perfect trip.

HSE 813: Fire Safety and Fire Risk Assessment

This module seeks to introduce to students basic fire prevention methods and a proactive way to identify the risk of fire and actions to take for control. This course will cover introduction to fire safety, introduction to basic principles of fire, classification and extinction methods, fire hazards and causes of fire, heat transmission and mechanisms for fire spread, fire detection, warning and emergency response, fire risk assessment, principles of fire protection in buildings, basic firefighting techniques, maintenance and testing of

firefighting equipment and types of extinguishers, fire emergency preparedness, planning and personnel competence development.

HSE 814: HSE-MS in Construction & Manufacturing Industry

This module seeks to equip students with basic construction and manufacturing industry HSE risks and hazards and best approach to manage them within the HSE-MS standards and guidelines. This course will cover introduction to construction & manufacturing Industry: types & categories, learning from past construction industry HSE incidents, construction & manufacturing industry hazards and risks, why HSE-MS in construction & manufacturing industry, HSE risk assessment for construction projects, construction industry safe systems of work- PTW, JSA, introduction to excavation safety, introduction to work at height safety, introduction to confined space entry safety, introduction to lifting operations and lifting equipment regulations (LOLER) and safe practices, introduction to manual handling and work place ergonomics, environmental aspects of construction and manufacturing industry, construction Industry work equipment hazards and control, emergency preparedness & response on construction sites, HSE management during construction- planning, inspection, audit, procurement, electrical & fire safety in construction sites.

HSE 815: Statistical Methods & Software Applications

This course covers experimental design and statistics, data Collection and Statistics, introduction to basic computing, activation of excel service pack II, basic computing using excel, writing of basic formulae, computing of data (Measure of Central Tendency-Mean, Median, Mode), computation of data (Measure of Dispersion-Standard Deviation, Standard Error of the Mean), 95% Confidence Interval, test of hypothesis-Chi, ANOVA, student t-test, data conformity, normality, separation of means, plotting of charts, insertion of error bars from standard error of the mean.

COHSE SPECIFIC ENVIRONMENTAL TECHNOLOGY AND SAFETY (ETS) MSc COURSES

ETS 817: Environmental Impact Assessment & Audits

This module seeks to equip students with basic understanding and skills to carry out environmental assessment and audit. This course will covers introduction to environmental assessment methodologies, introduction to

environmental audits, environmental impact assessment (EIA), introduction to EMS 14001:2015 auditing, environmental aspects, hazards and risks, introduction to environmental compliance monitoring, life cycle analysis (LCA).

ETS 818: Environmental Pollution and Remediation

This module seeks to align students to key issues related to soil and water contamination and possible remediation methods. The course covers definition of contaminated land, sources of contamination and types of contaminants, principles of soil and water remediation, methods of investigation for contaminated soil and water, remedial techniques for contaminated soil and water, introduction to contaminant flow and dispersion, parameters for the assessment of soil/water contamination, the role of local authorities (regulatory authorities) to remediation & Issuing of remediation notices.

ETS 819: Noise Pollution and Vibration

This module seeks to equip students with basic understanding and skills to carry out air quality and noise level assessment and audits as well as pollution prevention and control with special focus on air pollution and noise pollution. It will cover introduction and characteristics of noise, sound pressure level, intensity and power levels, noise spectrum and sound propagation, the Ear- outline of the anatomy, loudness, annoyance, basic sound level meter, type of noise, environmental Noise, effects of noise on man, industrial noise control.

ETS 820: Air Pollution & Climate Change

This module seeks to equip students with basic understanding and skills to carry out air quality and noise level assessment and audits as well as pollution prevention and control with special focus on air pollution. This course will cover the concept of environmental pollution (definitions, types, causes etc), introduction to atmospheric/air pollution, types of emissions & particulate releases to the atmosphere, air quality objectives & air quality standards, sampling and monitoring for atmospheric emissions, air pollutants and methods for analysis, air pollution prevention and control techniques, duties of local authorities to air pollution prevention, introduction to climate change science and impacts, introduction to climate change risks and management, climate change mitigation, climate change adaptation.

ETS 821: Water Treatment & Supply

This course seeks to provide a conceptual understanding of the legal, health, and technical aspects of treating water for drinking and industrial purposes. It will introduce to the student's important aspects regarding design and selection

of unit processes for a water treatment plant. It covers introduction to water demand and supply, introduction to water quality and pretreatment, water supply sources - ground water and surface waters, management of domestic, industrial and municipal water supply, population forecasting, pumps and pumping, conveyance of water, water treatment processes, water stability, water treatment plant design.

ETS 822: Wastewater & Sludge Treatment

This course seeks to create an understanding wastewater management and treatment of effluents and sludge. This will include topics as introduction to wastewater treatment technologies, why treat wastewater? water quality parameters and standard, basic sanitary microbiology, pollution parameters, principles of wastewater treatment, preliminary treatment units, primary treatment units, reactions & reactors, basic bio-kinetics, VIP & septic tank system, waste stabilization ponds, trickling filters, activated sludge process, anaerobic wastewater treatment principles, sludge treatment.

ETS 823: Environmental Modelling

This module seeks to equip students with basic understanding and skills to create models and make future predictions and projections on various environmental scenarios. This will cover introduction to environmental modelling (benefits, challenges, conceptual.), types of models (qualitative and quantitative), introduction source-pathway- receptor conceptual model, introduction to GIS and computer based software modelling, introduction to air pollutant dispersal models, contaminant migration models in water environment and soils, human exposure models from contaminated land, basis for uncertainty and reliability of environmental models.

COHSE SPECIFIC OCCUPATIONAL HEALTH AND SAFETY (OHS) MSc COURSES

OHS 817: Occupational Hygiene and Diseases

This course seeks to create an understanding of the principles of occupational Health and Hygiene and how to reduce Occupational diseases in the workplace. It will cover topics as introduction to Occupational Health and hygiene- Why Occupational health & hygiene, Occupational diseases and steps for the prevention of occupational diseases, the costs of occupational and work-related diseases, health promotion Programmes at work places, introduction to Work place stress and work-related stress, occupational health hazards and risks across major industries - construction, petroleum, aviation, banking, transport, introduction to musco-skeletal disorders

and the causes, impact of Occupational health and Occupational disease on HSE performance.

OHS 818: Noise Induced Hearing Loss and Indoor Air Quality

This course will cover what is noise-induced hearing loss, who is affected by NIHL, what causes NIHL, how can noise damage our hearing, what are the effects and signs of NIHL, can NIHL be prevented, main course source of noise at work, how can noise-induced hearing loss be treated, introduction to Indoor air quality air quality, fundamentals of indoor air quality, key Indoor air quality parameters, internal dour sources, thermal comfort in indoor environment, volatile organic compounds (VOCs) in indoor air quality, case studies and remedies.

OHS 819: Epidemiology

The course covers definition, objectives, uses and aims of epidemiology, epidemiological strategy, approach and history, measures of diseases frequency in a population, concept of risk measurement, concept of epidemics and epidemiological transition, steps in investigation and control of epidemics, epidemiological study design, screening and diagnostic epidemiology, concept of monitoring and evaluation in epidemiology, analytic epidemiology, criteria for judging causality in epidemiology, principles of disease prevention and control, non-communicable disease epidemiology, occupational health epidemiology, course seminar presentation, general revision.

OHS 820: Biostatistics

The course will cover notion, definition and Importance of biostatistics, levels of measurement, sources and types of data, data summarization and presentation, measures of central tendency, measures of dispersion, introduction statistical test, procedure for testing statistical hypothesis, choosing appropriate statistical test (parametric and Non parametric), the Chi-square test, students t-test, test for strength of relationship, regression, analysis of variance, introduction to SPSS, introduction to Epi- Info.

OHS 821: Medical Care Management and Emergency Response

This course covers definition of HealthCare management and HealthCare managers, functions of Healthcare managers and key competencies of effective managers, importance of interpersonal skills in healthcare management, models of organizational design in healthcare management, healthcare managers role in ensuring high performance, what are medical emergencies, where do medical emergencies occur, how do we

respond to medical emergencies, how do we prepare medical emergencies.

OHS 822: Management of Psychosocial Risk/Stress and Occupational Rehabilitation

This course covers definition of psychosocial risk management overview, policy and key principles, The psychosocial risks management process, Monitoring performance and management review, Understanding work-related stress and its causes, The effects of work-related stress (symptoms), Managing work-related stress (at organizational, management and individual levels), Depression and suicide, Definition of occupational rehabilitation terms, Occupational Rehabilitation, Occupational Rehabilitation Process, Assessment of Workers and Workplace, Return to Work Programmes.

This module seeks to introduce to students basic principles required for the practice and administration of OHS in the workplace. It will cover introduction to OHS practice and administration- The Plan-do-Check-Act cycle, foundations of Occupational Health & Safety, framework for the management of health and safety – (Hazards and Risk awareness), sources of health & safety Information, roles and responsibilities of health and safety practitioners, the role of communication, training/awareness and competence in HSE administration, measuring health & safety performance- Need for continual Improvement, management of health and safety violations- Consequence management, HSE reporting, implementation of principles of control, cost benefit analysis of OHS, integration of OHS in project design, construction/production and decommissioning stages.

OHS 823: Public Health and Safety

LIST OF ACADEMIC STAFF

UNIPORT STAFF

S/NO	Name	Qualification	Field of Specialization	Designation
1	Nwaogozie, I.L.	BSc., MSc. (Kansas); Ph. D. (Oklohoma state)	HYDROLOGY/ water resources and mathematical modelling	Professor
2	Abu, G.O.	BSc. (ABU); MSc. (Maryland)	Environmental microbiology and biotech. Designation	Professor
3	Nwachukwu, E.O.	BSc. (IMO); PGD., MSc. & Ph.D. (UPH)	Mycology/plant pathology and environmental management	Professor
4	Joel, O.F.	B.Tech, Chem. Eng. (UST), MSc. Engr Mgt. (UNIBEN), Ph.D. (Pet./Chem. RSU)	Drilling and Environmental Engineering	Professor
5	Mmom, P.C	BSc. (Ibadan), MSc (UPH), PhD Environmental Resource Planning and Management (Uncial).	Professor of Environmental Management. Dean Faculty of Social Sciences, Fellow, Nigerian Environmental Society.	Professor
6	Ibisime, E.	BSc. (RSU), MSc. (RSU), Ph.D. (UNIBEN).	Research Prof. of Ruminant Nutrition and Production	Professor
7	Adesope O.M.	BSc. (UI) MSc. (FUTO), Ph.D. (FUTO).	ICT in Agriculture and Cert. Project Design expert.	Professor
8	Ugbebor, J.N.	BSc. (UPH); MSc. (UPH); Ph.D. (UNN)	Safety, Environmental Issues and Pollution Control in the Oil and Gas industry	Reader
9	Douglas, K.E.	MBBS (UPH); FMCPA (Nigeria); DOceMed (London)	Occupational Health Hygiene	Professor
10	Alabere, I.D.	MBBS (Ibadan); MPH (Lagos); FMCPH (Nigeria)	Epidemiology	Professor
11	Momoh, Y.	BSc. (UNIBEN); MSc. (UPH), Ph.D. (UNIBEN)	Bioenergy, biofuels, and Bioremediation	Senior lecturer

12	Ugwoha, E.	B. Tech (RSU); MSc. (Newcastle); Ph.D. (Nottingham)	Fate and transport of contaminants in the environment	Reader
13	Moore, B.M.	MBBS(IBADAN); MPH (UPH)	Biostatistics	Senior lecturer
14	Bolaji, B.	BSc. (UI), MSc. (UI), Ph.D. (UPH),	Radiation Toxicology	Reader
15	Stanley, O.	BSc. (UNICAL), MSc. (AAU), Ph.D. (RSU).	Forestry and Environment, Environmental Management, Health Education	Professor
16	Patrick Iwuanyanwu, K. C.	BSc., MSc. (UPH), Ph.D.	Nutritional Biochemistry/Toxicology	Senior lecturer
17	Ogugbue, C.J	BSc. (Uterus), MSc., Ph.D. (UPH),	Bioremediation and Contaminated lands treatment	Professor
18	Amah, V.E.	B.Eng, M.Eng (UPH)	Environmental Engineering/Water Resources	Lecturer 1

VISITING LECTURERS

S/N	Name	Qualifications	University	Field of Specialization	Designation
1	Igoni, A.H.	Ph.D. (RSUST), MSc. (Uniben), BTech. (RSUST)	Rivers State University of and Technology Science	Environmental and Waste Management.	Professor
2	Agunwamba, J.C.	B.Eng., M. Eng., Ph.D. (Nsukka),	University of Nigeria, Nsukka	Civil and Environmental Eng.	Professor

INDUSTRY FACILITATORS

S/NO	NAME	Qualifications	Occupation
1	Dr. G.I. Oyet	BSc., MSc. Food Process Technology (UST), Ph.D. Environmental Management (UST)	GM, HSE Oando OVH Energy, Alumini Harvard Kennedy School of Government. Alumini of London School of Economics. Alumini of Lagos Business
2	Dr. Nnadeke Kasarachi	B.Eng. (UPH), MSc. (Portsmouth, UK), MSc. (Edinburgh, UK) MSc. - Safety Engineering (Mississippi, USA), Ph.D. – Safety Sciences & Technology (Pennsylvania, USA)	HSE ONNE Superintendent Technical Services TOTAL E&P Nigeria Limited (TEPNG)
3	Dr. (Sir) Patricks-E, Chinemerem	BSc. (Unical), M.Phil (RSU), PhD (Milan), EnvDipNEBOSH, MITD, MNMGS, MNES, HAZOP specialist ISO14001 EMS Lead Auditor	Environment & Millennium Targets, Foreign Programmes Consultant: Climate Solutions/EHS/BBS Research and Knowledge Exchange
4	Dr. C. Anyanwu		President, Nigeria Industrial Safety Council of Nigeria. Accident investigation expert.
5	Mrs. C.J. Eze	B.Eng. (UNIZIK), MSc. (Nottingham)	RESEARCH Consultant, EU water project in Anambra State
6	Dr. F. Onuoha	BSc. (UNIBEN), MSc. (FUTO)	Chairman, Institute of Safety Professionals of Nigeria, Rivers Branch. ISO 45001:2018, Nebosh Tutor, Environmental Management System Auditor, OSHAcademy USA

			Tutor, IRCA Tutor, Quality Management System Auditor
7	Dr. R. Obele	NCE, BSc. (R.College of Education) MSc. (RSU), MSc., Ph.D. (UPH)	Chairman, Institute of Safety Professionals of Nigeria, Bayelsa Branch
8	Mr. S. Ayoola	Fire Safety and Security Diploma.	MD, Fire Training Centre, Port Harcourt
9	Dr. Bara Brown	BSc. (RSU), MSc. Occupational Safety and Health (University Utara Malaysia), PhD Occupational Safety and Health (University Utara Malaysia)	Behavioural based Safety (BBS) Occupational Health and Safety Consultant.
10	Mr. L. C. Akube	B.Eng., MSc. (UPH), Ph.D. in view (UPH)	Computer analyst, Centre for Petroleum Geosciences
11	Mr. F. O. Iwu	BSc. (RSU), MSc. (UPH), Ph.D. in view (UPH).	MD Fintserv, Port Harcourt, CIEH certified trainer, Nebosh Certified Tutor
12	Dr. Ahiamadu, N.M	B.Sc (UPH), M.Phil (Nottingham), PhD (UPH)	Community Affairs Manager, TOTAL E&P Nigeria Limited (TEPNG)

FACILITIES

The University library stocks varieties of books. In addition, students can assess electronic journals, databases and e-book via the university portal. The Centre also has a library computer studio, Environmental and Safety Laboratory and conducive lecture rooms.

GRADUATE DOCTORATE PROGRAMMES IN OCCUPATIONAL HEALTH, SAFETY & ENVIRONMENT (COHSE) AT THE CENTRE FOR OCCUPATIONAL HEALTH, SAFETY & ENVIRONMENT (COHSE)

1. INTRODUCTION

The programme is designed for candidates seeking to qualify for a Doctorate degree in either Environmental Technology and Safety (ETS) or Occupational Health and Safety (OHS) as well as others intending to improve their professional skills for better performance in the industry.

2. PHILOSOPHY

The philosophy of the Postgraduate Doctorate programme is to provide postgraduate training in Occupational Health, Safety and Environment for master's degree holders in Science, Engineering and related disciplines who qualify for admission into the Doctorate degree programme.

3. VISION

To produce PhD graduates in Occupational health and safety, and Environment and safety professional who meet the needs of the industry and society at large in the area of occupational Health, Safety and Environment through commitment to excellent training, applied research, continuing education and capacity building.

4. MISSION

To provide postgraduate PhD training that will enable beneficiaries to be more effective in their workplace.

5. RATIONALE

The programme will provide opportunity for individuals with Upper Credit (CGPA = 3.5) Master's degree in Science, Engineering and related disciplines who desires to pursue higher degrees in Occupational Health, Safety and Environment.

6. AIM AND OBJECTIVES

The aim of the programme is to provide Master's degree graduate in Occupational Health, Safety and Environment (OHSE) / other related field with broad based training required in the Safety and Environmental industries.

The objectives of the PhD programme are to train graduates to perform the following:

- e. Promote health and safety awareness among workers;
- f. Prescribe suitable means for the evaluation and control of hazards;
- g. Provide guidance for compliance with global, federal, state, and local regulations;
- h. Drive purposeful environmentally friendly projects.

7. ADMISSION REQUIREMENTS

Candidates who possess a Master's degree with a minimum CGPA of 3.50 in a 5.0-point scale in Science, Engineering, Occupational Health and Safety (OHS), Environment and Safety (ENS) and related disciplines from a recognized University would be considered for admission.

8. PROGRAMME DURATION

The programme: full-time option, a minimum of 24 calendar month; and part-time option for minimum of 36 calendar months.

9. GRADUATION REQUIREMENT

A student is presented for graduation after passing all Nine course as well as settling all fees.

10. COURSE OUTLINE AND COURSE CODES.

Revised Course Outline & Curriculum for PhD Programme for Occupational Health Safety and Environment (COHSE)

Course Code	Course Title	Credit Load
-------------	--------------	-------------

Occupational Health and Safety (OHS)

GENERAL COURSES FOR BOTH OHS AND ENS

HSE 901: ICT and Research Methods

This course covers; **Part A- Thinking Skills for Conduct of Research:** What is thinking, approaches to truth and Knowledge, what is critical thinking, critical and uncritical thinkers, applying critical thinking, meaning and nature of research, objective of research, types of research, criteria for good research, research processes, research problem, literature review, formulation of hypothesis, hypothesis testing, research design, sampling design, data collection, analysis of data, Preparation of reports/thesis, deductive and inductive reasonings, precision and accuracy.

Part B - Proposal writing: the art of proposal writing (Part I), Creating log frame and project budget (Part II), Approach for project implementation (Part III)

HSE 902: Statistical Methods & Software Applications

This module covers; **Part A-** Basic Statistics for Data Analysis, Regression and Correlation, Auto – and Cross- Correlation, Test of Significance (Full Option), Test of Significance (Abridged), Moving Averages and Trend Analysis, 95% Confidence Interval, Research Design & Sample Size Estimation, Sampling Techniques (Probability & Non-Probability), Random Sampling – Simple/Systematic/Stratified/cluster, Non-Probability Sampling – Convenience/ Quota/ Purposive/ Snowball, Parametric/Non Parametric Statistical Methods, Test of Normality-Shapiro Wilks (w-s) Test, Non Parametric-Spearman’s method/Kendall’s coefficient of Concordance/ Kruskal-Wallis ANOVA method/Friedman’s test, Principal Component Analysis (PCA) & Regression (PCR), Basic Concepts: How to Run PCA/PCR using XLSTAT.

Part B- Software Applications: Research, Quantification and Digital Analysis – Nexus of Relationships. Descriptive and Inferential Statistics, Sample Size determination, Sampling Techniques and Research Designs, Instrumentation – Use of Interview design and Questionnaires, Qualitative & Quantitative use of Rating Scales, Characteristics of Data- Levels of measurement; Discrete and continuous data; Individual and Group Data sets, Hypothesis Testing and Associated Errors- Type 1 & 2 errors; levels of significance of a test; one and two tail tests, Parametric and Non- Parametric Statistical

tests- Independent t test, Paired 't' test, Chi-Square test, Kendal Tau test; Analysis of Variance (ANOVA), Measures of Correlation; Simple and Multiple Linear Regression, Principal Component and Factor Analysis, Application of the Statistical Package for the Social Sciences (SPSS) for resolving Parametric and Non Parametric tests, Practicum on SPSS Applications.

HSE 903: Air Quality and Environmental Noise

Air pollution system, sources and effects of air pollution, air quality standards and index, air pollution measurement and monitoring, Meteorology and air pollution dispersion models, abatement of air pollution. Noise sources, characteristics, and propagation. Human hearing sensitivity, noise measurements, noise metrics and effects of noise. Noise exposure and administrative/engineering control.

HSE 904: Fire Safety Management

This module seeks to introduce to students basic fire safety principles including prevention methods fire fighting and a proactive way to identify the fire hazards and fire risks including actions to take during fire related emergencies; The module covers- Basic fire safety principles: To include Fire triangle, types/class of fire, fire extinction, mechanisms of fire spread, Principles of fire prevention, Fire hazards and fire risk assessment, Heat transmission and mechanisms for fire spread, Firefighting & Fire control techniques: To include types of extinguishers, FM-200/Fire suppression system, the PASS Rule, Rig fire, aviation and ship yard firefighting, Fire incident and fire emergency preparedness and response, Fire incident case study analysis across industries, maintenance and testing of firefighting equipment, fire personnel competence development and requirement, Introduction to the roles and responsibilities of the Federal fire service commission of Nigeria.

HSE 905: Incident Management

This module seeks to introduce to students the proactive approach to incident management including investigation, reporting and emergency management for effective response. The module covers; Explanation of Domino and multi-causality theories & Swiss cheese model for incident causation, incident Root Cause Analysis; Incident/Accident Investigation Methods & Procedures including steps to conducting investigation & Interview tips; Accident investigation reporting and report template; Introduction to event tree and fault tree analysis; Crisis management and emergency preparedness and response for fire incidents, vehicular/traffic incidents, oil spill incidents, man-over board and fall from height, chemical incidents etc.

HSE 906: Safety & Environmental Risk Assessment and Management

This module seeks to create an understanding of the various risk assessment methods and failure tracing techniques that are applied to solve different industries occupational health and safety and environmental risks. The course covers; Definition and importance of Risk assessment and management, The Place of Risk Assessment in OHS & Environment Management Systems, Basic Risk assessment Steps, Risk Assessment Methods and Techniques, Introduction to Hazard Identification (HAZID) and detection, Introduction to Job Hazard Analysis- (JHA/JSA), Risk Computation & Risk Assessment matrix, Introduction to advanced failure tracing and process system safety/environmental risk assessment methods, Fault Tree & Event Tree Analysis (FTA/ETA) and EIA, Hazard & Operability Studies – HAZOP), Layers of Protection Analysis-(LOPA) & Hierarchy of Control, Failure Mode Effects Analysis (FMEA & FMECA), Introduction to Last Minute Risk Assessment, Risk Assessment & Incident Prevention, Value chain analysis.

Occupational Health and Safety (OHS) courses

OHS 907: Applied Occupational Health & Safety Management System

This course seeks to create an understanding of the various applied aspects of occupational health and safety. The course will also inspire and stimulate research students to develop research titles and themes that will aid occupational health and safety problem solving across different industries. It is a graduate discussion and research-based course that will draw from current references and case studies on occupational health and safety matters. This covers; Historical overview and Perspectives of OHS, Reasons for OHS-MS application across industries, Introduction to major OHS-MS Standard applied across industries (18001:2007 & ISO 45001:2018 AND EMS ISO 14001:2015), OHS-MS Application Across major Industries, OHS-MS in Procurement & Contractor Selection (HSE in Bid), OHS-MS in Project Design & Project Management, OHS-MS application in Construction & Manufacturing Industry, OHS-MS application in Oil & gas industry, OHS Performance indicators and role in organizational Performance Improvement, OHS-MS application in Employee Competence Development, Risk Assessment Methods: Job Hazard Analysis (JHA), HAZOP & FTA, Introduction to Process Safety Management (PSM) and Safe systems of work (SSoW), Introduction to Behavioural safety, Life Saving Rules, Introduction to Incident Management, Introduction to basic and minimum Industry OHS Practitioner competence

certifications, Occupational Health & Safety Research Focus.

OHS 908: Psychosocial Stress Management and Musculoskeletal Disorders

This Module covers; Psychosocial risk management overview, policy, and key principles, The psychosocial risks management process, Monitoring performance and management review, Understanding work-related stress and its causes, The effects of work-related stress (symptoms), Musculoskeletal imaging in Occupational Rehabilitation, Managing work-related stress (at organizational, management and individual levels), Depression and suicide, Definition of occupational rehabilitation terms, Occupational Rehabilitation process, Assessment of Workers and Workplace, Return to Work Programme.

Environmental Technology and Safety (ETS) courses

ETS 907: Environmental Assessment and Remediation Techniques

This module seeks to equip students with basic understanding and skills to carry out environmental assessment and audit. The course will cover; **Part A:** Principles of environmental field studies and Environmental assessment methodologies, Strategic environmental assessment and Life Cycle Analysis (LCA), Site selection, sample collection, sample treatment, sample handling and sample integrity, Environmental Impact Assessment (EIA)- Process

and practice in Nigeria, Environmental Audits, Post Impact Assessment and Impact Mitigation monitoring, Methods of assessment of contaminants soil and water, Remedial Techniques for contaminated soil and water, Basic principles of Environmental chemistry and microbiology, Quality assurance and Control, Ecosystem Restoration And Ecological Engineering.

Part B: Environmental Legislation and Policy-Fundamentals of environmental law and policy, Environmental regulation: past, present, and future, Nigerian environmental laws and policies (FMEnv, NESREA, and DPR), introduction to EGASPIN and the EIA act (Decree 86 of 1992), Environmental policy and planning, Social, political and economic aspects of environmental legislation and policy formulation, Enforcement and Implementation of environmental laws and policies.

ETS 908: Processes in Water and Wastewater Treatment

Water treatment schemes, aeration and gas stripping, coagulation and flocculation, sedimentation and flotation, filtration, adsorption, disinfection, softening, micro-and ultrafiltration, nanofiltration and reverse osmosis. Industrial water treatment. Review of wastewater treatment processes, chemical reactions and reactors, biokinetic models and applications in trickling filters and activated sludge systems. Anaerobic wastewater treatment systems, and sludge management.

LIST OF ACADEMIC STAFF

UNIPORT STAFF

S/NO	Name	Qualification	Field Of Specialization	Designation
1	Nwaogazie, I.L.	BSc., MSc. (Kansas); Ph. D. (Oklohoma state)	HYDROLOGY/ water resources and mathematical modelling	Professor
2	Abu, G.O.	BSc. (ABU); MSc. (Maryland)	Environmental microbiology and biotech. Designation	Professor
3	Nwachukwu, E.O.	BSc. (IMO); PGD., MSc. & Ph.D. (UPH)	Mycology/plant pathology and environmental management	Professor
4	Joel, O.F.	B.Tech, Chem. Eng. (UST), MSc. Engr Mgt. (UNIBEN), Ph.D. (Pet./Chem. RSU)	Drilling and Environmental Engineering	Professor
5	Mmom . P.C	BSc. (Ibadan), MSc (UPH), PhD Environmental Resource Planning and Management (Uncial).	Professor of Environmental Management. Dean Faculty of Social Sciences, Fellow, Nigerian Environmental Society.	Professor
6	Ibisime, E.	BSc. (RSU), MSc. (RSU), Ph.D. (UNIBEN).	Research Prof. of Ruminant Nutrition and Production	Professor

7	Adesope, O.M.	BSc. (RSU) MSc. (RSU), Ph.D. (RSU).	ICT in Agriculture and Cert. Project Design expert.	Professor
8	Ugbebor, J.N.	BSc. (UPH); MSc. (UPH); Ph.D. (UNN)	Safety, Environmental Issues and Pollution Control in the Oil and Gas industry	Reader
9	Douglas, K.E.	MBBS (UPH); FMCPA (Nigeria); DOceMed (London)	Occupational Health Hygiene	Professor
10	Alabere, I.D.	MBBS (Ibadan); MPH (Lagos); FMCPH (Nigeria)	Epidemiology	Professor
11	Momoh, Y.	BSc. (UNIBEN); MSc. (UPH), Ph.D. (UNIBEN)	Bioenergy, biofuels, and Bioremediation	Senior lecturer
12	Ugwoha, E.	B. Tech (RSU); MSc. (Newcastle); Ph.D. (Nottingham)	Fate and transport of contaminants in the environment	Reader
13	Moore, B.M.	MBBS(IBADAN); MPH (UPH)	Biostatistics	Senior lecturer
14	Bolaji, B.	BSc. (UI), MSc. (UI), Ph.D. (UPH),	Radiation Toxicology	Reader
15	Stanley, O.	BSc. (UNICAL), MSc. (AAU), Ph.D. (RSU).	Forestry and Environment, Environmental Management, Health Education	Professor
16	Patrick Iwuanyanwu, K. C.	BSc., MSc. (UPH), Ph.D.	Nutritional Biochemistry/Toxicology	Senior lecturer
17	Ogugbue C. J	BSc. (Uterus), MSc., Ph.D. (UPH),	Bioremediation and Contaminated lands treatment	Professor

VISITING LECTURERS

S/N	Name	Qualifications	University	Field of Specialization	Designation
1	Igoni, A.H.	Ph.D. (RSUST), MSc. (Uniben), BTech. (RSUST)	Rivers State University of and Technology Science	Environmental and Waste Management.	Professor
2	Agunwamba, J.C.	B.Eng., M. Eng., Ph.D. (Nsukka),	University of Nigeria, Nsukka	Civil and Environmental Eng.	Professor
3	Okereke, C.D.	BSc (ABU Zaria), MSc. (Birmingham), PhD (FUTO)	Federal University of Technology, Owerri	Public Health Engineering	Professor

INDUSTRY FACILITATORS

S/NO	Name	Qualifications	Occupation
1	Dr. G.I. Oyet	BSc., MSc. Food Process Technology (UST), Ph.D. Environmental Management (UST)	GM, HSE Oando OVH Energy, Alumini Harvard Kennedy School of Government. Alumini of London School of Economics. Alumini of Lagos Business
2	Dr. Nnadede O. Kasarachi	B.Eng. (UPH), MSc. (Portsmouth, UK), MSc. (Edinburgh, UK) MSc. - Safety Engineering (Mississippi, USA), Ph.D. –	HSE ONNE Superintendent Technical Services TOTAL E&P Nigeria Limited (TEPNG)

		Safety Sciences & Technology (Pennsylvania, USA)	
3	Dr. (Sir) Patricks-E, Chinemerem	BSc. (Unical), M.Phil (RSU), PhD (Milan), EnvDipNEBOSH, MITD, MNMGS, MNES, HAZOP specialist ISO14001 EMS Lead Auditor	Environment & Millennium Targets, Foreign Programmes Consultant: Climate Solutions/EHS/BBS Research and Knowledge Exchange

FACILITIES

The University library stocks varieties of books. In addition, students can assess electronic journals, databases and e-book via the university portal. The Centre also has a library computer studio, Environmental and Safety Laboratory and conducive lecture rooms.

CENTRE FOR PETROLEUM GEOSCIENCES (CPG)

BACKGROUND

The energy industry is a thriving sector, which graduates with requisite qualifications seek earnestly to be key players and drivers a new economy. The Centre for Petroleum Geosciences (CPG) was established in 2011 as a Centre of Excellence to “cater for the geosciences skill needs of the Petroleum industry. To achieve this, the M.Sc. in Petroleum Geosciences Programme was started to drive an excellent support for the Oil and Gas Industry by training manpower with requisite knowledge and practical competences in Petroleum Exploration for the industry.

With the large assay of high profile teaching personnel and the state-of-the-art equipment and tools available to produce high level man-power for the petroleum industry, the Centre is well-prepared to admit PGD and Ph.D students, at both full time and part time levels, to enable candidates improve their professional skills and performance in the industry.

The academic programme for the PGD and Ph.D. degree was drawn in consultation with the petroleum industry. The training is delivered jointly by lecturers from the University of Port Harcourt, other universities and experts from the Petroleum Industry. The training incorporates extensive practical assignments and involvement in the petroleum sector and field training in different geological settings.

VISION

To produce PGD, M.Sc., and Ph.D. graduates in Petroleum/Energy Geosciences who will be able to meet the needs of the petroleum/energy industry through commitment to proper training, applied research and capacity building.

MISSION

To become a top international Centre of Excellence in Petroleum/Energy Geosciences by providing PGD, M.Sc., and PhD training, which will enable beneficiaries to be the most effective in their workplaces.

GOAL

Our Centre is driven by the critical need to develop quality geosciences manpower readily deployable to achieve the corporate philosophy of the oil and gas companies which are rooted in;

- Increasing hydrocarbon reserves
- Reducing funding cost and unit operating cost
- Improving both the life-cycle asset management and,
- Environmental friendliness of their operations

The key to achieving all these goals is quality and competence of the workforce.

PHILOSOPHY

- Our trainees should be able to promote culture of excellence in sustained learning, leadership, internationalism and professionalism.
- Our trainees should be able to pursue advancement and propagation of knowledge in the Petroleum and Energy Industry.

AVAILABLE RESOURCES FOR TEACHING AND LEARNING

- a) Laboratories and Class Rooms
- b) Workstation
- c) Library and Information Resources
- d) Soft wares

STRUCTURE OF PROGRAMME

POSTGRADUATE DIPLOMA (PGD) IN PETROLEUM GEOSCIENCES

PROGRAMME DURATION

Full time: 12 months

Part time: 18 months

AWARD OF DEGREE

Successful students at the end of the programme shall receive a Post Graduate Diploma Degree in Petroleum Geosciences of the University of Port Harcourt.

AREA OF SPECIALIZATION

Petroleum Geosciences, Petroleum Geoengineering, Energy Geosciences, Integrated Petroleum Geosciences and Oil and Gas Enterprises Management.

ADMISSION REQUIREMENTS

The requirements for admission into the Post Graduate Diploma (PGD) programme in conjunction with standard School of Graduate Studies procedures are as follows:

1. First degree holders, from recognized Universities with minimum of third class or Higher National Diploma holders, from recognized Institutions of higher learning, with minimum of Upper Credit in Petroleum Geosciences, Geology, Geophysics, Petroleum Engineering, Gas Engineering, and Geo-mining Technology are invited to apply.
2. Holders of Higher National Diploma certificates, from recognized Institutions of higher learning, with minimum of Lower Credit in the areas above and possess

cognate experience in the oil and gas industry are eligible to apply.

All candidates of Nigerian origin resident in Nigeria must have obtained their NYSC discharge certificates.

MODE OF STUDY AND EXAMINATION

The Mode of Study is flexible and consist of both Modular hybrid of onsite and online components. Students are expected to offer and pass all taught courses, field/laboratory work/visits, and seminar and team/individual continuous assessments. Examinations will be administered at the end of each module onsite and online as applicable.

Full-time: Physical classroom with real-time online video conferencing (Monday to Friday, 8 a.m. to 4 p.m.).

Part-time: Virtual classroom with real-time online video conferencing (Monday to Friday, 5 p.m. to 8 p.m.); and Physical classroom (Saturdays, 8 a.m. to 4 p.m.)

COURSE DELIVERY

The students are taught by instructors from the University of Port Harcourt, and experts from the petroleum and energy industry.

GRADUATION REQUIREMENTS

To qualify for an award of the Post Graduate Diploma in Petroleum Geosciences, a student must meet the following requirements:

1. The student must have successfully completed and passed all the prescribed courses in the programme with at least C grades;
2. The student must have met other requirements of the School of Graduate Studies and the University of Port Harcourt.

COURSEWORK GRADING SYSTEM

The coursework grading system shall be as follows:

70 and above	A	5.00
60 - 69	B	4.00
50 - 59	C	3.00
0 - 49	F	0

COURSE CONTENTS

CPG 701: BASIC MODULE

CPG 702.1: Introduction to Programming, Research Writing and Presentation Skills (2 Units)

Introduction to Basic Computer Programming using Microsoft office suite, Q Basic, Visual Basic CT, CH and Matlab. Research writing and presentation skills.

CPG 701.2: Introduction to Oil and Gas Entrepreneurship (2 Units)

Oil and gas entrepreneurship ideas & pitfalls, upstream and downstream oil and gas sector, opportunities in the oil and gas industry (Maintenance and servicing, blogging, Legal Services, Spill Cleaning, Consulting, Petroleum Refining, Crude oil Shipping, Refinery and Tank Farm Construction, Lubricant Production, Procurement, Production and supply of Gas Pipelines, Natural Gas Marketing, Sale of Petroleum Tankers, Manufacturing and sale of Cooking Gas cylinders, Oil and Gas Pipeline Security, Petrol Station Construction, Oil and Gas Enterprise software Applications, Offshore Boat and Helicopter Transportation, Manufacturing and supply of Barrels or Drums, Petroleum Products Procurement and Supplies, Haulage and Logistics, Equipment Leasing, Oil Farm/Depot, Investment in Oil Companies via shares, Kerosene Retail, Cooking Gas wholesale and Retail).

CPG 701.3: Introduction to the Petroleum and Gas Industry / Hse Overview (2 Units)

Introduction. Basic Structure of Oil and Gas industry worldwide. The Nigerian oil and gas industry. Basic geology as relates to oil and gas reservoirs. Origin and formation of oil and gas. Reservoir fluid and rock properties, Formation Evaluation. Drilling, completion and Production operation Concepts of offshore operation. Terminology of exploration and production operation. Introduction to (HSE – MS). HSE Legislation/Policies. Security Management. Accident Prevention, Reporting and Investigation. Health Risk Assessment. HSE Auditing. Hazard

Management Tools. Contingency Management and basic entrepreneurship skills.

CPG 701.4: Fundamentals of Artificial Intelligence (AI), Machine Learning, Big Data, Internet of Things (IOT), Blockchain, Cloud Computing and Cybersecurity in the Oil and Gas Industry (3 Units)

There's a digital revolution underway. To stay ahead, today's leaders need a thorough understanding of the rapid—and sometimes radical—developments that are shaping this transformation. This course will focus on the seven biggest technologies that are shifting the economic landscape—blockchain, artificial intelligence, Machine Learning, Big Data, Cloud Computing, Internet of Things, and Cybersecurity.

Note: This is a hands-on course; students will learn by doing some basic coding.

CPG 8701.5: Introduction to Renewable Energy Technologies and Environmental Sustainability (2 Units)

Introduction to renewable energy technology: solar energy, wind energy, biomass, hydropower, wave energy, ocean thermal energy conversion, tidal energy, geothermal energy, renewable hydrogen. Fundamentals and main characteristics of renewable energy sources and their differences compared to fossil fuels. Technological basis for harnessing renewable energy sources, main components of different renewable energy systems, techno-economical assessments of renewable energy systems for specific energy demands that are economically feasible and have a minimal impact on the environment. Best combination of technological solutions to minimize the emission of greenhouse gases and increase the sustainability of energy system.

CPG 701.6: Introduction to Remote Sensing And Geographic Information Science (GIS) in the Oil and Gas Industry (3 Units)

Introduction to remote sensing and Geographic information system (GIS) and its deployment through the oil/gas field life-cycle in prospect analysis, data acquisition, data interpretation, data Index Map creation, Automated Map Production and Visualization, Exploration Survey, Thematic

Maps, Acreage Analysis, Basin Analysis, Play Analysis, Block Ranking, Well Planning, Pipeline Management, Pipeline Routing, Field Operations, Distribution Management, Drilling Operations, Asset Management, Facilities Management, Land Management, Vessel Tracking, Vehicle or Fleet Tracking, Production Monitoring, Well Log Digitization, Environmental Monitoring, Environmental Management, Remote Sensing for Terrain Stability, Disaster Management, Emergency Response, and Decommissioning.

Note: This is a hands on course. ArcGIS 10.5 or latest ArcGIS software is required.

CPG 702: GEOSCIENCES MODULE

CPG 702.1: Introduction to Petroleum Geology (2 Units)

Introduction to Basic Geology, Plate tectonics, Sedimentary processes. Textures of sediments, Environment of deposition and Sedimentary Basin of Nigeria. Reservoir rocks and their Petrophysical Properties. Types and Properties of Hydrocarbons. Origin, Maturation, Generation, Accumulation and Migration of hydrocarbons. Entrapment of hydrocarbons. Oil well logs and logging. Geology of the Niger Delta.

CPG 702.2: Introduction to Petroleum Geophysics (2 Units)

Introduction to Geophysics. Seismic waves. Huygen's principles, Fermat's principle, Acoustic Impedance, Reflectivity. Types of Seismic Exploration. Processes in Seismic Exploration. Gravity and Magnetic methods.

CPG 702.3: Introduction to Environmental Science, Management, Planning, Ethics, EIA and Sustainable Development (2 Units)

This course will cover the following: Environment, Earth as a system, life and environment, preserving life sources, energy, aqueous environment, air pollution, environment and society. This course will cover the following: Environmental Monitoring, Environmental Impact Assessment (EIA), Environmental Management System (EMS) and Environmental Auditing (EA). EIA-Instrument for Sustainable Development. Problems and solutions of Sustainable Development. Case Studies.

CPG 702.4: Introduction to Structural Analysis (2 Units)

Introduction to Structural Geology. Deformation of Rocks. Concept of Stress and Strain. Brittle and Ductile behavior of rocks. Plane features on landscape. Growth Faults, Roll Anticlines. Unconformities. Contours. Subsurface maps and stereo plots.

CPG 702.5: Introduction to Mining Exploration and Processing (2 Units)

Rocks, minerals and mineral resources. Genesis and classification of ore deposits. Processes of formation and geological environment of metallic and non-metallic and minerals. Occurrences and distribution of minerals in time and space. Geological criteria for occurrences of ores in Nigeria. Methods of prospecting, processing and use in the industry. Mining methods of prospecting, processing and use in the industry. Mining methods, production and marketing of minerals in Nigeria. Principles and application of magnetic, gravity, electrical, electromagnetic, seismic and radioactive methods of exploration for mineral deposits. Mine development strategies and mineral treatment methods. Mine hazards and control methods. Nuclear fuel cycle and fuel materials; nuclear fuels reserves, exploration, and mining stable isotopes; geochemistry, mineralogy and petrogenesis of thorium ores and Uranium deposits, and heir distribution. Mineral Economics, Reserves Calculations, Production, Marketing and Case histories.

CPG 703: RESERVOIR MODULE

CPG 703.1: Introduction to Reservoir Petrophysics (3 Units)

Introduction to Petrophysics. Reservoir Rock Fluid Properties. Rock Properties from Well logs. Core – log Relationships Measurement of Rock and Fluid Properties. Geostatistical Concepts. Petrophysical Modeling. Formation Evaluation.

CPG 703.2: Introduction to Well Logging and Interpretation (3 Units)

Introduction to Wireline logging. Main logging Tools. RW Determination. Lithology and Porosity Determination. Shaly Formations Evaluation. Other Tolls – NML, Dipmeter, Formation Testing.

CPG 703.3: Introduction to Core Analysis I & II (3 Units)

Introduction to Core Analysis. Reservoir Rocks Properties form Cores. Coring and Core Acquisition. Core Analysis. Core Data Averaging. Special Core Analysis (SCAL). Structure and Properties of Porous media. Static Rocks and Fluid Properties. Multiphase flow through Porous Media. Dynamic Fluid flow properties. Rock properties. Correlations. Petrophysical Laboratory Work.

CPG 703.4: Introduction to Seismic Data Interpretation (Quantitative) (3 Units)

Introduction. Velocities, Head Waves. Ground Motion. Travel times. Multiple subsurface layers. Hidden layers. Field Procedure for recognizing

dipping layers. Refractions. Conversion, AVO, VSP, Velocity Anisotropy. Seismic Inversion.

CPG 703.5: Introduction to Static Modeling (3 Units)

Introduction. Static reservoir models, Principles of Static Geomodeling. 3D Grid concept. Case concept. Stratigraphic Modeling. Structural Modeling. Facies Modeling, Petrophysical Modeling Geostatistical concept. Model quality. Volumetrics. History Matching. Future Predictions and quantification of uncertainties.

CPG 703.6: Introduction to Dynamic Modeling (3 Units)

Introduction. Concept and Technology. Flow Equations. Rock and Fluid Properties. Gridding in Reservoir Simulation. Simulation Process.

CPG 704: FIELD TRIP MODULE

CPG 704.1: Geoscience Field Trip (Geology & Geophysics) (2 Units)

Geological Fieldwork allows Participants to obtain samples, measuring their orientations, dimensions and construct Geologic and topographic maps. Identification of potential Source rocks, Reservoir rocks, Seals and Geological Structures. Textures, Sedimentary Structures and Palaeocurrents. Application to Reservoir Qualities. Geological Models and Simulation. Seismic Reflection and Refraction. Gravimeter and Magnetometer uses and application to Exploration. Seismic Reflection and Refraction. Gravimeter and Magnetometer uses and application to Exploration.

CPG 704.2: SEMINAR (2 Units)

CPG 704.3: PROJECT DEFENSE (2 Units)

MASTER OF SCIENCE (M.Sc) IN PETROLEUM GEOSCIENCES

PROGRAMME DURATION

Full time Programme will run for 12 Months while Part time Programme will run for 18 Months

AWARD OF DEGREE

Successful students at the end of the programme shall receive a Master's Degree in any of Petroleum Geosciences, Petroleum Geoengineering, Energy Geosciences, Integrated Petroleum Geosciences and Oil and Gas Enterprises Management of the University of Port Harcourt.

AREA OF SPECIALIZATION

Petroleum Geosciences, Petroleum Geoengineering, Energy Geosciences, Integrated

Petroleum Geosciences and Oil and Gas Enterprises Management.

ADMISSION REQUIREMENTS

Below are the requirements for admission into the Master of Science (M.Sc) programme in conjunction with standard School of Graduate Studies procedures are as follows:

1. Holders of first degree certificates with minimum of second class lower division or Post Graduate Diploma (PGD) certificates with minimum of Credit, from recognized universities, in Petroleum Geosciences, Geology, Geophysics, Petroleum Engineering, Gas Engineering, and Geomining Technology are invited to apply.
2. Holders of Post Graduate Diploma (PGD) with minimum of Merit, from recognized Universities, in Petroleum Geosciences, Geology, Geophysics, Petroleum Engineering, Gas Engineering, and Geomining Technology and possess cognate experience in the oil and gas industry are eligible to apply.

MODE OF STUDY AND EXAMINATION

The Mode of Study is flexible and consist of both Modular hybrid of onsite and online components. Students are expected to offer and pass all taught courses, field/laboratory work/visits, and seminar and team/individual continuous assessments. Examinations will be administered at the end of each module onsite and online as applicable.

Full-time: Physical classroom with real-time online video conferencing

(Monday to Friday, 8 a.m. to 4 p.m.).

Part-time: Virtual classroom with real-time online video conferencing

(Monday to Friday, 5 p.m. to 8 p.m.); and

Physical classroom (Saturdays, 8 a.m. to 4 p.m.)

COURSE DELIVERY

The students are taught by instructors from Universities and experts from the petroleum and energy industry.

GRADUATION REQUIREMENTS

To qualify for an award of the Master of Science degree in Petroleum Geosciences, a student must meet the following requirements:

1. The student must have successfully completed and passed all the prescribed courses in the programme with at least C grades;
2. The student must have met other requirements of the School of Graduate Studies and the University of Port Harcourt.

COURSEWORK GRADING SYSTEM	60	-	69	B	4.00
The coursework grading system shall be as follows:	50	-	59	C	3.00
70 and above	A		49	F	0
					5.00

COURSE CONTENTS

CPG 801: BASIC MODULE

SGS 801.1: ICT and Research Methodology (2 Units)

Essentials of Spreadsheet and Internet Technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Scientific Research, Concepts of Hypothesis, Formulation and Testing. Organization of Research and Report writing.

SGS 801.2: Management and Entrepreneurship (2 Units)

Business environment, general management, financial management, entrepreneurship development, feasibility studies, Marketing and managerial problem solving.

CPG 801.3: Oil and Gas Industry/HSE Overview (2 Units)

Advanced Reservoir Rock properties. Characteristics of Reservoir Fluid. Advanced Exploration Methods. Drilling Engineering. Well completion. Hydrocarbon In-Place Estimate. Recovery Methods. Production and Surface Facilities. Health Safety and Environmental Management System (Management Leadership and Commitment, Policy and Strategic Objectives, Organization, Responsibilities, Resources, Standards and Documentation, Hazards and Effects Management, Planning and Procedures, Implementation and Performance Monitoring, Audit, Review)

CPG 801.4: Application of Artificial Intelligence (AI), Machine Learning, Big Data, Internet of Things (IoT), Blockchain, Cloud Computing And Cybersecurity In The Oil And Gas Industry (3 Units)

Advanced coding and practical application of blockchain, artificial intelligence, Machine

Learning, Big Data, Cloud Computing, Internet of Things, and Cybersecurity in oil and gas business.

Note: This is a hands-on course; students will learn by doing advanced coding.

CPG 801.5: Future Trends in Renewable Energy Resources and Technology for Sustainable Development (2 Units)

Advances in wind turbines and solar panels, Hydro-reservoirs, batteries, Power-to-X fuels (electricity into heat, hydrogen or renewable synthetic fuels.), seasonal thermal energy storage, renewable based electrification. Green Technology and Sustainable Development. Drivers for Renewable Energy Policies, Impacts of Renewable Energy and Value of Renewable Energy Technology.

CPG 801.6: Application Of Remote Sensing And Geographic Information Science (GIS) in the Oil and Gas Industry (3 Units)

Application of UAV's and Drones in surface (Land / offshore) and under water manned and unmanned production platforms for oil and gas exploration, operations, **material handling, methane management**, disaster monitoring and emergency response, **inspection and predictive maintenance, surveillance** and monitoring pipelines.

Note: This is a Practical course. A Drone and a GIS software is required.

CPG 801.7: Applied Mathematics and Geostatistics Modelling (3 Units)

Differential equation, Numerical methods, Numerical Simulation Sensitivity Analysis, Steady-State Solution. Stability. Bifurcation Boundary-Value problem in oil and gas Reservoir. Fourier Series. Univariate, Multivariate Statistics. Variograms Geostatistical Simulation in 2D kriging and its variation and Geostatistical Simulations in Integrated Reservoir studies. Risk Management – Uncertainty quantification.

CPG 801.8: Advanced Report Writing, Communication and Presentation Skills (2 Units)

Introduction, Technical terms, Words, Abbreviations, Technical Writing Process, Technical Correspondence, Technical Writing Illustration, Feasibility Reports, Thesis Report Writing, Proposal Writing, Tendering/Biddings. Power Point Presentation Skills.

CPG 802: GEOSCIENCES MODULE

CPG 802.1: Advanced Petroleum Geology (2 Units)

Principles and applications of the characterization of petroleum systems, reservoirs and their fluids with a focus on unconventional resources. Methods of reservoir characterization, log analysis, subsurface mapping and the evaluation of reservoir heterogeneity with respect to geological characteristics and fundamental fluid flow related reservoir and fluid properties. Also examines subsurface CO₂ storage and other routes to eliminating CO₂ emissions from fossil fuel use as well as looking at the role of geoscience in energy recovery innovation and technology development.

CPG 802.2: Advanced Petroleum Geophysics (2 Units)

Principles and methods in petroleum seismology, with emphasis on exploring and characterizing petroleum reservoirs using seismic methods. The purposes and principles of common seismic data processing, imaging and analysis methods employed in the petroleum industry. The main technical issues in exploring onshore and offshore petroleum reservoirs using seismology, such as in assessing the suitability of using common seismic methods for petroleum targets. Using various seismic techniques to enhance signals and suppress noise in reflection seismic data to help detecting hydrocarbon reservoirs. Applying borehole geophysics and well logging techniques to tie with seismic and geological data to help achieving the exploration objectives. Common issues and techniques of applied seismology for characterizing petroleum reservoirs. Current issues in exploring unconventional petroleum reservoirs using seismology.

Note: Geophysics field work will take place during this course.

CPG 802.3: Fundamentals of Environmental Science, Management, Planning, Ethics, EIA and Sustainable Development (2 Units)

This course covers a wide range of “tools” used in environmental management for environmental decision making. Topics include: interrelationship among Assessment; Environment and Development; evolution of Environmental Assessment; Procedures and steps in Environmental Impact Assessment (EIA), Social Impact Assessment (SIA), and Health Impact Assessment (HIA); Public Participation; Strategic Environmental Assessment (SEA); Policy formulation; risk management systems, etc. Effectiveness and challenges of contemporary EA practices. Environmental Auditing and Management Systems.

CPG 802.4: Advanced Structural Analysis (2 Units)

The primary objective is to explain structural geology concepts and tools that aid in developing an internally consistent 3-D picture of the crustal structure, and evaluating specific reservoir characteristics such as top seal integrity and fault seal. Together, the instructors and students will develop a structural analysis "best practices" workflow. The class is structured according to tectonic setting (e.g. passive margins, transform margins, fold-thrust belts, continental rift systems). Within each tectonic setting, we cover regional geology, fault system geometry, kinematics, trap evolution, and the tools a practicing geologist would use to constrain a 3-D picture of the crustal structure.

CPG 803: BASIN ANALYSIS MODULE

CPG 803.1: Carbonate and Clastic Deposits (2 Units)

Carbonate Depositional Environments. Concepts of Components, Structures, Textures and Crystal Fabrics. Classification of Carbonates Description of Carbonate Rocks in Hand specimen and Drill Cuttings. Mineralogy and Petrology of Calcareous skeletal structures. Porosity and Permeability of Carbonate rocks. Sedimentary Deposits. Classic Sedimentary Rocks. Formation and Classification. Sedimentary Environments. Characteristics of Sand bodies. Geometry of Sand Reservoir Bodies. Porosity and Permeability Description of Hand Specimens and Drill Cutting. Deltaic models of classic sedimentation. Particle size Distribution analysis. Rock and Minerals Petrography. Identification, Collection and Preparation of Slides for Fossils.

CPG 803.2: Sequence Stratigraphy and Sedimentary Depositional Models (2 Units)

The Sedimentological spectrum. Concept and various types of Depositional models. Concept of sequence stratigraphy Driving mechanism of sequence Generation. Sequence Models. Time Attributes of Stratigraphy. Basic Concepts and Terminology of Sequence Stratigraphy. The Stratigraphic Building Blocks of Depositional Sequences. Recognition Criteria for the Identification of Depositional sequences and their Components in Outcrops, Cores, Well Logs, and Seismic. The Application of Sequence Stratigraphy in Non-marine, Shallow Marine, and Submarine Depositional Settings.

CPG 803.3: Operation Geology (2 Units)

Concepts of Reservoir Rocks. Properties of Reservoir Rocks. Subsurface Map Techniques Appraisal Subsurface Diagnosis of Sedimentary Environments from Cores, Ditch cuttings and Wireline logs. Prediction of the Distribution, Geometry and Orientation of Reservoir rocks. Characterization, Petrography and Morphology of Reservoir rocks. Porosity relationship to Rock composition. Texture and Diagenesis. Structural Analysis. Hydrostatics. Geological Attributes in Reservoir Estimation and Recovery Techniques. Petrophysical Analysis and Reservoir Modeling.

CPG 803.4: Application of Biostratigraphy to Exploration and Production (2 Units)

Introduction. Data Acquisition, Analysis and Presentation. Age Determination. Palaeoenvironmental Reconstruction. Biozonation. Graphic Correlation. Development of Chronological scale, Ecostratigraphy.

CPG 803.5: Application of Geochemistry to Exploration and Production (2 Units)

Introduction to Exploration Geochemistry. Origin of Petroleum. Generation Process. Migration Mechanism. Accumulation. Preservation. Evaluation of Source rock maturity. Petroleum Potential Correlation Studies, Source - Source, Oil -Source, Oil – Oil.

CPG 803.6: Seismic Survey Designs, Data Acquisition and Field Techniques (2 Units)

Introduction. Modern Seismic data Acquisition. Fundamentals of seismic Prospecting. Reflection Field Equipment. Basics of 2D and 3D survey design. Reflection Field methods. Seismic Data Processing. Basic principles of 4D seismic survey design and acquisition (land & marine).

CPG 803.7: Seismic Stratigraphy (2 Units)

Introduction: Wave Geophysics. Nature of Reflection Seismic Section, Reflection Seismic Acquisition and Processing Domains. Principles of Seismic Stratigraphy Interpretation... Resolution of Seismic data (Vertical and Lateral), Seismic Sequence Analysis, Seismic Facies Analysis.

CPG 804: RESERVOIR MODULE

CPG 804.1: Advanced Reservoir Petrophysics (3 Units)

This course covers the basic methods of open-hole well log analysis, and covers logging suite choices. New logging developments and current research are also covered. Special focus on certain methods is provided (e.g. 3D VSP, borehole imaging, pore pressure prediction).

CPG 804.2: Well Log Interpretation (3 Units)

Basic Concepts Review and Resistivity Tools. Conductivity and Nuclear Logging Tools. Acoustic and Geological Logging Tools. Advanced Logging Tools and Introduction to Formation Evaluation. Complex Lithology Evaluation, Formation Testers and Mini-Workshop

CPG 804.3: Core Analysis I & II (3 Units)

Core and log integration workflow process. Core and log integration importance. Fundamentals of log analysis. 3-Line interactive evaluation workshop. Textural core analysis and integration with the geologic framework. Determination of porosity. Log evaluation of Sw. Porosity evaluation workshop and evaluating Sw workshop. Petrophysical rock types and water saturation. Petrophysical rock type workshop. Applied capillary pressure and calibrating water saturation. Capillary pressure workshop. Core and log integration workshop. Reservoir facies. Reservoir facies characterization workshop. Pore geometry, clays, and the relationship to water saturation. Flow units and permeability prediction. Permeability prediction workshop. Flow unit workshop. Well evaluation workshop.

CPG 804.4: Advanced Seismic Data Interpretation (Quantitative) (3 Units)

Advanced concepts and foundations of wave and ray theory necessary for seismic processing, imaging, AVO analysis and structural interpretation. Review of rock properties, wave, and ray theory. Reservoir properties and well-log measurements. Seismic amplitude variation as a function of offset. Principles of fluid substitution. Parameterization of the AVO response for fluid

product estimation. Recognition of hydrocarbon signatures and interpretive "rules-of-thumb". AVO inversion for rock-properties, impedances and reflectivities. The information content & complications in long offset and post critical data. Fizz gas, anisotropy, and other challenges facing the exploration industry

CPG 804.5: Static Modeling And Reservoir Characterization: (Concepts/Technique) (3 Units)

Introduction to reservoir characterisation. Reservoir metrics and related variable types. Generation of a reservoir model. Grid design and structure determination. Structure model exercise. Geostatistics and spatial data analysis. Variograms, Kriging basics and methods, Co-kriging. Stochastic simulation methods for discrete variables (indicator simulation, TGS, Boolean, MPS, etc.). Simulation methods for continuous variables (SGS, GRFS, bivariate, etc.). Facies, properties and fracture modelling strategies. Volume estimates and uncertainty assessment. Upscaling to coarse grid models.

CPG 804.6: Dynamic Modeling (3 Units)

Quantitative tools to create 3D geological models of the subsurface, including properties like grain size, porosity and permeability.

CPG 804.7: Petroleum Hydrogeology/Contaminant Plumes (2 Units)

Groundwater flow in Reservoirs and tilted oil water contacts. Lateral and vertical Reservoir Continuity. Shallow and Deep Groundwater Aquifers. Well rehabilitation and well abandonment. Dewatering and Seepage Control. Contaminant Plume Sources. Hydrocarbon Migration, oil and gas field Depletion and Compartmentalization. Fault and top Seal Capacity for oil and gas.

CPG 805: PETROLEUM ENGINEERING MODULE

CPG 805.1: Cased Hole Formation Evaluation (3 Units)

Introduction to Cased Hole Logs. Open Hole Formation Evaluation – Overlays and Cross plots. Case hole Formation Evaluation – Production Logs, Completion Logs, etc. Through Casing Evaluation.

CPG 805.2: Geomechanics (3 Units)

Basic Geological concepts and Rock Formation. Principles of Stress-Strain Relationships. Theory of Rock Deformation. Pore Pressure and Fracture

Gradient Relationships. Abnormal Pressures in Well Operations Insitu Stress and Effective Stress concepts. Rock Failure and Rock strength. Wellbore Instability Management. Wellbore Instability. Modeling and Prediction. Geomechanical Principles in Well Design and Well construction. Practical Wellbore Instability Management. Case Histories.

CPG 805.3: Drilling, Completion and Work Over Operation/Oil Field Chemicals (3 Units)

Exploration and Drilling Operations. Drilling Fluid Lab testing and Equipment. Mud Calculation. Cement Composition, Additives and Reaction Kinetics. Cementing Operations. Cement testing and Lab Equipment. Cement Recipe Design calculations. Simulation Operations. Fluid Design, Result Interpretation and Fluid Application. Quality Control Efforts in Drilling, Cementing and Stimulation Operations.

CPG 805.4: Surface Production Engineering (3 Units)

Production test, Well Surveillance, Surface Production Facilities. Corrosion, Treating, Desalting, Gas Dehydration, Gas Compression.

CPG 805.5: Reservoir Engineering (3 Units)

Introduction. Reservoir Rock and Fluid Properties Description and Classification of natural underground oil and gas Reservoirs. Recovery methods Unit Systems. Fluid flow concept.

CPG 805.6: Integrated Reservoir Management (3 Units)

Introduction to Subsurface Reservoir Management Concepts. Reservoir Management Organization. Efficient Reservoir Surveillance and Monitoring Tools Reservoir Life Cycle. Case Studies.

CPG 805.7: Ethics, Corporate Social Responsibility and Governance (3 Units)

Principles and Moral values. Managing Ethics in Workplace. Assessing Culture and Cultivating Ethical Culture. Business Ethics. General Resources for managing Ethics in Workplace. Social Responsibility. General Resources for managing social Responsibility in workplace. Principle of Corporate governance and models. Regulation. Mechanisms and Controls. Systemic Problems of Corporate Governance.

CPG 805.8: Petroleum Economics and Risk Analysis (3 Units)

Fundamentals of Petroleum E & P Economics and Analysis. International Petroleum Economics. Fiscal System Mechanics and Analysis. Risk and

Uncertainty Management in Petroleum E & P Industry. Risk Decision Analysis.

possess cognate experience in the oil and gas industry are eligible to apply.

CPG 812: FIELD WORK, SEMINAR AND PROJECT TRIP MODULE

CPG 812.1: Geoscience Field Trip (2 Unit)

Geological Fieldwork allows Participants to obtain samples, measuring their orientations, dimensions and construct Geologic and topographic maps. Identification of potential Source rocks, Reservoir rocks, Seals and Geological Structures. Textures, Sedimentary Structures and Palaeocurrents. Application to Reservoir Qualities. Geological Models and Simulation. Seismic Reflection and Refraction. Gravimeter and Magnetometer uses and application to Exploration.

CPG 812.2: SEMINAR (2 Units)

CPG 813: DISSERTATION (12 Units)

DOCTOR OF PHILOSOPHY (Ph.D) IN PETROLEUM GEOSCIENCES

PROGRAMME DURATION

Full time: 24 Months
Part time: 36 Months

AWARD OF DEGREE

Successful students at the end of the programme shall receive a Doctor of Philosophy Degree in Petroleum Geoscience of the University of Port Harcourt.

ADMISSION REQUIREMENTS

Below are the requirements for admission into the Doctor of Philosophy (Ph.D) programme in conjunction with standard School of Graduate Studies procedures are as follows:

1. Holders of Master’s degree certificates with minimum CGPA of 3.5 on a 5-point scale, from recognized universities, in Petroleum or energy Geosciences are invited to apply.
2. Holders of Master’s degree certificates with minimum CGPA of 3.5 on a 5-point scale, from recognized universities, in Petroleum Engineering, Gas Engineering, Geology, Geophysics, and Geo-mining Technology and

AREA OF SPECIALIZATION

Petroleum Geosciences, Petroleum Geoengineering, Energy Geosciences, Integrated Petroleum Geosciences and Oil and Gas Enterprises Management.

MODE OF STUDY AND EXAMINATION

The Mode of Study is flexible and consist of both Modular hybrid of onsite and online components. Students are expected to offer and pass all taught courses, field/laboratory work/visits, and seminar and team/individual continuous assessments. Examinations will be administered at the end of each module onsite and online as applicable.

Full-time: Physical classroom with real-time online video conferencing (Monday to Friday, 8 a.m. to 4 p.m.).

Part-time: Virtual classroom with real-time online video conferencing (Monday to Friday, 5 p.m. to 8 p.m.); and Physical classroom (Saturdays, 8 a.m. to 4 p.m.)

COURSE DELIVERY

The students are taught by instructors from Universities and experts from the petroleum and energy industry.

GRADUATION REQUIREMENTS

To qualify for an award of the Doctor of Philosophy degree in Petroleum Geosciences, a student must meet the following requirements:

1. The student must have successfully completed and passed all the prescribed courses in the programme with at least C grades;
2. The student must have met other requirements of the School of Graduate Studies and the University of Port Harcourt.

COURSEWORK GRADING SYSTEM

The coursework grading system shall be as follows:

70 and above	A	5.00
60 - 69	B	4.00
50 - 59	C	3.00
0 - 49	F	0

COURSE OUTLINE

TOTAL					31

COURSE CONTENTS

CPG 901: GEOSCIENCES/ GEOENGINEERING MODULE

CPG 901.1: Advances in Petroleum Geosciences (3 Units)

Lectures will be based on contemporary areas of Petroleum Geosciences.

CPG 901.2: Advanced Application of IOT in Geosciences/Geoengineering (3 Units)

Lectures will be based on practical demonstration of IoT in solving Petroleum Geosciences/Geoengineering problems.

CPG 901.3: Advances in Seismology, Tectonics, and Geophysics

A primary focus in seismology and tectonics is the determination of detailed three dimensional earth structure, from the core to the surface, and related studies on the dynamics that drives mantle convection, deformation of the lithosphere, and plate tectonics in general. Particular emphasis is placed on interdisciplinary research and collaboration, where inferences made from seismological, geodynamic, and geodetic investigations are integrated with findings from the fields of mineral and rock physics, geochemistry, and petrology. Areas of specific focus in seismology include inner core structure, anisotropy, and attenuation, outer core structure, core-mantle boundary structure, upper mantle structure, strong ground motion studies, earthquake source parameter studies, and theoretical studies on seismic wave propagation. Investigations in tectonophysics include the coupling between mantle convection and lithospheric dynamics, the development of the kinematics, mechanics, and seismicity within plate boundary deformation zones, and the inference of mantle flow beneath the lithosphere. Current projects involve using earthquake and space geodetic data to infer the deformation fields and employing numerical, analytical, and analog modeling to understand surface geodynamical observations, ranging from geoid, topography,

plate motions and surface deformations in the global and regional scales to the partitioning of strain and tectonic implications at geometrically complex plate margins. Research in shallow subsurface geophysics includes field geophysical surveys of glaciotectonic deformation of Long Island sediments using ground penetrating radar and electrical resistivity.

CPG 901.4: Advances in Seismic Stratigraphy, Basin Analysis and Reservoir Characterization (3 Units)

The interest in seismic stratigraphic techniques to interpret reflection datasets is well established. The advent of sophisticated subsurface reservoir studies and 4D monitoring, for optimizing the hydrocarbon production in existing fields, does demonstrate the importance of the 3D seismic methodology. Overview reflection seismic methods and its limitations (1. Link between basic seismic stratigraphic principles and high resolution sequence stratigraphy. 2. Description of various techniques for seismic reservoir characterization and synthetic modelling 3. Overview inversion techniques, AVO and seismic attributes analysis).

CPG 901.5: Advances in Petroleum Geoengineering (3 Units)

This course, is aimed at a broad range of geoscientists and engineers working in the petroleum industry. The ultimate objectives are to enable technical staff members to maximize the recovery of hydrocarbons. The impact of petrophysical heterogeneity at various scales on the recovery of oil and gas.

CPG 901.6: Seminar (3 Units)

Seminar presentations will be based on specialised areas of research project.

CPG 902: DEFENCE MODULE

CPG 902.1: Research Project Defence (16 Units)

POSTGRADUATE DIPLOMA PROGRAMME IN GREEN ENERGY

GEOSCIENCES AND ASSET MANAGEMENT

Programme Duration

Postgraduate Diploma in Green Energy Geoscience and Asset Management: 12 months.

Award of Degree

Successful students at the end of the programme shall receive the Postgraduate Diploma in Green Energy Geoscience and Asset Management of the University of Port Harcourt.

Admission Requirements

Holders of First degree from recognized universities or Higher National Diploma (Upper credit) certificates from recognized institutions in the Sciences, Engineering, Technology, Social Sciences and Management with cognate experience in the energy industry are eligible to apply.

Mode of Study

The programme offers a flexible modular hybrid onsite and real-time online video conferencing that offers students excellent choices of time of study.

Course Delivery

Course delivery is by the academia and the energy industry.

Graduation Requirements

To qualify for an award of the postgraduate degree in Green Energy Geoscience and Asset Management of the University of Port Harcourt, a student must meet the following requirements:

1. The student must have successfully completed and passed all the prescribed courses in the programme with at least C grades;
2. The student must have met other requirements of the School of Graduate Studies and the University of Port Harcourt.

Course Grading System

The coursework grading system shall be as follows:

70 and above	A	5.00
60 - 69	B	4.00
50 - 59	C	3.

POSTGRADUATE DIPLOMA IN GREEN ENERGY GEOSCIENCE AND ASSET MANAGEMENT

COURSE CONTENTS

DGM 701.1: Research Methodology (2 Units)

Essentials of Spreadsheet and Internet Technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Scientific Research, Concepts of Hypothesis, Formulation and Testing. Organization of Research and Report writing.

DGM 701.2: Introduction to Entrepreneurship (2 Units)

Business environment, general management, financial management, entrepreneurship development, feasibility studies, Marketing and managerial problem solving.

DGM 701.3: Introduction to Fourth Industrial Revolution (2 Units)

Advanced coding and practical application of blockchain, artificial intelligence, Machine

Learning, Big Data, Cloud Computing, Internet of Things, and Cybersecurity in oil and gas business. Note: This is a hands-on course; students will learn by doing advanced coding.

DGM 701.4: HSE & Commercialization Opportunities (2 Units)

Health Safety and Environmental Management System (Management Leadership and Commitment, Policy and Strategic Objectives, Organization, Responsibilities, Resources, Standards and Documentation, Hazards and Effects Management, Planning and Procedures, Implementation and Performance Monitoring, Audit, Review.

DGM 701.5: Report Writing, Communication and Presentation Skills (2 Units)

Introduction, Technical terms, Words, Abbreviations, Technical Writing Process, Technical Correspondence, Technical Writing Illustration, Feasibility Reports, Thesis Report Writing, Proposal Writing, Tendering/Biddings. Power Point Presentation Skills.

DGM 702.1: Climate Change and Global Warming (2 Units)

Earth's climate system and the science and politics of global climate change. Climate in the Spotlight. The Spectrum of Scientific Opinion. Pundits, Advocates and Apocalypse. How to Tell Science from Rubbish. The earth's Natural Greenhouse Effect. Why the Earth is a Nice Place to Live. The Radiative Balance. The Importance of Water. Greenhouse gases. Greenhouse Gases: An Overview. The Role of Carbon Dioxide. The Role of Methane. Major Uncertainties.

DGM 702.2: Introduction to Carbon Capture Storage Utilization (2 Units)

Combating global warming, and over the last few years, has developed rapidly. Although much of the technology is similar to that of CO₂ enhanced oil recovery (EOR), as currently practiced This course will cover CCS across the world Economy, Capturing Carbon, Geological Carbon Storage, CCS Utilization, Energy decarbonization

DGM 702.3: Environmental Science and Sustainable Development (2 Units)

Tools used in environmental management for environmental decision making. Topics include: interrelationship among Assessment; Environment and Development; evolution of Environmental Assessment; Procedures and steps in Environmental Impact Assessment (EIA).

DGM 702.4: Geoscience and Unconventional Energy (2 Units)

Geology: definition, types of rocks, sediment formation. Types of sedimentary rocks. Sandstones, shales and carbonates: formation, composition, classification, environment of deposition and deformation. The operating principle of un-conventional energy technologies, materials used, characterization, and key performance characteristics. Technologies such as Solar energy, Wind, Batteries, Fuel cells, and Geothermal conversion. The advantages and limitations of these technologies in comparison to conventional sources of energy will also be examined. Green Technology and Sustainable Development. Drivers for Renewable Energy Policies, Impacts of Renewable Energy and Value of Renewable Energy Technology.

DGM 702.5: Geological Excursion (2 Unit)

Geological Fieldwork allows Participants to obtain samples, measuring their orientations, dimensions and construct Geologic and topographic maps. Identification of potential Source rocks, Reservoir rocks, Seals and Geological Structures. Textures, Sedimentary Structures and Paleocurrents. Application to Reservoir Qualities. Geological Models and Simulation. Seismic Reflection and Refraction. Gravimeter and Magnetometer uses and application to Exploration.

DGM 703.1: Introduction to Natural Gas and LNG Management (2 Units)

Gas units, reserves, exploration & production, unconventional gas (Coal Bed Methane and shale gas), LNG chain, gas pipelines and gas usage (electricity, petrochemicals, transport fuels, gas-to-liquids), including detailed discussions about gas & LNG economics, gas pricing and global trade patterns

DGM 703.2: Introduction to International Energy Law (2 Units)

The major legal obligations affecting the industry such as Energy Law, Comparative International Tax Law, Environmental Aspects of Energy Law, Legal Aspects of Mergers & Acquisitions, Energy Law and Policy, Renewable Energy Issues, Dispute Resolution in Energy Contracting, Energy Contract Law, Energy Management and Maritime Law.

DGM 703.3: Introduction to Public Relations (PR) (2 Units)

Overview of the history of energy, global trend affecting the industry. Exploration and production processes in energy. Public participation in the oil and gas industry. The role of public relations in the entire value chain of energy industry. Identify key issues and challenges of public relations in energy industry. Managing public relations challenges. Stakeholders effect on public relations. Strategies

of effective public relations. Legal elements and public Relations. Principles used by PR practitioners to plan and implement communication campaign. The role of internet, social media, email, twitter, blogs, television, newspaper, etc. How to identify and reach your audience. Learn how to generate good publicity, address negative perceptions / publicity. Corporate governance, legal frameworks & impact of petroleum law on public relations. Understand the role of public relations is crisis management. Definition an understanding of community. Energy bearing community and crisis concept.

DGM 704.1: Upstream and Downstream Accounting (2 Units)

For non-financial managers and staff within the industry improve their knowledge and application of best practices in financial management and accounting within E&P. Key financial principles in exploration, development and production. How business decisions impact upon financial statements and financial performance and how by understanding these impacts managers are better placed to evaluate their decisions. Financial impact of the contractual arrangements found in the industry, in particular how Production Sharing Agreements impact upon results and reserves.

DGM 705.1: Seminar (3 Units)

DGM 705.2: Research Project (9 Units)

MASTER OF SCIENCE IN GREEN ENERGY GEOSCIENCE AND ASSET MANAGEMENT

Areas of Specialization

1. Master of Science in Green Energy Geoscience and Asset Management (Energy Geoscience);
2. Master of Science in Green Energy Geoscience and Asset Management (Asset Management)

Programme Duration

Master of Science in Green Energy Geoscience and Asset Management:

Full Time: 12 months, and
Part Time: 18 months

Award of Degree

Successful students at the end of the programme shall receive the appropriate degrees in Green Energy Geoscience and Asset Management of the University of Port Harcourt.

Admission Requirements

Holders of First degree or PGD (credit) certificates from recognized universities in the Sciences, Engineering, Technology, Social Sciences and Management with three years experience in the energy industry are eligible to apply.

Mode of Study

The programme offers a flexible modular hybrid onsite and real-time online video conferencing that offers students excellent choices of time of study.

Course Delivery

Course delivery is by the academia and the energy industry.

Graduation Requirements

To qualify for an award of the Master of Science in Green Energy Geoscience and Asset Management of the University of Port Harcourt, a student must meet the following requirements:

1. The student must have successfully completed and passed all the prescribed courses in the programme with at least C grades;
2. The student must have met other requirements of the School of Graduate Studies and the University of Port Harcourt.

Course Grading System

The coursework grading system shall be as follows:

70 and above	A	5.00
60 - 69	B	4.00
50 - 59	C	3.00
0 - 49	F	0

DISSERTATION	MGM 806.2	Dissertation	16

COURSE CONTENTS

SGS 801.1: ICT and Research Methodology (2 Units)

Essentials of Spreadsheet and Internet Technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Scientific Research, Concepts of Hypothesis, Formulation and Testing. Organization of Research and Report writing.

SGS 801.2: Management and Entrepreneurship (2 Units)

Business environment, general management, financial management, entrepreneurship development, feasibility studies, Marketing and managerial problem solving.

MGM 801.1: Geoscience and the Fourth Industrial Revolution (3 Units)

Advanced coding and practical application of blockchain, artificial intelligence, Machine

Learning, Big Data, Cloud Computing, Internet of Things, and Cybersecurity in energy business. Note: This is a hands-on course; students will learn by doing advanced coding.

MGM 801.2 Energy Industry, Safety and Commercialization (3 Units)

Advanced Reservoir Rock properties. Characteristics of Reservoir Fluid. Advanced Exploration Methods. Drilling Engineering. Well completion. Hydrocarbon In-Place Estimate. Recovery Methods. Production and Surface Facilities. Health Safety and Environmental Management System (Management Leadership and Commitment, Policy and Strategic Objectives, Organization, Responsibilities, Resources, Standards and Documentation, Hazards and Effects Management, Planning and Procedures, Implementation and Performance Monitoring, Audit, Review.

MGM 802.1: Advanced Climate Change and Global Warming (3 Units)

CO₂ Emissions. Human Emissions of CO₂. How Much Carbon in the Ground? Different Concerns of Rich and Poor Countries. The Earth's Carbon Reservoirs What is Biogeochemistry? Why is the Atmospheric Carbon Reservoir so Small? Breathing of Gaia. The Missing CO₂ Sink. Carbon Cycling: Some Examples. The Physical Carbon Pump. The Biological Carbon Pump. The Marine Carbon Cycle. The Terrestrial Carbon Cycle. Climate and Weather. Climate and Weather: Some Definitions.

MGM 802.2: Carbon Capture Storage Utilization (3 Units)

CCUS / Geological Sequestration of CO₂, net-zero greenhouse gas (GHG) emissions by 2050. Combating global warming, and over the last few years, has developed rapidly. Although much of the technology is similar to that of CO₂ enhanced gas recovery, as currently practiced This course will cover CCS across the world Economy, Capturing Carbon, Geological Carbon Storage, CCS Utilization, Energy decarbonization, Sequestration and Future Prospects.

MGM 802.3: Unconventional Energy Technology (3 Units)

The operating principle of un-conventional energy technologies, materials used, characterization, and key performance characteristics. Technologies such as Solar energy, Wind, Batteries, Fuel cells, and Geothermal conversion. The advantages and limitations of these technologies in comparison to conventional sources of energy will also be examined. Scale of quantities, Impact of current energy usage, Conventional sources of energy. Overview of non-conventional energy resources, Consumption by sector. Geothermal and Biomass.

Battery basics, types testing, performance of batteries. Fuel cell types, Fuel processing, concept to product. Characterization and durability of fuel cells. Flywheels and super capacitors.

MGM 802.4: Solar Energy Systems (2Units)

Solar energy incident on earth. Solar spectrum. Overview of solar energy technologies, Solar Thermal devices. Solar Photovoltaic devices, Performance and durability of solar devices. Solar energy generation systems, and their technical specifications. Knowledge and skills to design and critically evaluate solar energy generation systems. An overview of the current and the future of solar energy systems. Evaluate the key technologies of solar PV and Concentrating Solar Power (CSP), select appropriate solutions for the generation of energy using solar PV and CSP for various applications, and select and implement appropriate methods for the design of solar energy systems.

MGM 802.5: Wind Energy Systems (2Units)

Introduction to wind energy - need for wind energy. How to plan for wind energy projects. Wind energy, technology and geographical aspects. Onshore and offshore wind energy. Fundamentals of wind turbines and placement. The need for wind energy and what an EIA is. Wind resources – variation of wind with height, and during day and night. Modeling wind power density and the power production based on different terrain properties. Wind turbine technology. Wind turbine designs including the modern three-bladed turbine. Aerodynamics. Thrust and power for a wind turbine. Variety of materials used to build turbine. Structural mechanics. Electrical systems.

MGM 802.6: Geothermal Energy (3 Units)

Introduction to Geothermal Energy Technology. Geothermal Systems (including ground-source heat pumps). Geothermal energy from shallow ground, to hot water and hot rock found a few miles beneath the Earth's surface, down to the extremely high temperatures of molten rock (magma). Depending on its characteristics, geothermal energy can be used for heating and cooling purposes or be harnessed to generate clean electricity. Thermal Characteristics. Sources of Geothermal Heat. Thermodynamics. Fluid Flow and Geochemistry. Subsurface Fluid Flow. Simple Quantitative Models. Chemistry of Geothermal Fluids. Resource Exploration and Characterization. Geology. Geophysics. Drilling. Resource Assessment, Downhole Measurements, Completions, Production Testing. Geothermal Energy Recovery and Conversion. Geothermal Power – Hydrothermal-Geothermal Power – SedHeat. Geothermal Power – EGS. Direct Use. Low Temperature Geothermal - Heat Pumps/ Underground Thermal Storage

MGM 802.7: Hydro (Ocean, Tide and River) Energy (2Units)

Harnessing green energy from ocean wave and tidal energy technologies. Geological and thermodynamics concepts and principles. Environmental analysis, physical principles and Energy storage. Fluid dynamics (multiphase porous media flows). Capture of the kinetic energy of flowing water and conversion to electricity. Future prospects. Green energy can be harnessed from the oceans and tide.

MGM 802.8: Nuclear Energy (2Units)

Introduction to the breadth of nuclear science and engineering fields of study. Introduction to the basic physics of nuclear energy and radiation, with an emphasis on the unique attributes and challenges of nuclear energy as a low-carbon solution. Peaceful applications of ionizing radiation to help humankind, such as reactors for materials science research, nuclear medicine, and security initiatives, are also introduced. Scientific, engineering, and economic basis for fission reactors. Nuclear reactor technology. Magnetic fusion energy research, covering the scientific and engineering basis of tokamaks. The state of the art in world fusion experiments. Uranium-235 and U-238 molecules in Nuclear energy.

MGM 802.9: Energy Storage and Extraction Technology (3 Units)

Energy storage technologies hydrogen technology, battery technology, and bio energy technologies. Energy storage and bio energy both in the transport sector and in the stationary sector. In the stationary sector, the course also covers Combined Heat and Power (CHP) systems. Distributed and localised energy storage associated with solar cell installations in buildings and energy storage solutions related to wind farms.

MGM 802.10: Environmental Management, Tools and Sustainable Development (2 Units)

Tools used in environmental management for environmental decision making. Topics include: interrelationship among Assessment; Environment and Development; evolution of Environmental Assessment; Procedures and steps in Environmental Impact Assessment (EIA), Social Impact Assessment (SIA), and Health Impact Assessment (HIA); Public Participation; Strategic Environmental Assessment (SEA); Policy formulation; risk management systems, etc. Effectiveness and challenges of contemporary EA practices. Environmental Auditing and Management Systems.

MGM 803.1: Natural Gas and LNG Management (3 Units)

Gas units, reserves, exploration & production, unconventional gas (Coal Bed Methane and shale

gas), LNG chain, gasyuf pipelines and gas usage (electricity, petrochemicals, transport fuels, gas-to-liquids), including detailed discussions about gas & LNG economics, gas pricing and global trade patterns. Hydrocarbon behaviour in the reservoir and its various recovery methods. It also provides information on specific and direct application of the process used in reservoir engineering and skills in solving reservoir engineering problems for maximum recoverable reserves.

MGM 803.2: Investment and Portfolio Management of Green Energy Assets (3 Units)

Flexibility and resilience coupled with effective risk management. Exploration & Production (E & P) as a critical part of the gas and other green energy industry. Implemented project/programme management methodology, gas and other green energy projects/programmes hit snags, delays and incur extra expenditure. Project/Programme scope of work and planning, Project/Programme progress reporting and communication, Project/Programme processes, and Project/Programme change control and completion. Tools and practical techniques to identify, analyse and manage uncertainties and risk in exploration and production projects. Challenges, with hands-on application of industry-standard tools and techniques to assess realistic scenarios and associated data. The essential commercial drivers. Case material to explore uncertainties and risks in the context of production forecasting, cash-flow management, incremental projects and asset portfolio manipulation.

MGM 803.3: Agile Project and Risk Management (3 Units)

This course integrates the Agile Project Management methodology to the Gas industry. Students will have the opportunity to discover how to implement agile project practices and apply sprints, product backlogs, histories, scrum meetings to a typical project in this industry area. Fast delivery, better communication & collaboration, cost management improvement and superior deliverables are typical results of using this methodology. Also, students will be exposed to international standards and management systems, supporting risks related to asset damage, business interruption, pollution, injuries to people, and damage to properties are intrinsic in normal energy activities through a series of workshops about how to create, manage and sustain a risk management program.

MGM 803.4: Roles and Responsibilities for Energy Industry Professionals (3 Units)

In every organisation, the basis of business activity is the creation, drafting, negotiation and

management of contracts. Those involved in the contracting process are, rightly, required to act as contracts professionals, and can no longer afford to treat contracts as an adjunct to their main roles. The increasing complexity of contracts, particularly when used in an international context, has brought the need for such skills into sharp focus. Other aspects of the course are: The Roles, Responsibilities and Behaviours of Competent Professionals, Equipping and Motivating Highly Effective Teams, Maximising the Performance Management Process, Negotiation Styles and When to Use them, and High-Level Communication Skills.

MGM 803.5: Leadership and Management Succession for Energy Executives (3 Units)

Effective leadership and competent management skills. Efficiency, quality and productivity. Decision making and outcomes. Succession planning and competitive advantages. Practical insights essential for effective implementation.

MGM 803.6: CONTRACT MANAGEMENT AND NEGOTIATIONS (3 Units)

Effective and efficient decision making; Contract management decision. Prompt paying
Effective claims resolution Low maintenance cost. Differentiation and Reverse Differentiation techniques

MGM 803.7: Public Relations and Corporate Governance (3 Units)

Overview of the history of energy, global trend affecting the industry. Exploration and production processes in energy. Public participation in the energy industry. The role of public relations in the entire value chain of energy industry. Identify key issues and challenges of public relations in energy industry. Managing public relations challenges. Stakeholders effect on public relations. Strategies of effective public relations. Legal elements and public Relations. Principles used by PR practitioners to plan and implement communication campaign. The role of internet, social media, email, twitter, blogs, television, newspaper, etc. How to identify and reach your audience. Learn how to generate good publicity, address negative perceptions / publicity. Principles and Moral values. Managing Ethics in Workplace. Assessing Culture and Cultivating Ethical Culture. Business Ethics. General Resources for managing Ethics in Workplace. Social Responsibility. General Resources for managing social Responsibility in workplace. Principle of Corporate governance and models. Regulation. Mechanisms and Controls. Systemic Problems of Corporate Governance.

MGM 803.8: Human Resources (HR) Management (3 Units)

The role of HR; the structure of the HR department and key functions; Recruitment and selection; Occupational and Psychometric Testing; The contract of employment; Key documentation in employment; Employee entitlements; Managing employment relations; Management development, mentoring and coaching; Performance Management; Appraisals; Employee engagement and motivation; Equal opportunities; workplace diversity and individual difference; Employee health safety and welfare; Succession planning; Talent Management; Managing retirements; Managing business reorganizations; Managing workplace change. The emphasis is on the use of a structured approach where good preparation and effective interviewing techniques ensure that the 'right' candidates are taken on by the organisation in accordance with internal policies, best practice and legal considerations.

MGM 803.9: Global Energy Policy and Economics (3 Units)

Concept of energy policies across the globe with respect to renewable and non-renewable energy, with emphasis on green energy as an alternative energy source for the future, and the basis for developing such policies by government or regulators taking cognisance of economic factors and infrastructure. The structure of such policy to public and private sector within the energy value, chain as well as the industrial and domestic energy consumers. Global energy outlook and how it favours the use of green energy. Energy policies development and how it changes over time in different countries such as UK, US, Middle East, Africa and Europe. These theories and examples of the existing policies help policy makers, resource personnel, management team and private sector to understand their role and strategize their investment and interest in the gas policy at international and local level. Contract Management; Contract Pricing and Analysis; Cost Accounting Standards; Performance Based Contracts; Subcontracts and Termination and Legal Issues.

MGM 804.1: International Financial Reporting Standards Accounting (3 Units)

Contractual arrangements such as production sharing contracts and joint venture arrangements. The IFRS accounting practices that are applied in relation to exploration, development and production. This course will cover: Overview of energy accounting issues, Prospecting, exploration and evaluation, Asset impairment principles and application to unproved property, Accounting for development, Provisions & asset retirement obligations (IAS 37 and IFRIC 1 and IFRIC 5),

Accounting for production, Leasing activities (IAS 17), Foreign currency transactions (IAS 21), Revenue recognition (IAS 18) and production inventories (IAS 2), Tax accounting in the energy industry (IAS 12), Energy reserves and their analysis and case studies. The main aspects of IFRS based accounting in the Gas industry. Variety of fiscal regimes, fiscal regime in their own jurisdiction. Successful effort and full cost accounting techniques, with reference to IFRS and FASB accounting standards. Intangible assets and their importance in the Gas industry as well as the fundamentals of Property, plant and equipment: Energy (Development and Production). The impairment of development and production assets is a vital topic for the Gas industry. Joint Arrangements: Joint venture & Joint operations and the rules in several IFRS. Finally, revenue recognition, which has been a matter of research and development by various accounting standards bodies for a decade and more has culminated in IFRS 15: students will spend some time in discussing this standard and its implications for the future.

MGM 804.2: Joint Venture Accounting (3 units)

Effective design and operated cash call activities and framework that are critical to success of the JV partnership. Joint Venture (JV) / Joint Operating Agreement (JOA. Joint Venture Billing statement. JV Contract Types, Roles and Responsibilities of JVCC parties, Overview of energy contract agreement types – JVCC principles, Fundamentals of JVCC budgeting and operating, Entitlements of JVCC partners, and case studies. The course assumes IFRS as the accounting framework to be used but references US GAAP to the extent that is it relevant to an IFRS business. This course covers the following: Overview of energy accounting issues, Principles of upstream accounting – refresher, Joint venture principles, Accounting by the operator, Revenue, Reporting of joint arrangements in the IFRS financial statements, Contracting and partnering arrangements, The mechanics of production sharing contracts, PSC economics and reserves, Accounting for the tax treatment of PSCs, Conveyances and business combinations and case studies.

MGM 804.3: Upstream and Downstream Finance Accounting (3 Units)

This course will help non-financial managers and staff within the industry improve their knowledge and application of best practices in financial management and accounting within E&P. The course covers the key financial principles in exploration, development and production. It goes on to examine how business decisions impact upon financial statements and financial performance and

how by understanding these impacts managers are better placed to evaluate their decisions. We will then look the financial impact of the contractual arrangements found in the industry, in particular how Production Sharing Agreements impact upon results and reserves.

MGM 804.4: Costing and Budgeting (3 Units)

This course is designed to provide a good level of knowledge and practice across the main aspects of Costing and Budgeting in the Energy Industry. During this course, students will be exposed to the intricacies of management accounting, in particular as they relate to the costing and budgeting aspects in Energy companies. Other aspects of the course are: The Role of Budgeting and Cost Control, Traditional Costing, Traditional Costing and Activity Based Costing (ABC), and Flexible Budgets and Variance Analysis.

MGM 804.5: Financial Analysis, Modelling and Forecasting (3 Units)

This course uses the principles of financial analysis and the power of Excel to identify the important variables that can dramatically enhance the value of an organisation in the energy industry. Using Excel and energy based cases and exercises, students will learn how to master many of the tools and functions it provides to apply the latest financial analysis techniques, understand what the numbers are revealing and be better able to make strategic and tactical decisions. Other aspects of the course include: Analysing the Annual Report, Financial Planning and Forecasting, The Time Value of Money, Evaluating Capital Project Proposals, and Effective Management of Historical Data Using Excel

MGM 804.6: International Energy Law, Policy and Risk Analysis (3 Units)

The major legal obligations affecting the energy industry Law, Comparative International Tax Law, Environmental Aspects of Energy Law, Legal Aspects of Mergers & Acquisitions, Energy Law and Policy, Renewable Energy Issues, Dispute Resolution in Energy Contracting, Energy Contract Law, Energy Management and Maritime Law. Fundamentals of gas E & P Energy Policies, Economics and Analysis. International Gas Economics. Fiscal System Mechanics and Analysis. Energy Entrepreneurship. Downsizing, restructuring and technological change, notions of traditional careers and ways of creating value: Enterprise development. Knowledge and skills relevant for starting and managing new ventures across the entrepreneurial life cycle; prepare for an investor. Entrepreneurial risk, performance and environment, Business planning techniques and their application in entrepreneurial ventures; Venture strategy in dynamic markets; Start-up and

resources to exploit a profit opportunity; The evolution of the venture and managing growth; Protecting and securing intellectual capital: IPR and antitrust law; Financial management for new ventures: financing a start-up; The entrepreneurial financing process: buying and selling a venture. Assess the impact of the business environment on entrepreneurial opportunity identification and exploitation; apply the theoretical underpinning of entrepreneurship to the process of managing risk in new ventures and supporting their development;

compare and contrast how managerial challenges vary across the life cycle of an entrepreneurial venture; assess the likely financial needs of a new venture and pitch for finance., and develop and write a credible business plan for a new venture. Risk and Uncertainty Management in Gas E & P Industry. Risk Decision Analysis.

MGM 805.1: SEMINAR (2 Units)

MGM 805.2 DISSERTATION (16 Units)

ACADEMIC STAFF AND OTHER RESOURCE PERSONS

S/N	NAME	QUALIFICATION	AREA OF SPECIALIZATION	DESIGNATION
UNIVERSITY LECTURERS				
1	Prof. J.A. Ajeinka	Ph.D. (UPH) M. Eng. (UPH) B.Sc. (UI)	Production Enhancement and Flow Assurance	Professor
2	Prof. M.O. Onyekonwu	Ph.D. (California) M.Sc. (California) B.Sc. (UI)	Reservoir Management	Professor
3	Prof. Joel Ogbonna	Ph.D. (UST) M.Sc. (Uniben) B.Tech. (RUST)	Oil Field Chemical	Professor

7	Prof. (Mrs.) Florence O. Nduka	Ph.D. (Nsukka), M.Sc., B.Sc. (Nsukka),	Communication Skills	Professor
8	Prof. Charity U. Okujagu	Ph.D. (UI), M.Sc. (UNN), B.Sc. (UPH)	Renewable Energy and Environmental Physics	Professor
9	Prof. Leo Osuji	Ph.D. (UI), M.Sc. (UI), B.Sc.(UI)	Environmental Geochemistry	Professor
10	Prof. A. U. Okoro	Nnamdi Azikiwe University	Sedimentology and Stratigraphy	Professor
11	Dr. (Ms.) Ini Ubong	Ph.D. (Futo), M.Sc. (UI), B.Sc. (Unical)	Analytical/ Environmental Chemistry	Senior Lecturer
12	Dr. Kunle Sofolabo	Ph.D. (UPH), M. Sc. (UPH) B.Sc. (UPH)	Geophysics	Senior Lecturer
13	Engr. Uche Osokogwu	M.Sc. (UPH), B.Sc. (UPH)	Petroleum Production Engineering	Senior Lecturer
14	Dr. E.O. Nwaichi	Ph.D. (UPH), M. Sc. (UPH), B.Sc. (UPH)	Communication Skills	Senior Lecturer
15	Dr. S. Abrakasa	Ph.D. (Newcastle), M.Sc (Newcastle), B.Sc. (Unical)	Petroleum Geochemistry	Senior Lecturer
16	Dr. F.A. Njoku	Ph.D. (Unical) M.Sc. (London) B.Sc. (UI)	Geophysics	Senior Lecturer
17	Dr. Boniface Oriji	Ph.D. (UPH), M.Eng. (UPH), B.Eng. (UPH)	Drilling & Well Completion	Senior Lecturer
18	Dr. Lawrence Peter Eyo-Essien	Ph.D., M.Sc. B.Sc. (UPH)	Microchemistry	Senior Lecturer
19	Dr. Emmanuel Biu		Mathematics/statistics	Senior Lecturer
20	Dr. Ngerebara		Environmental Geology	Senior Lecturer
21	Dr. M. U. Uzoegbu	Ph.D. (ATBU), M.Sc. (ATBU), B.Sc. (Futyola)	Organic Geochemistry	Lecturer
22	Dr. Diepiriye C. Okujagu	Ph.D. (UPH), M. Sc. (UPH) B.Sc. (UPH)	Structural Geology / Remote Sensing and GIS	Lecturer I
INDUSTRY				
23	Dr. Etim D. Uko	Ph.D. (RUST) M.Sc. (UPH), B.Sc. (Unical)	Applied Geophysics	Industry

24	Mr. Godwin Isoken Okuns	M.Sc. (Sheffied) B.Sc. (London)	Instrumentation/ Systems Engineering	Industry
25	Jasper Nwachukwu	B.Sc (UI)	Exploration Geology (SHELL)	Industry
26	Mr. Emmanuel Bassey Otop	M.Sc. (UPH), B.Sc. (Unical).	Petroleum Geology	Industry
27	Mr. Patrick Ekedede	M.Phil.(RUST), B.Sc (Unical)	Environmental Management	Industry
28	Dr Afe Mayowa	Ph.D.(UPH), M.Sc (UPH), B.Sc (UPH)	Petroleum Geology	Industry
29	Engr. Dr. Evelyn B. Ekeinde	Ph.D. (UPH), M. Eng. (UPH) B.Sc. (UPH)	Well Engineering / Geomechanics	Industry
30	Mr. Onipede Olamide		Remote Sensing and GIS	Industry
32	Mr. Jacob Zacckaus	M. Sc. (UPH) B.Sc. (UPH)	AI, IoT, Big Data, & Security	Industry
33	Mr. Lawrence Akubue	M. Sc. (UPH) B.Sc. (UPH)	ICT/Programming Skills	Industry
34	Mr. Magnus Kalu		Reservoir Geophysics	Industry
35	Mr. Celestine Ugwu		Operations Geologist	Industry
36	Prof. Andrew Hurst	Ph.D, B.Sc University of Aberdeen, UK	Production Geology	Professor
37	Emeritus Prof. Mosto Onuoha	Ph.D., M.Sc., B.Sc (LE University, Budapest, Hungary)	Applied Geophysics	Emeritus Professor
38	Prof. O. E. Abumere	Ph.D, M.Sc. (Manchester), B.Sc.(Uniben)	Solar Energy	Professor
39	Prof. Ibibia Lucky Worika	LLB (Lagos), BL, LLM (Lagos), PhD (Dundee)	Gas Law; Energy Law; International Law; Comparative Law	Professor
40	Prof. C. O. Ofurum	Ph.D., M.Sc. (FUTO), B.Sc (Uniben)	Accounting and Finance	Professor
40	Prof. B. E. Nwinee	Ph.D., M.Sc. (UPH), B.Sc. (RSUST)	Finance and Banking	Professor
41	Prof. B. C. Onuoha	Ph.D, M.Sc. (ABSU), B.Sc. (IMSU)	Management	Professor
42	Prof. G.N. Ogbonna	Ph.D., M.Sc., B.Sc	Accounting and Infotech	Professor
43	Prof. U.I. Ironkwe	Ph.D.,MBA, B.Sc., LLB, BL	Accounting and Law	Professor
44	Prof. C. N. Ogbuji	Ph.D (ABSU), M.Sc. (UNN), B.Sc. (ABSU)	Marketing	Professor
45	Prof. Y. Chad-Umerem	Ph.D., M.Sc., B.Sc	Nuclear Physics	Professor
46	Prof. I. S. Nnamdi	Ph.D., M.Sc. (ABSU), BSc. (UPH)	Finance	Professor
47	Prof. O. A. Ekpeyong	Ph.D., M.Sc. B.Sc. (UPH)	Sociology	Professor
48	Prof. R. Uahunmwangho	Ph.D, M.Sc., B.Sc. (Uniben)	Power Systems	
49	Prof. Boniface Oriji	Ph.D. (UPH), M.Eng. (UPH), B.Eng. (UPH)	Drilling & Well Completion	Senior Lecturer
50	Dr. G.O. Omojefe	Ph.D (DELSU), M.Sc, BSc (Unilag)	Financing/Banking	Reader
51	Dr. M. Opuwari	Ph.D (W.C University, S.A), M.Sc, B.Sc (UPH).	Petroleum Geology	Senior Lecturer
52	Dr. Dave Muirhead	Ph.D, BSc (Hons), FGS University of Aberdeen, UK	Geology and Geochemistry	Senior Lecturer

53	Dr. Stephen Bowden	Ph.D., M.Sc, B.Sc University of Aberdeen, UK	Organic Geochemistry	Senior Lecturer
54	Dr. E. Owushi	Ph.D. (MOUA), M.A (Uniben), LLB	Law	Senior Lecturer
55	Dr. Austin Sado	Ph.D (UPH), M.SC, PGD(UNN)	Public Relations	Senior Lecturer
56	Dr. C. Ebieto	Ph.D.(Sheffield), M.Sc, B.Sc (UPH)	Mechanical Engineering	Senior Lecturer
57	Dr. E.O. Diemuodeke	Ph.D. (Cranfield, UK), M.Sc, B.Sc.(UPH)	Mechanical Engineering	Senior Lecturer
58	Dr. Ini Ubong	Ph.D. (FUTO), M.Sc. (UI), B.Sc. (Unical)	Environmental Chemistry	Senior Lecturer
59	Dr. L. P.Eyo-Essien	Ph.D., M.Sc. B.Sc. (UPH)	Microchemistry	Senior Lecturer
60	Dr. O. D. Ngerebara	Ph.D., MPh (RSUT), B.Sc (UPH)	Environmental Geology	Senior Lecturer
61	Dr. C. U. Ugwueze	Ph.D, M.Sc(UPH), B.Sc (Enugu State University)	Petroleum Geology	Senior Lecturer

AFRICA CENTER OF EXCELLENCE IN OILFIELD CHEMICALS RESEARCH (ACE-CEFOR)

ABOUT ACE-CEFOR

The Africa Center of Excellence in Oilfield Chemicals Research (ACE-CEFOR) is one of 22 World Bank-funded Centers of Excellence established in 2013, to promote home grown and regional research networks that will help to develop the human capital in Africa.

ACE-CEFOR aims to develop the Nigerian Oil and Gas industry (in particular) and those of other African countries (in general) where oil and gas have been discovered.

The apparent lack of research Centres in the Gulf of Guinea, and indeed Africa, capable of producing competent researchers in Petroleum and related disciplines is also another motivating factor.

Specifically, we possess good learning infrastructure, focus on research programmes relevant to West and Central Africa as well as regional training, high capacity to mobilize financial resources from the private sector, and a more autonomous operational identity required for efficient project implementation.

ACE-CEFOR operates on the basis of triple helix model of government-academia-industry partnership and thus creates a research network of higher institutions for knowledge and technology transfer.

The postgraduate courses and research are designed, organised and taught on modular basis with teaching responsibility shared amongst experienced and active resource persons from the collaborating universities and Industry partners. The industry partners are involved in our curricula review and providing places for, at least, one month internship placement for our postgraduate students and faculties.

Therefore, our strong university-industry relationships with the resultant cross-fertilization of ideas have continued to be a veritable source of solutions to development challenges especially as they relate to the oil and gas sector.

OUR VISION

Our vision is to become the leading Centre of Excellence in Oilfield Chemicals Studies in Africa. The motivation for undertaking this project is the desire to promote home grown and regional research networks that will help to develop the human capital in Africa.

Also, to develop the Nigerian Oil and gas industry (in particular) and those of other African countries (in general) where oil and gas have been discovered.

OUR MISSION

The mission of ACE-CEFOR is to provide international post - graduate programmes and applied multi – disciplinary research in engineering and the sciences for sustainable development of the oil and gas industry in Africa.

THOUGHT COURSES AT ACE-CEFOR

Course Code	Course Title	Credit Unit
ACE 901 (General)	RESEARCH METHODS AND COMMERCIALIZATION	3
	Proposal/Grant writing	
	Research Methods and Presentation	
	Advance Statistics for Science and Engineering	
	Innovation, Commercialization/Patenting	
ACE 902 (General)	ENTREPRENEURSHIP / MANAGING FOR EXCELLENCE	3
	Entrepreneurship	
	Business Law	
	Business Accounting	
	Managing for Excellence	
ACE 903 (General)	OILFIELD SCIENCE AND TECHNOLOGY	3
	Overview of Oilfield Chemistry/Chemicals	
	Biotechnology Applications	
	Toxicological/Environmental Impact of Oilfield Chemicals	
	Overview of Refining, Petrochemical and Gas Processing	
	Overview of Exploration Operations in Petroleum	

	HSE Issues and Management in Oil and Gas Operations	
ACE 906	THESIS	12

NOTE: In addition to the courses above, the students also take two departmental thought courses from the collaborating departments. The

following are the collaborating departments and Centres:

1. Petroleum and Gas Engineering
2. Chemical Engineering
3. Pure and Industrial Chemistry
4. Microbiology
5. Plant Science and Biotechnology
6. Geology
7. Environmental technology and Management
8. Occupational Health and Safety

CENTRE FOR INFORMATION & TELECOMMUNICATION ENGINEERING [CITE]

Introduction

Nigeria has ambitious plan to leapfrog into the Information Age. The idea is to provide modern infrastructure to help incubate and nurture new leading edge local and international companies for technical innovations. The goal is to attract a core group of world-class companies.

Within the last ten years, the tele-density in Nigeria has increased tremendously to over 117 million wireless subscribers. In spite of this, the engineering curriculum used in our universities does not adequately cover the various wireless and new generation network technologies. Most of the major telecommunications equipment vendors and service providers reap substantial profits from their investments after the de-regulation of this sector. This has not resulted in providing key job opportunities for graduates in engineering in this sector of the economy. The key selling point is to upgrade the curriculum and in addition, provide for essential certification programmes as part of the requirements of graduations.

The government is looking forward to Information technology and Telecommunication to provide the needed boost in employment and entrepreneurship. Better technical education in this area will advance the entrepreneurial ecosystem of the country.

About the Centre [CITE]

The Centre for Information and Telecommunication Engineering (CITE) is proposed to be a specialized ICT programme poised to bridging the University –Industry Gap through innovative Research and ICT Professional certifications. It is a University-Industry based collaboration with academic degree to be awarded from Engineering. The Centre shall offer a Master degree programme in Information and Telecommunication Engineering .

Vision

The vision of the Centre for Information and Telecommunication Engineering is to become the leading Centre of Excellence in Information and Communication Technology, Telecommunication Engineering, Entrepreneurship Policy & Strategic Studies in Africa.

Mission

The mission of the Centre is to meet the needs of the Information and Telecommunication Industries through result-oriented trainings, innovative Research, ICT Professional Consultancy and Capacity building

Philosophy

The philosophy of the Centre for Information and Telecommunication Engineering is to sustain the core values of excellence, Integrity and Commitment in service delivery to humanity and ICT Industries.

Objectives

The main objectives are itemized below:

- To conduct research, provide consultancy and training in ICT and Telecommunication related areas.
- To produce graduates furnished with requisite technical skills and professional expertise to work in Telecom or ICT companies.
- To give Non-Engineering but I.T inclined candidates the needed competence and Skills to work in Engineering Field.
- To encourage the spirit of Entrepreneurship
- To enable participants acquire detailed understanding of the technical, management and policy aspects of Information and Telecommunication Engineering.
- To produce outstanding candidates in the world of ICT through relevant degree and professional certifications
- To proffer solutions to industrial problems through Software Developments

Functions of the Centre

The main functions of the Centre are:

Human Resource Development

The Centre will aggressively pursue human resource development programmes involving visiting scholars and researchers. It will also conduct training, workshops, symposia and seminars

Research and Development

The R&D activities would be industry-driven and would involve all organizations engaged in acquisition and commercialization of new ICT technologies.

Advisory and consultancy services

The Centre will play the leadership role in ICT policy formulation for different tiers of government. The centre will also offer consultancy services especially in the areas of ICT & Telecommunications.

Industrial/ Professional Collaborations

The Centre will seek for collaboration with Multinational Telecommunications Companies like MTN, Glo, Etisalat, Airtel, Ericsson, Huawei , ZTE, Nokia, Siemens etc

Sustainability of the Centre

Alcatel-Lucent has made strong commitment to support the Centre in the provision of industry – based experts to handle some of the courses, access to real life telecommunication equipments, field trips to functional work stations to aid students’ practical experience; and also provision of some infrastructures etc. Strategic plans are also in place to get sponsors from other major Telecom players.

PGD PROGRAMME IN INFORMATION AND TELECOMMUNICATIONS

Admission Requirements

Candidates who possess a Bachelor’s degree from a recognized University with a minimum of third class honor or Higher National Diploma (HND) from a recognized Polytechnic with a minimum of upper credit in any Engineering Fields, Computer Science, Mathematics/ Statistics, Physics, Physics-Electronic or any other related field would be considered.

Programme Duration

The programme is for 12 calendar months, during which the student is expected to take the complete modules and carry out an individual project.

Graduation Requirements

A student is presented for graduation after attempting and passing all fourteen modules, including individual project as well as fulfilling all School of Graduate Studies requirements; and in good standing with the university policies.

Course Outline

Codes	Course Title	Credit Units
DIT 701	ICT and Research Method	3
DIT 702	Entrepreneurship and Management	2
DIT 703	Probability and Statistics for Engineers	2
DIT 704	Circuit Analysis and Simulation	3
DIT 705	Digital Signal Processing Control System and Automation	2
DIT 706	Automation	2
DIT 707	Introduction to Mobile communication and networks	3
DIT 708	Software Development techniques	2
DIT 709	Data communications and Network	2
DIT 710	Optical Communication System	2
DIT 711	Computer Networks and Security	2

DIT 712	Advanced Circuit Techniques Technical Seminar and	2
DIT 713	Presentation	3
DIT 714	Final Project	6

Course Description

DIT 701 - ICT and Research Method

- Use of computer programme and software
- Methods of data collection
- Methods of data analysis

DIT 702 - Entrepreneurship and Management

- How to setup a business with little capital
- How to grow a business

DIT 703- Probability and Statistics for Engineers

- Probability distribution and analysis
- Regression and correlation
- Test of hypothesis and significance

DIT 704- Circuit Analysis and Simulation

Review of Phasors complex algebra and complex notation. Alternating current, AC quantities, Sinusoidal waveforms, AC circuits, AC Power and Power factor. Network theorems. Application of Laplace transformation to transient analysis of RLC circuits, transfer function concepts. Types of response; transient, and steady-state response. Frequency response. Foster and Cauer’s methods of synthesis, 2-port network synthesis, Resonance and Q-factors, Balanced Polyphase systems Unbalanced Polyphase systems, Coupled circuits, Filters, Transients in AC circuits

Simulation Lab: applications of computers software in the analysis and simulation of AC-circuits

DIT 705- Digital Signal Processing

Advantages of digital over analogue signal processing, problems of digitization, overview of application of DSP, basic elements of DSP system. Digital processing of analogue signals: Sampling of analogue signals, sampling theorem, aliasing, quantization, noise, and coding, types and selection of ADC/DAC, Sigma-delta ADC. Analytical tools: z-transform, properties, transfer function, inverse z-transform, z-plane poles and zeros, analysis of linear time-invariant in z-domain, system stability. Discrete Fourier Analysis: Discrete Fourier Transform and properties, inverse DFT, truncated Fourier transform, windowing, FFT algorithms. Discrete Time Signals & systems: Discrete time sequences (signals), classification and determination of discrete time system, discrete time i/o description (difference equation), solution of difference equations, convolution, correlation, impulse

response. Digital Filters: Definition and types, FIR filters: Transfer function, characteristics, applications, design methods. Software implementation of DSP algorithms. DSP Microprocessors: Architecture, fixed point vs floating point DSP, Finite word length effects. DSP chips: interfacing and programming. Practical application of DSP in audio and video.

DIT 706- Control Systems and Automation

Introduction: definition, examples of control systems. Open-loop and closed-loop control systems. Review of Laplace and inverse Laplace transforms. System modeling: Signal flow graph, block diagram. Transfer function. Poles and zeros. Block diagram reduction techniques. Mechanical, electrical and electromechanical systems. First and second order models, higher order models. Definitions of transient response parameters. Analysis of second-order system as prototype. Routh-Hurwitz stability criterion. Classification of systems based on steady-state characteristics, steady-state error coefficient. Definition of Root locus, Properties root locus, sketching of root locus plots. Effect of open-loop zeros and poles. Root locus design concepts. Frequency response analysis and design: Bode diagram, Polar plot, Nicholas plot. Nyquist stability criterion: non-mathematical description of Nyquist criterion, interpretation of stability. Relative stability – Gain and phase margins. Closed-loop frequency response analysis – M and N contours, Nicholas chart. Compensation techniques: lag, lead and lag-lead compensation, PD, PI and PID controllers. Cascade compensation based on root-locus method. Introduction to Feedback compensation.

DIT 707- Mobile Communication and Network

Evolution of mobile radio communications. Examples of mobile radio systems: radio paging, cordless telephones, cellular radio. Trends in cellular radio and personal communications. A basic cellular system, Frequency reuse, Roaming, Hand-off strategies, Co-channel interference, Traffic and Grade of service, System capacity, Improving capacity of cellular system. Propagation path loss, multi-path propagation problem, Raleigh fading, Rician distribution. Doppler effect. Field strength prediction models, co-channel interference and reduction, adjacent channel interference, near-far problem. Standards and overview of analogue and digital cellular systems: AMPS, TACS, GSM, CT2, PCN, DECT, PHS. Frequency management and channel assignment, speech coding, channel coding, bandwidth consideration, equalization, modulation techniques, multiple access techniques. GSM: Architecture, elements, and standard interfaces; FDMA/TDMA structure; Speech and channel

coding; time slots and bursts; signaling; hand-offs; DCS 1800; GPRS; data services over gsm. Third Generation Wireless Standard: convergence; UMTS; IMT-2000; CDMA2000; WCDMA; UWC-136; Network layer standards. Paging services and technologies; Short Message Services. Call Processing: Signalling; Roaming and mobility management; Route optimization; Wireless Intelligent Networking; Databases; Protocols; Security and billing issues. Global Positioning System: principles, and applications

DIT 708- Software Development techniques

Software development life cycle. Top-Down design. Program, design using pseudo-code, flowchart. Flowchart ANSI symbols and usage. Extensive examples and exercises using pseudo-code/flowchart to solve practical problems in engineering. Debugging and documentation techniques. Programming using a structural language such as C: Symbols, keywords, identifiers data types, operators, various statements, operator precedence, type conversion, conditional and control structures, function, recursive functions. Arrays: I-D, and multi-dimensional arrays, passing elements or whole array to a function. Simple sorting and searching on arrays, pointers, strings, dynamic memory allocation. Structures and Unions: Structure declaration and definition, accessing structures, array of structures, pointers and structures, union declaration, enumerated variables. File Handling: Concept of a file, files and streams, standard file handling functions, binary files, random access files. Advanced Topics: Command line parameters, pointers to functions, creation of header files, stacks, linked lists, bitwise manipulation. Software development in C in MS Windows, UNIX/LINUX, environments, header files, preprocessor directives, make, makefile. Static and dynamic linking libraries. Extensive examples, and exercises programming in C to solve practical problems in engineering. Exercises are to be done in the Computer Laboratory.

DIT 709 Data communication and Network

Introduction to Data communications: the development of Data Communications: types and sources of data, simple communications network, transmission definitions, one way transmission. Half duplex transmission, transmission codes, parallel transmission, serial transmission, bit synchronization, character synchronization, synchronous transmission, asynchronous transmission, efficiency of transmission. Error detection methods and data compression. Protocols: introduction to network protocol. Seven Layer ISO-OSI standard protocols and network architecture. Transport protocols, session services protocols, and other protocols. IEEE 802 standards. Error control and Data Compression:

Forward Error Control; error detection methods; parity checking; linear block codes, cyclic redundancy checking; feedback error control, data compression. Huffman coding and dynamic Huffman coding. Local Area Networks: medium access control techniques – Ethernet, token bus and token ring: LAN standards; fibre distributed data interface, metropolitan area network. Peer-to-peer, Client Server. Client-Server Requirements: GUI design standards, interface independence, platform independence, transaction processing, connectivity, reliability, backup and recovery mechanisms. Information Network Software; Features and benefits of major Network Operating System. Network OS: (e.g. Novell Netware. UNIX/LINUX. OS/2 & WindowsNT). TCP/IP and Network OS. INTERNET: Definition, architecture, services, Internet addressing. Internet protocol, IPv4, IPv6. Internet programming, Intranet. System administration and security issues

DIT 710- Optical Communication Network

Optical transmitting devices, LEDs optical receivers, optical fibres/types, features, joining/coupling deep space communication system/capacity, reliability economy/application of PCM and ADPCM concepts.

DIT 711- Computer Network and Security

Introduction: Definition, Uses of Computer Networks, Network Topology, Network Media, Network Devices, Different Types of Network: LAN, MAN, WAN etc IP addressing: Classful IP Addressing, Subnetmask, CIDR, Private IP Address, Public IP Address, Subnetting, VLSM etc. Network Model: OSI Reference Model, TCP/IT Reference Model, ATM Reference Model, Functions of the Layers of different models, Network Protocols working at different layers. Data Link Layer Design Issues, Framing: Character Count, Byte Stuffing, Bit Stuffing, Error Detection: Cyclic Redundancy Check, Parity Bit Checking, and Correction: Hamming Code. Windowing Protocols: Go back N ARQ, Selective repeat ARQ, Elementary Data Link Protocols, High-level Data Link Control, Point to Point Protocol, The Medium Access Control Sub-layer. Multiple Accesses: Random Access; ALOHA, CSMA, CSMA/CD, CSMA/CA, Channelized Access; CDMA, TDMA, FDMA, Controlled Access; Reservation, Poling, Token Passing. Ethernet, Wireless LANs, and Bluetooth. Switching: Circuit Switching, Packet Switching, Message Switching, Routing Algorithms, Virtual Circuit and Datagram, Congestion Control Algorithms, Quality of Service, Internetworking, Internetworking Devices etc. Network Layer Protocols: Address Resolution Protocol, Internet Protocol, Internet Control Message Protocol,

IPv6, Routing Information Protocol, Open Shortest Path First, Border Gateway Protocol, User Datagram Protocol, Transmission Control Protocol. Network Security:

DIT 712-Advanced Circuit Technique

Computer-aided design and analysis of integrated operational amplifiers and advanced circuits such as wideband amplifiers, instrumentation amplifiers, multiplier circuits, voltage controlled oscillators, and phase locked loops. Design techniques for advanced analogue circuits containing transistors and operational amplifiers.

DIT 713- Technical Seminar and Presentation

- Technical writing skills
- Seminar Presentaion
- Presentation skills

DIT 714 Final Project

Each student will be guided by experienced supervisors to put to use the acquired research skills

M.Sc. in Information and Telecommunication Engineering

Academic Programmes

The academic programme would be run under two modes

- a. **Regular- Programme Mode:** It is designed to run for 12 calendar months : 46 academic weeks, Monday to Friday, 8 hours daily.
- b. **Weekend- Programme Mode:** It is designed to run for 60 weekends (Friday Evening and Saturday, all day).

Please Note : *This Weekend programme is specially designed only for working class candidates who by their job tight schedules are not free during the week days.*

2. Degree to be Awarded:

Master of Science (M.Sc.) in Information and Telecommunication Engineering

Admission Requirement

Bachelor’s degree with nothing less than second class lower division in any of the Engineering Fields, Computer Science, Mathematics/ Statistics, Physics, Physics- Electronic or any other related field .

Grading System

The following system of Grade Points shall be used for the Award of Degree

Mark/score	Candidate	
70% & above	A	5.00
60-69	B	4.00
50-59	C	3.00
0-49	F	0

COURSE OUTLINE

Courses shall be delivered in modules. One week (40 hours) for each course.. See table below:

Codes	Module 1: FUNDAMENTALS	8 Units	Resource Persons
ITE 801.1	Overview of Telecommunication Engineering & ICT Industries	1	University
ITE 801.2	Applied Mathematics for communication Engineers	1	University
ITE 801.3	Research Methods & Communication Skills in Engineering	1	University
ITE 801.4	Computational Skills	1	University
ITE 802.1	Fundamentals of Modern Digital Modulation Techniques	1	University
ITE 802.2	Fundamentals of Information Networks & Data communication	1	University
ITE 802.3	Fundamentals of Optical Fiber Communication	1	University
ITE 802.4	Fundamentals of microwave Engineering	1	University
	Module 2: WIRELESS COMMUNICATION	8 Units	
ITE 803.1	Wireless Network	1	Industry
ITE 803.2	Intelligent Networks	1	Industry
ITE 803.3	Mobile Network Architecture	1	Industry
ITE 803.4	Wireless 3G: WCDMA (UMTS)	1	Industry
ITE 804.1	GSM Engineering	1	Industry
ITE 804.2	Radio Network Planning & Optimization Process	1	Industry
ITE 804.3	Broadband Concepts	1	Industry
ITE 804.4	Satellite Communication	1	Industry
	Module 3: SYSTEM DESIGN & PROGRAMMING	6 Units	
ITE 805.1	Cloud computing	1	Industry
ITE 805.2	Programming using Object Oriented Methods	1	Industry
ITE 805.3	Software Engineering Methods	1	University
ITE 806.1	Design of Database management System	1	Industry
ITE 806.2	System Design, Modeling & Simulation	1	University
ITE 806.3	Mobile App Development with Java Apps.	1	Industry
	Module 4: ICT-MANAGEMENT	3 Units	
ITE 807.1	Project Planning & Management	1	University
ITE 807.2	Business Strategy and Entrepreneurship	1	University
ITE 807.3	Network Security	1	Industry
	Module 5: ADVANCED WIRELESS COMMUNICATION	3 Units	
ITE 808.1	LTE	1	Industry
ITE 808.2	Information Systems Engineering	1	Industry
ITE 808.3	UMTS/HSPA/HSPA+ network Planning Methodologies and Tools	1	Industry
	Module 6: PREPARATION FOR PROFESSIONAL CERT.	2 Units	
ITE 809.1	Prep. For Networking Professional	1	Industry
ITE 809.2	Prep. For -Lucent NR1 Telecom Certification I	1	Industry
	Module 7: PROJECT MODULE	9 Units	
ITE 810.1	Mobile Communication	1	Industry
ITE 810.2	Design , Modeling & Simulation	1	Industry
ITE 810.3	Software Development	1	University
ITE 811.1	Thesis	6	University

(2) Carry out and defend a Master-Dissertation

Requirement for Graduation

A candidate must fulfill the following conditions to be awarded MSc degree in ITE .

(1) Pass all prescribed courses.

Please note:

There shall be two (2) separate exams for the professional certification courses in Module 6 : (i) the Internal Exam conducted by CITE (ii) the

External Exam conducted by the ICT professional body. A candidate that passes the internal exam but fails the external professional exam shall graduate with M.Sc. in Information & Telecommunication Engineering but without the relevant ICT professional Certificate of the professional body.

NB: The “professional Certificate” is only an added value to the M.Sc. degree to be awarded, not a requirement for graduation.

COURSE CONTENT

ITE 801.1 Overview of Telecommunication Engineering & ICT Industries 1 Unit

This course covers Telecommunication overview; Advanced topics which include network management, traffic engineering, and router internals. The course also considers the impact of wireless engineering solutions in a global, economic, environmental, and societal context. Historical Reviews in Telecommunication: Alexander Graham Bell, The telephone exchange/switching; Modes of telecommunication; **Evolution of Switching Systems:** Evolution of Telecommunications, Simple Telephone Communications, Basics of Switching System, Manual Switching System, Basic Elements of Strowger switching systems, Step-by-step switching system, Subscriber access to strowger switching, Crossbar exchange, Principle of Crossbar switching, Cross Bar Switch Configurations, Cross Point Technology, AT & T No. 5 Crossbar switch. **Computer-Controlled Switching-I: Computer-Controlled Switching-II: Signalling Techniques: Common Traffic Engineering: Telephone Networks:** Evolutions of ICT Industries.

ITE 801.2 Applied Mathematics for Communication Engineers- 1 Unit

This course is designed to expose students to Laplace Transformation, Transform relation for linear systems; forced and free response; transfer function; poles and zeros; stability; probability theory, frequency and probability distribution, expectation and moment classical distribution, binomial, poisson, gaussian, exponential central limit theorem and its significance, estimation and hypothesis testing; regression and correlation. Application of MATLAB in advanced Engineering mathematics.

ITE 801.3 Research Methods & Communication Skills 1 Unit

This course is designed to teach candidates technical research skills, how to write technical papers, thesis, and make technical seminar presentation using power points and other relevant computer tools.

ITE 801.4 Computational Skills

To be given by the Resource Person

ITE 802.1 Fundamentals of Modern Digital Modulation Techniques- 1 Unit

Course covers the following areas: What is modulation? The Channel Model, Review of Fourier Transform, Probability, Power Spectral Density and White Gaussian Noise. Nyquist Baseband Signaling – Linear Equalization, Duobinary Signaling, Partial Response Signals. Signal Space: Modulation Definitions – BPSK, QPSK, MPSK, QAM, BFSK, MFSK. Optimum Detection of Binary Signals – the Optimum Detector. Matched Filter Information Theory; Multitone Systems: Twisted-Pair Channel, Discrete Multitone (DMT) Implementation. Viterbi Algorithm; Trellis Coding; Cellular Communications: Introduction; Multiple Access Techniques – FDMA, TDMA, CDMA. Third Generation Proposals; HDTV; 4G systems

ITE 802.2: Fundamentals of Information Networks & Data communication -1 unit

Course focuses on the fundamentals of data communication networks. The goal is to give some insight into the rationale of why networks are structured the way they are today and to understand the issues facing the designers of next-generation data networks. Topics discussed include: layered network architecture, Link Layer protocols, high-speed packet switching, queuing theory, Local Area Networks, and Wide Area Networking issues, including routing and flow control. Management of telecommunications networks, cost-benefit analysis, and evaluation of connectivity options are covered. Students learn to evaluate, select, and implement different communication options within an organization. OSI layers; data link protocol; TCP/IP; flow control, congestion control, routing; local area networks (Ethernet, Token Ring and FDDI); transport layer; introduction to high-speed networks and MPLS; performance evaluation techniques.

ITE 802.3 Fundamental of Optical Fiber Communication- 1 Unit

This course looks at the introduction to Optical Fiber communication. Fibers: single- and multi-mode, attenuation, modal dispersion, group-velocity dispersion, polarization-mode dispersion. Wavelength-division multiplexing. System architectures: Local-area, access, metropolitan-area, long-haul. The course will give the student in-depth understanding of the functionality of optical networks and how they may be implemented. How an optical network can work together with an IP-

based network infrastructure for ensuring both high reliability and performance in access, metro and transport networks, will be emphasized. Protocols, e.g. MPLS, GMPLS, T-MPLS, Ethernet PBB-TE and RSVP-TE will be addressed. The topics covered include building blocks for optical networks and systems. Included is an introduction to optical components, principles and functionality in optical network elements as well as basic physical principles and properties and constraints in optical fiber transmission. Principles and the function of optical circuit switched networks, both network elements like reconfigurable add/drops and optical cross-connects as well as the principle of a wavelength routed optical network are covered. introduction to Transport Networks, including optical technology, and problem statement for optical network planning. The basis of optical technology and SDH standards. Optical technology and standards. SDH/SONET Basics. Traffic engineering including demand matrices and traffic patterns. Architecture: Client Server Layers. Physical, transport and client layers and their sublayers are explained, with examples discussed. Sub-Networks, Network Topologies, Network Management and Synchronization. Reliability and Network Protection. Optical Cross-Connects. Network Dimensioning: Ring Design, Traffic Routing, Span Engineering. Equipment Selection: High-level overview of SDH/SONET product portfolio, DWDM.

ITE 802.4 Fundamentals of microwave Engineering – 1 Unit

The focus of this course includes: Applications of microwaves (terrestrial and satellite communications, radar, remote sensing, wireless), system requirements for elements which must be analyzed and synthesized. Propagation modes (TEM, TE, TM, quasi-TEM), attenuation and dispersion of general guidelines. Microwave computer-aided design examples. Commercial software such as PATHLOSS. Introduction to Fixed Point-to-Point Microwave Radio Systems: System Design Objectives; Path Performance Limitations; Path design objectives; radio configurations; Antennas; frequency planning; EMI considerations; types of towers, tower specifications; safety considerations. Radio Technology; microwave propagation; performance estimation; design methodology; design considerations. **Radio Wave Propagation** : Electromagnetic waves, wave front, characteristic impedance of free space, reflection refraction and diffraction. Ground waves and sky waves.) **Radio Wave Propagation** : The ionospheric layers, refractive index, virtual height, critical frequency and angle, maximum usable frequency, skip zone, skip distance, fading.) **Radio Wave Propagation** : VHF line of sight

transmission. Tropospheric scattering communications. Relationship between transmitter power, antenna gains and received signal to noise in a free space radio link. VHF and microwave point-to-point link

ITE 803.1 Wireless Networks -1 Unit

This course introduces fundamental concepts of wireless networks. Topics include: an introduction to the wireless physical layer; an overview of commonly used wireless MAC mechanisms; MAC protocols including 802.11, Bluetooth and personal area networks; cellular standards and WiMax (802.16); making wireless work in today's Internet, including support for TCP over wireless, mobility, and security; and an introduction to selected advanced topics, such as vehicular networks and sensor networks. The course also considers the impact of wireless engineering solutions in a global, economic, environmental, and societal context. Introduction to wireless system design and engineering. Develops an understanding and appreciation of the wireless engineering problems such as cellular layout design, resource allocation, mobility management, capacity and performance and signaling load calculations. Introduces physical layer building blocks such as modulation, synchronization, coding, diversity, equalization, and spreading.

ITE 803.2 : Intelligent Networks -1 Unit

The focus of this course includes: What is ICC, What is Intelligent Network (IN), Examples of added service on the IN, Telecoms before the advent of the IN, Why then the IN, Telecoms before the advent of the IN but before the GSM, What is telecoms today with the IN, Major Differences between ICC and the older Alcatel IN versions, Global Architecture of the ICC, How does the ICC integrate into the Global network. **Applications of Intelligent Networks**

ITE 803.3 Mobile Network Architecture-1 Unit

This course is designed to cover Mobile TDM Network Architecture: Access, switching and IN service, Mobile networks and Data services, 2G GSM/GPRS/EDGE Architecture, 3G UMTS Architecture, 4G Wimax & LTE Network Architecture - NGN Architectures: Mobile NGN Networks, Services in NGN Networks - IMS Architecture: NGN vs. IMS Network, IMS/TISIPAN overview, IMS/TISIPAN architecture **Transmission/Backhauling technologies for mobile Networks-** Mixed Transmission Architecture- Synchronous Digital Hierarchy (SDH) - Wavelength Division Multiplexing (WDM) Microwave Transmission, Satellite Mobile Backhauling, IP Backhauling - MPLS and VPNs **Services: WIRELESS 2G: GSM Signaling, The Mobile**

Station and Subscriber Identity Module, The Base Station Subsystem ,The Network Switching Subsystem, The Abis-Interface ,The Air Interface of GSM

ITE 803.4 Wireless 3G: WCDMA (UMTS)- 1 Unit

The content of this course includes: IP Based next generation Networks, Evolution of Wireless Networks, Wireless IP Network Architectures, IP Multimedia Subsystems and Application-Level Signaling, Mobility Management, QoS Challenges in Wireless IP Networks. **WIRELESS 3G: WCDMA (UMTS)**Introduction to WCDMA, Conceptual Background of WCDMA, Radio Access Network Architecture, Introduction to Physical Layer, Introduction to Radio Network Planning, High-speed Downlink Packet Access concepts

ITE 804.1 GSM Engineering – 1 Unit

This is designed to introduce students to **GSM Services and Features:** Introduction of GSM ,GSM services ,Bearer services in GSM ,Teleservices in GSM ,GSM Standards ,ETSI and the Special Mobile Group ,GSM Phase 2+ ,3GSM ,3GPP and UMTS .**THE SYSTEM ARCHITECTURE OF GSM :**GSM system architecture, GSM addressing, IMSI, MSISDN, TMSI, MSRN, SPC, LAI, GCI Location areas and identity numbers ,etc..**The Base Station Subsystem (BSS) :**Base Transceiver Station (BTS) part of BSS ,Base Station Controller (BSC) part of BSS Transcoding Rate and Adaptation Unit (TRAU) .**Network Switching Subsystem (NSS):** NSS Components ,HLR/AuC ,EIR,NSS Subsystems and SS7 ,Mobile Services Switching Center (MSC) part of NSS ,MSC/VLR .**SS7 in GSM:**Call processing and information access ,SS7 network architecture ,SSP, STP and SCP ,SS7 routing ,SS7 links ,SS7 protocols ,Message Transfer Part (MTP) 1-3 ,SCCP ,TCAP ,MAP .**Air Interface (MS-BSS) of GSM :**The A-Interface Structure, LAPDm, GSM 04.08 ,The Structure of the Air-Interface in GSM , **Abis Interface (BSS-BSC):** Channel Configuration :Signaling on the Abis Interface, LAPD, Q.931; GSM 08.05 .**A-Interface (BSC-MSC) :**Signaling over A-Interface, The Base Station Subsystem Application Part SS7, SCCP/User part. **GSM Operation Scenarios:** GSM OAM&P ,GSM network planning, Project planning process of GSM networks ,etcAttach and Detach ,Location Update **Advanced features:** AMR ,Comparison of AMR and other GSM ,coding schemes EDGE, 8PSK vs. GMSK, etc

ITE 804.2 Radio Networking Planning & Optimization Process- 1 Unit

The content of this course includes: Network Architecture, The Access method TDMA, Coverage models ,Parameter setting , Network cost, Planning tool **CAPACITY PLANNING :** Frequency planning 4/12, 3/9, Frequency hopping, Advanced frequency planning strategies, Selection of frequency planning strategy, Channels per cell, Conversion of channels to Erlang **SELECTING SITE LOCATIONS:** Planning Tools, Site Acquisition, Idle mode procedures, Cell selection, Cell re-selection , System information , Cell parameters, Handover algorithms, **INITIAL TUNING,** Antenna direction/tilt Output power, Frequency plan .Handover parameters and Code allocation **NETWORK OPTIMIZATION ;**Handling poor C/N, C/I and C/A, Handover problems and solutions , Excessive load, Battery life-time and paging Performance . **INCREASING CAPACITY features:**Tightening the frequency plan, Micro cells, Pico cells, Dual band , Half-rate , Example of high capacity network, **CO-EXISTENCE ISSUES,** Spectrum GSM 1900/TDMA, GSM 900/900, GSM 900/1800, GSM/WCDMA GSM/LTE, **Traffic Capacity & Coverage Planning**

ITE 804.3 Broadband Concept- 1 Unit

This course covers the Concept of Broadband Today: Internet access, rates, applications, uses (gaming, video, triple play),Wireless/mobile broadband Vs. fixed broadband; The NCC and spectrumlicensing,ISPs, tier 1, 2 and 3 providers, IXPs, POPs, WISPs . **Evolution of Broadband:** Broadband modes – DSL, ADSL, GPRS, 3G, LTE, GPON, VSAT, satellitecommunications, Fiber optic concept; ALUs role in laying over 60% of all submarine cables, Why is Broadband So Important?, Simulation, real-time conferencing, applications, cloud computing, massiveopportunities in software development, Rural development, mass literacy and healthcare, Nigerian Broadband Initiative, FG policy on broadband; the Broadband for Rural Nova Scotia model; Galaxy ,Broadband, SAT-3, Main One, Glo-1 and WACS; NIGCOMSAT

ITE 804.4 SATELLITE Communication- 1 Unit

This course is designed to introduce students to Satellite Communications , Brief history and overview of satellite communications, the Regulatory Bodies. Frequency allocations. Orbital Aspects of Satellite Communications , Fundamental orbital Laws, Useful orbits for satellite communications, Perturbations of the orbits. Orbital effects on the performance of a communications system. ,The Satellite-Earth Channel ,Satellite uplink and downlink analysis, delay, dual polarization. attenuation, Depolarization and rain effect of propagation. The

environment of space. Satellite Communications Systems, Modulation and multiplexing techniques for satellite link Forward error correction. Communication Payload, transponders, coverage. Multiple access techniques, traffic laws and routing, FDMA, SPADE, TDMA, CDMA, random access. Subsystems of a communication satellite, earth station. VSAT and Mobile-Satellite Communications

The VSAT satellite system concept, link analysis, the mobile-satellite channel, direct home TV broadcasting.

ITE 805.1 Cloud Computing – 1 Unit

The content of this course includes: **What is the Cloud?:** Concepts of the cloud, IaaS, PaaS, SaaS, clients, Public and private clouds, community clouds Datacenters, Concept, Operation and location, power and cooling; **Why is the cloud necessary?:** Google example (e.g. Googlechat vs. Skype); software upgrades not necessary, Open Source protocols, APIs, Legal Issues, Patents, copyrights, IPv6, E-applications, E-learning, E-government, E-health

ITE 805.2 Programming using Object Oriented Methods- 1 Unit

To be given by the Resource Person

ITT 805.3 Software Engineering Methods 1 Unit

This course covers the following areas: Principles of software engineering applied to concurrent programs distributed software, and fault-tolerant; analysis and verification techniques and verification for concurrence locks, theory of a process, distributed system kernels, interleave principle, duality principle, application of verification techniques to system deadlocks and software fault-tolerance; detailed analysis of distribution locks, readers-and-writer problem and message-passing system, data flow design methodologies and use of data flow techniques in operating system. Maintenance schedules; Equipment failure; recovery

ITE 806.1 Design of Database Management System- 1 Unit

This course introduces graduate students to the foundations of database systems, focusing on basics such as the relational algebra and data model, schema normalization, keys and foreign key references; query optimization, and transactions. Details include: Introduction to Databases, Brief History of Databases, Classification of Databases, OLTP & OLAP, Components of Database, Field, Record, Table, index, View, Users, Schema & DBA, Introduction to Structure Query Language (SQL), Categories of SQL, DML, DDL, DCL Database Security, Logins, Encryption, Audit, High availability of

database, Scalability (scale up/scale out), Mirroring, Clustering, RAID, Database Backup and Restore.

ITE 806.2 System Design, Modeling & Simulation- 1 Unit

To be given by the Resource Person

ITE 806.3 Mobile App Development 1 Unit

The course covers every facet of mobile app development, including project management, requirements, architectural design, GUI and layout, data management, integration with existing web and legacy applications, web services, security, porting, and the management of mobile application development projects Various Application Frameworks, Core OS, Programming Languages, Networking, Security Graphics and Media, Internet & Web, Hardware Integration, Other Development Tools-

ITE 807.1 Project Planning & Management- 1 Unit

To be given by the Resource Person

ITE 807.2 Business Strategy & Entrepreneurship – 1 Unit

To be given by the Resource Person

ITE 807.3 Network Security

This course is designed to introduce graduate students to current network management technology and techniques, and emerging network management standards. In-depth study of the existing network security technology and the various practical techniques that have been implemented for protecting data from disclosure, for guaranteeing authenticity of messages, and from protecting systems for network-based attacks. SNMP family of standards including SNMP, SNMPv2, and RMON (Remote Monitoring), OSI systems management. Various types of security attacks (such as intruders, viruses, and worms **Network Security:** Various security services and standards (such as Kerberos, Digital Signature Standard, Pretty Good Privacy, SNMPv2 security facility). □ Different facets of security. □ Security in Wireless Networks, Internet Security.

IT...E 808.1 LTE- 1 Unit

The content of this course covers: Introduction to LTE (Long Term Evolution), Overview of IP Convergence in the mobile networks, Introduction to LTE (Long Term Evolution) and SAE/ePC/EPS, LTE Network Architecture, LTE Interfaces and protocols, LTE Packet Core (SAE/EPC and EPS), LTE/SAE/EPC Network Architecture, Evolved UTRAN and Evolved Packet Core, LTE/EPC Interworking, LTE

Protocol Stacks, LTE Interfaces covered in details, LTE-EPC Signaling, IMS (IP Multimedia Subsystem) in LTE, Overview of Diameter Protocol, Diameter Applications in IMS, LTE Operations and Procedures, LTE Planning and Optimization, Ethernet Backhaul for LTE, QoS Applied to LTE-EPC, PCC (Policy and Charging Control, LTE and EPC Security, Overview of LTE Air Interface; Overview of OFDM and MIMO, LTE RF Planning and Design, LTE Backhaul Requirements, LTE Backhaul Aggregation Network Technology, Overview of LTE-Advanced

ITE 808.2 Fundamentals of Information Systems Engineering 1 Unit

This course provides an introduction to systems and development concepts, information technology and application software. It explains how information is used in organizations and the effects Information Technology (IT) has on the organization's structure, processes, employees, customers, and suppliers. Requirements Engineering, System Architecture, System Design and Development, Systems Integration, Test and Evaluation, Validation and Verification, Systems Implementation, O&M, and Transition, SE Planning and Management, Collaborating with Technical Specialties, Building Successful Teams, Communicating with Impact, Results Orientation, Adaptability.

ITE 808.3 UMTS/HSPA/HSPA+ network Planning Methodologies and Tools – 1 Unit

This course covers the following areas: Planning methodologies, Monte Carlo simulations, Monte Carlo results analysis, Methodology comparisons, Deterministic models, Popular microcell models, Carrier wave measurements, Static simulations, Monte Carlo input parameters, Sample plots, Propagation models, Popular macrocell models, Mapping data requirements, Traffic Analysis, Traffic analysis process, Target coverage, Sample usage and service offerings, Nominal planning & site selection, Nominal planning, Initial dimensioning, Spreadsheet dimensioning, Site selection, Recommended antenna heights, Flowchart, UMTS ranges, Site options, Bad UMTS/HSPA/HSPA+ sites, Evaluating traffic requirements, Detailed site design: UMTS/HSPA/HSPA+ site configurations, RX Antennas, 4 RX diversity, Various configuration coverage increases Co-siting antennas, Antenna tilts, System configurations, MHA's, TX diversity, Isolation requirements Dual system antenna sample, Antenna orientation

ITE 809.1 Prep. For Networking Professional 1 Unit

To be given by the Resource Person

ITE 809.2 Prep. For Alcatel-Lucent NR1 Telecom Cert. I -1 Unit

To be given by the Resource Person

ITE 811.1 Master's Dissertation - 6 units

MSC IN INTELLIGENCE CONTROL AND INSTRUMENTATION ENGINEERING

MSc in Intelligent Control and Instrumentation will enable the students to acquire relevant digital, technical and professional skills needed in the current field of **Artificial Intelligence (AI)-based Control Systems and Instrumentation Engineering.**

Objectives:

- i. To encourage the spirit of Entrepreneurship
- ii. To produce outstanding candidates in Instrumentation and control through relevant degree and professional certifications
- iii. To produce students with theoretical and practical knowledge, skills and methods in control engineering, instrumentation and electronics.
- iv. To develop ability to synthesise information from a variety of sources and make effective decisions on complex instrumentation and control engineering problems.
- v. To produce Instrumentation and control engineers that are highly sought after in a range of industries including oil and gas, petrochemicals, chemical engineering, manufacturing, research, transport and infrastructure.

Academic Programmes:

The academic programme would be run under two modes

- a. **Regular- Programme Mode:** It is designed to run for 12 calendar months: 46 academic weeks, Monday to Friday, 8 hours daily.
- b. **Weekend- Programme Mode:** It is designed to run for 100 weekends (Friday Evening and Saturday, all day).

Note: *This Weekend programme is specially designed only for working class candidates who by their job tight schedules are not free during the week days.*

Degree to be Awarded:

Master of Science (MSc) in Intelligent Control and Instrumentation Engineering

Admission Requirements:

A minimum of a bachelor's degree with a minimum of second class lower division in any of the Engineering Fields, Physics, Physics-

Electronic, Science Laboratory Technology, Computer Science or any other related field.

Please note: Candidates with PGD (upper credit) would also be considered.

Course Outline

Courses shall be delivered in modules. One week (40 hours) for each course.

See table below:

CODES	MODULE1: FUNDAMENTALS	UNITS
SGS 801.1	ICT and Research Method	2
ICI 801.1	Overview of ICT, Control and Communication Engineering	2
ITE 801.2	Applied Mathematics for Engineers	2
ITE 801.3	Computational Skills with Python Programming	1
ICI 801.2	Modelling, Simulation and Visualisation	1
ICI 801.3	Real Time Embedded System Design	1
ICI 801.4	Reliability Engineering	1
MODULE 2: INSTRUMENTATION		4 UNITS
ICI 802.1	Process Measurement And Instrumentation	2
ICI 802.2	Virtual Instrumentation	1
ICI 802.3	Development of Dimensional Measurement	1
MODULE 3: CONTROL ENGINEERING		4 UNITS
ICI 803.1	Modern Control Systems	2
ICI 803.2	Design and Analysis of Robust System Controls	1
ICI 803.3	Intelligent Control Systems	1
MODULE 4: ARTIFICIAL INTELLIGENCE		3
ICI 804.1	Knowledge based systems and Expert Systems	1
ICI 804.2	Introduction to Artificial Intelligence	1
ICI 804.3	Smart Sensor Technology and Internet of things	1
MODULE 5: SYSTEM DESIGN AND PROGRAMMING		7 UNITS
ITE 805.1	Intelligent Network and Cloud Computing	1

ITE 805.2	Programming Using Object Oriented Methods	1
ICI 805.3	P & ID CAD	1
ITE 806.1	Design Of Database Management Systems	1
ITE 808.2	Information Systems Engineering	2
ITE 806.3	Mobile App Development With Java Apps	1
MODULE 6: ROBOTICS AND AUTOMATION		3 UNITS
ICI 806.1	Systems Automation and Robotics	2
ICI 806.2	Mobile Robots	1
MODULE 7: ENGINEERING MANAGEMENT		2 UNITS
ITE 807.1	Project Planning and Business Strategy	1
SGS 801.2	Management and Entrepreneurship	2
MODULE 8: PROFESSIONAL EXPERIENCE		1 UNIT
ITE 808.1	Field Visits/ Internship	1
ICI 808.1	Professional Certification	0
MODULE 9: PROJECT MODULE		6 UNITS
ITE 811.1	Dissertation	6

10. Requirements For Graduation

A candidate must fulfil the following conditions to be awarded MSc degree in ICI.

- (vii) Pass all prescribed courses.
- (viii) Do and defend a Master- Dissertation

11. Course Content

SGS 801.1 ICT and Research Methods

Principles of scientific research. Introduction: Definition of research, characteristics of research, types of research, research process, research as a way of thinking, application of research. IT Impacts: The 'automate' imperative and the 'informate' imperative in the emergence of a new research and development tool. The Research Proposal. The Introduction. The Problem. The Objective of the Study. The Hypothesis to be Tested. The Study Design. The Setting. Measurement Procedures. Sampling. Analysis of Data. Structure of the Report. Problems and Limitations. Work Schedule. Formulating a Research Problem: Reviewing the literature. Formulating a Research Problem. Identifying Variables. Constructing Hypothesis. Conceptualizing a research Design: The Research Design. Selecting a Study Design. Constructing an Instrument for data collection and Sampling: Selecting a Method for Data Collection. Use of

computer programme and software and Basics of power point presentation. Intellectual Property Issues: Protecting the intangible, Patents Infringement, Changes to watch for, Patent searches over the Internet), Copyrights Changes to watch for, Software piracy, Plagiarism), Trade secrets (What is eligible to be a trade secret?, Using a trade secret, Infringement), Reverse engineering

ICI 801.1 Overview of ICT, Control & Communications Engineering

This course covers an Overview of Applied Instrumentation, Measurement and Control Principles, Evolution of Instrumentation and Control Application areas. Basic Logic Systems. Telecommunication overview; Advanced topics which include network management, traffic engineering, and router internals. The course also considers the impact of wireless engineering solutions in a global, economic, environmental, and societal context. Historical Reviews in Telecommunication: Alexander Graham Bell, The telephone exchange/switching; Modes of telecommunication; Evolution of Switching Systems: Evolution of Telecommunications, Simple Telephone Communications, Basics of Switching System, Manual Switching System, Basic Elements of Strowger switching systems, Step-by-step switching system, Subscriber access to strowger switching, Crossbar exchange, Principle of Crossbar switching, Cross Bar Switch Configurations, Cross Point Technology, AT & T No. 5 Crossbar switch. Computer-Controlled Switching-I: Computer-Controlled Switching -II: Signalling Techniques: Common Traffic Engineering: Telephone Networks: Evolutions of ICT Industries.

ITE 801.2 Applied Mathematics for Engineers

This course is designed to expose students to Laplace Transformation, Transform relation for linear systems; forced and free response; transfer function; poles and zeros; stability; probability theory, frequency and probability distribution, expectation and movement classical distribution, binomial, poisson, Gaussian exponential central limit theorem and its significance, estimation and hypothesis testing; regression and correlation. Application of MATLAB in advanced Engineering mathematics.

ITE 801.3 Computational Skills with Python Language

Python Features, Python – Environment Setup. Local Environment Setup. Setting up PATH.Setting Path at Unix/Linux.Setting Path at Windows. Python Environment Variables. Running Python. Python 3 – Basic Syntax. First Python Program. Python Identifiers. Reserved

Words. Lines and Indentation. Multi-Line Statements. Quotation in Python. Comments in Python. Using Blank Lines. Waiting for the User. Multiple Statements on a Single Line.Multiple Statement Groups as Suites. Command line Arguments. Applications in computations, control and Mini-Projects.

ICI 801.2 Modelling, Simulation and Visualisation

A study of the construction of models which simulate real systems. Basic processes for engineering system design, methods of system modelling and forecasting The methodology of solution should include probability and distribution theory, statistical estimation and inference, the use of random varieties and validation procedures. Tools used in modelling, simulation, and visualization of processes should be taught.

ICI 801.3 Real Time and Embedded Systems Design

Principles of embedded system design and concept of hardware-software co-design, Programming languages intended for real time systems, Real time operating system (RTOS)System support: scheduling, resource handling, Design and analysis of real time system software, Modelling and verification of real time systems, Interrupts, Distributed real time systems, Real time communication, Real time systems for multiprocessor systems

ICI 801.4 Reliability Engineering

Reliability Concepts, Elementary Reliability Theory, Measurement of Reliability Failure, Time Distribution model, Exponential (Weibull model), Fault Tree Analysis, Failure Mode, Effect and criticality Analysis, Reliability growth, Maintainability and Availability. Methods and tools of Failure investigation and Fault detection starting from the code of conduct and data collection to writing the conclusions about the failure.

ICI 802.1 Process Measurement and Instrumentation

Overview of the process control plant, principal types of process plant and the associated measurement and control equipment used in the process industries. Development of models of process plant systems for optimising control system performance; analogue and digital control systems. Instrumentation systems used for the measurement of key process parameters such as temperature, pressure, level and composition. Measurement of single phase and multiphase flows relevant to the oil & gas industries, Real-time imaging systems for monitoring multiphase flows

in pipes (e.g. oil-water or solids-water flows) are studied.

Lab: Measurement of single phase and multiphase flows relevant to the oil & gas industries, Real-time imaging systems for monitoring multiphase flows in pipes (e.g. oil-water or solids-water flows) are studied. During the practical work undertaken in the module the student will learn how to design, build and test an electronic instrument e.g. an instrument for measuring the level of liquid in a tank.

ICI 802.2 Virtual Instrumentation

This module has been designed to build on your skills in modelling, designing, processing and simulating a range of analogue and digital systems. Review of the hardware and software aspects of virtual instrumentation (VI). You'll have the opportunity to use graphical and C/C++ programming languages using PC's and interface cards as the hardware platform. Industry standard software tools (such as LabVIEW) will also be explored to help design and simulate real systems.

ICI 802.3 Development of Dimensional Measurement

Theory and practical application of metrology for dimensional measurement of manufactured components. Basic principles of metrology including calibration, traceability and interchangeability. Practical sessions in measurements and analysis of data during laboratory work and study of contemporary instruments including laser interferometers and co-ordinate measurement machines (CMMs). The application of international standards and the propagation of uncertainty associated with practical measurement, in particular the effects of temperature, will be reviewed and the use of temperature measurement techniques such as thermal imaging will be covered.

ICI 803.1 Modern Control Systems

System characteristics: Revision of Laplace transforms and transfer functions. Block diagram algebra. Open and closed loop transfer functions. Steady state response and offset. Use of final value theorem. Characteristic equation. The s-plane. Concept of poles and zeroes. Significance of roots. Form of response and nature of stability. Manipulation of transfer function equations and application to control problems. Routh test. Second order systems: damping factor and natural frequency. Critical damping. Underdamped systems: response time, overshoot, decay ratio, etc. Higher order systems: approximation by lag plus delay. Linear systems design: Introduction to frequency response techniques. Concepts of attenuation and phase shift. Bode diagrams. Bode stability criterion. Gain and phase margins. Polar

plots. Use of Nichols chart. Use of Nyquist stability criterion. Relationship between open-loop and closed-loop responses. Real-time and frequency dimensions of s-plane. Significance of poles and zeros. Evan's rules. Construction and interpretation of root locus. Equivalence of dominant roots. Effect of time delay on system response and stability. Design of lead-lag compensators and PID controllers. Pole zero placement and cancellation. Adaptive control: Concepts of adaptive control. Adaptive control structures: direct and indirect adaptation. Distinction between tune on demand and continuous adaptation. Gain scheduling, model reference adaptive control and adaptive pole placement control. Overview of industrial adaptive controllers. Case study: internal model adaptive control.

ICI 803.2 Design and Analysis of Robust System Controls

General nature of Engineering control systems, Time and frequency domain treatment of control systems design, state space representation of univariate and linear multivariate systems. The concept of state estimation, measurability, observability, controllability, sensitivity, and stability in Liapunov's sense. Optimal control systems design, objective functions and use of quadratic performance index. Performance and robustness of multivariate feedback system design, based on Nyquist like techniques, linear quadratic gain (LQG) method, etc. Tracking system design, using output feedback. Observers and tracker synthesis using entire Eigenstructure assignment.

ICI 803.3 Intelligent Control Systems

Intelligent Control, Control of Hybrid Systems, Adaptive Control, Digital Control, Nonlinear Systems Analysis and Control, Optimal Control, Systems Theory, Neural Networks, System Identification, Estimation Theory, Optimization Applications

ICI 804.1 Knowledge based systems and Expert systems

Intelligent machines and expert systems, symbolic representation of knowledge, symbolic processing with prolog, data dependency as an alternative paradigm to imperative programming, rule based problem solver and knowledge representation techniques implemented in Prolog, Heuristic search and inference, data driven reasoning, goal-driven reasoning, domain-specific search, Application of Expert systems to engineering problems (process control systems) e.g. electricity utility systems, distillation columns etc

ICI 804.2 Introduction to Artificial Intelligence

Basic concepts of Artificial Intelligence, artificial intelligence in control applications, machine intelligence, machine learning, Introduction to artificial neural network, adaline, madaline, BAM, Hopfield memory, back propagation, counter-propagation networks, self-organising maps, adaptive resonance theory, fuzzy logic and evolutionary computing in engineering applications.

ICI 804.3 Smart Sensors and Internet of Things

Example of Smart Sensors in nature (Vision, Hearing, touch, and smell). How we can learn from nature, Principles of Sensing, Classification and Terminology of Sensors, Measurands. Some basic discussion about electric field, potential, capacitance, resistance etc. Mechanical Sensors, Acoustic, and Magnetic Sensors Radiation and Thermal Sensors, Chemical and Biosensors, Electronic Interface and Integrated Sensors/Design Projects/ Wireless integration, Electronics interfacing overview and technology design rules; Introduction to Microsystems; MEMS microsystem components; Microfluidics microsystem components, Electronic/wireless integration, Wireless sensor network (WSN) and Internet of Things (IoT), Internet of Things Application Domains, Design and Implementation of IoT for Environmental Condition Monitoring; Case study: Study of Smart City and its Design

ITE 805 .1 Intelligent network and Cloud Computing

The content of this course includes: What is the Cloud?: Concepts of the cloud, IaaS, PaaS, SaaS, clients, Public and private clouds, community clouds Data centres, Concept, Operation and location, power and cooling; Why is the cloud necessary?: Google example (e.g. Googlechat vs. Skype); software upgrades not necessary, Open Source protocols, APIs, Legal Issues, Patents, copyrights, IPv6, E-applications, E-learning, E-government, E-health

ITE 805.2 Programming using Object Oriented Methods

Into to programming, algorithm, Flow Chart, Console Application, Input Statement, Formula Translation, Output Statement, Writing Simple Programs, Conditional IF – Statements, Nested-IF Statement, Loops, Functions, Writing Other Programs, Exercises and mini projects, Windows Application, GUI Design, Input Statement, Formula Translation, Output Statement, Writing Simple Programs, Controls, conditional IF-Statements, Nested IF-Statement, Loops, Nested Loop, Arrays, Mini Projects, Database: MS SQL SERVER, Installation and configuration, create Database, Create Tables, Stored Procedure, insert, delete, select and update, Copy, backup, drop

database, Database Programming using Windows Form Application, Exercises and database driven projects, ASP.Net/Web application, GUI Design, Simple programs, Create menu and sub menus, website design, Site.master and web.config, Web Application development, Exercises and main project, Packaging and Deployment.

ICI 805.3 P & ID CAD

This is a Computer Aided Design-based course designed to teach and help students acquire “hands-on” skills on Piping and Instrumentation Diagram design and interpretation.

ITE 806.1 Design of Database Management System

This course introduces graduate students to the foundations of database systems, focusing on basics such as the relational algebra and data model, schema normalization, keys and foreign key references; query optimization, and transactions. Details include: Introduction to Databases, Brief History of Databases, Classification of Databases, OLTP & OLAP, Components of Database, Field, Record, Table, index, View, Users, Schema & DBA, Introduction to Structure Query Language (SQL), Categories of SQL, DML, DDL, DCL, Database Security, Logins, Encryption, Audit, High availability of database, Scalability (scale up/scale out), Mirroring, Clustering, RAID, Database Backup and Restore.

ITE 806.3 Mobile App Development

The course covers every facet of mobile app development, including project management, requirements, architectural design, GUI and layout, data management, integration with existing web and legacy applications, web services, security, porting, and the management of mobile application development projects Various Application Frameworks, Core OS, Programming Languages, Networking, Security Graphics and Media, Internet & Web, Hardware Integration, Other Development Tools-

ITE 808.2 Fundamentals of Information Systems Engineering

This course provides an introduction to systems and development concepts, information technology and application software. It explains how information is used in organizations and the effects Information. Technology (IT) has on the organization’s structure, processes, employees, customers, and suppliers. Requirements Engineering, System Architecture, System Design and Development, Systems Integration, Test and Evaluation, Validation and Verification, Systems Implementation, O&M, and Transition, SE Planning and Management, collaborating with

Technical Specialties, Building Successful Teams, Communicating with Impact, Results Orientation, Adaptability.

ICI 806.1 Automation and Robotics

Overview of the technical possibilities and commercial implications of automating manufacturing processes with a strong emphasis on high-value, high-precision manufacturing. Principles behind the programming and use of machine tools, industrial robots and their control systems, such as PLCs. Case studies from industrially-based research work. History and development of the work environment of robots, their applications and implementations, concept of control and sensory feedback in robots, Current industrial control technology and practices, including Programmable Logic Controllers (PLC), Supervisory Control and Data Acquisition (SCADA) and Distributed Control System (DCS) systems. discrete event system control, programming PLCs, manipulator theory and manipulator practice,

ICI 806.2 Mobile Robots

This module will teach you to critically review and analyse current autonomous intelligent robots, consolidate and extend knowledge in robotics applications and provide a practical understanding of robotic navigation and locomotion. You will also be taught the theory and practice of autonomous intelligent mobile robots and how these techniques and technologies impinge on research and industrial activities.

ITE 807.1 Project Planning and Business Strategy

This course covers contemporary managerial decision approaches in the organisation. Topics covered include business opportunities, mission statements and the development of corporate strategy, building the organisation competence, resource allocation, mergers and acquisition strategies, integration strategies, building organisational competitive strategies for their effectiveness through product pricing techniques, management process and policy control. This course also discusses analysis of industry structures and dynamics, e-business, process reengineering and corporate turnaround. Case writing and analysis are fundamental to this course.

SGS 801.2 Entrepreneurship and Management

Entrepreneurship Overview: Establishing & Financing new venture: Marketing and product strategy: Business and technology strategy: Case studies on important technology-based companies E-Commerce: Principles of doing business on the

Internet. Advertisements on the Internet. Simulation and using Internet as showroom. Management principles. Project management definition and constraints. Project life cycle. Project planning and scheduling. Project management tools. Critical Path method, CPM: principles, computation, and applications. Project Evaluation & Review Technique, PERT: principles, computation, and applications. Linear programming and application in CPM/PERT. Gantt's chart and applications.

ITE 808.1 Field Visit / Internship

ICI 808.1 Preparation for Automation certification

This course is designed to prepare students for the professional certification exam in Automation. Reviews of concepts, Standards, Equipments, Systems, past exam materials.etc

ITE 811.1 Master's Dissertation- 6 units

Ph. D. IN INFORMATION AND COMMUNICATION ENGINEERING Structure and Areas of Doctoral Degree Programme

The Degree is Doctor of Philosophy in Information and Communication Engineering with specializations in two major areas:

- i. Information System Engineering
- ii. Communication Engineering

The programme will involve five compulsory and four elective taught courses (which will be broken down into modules to incorporate "hands-on trainings" and a thesis in the specialized area leading to significant contributions to knowledge by the students under the guidance of experienced academic and industry- based staff and faculties. The aim of the taught courses is to review and introduce new concepts, theories, perspectives and applications of Information Technology and Communication Systems.

Admission Requirements

Candidates must possess a Master's degree with a minimum of 3.5 CGPA on a 5 point scale in any of the following Engineering fields: Electrical, Electronic , Electrical/Electronic, Computer Engineering, Software Engineering, Information Technology, Communication, Telecommunications, or any other related field . The candidates must also have five O'level credit passes including English, Mathematics, Physics and Chemistry

Programme Duration

The programme duration for full time students is a minimum of 24 calendar months and maximum of

60 calendar months while part time is minimum of 36 calendar months and maximum of 84 calendar months during which the student is expected to take the complete modules and carry out an individual research Thesis.

Graduation Requirements

A student is presented for graduation after attempting and passing all courses, including individual research project/ thesis as well as fulfilling all School of Graduate Studies requirements; and being in good standing with the university policies.

Course Outline

Modular approach will be employed in the course delivery.

Compulsory Courses

Codes	Course Title	Credit Units
ICE 901	Advanced ICT and Research Method	2
ICE 902	Project Management, Techno Entrepreneurship and cyber law	2
ICE 903	System Modelling and Simulations	3
ICE 904	Advanced Engineering Mathematics	3
ICE 917	Ph.D Thesis	12

Elective Courses: Candidate is to choose four (4) courses from the available six (6) courses depending on the chosen area of specialization/research interest.

OPTION-1: Information Systems Engineering

Codes	Course Title	Credit Units
ICE 905	Software Engineering	2
ICE 906	Internet of things and Cloud computing	2
ICE 907	Intelligent Data Analysis and Database management systems	2
ICE 908	Network Security and Management	2
ICE 909	Data Communication	2
ICE 910	Decision Support Systems	2

Option-2: Communication Engineering

Codes	Course Title	Credit Units
ICE 911	Advanced Digital Signal Processing	2
ICE 912	Advanced Wireless Communication and Management	2

ICE 913	Radio Propagation and Microwave Engineering	2
ICE 914	Optical Fibre Communication	2
ICE 915	Satellite communication	2
ICE 916	Software development in telecommunication	2

ICE 901 Advanced ICT and Research Methods

Principles of scientific research. Introduction: Definition of research, characteristics of research, types of research, research process, research as a way of thinking, application of research. IT Impacts: The 'automate' imperative and the 'informate' imperative in the emergence of a new research and development tool. The Research Proposal. The Introduction. The Problem. The Objective of the Study. The Hypothesis to be Tested. The Study Design. The Setting. Measurement Procedures. Sampling. Analysis of Data. Structure of the Report. Problems and Limitations. Work Schedule. Formulating a Research Problem: Reviewing the literature. Formulating a Research Problem. Identifying Variables. Constructing Hypothesis. Conceptualizing a research Design: The Research Design. Selecting a Study Design. Constructing an Instrument for data collection and Sampling: Selecting a Method for Data Collection. Use of computer programme and software and Basics of power point presentation. Intellectual Property Issues: Protecting the intangible, Patents Infringement, Changes to watch for, Patent searches over the Internet), Copyrights Changes to watch for, Software piracy, Plagiarism), Trade secrets (What is eligible to be a trade secret?, Using a trade secret, Infringement), Reverse engineering.. Advanced Power Point Presentation

ICE 902 Project Management, Techno Entrepreneurship and cyber law

Management principles. Project management definition and constraints. Project life cycle. Project planning and scheduling. Project management tools. Critical Path method, CPM: principles, computation, and applications. Project Evaluation & Review Technique, PERT: principles, computation, and applications. Linear programming and application in CPM/PERT. Gantt's chart and applications. Contract law and bidding. Technology Creativity Innovation and commercialization: Entrepreneurship Overview: Establishing & Financing new venture: Marketing and product strategy: Business and technology strategy: Case studies on important technology-based companies ECommerce: Principles of doing business on the Internet. Advertisements on the Internet. Simulation and using Internet as showroom. Marketing on the Internet. Technical support via Internet. Basic law: Contract law.

Cyber law. Cooperative bargaining, conflict resolution. Entrepreneurship case studies.

ICE 903 System Modelling and Simulations

Use of simulation as a optimization tool for effective design, planning, analysis, and decision-making; problem definition, model formulation, design of simulation experiments, and model-based analysis; application of advanced quantitative methods to modeling and simulation. Introduction to MATLAB. Short repetition of basic concepts in MATLAB: script files, functions, vectors and matrices, useful built-in functions. An intuitive introduction to signals in communication: information-carrying signal as analog and digital signals, the signals in the baseband and modulated signals, signal strength, signal spectrum, spectrum efficiency. Signal generation in MATLAB. An intuitive introduction to communication channels, transmission media: wired and wireless transmission channel noise, the basic channel models: a channel with Gaussian noise, the signal-noise ratio in the channel. More advanced models of communication channels, and their parameters. Generating channel model in MATLAB. The basic model of the communication system. Description and sequence of individual blocks at sender and receiver side. Implementation of the basic model of the communication system in MATLAB. Methods of calculating the probability of errors in transmission, the bit error probability and the probability of error messages through simulation experiments. The signal source. Fundamentals of signal compression. Algorithms for quantization and signal compression in MATLAB. Basic principles and implementation of protective coding information. Protective coding algorithms in MATLAB. Basic principles and implementation of codes for fault detection. CRC coding algorithms in MATLAB. Basic principles of digital modulation. Examples of modulation scheme and implementation in MATLAB. Basic principles of design communication receivers. Equalization procedure. Examples of implementation of the equalizer in MATLAB. Basic principles simulations of the complete communication system. Examples of implementation of basic communication systems in MATLAB. Execution of simulation experiments and display in MATLAB.

ICE 904 Advanced Engineering Mathematics

Revision of linear algebra, ordinary differential equation, and Laplace, Fourier, and Z transforms. Complex variable, analysis, and applications. Fast computational methods for linear algebra and integral transform algorithms. Short time fourier transform and applications, Wavelet transform. Green's function, Bessel functions, gamma function. Euler transform. Metric spaces, and

algebraic structure. Linear spaces: Bannch and Hilbert spaces; operators in Hilbert spaces. Singular value decomposition vs eigenvalue decomposition and applications. Graph theory and applications. Residue number system and applications. Numerical methods in solving engineering problems. Probability and Statistics.

ICE 905 Software Engineering

Requirements engineering and management (e.g., elicitation, specification, and verification), software architecture design and evaluation (e.g., architectural design models, description languages, and evaluation methods), software development paradigms (e.g., Waterfall, Agile, Iterative, Open Source, and GSD) software verification and validation (e.g., testing and inspection) and empirical software engineering (e.g., experiments, case studies, surveys, and field studies).

ICE 906 Internet of Things and Cloud Computing

Introduction to the Internet of Things, What is the IoT and why is it important?, Elements of an IoT ecosystem, Technology and business drivers, IoT applications, trends and implications, Sensors and sensor nodes, Sensing components and devices, Sensor modules, nodes and systems, Connectivity and networks, Wireless technologies for the IoT, Edge connectivity and protocols, Wireless sensor networks, AI and Machine Learning for IoT, Analytics and applications, Signal processing, real-time and local analytics, Databases, cloud analytics and applications. IoT lab exercises .Local processing on the sensor nodes, Connecting devices at the edge and to the cloud, Setting up wireless mesh networks, Processing and analysing data offline and in the cloud

ICE 907 Intelligent Data Analysis and Database Management System

Advanced database modeling and design, database implementation, distributed databases, object-oriented and object-relational databases, and databases for web applications, data mining methods. design, implementation, performance tuning of different types of databases, performing data mining tasks on various types of data., design and implementation of large, distributed database systems, madvanced relational modelling and SQL, database design and management for enterprises, transaction management, security, Internet-based databases, data warehousing, business intelligence and Big Data fundamentals, infrastructures and analytics, data quality and security, practical component on a real-world based database design or analytics scenario.

ICE 908 Network Security and Management

Network security: Cryptographic Techniques: Security Protocols: General security architectural concepts, transport layer security protocol, network layer security protocol, IEEE LAN security protocol, OSI upper layers architectural overview, upper layers security model, security exchanges. Directory Systems Security Network management: Fault management; Performance management process, accomplishing performance management, reporting performance information. Accounting management; Network Management Protocols

ICE 909 Data Communication

Principles of data communications, the fundamentals of signaling, basic transmission concepts, transmission media, circuit control, line sharing techniques, physical and data link layer protocols, error detection and correction, data compression, common carrier services and data networks, and the mathematical techniques used for network design and performance analysis. Potential topics include analog and digital signaling; data encoding and modulation; Shannon channel capacity; synchronous and asynchronously transmission; RS232 physical layer interface standards; FDM, TDM, and STDM multiplexing techniques; inverse multiplexing; analog and digital transmission; V series modem standards; PCM encoding and T1 transmission circuits; LRC, VRC, and CRC error detection techniques; Hamming and Viterbi forward error correction techniques; BSC and HDLC data link layer protocols; Huffman, MNP5, and V.42bis data compression algorithms; circuit, message, packet, and cell switching techniques; public key and symmetric encryption algorithms, authentication, digital signature, and message digest techniques, secure e-mail, PGP, and TSL/SSL security algorithms; Ethernet, Wi-Fi, Optical, and IP networks; reliability and availability; and queuing analysis network performance techniques. Quality of Service parameters. Network Security - Physical Layer Security, Tunneling and Virtual Private Networks (VPNs), Network Address Translation (NAT), TLS Protocol, Public Key Infrastructures (PKI), IPsec Protocol

ICE 910 Decision Support Systems

The significance of decision making, aspects of human and organizational decision making, theories and models relating to decision making, decision support systems as a support for an organization's activities, ICT as a support for decision making, group decision support systems, theories, methods and techniques for the design, construction and implementation of situation-specific decision support systems, principles for: Expert Systems, Executive Information Systems, Knowledge Management Systems, data

warehousing, data mining and business intelligence, evaluation methods for decision support systems

ICE 911 Advanced Digital Signal Processing

Review of fundamentals of DSP: Discrete-time signals and systems, sampling and reconstruction, Z-transform, transform analysis of linear time-invariant systems, structures for discrete-time systems, Fourier analysis of signals using DFT, FFT. Digital filters: Digital and analog filtering, Filter specifications, Magnitude and phase responses, IIR and FIR filters, Design of IIR and FIR filters; Rational parametric models of random signals, Autoregressive models, Yule-Walker equations, Levinson-Durbin algorithm, Lattice filters, Schur algorithm. Adaptive FIR filters, Error-performance surface, Steepest-descent algorithm, LMS algorithm, Convergence properties, Gradient adaptive lattice filter, Method of least squares, Recursive least squares algorithm, Applications in telecommunications, image processing, video compression, audio system, etc. DSP Hardware: Fixed point and floating point DSP, merits, demerits, and applications

ICE 912 Advanced Wireless Communication and Management

Wireless LAN. Modem technologies, xDSL, cable modem. IP over different networks and internetworking. Internet Applications Model: Applications models: Remote login (TELNET, Rlogin), File transfer and access (FTP, TFTP, NFS), Electronic Mail (SMTP, POP, IMAP, MIME), World wide web (HTTP), Voice and Video over IP (RTP), Internet management (SNMP). Streaming technologies. W AP (Wireless Application Protocol). Internet Security and Electronic Commerce Technology: Internet security and firewall design (IP sec). Encryption standards. Electronic cash and transaction models. Internet business models and technology development. Introductory Concepts: Overview of digital communication and radio communication characteristics; Cellular concepts and frequency reuse; Cellular geometry; Co-channel interference and frequency planning; Signal quality, traffic capacity and cell sizing; handoffs and mobility management; cell splitting; other forms of wireless communication. Signal Impairments and Countermeasures: Path losses; Multipath propagation; Delay spread and ISI; Fading characteristics; Far-near and shadowing effects; Adaptive detection for processing severely distorted signals; Source and channel coding; Diversity techniques; Co-channel interference reduction techniques; Directional antennas; Sectorized cells; Adaptive antennas. Cellular Systems:

ICE 913 Microwave Engineering

Microwave Devices: Overview of performance characteristics and applications. Microwave Diodes. Microwave bipolar transistors, hetero junction bipolar transistors, Field Effect Transistors. Transferred Electron Devices. Avalanche Transit-Time Devices. Microwave tubes. Applications in microwave circuits. Network Analysis: Transmission Line Equations and Solutions, Smith Chart, ABCD Matrix, S-Parameter Matrix, Signal Flow Graphs. Impedance Transformation and Matching Impedance Measurements, Single-stub Matching, Double-stub Matching, Triple-Stub Matching, Impedance Matching with Lumped Elements, Waveguide Reactive Elements, Quarter-wave Transformer, Binomial Transformer, Chebyshev Transformer, Tapered Transmission Lines Waveguide and Coaxial Components: Rectangular, bends and twists, ridge, fin Line, terminations, attenuators, phase shifters, Circular Polarizers. Coaxial-to-Waveguide Transitions. Baluns. Stripline Circuits: Substrate materials, stripline, micro strip, terminations, attenuators, couplers, power dividers, isolators, resonators, filters. Power Measurements: Introduction, Types of Power Measurements, Sensors, Meters, Specifications

ICE 914 Optical Fibre Communication

Introduction: Basic optical communications, generations, merits and limitations of optical fiber communications. Optical Fibre: Geometry, wave propagation, dispersion, nonlinear effects, loss characteristics. Optical Receivers: Block diagram, P-I-N and Avalanche photodiode receivers, noise, sensitivity, bit error rate performance analysis, and design. Coherent Light wave Systems: Principles of coherent and non-coherent detection. ASK,PSK,FSK,PPM,DPSK modulation formats. synchronous and asynchronous demodulation. Bit error rate performance analysis. Performance degradation due to laser phase noise, group velocity dispersion, self phase modulation, polarization mode dispersion, relative intensity noise, effect of timing jitter. Doped fibre amplifiers, Brillouin amplifiers, Fiber Raman amplifiers; Amplifier noise; Amplifier gain

characteristics; Amplifier performance analysis; Optical time division multiplexing (OTDM).

ICE 915 Satellite Communications

Elements of satellite communications: Satellite frequency bands, transmission and multiplexing schemes, trans-multiplexing, multiple access schemes. Communication satellites: Satellite orbit, laws governing satellite motion, satellite paths, geostationary satellites, non-geostationary constellations, satellite subsystems, launching of geostationary satellites. Earth stations: Earth station antennas: types of antennas, antenna gain, pointing loss, gain-noise temperature ratio, effective isotropic radiated power (EIRP); high power amplifiers; low noise amplifiers; up and down converters: conversion process, polarization hopping, redundancy configurations; earth station monitoring and control. Satellite link design: Basic link analysis, attenuation, sources of interference, carrier to noise and interference ratio, system availability, frequency reuse, link budget, link design. Multiple access techniques: FDMA

ICE 916 Software Development in Telecommunication

Telecommunication software development: Introduction. Examples of life cycles (V life cycle, Y life cycle, spiral life cycle, etc. Methods and tools for: requirement capture, analysis, specification, architecture, design and development. Finite state machines: the SDL language. Programming: Overview of programming languages (C, C++, Java) in telecommunication. Real-time programming. Programming for embedded systems. Performance and memory management. Configuration management. interfaces definition: Problem overview. Transparency of distribution. Distributed OO: the COREA solution, the Java solution. Interface specification in TMN. System tests: Unit tests. Software integration tests. Hardware integration tests. Embedded software tests. Performance and conformance tests. Testing of OO software. CASE to test: Attols, Insure, Hindsight, etc.

ICE 917 Ph.D. Thesis

ACADEMIC STAFF

S/N	Name of Staff	Qualification	Specialization	University
1	Prof. H.C. Inyiama	B.Eng, M.Eng, PhD	Computer Engineering	Visiting Professor
2	Prof. Ighalo.G.I	B.Eng, MSc, PhD	Electronic & Computer Engineering	Visiting Professor
3	Prof. I.L.Oborkhale	B.Eng, MSc, PhD	Communication Engineering	Visiting Professor
4	Prof. A.O Ibe	B.Eng, Ph.D	Electrical Engineering	Professor
5	Prof. S. N. Ndubisi	B.Eng, M.Eng, PhD,	Electrical Engineering	Professor
6	Prof .E.O.Nwachukwu	B.Eng, MSc , PhD	Computer Science	Professor
7	Prof.A.O.Kuye	B.Eng, MSc, PhD	Chemical Engineering	Professor

8	Prof I.L Nwaogazie	B.Eng, MSc, PhD	Civil Engineering	Professor
9	Prof Kalu. S.E	BSBA,MBA,Ph.D	Marketing Management	Professor
10	Dr. J. J. Biebuma	B.Eng, MSc, PhD	Communication Engineering	Snr. Lecturer
11	Dr. B. O. Omijeh	B.Eng, MSc, PhD	Electronic & Communication Engineering	Snr. Lecturer
12	Dr. U.A. Kamalu	B.Eng, MSc, PhD	Computer Engineering	Snr. Lecturer
13	Dr . C. Ugwu	B.Sc, MSc, Ph.D	Computer Science	Snr. Lecturer
14	Dr. N., O. Nwazor	B.Eng, M.Eng, PhD	Electronic & Communication Engineering	Lecturer I
15	Dr. S.I Orakwue.	B.Eng, M.Eng, PhD	Electronic & Computer Engineering	Lecturer I
16	Dr.I.B Asianuba,	B.Eng, M.Eng, PhD	Electronic & Communication Engineering	Lecturer I

INDUSTRY RESOURCE PERSONS

S/N	Name of Staff	Qualifications	Rank/Designation	Specialization
1	Dr.Frank Edughom	B.Eng, M.Eng, PhD, Elect/Elect. with 12 Years ICT working Experience	Software Engineer	Software Engineering
2	Dr. Chidi. Diugwu	B.Eng, M.Eng, PhD, Telecommunications .with 12 Years ICT working Experience	Microwave Engineer	Microwave Engineering
3	Engr. Faheed Olajimi	B.Eng, Alcatel Lucent Telecom Certifications + 10 years ICT Experience	Technical Manager	Mobile Engineering
4	Daenwi, Tonye.L	B.Eng, M.Eng (Computer Science), 7 years Working Experience	Chief Software Developer	Information and Technology
5	Engr. Daniel Ekpah	B.Eng, M.Eng (Computer / Communications Engineering, 8 years Working Experience	Network Engineer	Network Communication
6	Engr. Stanislaus Oguokebe	B.Eng, M.Eng (Electronic & Telecom, 8-Years Experience	Satellite Engineer	Satellite Communication
7	OSIKIBO, Tamuno-Ibuomi Lewis	B.Eng, M.Eng (Elect/Elect)-7 years experience	Control Engineer	Electronic and Control Engineering

INSTITUTE OF NATURAL RESOURCES, ENVIRONMENT AND SUSTAINABLE DEVELOPMENT (INRES)

M.SC DEGREE PROGRAMME IN NATURAL RESOURCES AND ENVIRONMENTAL MANAGEMENT

BRIEF HISTORY OF THE INSTITUTE

The Institute of Natural Resources, Environment and Sustainable Development (INRES), University of Port Harcourt, was established 2011 as a multidisciplinary Centre of Excellence in Natural Resources, Environment and Sustainable Development through a 3 – year grant from the John D. and Catherine T. MacArthur Foundation, Chicago, USA. The grant was awarded to the University based on grant application proposal jointly written by Prof. Enuvie, G. Akpokodje, (Geology; Principal investigator), Prof. B. C. Ndukwu and Prof. I. O. Agbagwa (Plant Science & Biotechnology; co-investigators). The proposal was the only one approved by the MacArthur Foundation in 2011 out of a total of 15 proposals submitted by Nigerian Universities.

In March 2012, Prof. Enuvie G. Akpokodje was appointed pioneer Director of INRES by the Vice Chancellor of the University of Port Harcourt, Prof. J. A. Ajiinka, for a two-year term. This appointment was re-newed in August 2014 for another two years. Professor Ndukwu of blessed memory was appointed Director of INRES after the tenure of Prof. Enuvie G. Akpokodje. Dr. V. Weli now Professor Weli acted briefly as Acting Director who succeeded Professor Ndukwu after his demise. Professor A. I. Hart was appointed as Director of INRES on February 2020 with Richmond U. Ideozu (PhD) as Assistant Director in March 2021.

VISION OF THE INSTITUTE

The vision is to be a world class Centre of Excellence for inter – trans – and multi-disciplinary graduate education, applied research and capacity building in natural resources, environment and sustainable development in Nigeria, the West African sub-region and the international community.

MISSION OF THE INSTITUTE

The mission is to produce competent indigenous manpower capable of developing and implementing integrated, multidisciplinary and sustainable solutions to developmental, environmental and natural resources management challenges. The specific objectives include:

- Promote and facilitate sustainable development in Nigeria and beyond.

- Produce quality Master of Science, Doctorate and postgraduate Diploma/Certificate graduates with multidisciplinary training.
- Enhance the technical skills and managerial capacity of the workforce of government organizations, industry and local community/civil society through specially designed professional short courses to address identified knowledge/skill deficiencies;
- Participate in innovative national, regional and global initiatives/projects that shape our sustainable future.

NATURE OF THE PROGRAMME

ENTRY/ADMISSION REQUIREMENTS FOR PGD, MSc AND PhD

Admission is open to first degree graduates in science, social sciences, engineering, health sciences and related disciplines who possess relevant academic qualifications. For the Postgraduate Diploma the candidates must have a minimum of Bachelor of Science with at least third class honours or Higher National Diploma (HND) from recognized institutions and who passed with a minimum of Upper Credit. Doctor of Philosophy (PhD) a CGPA of not less than 3.50 on 5-point is required. Candidates for PGD and M.Sc. are to undertake a written test and an oral interview. PhD candidates must prepare and present acceptable proposal prior to admission.

MODE OF STUDY AND PROGRAMME DURATION

All INRES programmes – PGD, MSc and PhD are modular but may be full-time or part-time. PGD, MSc runs for 12 calendar months (full-time) and 24 months (part-time) inclusive of taught courses and dissertation. PhD duration is a minimum of 24 months (full-time) and 36 months (part-time). INRES programmes and activities are not affected or disrupted by strike actions. There is no interruption. The duration of the programme for fulltime students is a minimum of 12 months, one (1) year for both MSc and PGD programs and maximum of 24 months (2) for PhD programs.

REGISTRATION OF STUDENTS

All new students required to undergo preliminary screening exercise before registration of courses. They are required to present original copies of certificate(s) to the screening officer(s) who would check-if they met the general University and Institute's admission requirements.

REGISTRATION AT THE UNIVERSITY LIBRARY

Fresh students are required to register with the University Library. They are to show to Library authorities, Original School Fees Receipt and Admission Letter.

IMPORTANT INFORMATION TO NOTE

1. NON-REFUND OF FEES

The Institute does not refund any fees/charges paid in error. Intending students should therefore obtain proper clearance before paying any fees.

2. GRADING SYSTEM

The following grading system which is uniform for all Faculties is applicable. Students are obliged to sit for examinations in all registered courses. Any student who fails to sit for any course examination without satisfactory reasons will earn the grade "F".

Mark/Score	Letter Notation	Grade Points
70% and above	A	5.00
60-69	B	4.00
50-59	C	3.00
0 – 49	F	0

DEGREE AWARDED

INRES degrees for all the programmes – PGD, MSc and PhD is in Natural Resources and Environmental Management. The PhD however have three (3) specialized areas or options in which candidates may carry out their research. These are:

- Impact Assessment and Remediation
- Bioresources Development and Conservation
- Coastal Zone Management and Climate Change

CODES AND RULES OF THE INSTITUTE

All students of the Institute are expected to demonstrate the highest mark of conduct and decorum at all times. They are further required to:

1. Obey the laws and regulations of the University.
2. Respect the statutory rights of staff and students and be polite.
3. Attend and never boycott lectures.
4. Obey Lecturer's instruction on academic matters.
5. Register for all courses and attend not less than 75% of lectures/practical to qualify to write the course examination.
6. Be punctual to lectures and laboratory practicals; attendance will be kept for all courses.
7. Avoid any form of examination malpractice.
8. Avoid membership of secret societies/cult.

9. Avoid anything that will tarnish the image and reputation of the University.

COURSE DESCRIPTIONS

PhD Courses

CGS 801 – ICT, Research Methods and Proposal Writing (2credits)

Spreadsheets – Microsoft Excel, Basic computing knowledge/window 2008; Internet Technology; Statistical packages; precision and accuracy estimates; principles of scientific research; basics of PowerPoint Presentation; concepts of hypothesis formulation and testing; and organization of research and technical report writing.

CGS 802 - Management and Entrepreneurship (2 credits)

Business environment and bioenterprises; basics of business and financial management; entrepreneurship development; feasibility studies; marketing and managerial problem solving.

NREM 901 – selected topics in Natural Resources, Environmental Management and Sustainable Development (3 credits)

Climate Change – Policy Response, Impact Assessment and Mitigation; Green Economy; GIS, Remote sensing and Modeling; Pest, Weed Control, Horticulture and Landscaping; E – Waste management.

NREM 902 - Advanced Natural Resources Stewardship and Environmental Advocacy (3 credits)

Environmental auditing and management Systems; national and international environmental laws, treaties, conventions and regulations; Public participation & Citizen group action in Environmental management; etc.

Elective Courses:

NREM 903 - Recent developments in ecological issues and biodiversity conservation (3 credits)

Ecological footprints; energy development and biodiversity; integrating biodiversity considerations into impact assessment; biodiversity and risk assessment; biodiversity hotspots and early warning signals – environmental sensitivity index mapping.

NREM 904 - Contemporary issues in environmental Geoscience with emphasis on water Resources Assessment and Management (3 credits)

Integrated water resources management; Groundwater Resources Assessment and

Management; Waste water treatment technologies; engineered sanitary landfills and solid waste handling; Ground water Risk Assessment and Remediation; Integrated Coastal Zone Management (ICZM).

NREM 905 - Advanced environmental Management and systems (waste management, remediation and modeling) (3 credits)

Waste characterization, Waste Disposal and Management Methods; - Hazardous and Toxic Wastes; drilling wastes, radioactive and medical wastes etc.

NREM 906 - Advanced environmental Toxicology and hazardous waste treatment. (3 credits)

Chemicals in the Environment; Fate and Transport; Contemporary issues on Environmental Toxicology – Systemic ecotoxicology, toxicity soils and dispersants (including OBM), Toxins and fates of absorbed toxins; etc.

NREM 907 - Environmental Quality and Remediation (3 credits)

Key pollutants, environmental factors impacting the fate and transport or pollutant; effects on human health and ecology. Green remediation measures. Evaluation of chemical, microbial and phytoremediation techniques in clean – up operations.

NREM 908 - Environmental Forensics (3 Credits)

Tracing environmental contaminants back to their point of origin. Methods of contaminants identification; This is important for the Niger Delta region which contains hundreds of Brownfield sites and their restoration/reclamation often involves public debate and law suits over the nature of contaminants on the site; identifying the party or parties responsible for those contaminants, and determining legal consequences and financial liability of the cleanup costs.

NREM 909 - Environmental Policy, Social and Management Impacts (3 credits)

Research in sustainability science and public policy and rural/urban development practices; Technical, economic, social barriers to the development of sustainability energy practices (e.g. solar, geothermal etc.) Constructing indicators and establishing models for monitoring urban systems; Enhancing sustainability, equity, and vulnerability reduction in communities and institutions.

NREM 908 - Research and Dissertation (9 credits)

This is a supervised advanced research intended to solve problems and will usually involve experiment, fieldwork, statistical analysis or simulation studies.

M.Sc. Courses

NREM 801: Introduction to Natural Resources & Environmental Management

The course gives a general overview of the natural resources industry and environmental resources industry and environmental management. It explores the nature of the inter-relationship between environmental systems and human systems, and examines the complexity of environmental policy, planning and management. The course enables students to gain an appreciation of the complex and trans-disciplinary nature of environmental management issues and the inherent challenges in multi-disciplinary approaches to environmental management. It introduces renewable and non-renewable natural resources and the issue of consumption and sustainability.

NREM 802: Health, Safety, Environment and Corporate Social Responsibility

This course enables students to appreciate the issues of health, safety, environment and social responsibility of industries. Companies are increasingly under pressure to address their social and environmental responsibilities. Topics include, social, health and environmental auditing corporate social responsibility (CSR) reporting, engagement of stakeholders and communities, participation of civil society groups, advocacy and communication.

NREM 803: Entrepreneurship

This course develops practical abilities and skills in entrepreneurship. It examines the broad areas of entrepreneurial business creation and management and historical perspective. Topics include: history and development of entrepreneurship theory, types of and characteristics of entrepreneurs, creativity and innovation, entrepreneurial process, feasibility study, business plans, pricing and bookkeeping, human resource management and marketing.

NREM 804: Fundamental of Environmental Biology

The Course introduces students to fundamental principles of Environmental Biology including plant, wildlife, marine and fishery resources as well as micro-organisms in relation to the environment. Topics include: habitats and management needs and tools; productivity patterns and stock dynamics; state of world wildlife and fishery resources and management; micro-organisms; microbial functions and activities in

natural environments; microbiological methods and techniques, etc.

NREM 805: Fundamentals of Environmental Geosciences

The earth as a system (Geosphere, biosphere, hydrosphere, atmosphere) and its interactions. Origin, structure and composition of the earth. The common rock-forming minerals, minerals and rock classification, rock cycle, elements of structural Geology (faults, folds, etc.). Economic minerals, energy and fossil fuel resources. Concept of plate tectonics and surface processes (Weathering, erosion, transportation and deposition).

NREM 806: Environmental Chemistry & Toxicology

The course deals with the principles of environmental chemistry and toxicology, focusing on issues relating to the chemistry and toxic potential in the environment and their management. Topics include: Basic concepts in soil chemistry and chemical properties, soil micro and macro nutrients, Biogeochemical cycle, Toxicity of oils and dispersants (including OBMs), Dose-response relationship, Quantification of toxicity indices, Range-finding tests, Probit analysis, Abott's correction formula, applicability of toxicity data in risk assessment and environmental monitoring.

NREM 807: Fundamentals of Economics and Project Costing/Analysis

This course provides a basic understanding of economic principles and its roles in natural resources and environmental management. The course also explores costing techniques, methods and their practical applications as well as economics of ecologically sustainable development. Topics include: market and non-market approaches, microeconomics, macroeconomics, supply and demand, Natural Environment and Human Economy, Resources Economics, Resource Scarcity, and Economic Efficiency, projects progress control and final cost, budgets and budgetary control, effective administration and management of contracts, competitive bidding, selection of successful bid, proper planning, documentation and execution of contract in the Nigerian oil exploration and production ventures.

NREM 808: Fundamentals of GIS and Remote Sensing

The course introduces students to principles and applications of geographic information systems (GIS) and remote sensing. It provides the basic theoretical, technical and analytical skills necessary to apply GIS to simple spatial problems. Topics include: A review of analysis functions,

selected advanced analysis, Modelling and flowcharting and Raster analysis GIS software package, data capturing techniques, spatial data and data models, cartographic techniques, GIS design and implementation as well as satellite imagery interpretation.

NREM 810: Sustainable Development: Concept, Principles and Practice

Sustainable Development is the current broadly-endorsed framework for environmental management and the emphasis in this course is exploring conceptual and practical framework for environmental management. Key topics include: development of the concepts of sustainable development and sustainability; Disciplinary perspectives/approaches (philosophy, economic, ecological, socio-cultural, governance health sciences etc.); Critiques of sustainability as a framework for environmental management; problems in practical interpretation and implementation of sustainability; Response to the sustainability framework by different levels of governance, corporations, professionals and International community. Poverty and the environment, community participation in development, practice of sustainable development and environmental management in Nigeria.

NREM 811: Environmental Impact Assessment (EIA, SIA & HIA)

This course provides an introduction to the wide range of "tools" used in environmental management and for environmental decision making. Topics include: interrelationship among Assessment; Environment and Development; evolution of Environmental Assessment; Procedures and steps in Environmental Impact Assessment (EIA), Social Impact Assessment (SIA), and Health Impact Assessment (HIA); Public Participation; Strategic Environmental Assessment (SEA); Policy formulation; risk management systems, etc. Effectiveness and challenges of contemporary EA practices. Environmental Auditing and Management Systems.

NREM 812: Ecosystem and Natural Resources Management/Conservation

The course introduces students to the interdisciplinary nature of ecosystem management/conservation and natural resources (including forest, wildlife, aquatic, geological). The complexity of managing dynamic ecosystems with on-going biodiversity changes. Need to balance ecological needs with economic, political and socio-cultural demands. Other topics include: threats to biodiversity; conservation genetic; wildlife population management; impacts of climate change; balancing stakeholder interests.

NREM 813: Waste Management, Pollution Assessment and Remediation

This course provides a comprehensive, interdisciplinary knowledge of waste management, fate and transport of inorganic and organic pollutants in the subsurface and integrated site characterization and assessment for subsurface remediation of contaminated sites. Topics include; waste management approaches, conceptual site models (CSM), Risk Based Site characterization, advection – dispersion theory, non-aqueous phase (LNAPLs & DNAPLs) in the subsurface, microbial processes, conceptual approach to soil remediation, integrating site characterization with selection of remediation methods, treatment approaches, treatability studies, preparation of remediation action plan, Bioremediation, monitoring and regulation of remediation standards.

NREM 815: Water Resources Assessment and Management

The course provides a comprehensive knowledge of several concepts relating to Water Resources Assessment and Management. Topics include: Concepts of sustainable water resources management and integrated water resources management, water quantity and quality, water use and demand including the value of water to the environment, irrigation agriculture and urban uses, water use efficiency and recycling, water policy and planning including principles of water reform, current developments in water policy and catchment-based decision-making. Climate change and Water Resources Sustainability.

NREM 816: Ecology, Biodiversity and Contemporary Issues

The concept of conservation – historical perspective; biodiversity and business; Biodiversity Action Plans (BAPs) and parameters for the assessment of biodiversity (Rapid Forest Assessments); Criteria for protecting an area; international coalition for biodiversity – UNCED 1992 and biodiversity, the convention on Biological Diversity (CBD); other international agreements and treaties on biodiversity conservation; Biodiversity conservation efforts in Nigeria (public sector and NGOs); forest and rangeland resources; wildlife and fisheries.

NREM 817: Climate Change and Coastal Zone Management

This course provides students with in-depth knowledge of concepts, policies, tools and techniques necessary for coastal zone management with emphasis on trans-disciplinary and large marine Ecosystems (LME) approaches as well as relevance of climate change impacts. Topics

include; global warming, climate change see level rise, overview of coastal zone management (imperatives, implementation and impacts); dynamics and processes along shoreline, coastal erosion, transport, deposition and resultant geomorphologic features; coastal zone anatomy (evolution, classification, characteristics and interrelationships with emphasis on the Nigerian coastal zone); Human-coast interaction (consequences, use-conflicts and costs); Coastal hazards; Mitigating coastal zone abuse; pollution, erosion and flooding; global warming and see level rise; ecological changes and conservation; coastal resource over-exploitation/mismanagement; population migration/displacement.

PGD Courses

NREM 700.1 - Introduction to Environmental and Natural Resource Management (2 Credits)

Definition and components of the environment, definition and classification of natural resources; importance of natural resources, impacts and threats to natural resources availability, importance of environmental and natural resources management; Nigerian Environment and Natural Resources (Understanding the Nigerian Environment and factors that define it, type and distribution of natural resources, causes of threats/depletion of Natural resources in Nigeria).

NREM 701.1 - Entrepreneurship and Project Management (2 credits)

Principles of entrepreneurship and project management; project costing and analysis; contract sourcing and bidding; opportunities in the environmental and natural resources sector.

NREM 702.1 - Principles of Ecology, Biodiversity and Conservation of Natural Resources (3 Credits)

Basic ecological concept, ecosystem structure and dynamics, biogeochemical (nutrient)cycles, ecological factors and species distribution, the concept, value and distribution, the concept, value and distribution of biological diversity, threats and causes of biodiversity loss, extinction of species, principles and methods of conservation of biodiversity and natural resources, convention on Biological Diversity (CBD), Protected Areas System.

NREM 703.1 - Hydrology, Watershed and Coastal Zone Management (3 Credits)

Basic geology of Nigeria, Managing impacts on watershed and water resources and understanding the relationships among forest, soil, water, land-use, and people. Management of wild lands watershed for control of the amount and timing of water yield, storm flow, water quality, erosion, and

sedimentation (emphasis on forest and water resources management), integrated coastal zone management.

NREM 704.1 - Principles of Sustainable Development in Management of Environmental and Natural Resources (3 Credits)

Definitions and evolution of sustainable development (SD) concept, sector applications and practice of sustainable development, principles of sustainable management of environment and natural resources, role of business in SD, Environmental and Natural Resources Economics and Governance (Socio-cultural perspectives and models for understanding human-environment interactions, Economic analysis of natural resources; economic principles in the management and use of natural resources, Governance (Survey) and analysis of policies, Legislation, institutions, and processes relating to the use of natural resources); the 'equator principle'.

NREM 705.1 - Impact Assessments and Environmental Laws/Regulations (2 Credits)

Meaning and types of impact assessments applicable in Nigeria: EIA, EA, PIA, EER, Baseline Assessment, etc.: legal and regulatory basis of IAS, environmental components for assessment (biogeophysical, health and social), EIA report preparation, environmental management plan (EMP.) EMS, typical EIA.

NREM 706.2 - GIS and Remote Sensing Application Natural Resources Management (3 Credits)

GIS and spatial techniques in environmental and natural resource management. Spatial data structures, map projection, global positioning system. How to create spatial data sets through GPS survey, Utilization of GIS software and performance of basic spatial analysis.

NREM 707.2 – Global Warming and Climate Change (3 Credits)

Understanding the basic science of global warming and, climate change evidence of global warming and climate change, likely impacts on environment and natural resources, current response and

activities towards reducing human-induced climate change, international conventions on climate change; principles of carbon trading; green economy.

NREM 708.2 – Environmental Hazards, Risks and Management (3 Credits)

Major environmental hazards and risks (flood, erosion, desertification, wildfires, etc.), causes, impacts and management of these hazards and risks; geographical distribution and preponderance of these hazards in Nigeria.

NREM 709.2 – Environmental Health, Pollution and Toxicology (3 Credits)

Concept of environmental pollution, causes, sources, effects and control of environmental pollution, chemicals in the environment – fate and transport, basic ecotoxicology – types, sources and effects of toxins environmental toxins; health hazards or work environment, public health, modern ergonomics and industrial psychology.

NREM 710.2 - Environmental Remediation and Waste Management (3 Credits)

Types and sources of waste; Waste characterization, Waste Disposal and Management Methods; Hazardous and Toxic Waste Disposal and Management – drilling wastes, radioactive and medical waste handling; Remediation – types, methods, principles and practice.

NREM 711.2 – ICT, Research Methodology and Anti-Plagiarism (1 Credit)

Basic computing knowledge; Internet Technology; Statistical packages; precision and accuracy estimates; principles of scientific research; concepts of hypothesis formulation and testing; and organization of research and technical report writing; anti-plagiarism checks.

NREM 712.2 – Research Project (6 Credits)

This is a supervised research intended to solve some identified problems and may involve some experiment, field work, statistical analysis or simulation studies.

PARTICIPATING LECTURERS

S/No	Name	Qualifications	Designation	Area of Specialization
1	Ibitoru A. Hart	PhD	Professor	Hydrobiology/Fisheries
2	Adesope. O. M	PhD	Professor	Agricultural extension and developmental studies
3	A.A. Obafemi	PhD	Professor	GIS, and Environmental Management
4	G.J. Udom	PhD	Professor	Hydrogeology/Engineering Geology
5	G. O. Avwiri	PhD	Professor	Environmental Physics
6	N. Frank-Peterside	PhD	Professor	Medical Microbiology/ Environmental Health
7	Abu. C. O	PhD	Professor	Environmental microbiology
8	Leo O. Osuji	PhD	Professor	Environmental/Petroleum Chemistry
9	I. O. Agbagwa	PhD	Professor	Biosystematics/Taxonomy, EIA
10	Best Ordinoha	PhD	Professor	Environmental health
11	Stanley. H. O	PhD	Professor	Environmental microbiology
12	Vincent-Akpu. I	PhD	Professor	Ecotoxicology and hydrobiology
13	N. Zabbey	PhD	Professor	Hydrobiology/Fisheries
14	Onoja. A. O	PhD	Reader	Agricultural Economics (Resource and Environmental Economist)
15	Edache Bernard Ochekwu	PhD	Reader	Phytoremediation and Plant Ecology
16	R. U. Ideozu	PhD	Senior Lecturer	Petroleum Geology Sedimentology/Reservoir Geology
17	G. W. Komi	PhD	Senior Lecturer	Hydrobiology, Radioecology/Ecotoxicology
18	Nwankwoala. H. O	PhD	Senior Lecturer	Hydrogeology and environmental geology
19	Okere. K. J	PhD	Senior Lecturer	Impact assessment and remediation
20	Ngobiri. C	PhD	Senior Lecturer	Environmental and Material Inorganic Chemistry
21	Iwunze. E	PhD	Senior Lecturer	Environmental Health
22	Mark Ogoro	PhD	Senior Lecturer	Coastal Geomorphological Studies, Geo-Spatial Technique (Cartography, GIS and Remote sensing)
23	Ademola Tinubu	PhD	Lecturer (Industry)	Regional Planning and Environmental Management
24	Green. A. C	MSc	Lecturer (Industry)	Environmental studies and impact assessment audit

AFRICAN CENTRE OF EXCELLENCE IN PUBLIC HEALTH AND TOXICOLOGICAL RESEARCH (ACE-PUTOR)

Introduction

The African Centre of Excellence in Public Health and Toxicological Research is a regional Centre established to promote collaboration and interdisciplinary research; build strong reputation for excellence; support teaching, learning, assessment of students; provide uninterrupted research and learning Calendar for local and international students. The Centre's mission is to become a platform to congregate highly skilled human resource both within and outside the UniPort; build a robust resource of highly skilled and motivated public health professionals who are equipped with current knowledge, skills and competencies required to improve the practice of public health, human/community nutrition, toxicology and midwifery/child health nursing; produce cutting –edge research projects to solve public health issues arising from oil and gas sectors and undertake consultancy and community services

POSTGRADUATE DIPLOMA IN NURSING SCIENCE

Entry Requirements for Post graduate Diploma in Nursing Science

Eligible candidates for the PGD in Nursing Science would be those with:

- Five O' level credits in the following subjects: which must include: English Language, Mathematics, and Biology/ Health Science
- Registered Nurse and Registered Midwife who had his/her first Degree in a health-related field and seeks to proceed for higher degree in any nursing specific (e.g., MSc Nursing, MSc Midwifery, MSc Public Health Nursing etc)
- Candidate with BNSc whose Cumulative Grade Point Average (CGPA) is **below** the University's requirement for master's degree programmes.
- Bachelor of Nursing Sciences with a Pass or 3rd class
- Bachelor of Midwifery Science (Pass or 3rd class)
- HND in public health nursing with a CGPA of 3.00 on a 5-point scale (lower credit)
- Must be a registered nurse and have a valid practicing license (Nigerian only)
- NYSC discharged certificate or EXEMPTION letter (Nigerian only)

Duration of Programme

Full time PGD – 12 months minimum to 24 months maximum

Part-time PGD – 24 months minimum to 36 months maximum

Graduation requirements

Students would meet the following requirements to qualify for the award of the Postgraduate Diploma in Nursing Science (PGD. Nursing Science)

- i. The student must have successfully completed all the prescribed courses in the programme
- ii. The student must meet the other requirements set by the School of Graduate Studies and the Africa Centre of Excellence in Public Health and Toxicological Research

List of courses in the Postgraduate Diploma in Nursing Science

Code	Credit Unit	Course
PUT 721	4	Advanced Medical-Surgical nursing
PUT 722	3	Advanced Mental health and Psychiatric nursing
PUT 723	4	Advanced Maternal and Child health
PUT 724	3	Community midwifery
PUT 725	3	Advanced community/Public health nursing
PUT 726	3	Introduction to Epidemiology
PUT 727	3	Principles of Teaching & Admin. Applied to Nursing
PUT 728	3	ICT, Nursing informatics & Biostatistics
PUT 729	2	Practicum/Field Trip
PUT 730	2	Seminar
Total Credit Units		30

Course Description

PUT 721: Advanced Medical - Surgical Nursing (4 Units)

Covers the application of Nursing Process approach in the management of clients (adult and children) with acute and chronic disease conditions affecting all system and conditions affecting the special senses. Exploration of concepts of critical thinking, evidence-based practice and reflective nursing care.

PUT 722: Mental Health and Psychiatric Nursing (3 Units)

Focuses on Planning, Implementation and Evaluation of Community Mental Health programme, (institutional and community care); Rehabilitation of the mentally ill and preventive mental health (primary, secondary and tertiary). The roles of the traditional healers in society and effects

of urban- rural migration on mental health, typology of crisis and crisis intervention in psychiatric nursing care will also be discussed as well as the role mental/psychiatric health care in schools, industries and homes.

PUT 723: Advanced Maternal and Child Health (4 Units)

This course is designed to prepare students to recognize those conditions that complicate or suggest deviation from normal during pregnancy, labour and puerperium. Obstetric emergencies in pregnancy and labour, obstetric interventions and management of abnormalities affecting the neonate. It highlights the midwife's role and responsibilities in early diagnosis, appropriate intervention and referral when necessary. Family care studies on abnormal midwifery is essential

PUT 724: Community Midwifery (3 Units).

This course is designed to enable the students identify basic concepts and principles of primary health care as it relates to midwifery practice in the community. Covers knowledge in the delivery and care of individuals and expectant families in both urban and rural areas of the community and use of delivery kit. It provides in-depth knowledge in the care of the expectant families in the community as well as utilizing available resources in planning and management of midwifery services. It also high light the role of the midwife in the health care team within the community

PUT 725: Advanced Community/Public Health Nursing (3 Units)

Entails further development of student's knowledge and skills in the planning, organization and administration of community health and primary health care services. The course emphasizes application of integrated knowledge in the development, implementation and evaluation of community health nursing and primary health care programmes, using a model of Community Health Planning cycle of "Need Assessment or Community Health diagnosis, development of care plans, implementation of care.

PUT 726: Introduction to Epidemiology

The course will introduce the students to the principles and concepts that guide the practice of epidemiology. Emphasis will be placed on factors that influence the distribution and serve as determinants and deterrents of health-related events. Disease outbreak investigation and the application of epidemiologic principles in the control of diseases of public health importance will also be taught.

PUT 727: Principles of Teaching and Administration Applied to Nursing (3 Units)

Focuses on the techniques and theories of teaching and administration in the practice of nursing, and effective teaching and administration are taught. The role of the nurse in the teaching of nursing students and clients is emphasized, also the administration of the health area facilities/resource management principles and techniques, problem solving, leadership dynamics effective communication. Other topics covered are factors in the teaching learning process and contemporary issues in nursing administration.

PUT 728: ICT, Nursing Informatics and Biostatistics (3 Units)

The course incorporates computer and information technology computer appreciation and information management system, data information management cycle, documentation and record keeping, eHealth, including mHealth, facility and home-based records, and the Integrated Disease Surveillance and Notification System, internet sources of health information, support system for service and research, computerized decision into nursing practice. The course is designed to provide the student with adequate knowledge and skills required to carry out research study, and to apply statistics and statistical packages in nursing research. It will also teach the students how the information obtained from the analysis of health data can be used to detect health problems, define priorities, identify innovative solutions and allocate resources to improve health outcomes.

PUT 729: Practicum/Internship.

The course provides opportunity for the students to have hands on experiences and apply the concept and theoretical aspect of nursing using a simulation and a real-life situation in the laboratory and designated practice centers/clinics.

PUT 730: Seminar

Seminar topic related to public health nursing and in the candidate's area of interest will be developed and presented in a report and examined orally by a panel of internal examiners. The students are expected to undertake a detailed systematic review of current literature on the basic concepts that are related to seminar topic.

MASTERS IN FERTILITY NURSING

Admission Requirements

Eligible candidates for the MSc Fertility Nursing would be those with:

- Five O' level credits in the following subjects: Biology, Chemistry, Physics, Mathematics and English Language at WAEC or NEC
- First Degree in Nursing with not less than second class honours lower division.
- Registered and licensed as a Nurse or Midwife

Programme Duration

- Full time (MSc) – 12 to 24 months
- Part-time (MSc) – 24 to 48 months

Graduation Requirements

To qualify for the award of the MSc, the candidate must have successfully completed all the prescribed courses in the programme including a scholarly research project and undertaken an internship period of 2 months.

List of courses, code and credit units in MSc Fertility Nursing

Course Code	No. of Unit	Course Title
PUT 800	0	Foundation to Graduate Studies
PUT 841	3	Fundamentals of fertility nursing practice
PUT 842	2	Applied Anatomy/physiology of the reproductive system
PUT 843	2	Applied Embryology, genetics and immunology
SGS 801.1	2	ICT and Research Methodology.
PUT 849	3	Biostatistics
SGS 801.2	2	Management and Entrepreneurship
PUT 844	3	Fertility and pre-conception care
PUT 845	3	Infertility and its management
PUT 846	3	Third party reproduction
PUT 847	3	Assisted Reproductive Technology (ART)
PUT 848	2	Ethico-legal aspects in fertility management
PUT 808	6	Dissertation
PUT 811	0	Internship
PUT 807	2	Seminar
	36	Total

COURSE DESCRIPTION

PUT 841 Fundamentals of fertility nursing practice (3 credits)

This course introduces the students to the historical perspectives, scope of practice, roles, basic concepts and theoretical foundations of fertility nursing care. It covers the basic concepts of fertility nursing practice, perspective of fertility nursing practice and the theories applied to fertility practice

PUT 842 Applied anatomy/ physiology of the reproductive system (2 credits)

This course builds on the already acquired knowledge of anatomy and physiology with special application to fertility. The course covers female and male reproductive system, Endocrine system Nervous system and Renal system in relation to fertility.

PUT 843 Applied embryology, genetics and immunology (2 credits)

This course is designed to enable students acquire the knowledge of embryological development and standard practices in handling and manipulation of gametes in order to achieve pregnancy. The course covers fundamental of embryo, seminal fluid analysis and sperm preparation, cryopreservation, laboratory management, daily quality Index, record keeping and documentation and laboratory key performance. The course will also assist the students understand the influence of genetic and immunological reactions in ART.

SGS 801.1 ICT& Research Methodology (2 credits)

This course should cover essentials of ICT especially the use of Microsoft Word, Spreadsheet, Power point, Access and Project. It will also examine common statistical packages used in health research. The contents will include Research paradigms, types of research, purpose and significance of research, Research topic\statement of problem, literature review, research method and methodology, data management, research communication, branches of statistics, data presentation, measures of central tendencies, dispersion and partition, probability distribution, association and predictions and testing of hypothesis etc

PUT 849 Biostatistics (3 credits)

The course incorporates computer and information technology computer appreciation and information management system, data information management cycle, documentation and record keeping, eHealth, including mHealth, facility and home-based records, and the Integrated Disease Surveillance and Notification System, internet sources of health information, support system for service and research, computerized decision into nursing practice. The course is designed to provide the student with adequate knowledge and skills required to carry out research study, and to apply statistics and statistical packages in nursing research. It will also teach the students how the information obtained from the analysis of health data can be used to detect health problems, define priorities, identify innovative solutions and allocate resources to improve health outcomes.

PUT 844 Fertility and pre-conception care (3 credits)

This course offers the students the opportunity to apply an in-depth knowledge of pre-conception care in evaluating the overall health and opportunities for improving health of individuals. It also empowers the students to provide genetic counselling and screening. The course covers concept of fertility and pre-conception care, In vivo conception, Nurses role and responsibilities before, during and after the procedure

PUT 845: Infertility and its management (3 credits)

This course offers the students the opportunity to apply an in-depth knowledge of epidemiology and clinical aspects of infertility for improving fertility nursing care of individuals with fertility challenges. The course covers epidemiology of infertility and causes, pathophysiology, fertility management and contemporary issues in fertility management. The course will also help students appreciate the psychosocial needs of the infertile couple and how to offer psychosocial support and guidance

PUT 846 Third Party Reproduction (3 credits)

This course focuses on third party involvement in the reproductive process which does not extend to raising up/upbringing of the child. This course involves gamete donation to couples who for one reason or the other cannot complete the cycle of pregnancy, either due to inability to produce adequate gamete for fertilization or due to inadequate uterus to carry pregnancy to term

PUT 847 Assisted Reproductive Technology (ART) (3credits)

This course is designed to provide the students with the requisite knowledge, skills and attitude required in the management of client using assisted reproductive technology. The course covers Historical perspective of ART, treatment options of ART, equipment and consumables use in ART, basic ultrasound skills for fertility management, contemporary issues in ART and the roles and responsibilities of the fertility nurse specialist. The course will cover medications used in ART, their pharmacokinetics, pharmacodynamics as well as the storage and administration. Issues around gamete donation to couples who for one reason or the other cannot complete the cycle of pregnancy, either due to inability to produce adequate gamete for fertilization or due to inadequate uterus to carry pregnancy to term would be covered. The course covers identification of suitable donors and surrogate, counselling and consenting, egg donation, sperm donation surrogacy and recipients.

PUT 848 Ethico-legal aspects in fertility management (2 credits)

The course introduces students to the ethico-legal aspects of infertility as this area of practice requires delicate approach, analysis and treatment. It prepares the students to cope with the numerous ethical and legal dilemmas and the call for multidisciplinary and expert approach to analysing each case as well as defining clear ethical and legal regulations open to corrections in respect to further investigative work. It will enable students to work based on ethical principles, holistic approach and full respect of life of an individual. The course covers concepts of ethics in fertility management, Ethical dilemmas and ethical decisions, The role of national and international organisations in ethico-legal aspects of infertility management and legal concepts in fertility management

PUT 811 Internship/Practicum (0 credits)

The course provides opportunity for the students to have hands on experiences and apply the concept and theoretical aspect of fertility nursing using a simulation and a real-life situation in the laboratory and designated fertility centers/clinics

PUT 807 Seminar (2 credits)

Seminar topic will be on candidate's area of interest presented in a report and examined orally by a panel of internal examiners. This may be followed up into research project with research methods and statistics in a further study.

MASTER PROGRAMME IN PUBLIC HEALTH NURSING

Entry requirements

The master programme in public health nursing will be open to candidates who possess:

1. Bachelor of Nursing Sciences with not less than second class lower division.
2. Bachelor of Science in Midwifery with less than second class lower division.
3. Postgraduate diploma in Public Health Nursing with a CGPA of not less than 3.50 on a 5-point scale (upper credit)
4. At least five (5) relevant credit level passes in SSCE or equivalent (WASCE, NECO or GCE O/L) at not more than two sittings, which must include: English Language, Mathematics, and Biology/Health Science (regional equivalent)
5. Must be a registered public health nurse and have a valid practicing license:
6. Evidence of NYSC OR Exemption letter (for Nigerian students).

Degree in View

Master of Science in Public Health Nursing (MSc. PH Nursing)

Duration of Programme

Full time Masters – 12 months (minimum) to 24 months (maximum)

Part-time Masters – 24 months (minimum) to 36 months (maximum)

Graduation requirements

Students would meet the following requirements to qualify for the award of the Master of Science degree in Public Health Nursing (MSc, PH Nursing):

- i. The students must have successfully completed all the prescribed courses in the programme
- ii. The students must have completed and scored a pass in his/her dissertation; and
- iii. The students must meet the other requirements set by the School of Graduate Studies and the Africa Centre of Excellence in Public Health and Toxicological Research

List of courses in the programme

Code	Credit Unit	Course
PUT 800	0	Foundation to Graduate Studies
PUT 831	3	Public Health Nursing Theories & Practice

Credit Units		

Description of Courses

PUH 821: Public Health Nursing Theories & Practice

This course will analyze the theories relevant to nursing and public health which will assist the students in identifying the unique role of public health nursing across settings. Students will explore the role and functions of public health nursing in primary and secondary prevention in the community, state and nation. The course will also

expose the students to acquire knowledge and skills on elements of programme design, implementation and evaluation in public health settings. They are exposed to know the different components and steps in programme planning and evaluation process. The students are also expected to select a programme of interest and practice what has been taught by developing a public health programme.

PUT 822 Health Education and Promotion

This course will teach ways and methods that will make people value health as a worthwhile asset, with a desire to live long and feel well. The emphasis will be on what people can do as individuals, families, communities to protect and improve their health. At the personal and family levels emphasis will be placed on such matter as exercise, deadliness in the home diet and discipline with regard to the use of tobacco and alcohol. At the community level and beyond, emphasize will be on environmental sanitation etc.

Broad areas covered include - Health Education - Principles, Methods and Approaches, Strategies; Principles of learning and behavioural change; Assessment of learning needs (individual, community); Designing educational materials; Evaluation of health education programme; Health Education in the Control of Communicable and Non-Communicable Diseases; Health promotion which includes the strategies and approaches.

This course will also cover nutrition which comprises: Classification of Food, functions and components. The course will emphasize on nutrition in vulnerable groups. Nutritional Values of Common Nigerian Foods; Culture and Nutrition; Beliefs and Taboos; Infection and Nutrition; Breastfeeding Weaning Practices; Food Policy; The National Breast-Feeding Policy; Food Hygiene and Toxicology and Applied Dietetics.

PUT 823 Epidemiology

Overview of the fundamental epidemiologic methods used in public health research and practice. The student will be familiarized with basic measures used in describing disease frequency in populations. Descriptive and analytic approaches to the study of disease will be explored, and a perspective on the role of epidemiologic methods in health services planning and evaluation will be provided. It will teach the basic concepts and principles of epidemiology and disease outbreak investigation, the application of epidemiologic principles in the control of diseases of public health importance. It will emphasize disease distribution, determinants and deterrents in communicable and non-communicable disease conditions.

Broad aspects covered include - Epidemiology: Definition. History, Distribution and Determinants of Diseases: Biological, Behavioural, Social, etc,

Epidemiological approach, Infective Agents: Reservoir of Infection, Transmission of Communicable Diseases, Host Factors, Epidemiologic triad, Natural history of disease, spectrum of diseases, Risk Factors in the Epidemiology of Communicable and Non-Communicable Diseases.

Epidemiological Methods: Epidemiological Tools – Rates (Crude and Specific), Ratios, Percentages, etc, epidemiological Methods: epidemiological Studies, Disease Surveillance and Notification, Uses of Epidemiology, Levels of Prevention, Epidemiological Transition.

The course will also teach basic concepts in the principles of transmission and control of communicable diseases.

Broad areas covered include - Epidemiology and Control of Communicable Diseases According to their Routes of Transmission ; Epidemiology and Control of Viral Infections (Poliomyelitis, HIV/AIDS, Viral Hepatitis A-G, Yellow Fever, Chickenpox, Lassa fever, Ebola, Exotic Diseases, Rabies, Measles, Rubella, Mumps, Viral RTIs,); Epidemiology and Control of Bacterial Infections (Tb, Leprosy, Enteric Fevers, Bacillary dysentery, Cholera, Bacterial Food Poisoning, Tetanus, Bacterial Pneumonia, Meningococcal Infections, Rheumatic Fever, Pertussis, Diphtheria, Plague, Anthrax, Chlamydial Infections); Epidemiology and Control of Protozoal Infections (Malaria, Amoebiasis, Giardiasis, Trichomoniasis, Trypanosomiasis; Epidemiology and Control of Fungal Infections (Superficial Fungal Infections, Candidiasis; Epidemiology and Control of Helminthic Infestations (Ascariasis, Trichuriasis, Enterobiasis), Groups of Communicable Diseases - STIs, Zoonoses, Diarrhoeal Diseases, Emerging and Re-Emerging ,Neglected tropical diseases and Hospital acquired Infections.

Control Programmes for Communicable Diseases in Nigeria; Epidemiology and Control of congenital diseases like sickle cell diseases.

Accidents - RTA and Home Accidents; Epidemiology and Control of; Epidemiology and Control of non-communicable diseases eg. Diabetes Mellitus, Coronary Heart Diseases, Asthma and Peptic Ulcer, Cancers eg Breast Ca, Cervix Ca, Prostate;

PUT 824 Biostatistics

This course will teach basic and inferential statistics as applied to clinical and epidemiological studies. This will include standard statistical concepts of data description, hypothesis testing including test statistics, correlation, p-values, significant levels, confidence intervals and linear regression. It will equip prospective students with basic and advanced skills in quantitative reasoning and application necessary for medical research.

Broad areas include - Introduction to statistics; Types of data, types of variables, Types of distribution; Sources of Data, Tools for Data Collection; Scales of Measurement; Diagrammatic Presentation of Data - Histograms, Pie charts, Bar Charts, Graphs, Pictogram etc; Numerical Presentation of Statistical Data - Measures of Central Tendency and Location; Measures of Dispersion; Tabular presentation – simple and cross table etc; Population, Samples and Sampling Techniques; Probability Theories; Estimating Population Values; Inferential Statistics; The Standard Normal Curve; Standard errors; Confidence Intervals; Tests of Significance - Z-Test, t-Test, Chi-Square Test; Association, Correlation and Regression; Uses of Statistics.

In addition, students will be exposed to understand the meaning and nature of demography which include sources and types of demographic data; population structure/Pyramid and dynamics; presentation of demographic data and rates. Also, basic measures of fertility, rates of natural increase; population growth and estimates and migration and mortality rates will be taught.

Broad areas covered include - Demography – Definition, Uses; Population Composition – Age, Sex, Occupation, Ethnicity etc; Population Dynamics (Fertility, Mortality, Migration, Population Structure, Growth and projection); Sources of Population Data; Sources of Health and Vital Statistics; Cancer Registration; Demographic Transition; Malthusian Theory of Population; Census – National and Local; World Population and Policy; the National Population Policy; Interaction between Medical Action, Population, Health and Population Growth; Measurements of Health and Disease; Different Rates and their Uses; Standardization of Vital Rates

PUT 825 Occupational and Environmental Health

This course will teach the impact of the environment and occupational activities on human health. It will explore how the physical and biological hazards found in the environment affect human health; and the sustainable ways of managing the hazards, to safeguard the health of the present and future generation. The course will also introduce the student to the ecological zones of the Niger delta region, and the other geo-political regions of Nigeria, to understand the interactions between the human population and the environment and explore sustainable ways of ensuring health in the different ecological zones. The course will also introduce the students to the principles and practice of occupational health nursing, health problems of urbanization and industrialization, laws, regulations and codes of practices governing the health, safety and welfare of workers at workplaces and the role of the public health nurse in occupational health.

PUT 826 Health System

Health system is the organization of human, material, and other resources to provide for the health care needs of the State or country. This course will provide the students with an understanding of the Nigerian Health System. It would explore the roles of traditional and modern health practitioners in Nigeria in meeting the health care needs of Nigerians, how health care services are financed, as well as the government policies and programme that guide the provision of health services in Nigeria. Current issues in International Health, National and International Health Agencies and their roles, Organization of International Health Agencies as well as basic skills in grant proposal writing to assess national and international funds. The course will also review the public and private sectors' function of creating and implementing policy, public policy and its application to public health nursing. The role of political, legal, ethical and social philosophy in defining public health nursing and other health services, are examined. The course considers how policies made by different branches of government and various public and private organizations affect nursing as a profession; its ability to deliver care and the impact on the areas of technology development, assessment, professional practice regulation and client/patient outcomes management.

The course will also provide students with adequate knowledge on how scarce resources are allocated among alternative uses for care of the sick and the promotion, maintenance and improvement of health, with information to decision makers on efficient use of available resources for maximizing health benefits. The contents include basic economic considerations in health care and application of such concepts in giving and receiving care, qualities of health and health cares as economic commodities using essentially the classical paradigm of consumer demand analysis, nature and characteristics of health and health care underscoring the need for agency relationship between professional health care providers and health care service consumers, equity distribution of health ,health care financing including health insurance scheme in Nigeria, health policy and the role of the state in health care delivery in Nigeria.

SGS 801: ICT & Research Methods

This course should cover essentials of ICT especially the use of Microsoft Word, Spreadsheet, Power point, Access and Project. It will also examine common statistical packages used in health research.

The course is an introduction to project design and planning and will teach the various methods in conducting scientific medical research. It will emphasize quantitative and qualitative designs

including how to conduct clinical trials and documentation. It will also introduce the use of computer in data analysis and the use of operational research and functional analysis in project design and evaluation.

Other areas covered include - Planning a Research; Ethical Issues in Research; Study Designs in Medicine and Public Health; Choice of Topic; Introduction (Problem Definition, Objectives); Formulation of hypothesis, Testing of hypothesis; Literature Search/Literature Review; Materials & Methods; Sample Size determination/Calculation; Instrument for data collection; Data Collection/Management; Presentation of Results (Data Presentation, Analysis etc); Discussion, Conclusion and Recommendations; Referencing; Project Write-Up.

SGS 802: Management & Entrepreneurship

Covers concepts, history and development of entrepreneurship, the entrepreneur, Qualities and characteristics, entrepreneurship and innovation. The Entrepreneur and Business Environment, Identifying Business Ownership and Registration, starting and developing business ventures, Legal forms of business ownership and registration. Types of business ownership, feasibility studies and business plan, Role of Small and medium scale Enterprise (SME) in the economy, Role of Government in Entrepreneurship, Business location and layout. Accounting for SME, Financing SME, Risk Management of SME, success and failure factors of SME, Prospects and challenges of Entrepreneurship in Nigeria, Standard organization of Nigeria. Entrepreneurship in Nursing. This course would expose the students to the practice of applied management and entrepreneurship. The students would learn how to enhance their entrepreneurial skills and manage their own business. Business prospects for students in higher institution would be taught and the student would learn how to get into the right business.

This course will also expose students to analysis, integration and application of principles of leadership/ management in health care organizations and population-based efforts across the public health care delivery system. Special emphasis is placed on the practical skills needed for public health nurses to succeed as leaders and managers in today's local and global health care. Students are expected to practice leadership-related skills in a group case-based learning that will focus on leadership, organizational assessment, financial resource decision making and allocation diversely in the workforce and quality improvement (quality assurance), explain change process and conflict in public health nursing (innovations).

PUT 827 Social and Rehabilitative Nursing

This course will acquaint the students with the requisite knowledge on philosophy and principles of rehabilitation, rehabilitation techniques, process and barriers, rehabilitation team. Introduction to Social Medicine; Social problems in the community Health assessments e.g., HDI, QALY, DALY; Social Deviance; Alcoholism; Drug Abuse; Smoking; the Aged, Adolescents and their health needs. Social Welfare Services in Nigeria and Other Countries; The Underprivileged in the Society. Violence: Classification and Causes, Violence Against Women, Domestic violence e.g., battered wife syndrome, rape etc, harmful practices against women, Drug abuse, community mental health nursing interventions. Disability, Handicap, Impairment; Classification, Causes and care of the Handicapped.

Care of the terminally ill and hospice care; Voluntary Agencies in health and social services; Emergency preparedness at Federal, State and Local Government Levels

PUT 828 Reproductive and Family Health

This course will teach the concepts of human needs and development throughout the life cycle though with emphasis on women and children's health issues. These will include Gender Equity, Equality and Women Empowerment, Safe Motherhood initiative, Family Planning – Information and services, Prevention and management of Infertility and sexual dysfunction in both men and women, abortions and post-abort care, Prevention and Management of reproductive tract infections and sexually transmitted infections including HIV/AIDS.

Broad areas covered include - Introduction to Family Health; Concept, Components and Objectives; Measurements in Family Health; Health Problems and Health Needs of Mothers and Children; Determinants of Health of Mothers and Children; Family Health Practice; birth preparedness and complication readiness, Maternal Health Care Services, Infant Welfare Clinic; Organization and Evaluation of Family Health Programmes; Immunization Programmes; Population Dynamics and Family Planning; The "At Risk" Concept in MCH; Safe Motherhood Initiative; Integrated Management of Neonatal and Childhood Illnesses; School Health - Aims and Objectives; The School Health Programme

PUT 811 Internship

The students would be exposed to practical training in public health programmes with the relevant industries and sector

PUT 807 Seminar

This seminar is designed to provide opportunities for students to pursue in depth study in a selected topic or area in public health nursing. Models and/theories

will be evaluated for their usefulness in public health nursing.

PUT 808 Dissertation

The candidate must design and execute an acceptable original project in any area related to public health nursing under supervision of an academic member of staff. For these projects, students will carry out original research. They will thus be exposed to practical research methods such as the design of empirical studies, questionnaire design, data collection, collation, analysis interpretation, and reporting. Referencing shall be the APA style. Ethical approval MUST be obtained from the Research and Ethics Committee of the University. Defense of completed project shall be done at date fixed by the departmental graduate committee and according to the guidelines set by the graduate school. Project shall be submitted in quarto size paper in BLACK bounded format and duly certified by project supervisor and must be submitted before the closing date given by the Centre.

MASTER PROGRAMME IN MIDWIFERY AND CHILD HEALTH NURSING

Admission Requirements

The master programme in midwifery and child health nursing will be open to candidates who possess

1. Bachelor of Nursing Sciences with not less than second class lower division.
2. Bachelor of Science Midwifery with not less than second class lower division .
3. Must be a trained and licensed nurse/midwife

Titles of master's studies

Master of Science in Midwifery and Child Health Nursing

Available options

Full time Masters – 12 months (minimum) to 24 months (maximum)

Part-time Masters – 24 months (minimum) to 36 months (maximum)

Graduation requirements

To qualify for the award of the master's degree, the candidate must have successfully completed all the prescribed courses in the programme including a supervised dissertation in their area of interest and have met other requirements of the school of graduate studies

List of courses in the master's degree in Midwifery

DESCRIPTION OF COURSES

SGS 801.1 ICT & Research Methods

This course should cover essentials of ICT especially the use of Microsoft Word, Spreadsheet, Power point, Access and Project. It will also examine common statistical packages used in health research. The course is an introduction to project design and planning and will teach the various methods in conducting scientific medical research. It will emphasize quantitative and qualitative designs including how to conduct clinical trials and documentation. It will also introduce the use of computer in data analysis and the use of operational research and functional analysis in project design and evaluation.

Other areas covered include - Planning a Research; Ethical Issues in Research; Study Designs in Medicine and Public Health; Choice of Topic; Introduction (Problem Definition, Objectives); Formulation of hypothesis; Testing of hypothesis; Literature Search/Literature Review; Materials &

Methods; Sample Size determination/Calculation; Instrument for data collection; Data Collection/Management; Presentation of Results (Data Presentation, Analysis etc); Discussion, Conclusion and Recommendations; Referencing; Project Write-Up

SGS 801.2 Management & Entrepreneurship

Covers concepts, history and development of entrepreneurship, the entrepreneur, Qualities and characteristics. The Entrepreneur and Business Environment, Identifying Business Ownership and Registration, starting and developing business ventures, Legal forms of business ownership and registration. Types of business ownership, feasibility studies, Role of Small and Scale Enterprise (SME) in the economy, Role of Government in Entrepreneurship, Business location and layout. Accounting for SME, Financing, SME, managing of SME, Risk Management of SME, success and failure factors of SME, Prospects and challenges of Entrepreneurship in Nigeria Entrepreneurship in Nigeria Entrepreneurship. This course would expose the students to the practice of applied management and entrepreneurship. The students would learn how to enhance their entrepreneurship skills and manage their own business. Business prospects for students in higher institution would be taught and the student would learn how to get into the right business

PUT 801. Legal-ethical issues in midwifery-child health nursing

The purpose of the course is to familiarize the students with the key concept of professional ethical- legal systems and approaches to midwifery practice and child health nursing. Ethic and midwifery issues in contemporary practice. Ethic and issues in child health nursing. The course will cover legal system and accountability of the midwife, and child health nurse, client rights, litigation and accountability and statutory provisions. Introduces students to Nigeria legal system; the rights and responsibilities of client and midwife and child health nurse in health system; Undertake selected legal case studies with its implications on midwifery practice and child health nursing practice

PUT 802. Theories and practices of community-based health care

The students will pursue in-depth study in a selected topic area in community-based health care. Models/theories will be evaluated for their usefulness in community-based health care. The nature of community health issues; community health practices, contemporary issues in community-based health care research; information and management systems in community-based health care practice; concepts of epidemiology;

determinant of disease and health; epidemiological theories; specific epidemiological case studies; principles and practice of disease control, health education, community health nutrition and environmental health programmes.

PUT 803. Advanced Community midwifery and Child health nursing

The course is designed to enhance the provision of midwifery/ child health nursing for women and their new born, families and relevant communities. It intends to improve existing skills and abilities in midwifery and child health nursing interventions and activities that are vital for the provision of professional midwifery and child health nursing care for childbearing family. Use of Models of community midwifery and child health nursing care. Also, development of leadership, consulting, coordinating and decision-making skills in the community

PUT 804. Professional Leadership and accountability in maternity care and Child health nursing

The course explores both individual professional accountability and organizational professional leadership. It covers, leadership in healthcare and examines their impact on organization including wider considerations in the external environment This module will enable students to assess and analyze leadership theories and styles, barriers to midwifery and child health nursing leadership and ways to overcome the barriers, and the roles that leaders and managers play in a range of organizational contexts, and to apply the principles and techniques of leadership and management in a range of contexts. The course exposes students to various approaches to improvement of leadership, management and teamwork, management styles in midwifery. The course also explores leadership competency model, the code and professional standard of practice, and what the code mean for clients and employers.

PUT 810 Advanced Reproductive Health

The course provides advanced education in reproductive health and issues with focus on public health and social aspect. Students will explore fertility control across the reproductive lifespan, and reproductive health services, maternal mortality, sexual violence, sexual reproductive rights. This stream will also cover reproductive endocrinology including an understanding of the reproductive cycle.

PUT 805 Advanced Midwifery

This module will commence with a critical review of the forms of evidence that underpin professional practice in health and social care. The ideology of evidence-based practice will be analyzed and its impact on practice evaluated, including an

examination of the barriers to using evidence in practice.

The module will cover **(1) Evidence for Health and Social Care, (2) promotion of normal childbirth, (3) Facilitation of complex birth and (4) Building a project on advancing global best clinical practice.**

For promoting normal birth, the module addresses one major National and International concerns about childbirth and the rising rate of intervention. The module will provide underpinning knowledge and confidence required to modify the situation by exploring how best to promote change in prenatal, intrapartum, and postnatal periods using existing knowledge and skills. Both international and local perspectives shall be analyzed, while deepening the students understanding of concept of normal childbirth.

For facilitation of complex birth for women with social, emotional, and physical needs, the module explores the roles of the midwife in addressing them. Direct and indirect causes of maternal death are examined, while considering wider influences on maternal mortality and morbidity. The module will explore strategies for the maintenance of normality within the complex situations. Students are expected to apply clinical practice and develop skills for caring for women with complex needs.

For developing a project for advancing clinical practice, the project will enable students to demonstrate ability to synthesis learning from other modules. The student is expected to plan and write up a work-based project demonstrating the ability to raise a significant and meaningful questions in relation to a chosen topic expanding existing knowledge to contribute to the development of best practice. The project can take a number of forms including:

- Empirical research
- Modified Systematic Review
- Audit or service evaluation
- Critical review of literature

Whichever option is chosen, the focus is an issue related to advancing practice and in the completed project the student must demonstrate how knowledge gained could be used to advance practice.

PUT 806. Advanced Neonatology and Child Care

The course aims at providing the midwife with in-depth knowledge base on the care of newborn, the health assessment and specialist healthcare. National standards for neonatal care, ward management of a neonate

PUT 809 Advanced Child Health Nursing

This module will commence with a critical review of the forms of evidence that underpin child health

nursing care. The ideology of evidence-based practice will be analyzed and its impact on practice evaluated, including an examination of the barriers to using evidence in practice. The module will cover (1) Theories and trends in child health nursing (2) Care of the child (3) Sick and vulnerable child (4) School health. For promoting child health nursing care, the module addresses National and International essentials of Global Child Health and International Child Mental Health. Both international and local perspectives shall be analyzed, while deepening the students understanding of concept of child health nursing. Direct and indirect causes of child death are examined, while considering wider influences on child mortality and morbidity. Students are expected to apply clinical practice and develop skills for caring for children with complex needs.

For developing a project for advancing clinical practice, the project will enable students to demonstrate ability to synthesis learning from other modules. The student is expected to plan and write up a work-based project demonstrating the ability to raise a significant and meaningful questions in relation to a chosen topic expanding existing knowledge to contribute to the development of best practice. The project can take a number of forms including:

- Empirical research
- Modified Systematic Review
- Audit or service evaluation
- Critical review of literature

Whichever option is chosen, the focus is an issue related to advancing practice and in the completed

project the student must demonstrate how knowledge gained could be used to advance practice in child health nursing.

PUT 807 Seminar

This seminar is designed to provide opportunities for students to pursue in depth study in a selected topic area in midwifery. Models/theories will be evaluated for their usefulness in midwifery.

PUT 808 Dissertation

The candidate must design and execute an acceptable original project in any area related to midwifery care under supervision of an academic member of staff. For these projects, students will carry out original research. They will thus be exposed to practical research methods such as the design of empirical studies, questionnaire design, data collection, collation, analysis interpretation, and reporting. Referencing shall be the APA style. Ethical approval MUST be obtained from the Research and Ethics Committee of the University. Defense of completed project shall be done at date fixed by the departmental graduate committee and according to the guidelines set by the graduate school. Project shall be submitted in quarto size paper in BLACK bounded format and duly certified by project supervisor and must be submitted before the closing date given by the Centre.

PUT 810 Internship

The students would be exposed to practical training in public health programmes with the relevant industries and sector.

TEACHING STAFF

S/N	NAME	QUALIFICATIONS	DESIGNATION	INSTITUTION	SPECIALISATION
1	Prof B. Ordinioha	MB, BS, FMCPH	Professor	UNIPORT	Environmental Health
2	Prof C.I. Tobin-West	MD, MPH, FMCPH	Professor	UNIPORT	Epidemiology
3	Professor Josephine Etowa	PhD Nursing	Professor of nursing	VISITING	Public Health Nursing
4	Dr Faith Diorgu	PhD Midwifery, PhD Edu. Psych; M.Sc Midwifery, M.Ed Edu. Psych.; B.Sc Nursing	Senior lecturer/HoD	UNIPORT	Midwifery

17	Mr Solomon Egwuonu	MSc (Comm.HltNsg), BSc.NSg, PGDE, RPHN, RN, RNT, FCAI, FIHNR.	Lecturer 1	Nursing, Novena Uni, Delta State	Community Health Nursing
18	Miss Theresa Timothy	MPH, BSc. Nsg, RPHN, RN, RM	DDNS/Desk Officer, Family Planning	RSPHCB, Port Harcourt	Public Health

PhD PROGRAMME IN CHILD HEALTH NURSING

Admission Requirements

For a candidate to be admitted into the PhD programme, he/she should have a relevant Masters' degree with a CGPA of not less than 3.5 on a five-point scale in MSc midwifery, child health nursing or any nursing related discipline. All prospective candidates must be trained and licensed nurses/midwives

Programme Titles:

Doctor of Philosophy (PhD) in Child Health Nursing

Programme duration:

Full time – 36 (minimum) to 48 months (maximum)

Part-time – 48 months (minimum) to 72 months (maximum)

Graduation Requirements

To qualify for the award of the PhD, the candidate must have successfully completed all the prescribed courses in the programme in line with the school of graduate studies requirement.

List of courses, code and credit units

Courses in PhD Child Health Nursing

Code	Unit	Course
PUT 901	3	Entrepreneurship
PUT 902	3	Advanced Biostatistics and Data Science
PUT 903	3	ICT, Technical Writing & Presentation Skills
PUT 905	3	Research Methods

PUT 916	3	Advanced Health Policy and Management
PUT 913	3	Advanced Epidemiology in Maternal-Child health
PUT 915	3	Advanced Child Health Nursing Theory and Practice
PUT 904	3	Seminar
PUT 906	12	Thesis

COURSES DESCRIPTION

PUT 901- Entrepreneurship (3 units)

This course teaches how to recognise, analyse and develop business opportunities. It will expose students to the various aspects of commerce – accounting, finance, marketing, management as well as the relevant legal and regulatory frameworks. The course will also introduce the students on ways of commercializing their research outputs and how they can develop knowledge enterprise.

Understanding the dynamic role of entrepreneurship and small businesses

Organizing and Managing a Small Business

Financial Planning and Control

Forms of Ownership for Small Business

Strategic Marketing Planning

New Product or Service Development

Business Plan Creation

Challenges of doing business in Nigeria and other developing countries

Research as an enterprise

PUT 902 - Advanced Biostatistics and Data Science (3 units)

This course teaches the concepts of biostatistics and the application of biostatistics in real world issues. Statistical methods and principles necessary for understanding and interpreting data used in public health and policy evaluation and formation. Topics include descriptive statistics, graphical data summary, sampling, statistical comparison of groups, correlation, and regression.

Probability and advanced statistical theories

parametric and non-parametric statistics,

Poisson distribution, Regression modelling, statistical software appreciation and bioinformatics.

Data Science introduces the concept and tools needed in turning open and real-world data into solving real world problems via mastering Data communication, data investigation, data wrangling, cleaning, sampling, exploratory analysis and data Visualization skills.

Students will learn the powerful statistical program in R and how to use R for effective data analysis and statistical programming. The course will also cover practical issues in statistical computing with R, especially in reading data into R, accessing R

packages, writing R functions, debugging, profiling R code, and organizing and commenting R code.

PUT 903 - ICT, Technical Writing & Presentation Skills (3 units)

The purpose of the course is to familiarize the participants with academic writing, grammar & syntax, Use suitable punctuation and grammar, employ conventions of academic style, achieve a sense of flow in written texts, critically read academic texts, summarise, paraphrase and reference correctly, engage in effective peer review and self-monitoring, replicate appropriate thesis structure, critical thinking and problem-solving skills, summarizing, paraphrasing journal critique techniques and preparation of manuscripts and dissertation reports. Preparation and presentation at conferences and scientific meetings.

Participants would be appreciating the use of Microsoft Office words (document management functions, layout, formatting, equation, reference) excel(document management, format cells, formulas, functions, charts, sparklines, , pivot tables, validation, hyperlinks, protecting and sharing worksheet/book), PowerPoint (document management, design, formatting, header/footer, working with text/pictures, creating master slide, screen views, charts, tables, animations, presentation structure), access (designing and viewing databases, tables, relationships, finding/sorting and filtering, queries), project (Microsoft project environment, outlining project – start time, working time, list of task, organising tasks, setting deadlines and constraints etc), common software for statistical analyses, presentation skills and writing journal article and dissertation reports

Students would also be exposed to the act of preparing manuscript preparation and various statements/guidelines/checklists for reporting academic manuscripts such as: CASP (Critical Appraisal Skill Program), CONSORT (Consolidated Standards of Reporting Trials), PRISMA (Preferred Reporting Items for Systematic Reviews and Meta-Analysis), ENTREQ (Enhancing Transparency in REporting the synthesis of Qualitative research), COREQ (Consolidated criteria for REporting Qualitative research), CARE (CAse REport guidelines), SQUIRE (Standards for Quality Improvement Reporting Excellence), STROBE (Strengthening the Reporting of Observational Studies in Epidemiology).

PUT 905 - Research Methods (3 units)

This course acquaints the students with principles and practice of advanced research methods in public health practice. Broad areas include systematic review, meta-analysis, meta-synthesis, quantitative and qualitative surveys, advanced literature search and data synthesis

Course Content

Research Process, Designs, and Human Subjects Protection
Research Question and Literature Review
Data Collection and SPSS
Descriptive Data Analysis
Inferential Data Analysis
Reporting the Results
Interpreting the Results
Thinking Skills for conduct of research

PUT 913: Advanced Epidemiology in Maternal-Child Health

This course will teach the distribution, determinants and deterrents of health conditions that are predominantly caused by the physical environment of the community. It would also examine the control efforts and recent global, national and subnational innovations for improving maternal and child health conditions.

This course will provide the students with an understanding of the nature of the physical, social and biological environment, human ecology, the relationship between unhealthy housing, air pollution and environmental toxicants and its health implication especially to mothers and children. It would examine the sources of the environmental health problems, the relevant policies and legislations, and the efforts to ensure healthy housing for all, and the control of air pollution other environmental toxicants.

The course will teach the relevant local, national and international policies and legislations used to ensure environmental health. It will give the students the basic understanding of the policies and legislations, how the policies and legislations can be proposed, amended and put into action; and the various safeguards put in place to prevent the arbitrary use of the policies and legislations in relation to safety of individual health. Natural and environmental toxicants; Food toxicology and carcinogens; Mutagens, teratogens, allergens; Neurotoxins, endocrine disruptors; Detoxification of toxicants; Microbial and insects' metabolism of xenobiotics; Metabolism as a determinant of toxicity and Assessment of toxicity; Metabolism of hydrocarbons and other toxicants; Human exposure to environmental contaminants.

PUT 914: Advanced Child Health Nursing

This course aims to familiarize students with evidence synthesis and evaluating elements of research designs in child health nursing, familiarizes them with trade off involved in these choices and enabling them to make conscious design choices for their research. The course provides comprehensive training on good research practice, critical evaluation of major theories, concepts, frameworks and paradigms in child health nursing practice. It

will provide students with sufficient insight to organize practical and ethical aspect of their research. The course covers the knowledge base for evidence-based child health nursing, the role of mixed method research, practicalities of mixed methods research for evidence-based child health nursing, quality of research and clinical research issues and methods.

PUT 916 - Advanced Health Policy and Management

The advanced health management principles and practice doctoral course aims to familiarize the participants with the theories behind the principles and practice of health management. Participants will develop a clear sense of their own strengths and weaknesses in health management and leadership and enhance their academic and professional development. The course will also improve the PhD candidate's understanding on developing research proposals and conducting research to support decision-making processes at all levels of the health system. In addition to self-assessment and reflection, participants study topics and practice skills associated with building strong teams, supervising and delegating work, managing conflict, using data for making management decisions, communicating effectively, and accountability, including managing financial and human resources

PUT 904 - Seminar (3 Units)

Seminar presentation on specified aspects of research will be presented such as literature review, public health significance, key findings and implications and finally present research for external defense.

PUT 906 – Thesis (12 Units)

The thesis will be an outline PhD proposal and a small piece of empirical work. The research proposal should indicate what the PhD might be along with, what the empirical work might be. The candidate's research will be supervised by academic and/or industry member of staff. The format of the report shall be in accordance with existing guidelines from the School of Graduate Studies.

PhD PROGRAMME IN MIDWIFERY CARE

Admission Requirements

For a candidate to be admitted into the PhD programme, he/she should have a relevant Masters' degree with a CGPA of not less than 3.5 on a five-point scale in MSc midwifery or any nursing related discipline. All candidates must be trained and licensed nurses/midwives.

Programme Titles:

Doctor of Philosophy (PhD) in Midwifery

Programme duration: Full time – 36 (minimum) to 48 months (maximum)

Part-time – 48 months (minimum) to 72 months (maximum)

Graduation Requirements

To qualify for the award of the PhD, the candidate must have successfully completed all the prescribed courses in the programme in line with the school of graduate studies requirement.

The courses for the new programmes are outlined below:

List of courses, code and credit units

Courses in PhD Midwifery

Code	Unit	Course
PUT 901	3	Entrepreneurship
PUT 902	3	Advanced Biostatistics and Data Science
PUT 903	3	ICT, Technical Writing & Presentation Skills
PUT 905	3	Research Methods
PUT 916	3	Advanced Health Policy and Management
PUT 913	3	Advanced Epidemiology in Maternal-Child health
PUT 914	3	Advanced Midwifery Theory and Practice
PUT 904	3	Seminar
PUT 906	12	Thesis

PhD PROGRAMMES IN PUBLIC HEALTH

Admission Requirements

For a candidate to be admitted into the PhD programme in Public Health, he/she should have a relevant Masters' degree in Public Health such as MSc Public Health, Master of Public Health, MSc Epidemiology, MSc Health Systems Management, MSc Population, MSc in **Reproductive Health with a CGPA of not less than 3.5 on 5-point scale.**

Programme Titles:

Doctor of Philosophy in Public Health – PhD Public Health

Programme duration:

Full time – 36 (minimum) to 48 months (maximum)
Part-time – 48 months (minimum) to 72 months (maximum)

Graduation Requirements

To qualify for the award of the PhD, the candidate must have successfully completed all the prescribed courses (all of the compulsory courses and 1 elective course) in the programme, submitted and successfully defended an appropriate thesis and met other requirements of the School of Graduate Studies.

List of courses, code and credit units

General Courses

Code	Unit	Course
PUT 901	3	Entrepreneurship

COURSES DESCRIPTION

PUT 901- Entrepreneurship (3 units)

This course teaches how to recognise, analyse and develop business opportunities. It will expose students to the various aspects of commerce – accounting, finance, marketing, management as well as the relevant legal and regulatory frameworks. The course will also introduce the students on ways of commercializing their research outputs and how they can develop knowledge enterprise.

Understanding the dynamic role of entrepreneurship and small businesses

Organizing and Managing a Small Business

Financial Planning and Control

Forms of Ownership for Small Business

Strategic Marketing Planning

New Product or Service Development

Business Plan Creation

Challenges of doing business in Nigeria and other developing countries

Research as an enterprise

PUT 902 - Advanced Biostatistics and Data Science (3 units)

This course teaches the concepts of biostatistics and the application of biostatistics in real world issues. Statistical methods and principles necessary for understanding and interpreting data used in public health and policy evaluation and formation. Topics include descriptive statistics, graphical data summary, sampling, statistical comparison of groups, correlation, and regression.

Probability and advanced statistical theories parametric and non-parametric statistics, Poisson distribution, Regression modelling, statistical software appreciation and bioinformatics. Data Science introduces the concept and tools needed in turning open and real-world data into solving real world problems via mastering Data communication, data investigation, data wrangling, cleaning, sampling, exploratory analysis and data Visualization skills.

Students will learn the powerful statistical program in R and how to use R for effective data analysis and statistical programming. The course will also cover practical issues in statistical computing with R, especially in reading data into R, accessing R packages, writing R functions, debugging, profiling R code, and organizing and commenting R code.

PUT 903 - ICT, Technical Writing & Presentation Skills (3 units)

The purpose of the course is to familiarize the participants with academic writing, grammar & syntax, critical thinking and problem-solving skills, summarizing, paraphrasing journal critique techniques and preparation of manuscripts and dissertation reports. Preparation and presentation at conferences and scientific meetings.

Participants would also be exposed to various statements/guidelines/checklists for reporting academic manuscripts such as:

CASP – Critical Appraisal Skill Program

CONSORT – Consolidated Standards of Reporting Trials

PRISMA – Preferred Reporting Items for Systematic Reviews and Meta-Analysis

ENTREQ – Enhancing Transparency in REporting the synthesis of Qualitative research

COREQ – Consolidated criteria for REporting Qualitative research

CARE – CAse REport guidelines

SQUIRE – Standards for Quality Improvement Reporting Excellence

STROBE – Strengthening the Reporting of Observational Studies in Epidemiology

ICT and Presentation Skills

Writing a Draft Journal Article

PUT 906 - Research Methods (3 units)

This course acquaints the students with principles and practice of advanced research methods in public health practice. Broad areas include systematic review, meta-analysis, meta-synthesis, quantitative

and qualitative surveys, advanced literature search and data synthesis

Course Content

Research Process, Designs, and Human Subjects Protection

Research Question and Literature Review

Data Collection and SPSS

Descriptive Data Analysis

Inferential Data Analysis

Reporting the Results

Interpreting the Results

Thinking Skills for conduct of research

PUT 904 – Environmental epidemiology, exposure science and risk assessment (3 Units)

This course teaches the students on principles and practice of advanced epidemiology. The candidate will also study the general concepts of assessing environmental exposures to chemicals in human populations. Exposure science will teach natural and environmental toxicants; Food toxicology and carcinogens; Mutagens, teratogens, allergens; Neurotoxins, endocrine disruptors; Detoxification of toxicants; Microbial and insects' metabolism of xenobiotics; Metabolism as a determinant of toxicity and Assessment of toxicity; Metabolism of hydrocarbons and other toxicants; Human exposure to environmental contaminants.

Introduction to principles and practice of epidemiology

Confounders, effect modification/interaction, causal inferences, outbreak investigations,

Geo-mapping/GIS, surveillance, receiver-operating characteristics curve, and surveys

The design of ecologic and personal monitoring studies

The techniques and equipment used for sampling and analysis, and interpretation of data.

The linkages among external concentrations, spatial and temporal parameters,

Exposure pathways (ingestion, inhalation, and dermal contact), internal dose, and biomarker expression are developed within the context of environmental exposure and risk assessment

Concepts of exposure, susceptibility, and disease relationships; environmental influences, stochastic events, rare events, association vs cause/effect, effect of politics, costs, public alarm

Risk assessment: Concept and models

Recent topics in risk assessments

Food safety;

Modern Environmental Health Hazards in Non-Communicable Diseases

Biomonitoring; Metals in diseases; Metal toxicology: lead, mercury, cadmium, arsenic,

chromium, nickel, vanadium, cobalt, manganese, iron, copper, etc;

Persistent organic pollutants (POPs) and dioxins

Plastics toxicology

Soot and aerosol toxicology; Ozone, a criteria air pollutant; Natural antidotes; Unravelling toxic mechanisms

Biomarkers for toxic effects; Predictive toxicology;

Regulatory aspects; Introduction to Systems Biology; Definition of fundamental concepts.

Cognitive effects of early exposure to environmental toxins, such as hydrocarbons, heavy metals, methylmercury, and other environmental toxicants on children and infants including exposure via breast milk

HSM 901 - Advanced Health Policy and Management

The advanced health management principles and practice doctoral course aims to familiarize the participants with the theories behind the principles and practice of health management. Participants will develop a clear sense of their own strengths and weaknesses in health management and leadership and enhance their academic and professional development. The course will also improve the PhD candidate's understanding on developing research proposals and conducting research to support decision-making processes at all levels of the health system. In addition to self-assessment and reflection, participants study topics and practice skills associated with building strong teams, supervising, and delegating work, managing conflict, using data for making management decisions, communicating effectively, and accountability, including managing financial and human resources

EPI 901. Advanced Field and Clinical Trial

In the realm of evidence-based medicine, clinical trials represent a methodology to provide the highest level of research evidence. This course is designed to cover the fundamental concepts underpinning this methodology, to highlight the practical components necessary for conducting a clinical trial, and to review issues in the design, analysis, and reporting of clinical trials. Emphasis shall be on assisting students with application of the knowledge gained in designing their PhD research, particularly where that involves conducting a field or clinical trial.

PRH 901 Advances in Reproductive Health

The purpose of this course is to examine reproductive issues, programs services and policies in countries. The course content will emphasize on

social, economic, environmental, behavioural and political factors that affect family planning, reproductive health, fertility and pregnancy outcomes. Focus will be made on interventions and programs to improve reproductive health, measurement and interpretation of reproductive indices and policies that affect reproductive health. Emphasizes will be made on current issues, challenges, and strategies to improve reproductive health, with a focus in resource-limited settings. Population changes and the demographic transition Conceptual issues in demography Mortality decline and change: the epidemiological transition Mortality transition in the developing world Contemporary mortality trends in developed countries. Demand and diffusion theories of fertility decline. The role of family planning programmes. The second demographic transition and family change. The perspective from evolutionary demography. AIDS in Africa: the demographic impact.

PUT 910 - Analytical Methods in Environmental Health (3 Units)

Students in this course learn the skills, methods, and critical thinking framework necessary for upper-level environmental health courses and for success as public health professionals. Environmental Health is a field of public health in which environmental hazards and health risks to populations are identified, assessed, and managed through a data-driven process.

Nature of the physical, social, and biological environment

Human ecology

Advance environmental forensic

Methodologies and techniques to obtain data in environmental health

Sampling, handling/storage of samples, sample preparation and determination.

Advanced environmental analysis in connection with advanced statistical methods including pattern recognition, multivariate statistics, and experimental designs

PUT 905 - Seminar I (3 Units)

Seminar presentation on specified aspects of research will be presented such as literature review, public health significance, key findings and implications and finally present research for external defense. The assessment of this will be the culmination of all scientific presentation of the PhD candidate in the second year of their programme

PUT 912 - Seminar II (3 Units)

Seminar presentation on specified aspects of research will be presented such as literature review,

public health significance, key findings and implications and finally present research for external defense. The assessment of this will be the culmination of all scientific presentation of the PhD candidate in the third year of their programme

PUT 911 – Thesis (6 Units)

The thesis will begin with identification of a suitable thesis topics and then development of a thesis concept notes before the PhD candidates can embark on a systematic review around the study. At the end

of the first year of the training, the PhD candidate should have developed an outline of the PhD proposal and a small piece of empirical work. The research proposal should indicate what the PhD might be along with, what the empirical work might be. The candidate's research will be supervised by academic and/or industry member of staff. The format of the report shall be in accordance with existing guidelines from the School of Graduate Studies.

LIST OF STAFF

S/n	Name	Qualifications	Designation	Specialisation	Status
1	Prof B. Ordinioha	MB, BS (UPH), FMCPH(NG), MD	Professor	Public Health, Environmental Health	Full-time
2	Prof Olufemi Adesope	BSc (UI), MSc (FUTO), PhD (FUTO)	Professor	Agriculture development, ICT in Research, rural sociology	Full-time
3	Prof KE Douglas	MBBS (UPH), DOH, FMCPH	Professor	Occupational Health	Full-time
4	Prof I. Etela	BSc (RSUST), MSc (RSUST), PhD (UNIBEN)	Professor	Agricultural Extension, Entrepreneurship	Ful-time
5	Prof C. Ogbuji	PGDE (NOUN), MSc (UNEC), PhD (ABSU)	Professor	Marketing, Entrepreneurship	Full-time
6	Prof C.I. Tobin-West	MD, MPH (Lag), Adv Dip Mgt, FMCPH (NG), MD	Professor	Epidemiology, Reproductive Health	Full-time
7	Prof. E.O. Orisakwe	BSc (UNN), MSc (UNILAG), PhD (UNN)	Professor	Nutrigenomics & Toxicology	Full-time
8	Prof D.S. Ogaji	MBBS UPH), MQI(Helsinki), MBA (NSW), PhD (Manchester), MNIM, FMCPH (NG), FISQua	Professor	Health Systems and Management	Full-time
9	Prof O. Maduka	MBBS (UPH), FMCPH, FRSPH	Professor	Epidemiology	Full-time
10	Dr Patrick-Iwuanyanwu, K.C	BSc (UPH), MSc (UPH), PhD (UPH)	Reader	Nutritional Biochemistry/Toxicology	Full-time
	Dr Catherine Ikewuchi	BSc (UPH), MSc (UPH), PhD (UPH)	Reader	Nutritional Biochemistry/Toxicology	Full-time
11	Dr Enembe Okokon	MBBch (Unical), MSc (Univ. Eastern Finland), PhD (Univ. Eastern Finland), FMCPH	Reader	Environmental Health	Visiting lecturer
12	Dr Soter Ameh	MBBS, MPH (UNIBEN), MSc (Witwatersrand), PhD (Witwatersrand), FMCPH (NG), FWACP	Reader	Epidemiology, Biostatistics	Visiting lecturer
13	Dr. A.N, Ezejiofor	BSc (Delsu), MSc (NAU), PhD (ABSU)	Senior lecturer	Toxicology/Pharmacokinetics	Full-time
14	Dr Uchenna Petronilla Ogoke	BSc (UNN), MSc (UPH), PhD (UPH)	Senior Lecturer	Mathematics, Biostatistics, Data Science	Full-time

POSTGRADUATE DIPLOMA IN ENVIRONMENTAL & PETROLEUM TOXICOLOGY

Entry Requirements

The PGD programme in environmental and petroleum toxicology will be opened to candidates who possess:

1. Honours degree in a Science or other suitable discipline.
2. At least five (5) relevant credit level passes in SSCE or equivalent (WASCE, NECO or GCE O/L) at not more than two sittings, which must include: English Language, Mathematics, and Biology (regional equivalent)
3. Evidence of NYSC OR Exemption letter (for Nigerian students)

Duration of Programme

Full time PGD – 12 months (minimum) to 24 months (maximum)

Part-time PGD – 24 months (minimum) to 36 months (maximum)

Graduation requirements

Students would meet the following requirements to qualify for the award of the PGD in Environmental Petroleum Toxicology (PGD EP Toxicology):

- i. The students must have successfully completed all the prescribed courses in the programme
- ii. The students must meet the other requirements set by the School of Graduate Studies and the Africa Centre of Excellence in Public Health and Toxicological Research

List of courses in the programme

Code	Credit Unit	Course
PUT 741	2	Introduction of petroleum industry and pollution consequences
PUT 731	2	Introduction to comparative Biochemistry
PUT 732	2	Introduction to comparative Physiology
PUT 733	2	Introduction to Toxicology
PUT 734	3	Exposure Toxicology
PUT 735	3	Toxicity Testing
PUT 736	3	Special Tests and Ecological Effects
PUT 737	3	Introduction to Risk Assessment
PUT 738	3	Toxicology Strategies for Petroleum Industry Exposure Assessments
PUT 739	3	Introduction to Medical Geology

PUT 740	2	Introduction to Oil Field Chemicals Hygiene and HSE Protocols
PUT 742	2	Seminars
Total	30	
Credit		
Units		

Course Description

PUT 741: Introduction to the petroleum industry and pollution consequences

Course Outline

Overview of the Petroleum Industry and its operations. The Petroleum Industry and pollution issues

Major forms of pollution in oil and gas exploitation. Consequences of pollution. Pollution Control and prevention

Environmental management and sustainability.

PUT 731 Introduction to comparative Biochemistry 2 units

Biochemistry of carbohydrates, lipids. Amino acids, nucleic acids, Metabolic pathways, etc. Introduction to signaling pathways

PUT 732 Introduction to comparative Physiology 2 units

Definition of basic concepts. Introduction to Physiology of Blood, Immune System, Liver, Kidney, Respiratory System, Nervous System, Cardiovascular System, Skin, Reproductive System, Eye, Endocrine System.

PUT 733 Introduction to Toxicology 2 units

Definition and Scope, Relationship to Other Sciences, and History. Definition and Scope. Relationship to Other Sciences. A Brief History of Toxicology. Dose-Response Relationships. Sources of Toxic Compounds. Exposure Classes. Use Classes. Movement of Toxicants in the Environment

PUT 734: Exposure Toxicology Env - 3 units

Air Pollutants. History. Types of Air Pollutants. Sources of Air Pollutants. Examples of Air Pollutants. Environmental Effects. Water and Soil Pollutants. Sources of Water and Soil Pollutants. Examples of Pollutants

Occupational Toxicants. Regulation of Exposure Levels. Routes of Exposure. Examples of Industrial Toxicants

PUT 735: Toxicity Testing – 3 units

Introduction. Experimental Administration of Toxicants. Routes of Administration. Chemical and Physical Properties. Exposure and Environmental

Fate. In vivo Tests. Acute and Sub-chronic Toxicity Tests. Chronic Tests
Reproductive Toxicity and Teratogenicity. Special Tests.

PUT 736: Special Tests and Ecological Effects - 3 units

Introduction. **In vitro Tests.** Prokaryote Mutagenicity. Eukaryote Mutagenicity. DNA Damage and Repair. Chromosome Aberrations. Mammalian Cell Transformation. General Considerations and Testing Sequences
Ecological Effects. Laboratory Tests. Simulated Field Tests. Field Tests. Risk Analysis. The Future of Toxicity Testing.

PUT 737: Introduction to Risk Assessment - 3 units

Introduction. Risk Assessment Methods. Hazard Identification

PUT 738: Toxicology Strategies for Petroleum Industry Exposure Assessments - 3 units

Introduction to Petroleum Operations, Oil and Gas Industry, Toxicology. Overview of Petroleum Operations and Process Streams. How to Categorize Streams using Toxicology Data. What are the Primary Constituents of Process Streams that drive exposure assessments? Selected Hazardous Constituents in Petroleum Substances
Benzene and others. Occupational Exposure Limits in the Petroleum Industry
ACGIH® Mixtures Formula – Utility, Its Value and Application to Chemicals found in the Petroleum Industry
Overview of the Formula, Its Application and Limitations. Examples of its Use with Chemicals in the Petroleum Industry. Organ effects of petroleum. Biomonitoring Considerations

PUT 739: Introduction to Medical Geology - 3 units

What is Medical Geology. Natural distribution and occurrence of elements. Anthropogenic sources. GIS as a tool in studies of the health of humans. Uptake of elements, particularly trace elements from the food to humans. Biological response on elements, particularly trace elements. Geological aspects on the nutrient supply.
Biological response on elements, particularly trace elements. Animal and medical geology. Aspects on uptake of elements, particularly trace elements, in animals. Uptake of elements, particularly trace elements, and toxicological consequences of uptake of both essential and non-essential trace elements. Transport of elements in air with a focus on volcanic activity, radon problems and natural aerosols of dam and health effects. Transport of elements in water with a focus on arsenic, fluoride and hardness of water and health effects.

PUT 740: Introduction to Oil Field Chemicals Hygiene and HSE Protocols (2 units)

Course Outline

Overview of oil field chemicals and applications. Chemical hygiene protocols and components
Management of chemical waste and disposal options. HSE Management systems and protocols.

PUT 742: Seminars (2 units)

Seminar topic related to environmental and petroleum toxicology and in the candidate's area of interest will be developed and presented in a report and examined orally by a panel of internal examiners. The students are expected to undertake a detailed systematic review of current literature on the basic concepts that are related to seminar topic.

MASTER'S IN ENVIRONMENTAL & PETROLEUM TOXICOLOGY

Entry Requirements

The MSc programme in environmental and petroleum toxicology is open to candidates who possess:

1. First degree in any of the Physical, Biological, Agricultural sciences including Geography with not less than second class lower division. Holders of first degree in Medicine & Surgery and dentistry are also eligible. Those who have successfully concluded the PGD programme in Environmental and Petroleum Toxicology with a CGPA of not less than 3.50 on a 5-point scale (upper credit)
2. At least five (5) relevant credit level passes in SSCE or equivalent (WASCE, NECO or GCE O/L) at not more than two sittings, which must include: English Language, Mathematics, and Biology (regional equivalent)
3. Evidence of NYSC OR Exemption letter (for Nigerian students)

Degree in View

Master in Environmental and Petroleum Toxicology (MSc. EP Toxicology)

Duration of Programme

Full time Masters – 12 months (minimum) to 24 months (maximum)

Part-time Masters – 24 months (minimum) to 36 months (maximum)

Graduation requirements

Students would meet the following requirements to qualify for the award of the Masters in Environmental Petroleum Toxicology (M.Sc. EP Toxicology):

- i. The students must have successfully completed all the prescribed courses in the programme

- ii. The students must have completed and scored a pass in his/her dissertation; and
- iii. The students must meet the other requirements set by the School of Graduate Studies and the Africa Centre of Excellence in Public Health and Toxicological Research

List of courses in the programme

Code	Credit Unit	Course
PUT 800	0	Foundation to Graduate Studies
PUT 820	2	The Petroleum Industry and Pollution Consequences
PUT 821	2	Comparative Biochemistry
PUT 822	2	Comparative Physiology
PUT 823	3	Principles of Pharmacology
PUT 824	3	Risk Assessment
SGS 801.1	2	ICT & Research Methodology
SGS 801.2	2	Management and Entrepreneurship
PUT 825	3	Exposure Assessment and Biomonitoring
PUT 826	2	Petroleum Industry Exposure Assessments
PUT 827	2	Medical Geology
PUT 828	3	Biometry & Modeling in Risk Assessments
PUT 829	2	Oil Field Chemicals Hygiene and HSE Protocols
PUT 807	2	Seminar
PUT 808	6	Research Project
Total Credit Units	36	

Course Outline

PUT 820: The petroleum industry and pollution consequences

Course Outline

Overview of the Petroleum Industry and its operations
 The Petroleum Industry and pollution issues
 Major forms of pollution in oil and gas exploitation
 Consequences of pollution
 Pollution Control and prevention
 Environmental management and sustainability

PUT 821: COMPARATIVE BIOCHEMISTRY 2 Credits

Definition of basic concepts. Introduction to biophysical chemistry, metabolic pathways, biochemistry of carbohydrate, lipid and protein. Signaling pathways in metabolic diseases

A. Carbohydrate Metabolism:

Brief account on the occurrence of carbohydrates, structure, properties and biological importance (monosaccharides, disaccharides and polysaccharides including mucopolysaccharides). **Breakdown of carbohydrates:** digestion and absorption of carbohydrate, breakdown of glycogen, Starch and disaccharides; **Glycolysis:** entry of other carbohydrates into the glycolytic sequences, alcoholic fermentation, regulation of glycolysis; **Citric acid cycle:** establishment of the cyclic nature, individual reactions and enzymes of citric acid cycle. Amphibolic nature of the cycle; Glyoxylate cycle; Control of citric acid cycle; Pentose phosphate pathway of glucose oxidation. Importance of the pathway and its regulation; **Biosynthesis:** biosynthesis of glucose from non-carbohydrate precursors (gluconeogenesis). Control of gluconeogenesis. Glycogen synthesis and its regulation, disaccharide biosynthesis; Glycoprotein biosynthesis

B. Lipid Metabolism:

Digestion and absorption of triglycerides, phospholipids, glycolipids and sterols; Biosynthesis of saturated, unsaturated, hydroxyl and branched chain fatty acids; 3. Oxidation of fatty acids and different pathways for such oxidation. Biosynthesis and degradation of phospholipids; **Glycolipids.** Sterol biosynthesis and conversion of cholesterol to various other biologically important compounds; Formation of prostaglandins, prostacyclins and thromboxanes from unsaturated fatty acids; Regulation of the various synthetic and degradative processes mentioned above.

C. Proteins:

Types of proteins; Amino Acids; Proteins – composition of amino acids, primary structure = sequence of amino acids; Hemoglobin Primary structure Secondary Tertiary, Quaternary; Collagens; Albumen proteins, Caseins. Cuticular proteins; Chorion proteins, silk proteins; Esterases; phosphatases phospholipases; Nucleases. Ureotelic, uricotelic and ammoniotelic modes of nitrogen metabolism. ii. Myoglobins, Haemoglobins, Haemocyanins, Haememerythrins.

D. CELL Biology and Endocrinology:

Types of cells, Extracellular matrix, Cytoskeletal elements and cell-cell interactions; Cell division and Cell cycle-Mitosis and meiosis, Cell cycle phases and Programmed cell death; Biomembranes; **Membrane Transport:** Passive, facilitated and exchange diffusion, Fick’s law of diffusion and active transport. **Synaptic transmission,** neurotransmitters, biogenic amines, amino acids and neuropeptides. Storage and exocytosis of neurotransmitters; **Endocrine System:** Endocrine organs in man. Location and inter relationship of endocrine glands in man; chemistry of hormones

produced by hypothalamus, pituitary, thyroid, parathyroid, pancreas, adrenals, gonads and intestine; Functions and abnormalities; Mechanism of action of Hormone; Insect hormones; Structure and function of moulting hormone, ecdysone, Pheromones: Mechanism of perception and action. Use of pheromones in control of agricultural pests.

PUT 822: COMPARATIVE Physiology 2 Credits

Definition of basic concepts.

Review of Physiology of

Blood, Immune System, Liver, Kidney, Respiratory System, Nervous System, Cardiovascular System, Skin, Reproductive System, Eye, Endocrine System.

PUT 823: Principles of Pharmacology 3 Credits

Pharmacokinetics: definition of pharmacokinetics.

Absorption: different sites of absorption, pH-partitioning, factors that affect absorption.

Distribution: Plasma-protein binding and other factors that affect distribution. Entry of drugs into special tissues: the brain and the foetus. Elimination of drugs: introduction to metabolism of drugs. Excretion in urine: glomerular filtration, tubular reabsorption, tubular secretion. Other routes of elimination.

Pharmacodynamics: Receptors. Neurotransmitters.

The adrenergic and cholinergic nervous systems; serotonin, histamine, agonists and antagonists of each of these neurotransmitters. Neuropeptides. Antibiotics. Non-steroidal anti-inflammatory drugs.

PUT 824 Risk Assessment 3 Credits

1. Background:
 - a. What is risk?
 - b. What is risk assessment?
 - c. History of the evolution of risk assessment
 - d. Utility of risk assessment in decision making – Risk based decision making, development of reference concentrations, reference doses and cancer slope factors, use of the latter types of information to manage environmental hazards.
 - e. Overview of the framework for risk assessment
2. Framework for Risk Based Decision Making
 - a. Planning and Scoping
 - i. Relevance of designing a risk assessment to address risk management decisions.
 - ii. Setting up your risk assessment to be responsive to your risk management needs.
 - b. Hazard Identification
 - i. What is hazard identification
 - ii. What are the key questions (information outputs) of a hazard identification exercise

- iii. Assuring a thorough evaluation of toxicity – key concepts to consider and understand – direct effects, interactions and effect modification, vulnerability and susceptibility, cumulative effects and cumulative exposure.
- iv. Types of data used in hazard identification – animal toxicology studies, Toxicokinetic (TK) studies, Toxicodynamic (TD) studies, human studies (limited because of ethical issues but when available can be useful), epidemiological studies.
- v. Evaluating mechanisms of toxicity – biotransformation, key xenobiotic pathways e.g. Cyp2E1, Phase 1 and Phase 2 metabolism basics, role of the liver, excretory mechanisms, etc
- vi. Weighting the evidence to support toxicity – Applying Hill's criteria
- vii. Case Study Review using an example from the USEPA's Integrated Risk Information System – good examples per rich database are benzene which is rich in human epi data and cis 1,3-Dichloroethylene which is not so data rich. Another good source of data are the EPA "Integrated Science Assessment" documents for National Ambient Air Quality Standards pollutants. I would use Pb as a good example.

- c. Risk Characterization
 - i. Tools for estimating risk – hazard quotient, hazard index, risk per population count using inhalation unit risk estimates for cancer.
 - ii. Summarizing the data from your risk assessment – Assuring that key information is included.
 - iii. Preparing a risk report for a decision maker.
 - iv. Case study maybe using benzene.
- d. Risk management
 - i. Types of risk management decisions.
 - ii. Informing your decision using your data
 - iii. Considerations in risk management – social, political, scientific, economic, equity, sustainability, etc.

SGS 801.1 ICT & Research Methods

This course should cover essentials of ICT especially the use of Microsoft Word, Spreadsheet, Power point, Access and Project. It will also examine common statistical packages used in health research.

The course is an introduction to project design and planning and will teach the various methods in conducting scientific medical research. It will emphasize quantitative and qualitative designs including how to conduct clinical trials and documentation. It will also introduce the use of computer in data analysis and the use of operational research and functional analysis in project design and evaluation.

Other areas covered include - Planning a Research; Ethical Issues in Research; Study Designs in Medicine and Public Health; Choice of Topic; Introduction (Problem Definition, Objectives); Formulation of hypothesis; Testing of hypothesis; Literature Search/Literature Review; Materials & Methods; Sample Size determination/Calculation; Instrument for data collection; Data Collection/Management; Presentation of Results (Data Presentation, Analysis etc.); Discussion, Conclusion and Recommendations; Referencing; Project Write-Up

SGS 801.2 Management & Entrepreneurship

Covers concepts, history and development of entrepreneurship, the entrepreneur, qualities and characteristics. The Entrepreneur and Business Environment, Identifying Business Ownership and Registration, starting and developing business ventures, Legal forms of business ownership and registration. Types of business ownership, feasibility studies, Role of Small and Scale Enterprise (SME) in the economy, Role of Government in Entrepreneurship, Business location and layout. Accounting for SME, Financing, SME, managing of SME, Risk Management of SME, success and failure factors of SME, prospects, and challenges of Entrepreneurship in Nigeria Entrepreneurship in Nigeria Entrepreneurship. This course would expose the students to the practice of applied management and entrepreneurship. The students would learn how to enhance their entrepreneurship skills and manage their own business. Business prospects for students in higher institution would be taught and the student would learn how to get into the right business

PUT 825: Exposure Assessment and Biomonitoring 3 Credits

The contents include key goals of exposure assessment and potential uses of the results of an exposure assessment; types of data that are used in exposure assessment (the hierarchy of exposure data – from personal monitoring data, biomonitoring to proximity types of data), including pros and cons of each type of data; biomarkers of effect and biomarkers of exposure, etc.; key questions in exposure assessment – type of exposure – acute, chronic or intermittent, route of exposure (inhalation, oral, dermal, injection), exposure pathways, duration of exposure, frequency of

exposure, characteristics of receptor population that are pertinent for exposure, exposure rates (inhalation and ingestion rates), etc.; measuring exposure data in a variety of settings – epi study, environmental monitoring, modelling (use example of National-Scale Air Toxics Assessment for the US); calculating exposure in a risk assessment– illustrative case studies – using simple exposure formulae $((IR*Conc*EF*ED)/(BW*AT))$; Illustrative case study using made up scenario for benzene; Dose-Response Assessment

- i. What is the goal and utility of a dose-response assessment?
- ii. Evaluating dose-response relationships in animal tox studies and epi studies.
- iii. Understanding d-r information – shape and slope of the curve, background exposures, baseline susceptibility, linearity and non-linearity and issues with assumptions.
- iv. Case Study - “Dose maketh the poison” – A re-evaluation using emerging data on Pb and endocrine disruptors

Others are biomonitoring; sentinel species for biomonitoring and bio-surveillance; biomarkers and biomonitoring: Blood Urea Saliva and Sweat studies (BUSS studies)

PUT 826: Petroleum Industry Exposure Assessments. 2 Credits

Toxicology Strategies for Petroleum Industry Exposure Assessments

Oil and Gas Industry, Toxicology

Introduction to Petroleum Operations

Overview of Petroleum Operations and Process Streams

How to Categorize Streams using Toxicology Data

What are the Primary Constituents of Process Streams that drive exposure assessments?

Selected Hazardous Constituents in Petroleum Substances

- Benzene
- H₂S
- Naphthalene
- Polycyclic Aromatic Hydrocarbons (PAHs)
- Butadiene

Occupational Exposure Limits in the Petroleum Industry

- How Different Companies Adopt or Set Internally Used Values

- Lessons Learned from this Process

- How Will they Affect the OEL Process

ACGIH® Mixtures Formula – Utility, Its Value and Application to Chemicals found in the Petroleum Industry

- Overview of the Formula, Its Application and Limitations

- Examples of its Use with Chemicals in the Petroleum Industry

Issues and Applications

Inhalation vs. Dermal Exposures
 Reproductive Issues
 Endocrine Disruptors
 Sharing Toxicology Data Globally
 Biomonitoring Considerations
 Petroleum Product Poisoning.
 Overview of Petroleum Product Poisoning
 Effects of Oil and Gas Fields on domestic/aquatic animals Health and Production

PUT 827 Medical Geology 2 units

Natural distribution and occurrence of elements.
 Anthropogenic sources.
 GIS as a tool in studies of the health of humans.
 Uptake of elements, particularly trace elements from the food to humans.
 Biological response on elements, particularly trace elements.
 Geological aspects on the nutrient supply.
 Biological response on elements, particularly trace elements.
 Animal and medical geology.
 Aspects on uptake of elements, particularly trace elements, in animals. Uptake of elements, particularly trace elements, and toxicological consequences of uptake of both essential and non-essential trace elements.
 Transport of elements in air with a focus on volcanic activity, radon problems and natural aerosols of dam and health effects.
 Transport of elements in water with a focus on arsenic, fluoride and hardness of water and health effects.
 Environmental epidemiology with special consideration to experimental framework, exposure assessment, bias and confounding factors.
 Transport of elements in water and the importance of speciation and the special requirements it has on sampling, preparation and analysis.
 Environmental medicine in relation to the natural environmental influence on human health. Which measures can be taken to avoid negative influences?
 Risk assessment of exposure for trace elements in the environment.
 Relationship between the risks with exposure for trace element in our environment and other health risks, e.g. smoking.

PUT 828: Biometry & Modeling in Risk Assessments 3 units

Introduction to Predictive Toxicology and Dry labs
 Predictive Toxicology Tools and Methods
 In Silico Toxicology – Non-Testing Methods
 QSAR Approaches to Predicting Toxicity
 Toxicity checker

PUT 829: Oil Field Chemicals Hygiene and HSE Protocols

Course Outline

Overview of oil field chemicals and applications
 Chemical hygiene protocols and components
 Management of chemical waste and disposal options
 HSE Management systems and protocols

PUT 807: SEMINARS 2 Credits

Seminar topic related to environmental and petroleum toxicology and in the candidate's area of interest will be developed and presented in a report and examined orally by a panel of internal examiners. The students are expected to undertake a detailed systematic review of current literature on the basic concepts that are related to seminar topic

PUT 808: Research Project (Dissertation) 6 Credits

The candidate must design and execute an acceptable original project in any area related to environmental/petroleum toxicology under supervision of an academic member of staff. For these projects, students will carry out original research. They will thus be exposed to practical research methods such as the design of empirical studies, questionnaire design, data collection, collation, analysis interpretation, and reporting. Referencing shall be the APA style. Ethical approval MUST be obtained from the Research and Ethics Committee of the University. Defense of completed project shall be done at date fixed by the departmental graduate committee and according to the guidelines set by the graduate school. Project shall be submitted in quarto size paper in BLACK bounded format and duly certified by project supervisor and must be submitted before the closing date given by the Centre.

ACADEMIC STAFF

S/N	Name	Qualification	Designation	Specialisation
1	Prof. Orisakwe, Orish E.	PhD	Professor	Toxicology/Pharmacology
2	Prof. Thuppil Venkatesh	PhD	Professor	Toxicology
3	Prof. Jerome Nriagu	PhD, DSc	Professor	Environmental Health Sciences
4	Prof. Judith T. Zelikoff,	Ph.D	Professor	Toxicology
5	Prof. Chiara Frazzoli	PhD	Professor	Toxicology
6	Prof Abbas A. Mahdi	PhD	Professor	Toxicology
7	Prof V. Ukaegbu	PhD	Professor	Medical Geologist
8	Dr Farzana Mahdi	PhD	Professor	Toxicology
9	Prof. F. Sikoki	PhD	Professor	Eco-Toxicology

10	Prof. Leo Osuji	PhD	Professor	Eco-Toxicology
11	Prof Patrick U. Agbasi	PhD	Professor	Toxicology
12	Prof Jose Centeno	PhD	Professor	Medical Geologist
13	Prof Ogbonna Joel	PhD	Professor	Petroleum and Gas
14	Dr. Z. Igweze	PhD	Reader	Toxicology/Pharmacology
15	Dr Chukwuemeka Raph Nwokocha	PhD	Reader	Environmental Health Sciences
16	Dr Olarenwaju Lawal	PhD	Reader	Geography
17	Dr. A.N, Ezejiofor	PhD	Senior lecturer	Toxicology/ Pharmacokinetics
18	Dr. K.C. Patrick-Iwuanyanwu	PhD	Senior lecturer	Toxicology/ Risk Assessment
19	Dr John Ugbebor	PhD	Senior lecturer	HSE/Environment
20	Dr. B.B. Babatunde	PhD	Senior lecturer	Eco-Toxicity and Radiation Toxicology
21	Dr Danladi Husaini Chiroma	PhD	Senior Lecturer	Toxicology
22	Dr Hyacinth Nwankwoala	PhD	Senior Lecturer	Medical Geologist
23	Dr K'tso Ngharbu	PhD	Senior Lecturer	Medical Geologist

PhD PROGRAMMES IN ENVIRONMENTAL HEALTH, ENVIRONMENTAL TOXICOLOGY AND NUTRITIONAL BIOCHEMISTRY/ TOXICOLOGY

Admission Requirements

For a candidate to be admitted into the PhD programme, he/she should have a relevant Masters' degree with a CGPA of not less than 4.0 on five-point scale. Candidates with master's degrees in food sciences and technology, food microbiology and other related courses can apply for the PhD in public health nutrition

Programme Titles:

Doctor of Philosophy (PhD) in Environmental health,
Doctor of Philosophy (PhD) in Environmental toxicology

Programme duration:

Full time – 36 (minimum) to 48 months (maximum)
Part-time – 48 months (minimum) to 72 months (maximum)

Graduation Requirements

To qualify for the award of the PhD, the candidate must have successfully completed all the prescribed courses in the programme in line with the school of graduate studies requirement.

LIST OF COURSES, CODE AND CREDIT UNITS

Area	Course	Code	Unit
General	Entrepreneurship	PUT 901	3
	Advanced Biostatistics and Data Science	PUT 902	3
	ICT, Technical Writing & Presentation Skills	PUT 903	3
	Environmental Epidemiology, Exposure Science & Risk Assessment	PUT 904	3
	Seminar	PUT 905	3
	Research Methods	PUT 906	3
	Research Project	PUT 907	12
Environmental Toxicology	Environmental Toxicology	PUT 908	3
Nutritional biochemistry/ toxicology	Advanced Nutritional Biochemistry	PUT 909	3
Environmental Health	Analytical Methods in Environmental Health	PUT 910	3

COURSES DESCRIPTION

PUT 901- Entrepreneurship (3 units)

This course teaches how to recognise, analyse and develop business opportunities. It will expose students to the various aspects of commerce – accounting, finance, marketing, management as well as the relevant legal and regulatory frameworks. The course will also introduce the students on Ways of commercializing their research outputs and how they can develop knowledge enterprise. Understanding the dynamic role of entrepreneurship and small businesses
Organizing and Managing a Small Business
Financial Planning and Control
Forms of Ownership for Small Business
Strategic Marketing Planning
New Product or Service Development
Business Plan Creation
Challenges of doing business in Nigeria and other developing countries
Research as an enterprise

PUT 902 - Advanced Biostatistics and Data Science (3 units)

This course teaches the concepts of biostatistics and the application of biostatistics in real world issues. Statistical methods and principles necessary for understanding and interpreting data used in public health and policy evaluation and formation. Topics include:

Descriptive statistics, graphical data summary, sampling, statistical comparison of groups, correlation, and regression.

Probability and advanced statistical theories parametric and non-parametric statistics, Poisson distribution, Regression modeling, statistical software appreciation and bioinformatics. Data Science introduces the concept and tools needed in turning open and real-world data into solving real world problems via mastering data communication, data investigation, data wrangling, cleaning, sampling, exploratory analysis and data Visualization skills.

Students will learn the powerful statistical program in R and how to use R for effective data analysis and statistical programming. The course will also cover practical issues in statistical computing with R, especially in reading data into R, accessing R packages, writing R functions, debugging, profiling R code, and organizing and commenting R code.

PUT 903 – ICT, Technical Writing & Presentation Skills (3 units)

The purpose of the course is to familiarize the participants with academic writing, grammar & syntax, critical thinking and problem-solving skills, summarizing, paraphrasing journal critique techniques and preparation of manuscripts and dissertation reports. Preparation and presentation at conferences and scientific meetings.

Participants would also be exposed to various statements/guidelines/checklists for reporting academic manuscripts such as:

CASP – Critical Appraisal Skill Program

CONSORT – Consolidated Standards of Reporting Trials

PRISMA – Preferred Reporting Items for Systematic Reviews and Meta-Analysis

ENTREQ – Enhancing Transparency in Reporting the synthesis of Qualitative research

COREQ – Consolidated criteria for Reporting Qualitative Research

CARE – Case Report guidelines

SQUIRE – Standards for Quality Improvement Reporting Excellence

STROBE – Strengthening the Reporting of Observational Studies in Epidemiology

ICT and Presentation Skills

Writing a Draft Journal Article

PUT 904: Environmental Epidemiology, Exposure Science & Risk Assessment

The candidate will study the principles and practice of advanced epidemiology and general concepts of assessing environmental exposures to chemicals in human populations. This course will also teach natural and environmental toxicants; food toxicology and carcinogens; mutagens, teratogens, allergens; neurotoxins, endocrine disruptors; detoxification of toxicants; microbial and insects' metabolism of xenobiotics; metabolism as a determinant of toxicity and assessment of toxicity; metabolism of hydrocarbons and other toxicants; human exposure to environmental contaminants.

Course Content

Introduction to principles and practice of epidemiology

Confounders, effect modification/interaction, causal inferences, outbreak investigations,

Geo-mapping/GIS, surveillance, receiver-operating characteristics curve, and surveys

The design of ecologic and personal monitoring studies

The techniques and equipment used for sampling and analysis, and interpretation of data.

The linkages among external concentrations, spatial and temporal parameters,

Risk assessment: concept and models

Recent topics in risk assessments

Food safety;

Modern environmental health hazards in non-communicable diseases

Biomonitoring; metals in diseases; metal toxicology: lead, mercury, cadmium, arsenic, chromium, nickel, vanadium, cobalt, manganese, iron, copper, etc;

Persistent organic pollutants (POPs) and dioxins

Plastics toxicology

Soot and aerosol toxicology; ozone, a criteria air pollutant; Natural antidotes; Unraveling toxic mechanisms

Biomarkers for toxic effects; predictive toxicology; regulatory aspects; introduction to systems biology; definition of fundamental concepts;

Cognitive effects of early exposure to environmental toxins, such as hydrocarbons, heavy metals, methylmercury, and other environmental toxicants on children and infants including exposure via breast milk

PUT 906 – Research Methods (3 units)

This course acquaints the students with principles and practice of advanced research methods in public health practice. Broad areas include systematic review, meta-analysis, meta-synthesis, quantitative and qualitative surveys, advanced literature search and data synthesis

Course Content

Research Process, Designs, and Human Subjects Protection

Research Question and Literature Review

Data Collection and SPSS

Descriptive Data Analysis

Inferential Data Analysis

Reporting the Results

Interpreting the Results

Thinking Skills for conduct of research

PUT 909 - Advanced Nutritional Biochemistry (3 Units)

This course is aimed at providing candidates with the principles of human nutrition. It is also aimed at providing an integrated overview of the physiological requirements and functions of protein, energy, and the major vitamins and minerals that are determinants of health and diseases in human populations. This course will also highlight principles of food and nutrition science relative to the health and well-being of the individual and the community. The chemical composition and functions of the essential nutrients, and how they are processed and utilized in the body. Dietary habits, nutrient requirements, food choices, healthy eating practices will also be highlighted. This course will also cover all theoretical/practical aspects of nutritional status assessments such as anthropometric measurement, dietary assessment etc. Screening topics will include the following:

Introduction to Nutrition : The need for food; Dietary sources, intake levels, physiological role, and requirement of major nutrients; The biological determinants of nutrient requirements and the assessment of nutritional status in individuals and the populations; The role of nutrition in growth and

health through the life cycle; The rationale for the development of dietary guidelines and nutrition policies in different countries; Nutrition and Biotechnology; Community nutrition; Maternal, infant and child nutrition; Nutrition in Health and Disease; Nutritional Epidemiology; Nutritional Assessment; Molecular Nutrition; control of food intake and regulation of body weight, as well as animal models of obesity; factors that affect the absorption, metabolism and storage of Vitamin A, as well as the association between Vitamin A deficiency and disease; Effects of nutritional alterations—for example, iron deficiency, folate alterations and PUFAs—on mortality, work capacity, and behaviour and cognitive functioning; Nutrition and physiological state (growth, reproduction, pregnancy, lactation etc.) and nutritional disorders of metabolic origin

PUT 912 - Analytical Methods in Environmental Health (3 Units)

Students in this course learn the skills, methods and critical thinking framework necessary for upper level environmental health courses and for success as public health professionals. Environmental Health is a field of public health in which environmental hazards and health risks to populations are identified, assessed and managed through a data-driven process. This course would introduce students to:

Nature of the physical, social and biological environment

Human ecology

Advance environmental forensic

Methodologies and techniques to obtain data in environmental health

Sampling, handling/storage of samples, sample preparation and determination.

Advanced environmental analysis in connection with advanced statistical methods including pattern recognition, multivariate statistics and experimental designs

PUT 905 - Seminar (3 Units)

Seminar presentation on specified aspects of research will be presented such as literature review, public health significance, key findings and implications and finally present research for external defense.

PUT 907 – Research Project (12 Units)

The dissertation will be an outline PhD proposal and a small piece of empirical work. The research proposal should indicate what the PhD might be along with, what the empirical work might be. The candidate's research will be supervised by academic and/or industry member of staff. The format of the report shall be in accordance with the existing guidelines from the School of Graduate Studies.

LIST OF STAFF

S/N	NAME	QUALIFICATIONS	DESIGNATION	SPECIALISATION
PUBLIC HEALTH				
1	Prof B. Ordinioha	MB, BS, FMCPH	Professor	History, Environmental Health
2	Prof D.S. Ogaji	MBBS, MQI, PhD, MNIM, FMCPH	Senior lecturer	Health System
3	Prof O. Obunge	BSc, MD, PhD, FWACP	Professor	Microbiology/ Laboratory Practice
4	Prof O. Georgewill	B.Med Sc, MBBS, MSc, MD	Professor	Therapeutics
5	Prof O.B. Babatunde	MBBS, Cert. Epid, FWACP	Senior lecturer	ICT/Research
6	Prof C.I. Tobin-West	MD,MPH,Adv Dip Mgt, FMCPH	Senior lecturer	Epidemiology, Reproductive Health
7	Prof K.E. Douglas	MBBS, FMCPH	Senior lecturer	Ethics, Occupational Health
8	Dr O. Maduka	MBBS, FMCPH, FRSPH	Senior lecturer	Epidemiology 1, Epidemiology 2
9	Dr I.D. Alabere	MBBS, MPH, FMCPH, mni,	Senior lecturer	Health Management, Seminar
10	Dr F. Adeniji	MBCH.B, MSc, FWACP (community Health)	Senior lecturer	Biostatistics
11	Dr Enembe Okokon	MBChB, MSc, PhD, FMCPH	Senior Lecturer	Environmental Epidemiology
NUTRITIONAL BIOCHEMISTRY/TOXICOLOGY				
1	Prof. E.N. Onyeike	PhD	Professor	Nutritional Biochemistry/Toxicology
2	Prof. Akaninwor, J.O.	PhD	Professor	Nutritional Biochemistry
3	Prof. E.O. Orisakwe	PhD	Professor	Nutrigenomics & Toxicology
4	Prof. O.A.T. Ebuehi	PhD	Professor	Nutritional & Food Biochemistry & Nutrigenomics
5	Prof. Irene Ifeoma Ijeh	PhD	Professor	Nutritional Biochemistry /Toxicology
6	Prof. I. Imumorin	PhD	Professor	Molecular Nutrition/ Nutrigenomics
7	Dr. E.B. Essien	PhD	Reader	Nutritional Biochemistry /Toxicology
7	Patrick-Iwuanyanwu, K.C	PhD	Senior lecturer	Nutritional Biochemistry/Toxicology
9	Ikewuchi, C.C.	PhD	Senior lecturer	Nutritional Biochemistry/ Toxicology
10	Amadi, B.A.	PhD	Senior lecturer	Nutrition/Toxicology
	Dr. E. M. Ubiaru	PhD	Visiting	Industrial and Food Microbiology.
11	Dr. Chukwukeluo E.B. Chukwuogo	PhD	Visiting	Industrial
ENVIRONMENTAL TOXICOLOGY				
1	Prof. Orisakwe, Orish E.	PhD	Professor	Toxicology/Pharmacology
2	Prof. Thuppil Venkatesh	PhD	Professor	Toxicology
3	Prof. Jerome Nriagu	PhD, DSc	Professor	Environmental Health Sciences
4	Prof. Judith T. Zelikoff,	Ph.D	Professor	Toxicology
5	Prof. Chiara Frazzoli	PhD	Professor	Toxicology

6	Prof Abbas A. Mahdi	PhD	Professor	Toxicology
7	Prof. F. Sikoki	PhD	Professor	Eco-Toxicology
8	Prof. Leo Osuji	PhD	Professor	Eco-Toxicology
9	Prof Patrick U. Agbasi	PhD	Professor	Toxicology
10	Dr. Z. Igweze	PhD	Reader	Toxicology/Pharmacology
11	Dr. A.N, Ezejiolor	PhD	Senior lecturer	Toxicology/Pharmacokinetics
12	Dr. K.C. Patrick-Iwuanyanwu	PhD	Senior lecturer	Toxicology/ Risk Assessment
13	Dr. B,B, Babatunde,	PhD	Senior lecturer	Eco-Toxicity and Radiation Toxicology

PhD PROGRAMMES IN ENVIRONMENTAL HEALTH, ENVIRONMENTAL TOXICOLOGY AND NUTRITIONAL BIOCHEMISTRY/TOXICOLOGY

Admission Requirements

For a candidate to be admitted into the PhD programme, he/she should have a relevant Masters’ degree with a CGPA of not less than 4.0 on five-point scale. Candidates with master’s degrees in food sciences and technology, food microbiology and other related courses can apply for the PhD in public health nutrition

Programme Titles:

Doctor of Philosophy (PhD) in Environmental health,

Doctor of Philosophy (PhD) in Environmental toxicology

Programme duration:

Full time – 36 (minimum) to 48 months (maximum)
Part-time – 48 months (minimum) to 72 months (maximum)

Graduation Requirements

To qualify for the award of the PhD, the candidate must have successfully completed all the prescribed courses in the programme in line with the school of graduate studies requirement.

List of courses, code and credit units

Courses description

PUT 901- Entrepreneurship (3 units)

This course teaches how to recognise, analyse and develop business opportunities. It will expose students to the various aspects of commerce – accounting, finance, marketing, management as well as the relevant legal and regulatory frameworks. The course will also introduce the students on ways of commercializing their research outputs and how they can develop knowledge enterprise.

Understanding the dynamic role of entrepreneurship and small businesses

Organizing and Managing a Small Business

Financial Planning and Control

Forms of Ownership for Small Business

Strategic Marketing Planning

New Product or Service Development

Business Plan Creation

Challenges of doing business in Nigeria and other developing countries

Research as an enterprise

PUT 902 - Advanced Biostatistics and Data Science (3 units)

This course teaches the concepts of biostatistics and the application of biostatistics in real world issues. Statistical methods and principles necessary for understanding and interpreting data used in public health and policy evaluation and formation. Topics include:

Descriptive statistics, graphical data summary, sampling, statistical comparison of groups, correlation, and regression.

Probability and advanced statistical theories parametric and non-parametric statistics, Poisson distribution, Regression modeling, statistical software appreciation and bioinformatics. Data Science introduces the concept and tools needed in turning open and real-world data into solving real world problems via mastering data communication, data investigation, data wrangling, cleaning, sampling, exploratory analysis and data Visualization skills.

Students will learn the powerful statistical program in R and how to use R for effective data analysis and statistical programming. The course will also cover practical issues in statistical computing with R, especially in reading data into R, accessing R packages, writing R functions, debugging, profiling R code, and organizing and commenting R code.

PUT 903 – ICT, Technical Writing & Presentation Skills (3 units)

The purpose of the course is to familiarize the participants with academic writing, grammar & syntax, critical thinking and problem-solving skills, summarizing, paraphrasing journal critique techniques and preparation of manuscripts and dissertation reports. Preparation and presentation at conferences and scientific meetings.

Participants would also be exposed to various statements/guidelines/checklists for reporting academic manuscripts such as:

CASP – Critical Appraisal Skill Program

CONSORT – Consolidated Standards of Reporting Trials

PRISMA – Preferred Reporting Items for Systematic Reviews and Meta-Analysis

ENTREQ – Enhancing Transparency in Reporting the synthesis of Qualitative research

COREQ – Consolidated criteria for Reporting Qualitative Research

CARE – Case Report guidelines

SQUIRE – Standards for Quality Improvement Reporting Excellence

STROBE – Strengthening the Reporting of Observational Studies in Epidemiology

ICT and Presentation Skills

Writing a Draft Journal Article

PUT 904: Environmental Epidemiology, Exposure Science & Risk Assessment

The candidate will study the principles and practice of advanced epidemiology and general concepts of assessing environmental exposures to chemicals in human populations. This course will also teach natural and environmental toxicants; food toxicology and carcinogens; mutagens, teratogens, allergens; neurotoxins, endocrine disruptors; detoxification of toxicants; microbial and insects' metabolism of xenobiotics; metabolism as a determinant of toxicity and assessment of toxicity; metabolism of hydrocarbons and other toxicants; human exposure to environmental contaminants.

Course Content

Introduction to principles and practice of epidemiology

Confounders, effect modification/interaction, causal inferences, outbreak investigations,

Geo-mapping/GIS, surveillance, receiver-operating characteristics curve, and surveys

The design of ecologic and personal monitoring studies

The techniques and equipment used for sampling and analysis, and interpretation of data.

The linkages among external concentrations, spatial and temporal parameters,

Risk assessment: concept and models

Recent topics in risk assessments

Food safety;

Modern environmental health hazards in non-communicable diseases

Biomonitoring; metals in diseases; metal toxicology: lead, mercury, cadmium, arsenic, chromium, nickel, vanadium, cobalt, manganese, iron, copper, etc;

Persistent organic pollutants (POPs) and dioxins

Plastics toxicology

Soot and aerosol toxicology; ozone, a criteria air pollutant; Natural antidotes; Unraveling toxic mechanisms

Biomarkers for toxic effects; predictive toxicology; regulatory aspects; introduction to systems biology; definition of fundamental concepts;

Cognitive effects of early exposure to environmental toxins, such as hydrocarbons, heavy metals, methylmercury, and other environmental toxicants on children and infants including exposure via breast milk

PUT 906 – Research Methods (3 units)

This course acquaints the students with principles and practice of advanced research methods in public health practice. Broad areas include systematic review, meta-analysis, meta-synthesis, quantitative and qualitative surveys, advanced literature search and data synthesis

Course Content

Research Process, Designs, and Human Subjects Protection
Research Question and Literature Review
Data Collection and SPSS
Descriptive Data Analysis
Inferential Data Analysis
Reporting the Results
Interpreting the Results
Thinking Skills for conduct of research

PUT 909 - Advanced Nutritional Biochemistry (3 Units)

This course is aimed at providing candidates with the principles of human nutrition. It is also aimed at providing an integrated overview of the physiological requirements and functions of protein, energy, and the major vitamins and minerals that are determinants of health and diseases in human populations. This course will also highlight principles of food and nutrition science relative to the health and well-being of the individual and the community. The chemical composition and functions of the essential nutrients, and how they are processed and utilized in the body. Dietary habits, nutrient requirements, food choices, healthy eating practices will also be highlighted. This course will also cover all theoretical/practical aspects of nutritional status assessments such as anthropometric measurement, dietary assessment etc. Screening topics will include the following:

Introduction to Nutrition: The need for food; Dietary sources, intake levels, physiological role, and requirement of major nutrients; The biological determinants of nutrient requirements and the assessment of nutritional status in individuals and the populations; The role of nutrition in growth and health through the life cycle; The rationale for the development of dietary guidelines and nutrition policies in different countries; Nutrition and Biotechnology; Community nutrition; Maternal, infant and child nutrition; Nutrition in Health and Disease; Nutritional Epidemiology; Nutritional Assessment; Molecular Nutrition; control of food intake and regulation of body weight, as well as animal models of obesity; factors that affect the absorption, metabolism and storage of Vitamin A, as well as the association between Vitamin A

deficiency and disease; Effects of nutritional alterations—for example, iron deficiency, folate alterations and PUFAs—on mortality, work capacity, and behaviour and cognitive functioning; Nutrition and physiological state (growth, reproduction, pregnancy, lactation etc.) and nutritional disorders of metabolic origin

PUT 912 - Analytical Methods in Environmental Health (3 Units)

Students in this course learn the skills, methods and critical thinking framework necessary for upper level environmental health courses and for success as public health professionals. Environmental Health is a field of public health in which environmental hazards and health risks to populations are identified, assessed and managed through a data-driven process. This course would introduce students to:

Nature of the physical, social and biological environment
Human ecology
Advance environmental forensic
Methodologies and techniques to obtain data in environmental health
Sampling, handling/storage of samples, sample preparation and determination.
Advanced environmental analysis in connection with advanced statistical methods including pattern recognition, multivariate statistics and experimental designs

PUT 905 - Seminar (3 Units)

Seminar presentation on specified aspects of research will be presented such as literature review, public health significance, key findings and implications and finally present research for external defense.

PUT 907 – Research Project (12 Units)

The dissertation will be an outline PhD proposal and a small piece of empirical work. The research proposal should indicate what the PhD might be along with, what the empirical work might be. The candidate's research will be supervised by academic and/or industry member of staff. The format of the report shall be in accordance with the existing guidelines from the School of Graduate Studies.

EMERALD ENERGY INSTITUTE FOR PETROLEUM AND ENERGY ECONOMICS, POLICY AND STRATEGIC STUDIES

INTRODUCTION

Emerald Energy Institute, (EEI) is a collaborative Institute for graduate education in Petroleum & Energy Economics, Policy and Strategic Studies. It was established in 2008 through Institute of Petroleum Studies (IPS) with Dr. Emmanuel .O. Egbogah, (OON), Adviser to President Umaru Musa Yar'adua on Petroleum Matters and Chairman of Emerald Energy Resources Ltd as the benefactor. The Institute is an international collaborative center for graduate studies and continuing education, to generate policy debates, and conduct applied research on energy, especially contemporary petroleum and power policy issues. As African countries grow in their status and relevance as petroleum and energy producers and exporters, the need to develop indigenous capacity in oil, gas & power sector is imperative.

The emphasis on building capacity for petroleum and energy sectors locally in Nigeria to complement professional training overseas in energy and petroleum policy issues and problems drives the passion and commitment of Emerald Energy Institute (EEI) to excellence, keeping in perspective the expectations stated in the Nigeria Content Law. Thus, Emerald Energy Institute in the University of Port Harcourt, an Institute of excellence, is established and anchored on local, regional and global academic faculty and industry experts in energy and petroleum to train highly skilled personnel and to conduct research on energy policy, management, and economics.

VISION

To become an inimitable Institute of excellence in petroleum and energy economics, management and strategic studies in Africa.

MISSION

To provide skilled professionals and managers for the petroleum and energy industry and institutions through commitment to excellence in training, applied economics and policy research, continuing education and capacity-building.

AIM

The EEI AIMS to develop petroleum and energy professionals with capabilities to manage and govern the petroleum and energy sectors, and to provide a forum for interactions between petroleum and energy professionals in government, academia, industry, and related professional bodies (the triple Helix plus model).

OBJECTIVES

- a. **To develop human capacity required by Nigeria and Sub-Saharan Africa in the following areas:**
 - Extraction of oil and gas resources in a cost efficient form.
 - Formulation and implementation of energy policies and regulations.
 - Effective management of the natural resources of Nigeria and sub-Saharan Africa (SSA).
- b. **To provide a forum for exchange of ideas & policy dialogue from various energy professionals through the triple helix model**
 - Energy Professionals in Government;
 - Energy Professionals in Academia;
 - Energy Professionals in Business/Industry.
- c. **To develop research in the following broad areas:**
 - Geopolitics of Energy and Energy Resources;
 - Energy Law, Regulations and Policy Analysis;
 - Oil and Gas Economics, Management and Finance.

ACADEMIC PROGRAMMES

The Emerald Energy Institute offers degree courses in energy and petroleum economics. The degree from the Institute is awarded by the University of Port Harcourt as approved by the University's Senate.

1. Post Graduate Diploma (PGD) in Petroleum & Energy Economics
2. Professional Masters in Energy Economics
3. Professional Masters in Petroleum Economics
4. Professional M.Sc. Petroleum Regulation and Policy (without dissertation)
5. Professional M.Sc. Climate Change, Green Economy and Policy (without dissertation)
6. Professional M.Sc. Energy Regulation and Policy (without dissertation)
7. Professional M.Sc. Energy Transitions Management and Policy (without dissertation)
8. Master of Science (MSc) Petroleum Business Management
9. Master of Science (MSc) Energy Business Management
10. Master of Science (MSc) Petroleum Economics, Management & Policy
11. Master of Science (MSc) Energy Economics, Management & Policy

12. Doctor of Philosophy (PhD) Petroleum Economics
13. Doctor of Philosophy (PhD) Energy Economics

PROGRAMME DURATIONS

- **POST GRADUATE DIPLOMA (PGD)**
The duration of the programme shall be 12 months of full time study. Industry/company workers can equally attend modular/sandwich programmes and accumulate credits for 24 months (Part time).
- **MASTER OF SCIENCE (M.Sc)**
The Masters Programmes at Emerald Energy Institute (EEI) shall be for 18 months of intensive course work, field trips, and dissertation preparation and for Full Time students and a minimum of 24 months for Part time students of intensive course work and dissertation.
- **DOCTOR OF PHILOSOPHY (Ph. D)**
The programme leading to the award of PhD degree in Petroleum and Energy Economics shall be for a minimum of 36 months and maximum of 48 months of intensive quarterly modular courses and research work for those with MSc degree in Petroleum and Energy Economics. This course work will involve 12 credits of advanced graduate course works in Applied Economics in addition to 12 credits core courses in petroleum, energy economics, management and policy and a thesis.
- **PROFESSIONAL MASTERS**
The Professional Masters Programmes at Emerald Energy Institute (EEI) can be completed in 12 months for Full time students and a maximum of 24 months for Part time students of intensive course work and field trips. Dissertation is not required for graduation.

ADMISSIONS REQUIREMENTS

GENERAL REQUIREMENT

- Candidates must possess a Bachelor of Science Degree with a minimum of Second Class (Upper Division) in Social Sciences, Management Sciences, Engineering or Physical Sciences.
- Sponsored company staff and candidates with at least three (3) years' experience in the petroleum and energy industries and a Second Class (Lower Division) Degree with a minimum CGPA of at least 3.00 (on a 5-point scale) may also be considered. Law degree holders with enough years of experience in the

oil, gas, and power industry may be considered as well.

- Candidates must have completed the mandatory NYSC and have proof of a discharge or exemption certificates.
- In addition to the above requirements, **ALL** candidates must also satisfy the minimum graduate school matriculation requirements of the University of Port Harcourt.
- The language of instruction at Emerald Energy Institute (EEI) is English and all applicants are expected to have a level of proficiency in English.
- All applicants academically qualified shall be required to undergo an entrance examination and interview by the Institute.

SPECIFIC REQUIREMENT

- **POST GRADUATE DIPLOMA (PGD) REQUIREMENT**
Applicants for PGD shall be required to have a minimum of Second Class Honours Lower Division in a relevant degree in Sciences, Management, Social Sciences, Geosciences, and Engineering with a minimum CGPA of 3.0. Candidates with Second Class Honours Lower Division in Law with adequate experience in the energy and petroleum industry will be considered. All candidates must also satisfy the minimum matriculation requirements of the University of Port Harcourt.
- **MASTER OF SCIENCE (M. Sc) REQUIREMENT**
Applicants for professional masters in energy economics shall be required to have a minimum of Second Class Honours Upper Division in a relevant degree in Social Sciences, Management Sciences, Law, Sciences, Geosciences, and Engineering with a minimum CGPA of 4.0. However, candidates with Second Class Honours Lower Division with at least 5 years working experience in the energy and petroleum industry will be considered. All candidates must also satisfy the minimum matriculation requirements of the University of Port Harcourt.
- **DOCTOR OF PHILOSOPHY (Ph.D.) REQUIREMENTS**
Entry into the PhD programme shall be on a competitive basis. Candidates with a B.Sc. Second Class Upper (or Lower Division degree in Social and Management Sciences, Engineering or Geosciences with at least four years' experience in the oil and gas industry)

is eligible to apply. But such candidates must also have an appropriate MSc degree in Energy or Petroleum Economics or appropriate majors in order to be eligible for direct admission to the Ph.D. programme. All candidates must also satisfy the minimum Graduate School Admission requirements of the University of Port Harcourt.

- **PROFESSIONAL MASTERS IN PETROLEUM OR ENERGY ECONOMICS**

Applicants for Professional Masters in either Petroleum or Energy Economics shall be required to have a minimum of Second Class Honours Upper Division in a relevant degree in Social Sciences, Management Sciences, Law, Sciences, Geosciences, and Engineering with a minimum CGPA of 4.0. However, candidates with Second Class Honours Lower Division with adequate experience in the energy and petroleum industry will be considered. All candidates must also satisfy the minimum matriculation requirements of the University of Port Harcourt.

- **PGD GRADUATION REQUIREMENTS**

To qualify for the award of Post Graduate Diploma in Petroleum and Energy Economics, the student must have successfully completed all the proposed courses and must have scored at least a grade of “C” in each of the courses. Evaluation of student performance shall be based on continuous assessment and final examination in taught courses and research preparation. The maximum standard for satisfactory academic progress at EEI is an A or a 5.0 Grade Point Average (GPA) and a minimum standard of a C or 3.0 Grade Point Average. Any student with a grade below “C” shall be required to write a resit exams. The minimum cumulative grade point average for graduation shall be 2.5.

- **MSc GRADUATION REQUIREMENTS**

The minimum standard for satisfactory academic progress at Emerald Energy Institute (EEI) is a C or a 3.0 Grade Point Average (GPA). D Grades, or an ABS are considered “unsatisfactory” and an F grade is a failed grade. Any student with a failed grade in any four courses during an academic year may be dismissed or asked to withdraw from the program. Any student who fails to meet the requirements for his/her program and/or has a grade point average of at least 2.5 will not qualify for award of the research-based M.Sc. and may be awarded a Post Graduate Diploma

or advised to transfer to a non-thesis program where applicable.

- **PHD. GRADUATION REQUIREMENTS**

Ph. D Scholars are expected to work closely with the institute’s academic adviser on admission to the PhD program to identify an advisor and two other committee members who shall serve as “advisors” for the study/research program. The selected committee members may include a faculty member(s) from the institute, and/or other departments or programs within or outside the University that can provide useful inputs to the candidate during the period leading to the award of the PhD degree.

During the first year of enrolment, PhD enrollees are expected to take 12 credits of advanced graduate course works in applied economics in addition to 12 credits speciality core courses in petroleum and energy economics, management and policy at Emerald Energy Institute (EEI) or any other recognized institution. At the end of the first year, the Ph. D scholars are expected to undertake a Graduate Qualifying Examinations before they can proceed with their work.

They are also required to participate in graduate seminars and independent research projects under the supervision of an advisor and two other committee members. Candidates are encouraged to apply for fellowships that will provide them with sponsorship to travel abroad to work on aspects of their research and/or participate in short courses/programs and conferences. The approval of the Office of the Director must be obtained before engaging in such programs. The approved students must also return to Emerald Energy Institute (EEI) to complete their research and PhD program.

There shall be three defense seminar before the final defense. These defense would comprise of a proposal, progress report-field work and the abstract defense.

Prior to submitting themselves for final assessment for the Ph.D. degree, all doctoral candidates are required to publish from their doctoral research at least two (2) papers in selected pre-approved peer reviewed journals as part of the requirement for graduation.

The Final Public Oral examination must include an initial public presentation of the research, and an open forum at the University graduate school in which the candidate is expected to defend the ideas presented in the thesis. The committee will then deliberate

briefly before voting on whether to award the candidate the degree. A simple majority vote by the committee is required for the award of the degree.

All professional masters' scholars are expected to obtain a minimum of a "C" grade in any exam undertaken at the Institute. A satisfactory performance in all course work examination is mandatory for graduation. This programme does not require a dissertation preparation and as such, the entire assessment on the student is based on course work.

PROFESSIONAL MASTERS GRADUATION PREREQUISITES

PGD PETROLEUM & ENERGY ECONOMICS

LIST OF COURSES, CODES AND CREDIT UNITS			
S/NO	COURSE CODE	COURSE TITLE	CREDIT UNIT
1	PEEM 701-1	Fundamentals of the Oil and Gas Industry	3
2	PEEM 701-2	Energy & Energy Resources, and the Economy	3

8	PEEM 702-1	Introductory Economic Theory	3
9	PEEM 702-2	Fundamentals of Micro and Macro Economics	3
10	PEEM 703	Mathematical Analysis, Research Methods and Statistics	3
11	PEEM 704	Petroleum & Energy Strategic Business Management	3
12	PEEM 705	Oil and Gas Industry and Pollution Issues	3
13	PEEM 706	Petroleum/Energy Project Finance & Investment Analysis	3
14	PEEM 707-1	Energy & Petroleum Policy, Law, Regulation & Ethics	3
15	PEEM 707-2	Environmental Sustainability & Community Relations in the Oil and Gas Industry	3
16	PEEM 707-3	Project Management	3
17	PEEM 708	Research Project	6

COURSE DESCRIPTION

PEEM 701-1 Fundamentals of the Oil and Gas Industry (3 Credits)

The course shall deepen the students' knowledge on the following course outlines: Introduction, History of the Industry, Upstream: Production & Exploration, Midstream: (Transportation, Models of Transportation & Storage), Downstream; Refining and Marketing, Oil & Gas Metering/Pricing, Laws & Regulations. The course further introduces students to development of oil and gas assets and presents the issues of profitability in petroleum exploration and development ventures.

PEEM 701-2 Energy & Energy Resources, and the Economy (3 Credits)

The course is an overview of all forms of energy and energy resources and the engineering processes for the transformation of primary energy to its useful forms. The course reviews fossil fuel energy and its forms, renewable energy resources and characteristics as well as the concept of energy technology in terms of location, assessment, processes and transformation. Specific topics include: exploration and exploitation of energy resources, development of unconventional resources, emerging technologies for energy production, electric power generation technologies, etc.

PEEM 701-3 Fundamentals of Downstream Petroleum Economics & Policy (3 Credits)

The course covers both the Downstream Petroleum Economics and Policy with the following contents: Oil Supply & Demand Fundamentals, Petroleum

Physical Trading, Financial & Market Trading with hedging & strategies, Overview of main Refining & Petrochemical Process, World Refining & Petrochemicals Demand, Evolution of Downstream Supply: Refining, Production & Quality(Specifications), Main Characteristics of Petrochemical Business: Economic Drivers, Principles of Refining, Management and Constraints, Standard Global Profit Analysis: Cash Flow, Capital Costs, Inflation Impact, etc, Introduction to Risk Analysis. Downstream Petroleum Regulations, and Downstream Petroleum Fiscal Policy

PEEM 701-4 Fundamentals of Natural Gas (3 Credits)

Natural gas is evolving globally and in Nigeria as the fossil fuel of choice and the bridge to renewables. The objective of this course is to provide students with an understanding of the natural gas value chain from upstream production through to downstream utilization, policy framework, overview of the evolving Nigerian gas market and monetization economics. Additionally, the course will present the linkages between gas and power sector as well as other gas feedstock industries. As a result of this class, students will have a better understanding of the context and complexity of the natural gas sector and will be equipped with the requisite knowledge and skills to make informed judgements on industry issues as professionals. They will better appreciate government policy efforts in gas as well as the inherent investment and strategic opportunities in the sector. Specifically, the course will provide learners with the overview of global energy trends, overview of natural gas value chain, as well as the Nigerian gas market.

PEEM 701-5 Fundamentals of the Energy Industry - Power Sector (3 Credits)

The objective of the course is to provide a better understanding of the economics of the energy and power industry. Courses includes Introduction to Energy Policy and Regulation; Fundamentals of Energy Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

PEEM 701-6 Local Content Development in the Oil and Gas Industry (3 Credits)

The course examines the conceptualization of Local Content in Nigeria, Factors that defines Local Content Development, Policy Framework of Local Content Development in Nigeria, Legal Framework for Nigerian Content Development

(Immigration Acts, The Petroleum Acts, Petroleum Development Fund Acts, The Petroleum Industry Bill, The Nigerian Oil & Gas Industry Content Development Act, etc), Challenges of Local Content Development in Oil & Gas Industry in Nigeria

PEEM 701-7 Fundamentals of Petroleum Geopolitics (3 Credits)

This course will provide the students a broader view of the petroleum industry, demand/supply, pricing and the oil and gas global geopolitics. The course covers: the political economy of oil & gas industry, petroleum pricing and its regulation by OPEC, the global politics involved, petroleum & macroeconomic issues, sustainable petroleum development, the recent energy transition and the geopolitics involved.

PEEM 702-1 Introductory Economic Theory (3 Credits)

This course covers foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning, and management. The topics are as much as possible made relevant to the energy and petroleum sector.

PEEM 702-2 Fundamentals of Micro and Macro Economics (3 Credits)

This is an introductory course providing a general understanding of basic macro-economic concepts. Specifically, it acquaints the students with an appreciation of the functions of economic systems, including various approaches to the organization of production and allocation of resources, and of policies to achieve national economic goals. These include the determination of national income, inflation, recession, unemployment, taxation, labor unions, environmental pollution, energy and economic growth. Its main focus is on introducing concepts and models which are used as tools of economic analysis. Concepts such as opportunity cost and approaches such as marginal analysis are introduced and the role of government, the national income and its distribution, GDP, consumption function, savings function, investment spending, the multiplier principle and the influence of government spending on income and output are discussed.

PEEM 703 Mathematical Analysis, Research Methods and Statistics (3 Credits)

This course is designed to provide a solid foundation for students in the applications of mathematical tools and statistics in petroleum and energy economics. The key objective is to provide

students with analytical tools for research and decision analysis. Specific topics to be taught include: applied mathematics and statistics with economic applications, research methods and efficiency analysis.

PEEM 704 Petroleum & Energy Strategic Business Management (3 Credits)

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion. It also introduces students to elements of strategy formulation, implementation and evaluation.

PEEM 705 Oil and Gas Industry and Pollution Issues (3 Credits)

The course will give an overview of the safety and environmental issues in the petroleum industry. It will provide detailed understanding of the methods and techniques to resolve these key issues for making petroleum production and processing, cleaner and safer. The course would educate students to identify and assess hazards in any stage of operation, to quantify and manage them as well. It will also highlight lessons learnt from the past accidents. Topical issues to be covered includes introduction to safety, health and environmental management- basic terms and their definitions- importance of safety- safety assurance and assessment- safety in design and operation- organizing for safety. Hazard classification and assessment- hazard evaluation and hazard control. Environmental issues and management- atmospheric pollution- flaring and fugitive release- water pollution- drilling waste, produced water, oil spills, cooling water, processed water- soil waste- rock cutting. Oil sludge, drilling solid waste, production waste environmental monitoring- environmental impact and decommissioning- environmental management.

PEEM 706 Petroleum/Energy Project Finance & Investment Analysis (3 Credits)

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion.

PEEM 707-1 Energy & Petroleum Policy, Law, Regulation & Ethics (3 Credits)

A complex legal environment underscores oil, gas and power business relationships and activities; and defines the limits of what stakeholders can do. This course provides an overview of the international energy business from a legal perspective within the context of the relationship among stakeholders in their transactions and what makes transactions in the energy business work. A key objective is to give a broad understanding of the legal and regulatory framework within which the energy sector operates. Specific topics include review of legal and institutional frameworks for the energy sector, critique & review of existing energy policy, basic concepts of energy resource ownership, international trade agreements, contract negotiation and agreements, energy purchase and sales agreements, environmental protection laws, and energy business regulations.

PEEM 707-2 Environmental Sustainability & Community Relations in the Oil and Gas Industry (3 Credits)

Environmental sustainability has become a global concern and an issue of contemporary discuss. This is against the backdrop of global climate issues associated with emissions from fossil fuel production and consumption activities. Added to this global concern is the yearning for increased involvement of host countries and communities the operations of the oil and gas industry operators. To this end, environmental sustainability and community relations is designed to provide learners with in-depth knowledge and understanding of the underpinnings of the concept of environmental sustainability, community relations and the interactions between the concepts. Topical issues to be covered in this course include sustainable development (SD) & sustainability, historical perspectives on sustainability, ongoing efforts of the UN towards SD around the globe, e.g. Agenda21; community relations & the global oil & gas industrial sector , community relations in the oil & gas industry in Nigeria, oil & gas companies, community relations via corporate social responsibility & host communities in Nigeria; community relations & environmental sustainability in the course of oil & gas operations in Nigeria, government regulation of community relations via government regulation of corporate social responsibility (environmental & social responsibilities).

PEEM 707-3 Project Management (3 Credits)

This course is designed to provide students with the skills to successfully plan and manage corporate projects and procedures. Furthermore, students will be acquainted with the requisite abilities knowledge of running successful projects, giving them a competitive edge within the marketplace. The program thoroughly explores the

inner and outer workings of project logistics, management, constraints, risks and execution necessary to deliver projects within the desired scope. Topical issues to be covered includes - project initiation, planning & execution; project monitoring, control and closure. Also, the course will cover project integration management, scope

management, schedule management, cost management, quality management, resource management, communications management, risk management, procurement management, stakeholder management, as well as team building.

PEEM 708 Project/Research Report

COURSE DESCRIPTION

SGS 801.1 ICT and Research Methodology (2 Credits)

This course should cover essentials of spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Research, Concepts of Hypothesis,

Formulation and testing, Organization of Research and Report Writing.

SGS 801.2 Management and Entrepreneurship (2 Credits)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

PEM 800 Business Communications (2 Credits)

This course will emphasize written, verbal and business communications. It will also focus on effective report writing and presentation skills as well as computer and internet competence.

EEM 801-1 Fundamentals of the Oil and Gas Industry (3 Credits)

The course shall deepen the students' knowledge on the following course outlines: Introduction, History of the Industry, Upstream: Production & Exploration, Midstream: (Transportation, Models of Transportation & Storage), Downstream; Refining and Marketing, Oil & Gas Metering/Pricing, Laws & Regulations. The course further introduces students to development of oil and gas assets and presents the issues of profitability in petroleum exploration and development ventures.

EEM 801-2 Energy & Energy Resources, and the Economy (3 Credits)

The course is an overview of all forms of energy and energy resources and the engineering processes for the transformation of primary energy to its useful forms. The course reviews fossil fuel energy and its forms, renewable energy resources and characteristics as well as the concept of energy technology in terms of location, assessment, processes and transformation. Specific topics include: exploration and exploitation of energy resources, development of unconventional resources, emerging technologies for energy production, electric power generation technologies, etc.

EEM 801-3 Fundamentals of Downstream Petroleum Economics & Policy (3 Credits)

The course covers both the Downstream Petroleum Economics and Policy with the following contents: Oil Supply & Demand Fundamentals, Petroleum Physical Trading, Financial & Market Trading with hedging & strategies, Overview of main Refining & Petrochemical Process, World Refining & Petrochemicals Demand, Evolution of Downstream Supply: Refining, Production & Quality (Specifications), Main Characteristics of Petrochemical Business: Economic Drivers, Principles of Refining, Management and Constraints, Standard Global Profit Analysis: Cash

Flow, Capital Costs, Inflation Impact, etc, Introduction to Risk Analysis. Downstream Petroleum Regulations, and Downstream Petroleum Fiscal Policy

EEM 801-4 Fundamentals of Natural Gas (3 Credits)

Natural gas is evolving globally and in Nigeria as the fossil fuel of choice and the bridge to renewables. The objective of this course is to provide students with an understanding of the natural gas value chain from upstream production through to downstream utilization, policy framework, overview of the evolving Nigerian gas market and monetization economics. Additionally, the course will present the linkages between gas and power sector as well as other gas feedstock industries. As a result of this class, students will have a better understanding of the context and complexity of the natural gas sector and will be equipped with the requisite knowledge and skills to make informed judgements on industry issues as professionals. They will better appreciate government policy efforts in gas as well as the inherent investment and strategic opportunities in the sector. Specifically, the course will provide learners with the overview of global energy trends, overview of natural gas value chain, as well as the Nigerian gas market.

EEM 801-5 Fundamentals of the Energy Industry - Power Sector (3 Credits)

The objective of the course is to provide a better understanding of the economics of the energy and power industry. Courses includes Introduction to Energy Policy and Regulation; Fundamentals of Energy Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

EEM 801-6 Local Content Development in the Oil and Gas Industry (3 Credits)

The course examines the conceptualization of local content in Nigeria, factors that defines local content development, policy framework of local content development in Nigeria, legal framework for Nigerian content development (immigration acts, the petroleum acts, petroleum development fund acts, the petroleum industry bill, the Nigerian oil & gas industry content development act, etc), challenges of local content development in oil & gas industry in Nigeria

EEM 801-7 Fundamentals of Geopolitics of Energy & Petroleum Resources and Supply (3 Credits)

This course will provide the students a broader view of the petroleum industry, demand/supply, pricing and the oil and gas global geopolitics. The course covers: the political economy of oil & gas industry, petroleum pricing and its regulation by OPEC, the global politics involved, petroleum & macroeconomic issues, sustainable petroleum development, the recent energy transition and the geopolitics involved.

EEM 801-8 Fundamentals of Micro and Macro Economics (3 Credits)

This is an introductory course providing a general understanding of basic macro-economic concepts. Specifically, it acquaints the students with an appreciation of the functions of economic systems, including various approaches to the organization of production and allocation of resources, and of policies to achieve national economic goals. These include the determination of national income, inflation, recession, unemployment, taxation, labor unions, environmental pollution, energy and economic growth. Its main focus is on introducing concepts and models which are used as tools of economic analysis. Concepts such as opportunity cost and approaches such as marginal analysis are introduced and the role of government, the national income and its distribution, GDP, consumption function, savings function, investment spending, the multiplier principle and the influence of government spending on income and output are discussed.

EEM 801-9 Introductory Economic Theory (3 Credits)

This course covers foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning, and management. The topics are as much as possible made relevant to the energy and petroleum sector.

EEM 802 Oil and Gas Industry and Pollution Issues (3 Credits)

The course will give an overview of the safety and environmental issues in the petroleum industry. It will provide detailed understanding of the methods and techniques to resolve these key issues for making petroleum production and processing, cleaner and safer. The course would educate students to identify and assess hazards in any stage of operation, to quantify and manage them as well. It will also highlight lessons learnt from the past accidents. Topical issues to be covered includes

introduction to safety, health and environmental management- basic terms and their definitions- importance of safety- safety assurance and assessment- safety in design and operation- organizing for safety. Hazard classification and assessment- hazard evaluation and hazard control. Environmental issues and management- atmospheric pollution- flaring and fugitive release- water pollution- drilling waste, produced water, oil spills, cooling water, processed water- soil waste- rock cutting. Oil sludge, drilling solid waste, production waste environmental monitoring- environmental impact and decommissioning- environmental management.

PEM 803 Applied Economics: Theory and Applications in the Energy Sector (3 Credits)

This course covers foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning, and management.

PEM 804 Applied Mathematics, Linear programming & Optimization Methods (3 Credits)

This course is designed to provide a solid foundation for students in the applications of mathematical modeling and techniques in petroleum and energy economics, management and strategy. The key objective is to provide students with analytical tools for research and decision analysis. Specific topics to be taught include: LP modeling, I-O modeling and analysis, efficiency analysis, industrial mathematics with applications and decision modeling in supply chain management.

PEM 805 Applied Econometrics for Energy Policy Analysis and Planning (3 Credits)

This course is designed to provide a solid foundation for students in the applications of econometrics and statistics in petroleum and energy economics, management and strategy. The key objective is to provide students with analytical tools for research and decision analysis. Specific topics to be taught include: applied mathematics and statistics with economic applications, classical linear regression analysis, time series models analysis and panel data model & nonlinear models, as well as discrete choice regression models.

EEM 806 Energy Economics I: Concepts, Geopolitics & Governance (3 Credits)

The objective of the course is to provide a better understanding of the economics of the energy and power industry in relation to trends in the overall economy and the society, and better quantitative and analytical skills to examine complex price behaviour and to develop new revenue generation models and project development approaches. Specific topics include: Introduction to Energy Policy and Regulation; Fundamentals of Energy Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

EEM 807 Energy Economics II: Renewable Energy Technology & Climate Change Economics (3 Credits)

The course covers renewable energy technologies, economics and policy and is intended to provide an overview of renewable energy concepts, issues relevant to the technologies currently used for providing energy services through renewable energy resources. The course also provides understanding and relevant knowledge in analyzing the integration of renewable energy into the global energy system and emerging issues in renewable energy development along the areas of gender, energy poverty, innovation and new energy technologies. Specific topics include: Renewable Energy Resources; Types and Classification of Renewable Energy Technologies; Introduction to Energy Economics and Energy Markets; Energy Policy Drivers; Renewable Energy Policies and Markets; and Innovations in Renewable Energy Technologies.

EEM 808 Energy Economics III: Energy Modelling and Power Market Analysis (3 Credits)

The course will provide students with a working knowledge of power systems and electricity industry restructuring, its impact on industry regulation, and the role of environmental concerns and the development of alternative generation technologies. Specific topics include: Introduction to Electricity Industry; Electric Power Industry Structure; Electricity Demand and Supply Dynamics; Cost Structures; Economics of Electric Power Generation, Transmission and Power Flow; Capital Planning: Regulated Versus Restructured; Transmission Access and Wheeling; Ancillary Services; Alternative Energy Policies and Programmes; Climate Change and Impact on Generation Investments; Legal and Regulatory Issues in Electricity Economics; and Global Case Studies and Electricity Sector Reforms.

PEM 809 Business Strategy, Change management and Policy Formulation (3 Credits)

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion.

EEM 810 Energy Infrastructure, Project Finance and Investment Analysis (3 Credits)

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion. Specific topics include: Introduction to the Finance Function and Specification of Firm Objectives; Sources of Finance and Determination of Firm or Project WACC; Project Finance and Issues in Petroleum Industry and Gas and Electricity Project Finance; Valuation of Energy Industry Firms; Introduction to Project Management and Project Integration Management and Review of Models; and Energy Project Scope, Time, Cost and Quality Management. Other topics include Project Management Scheduling Tools – An Introduction; Post Project Evaluation and Control; Human Resource and Communication Risk Management and Procurement Management; and Contextual Energy Finance and Project Management Issues for Developing Countries.

EEM 814 Economics of Power Market Regulation (3 Credits)

The course will provide students with a working knowledge of power systems and electricity industry restructuring, its impact on industry regulation, and the role of environmental concerns and the development of alternative generation technologies. Specific topics include: introduction to electricity industry; electric power industry structure; electricity demand and supply dynamics; cost structures; economics of electric power generation, transmission and power flow; capital planning: regulated versus restructured; transmission access and wheeling; ancillary services; alternative energy policies and programmes; climate change and impact on generation investments; legal and regulatory issues in electricity economics; and global case studies and electricity sector reforms.

EEM 811-1 Energy & Petroleum Policy, Law, Regulation & Ethics (3 Credits)

A complex legal environment underscores oil, gas and power business relationships and activities; and defines the limits of what stakeholders can do. This course provides an overview of the international energy business from a legal perspective within the context of the relationship among stakeholders in their transactions and what makes transactions in the energy business work. A key objective is to give a broad understanding of the legal and regulatory framework within which the energy sector operates. Specific topics include review of legal and institutional frameworks for the energy sector, critique & review of existing energy policy, basic concepts of energy resource ownership, international trade agreements, contract negotiation and agreements, energy purchase and sales agreements, environmental protection laws, and energy business regulations.

EEM 811-2 Environmental Sustainability and Governance in the Oil and Gas Industry (3 Credits)

Environmental sustainability has become a global concern and an issue of contemporary discuss. This is against the backdrop of global climate issues associated with emissions from fossil fuel production and consumption activities. Added to this global concern is the yearning for increased involvement of host countries and communities the operations of the oil and gas industry operators. To this end, environmental sustainability and community relations is designed to provide learners with in-depth knowledge and understanding of the underpinnings of the concept of environmental sustainability, community relations and the interactions between the concepts. Topical issues to be covered in this course include sustainable development (SD) & sustainability, historical perspectives on sustainability, ongoing efforts of the UN towards SD around the globe, e.g. Agenda21; community relations & the global oil & gas industrial sector , community relations in the oil & gas industry in Nigeria, oil & gas companies, community relations via corporate social responsibility & host communities in Nigeria; community relations & environmental sustainability in the course of oil & gas operations in Nigeria, government regulation of community relations via government regulation

of corporate social responsibility (environmental & social responsibilities).

EEM 812 Economics of Energy and the Environment (3 Credits)

This course examines the relationship between the economy and the environment. It examines the economics of natural resources from the extraction and use side, and the waste products returned to the environment. The course addresses issues such as fossil fuels and their impacts, pollution: environment /natural resources/humans, green house gases/global warming/ climate change, environmental audits/enviromental management system and environmental technologies & applied research (remediation, sequestration, etc)

EEM 813 Economics of Renewable forms of Energy (3 Credits)

This course introduces students to renewable energy and the basics of energy demand and energy consumption. It explores the types and features of renewable energy resources, the applications of renewable energy technologies, trend analysis of global capacity of renewable energy, renewable energy economics & investment analysis, focusing on renewable energy cost trend analysis as well as renewable energy project investment analysis using DCF Analysis

PEM 814 Project Management (3 Credits)

This course is designed to provide students with the skills to successfully plan and manage corporate projects and procedures. Furthermore, students will be acquainted with the requisite abilities knowledge of running successful projects, giving them a competitive edge within the marketplace. The program thoroughly explores the inner and outer workings of project logistics, management, constraints, risks and execution necessary to deliver projects within the desired scope. Topical issues to be covered includes - project initiation, planning & execution; project monitoring, control and closure. Also, the course will cover project integration management, scope management, schedule management, cost management, quality management, resource management, communications management, risk management, procurement management, stakeholder management, as well as team building.

COURSE DESCRIPTION

SGS 801.1 ICT and Research Methodology (2 Credits)

This course should cover essentials of spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Research, Concepts of Hypothesis, Formulation and testing, Organization of Research and Report Writing.

SGS 801.2 Management and Entrepreneurship (2 Credits)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

PEM 800 Business Communications (2 Credits)

This course will emphasize written, verbal and business communications. It will also focus on effective report writing and presentation skills as well as computer and internet competence.

PEM 801-1 Fundamentals of the Oil and Gas Industry (3 Credits)

The course shall deepen the students' knowledge on the following course outlines: Introduction, History of the Industry, Upstream: Production & Exploration, Midstream: (Transportation, Models of Transportation & Storage), Downstream; Refining and Marketing, Oil & Gas Metering/Pricing, Laws & Regulations. The course further introduces students to development of oil and gas assets and presents the issues of profitability in petroleum exploration and development ventures.

PEM 801-2 Energy & Energy Resources, and the Economy (3 Credits)

The course is an overview of all forms of energy and energy resources and the engineering processes for the transformation of primary energy to its useful forms. The course reviews fossil fuel energy and its forms, renewable energy resources and characteristics as well as the concept of energy technology in terms of location, assessment, processes and transformation. Specific topics include: exploration and exploitation of energy resources, development of unconventional resources, emerging technologies for energy production, electric power generation technologies, etc.

PEM 801-3 Fundamentals of Downstream Petroleum Economics & Policy (3 Credits)

The course covers both the Downstream Petroleum Economics and Policy with the following contents: Oil Supply & Demand Fundamentals, Petroleum Physical Trading, Financial & Market Trading with hedging & strategies, Overview of main Refining & Petrochemical Process, World Refining & Petrochemicals Demand, Evolution of Downstream Supply: Refining, Production & Quality (Specifications), Main Characteristics of Petrochemical Business: Economic Drivers, Principles of Refining, Management and Constraints, Standard Global Profit Analysis: Cash Flow, Capital Costs, Inflation Impact, etc, Introduction to Risk Analysis. Downstream Petroleum Regulations, and Downstream Petroleum Fiscal Policy.

PEM 801-4 Fundamentals of Natural Gas (3 Credits)

Natural gas is evolving globally and in Nigeria as the fossil fuel of choice and the bridge to renewables. The objective of this course is to provide students with an understanding of the natural gas value chain from upstream production through to downstream utilization, policy framework, overview of the evolving Nigerian gas market and monetization economics. Additionally, the course will present the linkages between gas and power sector as well as other gas feedstock industries. As a result of this class, students will have a better understanding of the context and complexity of the natural gas sector and will be equipped with the requisite knowledge and skills to make informed judgements on industry issues as professionals. They will better appreciate government policy efforts in gas as well as the inherent investment and strategic opportunities in the sector. Specifically, the course will provide learners with the overview of global energy trends, overview of natural gas value chain, as well as the Nigerian gas market.

PEM 801-5 Fundamentals of the Energy Industry - Power Sector (3 Credits)

The objective of the course is to provide a better understanding of the economics of the energy and power industry. Courses includes Introduction to Energy Policy and Regulation; Fundamentals of Energy Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

PEM 801-6 Local Content Development in the Oil and Gas Industry (3 Credits)

The course examines the conceptualization of Local Content in Nigeria, Factors that defines Local Content Development, Policy Framework of Local Content Development in Nigeria, Legal Framework for Nigerian Content Development (Immigration Acts, The Petroleum Acts, Petroleum Development Fund Acts, The Petroleum Industry Bill, The Nigerian Oil & Gas Industry Content Development Act, etc), Challenges of Local Content Development in Oil & Gas Industry in Nigeria

PEM 801-7 Fundamentals of Geopolitics of Energy & Petroleum Resources and Supply (3 Credits)

This course will provide the students a broader view of the petroleum industry, demand/supply, pricing and the oil and gas global geopolitics. The course covers: the Political Economy of Oil & Gas Industry, Petroleum Pricing and its Regulation by OPEC, the Global Politics involved, Petroleum & Macroeconomic Issues, Sustainable Petroleum Development, the recent Energy Transition and the Geopolitics involved.

PEM 801-8 Fundamentals of Micro and Macro Economics (3 Credits)

This is an introductory course providing a general understanding of basic macro-economic concepts. Specifically, it acquaints the students with an appreciation of the functions of economic systems, including various approaches to the organization of production and allocation of resources, and of policies to achieve national economic goals. These include the determination of national income, inflation, recession, unemployment, taxation, labor unions, environmental pollution, energy and economic growth. Its main focus is on introducing concepts and models which are used as tools of economic analysis. Concepts such as opportunity cost and approaches such as marginal analysis are introduced and the role of government, the national income and its distribution, GDP, consumption function, savings function, investment spending, the multiplier principle and the influence of government spending on income and output are discussed.

PEM 801-9 Introductory Economic Theory (3 Credits)

This course covers foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning, and management. The topics are as much

as possible made relevant to the energy and petroleum sector.

PEM 802 Oil and Gas Industry and Pollution Issues (3 Credits)

The course will give an overview of the safety and environmental issues in the petroleum industry. It will provide detailed understanding of the methods and techniques to resolve these key issues for making petroleum production and processing, cleaner and safer. The course would educate students to identify and assess hazards in any stage of operation, to quantify and manage them as well. It will also highlight lessons learnt from the past accidents. Topical issues to be covered includes introduction to safety, health and environmental management- basic terms and their definitions- importance of safety- safety assurance and assessment- safety in design and operation- organizing for safety. Hazard classification and assessment- hazard evaluation and hazard control. Environmental issues and management- atmospheric pollution- flaring and fugitive release- water pollution- drilling waste, produced water, oil spills, cooling water, processed water- soil waste- rock cutting. Oil sludge, drilling solid waste, production waste environmental monitoring- environmental impact and decommissioning- environmental management.

PEM 803 Applied Economics: Theory and Applications in the Energy Sector (3 Credits)

This course covers foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning, and management.

PEM 804 Applied Mathematics, Linear programming & Optimization Methods (3 Credits)

This course is designed to provide a solid foundation for students in the applications of mathematical modeling and techniques in petroleum and energy economics, management and strategy. The key objective is to provide students with analytical tools for research and decision analysis. Specific topics to be taught include: LP modeling, I-O modeling and analysis, efficiency analysis, industrial mathematics with applications and decision modeling in supply chain management.

PEM 805 Applied Econometrics for Energy Policy Analysis and Planning (3 Credits)

This course is designed to provide a solid foundation for students in the applications of econometrics and statistics in petroleum and energy economics, management and strategy. The key objective is to provide students with analytical tools for research and decision analysis. Specific topics to be taught include: applied mathematics and statistics with economic applications, classical linear regression analysis, time series models analysis and panel data model & nonlinear models, as well as discrete choice regression models.

PEM 806 Petroleum Economics I: Concepts, Geopolitics & Governance (3 Credits)

The course describes the key principles, economic concepts, and strategic thinking of the oil and gas industry with respect to its structure, conduct and performance. The course evaluates the major segments of the industry and introduces the oil and gas value sequence. The key players or major drivers impacting the global oil and gas supply outlook and pricing are identified and evaluated, including IOCs, OECD, OPEC, and NOCs. The course also presents a broad view of contemporary discussions on petroleum, economy, and the environment. Other topics covered include, the political economy of oil and gas, oil and gas policy versus market debate, petroleum price regulation and mechanism, resources, petroleum and macroeconomic issues, petroleum and the environment discourse, petroleum and sustainable development, the resource curse debates, geopolitics and energy security.

PEM 807 Petroleum Economics II: Upstream Petroleum Economics & Risk Analysis (3 Credits)

The course will provide students with a working knowledge of power systems and electricity industry restructuring, its impact on industry regulation, and the role of environmental concerns and the development of alternative generation technologies. Specific topics include: Introduction to Electricity Industry; Electric Power Industry Structure; Electricity Demand and Supply Dynamics; Cost Structures; Economics of Electric Power Generation, Transmission and Power Flow; Capital Planning: Regulated Versus Restructured; Transmission Access and Wheeling; Ancillary Services; Alternative Energy Policies and Programmes; Climate Change and Impact on Generation Investments; Legal and Regulatory Issues in Electricity Economics; and Global Case Studies and Electricity Sector Reforms.

PEM 808 Petroleum Economics III: Downstream of Gas/ Gas to Power Market Analysis (3 Credits)

The course describes all segments of midstream sector of the oil and gas industry including

refinery, petrochemical, LNG, GTL, and CNG plants with emphasis on its economic features and mechanisms. The concepts and factors affecting margins and margin volatility in the petroleum midstream industry are reviewed including but not limited to its structure and conduct, flexibility and limitations, product constraints and complexity, costs versus margin and profitability, LP modeling and optimization using COS, etc. The course also provides a review of the economics of petroleum products transportation and distribution, an overview of natural gas value chain, gas utility business structure, regulation and pricing, petroleum products trading, evolutions and applications of futures and options.

PEM 809 Business Strategy, Change Management and Policy Formulation (3 Credits)

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion.

PEM 810 Energy Infrastructure, Project Finance and Investment Analysis (3 Credits)

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion. Specific topics include: Introduction to the Finance Function and Specification of Firm Objectives; Sources of Finance and Determination of Firm or Project WACC; Project Finance and Issues in Petroleum Industry and Gas and Electricity Project Finance; Valuation of Energy Industry Firms; Introduction to Project Management and Project Integration Management and Review of Models; and Energy Project Scope, Time, Cost and Quality Management. Other topics include Project Management Scheduling Tools – An Introduction; Post Project Evaluation and Control; Human Resource and Communication Risk Management and Procurement Management; and Contextual Energy Finance and Project Management Issues for Developing Countries.

PEM 811-1 Energy & Petroleum Policy, Law, Regulation & Ethics (3 Credits)

A complex legal environment underscores oil, gas and power business relationships and activities;

and defines the limits of what stakeholders can do. This course provides an overview of the international energy business from a legal perspective within the context of the relationship among stakeholders in their transactions and what makes transactions in the energy business work. A key objective is to give a broad understanding of the legal and regulatory framework within which the energy sector operates. Specific topics include review of legal and institutional frameworks for the energy sector, critique & review of existing energy policy, basic concepts of energy resource ownership, international trade agreements, contract negotiation and agreements, energy purchase and sales agreements, environmental protection laws, and energy business regulations.

PEM 811-2 Environmental Sustainability and Governance in the Oil and Gas Industry (3 Credits)

Environmental sustainability has become a global concern and an issue of contemporary discuss. This is against the backdrop of global climate issues associated with emissions from fossil fuel production and consumption activities. Added to this global concern is the yearning for increased involvement of host countries and communities the operations of the oil and gas industry operators. To this end, environmental sustainability and community relations is designed to provide learners with in-depth knowledge and understanding of the underpinnings of the concept of environmental sustainability, community relations and the interactions between the concepts. Topical issues to be covered in this course include sustainable development (SD) & sustainability, historical perspectives on sustainability, ongoing efforts of the UN towards SD around the globe, e.g. Agenda21; community relations & the global oil & gas industrial sector , community relations in the oil & gas industry in Nigeria, oil & gas companies, community relations via corporate social responsibility & host communities in Nigeria; community relations & environmental sustainability in the course of oil & gas operations in Nigeria, government regulation of community relations via government regulation of corporate social responsibility (environmental & social responsibilities).

PEM 812 Economics of Petroleum Refining & Petrochemicals (3 Credits)

This course provides learners with the essence of international oil supply – global reserves, production & trade, introduction to global oil business - exploration, extraction, refining, marketing, transportation, crude oil classifications, crude oil quality indicators, crude oil characterization by assays, crude oil distillation – refined products introduction to crude oil refining

– distillation, refinery configurations, topping, hydroskimming, cracking, coking. The course also introduces students to refinery economics & petrochemicals, and petrochemical feedstock, processes and equipment.

PEM 813 Economics of Regulation of Petroleum Industries (3 Credits)

A study of Regulation Processes as a major consideration in Petroleum Industry operations with a clear insight on principles that affect Petroleum Industry Regulatory policies. Globalization provides a platform for debates, decisions and policies on what to regulate, whether to regulate and how to regulate. International capital would tend to discourage regulations, however an understanding of the economic and environmental policy framework implications is required for the selection of informed, technically feasible, optimal regulation choices beneficial to the environment, the energy and petroleum industry and the world.

PEM 814 Project Management (3 Credits)

This course is designed to provide students with the skills to successfully plan and manage corporate projects and procedures. Furthermore, students will be acquainted with the requisite abilities knowledge of running successful projects, giving them a competitive edge within the marketplace. The program thoroughly explores the inner and outer workings of project logistics, management, constraints, risks and execution necessary to deliver projects within the desired scope. Topical issues to be covered includes - project initiation, planning & execution; project monitoring, control and closure. Also, the course will cover project integration management, scope management, schedule management, cost

management, quality management, resource management, communications management, risk management, procurement management, stakeholder management, as well as team building.

PEM 815 – 1 Petroleum Reserves Classification (3 Credits)

This course will cover the definitions of, and uses for, oil and gas reserves estimates, and how to be compliant with each of the industry standard and regulator's versions of the reserves requirements. In this course, students will learn how geoscience and engineering evaluation methods should be used for compliance of reserves estimates, the differences in the evaluation assumptions and how the inherent uncertainties in reserve estimates are reflected by the categorization of reserves.

PEM 815 – 2 Petroleum Assets Valuation (3 Credits)

Valuation of petroleum assets – upstream, midstream and downstream, are essential for adequate decision making in the oil industry. There are fundamental variables that are associated with petroleum assets valuations, as well as risks and uncertainties. The course therefore, focuses on asset valuation of all sectors of the oil and gas industry with particular emphasis on the upstream sector - exploration and production. It is expected that students will be exposed to the challenging issues that commonly arise when valuing petroleum assets as well as interpreting valuation models, develop the practical skills to build and evaluate valuation models, and acquire skills for better economic decisions based on robust valuation models. Specific topics to be covered includes: Upstream Oil and Gas Valuation Model, Financing issues as well as sensitivity and stochastics models to quantify uncertainty.

COURSE DESCRIPTION

SGS 801.1 ICT and Research Methodology (2 Credits)

This course should cover essentials of spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Research, Concepts of Hypothesis, Formulation and testing, Organization of Research and Report Writing.

SGS 801.2 Management and Entrepreneurship (2 Credits)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

PEM 800 Business Communications (2 Credits)

This course will emphasize written, verbal and business communications. It will also focus on effective report writing and presentation skills as well as computer and internet competence.

PEM 801-1 Fundamentals of the Oil and Gas Industry (3 Credits)

The course shall deepen the students' knowledge on the following course outlines: Introduction, History of the Industry, Upstream: Production & Exploration, Midstream: (Transportation, Models of Transportation & Storage), Downstream; Refining and Marketing, Oil & Gas Metering/Pricing, Laws & Regulations. The course further introduces students to development of oil and gas assets and presents the issues of profitability in petroleum exploration and development ventures.

PEM 801-2 Energy & Energy Resources, and the Economy (3 Credits)

The course is an overview of all forms of energy and energy resources and the engineering processes for the transformation of primary energy to its useful forms. The course reviews fossil fuel energy and its forms, renewable energy resources and characteristics as well as the concept of energy technology in terms of location, assessment, processes and transformation. Specific topics include: exploration and exploitation of energy resources, development of unconventional resources, emerging technologies for energy production, electric power generation technologies, etc.

PEM 801-3 Fundamentals of Downstream Petroleum Economics & Policy (3 Credits)

The course covers both the Downstream Petroleum Economics and Policy with the following contents: Oil Supply & Demand Fundamentals, Petroleum Physical Trading, Financial & Market Trading with hedging & strategies, Overview of main Refining & Petrochemical Process, World Refining & Petrochemicals Demand, Evolution of Downstream Supply: Refining, Production & Quality (Specifications), Main Characteristics of Petrochemical Business: Economic Drivers, Principles of Refining, Management and Constraints, Standard Global Profit Analysis: Cash Flow, Capital Costs, Inflation Impact, etc, Introduction to Risk Analysis. Downstream Petroleum Regulations, and Downstream Petroleum Fiscal Policy

PEM 801-4 Fundamentals of Natural Gas (3 Credits)

Natural gas is evolving globally and in Nigeria as the fossil fuel of choice and the bridge to renewables. The objective of this course is to provide students with an understanding of the natural gas value chain from upstream production through to downstream utilization, policy framework, overview of the evolving Nigerian gas market and monetization economics. Additionally, the course will present the linkages between gas and power sector as well as other gas feedstock industries. As a result of this class, students will have a better understanding of the context and complexity of the natural gas sector and will be equipped with the requisite knowledge and skills to make informed judgements on industry issues as professionals. They will better appreciate government policy efforts in gas as well as the inherent investment and strategic opportunities in the sector. Specifically, the course will provide learners with the overview of global energy trends, overview of natural gas value chain, as well as the Nigerian gas market.

PEM 801-5 Fundamentals of the Energy Industry - Power Sector (3 Credits)

The objective of the course is to provide a better understanding of the economics of the energy and power industry. Courses includes Introduction to Energy Policy and Regulation; Fundamentals of Energy Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

PEM 801-6 Local Content Development in the Oil and Gas Industry (3 Credits)

The course examines the conceptualization of local content in Nigeria, factors that defines local content development, policy framework of local content development in Nigeria, legal framework for Nigerian content development (immigration acts, the petroleum acts, petroleum development fund acts, the petroleum industry bill, the Nigerian oil & gas industry content development act, etc), challenges of local content development in oil & gas industry in Nigeria.

PEM 801-7 Fundamentals of Geopolitics of Energy & Petroleum Resources and Supply (3 Credits)

This course will provide the students a broader view of the petroleum industry, demand/supply, pricing and the oil and gas global geopolitics. The course covers: the Political Economy of Oil & Gas Industry, Petroleum Pricing and its Regulation by OPEC, the Global Politics involved, Petroleum &

Macroeconomic Issues, Sustainable Petroleum Development, the recent Energy Transition and the Geopolitics involved.

PEM 801-8 Fundamentals of Micro and Macro Economics (3 Credits)

This is an introductory course providing a general understanding of basic macro-economic concepts. Specifically, it acquaints the students with an appreciation of the functions of economic systems, including various approaches to the organization of production and allocation of resources, and of policies to achieve national economic goals. These include the determination of national income, inflation, recession, unemployment, taxation, labor unions, environmental pollution, energy and economic growth. Its main focus is on introducing concepts and models which are used as tools of economic analysis. Concepts such as opportunity cost and approaches such as marginal analysis are introduced and the role of government, the national income and its distribution, GDP, consumption function, savings function, investment spending, the multiplier principle and the influence of government spending on income and output are discussed.

PEM 801-9 Introductory Economic Theory (3 Credits)

This course covers foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning, and management. The topics are as much as possible made relevant to the energy and petroleum sector.

PEM 802 Oil and Gas Industry and Pollution Issues (3 Credits)

The course will give an overview of the safety and environmental issues in the petroleum industry. It will provide detailed understanding of the methods and techniques to resolve these key issues for making petroleum production and processing, cleaner and safer. The course would educate students to identify and assess hazards in any stage of operation, to quantify and manage them as well. It will also highlight lessons learnt from the past accidents. Topical issues to be covered includes introduction to safety, health and environmental management- basic terms and their definitions- importance of safety- safety assurance and assessment- safety in design and operation- organizing for safety. Hazard classification and assessment- hazard evaluation and hazard control. Environmental issues and management- atmospheric pollution- flaring and fugitive release- water pollution- drilling waste, produced water, oil

spills, cooling water, processed water- soil waste-rock cutting. Oil sludge, drilling solid waste, production waste environmental monitoring-environmental impact and decommissioning-environmental management.

PEM 803 Applied Economics: Theory and Applications in the Energy Sector (3 Credits)

This course covers foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning, and management.

PEM 804 Applied Mathematics, Linear programming & Optimization Methods (3 Credits)

This course is designed to provide a solid foundation for students in the applications of mathematical modeling and techniques in petroleum and energy economics, management and strategy. The key objective is to provide students with analytical tools for research and decision analysis. Specific topics to be taught include: LP modeling, I-O modeling and analysis, efficiency analysis, industrial mathematics with applications and decision modeling in supply chain management.

PEM 805 Applied Econometrics for Energy Policy Analysis and Planning (3 Credits)

This course is designed to provide a solid foundation for students in the applications of econometrics and statistics in petroleum and energy economics, management and strategy. The key objective is to provide students with analytical tools for research and decision analysis. Specific topics to be taught include: applied mathematics and statistics with economic applications, classical linear regression analysis, time series models analysis and panel data model & nonlinear models, as well as discrete choice regression models.

PEM 806 Petroleum Economics I: Concepts, Geopolitics & Governance (3 Credits)

The course describes the key principles, economic concepts, and strategic thinking of the oil and gas industry with respect to its structure, conduct and performance. The course evaluates the major segments of the industry and introduces the oil and gas value sequence. The key players or major drivers impacting the global oil and gas supply outlook and pricing are identified and evaluated, including IOCs, OECD, OPEC, and NOCs. The course also presents a broad view of contemporary discussions on petroleum, economy, and the environment. Other topics covered include, the political economy of oil and gas, oil and gas policy

versus market debate, petroleum price regulation and mechanism, resources, petroleum and macroeconomic issues, petroleum and the environment discourse, petroleum and sustainable development, the resource curse debates, geopolitics and energy security.

PEM 807 Petroleum Economics II: Upstream Petroleum Economics & Risk Analysis (3 Credits)

This course describes the strategies, philosophy, process, and economic tools applied in the upstream business for decision-making under risk, uncertainty, and risk attitude; and it demonstrates how the economic value of oil and gas ventures and business can be estimated under various fiscal regimes. The key objective of Petroleum Economics II is to equip students with a working knowledge of the upstream petroleum industry in all aspects including: resources and reserves, oil and gas assets development, and portfolio management, forecasting production and revenue flow; cash flow analysis, deriving and interpreting deterministic and stochastic economic indicators, spreadsheet modeling tools to incorporate risk and uncertainty in oil and as economic modeling.

PEM 808 Petroleum Economics III: Downstream of Gas/ Gas to Power Market Analysis (3 Credits)

The course describes all segments of midstream sector of the oil and gas industry including refinery, petrochemical, LNG, GTL, and CNG plants with emphasis on its economic features and mechanisms. The concepts and factors affecting margins and margin volatility in the petroleum midstream industry are reviewed including but not limited to its structure and conduct, flexibility and limitations, product constraints and complexity, costs versus margin and profitability, LP modeling and optimization using COS, etc. The course also provides a review of the economics of petroleum products transportation and distribution, an overview of natural gas value chain, gas utility business structure, regulation and pricing, petroleum products trading, evolutions and applications of futures and options.

PEM 809 Business Strategy, Change Management and Policy Formulation (3 Credits)

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion.

PEM 810 Energy Infrastructure, Project Finance and Investment Analysis (3 Credits)

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion. Specific topics include: Introduction to the Finance Function and Specification of Firm Objectives; Sources of Finance and Determination of Firm or Project WACC; Project Finance and Issues in Petroleum Industry and Gas and Electricity Project Finance; Valuation of Energy Industry Firms; Introduction to Project Management and Project Integration Management and Review of Models; and Energy Project Scope, Time, Cost and Quality Management. Other topics include Project Management Scheduling Tools – An Introduction; Post Project Evaluation and Control; Human Resource and Communication Risk Management and Procurement Management; and Contextual Energy Finance and Project Management Issues for Developing Countries.

PEM 811-1 Energy & Petroleum Policy, Law, Regulation & Ethics (3 Credits)

A complex legal environment underscores oil, gas and power business relationships and activities; and defines the limits of what stakeholders can do. This course provides an overview of the international energy business from a legal perspective within the context of the relationship among stakeholders in their transactions and what makes transactions in the energy business work. A key objective is to give a broad understanding of the legal and regulatory framework within which the energy sector operates. Specific topics include review of legal and institutional frameworks for the energy sector, critique & review of existing energy policy, basic concepts of energy resource ownership, international trade agreements, contract negotiation and agreements, energy purchase and sales agreements, environmental protection laws, and energy business regulations.

PEM 811-2 Environmental Sustainability and Governance in the Oil and Gas Industry (3 Credits)

Environmental sustainability has become a global concern and an issue of contemporary discuss. This is against the backdrop of global climate issues associated with emissions from fossil fuel production and consumption activities. Added to this global concern is the yearning for increased involvement of host countries and communities the operations of the oil and gas industry operators. To this end, environmental sustainability and

community relations is designed to provide learners with in-depth knowledge and understanding of the underpinnings of the concept of environmental sustainability, community relations and the interactions between the concepts. Topical issues to be covered in this course include sustainable development (SD) & sustainability, historical perspectives on sustainability, ongoing efforts of the UN towards SD around the globe, e.g. Agenda21; community relations & the global oil & gas industrial sector, community relations in the oil & gas industry in Nigeria, oil & gas companies, community relations via corporate social responsibility & host communities in Nigeria; community relations & environmental sustainability in the course of oil & gas operations in Nigeria, government regulation of community relations via government regulation of corporate social responsibility (environmental & social responsibilities).

PEM 812 Economics of Petroleum Refining & Petrochemicals (3 Credits)

This course, provides learners with the essence of international oil supply – global reserves, production & trade, introduction to global oil business - exploration, extraction, refining, marketing, transportation, crude oil classifications, crude oil quality indicators, crude oil characterization by assays, crude oil distillation – refined products introduction to crude oil refining – distillation, refinery configurations, topping, hydroskimming, cracking, coking. The course also introduces students to refinery economics & petrochemicals, and petrochemical feedstock, processes and equipment

PEM 813 Economics of Regulation of Petroleum Industries (3 Credits)

A study of Regulation Processes as a major consideration in Petroleum Industry operations with a clear insight on principles that affect Petroleum Industry Regulatory policies. Globalization provides a platform for debates, decisions and policies on what to regulate, whether to regulate and how to regulate. International capital would tend to discourage regulations, however an understanding of the economic and environmental policy framework implications is required for the selection of informed, technically feasible, optimal regulation choices beneficial to the environment, the energy and petroleum industry and the world.

PEM 814 Project Management (3 Credits)

This course is designed to provide students with the skills to successfully plan and manage corporate projects and procedures. Furthermore, students will be acquainted with the requisite abilities knowledge of running successful projects,

giving them a competitive edge within the marketplace. The program thoroughly explores the inner and outer workings of project logistics, management, constraints, risks and execution necessary to deliver projects within the desired scope. Topical issues to be covered includes - project initiation, planning & execution; project monitoring, control and closure. Also, the course will cover project integration management, scope management, schedule management, cost management, quality management, resource management, communications management, risk management, procurement management, stakeholder management, as well as team building.

PEM 815– 1 Petroleum Reserves Classification (3 Credits)

This course will cover the definitions of, and uses for, oil and gas reserves estimates, and how to be compliant with each of the industry standard and regulator's versions of the reserves requirements. In this course, students will learn how geoscience and engineering evaluation methods should be used for compliance of reserves estimates, the differences in the evaluation assumptions and how

the inherent uncertainties in reserve estimates are reflected by the categorization of reserves.

PEM 815 – 2 Petroleum Assets Valuation (3 Credits)

Valuation of petroleum assets – upstream, midstream and downstream, are essential for adequate decision making in the oil industry. There are fundamental variables that are associated with petroleum assets valuations, as well as risks and uncertainties. The course therefore, focuses on asset valuation of all sectors of the oil and gas industry with particular emphasis on the upstream sector - exploration and production. It is expected that students will be exposed to the challenging issues that commonly arise when valuing petroleum assets as well as interpreting valuation models, develop the practical skills to build and evaluate valuation models, and acquire skills for better economic decisions based on robust valuation models. Specific topics to be covered includes: Upstream Oil and Gas Valuation Model, Financing issues as well as sensitivity and stochastics models to quantify uncertainty.

COURSE DESCRIPTION

SGS 801.1 ICT and Research Methodology (2 Credits)

This course should cover essentials of spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Research, Concepts of Hypothesis, Formulation and testing, Organization of Research and Report Writing.

SGS 801.2 Management and Entrepreneurship (2 Credits)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

PEM 800 Business Communications (2 Credits)

This course will emphasize written, verbal and business communications. It will also focus on effective report writing and presentation skills as well as computer and internet competence.

EEM 801-1 Fundamentals of the Oil and Gas Industry (3 Credits)

The course shall deepen the students' knowledge on the following course outlines: Introduction, History of the Industry, Upstream: Production & Exploration, Midstream: (Transportation, Models of Transportation & Storage), Downstream; Refining and Marketing, Oil & Gas Metering/Pricing, Laws & Regulations. The course further introduces students to development of oil and gas assets and presents the issues of profitability in petroleum exploration and development ventures.

EEM 801-2 Energy & Energy Resources, and the Economy (3 Credits)

The course is an overview of all forms of energy and energy resources and the engineering processes for the transformation of primary energy to its useful forms. The course reviews fossil fuel

energy and its forms, renewable energy resources and characteristics as well as the concept of energy technology in terms of location, assessment, processes and transformation. Specific topics include: exploration and exploitation of energy resources, development of unconventional resources, emerging technologies for energy production, electric power generation technologies, etc.

EEM 801-3 Fundamentals of Downstream Petroleum Economics & Policy (3 Credits)

The course covers both the Downstream Petroleum Economics and Policy with the following contents: Oil Supply & Demand Fundamentals, Petroleum Physical Trading, Financial & Market Trading with hedging & strategies, Overview of main Refining & Petrochemical Process, World Refining & Petrochemicals Demand, Evolution of Downstream Supply: Refining, Production & Quality (Specifications), Main Characteristics of Petrochemical Business: Economic Drivers, Principles of Refining, Management and Constraints, Standard Global Profit Analysis: Cash Flow, Capital Costs, Inflation Impact, etc, Introduction to Risk Analysis. Downstream Petroleum Regulations, and Downstream Petroleum Fiscal Policy

EEM 801-4 Fundamentals of Natural Gas (3 Credits)

Natural gas is evolving globally and in Nigeria as the fossil fuel of choice and the bridge to renewables. The objective of this course is to provide students with an understanding of the natural gas value chain from upstream production through to downstream utilization, policy framework, overview of the evolving Nigerian gas market and monetization economics. Additionally, the course will present the linkages between gas and power sector as well as other gas feedstock industries. As a result of this class, students will have a better understanding of the context and complexity of the natural gas sector

and will be equipped with the requisite knowledge and skills to make informed judgements on industry issues as professionals. They will better appreciate government policy efforts in gas as well as the inherent investment and strategic opportunities in the sector. Specifically, the course will provide learners with the overview of global energy trends, overview of natural gas value chain, as well as the Nigerian gas market.

EEM 801-5 Fundamentals of the Energy Industry - Power Sector (3 Credits)

The objective of the course is to provide a better understanding of the economics of the energy and power industry. Courses includes Introduction to Energy Policy and Regulation; Fundamentals of Energy Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

EEM 801-6 Local Content Development in the Oil and Gas Industry (3 Credits)

The course examines the conceptualization of Local Content in Nigeria, Factors that defines Local Content Development, Policy Framework of Local Content Development in Nigeria, Legal Framework for Nigerian Content Development (Immigration Acts, The Petroleum Acts, Petroleum Development Fund Acts, The Petroleum Industry Bill, The Nigerian Oil & Gas Industry Content Development Act, etc), Challenges of Local Content Development in Oil & Gas Industry in Nigeria.

EEM 801-7 Fundamentals of Geopolitics of Energy & Petroleum Resources and Supply (3 Credits)

This course will provide the students a broader view of the petroleum industry, demand/supply, pricing and the oil and gas global geopolitics. The course covers: The political economy of oil & gas industry, petroleum pricing and its regulation by OPEC, the global politics involved, petroleum & macroeconomic issues, sustainable petroleum development, the recent energy transition and the geopolitics involved.

EEM 801-8 Fundamentals of Micro and Macro Economics (3 Credits)

This is an introductory course providing a general understanding of basic macro-economic concepts. Specifically, it acquaints the students with an appreciation of the functions of economic systems, including various approaches to the organization of production and allocation of resources, and of

policies to achieve national economic goals. These include the determination of national income, inflation, recession, unemployment, taxation, labor unions, environmental pollution, energy and economic growth. Its main focus is on introducing concepts and models which are used as tools of economic analysis. Concepts such as opportunity cost and approaches such as marginal analysis are introduced and the role of government, the national income and its distribution, GDP, consumption function, savings function, investment spending, the multiplier principle and the influence of government spending on income and output are discussed.

EEM 801-9 Introductory Economic Theory (3 Credits)

This course covers foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning, and management. The topics are as much as possible made relevant to the energy and petroleum sector.

EEM 802 Oil and Gas Industry and Pollution Issues (3 Credits)

The course will give an overview of the safety and environmental issues in the petroleum industry. It will provide detailed understanding of the methods and techniques to resolve these key issues for making petroleum production and processing, cleaner and safer. The course would educate students to identify and assess hazards in any stage of operation, to quantify and manage them as well. It will also highlight lessons learnt from the past accidents. Topical issues to be covered includes introduction to safety, health and environmental management- basic terms and their definitions- importance of safety- safety assurance and assessment- safety in design and operation- organizing for safety. Hazard classification and assessment- hazard evaluation and hazard control. Environmental issues and management- atmospheric pollution- flaring and fugitive release- water pollution- drilling waste, produced water, oil spills, cooling water, processed water- soil waste- rock cutting. Oil sludge, drilling solid waste, production waste environmental monitoring- environmental impact and decommissioning- environmental management.

PEM 803 Applied Economics: Theory and Applications in the Energy Sector (3 Credits)

This course covers foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from

macroeconomics, microeconomics, development economics, managerial economics, economic planning, and management.

PEM 804 Applied Mathematics, Linear programming & Optimization Methods (3 Credits)

This course is designed to provide a solid foundation for students in the applications of mathematical modeling and techniques in petroleum and energy economics, management and strategy. The key objective is to provide students with analytical tools for research and decision analysis. Specific topics to be taught include: LP modeling, I-O modeling and analysis, efficiency analysis, industrial mathematics with applications and decision modeling in supply chain management.

PEM 805 Applied Econometrics for Energy Policy Analysis and Planning (3 Credits)

This course is designed to provide a solid foundation for students in the applications of econometrics and statistics in petroleum and energy economics, management and strategy. The key objective is to provide students with analytical tools for research and decision analysis. Specific topics to be taught include: applied mathematics and statistics with economic applications, classical linear regression analysis, time series models analysis and panel data model & nonlinear models, as well as discrete choice regression models.

EEM 806 Energy Economics I: Concepts, Geopolitics & Governance (3 Credits)

The objective of the course is to provide a better understanding of the economics of the energy and power industry in relation to trends in the overall economy and the society, and better quantitative and analytical skills to examine complex price behaviour and to develop new revenue generation models and project development approaches. Specific topics include: Introduction to Energy Policy and Regulation; Fundamentals of Energy Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

EEM 807 Energy Economics II: Renewable Energy Technology & Climate Change Economics (3 Credits)

The course covers renewable energy technologies, economics and policy and is intended to provide an overview of renewable energy concepts, issues relevant to the technologies currently used for providing energy services through renewable

energy resources. The course also provides understanding and relevant knowledge in analyzing the integration of renewable energy into the global energy system and emerging issues in renewable energy development along the areas of gender, energy poverty, innovation and new energy technologies. Specific topics include: Renewable Energy Resources; Types and Classification of Renewable Energy Technologies; Introduction to Energy Economics and Energy Markets; Energy Policy Drivers; Renewable Energy Policies and Markets; and Innovations in Renewable Energy Technologies.

EEM 808 Energy Economics III: Energy Modelling and Power Market Analysis (3 Credits)

The course will provide students with a working knowledge of power systems and electricity industry restructuring, its impact on industry regulation, and the role of environmental concerns and the development of alternative generation technologies. Specific topics include: introduction to electricity industry; electric power industry structure; electricity demand and supply dynamics; cost structures; economics of electric power generation, transmission and power flow; capital planning: regulated versus restructured; transmission access and wheeling; ancillary services; alternative energy policies and programmes; climate change and impact on generation investments; legal and regulatory issues in electricity economics; and global case studies and electricity sector reforms.

PEM 809 Business Strategy, Change Management and Policy Formulation (3 Credits)

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion.

EEM 810 Energy Infrastructure, Project Finance and Investment Analysis (3 Credits)

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion. Specific topics include: Introduction to the finance function and specification of firm objectives; sources of finance

and determination of firm or project WACC; project finance and issues in petroleum industry and gas and electricity project finance; valuation of energy industry firms; introduction to project management and project integration management and review of models; and energy project scope, time, cost and quality management. Other topics include project management scheduling tools – an introduction; post project evaluation and control; human resource and communication risk management and procurement management; and contextual energy finance and project management issues for developing countries.

EEM 811-1 Energy & Petroleum Policy, Law, Regulation & Ethics (3 Credits)

A complex legal environment underscores oil, gas and power business relationships and activities; and defines the limits of what stakeholders can do. This course provides an overview of the international energy business from a legal perspective within the context of the relationship among stakeholders in their transactions and what makes transactions in the energy business work. A key objective is to give a broad understanding of the legal and regulatory framework within which the energy sector operates. Specific topics include review of legal and institutional frameworks for the energy sector, critique & review of existing energy policy, basic concepts of energy resource ownership, international trade agreements, contract negotiation and agreements, energy purchase and sales agreements, environmental protection laws, and energy business regulations.

EEM 811-2 Environmental Sustainability and Governance in the Oil and Gas Industry (3 Credits)

Environmental sustainability has become a global concern and an issue of contemporary discuss. This is against the backdrop of global climate issues associated with emissions from fossil fuel production and consumption activities. Added to this global concern is the yearning for increased involvement of host countries and communities the operations of the oil and gas industry operators. To this end, environmental sustainability and community relations is designed to provide learners with in-depth knowledge and understanding of the underpinnings of the concept of environmental sustainability, community relations and the interactions between the concepts. Topical issues to be covered in this course include sustainable development (SD) & sustainability, historical perspectives on sustainability, ongoing efforts of the UN towards SD around the globe, e.g. Agenda21; community relations & the global oil & gas industrial sector , community relations in the oil & gas industry in Nigeria, oil & gas companies, community relations

via corporate social responsibility & host communities in Nigeria; community relations & environmental sustainability in the course of oil & gas operations in Nigeria, government regulation of community relations via government regulation of corporate social responsibility (environmental & social responsibilities).

EEM 812 Economics of Energy and the Environment (3 Credits)

This course examines the relationship between the economy and the environment. It examines the economics of natural resources from the extraction and use side, and the waste products returned to the environment. This course examines the relationship between the economy and the environment. It examines the economics of natural resources from the extraction and use side, and the waste products returned to the environment. The course addresses issues such as fossil fuels and their impacts, pollution: environment /natural resources/humans, green house gases/global warming/ climate change, environmental audits/environmental management system and environmental technologies & applied research (remediation, sequestration, etc).

EEM 813 Economics of Renewable forms of Energy (3 Credits)

This course introduces students to renewable energy and the basics of energy demand and energy consumption. It explores the types and features of renewable energy resources, the applications of renewable energy technologies, trend analysis of global capacity of renewable energy, renewable energy economics & investment analysis, focusing on renewable energy cost trend analysis as well as renewable energy project investment analysis using DCF Analysis.

EEM 814 Economics of Power Market Regulation (3 Credits)

The course will provide students with a working knowledge of power systems and electricity industry restructuring, its impact on industry regulation, and the role of environmental concerns and the development of alternative generation technologies. Specific topics include: Introduction to electricity industry; electric power industry structure; electricity demand and supply dynamics; cost structures; economics of electric power generation, transmission and power flow; capital planning: regulated versus restructured; transmission access and wheeling; ancillary services; alternative energy policies and programmes; climate change and impact on generation investments; legal and regulatory issues in electricity economics; and global case studies and electricity sector reforms.

EEM 815 Project Management (3 Credits)

This course is designed to provide students with the skills to successfully plan and manage corporate projects and procedures. Furthermore, students will be acquainted with the requisite abilities knowledge of running successful projects, giving them a competitive edge within the marketplace. The program thoroughly explores the inner and outer workings of project logistics, management, constraints, risks and execution necessary to deliver projects within the desired

scope. Topical issues to be covered includes - project initiation, planning & execution; project monitoring, control and closure. Also, the course will cover project integration management, scope management, schedule management, cost management, quality management, resource management, communications management, risk management, procurement management, stakeholder management, as well as team building.

EEM 816 Project/Dissertation

COURSE DESCRIPTION

SGS 801.1 ICT and Research Methodology (2 Credits)

This course should cover essentials of spreadsheets, Internet technology, Statistical

Packages, Precision and Accuracy of Estimates, Principles of Research, Concepts of Hypothesis, Formulation and testing, Organization of Research and Report Writing.

SGS 801.2 Management and Entrepreneurship (2 Credits)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

MEBM 800 Business Communications (2 Credits)

This course will emphasize written, verbal and business communications. It will also focus on effective report writing and presentation skills as well as computer and internet competence.

MEBM 801-1 Fundamentals of the Oil and Gas Industry (3 Credits)

The course shall deepen the students' knowledge on the following course outlines: Introduction, History of the Industry, Upstream: Production & Exploration, Midstream: (Transportation & Storage), Downstream: Refining and Marketing, Oil & Gas Metering/Pricing, Laws & Regulations. The course further introduces students to development of oil and gas assets and presents the issues of profitability in petroleum exploration and development ventures.

MEBM 801-2 Energy & Energy Resources, and the Economy (3 Credits)

The course is an overview of all forms of energy and energy resources and the engineering processes for the transformation of primary energy to its useful forms. The course reviews fossil fuel energy and its forms, renewable energy resources and characteristics as well as the concept of energy technology in terms of location, assessment, processes and transformation. Specific topics include: exploration and exploitation of energy resources, development of unconventional resources, emerging technologies for energy production, electric power generation technologies, etc.

MEBM 801-3 Fundamentals of Downstream Petroleum Economics & Policy (3 Credits)

The course covers both the Downstream Petroleum Economics and Policy with the following contents: Oil Supply & Demand Fundamentals, Petroleum Physical Trading, Financial & Market Trading with hedging & strategies, Overview of main Refining & Petrochemical Process, World Refining & Petrochemicals Demand, Evolution of Downstream Supply: Refining, Production & Quality (Specifications), Main Characteristics of Petrochemical Business: Economic Drivers, Principles of Refining, Management and Constraints, Standard Global Profit Analysis: Cash Flow, Capital Costs, Inflation Impact, etc, Introduction to Risk Analysis. Downstream

Petroleum Regulations, and Downstream Petroleum Fiscal Policy

MEBM 801-4 Fundamentals of Natural Gas (3 Credits)

Natural gas is evolving globally and in Nigeria as the fossil fuel of choice and the bridge to renewables. The objective of this course is to provide students with an understanding of the natural gas value chain from upstream production through to downstream utilization, policy framework, overview of the evolving Nigerian gas market and monetization economics. Additionally, the course will present the linkages between gas and power sector as well as other gas feedstock industries. As a result of this class, students will have a better understanding of the context and complexity of the natural gas sector and will be equipped with the requisite knowledge and skills to make informed judgements on industry issues as professionals. They will better appreciate government policy efforts in gas as well as the inherent investment and strategic opportunities in the sector. Specifically, the course will provide learners with the overview of global energy trends, overview of natural gas value chain, as well as the Nigerian gas market.

MEBM 801-5 Fundamentals of the Energy Industry - Power Sector (3 Credits)

The objective of the course is to provide a better understanding of the economics of the energy and power industry. Courses includes Introduction to Energy Policy and Regulation; Fundamentals of Energy Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

MEBM 801-6 Local Content Development in the Oil and Gas Industry (3 Credits)

The course examines the conceptualization of local content in Nigeria, factors that defines local content development, policy framework of local content development in Nigeria, legal framework for Nigerian content development (immigration acts, the petroleum acts, petroleum development fund acts, the petroleum industry bill, the Nigerian oil & gas industry content development act, etc), challenges of local content development in oil & gas industry in Nigeria

MEBM 801-7 Fundamentals of Geopolitics of Energy & Petroleum Resources and Supply (3 Credits)

This course will provide the students a broader view of the petroleum industry, demand/supply, pricing and the oil and gas global geopolitics. The course covers: the political economy of oil & gas industry, petroleum pricing and its regulation by OPEC, the global politics involved, petroleum & macroeconomic issues, sustainable petroleum development, the recent energy transition and the geopolitics involved.

MEBM 801-8 Fundamentals of Micro and Macro Economics (3 Credits)

This is an introductory course providing a general understanding of basic macro-economic concepts. Specifically, it acquaints the students with an appreciation of the functions of economic systems, including various approaches to the organization of production and allocation of resources, and of policies to achieve national economic goals. These include the determination of national income, inflation, recession, unemployment, taxation, labor unions, environmental pollution, energy and economic growth. Its main focus is on introducing concepts and models which are used as tools of economic analysis. Concepts such as opportunity cost and approaches such as marginal analysis are introduced and the role of government, the national income and its distribution, GDP, consumption function, savings function, investment spending, the multiplier principle and the influence of government spending on income and output are discussed.

MEBM 801-9 Introductory Economic Theory (3 Credits)

This course covers foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning, and management. The topics are as much as possible made relevant to the energy and petroleum sector.

MEBM 802 Oil and Gas Industry and Pollution Issues (3 Credits)

The course will give an overview of the safety and environmental issues in the petroleum industry. It will provide detailed understanding of the methods and techniques to resolve these key issues for making petroleum production and processing, cleaner and safer. The course would educate students to identify and assess hazards in any stage of operation, to quantify and manage them as well. It will also highlight lessons learnt from the past accidents. Topical issues to be covered includes introduction to safety, health and environmental management- basic terms and their definitions- importance of safety- safety assurance and

assessment- safety in design and operation-organizing for safety. Hazard classification and assessment- hazard evaluation and hazard control. Environmental issues and management-atmospheric pollution- flaring and fugitive release-water pollution- drilling waste, produced water, oil spills, cooling water, processed water- soil waste-rock cutting. Oil sludge, drilling solid waste, production waste environmental monitoring-environmental impact and decommissioning-environmental management.

MEBM 803 Applied Economics: Theory and Applications in the Energy Sector (3 Credits)

This course covers foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning, and management.

MEBM 804 Applied Mathematics, Linear programming & Optimization Methods (3 Credits)

This course is designed to provide a solid foundation for students in the applications of mathematical modeling and techniques in petroleum and energy economics, management and strategy. The key objective is to provide students with analytical tools for research and decision analysis. Specific topics to be taught include: LP modeling, I-O modeling and analysis, efficiency analysis, industrial mathematics with applications and decision modeling in supply chain management.

MEBM 805 Applied Econometrics for Energy Policy Analysis and Planning (3 Credits)

This course is designed to provide a solid foundation for students in the applications of econometrics and statistics in petroleum and energy economics, management and strategy. The key objective is to provide students with analytical tools for research and decision analysis. Specific topics to be taught include: applied mathematics and statistics with economic applications, classical linear regression analysis, time series models analysis and panel data model & nonlinear models, as well as discrete choice regression models.

MEBM 806 Energy Economics I: Concepts, Geopolitics & Governance (3 Credits)

The objective of the course is to provide a better understanding of the economics of the energy and power industry in relation to trends in the overall economy and the society, and better quantitative and analytical skills to examine complex price

behaviour and to develop new revenue generation models and project development approaches. Specific topics include: Introduction to Energy Policy and Regulation; Fundamentals of Energy Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

MEBM 807 Energy Economics II: Renewable Energy Technology & Climate Change Economics (3 Credits)

The course covers renewable energy technologies, economics and policy and is intended to provide an overview of renewable energy concepts, issues relevant to the technologies currently used for providing energy services through renewable energy resources. The course also provides understanding and relevant knowledge in analyzing the integration of renewable energy into the global energy system and emerging issues in renewable energy development along the areas of gender, energy poverty, innovation and new energy technologies. Specific topics include: Renewable Energy Resources; Types and Classification of Renewable Energy Technologies; Introduction to Energy Economics and Energy Markets; Energy Policy Drivers; Renewable Energy Policies and Markets; and Innovations in Renewable Energy Technologies.

MEBM 808 Energy Economics III: Energy Modelling and Power Market Analysis (3 Credits)

The course will provide students with a working knowledge of power systems and electricity industry restructuring, its impact on industry regulation, and the role of environmental concerns and the development of alternative generation technologies. Specific topics include: Introduction to Electricity Industry; Electric Power Industry Structure; Electricity Demand and Supply Dynamics; Cost Structures; Economics of Electric Power Generation, Transmission and Power Flow; Capital Planning: Regulated Versus Restructured; Transmission Access and Wheeling; Ancillary Services; Alternative Energy Policies and Programmes; Climate Change and Impact on Generation Investments; Legal and Regulatory Issues in Electricity Economics; and Global Case Studies and Electricity Sector Reforms.

MEBM 809 Business Strategy, Change Management and Policy Formulation (3 Credits)

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion.

MEBM 810 Energy Infrastructure, Project Finance and Investment Analysis (3 Credits)

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion. Specific topics include: Introduction to the Finance Function and Specification of Firm Objectives; Sources of Finance and Determination of Firm or Project WACC; Project Finance and Issues in Petroleum Industry and Gas and Electricity Project Finance; Valuation of Energy Industry Firms; Introduction to Project Management and Project Integration Management and Review of Models; and Energy Project Scope, Time, Cost and Quality Management. Other topics include Project Management Scheduling Tools – An Introduction; Post Project Evaluation and Control; Human Resource and Communication Risk Management and Procurement Management; and Contextual Energy Finance and Project Management Issues for Developing Countries.

MEBM 814 Economics of Power Market Regulation (3 Credits)

The course will provide students with a working knowledge of power systems and electricity industry restructuring, its impact on industry regulation, and the role of environmental concerns and the development of alternative generation technologies. Specific topics include: introduction to electricity industry; electric power industry structure; electricity demand and supply dynamics; cost structures; economics of electric power generation, transmission and power flow; capital planning: regulated versus restructured; transmission access and wheeling; ancillary services; alternative energy policies and programmes; climate change and impact on generation investments; legal and regulatory issues in electricity economics; and global case studies and electricity sector reforms.

MEBM 811-1 Energy & Petroleum Policy, Law, Regulation & Ethics (3 Credits)

A complex legal environment underscores oil, gas and power business relationships and activities;

and defines the limits of what stakeholders can do. This course provides an overview of the international energy business from a legal perspective within the context of the relationship among stakeholders in their transactions and what makes transactions in the energy business work. A key objective is to give a broad understanding of the legal and regulatory framework within which the energy sector operates. Specific topics include review of legal and institutional frameworks for the energy sector, critique & review of existing energy policy, basic concepts of energy resource ownership, international trade agreements, contract negotiation and agreements, energy purchase and sales agreements, environmental protection laws, and energy business regulations.

MEBM 811-2 Environmental Sustainability and Governance in the Oil and Gas Industry (3 Credits)

Environmental sustainability has become a global concern and an issue of contemporary discuss. This is against the backdrop of global climate issues associated with emissions from fossil fuel production and consumption activities. Added to this global concern is the yearning for increased involvement of host countries and communities the operations of the oil and gas industry operators. To this end, environmental sustainability and community relations is designed to provide learners with in-depth knowledge and understanding of the underpinnings of the concept of environmental sustainability, community relations and the interactions between the concepts. Topical issues to be covered in this course include sustainable development (SD) & sustainability, historical perspectives on sustainability, ongoing efforts of the UN towards SD around the globe, e.g. Agenda21; community relations & the global oil & gas industrial sector , community relations in the oil & gas industry in Nigeria, oil & gas companies, community relations via corporate social responsibility & host communities in Nigeria; community relations & environmental sustainability in the course of oil & gas operations in Nigeria, government regulation of community relations via government regulation of corporate social responsibility (environmental & social responsibilities).

MEBM 812 Economics of Energy and the Environment (3 Credits)

This course examines the relationship between the economy and the environment. It examines the economics of natural resources from the extraction and use side, and the waste products returned to the environment. The course addresses issues such as fossil fuels and their impacts, pollution: environment /natural resources/humans, green house gases/global warming/ climate change, environmental audits/environmental management system and environmental technologies & applied research (remediation, sequestration, etc)

MEBM 813 Economics of Renewable forms of Energy (3 Credits)

This course introduces students to renewable energy and the basics of energy demand and energy consumption. It explores the types and features of renewable energy resources, the applications of renewable energy technologies, trend analysis of global capacity of renewable energy, renewable energy economics & investment analysis, focusing on renewable energy cost trend analysis as well as renewable energy project investment analysis using DCF Analysis

MPBM 814 Project Management (3 Credits)

This course is designed to provide students with the skills to successfully plan and manage corporate projects and procedures. Furthermore, students will be acquainted with the requisite abilities knowledge of running successful projects, giving them a competitive edge within the marketplace. The program thoroughly explores the inner and outer workings of project logistics, management, constraints, risks and execution necessary to deliver projects within the desired scope. Topical issues to be covered includes - project initiation, planning & execution; project monitoring, control and closure. Also, the course will cover project integration management, scope management, schedule management, cost management, quality management, resource management, communications management, risk management, procurement management, stakeholder management, as well as team building.

COURSE DESCRIPTION

SGS 801.1 ICT and Research Methodology (2 Credits)

This course should cover essentials of spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Research, Concepts of Hypothesis, Formulation and testing, Organization of Research and Report Writing.

SGS 801.2 Management and Entrepreneurship (2 Credits)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

MPBM 800 Business Communications (2 Credits)

This course will emphasize written, verbal and business communications. It will also focus on effective report writing and presentation skills as well as computer and internet competence.

MPBM 801-1 Fundamentals of the Oil and Gas Industry (3 Credits)

The course shall deepen the students' knowledge on the following course outlines: Introduction, History of the Industry, Upstream: Production & Exploration, Midstream: (Transportation, Models of Transportation & Storage), Downstream; Refining and Marketing, Oil & Gas Metering/Pricing, Laws & Regulations. The course further introduces students to development of oil and gas assets and presents the issues of profitability in petroleum exploration and development ventures.

MPBM 801-2 Energy & Energy Resources, and the Economy (3 Credits)

The course is an overview of all forms of energy and energy resources and the engineering processes for the transformation of primary energy to its useful forms. The course reviews fossil fuel energy and its forms, renewable energy resources and characteristics as well as the concept of energy technology in terms of location, assessment,

processes and transformation. Specific topics include: exploration and exploitation of energy resources, development of unconventional resources, emerging technologies for energy production, electric power generation technologies, etc.

MPBM 801-3 Fundamentals of Downstream Petroleum Economics & Policy (3 Credits)

The course covers both the Downstream Petroleum Economics and Policy with the following contents: Oil Supply & Demand Fundamentals, Petroleum Physical Trading, Financial & Market Trading with hedging & strategies, Overview of main Refining & Petrochemical Process, World Refining & Petrochemicals Demand, Evolution of Downstream Supply: Refining, Production & Quality (Specifications), Main Characteristics of Petrochemical Business: Economic Drivers, Principles of Refining, Management and Constraints, Standard Global Profit Analysis: Cash Flow, Capital Costs, Inflation Impact, etc, Introduction to Risk Analysis. Downstream Petroleum Regulations, and Downstream Petroleum Fiscal Policy

MPBM 801-4 Fundamentals of Natural Gas (3 Credits)

Natural gas is evolving globally and in Nigeria as the fossil fuel of choice and the bridge to renewables. The objective of this course is to provide students with an understanding of the natural gas value chain from upstream production through to downstream utilization, policy framework, overview of the evolving Nigerian gas market and monetization economics. Additionally, the course will present the linkages between gas and power sector as well as other gas feedstock industries. As a result of this class, students will have a better understanding of the context and complexity of the natural gas sector and will be equipped with the requisite knowledge and skills to make informed judgements on industry issues as professionals. They will better appreciate government policy efforts in gas as well as the inherent investment and strategic opportunities in the sector. Specifically, the course will provide learners with the overview of global energy trends, overview of natural gas value chain, as well as the Nigerian gas market.

MPBM 801-5 Fundamentals of the Energy Industry - Power Sector (3 Credits)

The objective of the course is to provide a better understanding of the economics of the energy and power industry. Courses includes Introduction to Energy Policy and Regulation; Fundamentals of Energy Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy

Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

MPBM 801-6 Local Content Development in the Oil and Gas Industry (3 Credits)

The course examines the conceptualization of Local Content in Nigeria, Factors that defines Local Content Development, Policy Framework of Local Content Development in Nigeria, Legal Framework for Nigerian Content Development (Immigration Acts, The Petroleum Acts, Petroleum Development Fund Acts, The Petroleum Industry Bill, The Nigerian Oil & Gas Industry Content Development Act, etc), Challenges of Local Content Development in Oil & Gas Industry in Nigeria

MPBM 801-7 Fundamentals of Geopolitics of Energy & Petroleum Resources and Supply (3 Credits)

This course will provide the students a broader view of the petroleum industry, demand/supply, pricing and the oil and gas global geopolitics. The course covers: The Political Economy of Oil & Gas Industry, Petroleum Pricing and its Regulation by OPEC, the Global Politics involved, Petroleum & Macroeconomic Issues, Sustainable Petroleum Development, the recent Energy Transition and the Geopolitics involved.

MPBM 801-8 Fundamentals of Micro and Macro Economics (3 Credits)

This is an introductory course providing a general understanding of basic macro-economic concepts. Specifically, it acquaints the students with an appreciation of the functions of economic systems, including various approaches to the organization of production and allocation of resources, and of policies to achieve national economic goals. These include the determination of national income, inflation, recession, unemployment, taxation, labor unions, environmental pollution, energy and economic growth. Its main focus is on introducing concepts and models which are used as tools of economic analysis. Concepts such as opportunity cost and approaches such as marginal analysis are introduced and the role of government, the national income and its distribution, GDP, consumption function, savings function, investment spending, the multiplier principle and the influence of government spending on income and output are discussed.

MPBM 801-9 Introductory Economic Theory (3 Credits)

This course covers foundational concepts, precepts and assumptions in economic theory and

applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning, and management. The topics are as much as possible made relevant to the energy and petroleum sector.

MPBM 802 Oil and Gas Industry and Pollution Issues (3 Credits)

The course will give an overview of the safety and environmental issues in the petroleum industry. It will provide detailed understanding of the methods and techniques to resolve these key issues for making petroleum production and processing, cleaner and safer. The course would educate students to identify and assess hazards in any stage of operation, to quantify and manage them as well. It will also highlight lessons learnt from the past accidents. Topical issues to be covered includes introduction to safety, health and environmental management- basic terms and their definitions- importance of safety- safety assurance and assessment- safety in design and operation- organizing for safety. Hazard classification and assessment- hazard evaluation and hazard control. Environmental issues and management- atmospheric pollution- flaring and fugitive release- water pollution- drilling waste, produced water, oil spills, cooling water, processed water- soil waste- rock cutting. Oil sludge, drilling solid waste, production waste environmental monitoring- environmental impact and decommissioning- environmental management.

MPBM 803 Applied Economics: Theory and Applications in the Energy Sector (3 Credits)

This course covers foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning, and management.

MPBM 804 Applied Mathematics, Linear programming & Optimization Methods (3 Credits)

This course is designed to provide a solid foundation for students in the applications of mathematical modeling and techniques in petroleum and energy economics, management and strategy. The key objective is to provide students with analytical tools for research and decision analysis. Specific topics to be taught include: LP modeling, I-O modeling and analysis, efficiency analysis, industrial mathematics with

applications and decision modeling in supply chain management.

MPBM 805 Applied Econometrics for Energy Policy Analysis and Planning (3 Credits)

This course is designed to provide a solid foundation for students in the applications of econometrics and statistics in petroleum and energy economics, management and strategy. The key objective is to provide students with analytical tools for research and decision analysis. Specific topics to be taught include: applied mathematics and statistics with economic applications, classical linear regression analysis, time series models analysis and panel data model & nonlinear models, as well as discrete choice regression models.

MPBM 806 Petroleum Economics I: Concepts, Geopolitics & Governance (3 Credits)

The course describes the key principles, economic concepts, and strategic thinking of the oil and gas industry with respect to its structure, conduct and performance. The course evaluates the major segments of the industry and introduces the oil and gas value sequence. The key players or major drivers impacting the global oil and gas supply outlook and pricing are identified and evaluated, including IOCs, OECD, OPEC, and NOCs. The course also presents a broad view of contemporary discussions on petroleum, economy, and the environment. Other topics covered include, the political economy of oil and gas, oil and gas policy versus market debate, petroleum price regulation and mechanism, resources, petroleum and macroeconomic issues, petroleum and the environment discourse, petroleum and sustainable development, the resource curse debates, geopolitics and energy security.

MPBM 807 Petroleum Economics II: Upstream Petroleum Economics & Risk Analysis (3 Credits)

This course describes the strategies, philosophy, process, and economic tools applied in the upstream business for decision-making under risk, uncertainty, and risk attitude; and it demonstrates how the economic value of oil and gas ventures and business can be estimated under various fiscal regimes. The key objective of Petroleum Economics II is to equip students with a working knowledge of the upstream petroleum industry in all aspects including: resources and reserves, oil and gas assets development, and portfolio management, forecasting production and revenue flow; cash flow analysis, deriving and interpreting deterministic and stochastic economic indicators, spreadsheet modeling tools to incorporate risk and uncertainty in oil and as economic modeling.

**MPBM 808 Petroleum Economics III:
Downstream of Gas/ Gas to Power Market
Analysis (3 Credits)**

The course describes all segments of midstream sector of the oil and gas industry including refinery, petrochemical, LNG, GTL, and CNG plants with emphasis on its economic features and mechanisms. The concepts and factors affecting margins and margin volatility in the petroleum midstream industry are reviewed including but not limited to its structure and conduct, flexibility and limitations, product constraints and complexity, costs versus margin and profitability, LP modeling and optimization using COS, etc. The course also provides a review of the economics of petroleum products transportation and distribution, an overview of natural gas value chain, gas utility business structure, regulation and pricing, petroleum products trading, evolutions and applications of futures and options.

**MPBM 809 Business Strategy, Change
Management and Policy Formulation
(3 Credits)**

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion.

**MPBM 810 Energy Infrastructure, Project
Finance and Investment Analysis
(3 Credits)**

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion. Specific topics include: Introduction to the Finance Function and Specification of Firm Objectives; Sources of Finance and Determination of Firm or Project WACC; Project Finance and Issues in Petroleum Industry and Gas and Electricity Project Finance; Valuation of Energy Industry Firms; Introduction to Project Management and Project Integration Management and Review of Models; and Energy Project Scope, Time, Cost and Quality Management. Other topics include Project Management Scheduling Tools – An Introduction; Post Project Evaluation and Control; Human Resource and Communication Risk Management and Procurement Management; and Contextual Energy Finance and Project Management Issues for Developing Countries.

**MPBM 811-1 Energy & Petroleum Policy,
Law, Regulation & Ethics (3 Credits)**

A complex legal environment underscores oil, gas and power business relationships and activities; and defines the limits of what stakeholders can do. This course provides an overview of the international energy business from a legal perspective within the context of the relationship among stakeholders in their transactions and what makes transactions in the energy business work. A key objective is to give a broad understanding of the legal and regulatory framework within which the energy sector operates. Specific topics include review of legal and institutional frameworks for the energy sector, critique & review of existing energy policy, basic concepts of energy resource ownership, international trade agreements, contract negotiation and agreements, energy purchase and sales agreements, environmental protection laws, and energy business regulations.

**MPBM 811-2 Environmental Sustainability
and Governance in the Oil and Gas Industry (3
Credits)**

Environmental sustainability has become a global concern and an issue of contemporary discuss. This is against the backdrop of global climate issues associated with emissions from fossil fuel production and consumption activities. Added to this global concern is the yearning for increased involvement of host countries and communities the operations of the oil and gas industry operators. To this end, environmental sustainability and community relations is designed to provide learners with in-depth knowledge and understanding of the underpinnings of the concept of environmental sustainability, community relations and the interactions between the concepts. Topical issues to be covered in this course include sustainable development (SD) & sustainability, historical perspectives on sustainability, ongoing efforts of the UN towards SD around the globe, e.g. Agenda21; community relations & the global oil & gas industrial sector, community relations in the oil & gas industry in Nigeria, oil & gas companies, community relations via corporate social responsibility & host communities in Nigeria; community relations & environmental sustainability in the course of oil & gas operations in Nigeria, government regulation of community relations via government regulation of corporate social responsibility (environmental & social responsibilities).

**MPBM 812 Economics of Petroleum Refining
& Petrochemicals (3 Credits)**

This course, provides learners with the essence of international oil supply – global reserves, production & trade, introduction to global oil

business - exploration, extraction, refining, marketing, transportation, crude oil classifications, crude oil quality indicators, crude oil characterization by assays, crude oil distillation – refined products introduction to crude oil refining – distillation, refinery configurations, topping, hydro-skimming, cracking, coking. The course also introduces students to refinery economics & petrochemicals, and petrochemical feedstock, processes and equipment

MPBM 813 Economics of Regulation of Petroleum Industries (3 Credits)

A study of Regulation Processes as a major consideration in Petroleum Industry operations with a clear insight on principles that affect Petroleum Industry Regulatory policies. Globalization provides a platform for debates, decisions and policies on what to regulate, whether to regulate and how to regulate. International capital would tend to discourage regulations, however an understanding of the economic and environmental policy framework implications is required for the selection of informed, technically feasible, optimal regulation choices beneficial to the environment, the energy and petroleum industry and the world.

MPBM 814 Project Management (3 Credits)

This course is designed to provide students with the skills to successfully plan and manage corporate projects and procedures. Furthermore, students will be acquainted with the requisite abilities knowledge of running successful projects, giving them a competitive edge within the marketplace. The program thoroughly explores the inner and outer workings of project logistics, management, constraints, risks and execution necessary to deliver projects within the desired scope. Topical issues to be covered includes - project initiation, planning & execution; project monitoring, control and closure. Also, the course

will cover project integration management, scope management, schedule management, cost management, quality management, resource management, communications management, risk management, procurement management, stakeholder management, as well as team building.

MPBM 815– 1 Petroleum Reserves Classification (3 Credits)

This course will cover the definitions of, and uses for, oil and gas reserves estimates, and how to be compliant with each of the industry standard and regulator's versions of the reserves requirements. In this course, students will learn how geoscience and engineering evaluation methods should be used for compliance of reserves estimates, the differences in the evaluation assumptions and how the inherent uncertainties in reserve estimates are reflected by the categorization of reserves.

MPBM 815 – 2 Petroleum Assets Valuation (3 Credits)

Valuation of petroleum assets – upstream, midstream and downstream, are essential for adequate decision making in the oil industry. There are fundamental variables that are associated with petroleum assets valuations, as well as risks and uncertainties. The course therefore, focuses on asset valuation of all sectors of the oil and gas industry with particular emphasis on the upstream sector - exploration and production. It is expected that students will be exposed to the challenging issues that commonly arise when valuing petroleum assets as well as interpreting valuation models, develop the practical skills to build and evaluate valuation models, and acquire skills for better economic decisions based on robust valuation models. Specific topics to be covered includes: Upstream Oil and Gas Valuation Model, Financing issues as well as sensitivity and stochastics models to quantify uncertainty.

**PROFESSIONAL MSc. CLIMATE CHANGE MANAGEMENT AND POLICY
LIST OF COURSES, CODES AND CREDIT UNITS**

S/NO	COURSE CODE	COURSE TITLE	CREDIT UNITS
MODULE 1			
1	MCGE 800.1	Fundamentals of the Oil and Gas Industry	3
2	MCGE 800.2	Energy, Energy Resources & the Economy	3
3	MCGE 800.3	Fundamentals of Downstream Petroleum Economics & Policy	3
4	MCGE 800.4	Fundamentals of Natural Gas	3
MODULE 2			
5	MCGE 800.5	Fundamentals of the Energy Industry-Power Sector	3
6	MCGE 800.6	Local Content Development in the Oil & Gas Industry	3
7	MCGE 800.7	Fundamentals of Petroleum Geopolitics	3
8	MCGE 800.8	Entrepreneurship & ICT Applications	3
9	MCGE 800.9	Fundamentals of Micro and Macro Economics	3

10	MCGE 800.10	Introductory Economic Theory	3
MODULE 3			
11	MCGE 800.11	Energy & Petroleum Policy, Law, Regulation & Ethics	3
12	MCGE 800.12	Environmental Sustainability & Community Relations in the Oil and Gas Industry I	3
13	MCGE 800.13	Environmental Sustainability & Community Relations II	3
MODULE 4			
14	MCGE 800.14	Natural Gas Economics & Policy	3
15	MCGE 800.15	Climate Change Science	3
16	MCGE 800.16	Climate Change and Environmental Economics	3
17	MCGE 800.17	Environmental Accounting (Decarbonization, Carbon Capture & Co ₂ Sequestration & Storage) & Policy	3
18	MCGE 800.18	Climate Change and Global Warming	3
19	MCGE 800.19	Climate Change Concepts, Geopolitics & Governance	3
20	MCGE 800.20	Environmental Management, Planning, EIA and Sustainable Development	3
21	MCGE 800.21	Energy Management for Green Economy	3

MODULE 5			
22	MCGE 800.22	Climate Policy & Public Finance	3
23	MCGE 800.23	Climate Economics & Taxation	3
24	MCGE 800.24	Climate Change Learning and Implementation	3
25	MCGE 800.25	Green Economy & Marketing	3
MODULE 6			
26	MCGE 800.26	Energy Policy, Economics & Risk Analysis	3
27	MCGE 800.27	Renewable Energy Technology & Climate Change Policy	3
28	MCGE 800.28	Energy Laws, Regulations & Policy	3
29	MCGE 800.29	Research Methods/Business Communication	2
MODULE 7			
30	MCGE 800.30	Petroleum & Energy Infrastructure Finance & Evaluation	3
31	MCGE 800.31	Strategy formulation, Implementation & Evaluation	3
32	MCGE 800.32	Policy Formulation, Implementation & Evaluation	3
33	MCGE 800.33	Project Management	3
34	MCGE 800.34	Strategies for Change Management	3

COURSE DESCRIPTION

MODULE 1

MCGE 800.1: FUNDAMENTALS OF THE OIL AND GAS INDUSTRY (3 CREDITS)

The course shall deepen the students' knowledge on the following course outlines: Introduction, History of the Industry, Upstream: Production & Exploration, Midstream: (Transportation, Models of Transportation & Storage), Downstream; Refining and Marketing, Oil & Gas Metering/Pricing, Laws & Regulations.

MCGE 800.2: ENERGY, ENERGY RESOURCES & THE ECONOMY (3 CREDITS)

The course is an overview of all forms of energy and energy resources and the engineering processes for the transformation of primary energy to its useful forms. The course reviews fossil fuel energy and its forms, renewable energy resources and characteristics as well as the concept of energy technology in terms of location, assessment, processes and transformation.

MCGE 800.3: FUNDAMENTALS OF DOWNSTREAM PETROLEUM ECONOMICS & POLICY (3 CREDITS)

The course covers both the Downstream Petroleum Economics and Policy with the following contents: Oil Supply & Demand Fundamentals, Petroleum Physical Trading, Financial & Market Trading with hedging & strategies, Overview of main Refining & Petrochemical Process, World Refining & Petrochemicals Demand, Evolution of Downstream Supply: Refining, Production & Quality (Specifications), Main Characteristics of Petrochemical Business: Economic Drivers, Principles of Refining, Management and Constraints, Standard Global Profit Analysis: Cash Flow, Capital Costs, Inflation Impact, etc, Introduction to Risk Analysis. Downstream Petroleum Regulations, and Downstream Petroleum Fiscal Policy.

MCGE 800.4: FUNDAMENTALS OF NATURAL GAS (3 CREDITS)

The course will provide Students with a better understanding of Natural Gas and its constituents in sustaining the Petrochemical Industry. The course covers the following: Gas Reservoirs, Estimation of Reserves, Gas Condensate Reservoirs, Natural Gas Drilling/Completions, Production, Well Performance, Transportation,

Gas Flow in Pipes, Dew Point Pressure & Temperature, Gas Metering, Storage, LNG, CNG, NGL GTP etc.

MODULE 2

MCGE 800.5: FUNDAMENTALS OF THE ENERGY INDUSTRY-POWER SECTOR (3 CREDITS)

The objective of the course is to provide a better understanding of the economics of the energy and power industry in relation to trends in the overall economy and the society, and better quantitative and analytical skills to examine complex price behavior and to develop new revenue generation models and project development approaches. Specific topics include: Introduction to Energy, Fundamentals of Energy Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

MCGE 800.6: LOCAL CONTENT DEVELOPMENT IN THE OIL & GAS INDUSTRY (3 CREDITS)

The course examines the conceptualization of Local Content in Nigeria, Factors that defines Local Content Development, Policy Framework of Local Content Development in Nigeria, Legal Framework for Nigerian Content Development (Immigration Acts, The Petroleum Acts, Petroleum Development Fund Acts, The Petroleum Industry Bill, The Nigerian Oil & Gas Industry Content Development Act, etc), Challenges of Local Content Development in Oil & Gas Industry in Nigeria.

MCGE 800.7: FUNDAMENTALS OF PETROLEUM GEOPOLITICS (3 CREDITS)

This course will provide the students a broader view of the petroleum industry, demand/supply, pricing and the oil and gas global geopolitics. The course covers: the Political Economy of Oil & Gas Industry, Petroleum Pricing and its Regulation by OPEC, the Global Politics involved, Petroleum & Macroeconomic Issues, Sustainable Petroleum Development, the recent Energy Transition and the Geopolitics involved.

MCGE 800.8: ENTREPRENEURSHIP & ICT APPLICATIONS (3 CREDITS)

The purpose of this course is primarily for the students to be acquainted with ICT skills for entrepreneurship applications. The focus is on computer application and efficiency. Coding, Machine learning, Internet things, Programming Languages (Python, C-Sharp, C++, R-programming, etc).

MCGE 800.9: FUNDAMENTALS OF MICRO AND MACRO ECONOMICS (3 CREDITS)

This is an introductory course providing a general understanding of basic macro-economic concepts. Specifically, it acquaints the students with an appreciation of the functions of economic systems, including various approaches to the organization of production and allocation of resources, and of policies to achieve national economic goals. These include the determination of national income, inflation, recession, unemployment, taxation, labor unions, environmental pollution, energy and economic growth. Its main focus is on introducing concepts and models which are used as tools of economic analysis. Concepts such as opportunity cost and approaches such as marginal analysis are introduced and the role of government, the national income and its distribution, GDP, consumption function, savings function, investment spending, the multiplier principle and the influence of government spending on income and output are discussed.

MCGE 800.10: INTRODUCTORY ECONOMIC THEORY (3 CREDITS)

The course covers the foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning and management. The topics are as much as possible made relevant to the energy and petroleum sector.

MODULE 3

MCGE 800.11: ENERGY & PETROLEUM POLICY, LAW, REGULATION & ETHICS (3 CREDITS)

This course will expose the students to a complex legal environment underscores oil, gas and power business relationship and activities; and defines the limits of what stakeholders can do. This course provides an overview of the international energy business from a legal perspective within the context of the relationship among stakeholders in their transactions and what makes transactions in the energy business work. A key objective is to give a broad understanding of the legal and regulatory framework within which the energy sector operates. Specific topics include review of

legal and institutional frameworks for the energy sector, critique & review of existing energy policy, basic concepts of energy resource ownership, international trade agreements, contract negotiation and agreements, energy purchase and sales agreements, environmental protection laws, and energy business regulations.

MCGE 800.12: ENVIRONMENTAL SUSTAINABILITY & COMMUNITY RELATIONS IN THE OIL AND GAS INDUSTRY I (3 CREDITS)

The objective of the course is to provide a better understanding of the ecological context and mapping, external risks to the industry, strategic risks to the industry, impact of operational incidents, identifying typical operational emissions scenarios, exploring typical mitigation strategies and their resource implications, option appraisal in support of an emission reduction, evolution of emission and incident reduction in the oil and gas industry, risk assessment and mitigation techniques, importance of culture across the organization on emission and human incident reduction, strategic approach to environmental sustainability and responsible conduct and Initiatives/tools that support a culture of emissions and human incident reduction

MCGE 800.13: ENVIRONMENTAL SUSTAINABILITY & COMMUNITY RELATIONS II (3 CREDITS)

Environmental sustainability has become a global concern and an issue of contemporary discuss. This is against the backdrop of global climate issues associated with emissions from fossil fuel production and consumption activities. Added to this global concern is the yearning for increased involvement of host countries and communities the operations of the oil and gas industry operators. To this end, environmental sustainability and community relations is designed to provide learners with in-depth knowledge and understanding of the underpinnings of the concept of environmental sustainability, community relations and the interactions between the concepts. Topical issues to be covered in this course include sustainable development (SD) & sustainability, historical perspectives on sustainability, ongoing efforts of the UN towards SD around the globe, e.g. Agenda21; community relations & the global oil & gas industrial sector , community relations in the oil & gas industry in Nigeria, oil & gas companies, community relations via corporate social responsibility & host communities in Nigeria; community relations & environmental sustainability in the course of oil & gas operations in Nigeria, government regulation of community relations via government regulation

of corporate social responsibility (environmental & social responsibilities).

MODULE 4

MCGE 800.14: NATURAL GAS ECONOMICS & POLICY (3 CREDITS)

This course will expose students to understanding the Importance of natural gas in the world energy balance; global reserves and production of natural as well as major demand centres. It will also x-ray international gas markets as well as the impact of unconventional gas production on the world demand/supply and on gas prices. Additional topics to be covered include the role of growing trade in liquefied natural gas (LNG) in increasing emerging markets' access to natural gas, as well as the policy drivers.

MCGE 800.15: CLIMATE CHANGE SCIENCE (3 CREDITS)

The course shall deepen the students' knowledge on the roles that renewable energy transition, energy efficiency and afforestation/reforestation and other low energy carbon solutions could play in globe greenhouse gas emission reduction, especially in meeting the Paris Climate Agreement. The Module will expatiate in details all the parameters that interact to create global warming and how best to mitigate it. Topics to be covered are: Theory of Climate Change, Fundamentals of Climate Change Science, GHG Emissions in Global Warming, Climate Change Adaptation-mitigation/Technologies, Kyoto Protocol Mechanisms and Paris Climate Agreement, Key Sectors affected by Climate Change, Coastal Zone Management in handling Climate Change induced Coastal Erosion/Sea Level Rise, Climate Change on Sustainable Development Goals (SDG), Adaption and Development Planning, Low Carbon Development Processes-Mitigation & Green Economy, Climate Change Policies in Nigeria, Financial/Fiscal & Market instruments for tackling Climate Change, Climate Finance & Clean Energy Investments.

MCGE 800.16: CLIMATE CHANGE AND ENVIRONMENTAL ECONOMICS (3 CREDITS)

Environmental economics is playing an increasingly central role in understanding the causes of, and designing policy solutions to, contemporary environmental and resource problems. It has been instrumental in informing policy across the world, for example in the creation of markets to efficiently regulate pollutants such as acid rain and carbon. Environmental and resource economics also informs the design of new instruments for the conservation of ecosystem services and the efficient use of natural resources,

such as water and forests, and for the promotion of renewable energy and electric vehicles.

In order to make climate change and environmental and resource issues central to the policy debate, it is also necessary to demonstrate the contribution that the environment makes to human well-being, and the serious economic, health effects of pollution and the cost implications.

MCGE 800.17: ENVIRONMENTAL ACCOUNTING (DECARBONIZATION, CARBON CAPTURE & CO₂ SEQUESTRATION & STORAGE) & POLICY (3 CREDITS)

Carbon dioxide capture and storage (CCS), is considered as one of the options for reducing atmospheric emissions of CO₂ from human activities. CO₂ is emitted principally from the burning of fossil fuels, both in large combustion units such as those used for electric power generation and in smaller, distributed sources such as automobile engines and furnaces used in residential and commercial buildings. CO₂ emissions also result from some industrial and resource extraction processes, as well as from the burning of forests during land clearance. CCS would most likely be applied to large point sources of CO₂, such as power plants or large industrial processes. Some of these sources could supply decarbonized fuel such as hydrogen to the transportation, industrial and building sectors, and thus reduce emissions from those distributed sources. This course will therefore expose students to accounting and policy drivers for decarbonization, carbon capture and CO₂ sequestration and storage.

MCGE 800.18: CLIMATE CHANGE AND GLOBAL WARMING (3 CREDITS)

Global warming is a long-term heating of Earth's climate system observed since the pre-industrial period (between 1850 and 1900) due to human activities, primarily fossil fuel burning, which increases heat-trapping greenhouse gas levels in Earth's atmosphere. The term is frequently used interchangeably with the term climate change, though the latter refers to both human- and naturally produced warming and the effects it has on our planet. It is most commonly measured as the average increase in Earth's global surface temperature. The course also covers Greenhouse Effect, Greenhouse Gases, CO₂ Emission, Biogeochemistry, Carbon Cycling, Climate and Weather, Global Wind System, Cloud, Storms & Climate, Global Ocean Circulation.

MCGE 800.19: CLIMATE CHANGE CONCEPTS, GEOPOLITICS & GOVERNANCE (3 CREDITS)

The objective of the course is to provide a better understanding of the economics of the energy and power industry in relation to trends in the overall economy and the society, and better quantitative and analytical skills to examine complex price behavior and to develop new revenue generation models and project development approaches. Specific topics include: Introduction to Climate Change Policy and Regulation; Fundamentals of Climate Change Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

MCGE 800.20: ENVIRONMENTAL MANAGEMENT, PLANNING, EIA AND SUSTAINABLE DEVELOPMENT (3 CREDITS)

The course examines environmental management for environmental decision making. Other topics are interrelationship among Assessment; Environmental and Development; Evolution of Environmental Assessment; Procedures and steps in Environmental Impact Assessment (EIA), Social Impact Assessment (SIA), and Health Impact Assessment (HIA), Public Participation; Strategic Environmental Assessment (SEA), Policy formulation; Risk Management Systems, and Environmental Auditing and Management Systems.

MCGE 800.21: ENERGY MANAGEMENT FOR GREEN ECONOMY (3 CREDITS)

This course explores the various perspectives on individual and industrial energy demand, energy management, energy supply, energy markets, and energy policies affecting the markets. More so, the course will cover areas like Fossil Fuel, Renewable Electricity Economics, Nuclear Power Sector/Energy Tax, Price Regulations, Deregulations, Energy Efficiency, Energy Security and Sustainability, and Greenhouse Gas Emission Policies.

MODULE 5

MCGE 800.22: CLIMATE POLICY & PUBLIC FINANCE (3 CREDITS)

The course is aimed at building understanding of the links between climate policy and public finance. The course highlights how jobs will be affected by Climate change and what roles governments are expected to play. It goes into details to explain national and international climate change finance and creates a strategic framework for climate finance management. Also, the course covers: Understand climate change impact, Asia

and Pacific Climate Change Experience, New emerging green jobs, National and International Finance for Climate Change, Strategic Climate Policy, Strategic Framework for Managing Climate Finance, Understand how the Climate Finance Markets affect the oil & gas Industry, Impact of Climate Finance on Automotive Sector, Renewable Energy Sector and impact on Climate Finance, and Strategic National Climate Policy with positive Public Finance outcomes.

MCGE 800.23: CLIMATE ECONOMICS & TAXATION (3 CREDITS)

This course will expose the students to a renewed and increasing interest in policy instruments that put a price on greenhouse gas (GHG) emissions through the adoption of carbon taxes and other economic instruments. It is pertinent to note that climate change includes externalities, common property resources, public goods, renewable and non-renewable resources, and the discounting of costs and benefits over time. Economic policy instruments that can alter patterns of energy use, industrial development, and income distribution are crucial to the mitigation or adoption of climate change plans. Also, the course covers: Global Carbon Economics, Carbon Tax Adoption, and Effects of the Carbon Tax and the use of Revenues, Global Greenhouse Gas Emission Reduction, and Parameters that shape adoption of Carbon Taxation Decision, Approaches for determining Carbon Taxes, and Climate Economics for Climate Change Mitigation.

MCGE 800.24: CLIMATE CHANGE LEARNING AND IMPLEMENTATION (3 CREDITS)

The course will provide students with good knowledge of Climate Change, Adaption, Mitigation, Weather Forecasts, Climate Projections and its Utilization, Different Climate Scenarios, Impacts of Climate Change, Recognize the Opportunities for Low Carbon Future, Climate Change Plan & Finance, and Projects to tackle Climate Change.

MCGE 800.25: GREEN ECONOMY & MARKETING (3 CREDITS)

The transition to an inclusive green economy presents many significant opportunities. Green Procurement Practice and the increasing global demand for environmental goods and services as well as consumer demand for more sustainable products can aid countries in diversifying their economies, reduce commodity dependence and boost long-term sustainable development. The course covers: Legal and Governance Framework for Trade and Green Economy, Challenges and Potential Opportunities related to Trade in the Transition to a Green economy, Enabling Policy to

foster Green Trade Practices, Sectoral Case Studies of Green Trade, and Green Economy Transition within the Framework of International Trade.

MODULE 6

MCGE 800.26: ENERGY POLICY, ECONOMICS & RISK ANALYSIS (3 CREDITS)

This course will cover in details, the basic Energy Policy, Economics and Risk Analysis. The core emphasis on this course are: Fundamentals of Energy Policy, Risk Analysis, International & Local Energy Economics, Fiscal System Mechanisms & Analysis, Energy Risk and Uncertainty Management, Risk Decision Analysis.

MCGE 800.27: RENEWABLE ENERGY TECHNOLOGY & CLIMATE CHANGE POLICY (3 CREDITS)

The course covers renewable energy technologies, economics and policy and is intended to provide an overview of renewable energy concepts, issues relevant to the technologies currently used for providing energy services through renewable energy resources. The course also provides understanding and relevant knowledge in analyzing the integration of renewable energy into the global energy system and emerging issues in renewable energy development along the areas of gender, energy poverty, innovation and new energy technologies. Specific topics include: Renewable Energy Resources; Types and Classification of Renewable Energy Technologies; Introduction to Energy Economics and Energy Markets; Energy Policy Drivers; Renewable Energy Policies and Markets; and Innovations in Renewable Energy Technologies.

MCGE 800.28: ENERGY LAWS, REGULATIONS & POLICY (3 CREDITS)

This course provides an overview of the international energy business from a legal perspective within the context of the relationship among stakeholders in their transactions and what makes transactions in the energy business work. A key objective is to give a broad understanding of the legal and regulatory framework within which the energy sector operates. Specific topics include review of legal and institutional frameworks for the energy sector, critique & review of existing energy policy, basic concepts of energy resource ownership, international trade agreements, contract negotiation and agreements, energy purchase and sales agreements, environmental protection laws, and energy business regulations.

MCGE 800.29: RESEARCH METHODS/ BUSINESS COMMUNICATION

(3 CREDITS)

Effective communication and ICT (soft) Skills are essential for academic, professional and business success in the contemporary world. This course will emphasize written, verbal and business communications. It will also focus on effective report writing and presentation skills as well as computer and internet competence. The course further introduces students to research methods in their field.

MODULE 7

MCGE 800.30: PETROLEUM & ENERGY INFRASTRUCTURE FINANCE & EVALUATION (3 CREDITS)

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion. Specific topics include: Introduction to the Finance Function and Specification of Firm Objectives; Sources of Finance and Determination of Firm or Project WACC; Project Finance and Issues in Petroleum Industry and Gas and Electricity Project Finance; Valuation of Energy Industry Firms; Introduction to Project Management and Project Integration Management and Review of Models; and Energy Project Scope, Time, Cost and Quality Management. Other topics include Project Management Scheduling Tools – An Introduction; Post Project Evaluation and Control; Human Resource and Communication Risk Management and Procurement Management; and Contextual Energy Finance and Project Management Issues for Developing Countries

MCGE 800.31: STRATEGY FORMULATION, IMPLEMENTATION & EVALUATION (3 CREDITS)

Definition of strategy, components of strategy, hierarchy of strategies, marketing strategy, the marketing mix, strategic decisions, corporate objectives, corporate development strategy, alternative corporate growth strategy, allocation of corporate resources, portfolio models, the BCG model and its limitations, industry attractiveness business position matrix, value based model and its features, strategic decisions at SBU level, SBU's competitive strategy, stakeholder consideration in resources allocation.

MCGE 800.32: POLICY FORMULATION, IMPLEMENTATION & EVALUATION (3 CREDITS)

The course covers background to public policy & policy analysis, agenda setting, quick win model of policy analysis, policy formulation, adoption, implementation and evaluation. Policy formulation and implementation steps, pitfalls in defining a public policy problem, policy implementation plan, policy evaluation after implementation, policy evaluation techniques.

MCGE 800.33: PROJECT MANAGEMENT (3 CREDITS)

This course is designed to provide students with the skills to successfully plan and manage corporate projects and procedures. Furthermore, students will be acquainted with the requisite abilities knowledge of running successful projects, giving them a competitive edge within the marketplace. The program thoroughly explores the inner and outer workings of project logistics, management, constraints, risks and execution necessary to deliver projects within the desired scope. Topical issues to be covered includes - project initiation, planning & execution; project monitoring, control and closure. Also, the course will cover project integration management, scope management, schedule management, cost management, quality management, resource management, communications management, risk management, procurement management, stakeholder management, as well as team building.

MCGE 800.34: STRATEGIES FOR CHANGE MANAGEMENT (3 CREDITS)

Change management is the people side of business transformation. Business change is complex because of relationships between the business environment, the organization, its people and

supporting technologies. Change can be instigated from within the organization or imposed by external factors, as such, Change needs to be cohesively and proactively managed. Accordingly, this course on change management integrates the transition of people, processes and technology from the current “as-is” state to a continually unfolding future state. During the course, the students will be exposed to how the dynamics of effective change management work and how to identify and unlock resistance to change, enabling teams to work together and speeding up the implementation of change programmes.

**MODULE 7:
SGS COMPULSORY COURSES**

SGS 801.1: ICT AND RESEARCH METHODOLOGY (2 CREDITS)

This course should cover essentials of spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Research, Concepts of Hypothesis, Formulation and testing, Organization of Research and Report Writing.

SGS 801.2: MANAGEMENT AND ENTREPRENEURSHIP (2 CREDITS)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.)

DISSERTATION: In place of dissertation, students are required to attend at least one seminar/conference/workshop every year of the duration of this programme. Submission of approved and graded term papers will also be required.

**PROFESSIONAL MSc. ENERGY TRANSITIONS MANAGEMENT AND POLICY

AIM

The global energy landscape is changing drastically from dependence on fossil fuels to alternative energy sources, especially renewable energy sources. This change possess consequences, especially to oil producing and consuming countries as well as the oil industry in general, depending on the approach adopted to manage the transition. Thus, the aim of this programme is to train students, and empower them with the tools for adequate policy making and management of the transition to greener energy sources in Nigeria and Africa at large.

OBJECTIVES

The objectives of the programme include:

1. To equip professionals with the appropriate level of knowledge and information to guide and superintend over effective policy approaches and management of energy transition.
2. To train and empower students with technical and non-technical knowledge for effective

communication of energy transition policies, and guidance for transitioning to greener energy alternatives.

3. To equip students from both commercial disciplines, government and the industry with sound policy and regulatory approaches for effective policy making and adherence to international best practices in enforcement of the energy transition agenda.

PROGRAMME DURATION

The programme will be run virtually, and on a modular basis for a period of 18 Calendar months.

AWARD OF DEGREE

Students who must have completed and passed all prescribed courses at the end of the programme shall be awarded a Professional M.Sc Degree in **Energy Transitions Management and Policy** of the University of Port Harcourt.

COURSE DESCRIPTION

MODULE 1

ETSP 800.1: FUNDAMENTALS OF THE OIL & GAS INDUSTRY (3 CREDITS)

The course shall deepen the students' knowledge on the following course outlines: Introduction, History of the Industry, Upstream: Production & Exploration, Midstream: (Transportation, Models of Transportation & Storage), Downstream; Refining and Marketing, Oil & Gas Metering/Pricing, Laws & Regulations.

ETSP 800.2: ENERGY, ENERGY RESOURCES & THE ECONOMY

The course is an overview of all forms of energy and energy resources and the engineering processes for the transformation of primary energy to its useful forms. The course reviews fossil fuel energy and its forms, renewable energy resources and characteristics as well as the concept of energy technology in terms of location, assessment, processes and transformation.

ETSP 800.3: FUNDAMENTALS OF DOWNSTREAM PETROLEUM ECONOMICS & POLICY (3 CREDITS)

The course covers both the Downstream Petroleum Economics and Policy with the following contents: Oil Supply & Demand Fundamentals, Petroleum Physical Trading, Financial & Market Trading with hedging & strategies, Overview of main Refining & Petrochemical Process, World Refining & Petrochemicals Demand, Evolution of Downstream Supply: Refining, Production & Quality(Specifications), Main Characteristics of Petrochemical Business: Economic Drivers, Principles of Refining, Management and Constraints, Standard Global Profit Analysis: Cash Flow, Capital Costs, Inflation Impact, etc, Introduction to Risk Analysis. Downstream Petroleum Regulations, and Downstream Petroleum Fiscal Policy.

ETSP 800.4: FUNDAMENTALS OF NATURAL GAS (3 CREDITS)

The course will provide Students with a better understanding of Natural Gas and its constituents in sustaining the Petrochemical Industry. The course covers the following: Gas Reservoirs, Estimation of Reserves, Gas Condensate Reservoirs, Natural Gas Drilling/Completions, Production, Well Performance, Transportation, Gas Flow in Pipes, Dew Point Pressure & Temperature, Gas Metering, Storage, LNG, CNG, NGL GTP etc.

MODULE 2

ETSP 800.5: FUNDAMENTALS OF THE ENERGY INDUSTRY-POWER SECTOR (3 CREDITS)

The objective of the course is to provide a better understanding of the economics of the energy and power industry in relation to trends in the overall economy and the society, and better quantitative and analytical skills to examine complex price behavior and to develop new revenue generation models and project development approaches. Specific topics include: Introduction to Energy, Fundamentals of Energy Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

ETSP 800.6: LOCAL CONTENT DEVELOPMENT IN THE OIL & GAS INDUSTRY (3 CREDITS)

The course examines the conceptualization of Local Content in Nigeria, Factors that defines Local Content Development, Policy Framework of Local Content Development in Nigeria, Legal Framework for Nigerian Content Development (Immigration Acts, The Petroleum Acts, Petroleum Development Fund Acts, The Petroleum Industry Bill, The Nigerian Oil & Gas Industry Content Development Act, etc), Challenges of Local Content Development in Oil & Gas Industry in Nigeria.

ETSP 800.7: FUNDAMENTALS OF PETROLEUM GEOPOLITICS (3 CREDITS)

This course will provide the students a broader view of the petroleum industry, demand/supply, pricing and the oil and gas global geopolitics. The course covers: the Political Economy of Oil & Gas Industry, Petroleum Pricing and its Regulation by OPEC, the Global Politics involved, Petroleum & Macroeconomic Issues, Sustainable Petroleum Development, the recent Energy Transition and the Geopolitics involved.

ETSP 800.8: ENTREPRENEURSHIP & ICT APPLICATIONS (3 CREDITS)

The purpose of this course is primarily for the students to be acquainted with ICT skills for entrepreneurship applications. The focus is on computer application and efficiency. Coding, Machine learning, Internet things, Programming Languages (Python, C-Sharp, C++, R-programming, etc).

ETSP 800.9: FUNDAMENTALS OF MICRO AND MACRO ECONOMICS (3 CREDITS)

This is an introductory course providing a general understanding of basic macro-economic concepts. Specifically, it acquaints the students with an appreciation of the functions of economic systems, including various approaches to the organization of production and allocation of resources, and of policies to achieve national economic goals. These include the determination of national income, inflation, recession, unemployment, taxation, labor unions, environmental pollution, energy and economic growth. Its main focus is on introducing concepts and models which are used as tools of economic analysis. Concepts such as opportunity cost and approaches such as marginal analysis are introduced and the role of government, the national income and its distribution, GDP, consumption function, savings function, investment spending, the multiplier principle and the influence of government spending on income and output are discussed.

ETSP 800.10: INTRODUCTORY ECONOMIC THEORY (3 CREDITS)

The course covers the foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning and management. The topics are as much as possible made relevant to the energy and petroleum sector.

MODULE 3

ETSP 800.11: ENERGY & PETROLEUM POLCY, LAW, REGULATION & ETHICS (3 CREDITS)

This course will expose the students to a complex legal environment underscores oil, gas and power business relationship and activities; and defines the limits of what stakeholders can do. This course provides an overview of the international energy business from a legal perspective within the context of the relationship among stakeholders in their transactions and what makes transactions in the energy business work. A key objective is to give a broad understanding of the legal and regulatory framework within which the energy sector operates. Specific topics include review of legal and institutional frameworks for the energy sector, critique & review of existing energy policy, basic concepts of energy resource ownership, international trade agreements, contract negotiation and agreements, energy purchase and sales agreements, environmental protection laws, and energy business regulations.

ETSP 800.12: ENVIRONMENTAL SUSTAINABILITY & COMMUNITY

RELATIONS IN OIL AND GAS INDUSTRY I (3 CREDITS)

The objective of the course is to provide a better understanding of the ecological context and mapping, external risks to the industry, strategic risks to the industry, impact of operational incidents, identifying typical operational emissions scenarios, exploring typical mitigation strategies and their resource implications, option appraisal in support of an emission reduction, evolution of emission and incident reduction in the oil and gas industry, risk assessment and mitigation techniques, importance of culture across the organization on emission and human incident reduction, strategic approach to environmental sustainability and responsible conduct and Initiatives/tools that support a culture of emissions and human incident reduction

ETSP 800.13: ENVIRONMENTAL SUSTAINABILITY & COMMUNITY RELATIONS II (3 CREDIT UNITS)

Environmental sustainability has become a global concern and an issue of contemporary discuss. This is against the backdrop of global climate issues associated with emissions from fossil fuel production and consumption activities. Added to this global concern is the yearning for increased involvement of host countries and communities the operations of the oil and gas industry operators. To this end, environmental sustainability and community relations is designed to provide learners with in-depth knowledge and understanding of the underpinnings of the concept of environmental sustainability, community relations and the interactions between the concepts. Topical issues to be covered in this course include sustainable development (SD) & sustainability, historical perspectives on sustainability, ongoing efforts of the UN towards SD around the globe, e.g. Agenda21; community relations & the global oil & gas industrial sector , community relations in the oil & gas industry in Nigeria, oil & gas companies, community relations via corporate social responsibility & host communities in Nigeria; community relations & environmental sustainability in the course of oil & gas operations in Nigeria, government regulation of community relations via government regulation of corporate social responsibility (environmental & social responsibilities).

MODULE 4

ETSP 800.14: CLIMATE CHANGE SCIENCE (3 CREDITS)

The course shall deepen the students' knowledge on the roles that renewable energy transition, energy efficiency and afforestation/reforestation and other low energy carbon solutions could play

in globe greenhouse gas emission reduction, especially in meeting the Paris Climate Agreement. The Module will expatiate in details all the parameters that interact to create global warming and how best to mitigate it. Topics to be covered are: Theory of Climate Change, Fundamentals of Climate Change Science, GHG Emissions in Global Warming, Climate Change Adaptation-mitigation/Technologies, Kyoto Protocol Mechanisms and Paris Climate Agreement, Key Sectors affected by Climate Change, Coastal Zone Management in handling Climate Change induced Coastal Erosion/Sea Level Rise, Climate Change on Sustainable Development Goals (SDG), Adaption and Development Planning, Low Carbon Development Processes-Mitigation & Green Economy, Climate Change Policies in Nigeria, Financial/Fiscal & Market instruments for tackling Climate Change, Climate Finance & Clean Energy Investments.

ETSP 800.15: CLIMATE CHANGE POLICY AND ENVIRONMENTAL ECONOMICS (3 CREDITS)

Environmental economics is playing an increasingly central role in understanding the causes of, and designing policy solutions to, contemporary environmental and resource problems. It has been instrumental in informing policy across the world, for example in the creation of markets to efficiently regulate pollutants such as acid rain and carbon. Environmental and resource economics also informs the design of new instruments for the conservation of ecosystem services and the efficient use of natural resources, such as water and forests, and for the promotion of renewable energy and electric vehicles. In order to make climate change, environmental and resource issues central to the policy debate, it is also necessary to demonstrate the contribution that the environment makes to human well-being, and the serious economic and health effects of pollution and the cost and policy implications.

ETSP 800.16: ENVIRONMENTAL ACCOUNTING - DECARBONIZATION, CARBON CAPTURE & CO₂ SEQUESTRATION & STORAGE (3 CREDITS)

Carbon dioxide capture and storage (CCS), is considered as one of the options for reducing atmospheric emissions of CO₂ from human activities. CO₂ is emitted principally from the burning of fossil fuels, both in large combustion units such as those used for electric power generation and in smaller, distributed sources such as automobile engines and furnaces used in residential and commercial buildings. CO₂ emissions also result from some industrial and resource extraction processes, as well as from the

burning of forests during land clearance. CCS would most likely be applied to large point sources of CO₂, such as power plants or large industrial processes. Some of these sources could supply decarbonized fuel such as hydrogen to the transportation, industrial and building sectors, and thus reduce emissions from those distributed sources. This course will therefore equip students with the policy drivers for decarbonization, carbon capture & CO₂ sequestration & storage.

MODULE 5

ETSP 800.17: ENERGY TRANSITION CONCEPTS, GEOPOLITICS & GOVERNANCE (3 CREDITS)

The objective of the course is to provide a better understanding of the economics of the energy and power industry in relation to trends in the overall economy and the society, and better quantitative and analytical skills to examine complex price behavior and to develop new revenue generation models and project development approaches. Specific topics include: Introduction to Energy Policy and Regulation; Fundamentals of Energy Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

ETSP 800.18: ENERGY INFRASTRUCTURE, PROJECT MANAGEMENT & FINANCE (3 CREDITS)

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion. Specific topics include: Introduction to the Finance Function and Specification of Firm Objectives; Sources of Finance and Determination of Firm or Project WACC; Project Finance and Issues in Petroleum Industry and Gas and Electricity Project Finance; Valuation of Energy Industry Firms; Introduction to Project Management and Project Integration Management and Review of Models; and Energy Project Scope, Time, Cost and Quality Management. Other topics include Project Management Scheduling Tools – An Introduction; Post Project Evaluation and Control; Human Resource and Communication Risk Management and Procurement Management; and Contextual

Energy Finance and Project Management Issues for Developing Countries.

ETSP 800.19: ENERGY TRANSITION MODELLING, POLICY ANALYSIS & PLANNING (3 CREDITS)

This course will provide the students with modelling scheme intended to support energy planning and policy analysis. The concept of 'Integrated National Energy Planning' (INEP), spread sheet models, optimization models, and linear programming models which energy planners use shall be discussed. Environmental considerations are also introduced into the analysis. Techniques are then applied to all energy subsectors.

ETSP 800.20: ENERGY MANAGEMENT & POLICY (3 CREDITS)

The purpose of energy management is primarily to minimize energy consumption and costs. Energy Management and Policy demands a practical balance between energy efficiency and human energy requirements without compromising substantial energy needs and cost reductions. In this course, requisite knowledge needed to understand the key energy challenges, energy options, best principles and practices of managing it, and global energy management and policies would be extensively discussed. Topics to be covered are: Energy Management Concepts, Global Energy Strategies & Policy, Challenges on Global Energy Management, Best Principles & Practices to Energy Management, Energy Planning & Development, Importance of International Energy Policy Framework, Energy supply Challenges, Energy Security & Sustainability, and International Energy Geopolitics in Energy Management.

ETSP 800.21: ENERGY MANAGEMENT & ECONOMICS (3 CREDITS)

This course explores the various perspectives on individual and industrial energy demand, energy management, energy supply, energy markets, and energy policies affecting the markets. More so, the course will cover areas like Fossil Fuel, Renewable Electricity Economics, Nuclear Power Sector/Energy Tax, Price Regulations, Deregulations, Energy Efficiency, Energy Security and Sustainability, and Greenhouse Gas Emission Policies.

MODULE 6

ETSP 800.22: NATURAL GAS ECONOMICS & POLICY (3 CREDITS)

This course will expose students to understanding the Importance of natural gas in the world energy balance; global reserves and production of natural

as well as major demand centres. It will also x-ray international gas markets as well as the impact of unconventional gas production on the world demand/supply and on gas prices. Additional topics to be covered include the role of growing trade in liquefied natural gas (LNG) in increasing emerging markets' access to natural gas, as well as the policy drivers.

ETSP 800.23: ENERGY TRANSITION-RENEWABLE ENERGY SOURCES, TECHNOLOGY, STRATEGY & APPLICATIONS (3 CREDITS)

The course covers renewable energy technologies, economics and policy and is intended to provide an overview of renewable energy concepts, issues relevant to the technologies currently used for providing energy services through renewable energy resources. The course also provides understanding and relevant knowledge in analyzing the integration of renewable energy into the global energy system and emerging issues in renewable energy development along the areas of gender, energy poverty, innovation and new energy technologies. Specific topics include: Renewable Energy Resources; Types and Classification of Renewable Energy Technologies; Introduction to Energy Economics and Energy Markets; Energy Policy Drivers; Renewable Energy Policies and Markets; and Innovations in Renewable Energy Technologies.

ETSP 800.24: ENERGY TRANSITION-RENEWABLE ELECTRICITY, STRATEGY & SUSTAINABILITY (3 CREDITS)

This course will expose the students to the major challenges associated with global renewable electricity generation, transportations and storage. The course will cover specialized areas like: Emerging and Future Energy Mix, Energy Efficiency/Generation, Carbon Capture and Storage in Global Energy Transition, Current Energy Projects/Investments, Hydropower, Wind/Offshore Wind, Solar PV/Solar, Thermal, Geothermal Energy Sources, Nuclear Power and Environmental impacts, Renewable Energy Intermittency, Natural Gas Roles in Energy Transition, Energy Transition Strategy in Oil & Gas Industry, Policies and Strategy for Sustainable Energy Transition.

ETSP 800.25: ENERGY TRANSITION-SUSTAINABLE TRANSPORTATION, STRATEGY & SUSTAINABILITY (3 CREDITS)

To decarbonize the transport sector, the call for clear energy generated so discussions across the globe. The discussions prompted the use of Compressed Natural Gas, Biofuels, Hydrogen Fuel Cells and most recently the Electric Vehicles. This

course will cover: Blue Hydrogen Production, green Hydrogen, Decarbonization Options and Challenges, Telecommuting, Car Pooling, Car Sharing and Smart Cities Planning as Transportation Fuel Reduction Strategies, Carbon Management-Sustainable Transportation Energy Mix, Biofuels-Hydrogen and Electric Vehicles Deployment, Well-to-Wheel Transport Fuels/CO₂ Emissions, Kaya Equation for Decarbonization, Enhanced Energy Efficiency, Energy Policy & Strategies for Sustainable Mobility Transition.

ETSP 800.26: ENERGY MODELLING & POWER MARKET ANALYSIS FOR DEVELOPING ECONOMY (3 CREDITS)

The course will provide students with a working knowledge of power systems and electricity industry restructuring, its impact on industry regulation, and the role of environmental concerns and the development of alternative generation technologies. Specific topics include: Introduction to Electricity Industry; Electric Power Industry Structure; Electricity Demand and Supply Dynamics; Cost Structures; Economics of Electric Power Generation, Transmission and Power Flow; Capital Planning: Regulated Versus Restructured; Transmission Access and Wheeling; Ancillary Services; Alternative Energy Policies and Programmes; Climate Change and Impact on Generation Investments; Legal and Regulatory Issues in Electricity Economics; and Global Case Studies and Electricity Sector Reforms.

ETSP 800.27: ENERGY POLICY, ECONOMICS & RISK ANALYSIS (3 CREDITS)

This course will cover in details, the basic Energy Policy, Economics and Risk Analysis. The core emphasis of this course are: Fundamentals of Energy Policy, Risk Analysis, International & Local Energy Economics, Fiscal System Mechanisms & Analysis, Energy Risk and Uncertainty Management, Risk Decision Analysis.

ETSP 800.28: RESEARCH METHODS/BUSINESS COMMUNICATIONS (2 CREDITS)

Adequate knowledge of research, and research methods is a prerequisite every professional. Accordingly, this course will expose students to the various methods for conducting research. The second part of the course, which is business communication provides students with essential skills for communicating their research/reports in a concise and adequate manner. This is essential for academic, professional and business success in the contemporary world. This course will emphasize written, verbal and business communications. It will also focus on effective

report writing and presentation skills as well as computer and internet competence.

MODULE 7

ETSP 800.29: PETROLEUM & ENERGY INFRASTRUCTURE FINANCE & EVALUATION (3 CREDITS)

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion. Specific topics include: Introduction to the Finance Function and Specification of Firm Objectives; Sources of Finance and Determination of Firm or Project WACC; Project Finance and Issues in Petroleum Industry and Gas and Electricity Project Finance; Valuation of Energy Industry Firms; Introduction to Project Management and Project Integration Management and Review of Models; and Energy Project Scope, Time, Cost and Quality Management. Other topics include Project Management Scheduling Tools – An Introduction; Post Project Evaluation and Control; Human Resource and Communication Risk Management and Procurement Management; and Contextual Energy Finance and Project Management Issues for Developing Countries

ETSP 800.30 STRATEGY FORMULATION, IMPLEMENTATION & EVALUATION (3 CREDITS)

Definition of strategy, components of strategy, hierarchy of strategies, marketing strategy, the marketing mix, strategic decisions, corporate objectives, corporate development strategy, alternative corporate growth strategy, allocation of corporate resources, portfolio models, the BCG model and its limitations, industry attractiveness business position matrix, value based model and its features, strategic decisions at SBU level, SBU's competitive strategy, stakeholder consideration in resources allocation.

ETSP 800.31: POLICY FORMULATION, IMPLEMENTATION & EVALUATION (3 CREDITS)

The course covers background to public policy & policy analysis, agenda setting, quick win model of policy analysis, policy formulation, adoption, implementation and evaluation. Policy

formulation and implementation steps, pitfalls in defining a public policy problem, policy implementation plan, policy evaluation after implementation, policy evaluation techniques.

ETSP 800.32: PROJECT MANAGEMENT (3 CREDITS)

This course is designed to provide students with the skills to successfully plan and manage corporate projects and procedures. Furthermore, students will be acquainted with the requisite abilities knowledge of running successful projects, giving them a competitive edge within the marketplace. The program thoroughly explores the inner and outer workings of project logistics, management, constraints, risks and execution necessary to deliver projects within the desired scope. Topical issues to be covered includes - project initiation, planning & execution; project monitoring, control and closure. Also, the course will cover project integration management, scope management, schedule management, cost management, quality management, resource management, communications management, risk management, procurement management, stakeholder management, as well as team building.

ESTP: 800.33: CHANGE MANAGEMENT STRATEGIES (3 CREDITS)

This course provides extensive knowledge of the change process. Students will not only learn about the need for change, and how people respond to it, but also about both the vision and the mission associated with change. Topical contents for this course includes- - the context for change management, leadership and management styles, implications of management style on change

management, organizational culture and its implications to change management, current trends in change management, organizational view of change, sources of inertia that impede change (The 3 Cs) & its implications. Also, the course will cover models of change, categories of change and their adaptation approaches, managing the change process, motivating change. Addition, envisioning the future & roles for successful leaders, mission, vision and value statements will be covered in the course. Finally, the students will be exposed to building coalitions, strategies for introducing change, managing transition, developing guidance structure and the learning process.

MODULE 7: SGS COMPULSORY COURSES

SGS 801.1: ICT AND RESEARCH METHODOLOGY (2 CREDITS)

This course should cover essentials of spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Research, Concepts of Hypothesis, Formulation and testing, Organization of Research and Report Writing.

SGS 801.2: MANAGEMENT AND ENTREPRENEURSHIP (2 CREDITS)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

DISSERTATION: In place of dissertation, students are required to attend at least one seminar/conference/workshop every year of the duration of this programme. Submission of approved and graded term papers will also be required.

PROFESSIONAL MSc, ENERGY REGULATION AND POLICY

LIST OF COURSES, CODES AND CREDIT UNITS

29	SGS 801.1	ICT and Research Methodology	2
30	SGS 801.2	Management and Entrepreneurship	2
Total			87

COURSE DESCRIPTION

MODULE 1

MERP 800.1: FUNDAMENTALS OF THE OIL & GAS INDUSTRY (3 CREDITS)

The course shall deepen the students' knowledge on the following course outlines: Introduction, History of the Industry, Upstream: Production & Exploration, Midstream: (Transportation, Models of Transportation & Storage), Downstream; Refining and Marketing, Oil & Gas Metering/Pricing, Laws & Regulations.

MERP 800.2: ENERGY, ENERGY RESOURCES & THE ECONOMY (3 CREDITS)

The course is an overview of all forms of energy and energy resources and the engineering processes for the transformation of primary energy to its useful forms. The course reviews fossil fuel energy and its forms, renewable energy resources and characteristics as well as the concept of energy technology in terms of location, assessment, processes and transformation.

MERP 800.3: ENERGY MARKETS (3 CREDITS)

Energy markets are governed by the laws of economics. Generators and consumers interact to shape the transactions in the energy markets, and thus the energy system. This course will help expose students to the understanding of the

functioning of energy markets as the necessary first step to promotion of the energy transition. Topical issues to be discussed includes the basics of the energy markets, operation and design of those markets, how policy makers can promote investment in electricity generation, how the electricity network operates and how network tariffs are determined.

MERP 800.4: FUNDAMENTALS OF DOWNSTREAM PETROLEUM ECONOMICS & POLICY (3 CREDITS)

The course covers both the Downstream Petroleum Economics and Policy with the following contents: Oil Supply & Demand Fundamentals, Petroleum Physical Trading, Financial & Market Trading with hedging & strategies, Overview of main Refining & Petrochemical Process, World Refining & Petrochemicals Demand, Evolution of Downstream Supply: Refining, Production & Quality(Specifications), Main Characteristics of Petrochemical Business: Economic Drivers, Principles of Refining, Management and Constraints, Standard Global Profit Analysis: Cash Flow, Capital Costs, Inflation Impact, etc, Introduction to Risk Analysis. Downstream Petroleum Regulations, and Downstream Petroleum Fiscal Policy.

MODULE 2

MERP 800.5: FUNDAMENTALS OF NATURAL GAS (3 CREDITS)

The course will provide Students with a better understanding of Natural Gas and its constituents in sustaining the Petrochemical Industry. The course covers the following: Gas Reservoirs, Estimation of Reserves, Gas Condensate Reservoirs, Natural Gas Drilling/Completions, Production, Well Performance, Transportation, Gas Flow in Pipes, Dew Point Pressure & Temperature, Gas Metering, Storage, LNG, CNG, NGL GTP etc.

MERP 800.6: FUNDAMENTALS OF THE ENERGY INDUSTRY-POWER SECTOR (3 CREDITS)

The objective of the course is to provide a better understanding of the economics of the energy and power industry in relation to trends in the overall economy and the society, and better quantitative and analytical skills to examine complex price behavior and to develop new revenue generation models and project development approaches. Specific topics include: Introduction to Energy, Fundamentals of Energy Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

MERP 800.7: LOCAL CONTENT DEVELOPMENT IN THE OIL & GAS INDUSTRY (3 CREDITS)

The course examines the conceptualization of Local Content in Nigeria, Factors that defines Local Content Development, Policy Framework of Local Content Development in Nigeria, Legal Framework for Nigerian Content Development (Immigration Acts, The Petroleum Acts, Petroleum Development Fund Acts, The Petroleum Industry Bill, The Nigerian Oil & Gas Industry Content Development Act, etc), Challenges of Local Content Development in Oil & Gas Industry in Nigeria.

MERP 800.8: FUNDAMENTALS OF PETROLEUM GEOPOLITICS (3 CREDITS)

This course will provide the students a broader view of the petroleum industry, demand/supply, pricing and the oil and gas global geopolitics. The course covers: the Political Economy of Oil & Gas Industry, Petroleum Pricing and its Regulation by OPEC, the Global Politics involved, Petroleum & Macroeconomic Issues, Sustainable Petroleum Development, the recent Energy Transition and the Geopolitics involved.

MERP 800.9: ENTREPRENEURSHIP & ICT APPLICATIONS (3 CREDITS)

The purpose of this course is primarily for the students to be acquainted with ICT skills for entrepreneurship applications. The focus is on computer application and efficiency. Coding, Machine learning, Internet things, Programming Languages (Python, C-Sharp, C++, R-programming, etc).

MODULE 3

MERP 800.10: FUNDAMENTALS OF MICRO AND MACRO ECONOMICS (3 CREDITS)

This is an introductory course providing a general understanding of basic macro-economic concepts. Specifically, it acquaints the students with an appreciation of the functions of economic systems, including various approaches to the organization of production and allocation of resources, and of policies to achieve national economic goals. These include the determination of national income, inflation, recession, unemployment, taxation, labor unions, environmental pollution, energy and economic growth. Its main focus is on introducing concepts and models which are used as tools of economic analysis. Concepts such as opportunity cost and approaches such as marginal analysis are introduced and the role of government, the national income and its distribution, GDP, consumption function, savings function, investment spending, the multiplier principle and the influence of government spending on income and output are discussed.

MERP 800.11: INTRODUCTORY ECONOMIC THEORY (3 CREDITS)

The course covers the foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning and management. The topics are as much as possible made relevant to the energy and petroleum sector.

MERP 800.12: ENERGY & PETROLEUM POLICY, LAW, REGULATION & ETHICS (3 CREDITS)

This course will expose the students to a complex legal environment underscores oil, gas and power business relationship and activities; and defines the limits of what stakeholders can do. This course provides an overview of the international energy business from a legal perspective within the context of the relationship among stakeholders in their transactions and what makes transactions in the energy business work. A key objective is to give a broad understanding of the legal and regulatory framework within which the energy

sector operates. Specific topics include review of legal and institutional frameworks for the energy sector, critique & review of existing energy policy, basic concepts of energy resource ownership, international trade agreements, contract negotiation and agreements, energy purchase and sales agreements, environmental protection laws, and energy business regulations.

MERP 800.13: ENVIRONMENTAL SUSTAINABILITY & COMMUNITY RELATIONS IN OIL AND GAS INDUSTRY I (3 CREDITS)

The objective of the course is to provide a better understanding of the ecological context and mapping, external risks to the industry, strategic risks to the industry, impact of operational incidents, identifying typical operational emissions scenarios, exploring typical mitigation strategies and their resource implications, option appraisal in support of an emission reduction, evolution of emission and incident reduction in the oil and gas industry, risk assessment and mitigation techniques, importance of culture across the organization on emission and human incident reduction, strategic approach to environmental sustainability and responsible conduct and Initiatives/tools that support a culture of emissions and human incident reduction.

MERP 800.14: ENVIRONMENTAL SUSTAINABILITY & COMMUNITY RELATIONS II (3 CREDITS)

Environmental sustainability has become a global concern and an issue of contemporary discuss. This is against the backdrop of global climate issues associated with emissions from fossil fuel production and consumption activities. Added to this global concern is the yearning for increased involvement of host countries and communities the operations of the oil and gas industry operators. To this end, environmental sustainability and community relations is designed to provide learners with in-depth knowledge and understanding of the underpinnings of the concept of environmental sustainability, community relations and the interactions between the concepts. Topical issues to be covered in this course include sustainable development (SD) & sustainability, historical perspectives on sustainability, ongoing efforts of the UN towards SD around the globe, e.g. Agenda21; community relations & the global oil & gas industrial sector, community relations in the oil & gas industry in Nigeria, oil & gas companies, community relations via corporate social responsibility & host communities in Nigeria; community relations & environmental sustainability in the course of oil & gas operations in Nigeria, government regulation of community relations via government regulation

of corporate social responsibility (environmental & social responsibilities).

MODULE 4

MERP 800.15: ENERGY RESOURCES INFRASTRUCTURE & NATURAL GAS ECONOMICS (3 CREDITS)

Today's energy systems are highly interdependent and very heterogeneous. The infrastructure that supports the generation and distribution of energy is varied, and requires an understanding of a range of interdisciplinary concepts that impacts energy related projects. This course will explore the various energy infrastructures for delivering energy services. Also, a second part of the course will X-ray Natural gas economics. It will specifically explore the principle of supply and demand is a major factor that governs natural gas pricing; the drivers behind the supply of natural gas including pipeline capacity, storage, and imports. By understanding these fundamental drivers. Students will be equipped with the requisite skills for planning and managing energy resources infrastructures.

MERP 800.16: ECONOMICS OF POWER MARKET REGULATION (3 CREDITS)

The course will provide students with a working knowledge of power systems and electricity industry restructuring, its impact on industry regulation, and the role of environmental concerns and the development of alternative generation technologies. Specific topics include: Introduction to Electricity Industry; Electric Power Industry Structure; Electricity Demand and Supply Dynamics; Cost Structures; Economics of Electric Power Generation, Transmission and Power Flow; Capital Planning: Regulated Versus Restructured; Transmission Access and Wheeling; Ancillary Services; Alternative Energy Policies and Programmes; Climate Change and Impact on Generation Investments; Legal and Regulatory Issues in Electricity Economics; and Global Case Studies and Electricity Sector Reforms.

MERP 800.17: ECONOMICS OF RENEWABLE ENERGY (3 CREDITS)

The course covers renewable energy technologies, economics and policy and is intended to provide an overview of renewable energy concepts, issues relevant to the technologies currently used for providing energy services through renewable energy resources. The course also provides understanding and relevant knowledge in analyzing the integration of renewable energy into the global energy system and emerging issues in renewable energy development along the areas of gender, energy poverty, innovation and new energy technologies. Specific topics include:

Renewable Energy Resources; Types and Classification of Renewable Energy Technologies; Introduction to Energy Economics and Energy Markets; Energy Policy Drivers; Renewable Energy Policies and Markets; and Innovations in Renewable Energy Technologies.

MERP 800.18: ELECTRICITY ECONOMICS AND POWER SYSTEM ANALYSIS (3 CREDITS)

This course will expose the students to the major challenges associated with global renewable electricity generation, transportations and storage. The course will cover specialized areas like: Emerging and Future Energy Mix, Energy Efficiency/Generation, Carbon Capture and Storage in Global Energy Transition, Current Energy Projects/Investments, Hydropower, Wind/Offshore Wind, Solar PV/Solar, Thermal, Geothermal Energy Sources, Nuclear Power and Environmental impacts, Renewable Energy Intermittency, Natural Gas Roles in Energy Transition, Energy Transition Strategy in Oil & Gas Industry, Policies and Strategy for Sustainable Energy Transition.

MODULE 5

MERP 800.19: RENEWABLE ENERGY REGULATION AND POLICY (3 CREDITS)

This course provides an overview of the international energy business from a legal perspective within the context of the relationship among stakeholders in their transactions and what makes transactions in the energy business work. A key objective is to give a broad understanding of the legal and regulatory framework within which the energy sector operates. Specific topics include review of legal and institutional frameworks of renewable energy in Nigeria and Globally, critique & review of existing energy policy, basic concepts of energy resource, international trade agreements, contract negotiation and agreements, energy purchase and sales agreements, environmental protection laws, and energy business regulations.

MERP 800.20: ENERGY RESOURCE INFRASTRUCTURE FINANCING & PERFORMANCE EVALUATION (3 CREDITS)

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion. Specific topics include: Introduction to the Finance Function and Specification of Firm Objectives; Sources of

Finance and Determination of Firm or Project WACC; Project Finance and Issues in Petroleum Industry and Gas and Electricity Project Finance; Valuation of Energy Industry Firms; Introduction to Project Management and Project Integration Management and Review of Models; and Energy Project Scope, Time, Cost and Quality Management. Other topics include Project Management Scheduling Tools – An Introduction; Post Project Evaluation and Control; Human Resource and Communication Risk Management and Procurement Management; and Contextual Energy Finance and Project Management Issues for Developing Countries

MERP 800.21: ENERGY TRANSITION-SUSTAINABLE TRANSPORTATION, STRATEGY, SUSTAINABILITY & POLICY (3 CREDITS)

To decarbonize the transport sector, the call for clear energy generated so discussions across the globe. The discussions prompted the use of Compressed Natural Gas, Biofuels, Hydrogen Fuel Cells and most recently the Electric Vehicles. This course will cover: Blue Hydrogen Production, green Hydrogen, Decarbonization Options and Challenges, Telecommuting, Car Pooling, Car Sharing and Smart Cities Planning as Transportation Fuel Reduction Strategize, Carbon Management-Sustainable Transportation Energy Mix, Biofuels-Hydrogen and Electric Vehicles Deployment, Well-to-Wheel Transport Fuels/CO₂ Emissions, Kaya Equation for Decarbonization, Enhanced Energy Efficiency, Energy Policy & Strategies for Sustainable Mobility Transition.

MERP 800.22: POWER SECTOR REGULATION & POLICY (3 CREDITS)

The course will provide students with a working knowledge of power systems and electricity industry restructuring, its impact on industry regulation, and the role of environmental concerns and the development of alternative generation technologies. Specific topics include: Introduction to Electricity Industry regulation; Electric Power Industry Structure; Electricity Demand and Supply regulation; Cost Structures; Electric Power Generation Policy, Transmission and Power Flow Policy; Tariff billing regulation by NERC, Alternative Energy Policies and Programmes; Climate Change and Impact on Generation Investments; Legal and Regulatory Issues in Electricity Economics; and Global Case Studies and Electricity Sector Reforms.

MERP 800.23: ENVIRONMENTAL ACCOUNTING & POLICY (3 CREDITS)

The interest in environmental accounting issues has grown rapidly in recent years, and the issues impact the various specializations within the field

of accounting, including financial reporting, analysis and disclosure, cost management and managerial decision making, capital investment analysis, auditing, and taxation. Environmental accounting is increasingly being used to support the development and analysis of government policy. Thus, this course aims to provide students with an understanding of the range of measurement, calculation, reporting and auditing requirements and challenges related to climate change and the policy responses to climate change. Students will come away from the course with the skills to both implement and critique carbon accounting methods. In addition to carbon accounting, the course will also explore broader aspects of environmental and natural capital accounting. The course develops both practical knowledge for implementing different carbon accounting methods, and analytical skills for critiquing current accounting and reporting practice. The course will also explore the main policy motivations for carbon accounting, the relationship between carbon accounting and carbon finance, and some of the ethical issues associated with carbon accounting.

MERP 800.24: RESEARCH METHODS/BUSINESS COMMUNICATIONS (2 CREDITS)

Adequate knowledge of research, and research methods is a prerequisite every professional. Accordingly, this course will expose students to the various methods for conducting research. The second part of the course, which is business communication provides students with essential skills for communicating their research/reports in a concise and adequate manner. This is essential for academic, professional and business success in the contemporary world. This course will emphasize written, verbal and business communications. It will also focus on effective report writing and presentation skills as well as computer and internet competence.

MODULE 6

MERP 800.25: STRATEGY FORMULATION, IMPLEMENTATION & EVALUATION (3 CREDITS)

Definition of strategy, components of strategy, hierarchy of strategies, marketing strategy, the marketing mix, strategic decisions, corporate objectives, corporate development strategy, alternative corporate growth strategy, allocation of corporate resources, portfolio models, the BCG model and its limitations, industry attractiveness business position matrix, value based model and its features, strategic decisions at SBU level, SBU's competitive strategy, stakeholder consideration in resources allocation.

MERP 800.26: POLICY FORMULATION, IMPLEMENTATION & EVALUATION (3 CREDITS)

The course covers background to public policy & policy analysis, agenda setting, quick win model of policy analysis, policy formulation, adoption, implementation and evaluation. Policy formulation and implementation steps, pitfalls in defining a public policy problem, policy implementation plan, policy evaluation after implementation, policy evaluation techniques.

MERP 800.27: PROJECT MANAGEMENT (3 CREDITS)

This course is designed to provide students with the skills to successfully plan and manage corporate projects and procedures. Furthermore, students will be acquainted with the requisite abilities knowledge of running successful projects, giving them a competitive edge within the marketplace. The program thoroughly explores the inner and outer workings of project logistics, management, constraints, risks and execution necessary to deliver projects within the desired scope. Topical issues to be covered includes - project initiation, planning & execution; project monitoring, control and closure. Also, the course will cover project integration management, scope management, schedule management, cost management, quality management, resource management, communications management, risk management, procurement management, stakeholder management, as well as team building.

MERP 800.28: STRATEGIES FOR CHANGE MANAGEMENT (3 CREDITS)

Change management is the people side of business transformation. Business change is complex because of relationships between the business environment, the organization, its people and supporting technologies. Change can be instigated from within the organization or imposed by external factors, as such, Change needs to be cohesively and proactively managed. Accordingly, this course on change management integrates the transition of people, processes and technology from the current "as-is" state to a continually unfolding future state. During the course, the students will be exposed to how the dynamics of effective change management work and how to identify and unlock resistance to change, enabling teams to work together and speeding up the implementation of change programmes.

MODULE 7: SGS COMPULSORY COURSES

SGS 801.1: ICT AND RESEARCH METHODOLOGY (2 CREDITS)

This course should cover essentials of spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Research, Concepts of Hypothesis, Formulation and testing, Organization of Research and Report Writing.

SGS 801.2: MANAGEMENT AND ENTREPRENEURSHIP (2 CREDITS)

The course will cover business environment, general management, financial management,

entrepreneurship development, feasibility studies, marketing and managerial problem solving.

DISSERTATION: In place of dissertation, students are required to attend at least one seminar/conference/workshop every year of the duration of this programme. Submission of approved and graded term papers will also be required.

PROFESSIONAL MSc, PETROLEUM REGULATION AND POLICY

LIST OF COURSES, CODES AND CREDIT UNITS

S/NO	COURSE CODE	COURSE TITLE	CREDIT UNITS
MODULE 1			
1	MPRP 800.1	Fundamentals of the Oil and Gas Industry	3
2	MPRP 800.2	Energy, Energy Resources & the Economy	3
3	MPRP 800.3	Fundamentals of Downstream Petroleum Economics & Policy	3
MODULE 2			
4	MPRP 800.4	Fundamentals of Natural Gas	3
5	MPRP 800.5	Fundamentals of the Energy Industry-Power Sector	3
6	MPRP 800.6	Local Content Development in Oil & Gas Industry	3
7	MPRP 800.7	Fundamentals of Petroleum Geopolitics	3
8	MPRP 800.8	Entrepreneurship ICT Applications	3
9	MPRP 800.9	Micro and Macro Economics	3
10	MPRP 800.10	Introductory Economic Theory	3
MODULE 3			
11	MPRP 800.11	Energy & Petroleum Policy, Law, Regulation & Ethics	3
12	MPRP 800.12	Environmental Sustainability & Community Relations in the Oil and Gas Industry (I)	3
13	MPRP 800.13	Environmental Sustainability & Community Relations (II)	3
MODULE 4			
14	MPRP 800.14	Upstream Petroleum Regulation & Policy (Exploration & Production)	3
15	MPRP 800.15	Crude Oil Pricing & Policy (Pricing)	3
16	MPRP 800.16	Refining & Petrochemical Regulation & Policy	3
17	MPRP 800.17	Economics of Regulation of Petroleum Industry	3
18	MPRP 800.18	Natural Gas Economics & Policy	3
MODULE 5			
19	MPRP 800.19	Midstream Petroleum Regulation & Policy (Transportation & Storage)	3
20	MPRP 800.20	Fuels Retailing Regulation & Policy	3
21	MPRP 800.21	LPG Storage & Bottling Regulation (Operation) & Policy	3
22	MPRP 800.22	Downstream Petroleum Pricing Regulation (Pricing) & Policy	3
23	MPRP 800.23	Research Methods/Business Communications	2

COURSE DESCRIPTION

MODULE 1

MPRP 800.1: FUNDAMENTALS OF OIL & GAS INDUSTRY (3 CREDITS)

The course shall deepen the students' knowledge on the following course outlines: Introduction, History of the Industry, Upstream: Production & Exploration, Midstream: (Transportation, Models of Transportation & Storage), Downstream: Refining and Marketing, Oil & Gas Metering/Pricing, Laws & Regulations.

MPRP 800.2: ENERGY, ENERGY RESOURCES & THE ECONOMY (3 CREDITS)

The course is an overview of all forms of energy and energy resources and the engineering processes for the transformation of primary energy to its useful forms. The course reviews fossil fuel energy and its forms, renewable energy resources and characteristics as well as the concept of energy technology in terms of location, assessment, processes and transformation.

MPRP 800.3: FUNDAMENTALS OF DOWNSTREAM PETROLEUM ECONOMICS & POLICY (3 CREDITS)

The course covers both the Downstream Petroleum Economics and Policy with the following contents: Oil Supply & Demand Fundamentals, Petroleum Physical Trading, Financial & Market Trading with hedging & strategies, Overview of main Refining & Petrochemical Process, World Refining & Petrochemicals Demand, Evolution of Downstream Supply: Refining, Production & Quality (Specifications), Main Characteristics of Petrochemical Business: Economic Drivers, Principles of Refining, Management and Constraints, Standard Global Profit Analysis: Cash Flow, Capital Costs, Inflation Impact, etc, Introduction to Risk Analysis. Downstream Petroleum Regulations, and Downstream Petroleum Fiscal Policy.

MODULE 2

MPRP 800.4: FUNDAMENTALS OF NATURAL GAS (3 CREDITS)

The course will provide Students with a better understanding of Natural Gas and its constituents in sustaining the Petrochemical Industry. The course covers the following: Gas Reservoirs, Estimation of Reserves, Gas Condensate Reservoirs, Natural Gas Drilling/Completions, Production, Well Performance, Transportation, Gas Flow in Pipes, Dew Point Pressure & Temperature, Gas Metering, Storage, LNG, CNG, NGL GTP etc.

MPRP 800.5: FUNDAMENTALS OF ENERGY INDUSTRY-POWER SECTOR (3 CREDITS)

The objective of the course is to provide a better understanding of the economics of the energy and

power industry in relation to trends in the overall economy and the society, and better quantitative and analytical skills to examine complex price behavior and to develop new revenue generation models and project development approaches. Specific topics include: Introduction to Energy, Fundamentals of Energy Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

MPRP 800.6: LOCAL CONTENT DEVELOPMENT IN THE OIL & GAS INDUSTRY (3 CREDITS)

The course examines the conceptualization of Local Content in Nigeria, Factors that defines Local Content Development, Policy Framework of Local Content Development in Nigeria, Legal Framework for Nigerian Content Development (Immigration Acts, The Petroleum Acts, Petroleum Development Fund Acts, The Petroleum Industry Bill, The Nigerian Oil & Gas Industry Content Development Act, etc), Challenges of Local Content Development in Oil & Gas Industry in Nigeria.

MPRP 800.7: FUNDAMENTALS OF PETROLEUM GEOPOLITICS (3 CREDITS)

This course will provide the students a broader view of the petroleum industry, demand/supply, pricing and the oil and gas global geopolitics. The course covers: The Political Economy of Oil & Gas Industry, Petroleum Pricing and its Regulation by OPEC, the Global Politics involved, Petroleum & Macroeconomic Issues, Sustainable Petroleum Development, the recent Energy Transition and the Geopolitics involved.

MPRP 800.8: ENTREPRENEURSHIP & ICT APPLICATIONS (2 CREDITS)

The purpose of this course is primarily for the students to be acquainted with ICT skills for entrepreneurship applications. The focus is on computer application and efficiency. Coding, Machine learning, Internet things, Programming Languages (Python, C-Sharp, C++, R-Programming etc).

MPRP 800.9: MICRO AND MACRO ECONOMICS (3 CREDITS)

This is an introductory course providing a general understanding of basic macro-economic concepts. Specifically, it acquaints the students with an appreciation of the functions of economic systems, including various approaches to the organization of production and allocation of resources, and of

policies to achieve national economic goals. These include the determination of national income, inflation, recession, unemployment, taxation, labor unions, environmental pollution, energy and economic growth. Its main focus is on introducing concepts and models which are used as tools of economic analysis. Concepts such as opportunity cost and approaches such as marginal analysis are introduced and the role of government, the national income and its distribution, GDP, consumption function, savings function, investment spending, the multiplier principle and the influence of government spending on income and output are discussed.

MPRP 800.10: INTRODUCTORY ECONOMIC THEORY (3 CREDITS)

The course covers the foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning and management. The topics are as much as possible made relevant to the energy and petroleum sector.

MODULE 3

MPRP 800.11: ENERGY & PETROLEUM POLICY, LAW, REGULATION & ETHICS (3 CREDITS)

This course will expose the students to a complex legal environment underscores oil, gas and power business relationship and activities; and defines the limits of what stakeholders can do. This course provides an overview of the international energy business from a legal perspective within the context of the relationship among stakeholders in their transactions and what makes transactions in the energy business work. A key objective is to give a broad understanding of the legal and regulatory framework within which the energy sector operates. Specific topics include review of legal and institutional frameworks for the energy sector, critique & review of existing energy policy, basic concepts of energy resource ownership, international trade agreements, contract negotiation and agreements, energy purchase and sales agreements, environmental protection laws, and energy business regulations.

MPRP 800.12: ENVIRONMENTAL SUSTAINABILITY & COMMUNITY RELATIONS IN OIL AND GAS INDUSTRY (I) (3 CREDITS)

The objective of the course is to provide a better understanding of the ecological context and mapping, external risks to the industry, strategic risks to the industry, impact of operational incidents, identifying typical operational

emissions scenarios, exploring typical mitigation strategies and their resource implications, option appraisal in support of an emission reduction, evolution of emission and incident reduction in the oil and gas industry, risk assessment and mitigation techniques, importance of culture across the organization on emission and human incident reduction, strategic approach to environmental sustainability and responsible conduct and Initiatives/tools that support a culture of emissions and human incident reduction

MPRP 800.13: ENVIRONMENTAL SUSTAINABILITY & COMMUNITY RELATIONS (II) (3 CREDITS)

Environmental sustainability has become a global concern and an issue of contemporary discuss. This is against the backdrop of global climate issues associated with emissions from fossil fuel production and consumption activities. Added to this global concern is the yearning for increased involvement of host countries and communities the operations of the oil and gas industry operators. To this end, environmental sustainability and community relations is designed to provide learners with in-depth knowledge and understanding of the underpinnings of the concept of environmental sustainability, community relations and the interactions between the concepts. Topical issues to be covered in this course include sustainable development (SD) & sustainability, historical perspectives on sustainability, ongoing efforts of the UN towards SD around the globe, e.g. Agenda21; community relations & the global oil & gas industrial sector, community relations in the oil & gas industry in Nigeria, oil & gas companies, community relations via corporate social responsibility & host communities in Nigeria; community relations & environmental sustainability in the course of oil & gas operations in Nigeria, government regulation of community relations via government regulation of corporate social responsibility (environmental & social responsibilities).

MODULE 4

MPRP 800.14: UPSTREAM PETROLEUM REGULATION & POLICY (EXPLORATION & PRODUCTION) (3 CREDITS)

This course provides an overview of the upstream exploration, exploitations and production operations. The key objective is to equip students with a working knowledge of the upstream petroleum industry in all aspects including: resources and reserves, oil and gas assets development, and portfolio management, forecasting production and revenue flow; cash flow analysis, deriving and interpreting deterministic and stochastic economic indicators,

spreadsheet modeling tools to incorporate risk and uncertainty in oil and as well as the substantive regulatory framework of upstream petroleum from inception to the most current Petroleum Industry Act, newly signed and its policy implications.

MPRP 800.15: CRUDE OIL PRICING (PRICING) & POLICY (3 CREDITS)

This course will expose the students to the rudiment of crude oil pricing in the petroleum industry. Again, it will afford the students the opportunities to learn the following topics: introduction to oil trading, global oil prices, what determines oil prices, factors that affects the price of oil in the global market, geopolitics of oil price (OPEC, USA etc), OPEC influence on global oil price, oil & natural gas prices correlations, oil price and inflation impact, oil prices and the global economy. Pricing policies and their implications will also be discussed in this course.

MPRP 800.16: REFINING & PETROCHEMICALS REGULATION & POLICY (3 CREDITS)

Petroleum refining is one of the largest industries globally, and it is an important part of the world economy. However, the actual and potential environmental hazards associated with refineries have caused increased concern for localities in close proximity to them, and the global environment by extension, especially against the backdrop of global concerns on environmental sustainability. This course therefore provides a general overview of the processes involved in petroleum refining & petrochemicals production, and the associated environmental hazards. This course will cover in details, the basic regulatory framework for refining and petrochemical products, Environmental hazards of petroleum refineries, environmental regulation of refining and petrochemical infrastructures, regulation and refinery investment, environmental regulation of refined products, regulation of siting and permitting requirements, regulation and legislation of refining and petrochemical industries.

MPRP 800.17: ECONOMICS OF REGULATION OF PETROLEUM INDUSTRY (3 CREDITS)

A study of Regulation Processes as a major consideration in Petroleum Industry operations with a clear insight on principles that affect Petroleum Industry Regulatory policies. Globalization provides a platform for debates, decisions and policies on what to regulate, whether to regulate and how to regulate. International capital would tend to discourage regulations, however an understanding of the economic and environmental policy framework implications are required for the selection of informed, technically

feasible, optimal regulation choices beneficial to the environment, the energy and petroleum industry and the world.

MPRP 800.18: NATURAL GAS ECONOMICS & POLICY (3 CREDITS)

This course will expose students to understanding the Importance of natural gas in the world energy balance; global reserves and production of natural as well as major demand centres. It will also x-ray international gas markets as well as the impact of unconventional gas production on the world demand/supply and on gas prices. Additional topics to be covered include the role of Growing trade in liquefied natural gas (LNG) in increasing emerging markets' access to natural gas as well as their policy drivers.

MODULE 5

MPRP 800.19: MIDSTREAM PETROLEUM REGULATION & POLICY (TRANSPORTATION & STORAGE) (3 CREDITS)

The midstream sector covers transportation, storage, and trading of crude oil, natural gas, and refined products. Once the oil has been extracted and separated from natural gas, pipelines transport the products to another carrier or directly to a refinery. Crude carriers are classed as either VLCCs (Very Large Crude Carriers) or ULCCs (Ultra Large Crude Carriers) and are designed to transport vast quantities of crude oil over long land and sea routes. Petroleum products then travel from the refinery to market by tanker, truck, or pipelines. The course covers the petroleum storage (farm tanks) regulations, petroleum transportation regulations, petroleum pipeline regulations and policy.

MPRP 800.20: FUELS RETAILING REGULATION & POLICY (3 CREDITS)

Petroleum is one of the most important fuels derived from fossil energy sources, and petroleum-based fuels have been used to power automotive vehicles and industrial production for centuries. With increasing demand for fuels, and the associated environmental concerns, regulation of petroleum-based fuels becomes necessary. Fuels regulation provides for standards regarding the quality of liquid petroleum fuels (AGO, DPK, PMS, etc). This course is important as it will expose learners to the classification, characteristics, properties and performance of liquid petroleum fuels; limit values of additives and other components of fuels for various purposes, and policies. Students will also be acquainted with fuel quality standards and requirements, regulations on blended fuels standards and fuel additives. Students will also be exposed to international best practices in direct and

indirect regulation of emissions from petroleum fuels.

MPRP 800.21: LPG STORAGE & BOTTLING REGULATION & POLICY (OPERATIONS) (3 CREDITS)

LPG is an excellent, environmentally friendly fuel with hundreds of millions of satisfied consumers across all parts of the world. As with all forms of energy, LPG can be hazardous if mishandled or misused. Care in the storage, handling, distribution and use of LPG will mitigate any incidents, accidents and their consequences. Accordingly, this course on LPG storage and bottling regulation is designed to acquaint students with the requisite knowledge and skills promote safety in storage, handling, distribution and use of LPG and promotion of LPG, as well as enabling fair business and investment climate for LPG business operators. Topical issues to be covered in the course include: Regulatory Framework for LPG bottling and storage, regulation of location and operation of LPG storage and handling facilities, regulation of LPG transportation, consumer protection regulations for safety for LPG users. LPG product classification, supply and installation of handling facilities. Also, the course will cover national regulations the minimum safety information on a cylinder as well as international best practices in the regulation of LPG storage and bottling.

MPRP 800.22: DOWNSTREAM PETROLEUM PRICING REGULATION (PRICING) & POLICY (3 CREDITS)

The course will provide students with a working knowledge of understanding key downstream terms and factors, major international industry players and fundamentals of downstream agreements and pricing, Sales/pricing agreements relevant to crude oil; natural gas, and Liquefied Natural Gas (LNG), transportation agreements, gas supply and purchase agreements, downstream oil and gas force majeure clauses, legal framework that governs international downstream contracts and trading, downstream agreements for the disposal of production: petroleum sales. The course will also provide a review of the economics of petroleum products transportation and distribution, an overview of natural gas value chain, gas utility business structure, regulation and pricing, petroleum products trading, and policies.

MPRP 800.23: RESEARCH METHODS/BUSINESS COMMUNICATIONS (3 CREDITS)

Adequate knowledge of research, and research methods is a prerequisite every professional. Accordingly, this course will expose students to the various methods for conducting research. The

second part of the course, which is business communication provides students with essential skills for communicating their research/reports in a concise and adequate manner. This is essential for academic, professional and business success in the contemporary world. This course will emphasize written, verbal and business communications. It will also focus on effective report writing and presentation skills as well as computer and internet competence.

MODULE 6

MPRP 800.24: PETROLEUM & ENERGY INFRASTRUCTURE FINANCE & EVALUATION (3 CREDITS)

The course examines the financing options for energy ventures, especially where the attributes above call for multiple sources of funding and sometimes complex arrangements. It also examines how, after funding is secured and relevant projects have been selected, the finance function is integral to the management of projects to ensure successful completion. Specific topics include: Introduction to the Finance Function and Specification of Firm Objectives; Sources of Finance and Determination of Firm or Project WACC; Project Finance and Issues in Petroleum Industry and Gas and Electricity Project Finance; Valuation of Energy Industry Firms; Introduction to Project Management and Project Integration Management and Review of Models; and Energy Project Scope, Time, Cost and Quality Management. Other topics include Project Management Scheduling Tools – An Introduction; Post Project Evaluation and Control; Human Resource and Communication Risk Management and Procurement Management; and Contextual Energy Finance and Project Management Issues for Developing Countries.

MPRP 800.25: STRATEGY FORMULATION, IMPLEMENTATION & EVALUATION (3 CREDITS)

Definition of strategy, components of strategy, hierarchy of strategies, marketing strategy, the marketing mix, strategic decisions, corporate objectives, corporate development strategy, alternative corporate growth strategy, allocation of corporate resources, portfolio models, the BCG model and its limitations, industry attractiveness business position matrix, value based model and its features, strategic decisions at SBU level, SBU's competitive strategy, stakeholder consideration in resources allocation.

MPRP 800.26: POLICY FORMULATION, IMPLEMENTATION & EVALUATION (3 CREDITS)

The course covers background to public policy & policy analysis, agenda setting, quick win model of

policy analysis, policy formulation, adoption, implementation and evaluation. Policy formulation and implementation steps, pitfalls in defining a public policy problem, policy implementation plan, policy evaluation after implementation, policy evaluation techniques.

MPRP 800.27: PROJECT MANAGEMENT (3 CREDITS)

This course is designed to provide students with the skills to successfully plan and manage corporate projects and procedures. Furthermore, students will be acquainted with the requisite abilities knowledge of running successful projects, giving them a competitive edge within the marketplace. The program thoroughly explores the inner and outer workings of project logistics, management, constraints, risks and execution necessary to deliver projects within the desired scope. Topical issues to be covered includes - project initiation, planning & execution; project monitoring, control and closure. Also, the course will cover project integration management, scope management, schedule management, cost management, quality management, resource management, communications management, risk management, procurement management, stakeholder management, as well as team building.

MPRP 800.28: STRATEGIES FOR CHANGE MANAGEMENT (3 CREDITS)

Change management is the people side of business transformation. Business change is complex because of relationships between the business environment, the organization, its people and supporting technologies. Change can be instigated from within the organization or imposed by

external factors, as such, Change needs to be cohesively and proactively managed. Accordingly, this course on change management integrates the transition of people, processes and technology from the current “as-is” state to a continually unfolding future state. During the course, the students will be exposed to how the dynamics of effective change management work and how to identify and unlock resistance to change, enabling teams to work together and speeding up the implementation of change programmes.

MODULE 7: SGS COMPULSORY COURSES

SGS 801.1: ICT AND RESEARCH METHODOLOGY (2 CREDITS)

This course should cover essentials of spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Research, Concepts of Hypothesis, Formulation and testing, Organization of Research and Report Writing.

SGS 801.2: MANAGEMENT AND ENTREPRENEURSHIP (2 CREDITS)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

DISSERTATION: In place of dissertation, students are required to attend at least one seminar/conference/workshop every year of the duration of this programme. Submission of approved and graded term papers will also be required.

**PhD ENERGY ECONOMICS
LIST OF COURSES, CODES AND CREDIT UNITS**

S/N O	COURS E CODE	COURSE TITLE	CREDIT UNIT
1	SGS 901.1	ICT and Research Methodology	2
2	SGS 901.2	Management and Entrepreneurship	2
3	EEM 900	Business Communications	2

COURSE DESCRIPTION

SGS 901.1 ICT and Research Methodology (2 Credits)

This course should cover essentials of spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Research, Concepts of Hypothesis, Formulation and testing, Organization of Research and Report Writing.

SGS 901.2 Management and Entrepreneurship (2 Credits)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

EEM 900 Business Communications (2 Credits)

This course will emphasize written, verbal and business communications. It will also focus on effective report writing and presentation skills as well as computer and internet competence.

EEM 901-1 Fundamentals of the Oil and Gas Industry (3 Credits)

The course shall deepen the students' knowledge on the following course outlines: Introduction, History of the Industry, Upstream: Production & Exploration, Midstream: (Transportation, Models

of Transportation & Storage), Downstream; Refining and Marketing, Oil & Gas Metering/Pricing, Laws & Regulations. The course further introduces students to development of oil and gas assets and presents the issues of profitability in petroleum exploration and development ventures.

EEM 901-2 Energy & Energy Resources, and the Environment (3 Credits)

The course is an overview of all forms of energy and energy resources and the engineering processes for the transformation of primary energy to its useful forms. The course reviews fossil fuel energy and its forms, renewable energy resources and characteristics as well as the concept of energy technology in terms of location, assessment, processes and transformation. Specific topics include: exploration and exploitation of energy resources, development of unconventional resources, emerging technologies for energy production, electric power generation technologies, etc.

EEM 901-3 Fundamentals of Downstream Petroleum Economics & Policy (3 Credits)

The course covers both the Downstream Petroleum Economics and Policy with the following contents: Oil Supply & Demand Fundamentals, Petroleum Physical Trading, Financial & Market Trading

with hedging & strategies, Overview of main Refining & Petrochemical Process, World Refining & Petrochemicals Demand, Evolution of Downstream Supply: Refining, Production & Quality(Specifications), Main Characteristics of Petrochemical Business: Economic Drivers, Principles of Refining, Management and Constraints, Standard Global Profit Analysis: Cash Flow, Capital Costs, Inflation Impact, etc, Introduction to Risk Analysis. Downstream Petroleum Regulations, and Downstream Petroleum Fiscal Policy

EEM 901-4 Fundamentals of Natural Gas (3 Credits)

Natural gas is evolving globally and in Nigeria as the fossil fuel of choice and the bridge to renewables. The objective of this course is to provide students with an understanding of the natural gas value chain from upstream production through to downstream utilization, policy framework, overview of the evolving Nigerian gas market and monetization economics. Additionally, the course will present the linkages between gas and power sector as well as other gas feedstock industries. As a result of this class, students will have a better understanding of the context and complexity of the natural gas sector and will be equipped with the requisite knowledge and skills to make informed judgments on industry issues as professionals. They will better appreciate government policy efforts in gas as well as the inherent investment and strategic opportunities in the sector. Specifically, the course will provide learners with the overview of global energy trends, overview of natural gas value chain, as well as the Nigerian gas market.

EEM 901-5 Fundamentals of the Energy Industry - Power Sector (3 Credits)

The objective of the course is to provide a better understanding of the economics of the energy and power industry. Courses includes Introduction to Energy Policy and Regulation; Fundamentals of Energy Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

EEM 901-6 Local Content Development in the Oil and Gas Industry (3 Credits)

The course examines the conceptualization of local content in Nigeria, factors that defines local content development, policy framework of local content development in Nigeria, legal framework for Nigerian content development (immigration

acts, the petroleum acts, petroleum development fund acts, the petroleum industry bill, the Nigerian oil & gas industry content development act, etc), challenges of local content development in oil & gas industry in Nigeria.

EEM 901-7 Fundamentals of Geopolitics of Energy & Petroleum Resources and Supply (3 Credits)

This course will provide the students a broader view of the petroleum industry, demand/supply, pricing and the oil and gas global geopolitics. The course covers: The Political Economy of Oil & Gas Industry, Petroleum Pricing and its Regulation by OPEC, the Global Politics involved, Petroleum & Macroeconomic Issues, Sustainable Petroleum Development, the recent Energy Transition and the Geopolitics involved

EEM 901-8 Fundamentals of Micro and Macro Economics (3 Credits)

This is an introductory course providing a general understanding of basic macro-economic concepts. Specifically, it acquaints the students with an appreciation of the functions of economic systems, including various approaches to the organization of production and allocation of resources, and of policies to achieve national economic goals. These include the determination of national income, inflation, recession, unemployment, taxation, labor unions, environmental pollution, energy and economic growth. Its main focus is on introducing concepts and models which are used as tools of economic analysis. Concepts such as opportunity cost and approaches such as marginal analysis are introduced and the role of government, the national income and its distribution, GDP, consumption function, savings function, investment spending, the multiplier principle and the influence of government spending on income and output are discussed.

EEM 901-9 Introductory Economic Theory (3 Credits)

This course covers foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning, and management. The topics are as much as possible made relevant to the energy and petroleum sector.

EEM 901-10 Applied Economics: Theory and Applications in the Energy Sector (3 Credits)

This course covers foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from

macroeconomics, microeconomics, development economics, managerial economics, economic planning, and management.

PEE 901 Advanced Well Engineering and Drilling Technology (3 Credits)

This course describes advances and emerging technologies in drilling mechanics and drilling economics, focusing in all aspects of drilling wells. Its topics includes rig equipment and drilling methods, drilling and completion fluids, drilling bits, well planning and cost analysis, hydraulics, cementing technology, casing and casing design, abnormal pressure and well control, directional and horizontal drilling methods.

PEE 902 Advanced Petroleum Reservoir Engineering & Processes (3 Credits)

Reservoir engineering fundamental principles would be explored. Analysis of fluid flow in bounded and unbounded reservoirs, wellbore storage, and phase redistribution, finite and infinite conductivity fractures; dual-porosity systems, gas wells. It will also include material balance in oil and gas reservoirs, fundamental well test analysis, natural water influx, predicting oil reservoir performance and improved oil recovery methods.

EEM 902 Oil and Gas Industry and Pollution Issues (3 Credits)

The course will give an overview of the safety and environmental issues in the petroleum industry. It will provide detailed understanding of the methods and techniques to resolve these key issues for making petroleum production and processing, cleaner and safer. The course would educate students to identify and assess hazards in any stage of operation, to quantify and manage them as well. It will also highlight lessons learnt from the past accidents. Topical issues to be covered includes introduction to safety, health and environmental management- basic terms and their definitions- importance of safety- safety assurance and assessment- safety in design and operation- organizing for safety. Hazard classification and assessment- hazard evaluation and hazard control. Environmental issues and management- atmospheric pollution- flaring and fugitive release- water pollution- drilling waste, produced water, oil spills, cooling water, processed water- soil waste- rock cutting. oil sludge, drilling solid waste, production waste environmental monitoring- environmental impact and decommissioning- environmental management.

EEM 903 Applied Mathematics, Linear Programming & Optimization Methods (3 Credits)

This course is designed to provide a solid foundation for students in the applications of mathematical modeling and techniques in

petroleum and energy economics, management and strategy. The key objective is to provide students with analytical tools for research and decision analysis. Specific topics to be taught include: LP modeling, I-O modeling and analysis, efficiency analysis, industrial mathematics with applications and decision modeling in supply chain management.

EEM 904 Applied Econometrics for Energy Policy Analysis and Planning (3 Credits)

This course is designed to provide a solid foundation for students in the applications of econometrics and statistics in petroleum and energy economics, management and strategy. The key objective is to provide students with analytical tools for research and decision analysis. Specific topics to be taught include: applied mathematics and statistics with economic applications, classical linear regression analysis, time series models analysis and panel data model & nonlinear models, as well as discrete choice regression models.

EEM 905-1 Energy & Petroleum Policy, Law, Regulation and Ethics (3 Credits)

A complex legal environment underscores oil, gas and power business relationships and activities; and defines the limits of what stakeholders can do. This course provides an overview of the international energy business from a legal perspective within the context of the relationship among stakeholders in their transactions and what makes transactions in the energy business work. A key objective is to give a broad understanding of the legal and regulatory framework within which the energy sector operates. Specific topics include review of legal and institutional frameworks for the energy sector, critique & review of existing energy policy, basic concepts of energy resource ownership, international trade agreements, contract negotiation and agreements, energy purchase and sales agreements, environmental protection laws, and energy business regulations.

EEM 905-2 Environmental Sustainability and Governance in the Oil and Gas Industry (3 Credits)

Environmental sustainability has become a global concern and an issue of contemporary discuss. This is against the backdrop of global climate issues associated with emissions from fossil fuel production and consumption activities. Added to this global concern is the yearning for increased involvement of host countries and communities the operations of the oil and gas industry operators. To this end, environmental sustainability and community relations is designed to provide learners with in-depth knowledge and understanding of the underpinnings of the concept of environmental sustainability, community

relations and the interactions between the concepts. Topical issues to be covered in this course include sustainable development (SD) & sustainability, historical perspectives on sustainability, ongoing efforts of the UN towards SD around the globe, e.g. Agenda21; community relations & the global oil & gas industrial sector, community relations in the oil & gas industry in Nigeria, oil & gas companies, community relations via corporate social responsibility & host communities in Nigeria; community relations & environmental sustainability in the course of oil & gas operations in Nigeria, government regulation of community relations via government regulation of corporate social responsibility (environmental & social responsibilities).

EEM 906 Climate Change Policy & Regulations (3 Credits)

The course will present an overview of energy resources and use with special attention to their impacts on the Environment and Climate. Special focus will be on energy efficiency/security, energy policy, environmental protection, climate change policy/regulations and sustainability issues. The course further elaborates on climate change policy & regulations, Carbon Concerns and Constraints, Mitigation & Adaptation Options, Mainstreaming Climate Change into National Development, Climate Change Agreement (Paris, 2015), COP 26 (Glasgow) Outcomes & Future Directions and energy efficiency/ security & informed energy choices

EEM 907 Renewable Energy Technology, Economics and Policy (3 Credits)

The course provides an overview of renewable energy concepts, issues relevant to the technologies currently used for providing energy services through renewable energy resources. It will also provide understanding and relevant knowledge in analysing the integration of renewable energy into global energy system and emerging issues in renewable energy development.

EEM 908 Electricity Economics and Power System Analysis (3 Credits)

This course will provide students with a working knowledge of power systems and electricity industry restructuring, its impact on industry regulation, and the role of environmental concerns and the development of alternative generation technologies.

EEM 909 Advanced Energy Economics, Modelling and Market Analysis (3 Credits)

The objective of the course is to engage students in learning how to integrate their knowledge of micro, macro, trade, and other economics courses

to develop a comprehensive, “general equilibrium” perspective on real-world economic problems. The course offers a hands-on curriculum that guides students in using the CGE model as a laboratory in which to study economic behaviour in an economy. Upon completion of the course, participants will be able to understand the general functioning and capabilities of CGE models; the structure of a CGE database and its various inter-linkages; Run CGE simulations using the GAMS software and interpret and present CGE simulation results in a comprehensive manner.

PEM 910 Economics of Regulation of Power markets (3 Credits)

The course will provide students with a working knowledge of power systems and electricity industry restructuring, its impact on industry regulation, and the role of environmental concerns and the development of alternative generation technologies. Specific topics include: Introduction to Electricity Industry; Electric Power Industry Structure; Electricity Demand and Supply Dynamics; Cost Structures; Economics of Electric Power Generation, Transmission and Power Flow; Capital Planning: Regulated Versus Restructured; Transmission Access and Wheeling; Ancillary Services; Alternative Energy Policies and Programmes; Climate Change and Impact on Generation Investments; Legal and Regulatory Issues in Electricity Economics; and Global Case Studies and Electricity Sector Reforms.

PEM 911 Economics of Renewable forms of Energy (3 Credits)

This course introduces students to renewable energy and the basics of energy demand and energy consumption. It explores the types and features of renewable energy resources, the applications of renewable energy technologies, trend analysis of global capacity of renewable energy, renewable energy economics & investment analysis, focusing on renewable energy cost trend analysis as well as renewable energy project investment analysis using DCF Analysis.

PEM 912 Project Management (3 Credits)

This course is designed to provide students with the skills to successfully plan and manage corporate projects and procedures. Furthermore, students will be acquainted with the requisite abilities knowledge of running successful projects, giving them a competitive edge within the marketplace. The program thoroughly explores the inner and outer workings of project logistics, management, constraints, risks and execution necessary to deliver projects within the desired scope. Topical issues to be covered includes - project initiation, planning & execution; project monitoring, control and closure. Also, the course

will cover project integration management, scope management, schedule management, cost management, quality management, resource management, communications management, risk

management, procurement management, stakeholder management, as well as team building.

PEM 913 Research project/Thesis

COURSE DESCRIPTION

SGS 901.1 ICT and Research Methodology (2 Credits)

This course should cover essentials of spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Research, Concepts of Hypothesis, Formulation and testing, Organization of Research and Report Writing.

SGS 901.2 Management and Entrepreneurship (2 Credits)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

EEM 900 Business Communications (2 Credits)

This course will emphasize written, verbal and business communications. It will also focus on effective report writing and presentation skills as well as computer and internet competence.

PEM 901-1 Fundamentals of the Oil and Gas Industry (3 Credits)

The course shall deepen the students' knowledge on the following course outlines: Introduction, History of the Industry, Upstream: Production & Exploration, Midstream: (Transportation, Models of Transportation & Storage), Downstream: Refining and Marketing, Oil & Gas Metering/Pricing, Laws & Regulations. The course further introduces students to development of oil and gas assets and presents the issues of profitability in petroleum exploration and development ventures.

PEM 901-2 Energy & Energy Resources, and the Environment (3 Credits)

The course is an overview of all forms of energy and energy resources and the engineering processes for the transformation of primary energy to its useful forms. The course reviews fossil fuel energy and its forms, renewable energy resources and characteristics as well as the concept of energy technology in terms of location, assessment, processes and transformation. Specific topics include: exploration and exploitation of energy resources, development of unconventional resources, emerging technologies for energy

production, electric power generation technologies, etc.

PEM 901-3 Fundamentals of Downstream Petroleum Economics & Policy (3 Credits)

The course covers both the Downstream Petroleum Economics and Policy with the following contents: Oil Supply & Demand Fundamentals, Petroleum Physical Trading, Financial & Market Trading with hedging & strategies, Overview of main Refining & Petrochemical Process, World Refining & Petrochemicals Demand, Evolution of Downstream Supply: Refining, Production & Quality(Specifications), Main Characteristics of Petrochemical Business: Economic Drivers, Principles of Refining, Management and Constraints, Standard Global Profit Analysis: Cash Flow, Capital Costs, Inflation Impact, etc, Introduction to Risk Analysis. Downstream Petroleum Regulations, and Downstream Petroleum Fiscal Policy

PEM 901-4 Fundamentals of Natural Gas (3 Credits)

Natural gas is evolving globally and in Nigeria as the fossil fuel of choice and the bridge to renewables. The objective of this course is to provide students with an understanding of the natural gas value chain from upstream production through to downstream utilization, policy framework, overview of the evolving Nigerian gas market and monetization economics. Additionally, the course will present the linkages between gas and power sector as well as other gas feedstock industries. As a result of this class, students will have a better understanding of the context and complexity of the natural gas sector and will be equipped with the requisite knowledge and skills to make informed judgements on industry issues as professionals. They will better appreciate government policy efforts in gas as well as the inherent investment and strategic opportunities in the sector. Specifically, the course will provide learners with the overview of global energy trends, overview of natural gas value chain, as well as the Nigerian gas market.

PEM 901-5 Fundamentals of the Energy Industry - Power Sector (3 Credits)

The objective of the course is to provide a better understanding of the economics of the energy and power industry. Courses includes Introduction to

Energy Policy and Regulation; Fundamentals of Energy Policy; Fundamentals of Economic Regulation and Restructuring of the Power Industry; Pricing Policies; Restructuring in Energy Industries; Economic Considerations across the Electric Power Value Chain; Economic Considerations across the Natural Gas Value Chain; and Economics of Energy Efficiency and Conservation.

PEM 901-6 Local Content Development in the Oil and Gas Industry (3 Credits)

The course examines the conceptualization of Local Content in Nigeria, Factors that defines Local Content Development, Policy Framework of Local Content Development in Nigeria, Legal Framework for Nigerian Content Development (Immigration Acts, The Petroleum Acts, Petroleum Development Fund Acts, The Petroleum Industry Bill, The Nigerian Oil & Gas Industry Content Development Act, etc), Challenges of Local Content Development in Oil & Gas Industry in Nigeria

PEM 901-7 Fundamentals of Geopolitics of Energy & Petroleum Resources and Supply (3 Credits)

This course will provide the students a broader view of the petroleum industry, demand/supply, pricing and the oil and gas global geopolitics. The course covers: the political economy of oil & gas industry, petroleum pricing and its regulation by OPEC, the global politics involved, petroleum & macroeconomic issues, sustainable petroleum development, the recent energy transition and the geopolitics involved.

PEM 901-8 Fundamentals of Micro and Macro Economics (3 Credits)

This is an introductory course providing a general understanding of basic macro-economic concepts. Specifically, it acquaints the students with an appreciation of the functions of economic systems, including various approaches to the organization of production and allocation of resources, and of policies to achieve national economic goals. These include the determination of national income, inflation, recession, unemployment, taxation, labor unions, environmental pollution, energy and economic growth. Its main focus is on introducing concepts and models which are used as tools of economic analysis. Concepts such as opportunity cost and approaches such as marginal analysis are introduced and the role of government, the national income and its distribution, GDP, consumption function, savings function, investment spending, the multiplier principle and the influence of government spending on income and output are discussed.

PEM 901-9 Introductory Economic Theory (3 Credits)

This course covers foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning, and management. The topics are as much as possible made relevant to the energy and petroleum sector.

PEM 901-10 Applied Economics: Theory and Application in the Energy Sector (3 Credits)

This course covers foundational concepts, precepts and assumptions in economic theory and applications for policy and economic analysis and business decisions. Topics are drawn from macroeconomics, microeconomics, development economics, managerial economics, economic planning, and management.

PEM 902 Oil and Gas Industry and Pollution Issues (3 Credits)

The course will give an overview of the safety and environmental issues in the petroleum industry. It will provide detailed understanding of the methods and techniques to resolve these key issues for making petroleum production and processing, cleaner and safer. The course would educate students to identify and assess hazards in any stage of operation, to quantify and manage them as well. It will also highlight lessons learnt from the past accidents. Topical issues to be covered includes introduction to safety, health and environmental management- basic terms and their definitions- importance of safety- safety assurance and assessment- safety in design and operation- organizing for safety. Hazard classification and assessment- hazard evaluation and hazard control. Environmental issues and management- atmospheric pollution- flaring and fugitive release- water pollution- drilling waste, produced water, oil spills, cooling water, processed water- soil waste- rock cutting. Oil sludge, drilling solid waste, production waste environmental monitoring- environmental impact and decommissioning- environmental management.

PEM 903 Applied Mathematics, Linear Programming & Optimization Methods (3 Credits)

This course is designed to provide a solid foundation for students in the applications of mathematical modeling and techniques in petroleum and energy economics, management and strategy. The key objective is to provide students with analytical tools for research and decision analysis. Specific topics to be taught

include: LP modeling, I-O modeling and analysis, efficiency analysis, industrial mathematics with applications and decision modeling in supply chain management.

PEM 904 Applied Econometrics for Energy Policy Analysis and Planning (3 Credits)

This course is designed to provide a solid foundation for students in the applications of econometrics and statistics in petroleum and energy economics, management and strategy. The key objective is to provide students with analytical tools for research and decision analysis. Specific topics to be taught include: applied mathematics and statistics with economic applications, classical linear regression analysis, time series models analysis and panel data model & nonlinear models, as well as discrete choice regression models.

PEM 905-1 Energy & Petroleum Policy, Law, Regulation and Ethics (3 Credits)

A complex legal environment underscores oil, gas and power business relationships and activities; and defines the limits of what stakeholders can do. This course provides an overview of the international energy business from a legal perspective within the context of the relationship among stakeholders in their transactions and what makes transactions in the energy business work. A key objective is to give a broad understanding of the legal and regulatory framework within which the energy sector operates. Specific topics include review of legal and institutional frameworks for the energy sector, critique & review of existing energy policy, basic concepts of energy resource ownership, international trade agreements, contract negotiation and agreements, energy purchase and sales agreements, environmental protection laws, and energy business regulations.

PEM 905-2 Environmental Sustainability and Governance in the Oil and Gas Industry (3 Credits)

Environmental sustainability has become a global concern and an issue of contemporary discuss. This is against the backdrop of global climate issues associated with emissions from fossil fuel production and consumption activities. Added to this global concern is the yearning for increased involvement of host countries and communities the operations of the oil and gas industry operators. To this end, environmental sustainability and community relations is designed to provide learners with in-depth knowledge and understanding of the underpinnings of the concept of environmental sustainability, community relations and the interactions between the concepts. Topical issues to be covered in this course include sustainable development (SD) & sustainability, historical perspectives on

sustainability, ongoing efforts of the UN towards SD around the globe, e.g. Agenda21; community relations & the global oil & gas industrial sector , community relations in the oil & gas industry in Nigeria, oil & gas companies, community relations via corporate social responsibility & host communities in Nigeria; community relations & environmental sustainability in the course of oil & gas operations in Nigeria, government regulation of community relations via government regulation of corporate social responsibility (environmental & social responsibilities).

PEM 906 Economics of Petroleum Supply and Geopolitics of Resources (3 Credits)

The course evaluates the major segments of the industry and introduces the oil and gas value sequence. The key players or major drivers impacting the global oil and gas supply outlook and pricing are identified and evaluated, including IOCs, OECD, OPEC, and NOCs. The course also presents a broad view of contemporary discussions on petroleum, economy, and the environment. Other topics covered include, the political economy of oil and gas, oil and gas policy versus market debate, petroleum price regulation and mechanism, resources, petroleum and macroeconomic issues, petroleum and the environment discourse, petroleum and sustainable development, the resource curse debates, geopolitics and energy security.

PEM 907 Advanced Petroleum Economics, Modelling and Fiscal Analysis (3 Credits)

This course will entail selected topics in oil industry economic evaluation including offshore bidding, project ranking and selection, capital budgeting, project management and financing, long-term oil and gas field development projects and incremental analysis for assisted recovery and acceleration.

PEM 908 Economics of Petroleum Refining & Petrochemicals (3 Credits)

This course, provides learners with the essence of international oil supply – global reserves, production & trade, introduction to global oil business - exploration, extraction, refining, marketing, transportation, crude oil classifications, crude oil quality indicators, crude oil characterization by assays, crude oil distillation – refined products introduction to crude oil refining – distillation, refinery configurations, topping, hydroskimming, cracking, coking. The course also introduces students to refinery economics & petrochemicals, and petrochemical feedstock, processes and equipment

PEM 909 Economics of Regulation of the Petroleum Industry (3 Credits)

A study of Regulation Processes as a major consideration in Petroleum Industry operations with a clear insight on principles that affect Petroleum Industry Regulatory policies. Globalization provides a platform for debates, decisions and policies on what to regulate, whether to regulate and how to regulate. International capital would tend to discourage regulations, however an understanding of the economic and environmental policy framework implications is required for the selection of informed, technically feasible, optimal regulation choices beneficial to the environment, the energy and petroleum industry and the world.

PEE 901 Advanced Well Engineering and Drilling Technology (3 Credits)

This course describes advances and emerging technologies in drilling mechanics and drilling economics, focusing in all aspects of drilling wells. Its topics includes rig equipment and drilling methods, drilling and completion fluids, drilling bits, well planning and cost analysis, hydraulics, cementing technology, casing and casing design, abnormal pressure and well control, directional and horizontal drilling methods.

PEE 902 Advanced Petroleum Reservoir Engineering & Processes (3 Credits)

Reservoir engineering fundamental principles would be explored. Analysis of fluid flow in bounded and unbounded reservoirs, wellbore storage, and phase redistribution, finite and infinite conductivity fractures; dual-porosity systems, gas wells. It will also include material balance in oil and gas reservoirs, fundamental well test analysis, natural water influx, predicting oil reservoir performance and improved oil recovery methods.

PEE 903 Advanced Petroleum Production Engineering & Process (3 Credits)

This course provides insight into oil and gas recoveries; and exposes both the benefits and limitations of various production techniques available. Its topics includes well performance, multiphase flow in pipes, artificial lift methods, production decline curves, production well analyses, well stimulation and work-over operations, separation processes, oil and gas treatment, produced water management and oil and gas metering

PEM 910 Project Management (3 Credits)

This course is designed to provide students with the skills to successfully plan and manage

corporate projects and procedures. Furthermore, students will be acquainted with the requisite abilities knowledge of running successful projects, giving them a competitive edge within the marketplace. The program thoroughly explores the inner and outer workings of project logistics, management, constraints, risks and execution necessary to deliver projects within the desired scope. Topical issues to be covered includes - project initiation, planning & execution; project monitoring, control and closure. Also, the course will cover project integration management, scope management, schedule management, cost management, quality management, resource management, communications management, risk management, procurement management, stakeholder management, as well as team building.

PEM 911– 1 Petroleum Reserves Classification (3 Credits)

This course will cover the definitions of, and uses for, oil and gas reserves estimates, and how to be compliant with each of the industry standard and regulator's versions of the reserves requirements. In this course, students will learn how geoscience and engineering evaluation methods should be used for compliance of reserves estimates, the differences in the evaluation assumptions and how the inherent uncertainties in reserve estimates are reflected by the categorization of reserves.

PEM 911 – 2 Petroleum Assets Valuation (3 Credits)

Valuation of petroleum assets – upstream, midstream and downstream, are essential for adequate decision making in the oil industry. There are fundamental variables that are associated with petroleum assets valuations, as well as risks and uncertainties. The course therefore, focuses on asset valuation of all sectors of the oil and gas industry with particular emphasis on the upstream sector - exploration and production. It is expected that students will be exposed to the challenging issues that commonly arise when valuing petroleum assets as well as interpreting valuation models, develop the practical skills to build and evaluate valuation models, and acquire skills for better economic decisions based on robust valuation models. Specific topics to be covered includes: Upstream Oil and Gas Valuation Model, Financing issues as well as sensitivity and stochastics models to quantify uncertainty.

PEM 912 Research project/Thesis

LIST OF ACADEMIC STAFF

S/N	NAME	QUALIFICATION	SPECIALIZATION	RANK
1	Joseph Ajienska	B. Sc., Petroleum Engineering (University of Ibadan), M.Eng. & PhD Petroleum Engineering (UNIPORT)	Petroleum Engineering	Professor
2	Ayo Kuye	BSc. Chemical Engineering (UNILAG), PhD, Chemical Engineering (University of Strathclyde, UK)	Chemical Engineering	Professor
3	Worika L. Ibibia	BL, LLM, LLB, Law (UNILAG); PhD, Energy Law & Policy (University of Dundee, UK)	Energy Law and Policy	Professor
4	Ogbonna Joel	B.Tech, Chemical and Petro-Chemical Engineering (Rivers State University of Science and Technology); MSc. Engineering Management (UNIBEN); PhD, Chemical/Petrochemical Engineering (Rivers State University of Science and Technology)	Oilfield Chemical & Environmental Pollution	Professor
5	Lawrence Ohale	BSc., MSc & Ph.D, Economics (UNIPORT)	Economics	Professor
6	Chijioko Nwaozuzu	BSc. Business Administration (UNN); MBA Management (Edinburgh Business School, Harriot-Watt University); MBA, Oil & Gas Management & PhD Petroleum Management & Policy (University of Dundee, UK.)	Oil & Gas Management	Professor
7	John Ugbebor	B.Eng, Petroleum Engineering (UNN); M.Eng. & PhD, Environmental Engineering (UNIPORT)	Safety	Senior Lecturer
8	Uche Osokogwu	B.Eng. & M.Eng., Petroleum Engineering (UNIPORT); Ph.D Petroleum Engineering (Cranfield University, Bedfordshire, United Kingdom.)	Petroleum Production/Economics	Associate Professor
9	Alwell Nteegah	Ph.D, MSc & BSc., MSc. & PhD, (UNIPORT)	Economics	Associate Professor
10	Adesope Olufemi Martins	BSc. Agriculture Extension (University of Ibadan); MSc & Ph.D Agricultural Extension (FUTO)	Agricultural Economics & Extension	Professor
11	Agiobenebo Tamuno	BSc. Economics (ABU, Zaria); MA & PhD, Economics (University of Pittsburgh, U.S.A)	Economics	Professor
12	Bristol Alagbariya Edward	BA, Law (UNIPORT); BL (UNILAG); PhD, Environmental Law & Policy (University of Dundee, UK)	Environmental Law and Policy	Associate Professor
13	Oduola Koyejo	BSc. Chemical Engineering (UNILAG); MSc. & PhD, Chemical Engineering (National University Levivska Polytechnika, Ukraine)	Chemical Engineering	Professor
14	Chinedu N. Ogbuji	BSc., Marketing (ABSU, Uturu); PGDE, Education (NOUN); MSc. Marketing (UNN); MBA & PhD, Marketing (ABSU, Uturu)	Social/Environmental Marketing and Entrepreneurial Marketing	Professor

15	Mica Leyirah	BSc & MBA, Accounting (Rivers State University of Science & Technology); PhD, Accounting (UNIPOINT)	Environmental Accounting and Taxation	Professor
15	Toyin Odutola	BSc, Petroleum Engineering (LAUTECH), MSc Petroleum Engineering (African University of Science & Technology); PhD Petroleum Engineering (UNIPOINT)	Production Engineering	Senior Lecturer
16	Okodua Henry	B.Sc. Economics (UNILORIN); MSc Economics (UNIBEN); PhD Economics (Covenant University, Ogun State)	Economics	Senior Lecturer
17	Sam Amadi	BL (University of Calabar), LLB, Law (Nigerian Law School) ; LLM, Law MPA (Harvard's Kennedy School of Government); PhD, Law (Harvard University, USA).	Power Sector Economics, Law and Regulation	Professor
18	Felix Dayo	BSc., Chemical Engineering (OAU); MSc, Nuclear Engineering (University Michigan, USA); PhD, Engineering & Public Policy (Carnegie Mellon University, USA)	RE Technology & Policy	Professor
19	Leo Ukpong	BSc. & M.Sc. Economics (Alabama A&M University, USA); MBA, Finance (University of New York, USA.); M.Sc. Petroleum Economics (University of Pennsylvania, USA); Ph.D. Financial Economics 9 The Wharton School of Business, University of Pennsylvania.	Energy Economics Finance	Professor
20	Adenikinju Adeola	Ph.D, MSc, BSc., MSc. PhD Economics (University of Ibadan)	Energy Economics	Professor
21	Gurkan Kumbaroglu	B.S. Industrial Engineering (Gazi University, Turkey); MS & PhD, Industrial Engineering (Middle East Technical University)	Power Systems Economics	Professor
22	Ogbe David	BS and MS, Petroleum Engineering (Louisiana State University, Baton Rouge, Louisiana, USA.); Ph.D. Petroleum Engineering (Stanford University, California, USA).	Petroleum Engineering	Professor
23	Iwayemi Akin	BSc. Economics (University of Ibadan), Ph.D. Economics (The Johns Hopkins University, USA)	Energy Economics	Professor
24	Afees Salisu	BSc., MSc. & PhD. Economics (University of Ibadan)	Applied Econometrics	Professor
25	Nwogwugwu Collins Uche	BSc. Economics (Ahmadu Bello University, Zaria.); PGDE Economics (University of Calabar); MSc & PhD Economics (UNIPOINT)	Economics	Professor

26	Igbokoyi Alpheus	BSc, Petroleum Engineering (University of Ibadan); MBA, Global Energy Management (Haskayne School of Business, University of Calgary, Canada.); MSc, Petroleum Engineering (University of Ibadan); M.Sc, Energy Regulation and Law (Vermont Law School); PhD, Petroleum Engineering (University of Oklahoma, USA)	Petroleum Engineering	Professor
27	Chidi Ibe	BSc. Geology (UNN); MSc., Energy & Environment & Ph. D, Oceanography (Royal School of Mines, Imperial College of Science and Technology, London, United.)	Energy, Environment and Climate Change	Professor
28	Obindah Gershon	B.Sc, Economics (UNN); M.Sc, Oil and Gas Economics & PhD, Petroleum Economics (University of Dundee, UK)	Energy Economics	Senior Lecturer
29	Eme Ekekwe	BA Political Science (University of Western Ontario, Canada.); MA & PhD, Political Science (Carleton University, Ottawa, Canada.)	Political Science	Professor
30	Mike Onyekonwu	BSc. Petroleum Engineering (University of Ibadan); MSc. & PhD Petroleum Engineering (Stanford University, California, USA)	Petroleum Engineering	Professor
31	Wumi Iledare	B.Sc. Petroleum Engineering (University of Ibadan); M.S. Energy Resources (University of Pittsburgh's School of Engineering, USA); Ph.D. Mineral and Energy Resource Economics (West Virginia University, USA)	Petroleum & Energy Economics	Professor
32	Ify Nwaogazie	BS, Civil Engineering & MS, Water Resources Engineering (University of Kansas, USA); Ph.D, Civil & Environmental Engineering (Oklahoma State University, USA)	Civil Engineering	Professor
33	Adewale Dosunmu	B.Sc, Petroleum Engineering (University of Ibadan); M.Eng & Ph.d, Petroleum Engineering (UNIPORT).	Petroleum Engineering	Professor
34	Okey Onuchukwu	BSc., MSc. & PhD Economics (UNIPORT)	Economics	Professor
35	David Ige	BSc & M.Eng, Chemical Engineering (UNILAG); MBA (University of Aberdeen); PhD, Chemical Engineering (University Cambridge, UK)	Engineering	Visiting Lecturer
36	Habib Nuhu	BSc. Applied Geology (Abubakar Tafewa Belewa University); MSc. Petroleum Geosciences (Imperial College, London); PhD petroleum Engineering (Seoul University, Korea)	Energy Economics	Visiting Lecturer
37	Ernest Nwapa	BSc., Civil Engineering (UNN); Ph. D Management Technology (Hon). (FUTO)	Local Content Development	Visiting Lecturer

38	Tim Okon	BSc. Geology (Ahmadu Bello University, Zaria); MBA (Texas A&M University, USA); MSc, PhD, DIC Petroleum Geophysics (Imperial College, London)	Energy Economics	Visiting Lecturer
39	Adiele Nwankwo	BA, Economics (Miami University, USA); Masters, Regional Planning & MSc. Civil Engineering (The Ohio State University, USA); PhD, Philosophy 9University of Michigan, USA)	Project Management	Visiting Lecturer
40	Jude Amaefule	BSc Petroleum Engineering (University of Los Angeles, California, USA); MSc, & PhD, Petroleum Engineering 9University of Southern California, USA).	Petroleum Engineering	Visiting Lecturer
41	Ukawkwu Nwojo	BSc., Petroleum Engineering; MBA, Project Management Technology (FUTO), MSc, Petroleum Engineering & PhD, Petroleum Economics (UNIPORT)	Petroleum Economics	Visiting Lecturer
42	Soala Ariworiokuma	BSc. Business Administration; PGD, Policy Analysis; M.A, Economics; Ph.D Administration. (University of Nebraska, USA)	Economics of Petroleum Supply & Geopolitics	Visiting Lecturer
43	Yusuf Abdulsalam	BSc. Agricultural Engineering (University of Ilorin.); MSc. PhD Agricultural Engineering (Ahmadu Bello University, Zaria)	Energy/Power Market Economics	Visiting Lecturer
44	Joseph Ellah	BSc, Mathematics (Cuttington University College, Liberia); MSc & PhD, Applied Mathematics (University of Durham, UK)	Operations Research, Statistics & Research methods	Visiting Lecturer
45	Suleiman Tahir	BSc., MSc & PhD Economics 9African University of Science Technology, Abuja)	Economics	Visiting Lecturer
46	Joshua Gogo	BSc. Chemical/ Petrochemical Engineering (Rivers State University of Science & Technology, Nigeria); MSc. Computer Information Systems (USA); MA/PhD in Economics (Canada)	Operations Research	Visiting Lecturer

CENTRE FOR PEACE AND SECURITY STUDIES

HISTORY OF THE CENTRE

Centre for Ethnic and Conflict Studies (CENTECS) was established in 2003 (became functional in 2005) as a unit of the Faculty of Social Sciences. CENTECS is a bold initiative by the University of Port Harcourt to revive and sustain the research culture in the University system. It is already common knowledge that little or no research activity is going on in our universities as a result of long years of under-funding and the consequent agitations, in the form of strikes by university lecturers. It is also true that the conventional university academic Departments and Faculties have since ceased to provide effective platforms for organising any meaningful research work. Thus extra departmental structures in the form of research Centres' or Institutes have become the new planks for the rebirth of purposeful work. It is against this background that the Centre for Ethnic and Conflict Studies was established. CENTECS meets this need by conducting researches that provide evidence-based information towards addressing the problem of conflict in the Niger- Delta, Nigeria, Africa and beyond. Between 2016 and 2021 CENTECS was merged with the Centre for Gender Studies. Both Centres became Centre for Conflict and Gender Studies (CCGS). In April 2015, the two Centres were demerged. In consideration of the need to proffer Intellectual responses to contemporary security issues that are threatening the fabrics of national, regional and global integration, the Centre has been registered as Centre for Peace and Security Studies (CPSS) with effect from March, 2021.

Objectives of the Centre are to:

- Make CPSS a Centre of excellence in peace and security studies through cutting- edge teaching and research.
- Transfer knowledge in peace and security studies through teaching, research and workshops.
- Develop our students' understanding of peace and security study problems and their consequences for social life in Nigeria and global society and equip them with skill and competences for managing the phenomenon.
- Deliver a high-quality programmes in Peace and Security studies.
- Provide students with adequate theoretical, methodological and practical foundations for the emerging field of peace and security studies in Nigeria.
- Educate students to appreciate the causes of intrastate and interstate conflict; security, conflict resolution and post-conflict peace building process with special reference to Nigeria and Africa.

- Give students whose initial training was not in peace and conflict studies, an opportunity to achieve their desired goal of obtaining a certificate in the field.
- Apply our skills and competences towards the advancement of evidence based and policy relevant research in peace and security studies to facilitate the development of Nigeria, Africa and the world.

VISION

CPSS envisages the total integration of all Nigerians into a viable and justice-loving nation; the supremacy of citizenship over indigeneship; a nation renowned for upholding justice equity and fairness; a nation where conflicts are reduced to an inconsequential minimum for citizens to enjoy maximum security and the creation of an intellectual haven for research on global peace and security.

MISSION

To apply our skills and competences towards the advancement of evidence- based and policy relevant research in peace and security studies to facilitate the development of Nigeria, Africa and the World.

POST GRADUATE DIPLOMA (PGD) PROGRAMME IN PEACE IN AND SECURITY STUDIES

Entry Requirement

To be eligible for admission into the programme, candidates must possess a first degree (B.Sc. B.Ed., B.A.) from any recognized university. Preference will be given to candidates who have degrees in related fields of study, and to those who work in the peace and security sector. In exceptional cases, candidates without first degrees, but who have attended high professional institutions like the National War College, NIPSS, etc and who have demonstrable practical experience in peacekeeping operations and other peace building activities, may be considered for admission.

Duration

The Post-Graduate Diploma (PGD) in Peace and Security Studies is designed for 12 months full time.

Graduation Requirement

To graduate from the Diploma programme, a candidate must obtain a minimum of 30 credits. This load will include a research project of 6 credits to be completed after the course work. In addition to the Core Courses, the students are required to take at least 2 electives per semester.

FIRST MODULE

COURSE CODE	COURSE TITLE	CREDIT UNIT

DETAILED DESCRIPTION OF COURSES

PSS 700.1 Concepts and Theories of Peace and Conflict Studies – (3 Credit Units)

The course explores the evolution and development of peace and conflict studies as an academic subject area. It familiarizes the students with basic concepts like conflict, violence, war, and peace, settlement, resolution, order, etc. It also looks at the causes of conflicts; the relationships between peace and violence, peace and conflict, and peace and war; ethics and war, including circumstances, under which the use of military force can be justified; discussions of realist, pacifist and just war responses; ethics of peace and war; relationship between ethical traditions and modern international law; what international law says about war;

unsolved issues of humanitarian intervention, war crimes; relationship between religion and conflict; etc.

PSS 701.1 African Approaches to Conflict Resolution - (2 Credit Units)

This course is aimed at providing the students with an understanding of issues of conflict and peace in Africa, understanding the principle and process of Alternate Dispute Resolution and Traditional Dispute Resolution mechanisms; the nature of the community and state in Africa and its relationship to peace, African institutions as instruments for peace building, Westernization and challenges to African institutions and culture as bases for conflict, African colonial past and implications for conflict, African approaches to conflict, nonviolence and peace-building. Case studies from Nigeria, West Africa and the rest of Africa will be used.

PSS 702.1 Conflict Analyses and Management - (2 Credit Units)

The course is built on the premise that successful; conflict resolution depends largely on adequate analysis. An important tool for conflict understanding is conflict analysis. An important tool for conflict understanding is conflict analysis. The course will cover meaning and issues involved in conflict analysis (its uses) examining the various methods for analysing conflict; the use of self-reflection at individual levels; the use of the ABC method of analysis, pyramid methods, use of case study analysis and mapping of the conflict.

PSS 703.1 Non-violent Conflict Transformation – (2 Credit Units)

This course is designed to equip students with the theories and principles nonviolent conflict transformation. The growing culture of violence in politics and interpersonal relations requires peace education that includes knowledge and application of methods of nonviolence. Some people or individuals in conflict tend to have penchant for attack of life and limbs of opponents rather their power. This alone underlies a need to provide students with an opportunity to explore the concept of nonviolence and related concepts of Non-killing in dealing with conflicts. The course is intended to make students appreciate the values, methods and strategies of nonviolent conflict transformation by focusing on specific cases, including recent nonviolent actions in Africa. As well, it will look at historical cases of nonviolent struggles and ideas credited to Mahatma Gandhi and Martin Luther King Junior. The course will also explore traditional approaches to peace in Africa in context of nonviolence.

PSS 704.1 Research Methodology in Peace Studies – (2 Credit Units)

This course is aimed at introducing research methods in peace and conflict studies. Issues to be covered include, conceptual foundations of research; concepts, constructs, hypothesis, theories, variables, etc. The nature of peace and conflict data, community conflict research, the Participatory Rural Appraisal methodology, the historical methodology, ethics in conflict research. Others are types of research, data collection methods, sampling and sampling designs; measurement; questionnaire construction; organization of project reports; data analysis, and hypothesis testing. The management of conflict research findings as an instrument of peace building

PSS 705.1 Communications and Conflict Management – (2 Credit Units)

This course focuses on the importance of communication to conflict management. It looks at communication theory, and the Media as an instrument of mass communication. It explores attitudes and communication skills in conflict situations. It also covers the meaning of communication; elements of good communication, communication skills and tools; listening techniques, roadblocks to communication and conflict management. It will also involve ethics of reporting conflict, minimizing bias in conflict reporting; use of language in conflict reporting; risks in conflict coverage and reporting; conflict of interest between media proprietors and the ethics in conflict coverage.

PSS 706.2 Peace-Building Strategies and Recovery Frameworks – (3 Credit Units)

In this course students will understand the root causes of conflict and how to address them using different frameworks developed by National and International Organizations engaged in peace work. It will also enable students become conscious of the barriers to sustainable peace and ways of averting them. Finally, this course will expose students to cross-cutting issues like human needs approach to development, sustainable development, participatory development and development cooperation.

PSS 707.2 Environment and Conflict Management – (2 Credit Units)

Students will understand the origin and nature of conflicts caused environmental degradation in Africa, particularly in the Niger Delta Region of Nigeria. It will also examine the impact of war on the environment and global environmental protocols and legislations enacted to protect the environment.

PSS 708.2 Peace Education and Peer Mediation – (2 Credit Units)

The course will introduce students to the definitions and concepts of Peace Education; the culture of

Peace; and Institutions and processes of Peace Education, Institutions of Peace Education, the use of the agencies socialization for teaching non-violence, using subjects like music, art, drama, mathematics, etc, to teach peace education, setting up peer peace groups, etc.

PSS 709.2 Early Warning Response Mechanisms - (2 Credit Units)

This course introduces students to the concepts and practice of early warning mechanisms identification as a fundamental way of preventing violent conflicts in human society. Some of the focus areas of this course include; complexity of conflicts, anticipation of conflict, role of governmental and nongovernmental organizations in intelligence gathering, early warning analysis and how to ensure early response. Your understanding of this course will empower you to critically scrutinize information and conflict indices in order to enhance the design of early and right responses to prevent violence.

PSS 710.2 Individual Research Project: Write, submit and Present (Core) – (12 Credit units)

Every student will write, defend and submit a research project at the end of the course work, leading to the Submission of a project. The topic of research must fall within one of the research areas in peace and conflict studies.

MASTERS OF SCIENCE (M.Sc.) COURSES IN PEACE AND SECURITY STUDIES

Admission Requirements

Candidates for the Master's Degree in Peace and Security Studies must have one of the following:

- A good first-degree honours from any discipline with a minimum of second-class lower division
- A minimum of third-class honours degree from a recognized university plus Postgraduate Diploma in Peace and Conflict Studies at credit level with a CGPA of 3.50
- Credit in HND with Postgraduate Diploma in Peace and Security Studies from a recognized university with a CGPA of 3.50. and;
- Evidence of NYSC discharge or exemption/exclusion certificate.

Duration of Programme

- The Full-time Master degree in Peace and Security Studies shall run a minimum of four Quarters (12 calendar months).
- The Part-time programme shall run for a minimum of six Quarters and a maximum of eight Quarters.

2.05 Requirements for Graduation

To qualify for the award of Master's Degree in Peace and Security Studies, a candidate must pass a

minimum of 37 credit units comprising core, elective and seminars courses and the Thesis.

PSS 888.2 M.Sc Dissertation

6

2.06 Domain of the Programme

All Master's Degree programmes in Peace and Security Studies shall be domicile at Centre for Peace and Security Studies (CPSS), Faculty of Social Sciences University of Port Harcourt.

2.07 Mode of Application

Requests for application forms should be made to the Centre for Peace and Security Studies (CPSS), and such requests must be accompanied by the stipulated fee made payable to the Centre for Peace and Security Studies (CPSS), University of Port Harcourt with the candidate's name, address and course applied for, written at the reverse side.

FIRST MODULE

COURSE CODE	COURSE TITLE	CREDIT UNIT
PSS 800.1	Theoretical Perspectives on Conflict, Peace and Security	3
PSS 801.1	Advanced Research Methodology	3
SGS 801.1	ICT and Research Methodology	2

SECOND MODULE

PSS.808.2	International Organisations, Conflict and Security Management	3
		9

FOURTH MODULE

COURSE CODE	COURSE TITLE	CREDIT UNIT
SGS 801.2	Management and Entrepreneurship	3

DESCRIPTION OF COURSES

PSS 800.1 Theoretical Perspectives on Conflict, Peace and Security (3 Credit Units)

The course examines key concepts, theoretical perspectives and models of conflict analysis, peace-building and the structure of contemporary international security, including contending theories of international relations and regional security complexes. It also enquires into military and non-military sources of insecurity as related to global regional and national/state levels as well as human security. Other issues discussed are: critical security studies; conflicts commonly occurring in all human relations; progress from submerged moments to rising tensions; and the examination of crises/violence in the post-conflict stage and the analysis of causes at every relevant stage. Analysis is approached through such theoretical perspectives as the conflict dynamics triangle; needs-based conflict origins; and rational, strategic calculation and analysis of social psychological processes. Furthermore, the course deals with concepts such as positive peace, a culture of peace and the major approaches/schools on early warning and prevention, conflict management, conflict resolution and transformation/peacebuilding in their historical revolution. The multi-track approach of peace building, particularly the three level analyses of actors and action pyramids, will also be examined. The UN Agenda for Peace will be presented. Discourse on top-down, bottom-up and integrative approaches will be examined featuring state and non-state actors, the varied strategies they deploy in peace interventions and their efforts to ensure coordination for best results.

PSS 801.1 Advanced Research Methodology (3 Credit Units).

This course is aimed at introducing research methods in peace and conflict studies. Issues to be covered include, conceptual foundations of research; concepts, constructs, hypothesis, theories, variables, etc. The nature of peace and conflict data, community conflict research, the Participatory Rural Appraisal methodology, the historical methodology, and ethics in conflict research will be applied. Others are types of research, data collection methods, sampling and sampling designs; measurement; questionnaire construction; organization of project reports; data analysis, and hypothesis testing. The management of conflict research findings as an instrument of peace building.

SGS 801.1: ICT and Research Methodology (2 Credit Units).

This course should cover essentials of spread sheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Scientific Research, Concepts of Hypothesis, Formulation and Testing, Organization of Research and Report Writing.

PSS 802.1 Environment and Conflict (3 Credit Units)

Students will understand the origin and nature of conflicts caused by environmental degradation in Africa, particularly in the Niger Delta Region of Nigeria. It will also examine the impact of war on the environment and global environmental protocols and legislations enacted to protect the environment.

PSS 803.1 Peace-making and International Peacekeeping (3 Credit Units).

This course will expose students to the problems of peace-making and peacekeeping initiatives around the world. This is with a view to identifying Regional and Global efforts at managing conflict within International Law and UN Security Council mandates. Emphasis shall be placed on the roles of the UN, ECOWAS and NGOS in peace-making and peacekeeping, Chapters and levels of UN engagement in International Conflict and topics on the 'Responsibility to Protect' civilians in times of conflict.

PSS 804.1 African Approaches to Conflict Management and Resolution (3 Credit Units).

This course is aimed at providing the students with an understanding of issues of conflict and peace in Africa, understanding the principle and process of Alternate Dispute Resolution and Traditional Dispute Resolution mechanisms; the nature of the community and state in Africa and its relationship to peace, African institutions as instruments for peace building, Westernization and challenges to African institutions and culture as bases for conflict, African colonial past and implications for conflict, African approaches to conflict, nonviolence and peace-building. Case studies from Nigeria, West Africa and the rest of Africa will be used.

PSS 805.1 Language, Communication and Conflict Management (3 Credit Units)

This course focuses on the importance of communication to conflict management. It looks at communication theory, and the Media as an instrument of mass communication. It explores attitudes and communication skills in conflict situations. It also covers the meaning of communication; elements of good communication, communication skills and tools; listening techniques, roadblocks to communication and conflict management. It will also involve ethics of reporting conflict, minimizing bias in conflict reporting; use of language in conflict reporting; risks

in conflict coverage and reporting; conflict of interest between media proprietors and the ethics in conflict coverage.

PSS 806.2 Critical Security Studies (3 Credit Units)

The course introduces students to the subfield of critical security studies (CSS), which means it takes a broadly constructivist and critical perspective to the study of security. Traditionally, International Relations (IR) security studies literature focuses on state security, studying it especially through realist and sometimes (neo) liberal lenses. This course presumes background knowledge of those mainstream security approaches and issues (such as realism and (neo) liberalism, the causes of war, strategy, deterrence, arms control or alliance theory), but it does not deal directly with them. Instead, we ask, what is security? Who or what is being secured and for and by whom? We question whether the state is the appropriate (or only) referent object for security, and particularly draw on analytical models from outside the mainstream. We also ask how to conduct research in critical studies.

PSS 807.2 International Security Studies (3 Credit Units).

This course introduces students to different concepts of security, such as international, global and human security. It helps students to examine and understand the imperial problems in their historical context as well as facilitate an understanding and appreciation of the changes in continuities of security problems from the cold war to the present. It also helps students to develop an in-depth understanding of different approaches to security problems, both in their historical context as well as contemporary debate. It exposes students to develop critical understanding of the complex dimensions of security and the nature of various threat to security. The course will also examine the military and non-military approaches to security threats and develop critical facilities to apprise their suitability for meeting contemporary security challenges. Finally, the course also provides students with an intellectual environment for enhancing and testing critical, independent analysis of international and global security.

PSS 808.2 International Organisations, Conflict and Security Management

This course examines the role of key international organisations such as the United Nations, Non-Atlantic Treaty Organisation, European Union and African Union in conflict and security management. The historical background dates back to the First World War through the Second World War, the Cold War and the era of globalisation. The course will pay attention to the flashpoints in international conflicts caused by geopolitical and geostrategic struggles for

influence particularly by the United States, Europe, China, Russia and emerging powers.

SGS 801.2 Management and Entrepreneurship (2 Credit Units)

This Course will cover business environment, General Management, Financial Management, Entrepreneurship Development Feasibility Studies, Marketing and Managerial Problem Solving.

PSS 888.2 M.Sc. Dissertation (6 Credit Units).

The M.Sc. Dissertation should be an original work presented in accordance with the regulations of the Graduate School. It shall be accepted and deemed necessary to have contributed to knowledge.

EXECUTIVE MASTERS OF SCIENCE (M.Sc.) IN CRIMINOLOGY AND POLICE PSYCHOLOGY

ADMISSION REQUIREMENTS

Candidates for the Master of Science degree in Criminology and Police Psychology must have one of the following:

- (a) A good first-degree honour in any discipline with a minimum of second-class lower division.
- (b) A minimum of third-class honours degree from a recognized university plus Postgraduate Diploma in Criminology or in related disciplines at credit level with a CGPA of 3.50.
- (c) Upper Credit in HND with Postgraduate Diploma in Criminology or in related disciplines in a recognized University with a CGPA of 3.50.
- (d) Evidence of NYSC discharge or exemption/exclusion certificate is required.

DURATION OF PROGRAMME

- (a) The Executive M.Sc. Degree in Criminology and Police Psychology shall run for 12 calendar months.

REQUIREMENTS FOR GRADUATION

To qualify for the award of an Executive M.Sc. Degree in Criminology and Police Psychology, a candidate must pass a minimum of 37 credit units comprising core, elective and seminars courses and the Dissertation.

FIRST MODULE

Course Code	Course Title	Credit Unit
CPP 800.1	Introduction to Criminology	3
CPP 801.1	Applied Forensic Psychology	3
SGS 801.1	ICT & Research Methods	2

SECOND MODULE

Course Code	Course Title	Credit Unit
CPP 802.1	Advanced Research Methods in Criminology	3
CPP 803.1	Advanced Theories in Criminology	3
CPP 804.1	Policing and Law Enforcement in and Victimology in Nigeria	3
		9

THIRD MODULE

Course Code	Course Title	Credit Unit
SGS 801.2	Management and Entrepreneurship	2
CPP 805.2	Cybercrime and Forensic Investigation	3
CPP 806.2	Practical Psychology for Policing	3
		8

FOURTH MODULE

Course Code	Course Title	Credit Unit
CPP 807.2	Correctional Facilities, Technology and Crime Prevention and Control	3
CPP 888.2	Dissertation	12
		15

3.06 DETAILED DESCRIPTION OF COURSES

CPP 800.1 Introduction to Criminology (3 Credit Units)

This course is aimed at introducing students to the issues of crime punishment and victimization. Topics covered include: Crime as a social phenomenon; Traditional Contextualization of crime; Trends in contemporary crime, domestic violence. Substance abuse and related crime, Kidnapping, Bandit and crime, the mass media and crime reports and mechanisms for responding to crime in Nigeria.

CPP 801.1 Applied Forensic Psychology (3 Credit Units)

This course has been designed against students with the challenges of working with mentally disordered offenders. The course aims to introduce students to the assessment and treatment of offenders, including thinking about context and considering ethical issues relating to working as a psychologist with this group. The topics taught within this module highlight to students the difficulties that can occur when dealing with mentally disordered offenders

and provide students with an understanding of how such offenders are dealt with within the Nigerian criminal justice system.

SGS 801.1 ICT & Research Methods (2 Credit Units)

This course should cover essentials of spreadsheets, Internet technology, Statistics Packages, Precision and Accuracy of estimate. Principal of Scientific Research, Concept of Hypothesis, Formulation and Testing, Organization of Research and Report Writing.

CPP 802.1 Advanced Research Methods in Criminology (3 Credit Units)

This module provides students with an advanced understanding of the research designs commonly employed within criminology and criminal psychology research. It combines both a theoretical and a practical approach to learning, which enables students to develop the research skills that are essential for completing their MSc thesis. Students will be taught both quantitative and qualitative approaches to criminological research through structured units that cover the entire research process from design to write up.

CPP 803.1 Advanced Theories in Criminology (3 Credit Units)

This course is an advanced study and critical appraisal of various theories of crime causation, including an examination of biological psychological, economic, and sociological perspective on the aetiology of crime. The course focuses on major theoretical approaches to the understanding of crime, and different types of crime and criminal behaviour. The purpose of this course is to provide the students with understanding of nature and causes of crime. This course provides students with an understanding of the issues involved in explaining, defining, and measuring crime. Additionally, the course focuses on the nature and causes of crime as well as on patterns and trends in criminal activity. Biological, psychological, and sociological theories are also discussed as explanations of crime and delinquency

CPP 804.1 Policing and Law Enforcement and Victimology in Nigeria (3 Credit Units)

This course has details on Policing, Law Enforcement, Police Organisation, Police Administration, Functions of the Nigeria Police, Power of the Nigeria Police, Methodology of Policing, Crime Detection, Criminal Investigation, Police Discretion, Police Culture, police Sub-Culture, Community Policing, Police Ethics, Police Deviance, Human Rights, Law, Criminal Procedure, Effective Policing, Efficiency Policing, Reform, Victimology, Restitution and Police Cooperate Social Responsibility.

SGS 801.2 Management and Entrepreneurship (2 Credit Units)

This Course will cover business environment, General Management, Financial Management, Entrepreneurship Development Feasibility Studies, Marketing and Managerial Problem Solving.

CPP 805.2 Cyber Crimes and Forensic Investigation (3 Credit Units)

Cybercrime is closely associated with technology. The course first focuses on technology and crime, (CCTV, Surveillance and tracking: Drone Technology & Terrorism: Software early warning& response, Artificial Intelligence, Networking Technology). The course also explores the major types of cybercrimes and their criminological motivations; current law enforcement and prosecutorial responses to cybercrimes, protected right of computer Users and protection of the accused, existing punishment mandates and transitional issues in cybercrime.

This aspect of the course introduces students to the scientific method used to solve crime by gathering and analysing all crime-related physical evidence to come to a conclusion about a suspect. Topic covered will include: such evidence as blood fluid, finger Prints, residue, hard drives, computers or other technology to consider how any crime was committed.

CPP 805.2 Practical Psychology for Policing (3 Credit Units)

The course introduces students to the link between psychology and police practice and how Psychological knowledge can be applied in everyday police services. Topics covered include: Psychology and Policing, suspects interview strategies, street/neighbourhood psychology for police, police decision making, using nudge psychology to prevent crime and how knowledge of criminal career can be used to detect serious offenders.

CPP 806.2 Correctional Facilities, Technology and Crime Prevention and Control (3 Credit Units)

The course explores the various institution practices and procedure of the criminal justice of Nigeria. Students will be exposed to the roles of the police, court and corrections, as well as how the imposition of punishment affect offenders, victims, families and other members of the community. The course equally looks at the role that technology plays in the apprehension and punishment of offenders.

CPP 808.2 Dissertation (12 Credit Units)

The M.Sc. Dissertation should be an original work presented in accordance with the regulations of the Graduate School. It shall be accepted and deemed necessary to have contributed to knowledge.

DEGREE IN VIEW

Executive Masters in Criminology and Police Psychology.

DURATION OF PROGRAMME.

Twelve (12) calendar Months.

MASTERS IN SECURITY MANAGEMENT

ADMISSION REQUIREMENTS.

- Candidates for admission into the programme shall possess an appropriate Bachelor's Degree of the University of Port Harcourt or any other recognized University. Preference shall be given to candidates doing related jobs in Government Ministries, the Private sector, and Security services.
- Candidates for the Master of Science Degree in Security Management must have one of the following:
 - (a) A good first-degree, Honours in any discipline with a minimum of second-class lower division.
 - (b) A minimum of third-class Honours degree from a recognized university plus Postgraduate Diploma in Criminology or in related disciplines at credit level with a CGPA of 3.50.
 - (c) Upper Credit in HND with Postgraduate Diploma in Criminology or in related disciplines in a recognized University with a CGPA of 3.50.
 - (d) Evidence of NYSC discharge or exemption/exclusion certificate is required.

DURATION OF PROGRAMME.

1. The maximum period allowed for the completion of the M.Sc. Degree shall be 18 months.
2. Students may register for a maximum of 45 units, but assessment for the award of the degree is based on the attainment of 37 units.
3. The M.Sc. in Security Management Degree shall be classified in line with the existing regulations of the School of Graduate Studies (SGS) University of Port Harcourt.
4. The M.Sc. Degree in Security Management shall run for 12 calendar months.

GRADUATION REQUIREMENTS.

To qualify for the award of an M.Sc. Degree in Security Management, a candidate must pass a minimum of 37 credit units comprising core, elective and seminar courses and the Dissertation.

4.05 COURSE CONTENT

The course delivery methods will include lectures, group work, case studies, critical reading, discussion and self-assessment. Students will be exposed to online materials to improve their access to diverse sources of reading.

FIRST MODULE

Course Code	Course Title (Core Courses)	Credit Unit
SGS 801.1	ICT and Research Method	2
PSS 800.1	Advanced Research Methodology & Statistics	2
PSS 801.1	Theoretical Perspectives on Peace and Security.	2
PSM 802.1	Information Security and Technology.	2
		8

SECOND MODULE

Course Code	Course Title (Core Courses)	Credit Unit
PSM.803.2	HRM and Organizational Behaviour	2
PSM.804.2	Theories of Management	2
PSM.805.2	Seminar in Business Administration	2

PSM.813.4	Corrupt Practices & Financial Crime	2
PSM.814.4	Legal Aspects of Security Management and Entrepreneurship.	2
SGS.801.2	Management and Entrepreneurship.	2
PSS 888	Dissertation	6
		14

COURSE DESCRIPTIONS

SGS 801.1 ICT and RESEARCH. (2 CREDIT UNIT).

A study of quantitative methods for solving management problems. Topics covered include data analysis, probability concepts and applications, break-even analysis, critical path method, PERT/B.Sc. sigma six, queuing theory, statistical quality control, forecasting, inventory control, linear programming, location analysis, transportation problems and other topics.

PSS 800.1 Advanced Research Methods & Statistics (2 Credit Unit).

This module introduces students to research methods and how Private Investigators can effectively carry out meaningful research. Research – a way to thinking, formulating a research problem, conceptualizing a research design, constructing an instrument for data collection, selecting a sample, writing a research proposal, collecting data, Processing and displaying data and writing a research report.

PSS 801.1 Theories In Peace And Security Studies (2 Credit Unit).

Students acquire skills in analyzing and applying theories in peace and security studies. These include: The Social Structure Theories by Karl Marx, Dahrendorf and Robert Merton who argue that conflict is a product of the way societies are structured: Human Needs Theory which highlights the prominence of human needs in generating conflict as a result of frustration aggression or relative deprivation: The Social Theories include Games Theory, Just War Theory etc.

PSM 802.1 Information Security & Technology (2 Credit Unit).

Information technology Security is a field involving the protection of computer systems and the prevention of unauthorized use or changes or access of electronic data. It deals with the protection of software, hardware, networks and its information. Due to the heavy reliance on computers in the modern industry that store and transmit an abundance of confidential information about people and assets, as the security of Information is a critical function and needed insurance of many businesses. The module also covers the practice and principles of “e-security”.

PSM.803.2 HRM &Organisational Behaviour (2 Credit Unit).

The course is a hybrid that deals with the intricacies of behavioural variables in organizations, and the managers that run them and blends these with HRM major functions. It also delves into environmental factors that create or affect such behaviours, interactions of individuals, groups and organization; diversity, emotion and moods, attitude and job

satisfaction, personality, group dynamics, communication and conflict management, values and culture, structure, and motivation management. The course equally deals with pertinent issues of biblical principles, ethics and their interactions as well as application in business organizations.

PSM.804.2 Theories of Management (2 Credit Unit).

Theory, Definition and Building Blocks. The use of theories in management and research. The history of management theories. Fredrick Taylor and Scientific Management. Elton Mayo and the Human Relations Approach. Hertzberg and the Two Factor Theory. Management by Objectives. Contingency Theory of Management. Total Quality Management. Theory Z and Leadership Theory of Management.

PSM.805.2 Seminar in Business Administration (2 Credit Unit).

Students will write seminar papers either as individuals or groups and present them using technology to develop skill in presentation of papers.

PSM 806.2 Criminal Investigation (2 Credit Unit).

The course comprehensively covers the very latest in investigative tools and techniques as well as established investigative procedures. The module stresses practical procedures, techniques, and applications of private and public investigations to provide students with a solid foundation in criminal investigation. It seamlessly integrates coverage of modern investigative tools alongside discussion of established investigation policies, procedures, and techniques for the private investigator. The course also features updated, enhanced coverage of such important topics as terrorism and homeland security, cybercrime, forensics and physical evidence, federal law enforcement investigations, report writing, crimes against children, photography and sketching, preparing and presenting cases in court, and identity theft.

PSM.807.3 Critical Thinking and Intelligence Analysis (2 Credit Unit).

Everyone thinks; it is our nature to do so. But much of our thinking, left to itself, is biased, distorted, partial, uninformed or down-right prejudiced. Yet the quality of our life and that of what we produce, make, or build depends precisely on the quality of our thought. Critical thinking is the art of analyzing and evaluating thinking with a view to improving it. Critical thinking is, self-directed, self-disciplined, self-monitored, and self-corrective thinking. This module focuses on the essence of critical thinking concepts and tools and students can use it to design instruction, assignments, and tests in any subject. Students are also taught on how Critical Thinking can also be used to improve learning in any content area and how its generic skills apply to all subjects -

12 ways of learning, What is critical thinking, Thinking strategies, Why critical thinking, Model of critical thinking, Key critical thinking skills, Brain power for critical thinking and How a critical thinker reasons, Process of understanding, 3 levels of thought, How to build your brain, Standards-Elements-Traits, Critical thinking uses, Dangerous toxins to the brain and Food required for brain enhancement. Criminal Intelligence- Introduction to intelligence, the intelligence process, National intelligence model, Evaluation of source and data, Analysis and analytical process, Basic Analysis Techniques – Link Analysis, Basic Analysis Techniques –Event Charting, Basic Analysis Techniques – Flow Analysis, Basic Analysis Techniques – Tel Analysis, Inference Development, Presentation of Results, Criminal Info & Intelligent Guidelines, Making Recommendations, Criminal Intelligent Databases.

PSM.808.3 Forecasting Terrorism: Predictive Analytical Techniques (2 Credit Unit).

The module focuses on methodology, scope and limitations of Terrorism, observed patterns and trends, Predictive Analytical Techniques, Forecast Global Terror Threats, Data collection models for forecasting, Data management and storage; Designing routes for ventilating forecasts for national strategic security management, and Designing a synergy model for national terrorism profiling

The module focuses on methodology, scope and limitations of Terrorism, observed patterns and trends, Predictive Analytical Techniques, Forecast Global Terror Threats, Data collection models for forecasting, Data management and storage; Designing routes for ventilating forecasts for national strategic security management, and Designing a synergy model for national terrorism profiling.

PSM.809.3 Strategic Security Management (2 Credit Unit).

The history of security and the role of security professionals, Terrorism and national strategies, crime prevention through environmental design, Violence, theft and drugs in the workplace, Insider threats, pre-employment screening and executive/personnel protection, The security of physical structures, Threats to information security, including malware and bonnets and risks to proprietary information and communication, Security law and liabilities, Investigations, interrogations and surveillance, Risk management, threats from natural disasters and business continuity/enterprise resilience, Critical infrastructures and key national resources, The future of security technology. The also course examines processes, tools and systems employ in the management of a community to ensure safety of persons and properties. It content covers community

policing, domestic abuse, homicide, death investigation, interrogation techniques, community crime database development, and surveillance strategies. Furthermore, the course comprehensively looks at the possibility of setting up a private security outfit (business proposal); legal and business requirements. It covers areas like proposal and prospectus development, funding, finding clients/marketing, operational logistics, equipment and facilities, location advantage, business registration, working with law and enforcement agencies and the ethical issues in private security.

PSM.810.3 Criminal Profiling – Strategies and Techniques (2 Credit Unit).

This module focuses on the deductive profiling method developed by criminal profilers and motivated by the limited knowledge available regarding the criminal profiling process. Deductive profiling is different from other forms of profiling in that it focuses on criminal profiling as an investigative process, solving real crime through an honest understanding of the nature and behaviour of criminals. It approaches each criminal incident as its own universe of behaviours and relationships. The course emphasizes the most crucial tenet that any good criminal profiler should adhere to, the enthusiastic desire to investigate and examine the facts. It also include false reports, psychological autopsies, criminal profiling in court, stalking, domestic homicide, sexual asphyxia, and staged crime scenes - History of criminal profiling ,Inductive criminal profiling, Deductive criminal profiling, Case assessment, Introduction to crime reconstruction, Evidence dynamics, Wound pattern analysis, Victimology, The psychological autopsy, False reports, Crime scene characteristics, Understanding modus operandi, Staged crime scenes, Understanding offender signature, Criminal motivation, Offender characteristics, Criminal profiling in court, Fire & explosives: Behavioural aspects, Psychopathic behaviour, Sadistic behaviour, Domestic homicide, Sexual asphyxia, Stalking, Serial homicide, Serial rape, Cyber-patterns – Criminal behaviour on the internet, Ethics and the criminal profiler.

PSM 811.3 Marketing of Security Services (2 Credit Units)

This course underscores the importance of marketing of services generally and security services in particular. It exposes the candidates to the rudiments of the application of marketing strategy in delivering security services. It covers such areas as, the concept and meaning of services and security services, types of security services, services marketing mix, nature and scope of security services, service marketing organization, segmentation of security service markets, security

service marketing environment, client/customer relationship management.

PSM.812.4 Forensics and Crime Scene Investigations (2 Credit Unit).

When forensic recoveries are properly processed and recorded, they are a major intelligence source for crime investigators and analysts. Forensic Intelligence takes the subject of forensics one step further and describes how to use the evidence recovered at crime scenes for extended analysis and the dissemination of new forensic intelligence. The module supplies practical advice on how to use all forensic recoveries in a modern, analysis-driven, intelligence-led policing environment. It also covers evidentiary procedures related to each of the crime types, as well as the production of intelligence products from police data. By mastering the basic crime scene investigation recording and intelligence processes in this course, student investigators can make the best use of all their forensic recoveries- Introducing forensic intelligence, The value of forensics in crime analysis and intelligence, Research and analytical processes, Forensic evidence recovery, processing and best practice, Best practice in recovery of forensic evidence from crime scenes, The need for investment in information technology, Arriving at the crime scene – initial response and prioritization, Preliminary documentation and evaluation of the crime scene, Processing the crime scene, Completing and recording the crime scene investigation, Crime scene equipment and Practical crime scene management.

PSM.813.4 Corrupt Practices And Financial Crime (2 Credit Unit)

This module teaches a management system and leadership philosophy that effectively co-ordinates the sharing of criminal information and maximizes strategic leadership and decision making. It also covers the proof of corrupt practices and financial crimes –Types of Financial crimes, crime linked to terrorist financing ,motivation of employees to fight fraud, vulnerability of financial sector to fraud, Introduction to Intelligence-led policing, Critical thinking and the intelligence analyst, Organizational strategies, Crime analysis strategies, COMPSTAT Integration, strategic leadership and communication, Leadership and planning,

Analytical products, Analytical models and charting, Investigative strategies and Tactical leadership Strategic leadership, ILP – meeting criminal intelligence requirements, Removing the barriers, Synchronization of COP and POP, Strategic Planning, Intelligence analysis, Crime analysis, Criminal investigative analysis, Analytical reporting and Intelligence sharing.

PSM.814.4 Legal Aspects of Security (2 Credit Unit)

Areas to be covered include : Criminal law and procedures, Civil law and procedures, Homeland or national security procedures, Privacy laws and regulations, Information resources and methods of conducting legal research, Statutes, regulations and case law governing or affecting the security industry and the protection of people, property and information, Criminal law and procedures, Civil law and procedures, Employment law (e.g., wrongful termination, discrimination and harassment), Investigation processes, Preservation and rules of evidence, Fact-finding processes and techniques, Interview interrogation processes and techniques, Key concepts in the preparation and/or response to requests for proposals, Contract law, indemnification, and liability insurance principles, Federal laws governing labour relations, including union and management issues, Laws pertaining to developing and managing investigative programs, Laws pertaining to the collection and preservation of evidence, Laws pertaining to managing surveillance processes, Laws pertaining to managing investigative interviews, Laws related to the rights of employees and the employer in conducting an investigation.

SGS 801.2 Management and Entrepreneurship (2 Credit Units)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

PSS 888 Dissertation (6 Credit Unit)

Independent study of a management or security management topic duly approved by the department under the supervision of a lecturer appointed in the department.

4.07 LIST OF ACADEMIC STAFF

S/N	NAME	QUALIFICATION	AREA OF SPECIALISATION	DESIGNATION
1.	Ifeanacho, M. I.	B.A., M.A. (UCC Cork Ireland), Ph.D. (UPH).	Human Resources Management	Professor (Director)
2.	S.B. Arokoyu	B.Sc., PGDE, M.Sc., Ph.D. (UPH)	Urban and Regional Geography	Professor
3.	Regina Rex Eleazu-Uriri PhD	NCE (Fed. Coll of Edu.Abiokuta) BSc (Ed) (UNICAL) PGD Computer Science(NOUN) MEd Education (UNICAL) Ph.D. (UNICAL).	Security Management	Industry Lecturer
4.	Anthony Abiola Allen	B.Sc.(UNILAG) MBA – Banking and Finance(UNILAG) Ph.D. Forensic Criminology(UNILAG)	Security Management	Industry Lecturer
5.	Chinedu N. Ogbuji	Ph.D(MKT-ABSU), MSc. (MKT-PR-UNEC), MBA(MKT-ABSU), PGDE(NOUN).	Social/Services Marketing	Professor
6.	Chima B. Onuoha,	Ph.D(MGT-ABSU), MBA(MGT-UNEC), MBA(Finance-ABSU), MSc.(International Affairs and Diplomacy) (ABSU), PGDE(NOUN).	Strategic Management	Professor
7.	Abu, O.P.	B.Sc., M.Sc., Ph.D. (UPH)	Industrial Analysis, Medical Sociology & Social Gerontology	Industry Lecturer
8.	Badey, Dinebari K.	B.Sc., MSc., Ph.D. (UPH)	Development Studies	Senior Lecturer
9.	Dr. Kiale Niyiayana	B.Sc., M.Sc. (UPH) M.Sc.(kings College ,London) Ph.D.(UNN).	International Relations (Conflict and Peace Studies)	Senior Lecturer
10.	Dr. (Mrs) Onyinye O. Durueke	B.A., M.A., and Ph.D.(Ibadan)	Gender Studies/ Peace and Conflict Studies	Senior Lecturer
11.	Dr.Gbenemene Kpae	B.Sc., M.A. (Missouri USA) Ph.D. (UPH)	Criminology and Environmental Conflict	Senior Lecturer
12.	Dr. Mezie-Okoye, Charles C.	B.Sc., M.Sc., Ph.D. (UPH).	Peace and Conflict Studies/ Development Studies	Senior Lecturer

MASTERS IN CYBER SECURITY

ADMISSION REQUIREMENTS.

- Candidates for admission into the programme shall possess an appropriate Bachelor's Degree of the University of Port Harcourt or any other recognized University. Preference shall be given to candidates doing related jobs in government ministries, the private sector, and security services.
- Candidates for the Master of Science Degree in Cyber Security must have one of the following:

- a) A good first-degree, Honours in any discipline with a minimum of second-class lower division.
- b) A minimum of third-class Honours degree from a recognized university plus Postgraduate Diploma in Criminology or in related disciplines at credit level with a CGPA of 3.50.
- c) Upper Credit in HND with Postgraduate Diploma in Criminology or in related disciplines in a recognized University with a CGPA of 3.50.

- d) Evidence of NYSC discharge or exemption/exclusion certificate is required.

DURATION OF PROGRAMME.

1. The maximum period allowed for the completion of the M.Sc. Degree shall be 18 months.
2. Students may register for a maximum of 45 units, but assessment for the award of the degree is based on the attainment of 37 units.
3. The M.Sc. in Cyber Security Degree shall be classified in line with the existing regulations of the School of Graduate Studies (SGS) University of Port Harcourt.
4. The M.Sc. Degree in Cyber Security shall run for 12 calendar months.

GRADUATION REQUIREMENTS.

To qualify for the award of a M.Sc. Degree in Cyber Security, a candidate must pass a minimum of 37 credit units comprising core, elective and seminars courses and the Dissertation.

FIRST MODULE

Course Code	Course Title (Core Courses)	Credit Unit
SGS 801.1	ICT and Research Method	2
PCS 801.1	Advanced Research Methodology	2
PCS 800.1	Data Integrity and Authentication.	2
PCS.801.1	Cyber Security Governance and Cyber Law	2
		8

COURSE DESCRIPTIONS

SGS 801.1 ICT & RESEARCH (2 CREDIT UNIT)

A study of quantitative methods for solving management problems. Topics covered include data analysis, probability concepts and applications, break-even analysis, critical path method, PERT/B.Sc. sigma six, queuing theory, statistical quality control, forecasting, inventory control, linear programming, location analysis, transportation problems and other topics.

PCS 801.1 ADVANCED RESEARCH METHODS (2 CREDIT UNIT).

This module introduces students to research methods and how Private Investigators can effectively carry out meaningful research. Research – a way to thinking, formulating a research problem; Conceptualizing a research design, constructing an instrument for data collection, selecting a sample, writing a research proposal, collecting data, Processing and displaying data and writing a research report.

PCS 800.1 DATA INTEGRITY AND AUTHENTICATION (2 CREDIT UNIT).

This course explains the concepts of authentication, authorization, access control, and data integrity. It explains the various authentication techniques and their strengths and weaknesses. It also explains the various possible attacks on passwords. Topics include:

- Authentication strength:** Multifactor authentication, Cryptographic tokens, Cryptographic devices, Biometric authentication, One-time passwords, and Knowledge-based authentication.
- Password attack techniques:** Dictionary attack, Brute force attack, Rainbow table attack, Phishing and social engineering, Malware-based attack, Spidering, Off-line analysis, and Password cracking tools.
- Password storage techniques:** Cryptographic hash functions (SHA-256, SHA-3, collision

resistance), Salting, Iteration count, and Password-based key derivation.

- d) **Data integrity:** Message authentication codes (HMAC, CBC-MAC), Digital signatures, Authenticated encryption, and Hash trees.

PCS.801.1 CYBER SECURITY GOVERNANCE AND CYBER LAW (L-2; T-0; P-0) (2 CREDIT UNITS)

This course aims to provide students with a broad understanding of the current legal environment in relation to cyberspace. This includes both domestic and international laws as well as the application of jurisdictional boundaries in cyber-based legal cases. Students should have a strong understanding of current applicable legislation and a strong background in the formation of these legal tools.

This course provides an overview of the legal doctrines and principles that apply to the operation and development of computer technology and the Internet. Topics include: issues related to jurisdiction, constitutional issues of free speech, property rights, e-business, and current developments in legislation and case law.

- a) **Constitutional foundations of cyber law:** Executive power, Legislative power, First amendment, Fourth amendment, and Tenth amendment.
- b) Intellectual property related to cyber security: copyright acts
- c) **Privacy laws:** Laws governing Internet privacy, Laws governing social media privacy, and electronic surveillance laws
- d) **Data security law:**
- e) **Digital evidence:**

PCS.803.2 INFORMATION SECURITY ENGINEERING (2 CREDIT UNIT).

It establishes the foundations for designing, building, maintaining and assessing security functions at the end- user, network and enterprise levels of an organization. The faculty instruction, readings, lab exercises, exam, and required student writing assignment are coordinated to introduce and develop the core technical, management, and enterprise-level capabilities that will be developed throughout the information security engineering program.

PCS.803.2 CRYPTOGRAPHIC TECHNIQUES (2 CREDIT UNIT)

Students in this course explores symmetric and asymmetric cryptography, key management, and encryption algorithms such as DES, AES, RSA, and PGP. Discusses PKI, SSL, and VPN including how to use protocols, hashing, digital signatures, and certificates and certificate authorities. It covers policies, procedures, and methods for the proper use of cryptography in secure systems.

Symmetric (private key) ciphers: Block ciphers and stream ciphers (pseudorandom permutations, pseudo-random generators), Feistel networks, Data Encryption Standard (DES), Advanced Encryption Standard (AES), Modes of operation for block ciphers, Differential attack, linear attack, and Stream ciphers, linear feedback shift registers, RC4. Asymmetric (public-key) ciphers: Theoretical concepts (Computational complexity, one-way trapdoor functions), Naive RSA, Weakness of Naive RSA, padded RSA, Diffie-Hellman protocol, El Gamal cipher, Other public-key ciphers, including Goldwasser Micali, Rabin, Paillier, McEliece, and Elliptic curves ciphers.

PCS.804.2 SECURITY STRATEGIES FOR WEB APPLICATIONS AND SOCIAL NETWORKS (2 CREDIT UNIT).

This course provides an in-depth look at how to secure mobile users as customer-facing information migrates from mainframe computers and application servers to Web-enabled applications. The course provides a comprehensive explanation of the evolutionary changes that have occurred in computing, communications, and social networking. In addition, this course covers how to secure systems against all the risks, threats, and vulnerabilities associated with Web-enabled applications accessible via the Internet.

PCS.805.2 SYSTEMS SECURITY (2 CREDIT UNIT).

Security Principles, Account Security, File System Security, Assessing Risk, Risk Analysis, and Encryption. The student's basic network and operating system skills will be expanded to include planning, implementation, and auditing of a system's security package. Secure design and secure coding principles, practices, and methods including least privilege, threat modeling, and static analysis. Covers common vulnerabilities such as buffer overruns, integer overflows, injection attacks, cross-site scripting, and weak error handling.

PCS 806.3 INFORMATION SECURITY RISK ANALYSIS AND MANAGEMENT (2 CREDIT UNIT)

Quantitative risk assessment, Qualitative risk assessment, relating threat to vulnerability, defining impact, risk mitigation, risk transference or avoidance, Communicating Risks and Risk management strategies, Risk management technologies

PCS 807.3 CLOUD COMPUTING SECURITY (2 CREDIT UNIT)

Introduction to cloud computing, cloud computing vendors cloud Computing threats, Cloud Reference Model. Introduction to data centers: servers, data

storage, networking and virtualization. Data center networking, Introduction to server virtualization software: VMware VSphere. Virtual machine management: configuration, placement and resource allocation. Power efficiency in virtual data centers. Fault tolerance in virtual data centers. The Cloud Cube Model and Security or Cloud Computing. Security in the Cloud, Cloud Threats, Threat Mitigation, Cloud and Security Risks, Real World Issues with Cloud Computing, Cloud Security Alliance, National Institute of Standards and Technology, Information Assurance Framework, Cloud Audit, Cloud Management Audit/Assurance Program, Cloud Business Continuity Planning.

PCS 808.3 INFORMATION STORAGE SECURITY (2 CREDIT UNIT).

- a) Disk and file encryption: hardware-level versus software encryption.
- b) Data erasure: Overwriting, degaussing, Physical destruction methods, and Memory remanence.
- c) Data masking: Data masking for testing, Data masking for obfuscation, and Data masking for privacy.
- d) Database security: Access/authentication, auditing, and App integration paradigms.
- e) Data security law: legal aspects of data security, laws and policies that govern data (e.g., HIPAA). It also provides an introduction to other law-related topics in the Organizational Security knowledge area.
- f) Information Security Models: Basic concepts, Access control list (ACL), Bell-La Padula model, Biba model, Brewer and Nash model, Capability-based security, Clark-Wilson model, Context-based access control (CBAC), Graham-Denning model, Harrison-Ruzzo-Ullman (HRU), Lattice-based access control (LBAC), Mandatory access control (MAC), Multi-level security (MLS), Non-interference (security), Object-capability model, Role-based access control (RBAC), Take grant protection model, Protection ring, High-water mark (computer security).

A survey of emerging and leading technologies in the cyber security field. The aim is to research and evaluate emerging technologies and determine secure implementation strategies for best-fit business solutions. Topics include evolutionary technology development and adoption in organizations.

PCS 809.3 ETHICAL HACKING AND REVERSE ENGINEERING (2 CREDIT UNIT).

An exploration of techniques and technologies for understanding the operation of malicious software and attacks. It discusses and explores techniques for detection, identification and prevention. Presents reverse engineering of code and network exploits as a method for understanding and development of countermeasures

PCS 810.4 WEB & SOCKET PROGRAMMING (2 CREDIT UNIT).

Markup Languages Development Tools/Environment overview of network architectures, applications (HTTP, FTP), network programming interfaces (e.g., sockets), transport (TCP, UDP), flow control, congestion control, IP, routing, IPv6, multicast, data link protocols, error-detection/correction, multiple access, LAN, Ethernet, wireless networks, and network security. Examples will be drawn primarily from the Internet (e.g., TCP, UDP, and IP) protocol suite. Over the course of the quarter, students' program in C++ on UNIX systems to build web clients and servers, and a fully compatible TCP/IP stack that can run them.

PCS 811.4 INFORMATION DISASTER RECOVERY (2 CREDIT UNIT).

Disaster Recovery Philosophy, Principles and Planning, Contingency Plan Components, Agency Response Procedures and Continuity of Operations, Planning Processes, Continuity and Recovery Function, Steps of Disaster Recovery Planning, Role of IT and Network Management in Disaster Recovery, Developing the Disaster Recovery, Executive Support, DRP Leadership, Cross Department Subcommittee, Department Level Teams, Relationship between IT and Network Staff with Departments, Planning Team Skill Inventory, DRP Team applications and data and Construct a comprehensive lifecycle approach to Web application security.

PCS 812.4 MULTIMEDIA APPLICATIONS AND SECURITY (2 CREDIT UNIT)

This course addresses the design and implementation of secure multimedia applications. Concentration is on writing software programs that make it difficult for intruders to exploit security holes. The course emphasizes writing secure distributed programs in Java. The security ramifications of class, field and method visibility are emphasized

PSS 888 DISSERTATION (6 CREDIT UNIT).

Independent study of a management or security management topic duly approved by the department under the supervision of a lecturer appointed in the department.

LIST OF ACADEMIC STAFF

S/N	NAME	QUALIFICATION	AREA OF SPECIALISATION	DESIGNATION
1.	Ifeanacho, M. I.	B A., M.A. (UCC Cork Ireland), Ph.D. (UPH)	Human Resources Management	Professor (Director)
2.	Anthony Abiola Allen.	B.Sc,(UNILAG) – MBA – Banking and Finance(UNILAG) Ph.D.(UNILAG) .	Forensic Criminologist.	Professor
3.	Ugwu Chidiebere	B.Sc., M.A., Ph.D. (UPH)	Machine Learning and Intelligent Systems.	Professor
4.	Regina Rex Eleazu-Uriri PhD	NCE (Fed. Coll of Edu.Abiokuta) BSc (Ed) (UNICAL) PGD Computer Science(NOUN) MEd Education .(UNICAL) Ph.D. (UNICAL).	Security Management	Industry Lecturer
5.	Ohale, L.	B.Sc., M.Sc., Ph.D. (UPH)	Economic Development	Professor
6.	Abu, O.P.	B.Sc., M.Sc., Ph.D. (UPH)	Industrial Analysis, Medical Sociology & Social Gerontology	Senior Lecturer
7.	Badey, Dinebari K.	B.Sc., M.Sc., Ph.D. (UPH)	Development Studies	Senior Lecturer
8.	Dr. Kiale Nyiayaana	B.Sc., M.Sc. (UPH) M.Sc.(Kings College ,London) Ph.D.(UNN).	International Relations (Conflict and Peace Studies)	Senior Lecturer
9.	Dr. (Mrs) Onyinye O. Durueke	B.A., M.A., and Ph.D. (Ibadan).	Gender Studies/Peace and Conflict Studies	Senior Lecturer
10.	Dr.Gbenemene Kpae	B.Sc., M.A., Missouri, USA, Ph.D. (UPH).	Criminology and Environmental Conflict	Senior Lecturer
11.	Dr. Mezie-Okoye, Charles C.	B.Sc., M.Sc., Ph.D. (UPH).	Peace and Conflict Studies/ Development Studies	Senior Lecturer

Ph.D. PROGRAMME IN PEACE AND SECURITY STUDIES

Entry Requirement

Eligible candidates for admission into the Ph.D. Programme must possess a Master's Degree in Peace & Security Studies from recognised University and should have an average score of 60% or its equivalent grade. Candidates who possess a Master's degree in other fields of study must also have a postgraduate diploma or Master's Degree in Peace and Security Studies with a minimum of grade "C" to qualify for admission. Admission will also be based on interview performance.

Duration of Programme

(a) The Full-Time Ph.D programme in Peace and Conflict Studies should run for a minimum of Six (6) quarters or a maximum of Ten (10) quarters.

(b) The Part-time programme should run for a minimum of Eight (8) quarters, and a maximum of Twelve (12) quarters.

Requirements for Graduation

A candidate must have fulfilled the following conditions to be awarded a Ph.D. degree in Peace and Security Studies.

FIRST SESSION MODULE

Course Code	Course Title	Credit Unit
PSS 900.1	Peacekeeping and International Conflict Resolution	3
PSS 901.1	Applied Research Methodology in Peace and Conflict	3

PSS 902.1	African and Western approaches to Negotiation and Mediation	3	
		9	DESCRIPTION OF COURSES
SECOND MODULE			PSS 900.1 Peacekeeping and International Conflict Resolution (3 Credit Units)
Course Code	Course Title	Credit Unit	The overall aim of the course is to provide the students with the basic understanding of the field of conflict resolution and its application – theoretical and practically – to peacekeeping intervention in contemporary international conflict. The course explores the emergence and development of the academic discipline of conflict resolution and its relations to the evolution of peacekeeping. The contribution of conflict resolution theory and practice to peacekeeping practice are identified early on and considered throughout the course. The nature of conflict and the dynamics of contemporary conflict are defined, along with the key concepts and techniques for solving conflicts. The course explores the significant areas that will improve responses to today’s complex emergencies, including conflict analysis and mapping, early warning and conflict prevention, contingency and complementarities approaches, interagency coordination, post-conflict peace building and reconciliation, cultural understanding and gender awareness.
PSS 903.1	Refugees and Internally Displaced Persons (IDPs)	3	
PSS 904.1	Framework for Economic Reconstruction in Conflict Affected States	3	
PSS 905.1	Race, Racism and Xenophobia in Africa	3	
		9	
THIRD MODULE			PSS 901.1 Applied Research Methodology in Peace and Conflict Studies (3 Credit Units)
Course Code	Course Title	Credit Unit	This course aims at familiarizing doctoral students with the ways in which a vague interest in research is transformed into a theoretically informed puzzle with concrete hypotheses. It clears the ground for students to discover how an appropriate research method is chosen, how a research question/hypothesis is tested, what problems can be encountered in data collection and analysis, how the data can be interpreted, and how the results can be effectively presented. With these objectives in perspective, the course deals with fundamental issues of philosophy of science; epistemology; ontology; empirical, rational and phenomenological approaches; and case and comparative studies. It also examines the formulation of research aims, the roles of the hypothesis, theories as tools to explain reality, definitions and delimitations, quantitative methods, qualitative methods and mixed methods.
PSS 906.1	Terrorism and Global Security	3	
PSS 907.1	Peacebuilding, Democracy and Development	3	
PSS 908.1	Arms Control and Disarmament	3	
		9	
SECOND SESSION MODULE			PSS 902.1 Refugees and Internally Displaced Persons (IDPs) (3 Credit Units)
FIRST MODULE			This course examines the origin, causes, and dimensions of refugee crisis both in Africa and the large for managing refugee crisis-international, regional and sub-regional case studies. The course also explores the problem and management of internally displaced persons within states and regions, resulting from armed conflicts, internal strife and violation of human rights and disasters with emphasis
Course Code	Course Title	Credit Unit	
PSS 909.2	Advanced Seminar in Peace and Conflict in Africa	3	
PSS 910.2	National Security and Human Rights	3	
PSS 911.2	Civil War, Violent Conflict and Displacements in Africa	3	
		9	
SECOND MODULE			
Course Code	Course Title	Credit Unit	
PSS 999..2	Thesis	6	
		6	
THIRD MODULE			
Course Code	Course Title	Credit Unit	
PSS 999.2	Thesis	6	
PSS 999 .2	Thesis	6	
		18	

on children, women, and other vulnerable groups; a critical look at the capacity and willingness of governments and institutions to address the human society needs of internally displaced persons (IDPs) and how the responses of international community can be better enhanced; socio-psychological dimension of IDPs.

PSS 903.1 Framework for Economic Reconstruction in Conflict Affected States (3 Credit Units)

This course examines a range of a range of challenges and the variety of resources available in the area of economic and conflict management. Discussions focus on the role of economic actors and the inter-relations between conflict and development. It also explores the potential of economic policies and activities to forestall conflict and promote Peace. The course also aims at developing skills required to apply and assess targeted economic interventions and conflict management while encouraging students and guide development in a way that sustains security and welfare as well as economic growth.

PSS 904.1 Terrorism and Global Security (3 Credit Units)

Detailed and careful investigations of international security with emphasis on the activities of both local and international terrorist groups and organisations, such as Boko Haram, ISIS, etc. Methods of recruitment of members, funding of methods of operations (airline bombing, suicide bombing, targeted assassinations, the establishment of caliphates, act of soft targets), are critically examined, as well as the international responses to the threat of global security.

PSS 905. 1 Peacebuilding, Democracy and Development (3 Credit Units)

This course focuses on the issues of planning and the implementation of peace intervention efforts and strategies for conflict transformation. This is done after performing conflict analysis and the requisite baseline study. The three major dimensions of conflict and peacebuilding will be presented: individual, relational, and cultural/structural concerns. Peace intervention aims to bring about transformation in all dimensions with varied focus on inter- and intra-state wars. Post-conflict discussions include mechanisms of transcending incompatibility; resolution and its basic element ; peace agreements; problems of change, the need for trust and legitimacy; Disarmament, Demobilization, and Reintegration (DDR); the security dilemmas and transitional justice; power-sharing and prospects of transition to democracy, particularly in multi-ethnic settings; and rehabilitation and equitable economic development. The course will use practical examples of post-conflict processes and

the struggle to sustain and deepen transitional democracy.

PSS 906.2 Negotiations and Mediation for Peace: African and Western Approaches (3 Credit Units)

This course introduces students to the significance of culture in resolving conflict within and between cultural groups. It is designed to allow students to develop an advanced and critical understanding of African approaches to conflict resolution. It makes an extensive use of case studies in order to encourage students to reflect on the ways in which African approaches relate to theories and practices in the field of conflict resolution, and to explore their potential in the prevention, management and resolution of contemporary conflicts in Africa.

PSS 907.2 National Security and Human Rights (3 Credit Units)

This course gives students a clear understanding of what constitutes human rights. The course also explores why human rights and human security have become such major players in policy, as well as important aspects of the work that NGO's and other non-state actors conduct. Of particular importance to this course is conducting an analysis of the role of civil society (human rights NGO's, church groups, and grassroots groups). The course features important writings by practitioners and experts in the field. The mantra for this course will be to challenge all givens, in an effort to promote critical thinking and awareness of implications while attempting to disabuse various popular and sometimes unfounded narratives. This course will provide the CPSS students a basic, but thorough, survey of the theories, international legal regimes, domestic political forces, key mechanisms, and global debates related to the international human rights movement in the context of Nigeria national security policy. Unlike surveys of the human rights movement or courses in international human rights law, the course is uniquely designed with the student who specializes in a national security-related field in mind.

PSS 908.2 Arm Control and Disarmement (3 Credit Units)

The course addresses issues arising from the anxiety over the proliferation of weapons of mass destruction. The renaissance in nuclear power acquisition and the rebirth of national security interest protections demonstrated in the slogan "American First" and the exist of Britain from the European Union have raised issues that influenced international Peace and Security during the cool war. The students will acquire knowledge o the LPT-Licit nuclear powers (N5) amd NPT Article 6 obligation to disarm. The International Intrigues in limiting the thress states that are currently acquiring

nuclear capabilities. Non -inclusion of non- state groups in the NPT intergovernmental agreements-all against the backdrop of nuclear power for civilian use, nuclear non-proliferation and disarmament.

PSS 909.2 Advanced Seminar in Peace and Conflict Studies in Africa (3 Credit Units)

Students are expected to research on the topical area in a field of Peace and Conflict Studies other than their preferred area of specialization under the guidance of an assigned staff. The seminar is expected to be presented to the panel of Centre’s Ph.D examiners and assessed accordingly.

PSS 910 .2 Race, Racism and Xenophobia African in Diaspora studies(3 Credit Units)

Students will learn about the concepts of race, racism and xenophobia and how they have impacted on African relations with the rest of the world, as well as African experience in the diaspora. **Course Description:** Africa’s contact and relationship with Europe, America, China, Arabia and other Asian countries have inflicted African peoples with the stigma and discrimination of racism. This course will examine the concepts of race, racism and xenophobia and they shaped Africa’s relationship the rest of the world. It will also specifically examine the African experience with racism and xenophobia in the USA, Europe and South Africa, as well in world politics, sports, education, science and technology.

PSS 910.2 Civil Wars, Violent Conflicts, and Displacements in Africa (3 Credit Units)

Students will learn about the impact of civil wars on the political, social and economic development of Africa; and how it has led to the displacement of Africans from their various homes and countries

Course Description: This course will explore the problems of civil wars and violent conflict in Africa, and how they have impacted on the political, economic and social development in Africa. The course will also explore the role of African and international organizations in the management and resolution of conflicts in Africa. Another important component of the course is how violent conflicts have led to internal displacements and refugee crises across and beyond Africa.

PSS 911 2 .Natural Resources and Resource Conflicts in Africa (3 Credit Units)

Students will learn about the role of natural resources in African development and also how natural resources has triggered violent conflicts in African countries. **Course Description:** Natural resources have been a veritable tool for economic development in Africa. But it has also been an important factor in the onslaught of violent conflict and civil wars in Africa. This course will examine how natural resources such as crude oil, gold, diamond, cobalt, uranium, amongst others, have led to violent conflicts in African countries. It will also explore the role of internal and external factors in these conflicts, and what role the international community have played in aiding and abetting these conflicts

PSS 999.2 Thesis (6 Credit Units)

This is a programme of individual research bearing on each student's field of specialization. The focus of the student's research is expected to be on generating new ideas on the processes of Peace and Conflict resolution. The topic of research must fall within one of the research areas in Peace and Security Studies.

ACADEMIC STAFF

S/N	NAME	QUALIFICATION	AREA OF SPECIALISATION	DESIGNATION
1.	Professor Ifeanacho M. I.	B.A.,M.A.,(Cork/Ireland) Ph.D.(UPH)	Human Resources Management	Professor (Director of the Centre)
2.	Professor S. B. Arokoyu	B.Sc., PGDE, M.Sc., Ph.D. (UPH)S	Urban and Regional Geography	Professor
3	Professor Walter C. Ihejirika	B.Sc., PGD, M.Sc., Ph.D. (Rome)	Development communication and Media Studies	Professor
4.	Professor Ohale L.	B.Sc., M.Sc., Ph.D. (UPH)	Economic Development	Professor
5.	Dr. Abu O. P.	B.Sc., M.Sc., Ph.D. (UPH)	Industrial Analysis, Medical Sociology & Social Gerontology	Senior Lecturer
6.	Dr. Badey Dinebari K.	B.Sc., M.Sc., Ph.D. (UPH).	Development Studies	Senior Lecturer

7.	Dr. Kiale Nyiayaana	B.Sc (UPH), M.Sc.,(London) Ph.D.(UPH)	International Relations (Conflict and Peace Studies)	Senior Lecturer (Deputy Director)
8.	Dr. Onyinye O. Durueke	B.A., M.A., and Ph.D. (Ibadan).	Gender Studies/Peace and Conflict Studies	Senior Lecturer
9.	Dr. Gbenemene Kpae	B.Sc., M.A., Missouri, (USA), Ph.D. (UPH).	Criminology and Environmental Conflict	Senior Lecturer
10.	Dr. Mezie-Okoye, Charles C.	B.Sc., M.Sc., Ph.D. (UPH).	Peace and Conflict Studies/ Development Studies	Senior Lecturer
11.	Dr. Chioma Daisy Onyige	B.A. M.Sc, Ph.D (UPH)	Criminology and Feminist Studies	Senior Lecturer
12.	Tubotamuno Boma	B.Sc., M.Sc., (UPH)	Monetary Economist	Lecturer 11

* The Centre will recruit part –time lecturers from the Police formation in Rivers State.

VISITING LECTURERS AND PARTNERS

The Centre will draw expertise and occasional guest lecturers from the Peace and Conflict Studies Programme, University of Ibadan; Halogen Security, and Institute of Peace Keeping Training

Centre (KAIPTC), Accra-Ghana. West Africa Civil Society Institute (WACSI), Ghana, Centre for Advanced Social Scienc (CASS), Port Harcourt and Open Society Initiative of West Africa (OSIWA), Nigeria, PIND and Kebetkache.

INSTITUTE OF INTERNATIONAL TRADE AND DEVELOPMENT (IITD)

PGD, M.Sc AND Ph.D. PROGRAMMES

Introduction

Trade is strategic to economic growth and development. It is a critical engine of growth through employment generation, income and livelihood security and poverty reduction. Trade-led growth requires mutually beneficial agreements among trading partners, either as entities or countries. The growing complexity and competitiveness of global trade order have increased burdens on countries, particularly developing ones, in the areas of creating effective strategies that assure benefit from expanding but increasingly dynamic global trading order.

Nigeria and other countries of Africa participate in bilateral, regional and multilateral trade negotiations that shape the outlook of global trade. Trade agreements largely deliver expanded market access to nations that have the capacity to conduct sound analysis of trade and trade policy, formulate negotiating mandates and articulate positions at the negotiating table. Trade development requires strategic policy focus, strong institutions and knowledgeable human resources. The changing dynamics of trade, trade facilitation and the global trade policy process require regular capacity updates to understand and participate effectively in the global trade process.

The Institute of Trade and Development was established in University of Port Harcourt in October 2010 as a direct response to the observed trade related capacity gaps in trade policy processes in Nigeria and Africa. This is the pioneer institute directed at trade capacity building for academics and trade professionals in Nigeria. The key areas of intervention of the institute include:

- building critical mass of academics to support regular trade capacity building and sound analysis of complex trade issues as inputs into national, regional and global trade policy process.
- building capacity of governments and government agencies to understand and participate effectively in global trade policy process
- conduct research and publish analysis and opinion on on-going and emerging trade issues
- provide platform for debate and international collaboration on trade policy issues

Vision

The vision of the institute is to be the leading research and academic institute in Trade and development Policies in Africa.

Mission

Institute for Trade and Development aims at inculcating and encouraging a culture of quality and collaborative research in trade and development. It will nurture competitive ideas for creative problem solving and produce high quality trade policy analysts who will influence policy on trade and development.

Programmes of the Institute

- Post Graduate Diploma (PGD) in International Trade and Development
- M.Sc in International Trade and Development
- M.Sc in Customs Administration and Border Management
- M.Sc in Ports Management and Maritime Administration
- M.Sc in Shipping and Maritime Security
- PhD International Trade and Development

Professional Capacity Building

- Short Capacity Courses for Government Departments and Agencies, and Private Sector on:
 - Understanding Basic Trade Analysis
 - Understanding International Trade Rules
 - Trade Policy Process
 - Trade Negotiations
 - Trade Defense Processes
 - Trade Facilitation
 - Standards and Trade Quality
 - Value Chain Analysis

Public Debates | Seminars on Domestic and International Trade Concern

- Continental Trade Agreements: Continental Free Trade Agreements
- Regional Trade Agreements: EU-ACP Economic Partnership Agreements, ECOWAS Common External Tariffs
- Multilateral Trade Agreements: WTO

International Collaboration

- Collaboration with recognised trade related institutions including
 - Trade Law Centre of Southern Africa (TRALAC), Stellenbosch, South Africa
 - Trade Policy Centre for Africa (TRAPCA), Arusha, Tanzania, etc.

Partners

- Government Agencies
- Private Sector
- Academic Think-Tanks
- Donor Community
- Civil Society Organizations
- Students

Admission Requirements for PGD Programme

The PGD programme in International Trade and Development is open to candidates who possess an honours degree in any discipline from a recognized University; especially Education, Economics, Political Science, Accounting, Finance, Management, Marketing, History, Geography, law or related fields degree not lower than (3rd class). Holders of Higher National Diploma (HND) from recognized institutions and who passed with a minimum of lower or upper credit are also eligible for admission. Persons in trade related industries with at least 5 years working experience will be considered for admission into the Institute of International Trade and Development PGD programme.

Programme Duration

The programme is designed for one academic session of course work comprising two (2) semesters.

Graduation Requirement

The successful completion of the programme requires a candidate to pass all the prescribed courses and defend a project written by the student at the end of the course work. This will be a total of 28 credit units consisting of 11 credit units of core courses, 5 credit units of compulsory courses, 6 credit units in electives and 6 compulsory credit units of research project. The pass mark in any course shall be 50%, a grade of C.

PGD Course Description

ITD 701.1 Introduction to International Trade and Development Theory and Policy

Over the past two decades, there have been fundamental structural changes in the global economy. These changes include trade and payments liberalization, globalization and rapid integration of national economies. This course therefore, is designed to acquaint students with the basic theories and policies of international trade.

ITD 702.1 Entrepreneurship and Management

Definition of Entrepreneurship. The historical and economic role of entrepreneurship. Theory and Practice of entrepreneurship. Starting and Managing a new enterprise. Characteristics of entrepreneurship. The identification and evaluation of new venture opportunities. Resources utilization. Strategy development and successful planning. Implementing and launching new business ventures. Analyses of case studies and developing of detailed business plan for starting and owning an enterprise.

ITD 703.1 Introductory Microeconomics

This course is designed to deepen and widen the critical and analytical understanding of theoretical

and methodological issues in microeconomics. It also addresses the basic questions of resource allocation within our society and the appropriate role of government intervention in the economy. Microeconomic theory, problem of scarce resources and allocation of resources in product and factor markets with application to Nigeria and other economies; equilibrium concept, possibility of disequilibrium, partial equilibrium and general equilibrium analysis; supply of demand theory; cobweb theory; introductory dynamics, consumers behavior, production theory and more topics to be covered.

ITD 712.2 Business Economics

Business Economics otherwise known as managerial economics studies the application of economics theory and methodology to business. Thus, the objective of this course is to among other things; equip the students with the skills for rational decision making in their businesses in the face of scarce resources. Furthermore, participants will learn the art of applying economic principles in developing and managing successful businesses. Some key components of this include: Theory of Production, Demand and Supply investment decision making and profit maximization.

ITD 705.2 Introductory Macroeconomics

Macroeconomics studies the functioning of the economy as a whole. Therefore, the main objective of this course is to enable students to have a good understanding of macroeconomic theory and policy. Macroeconomic problems and policies including the tools used in stabilizing the macro economy are also explored in the course. Macroeconomic theory, national income accounting, macroeconomic aggregates, the classical system, the monetarist system, domestic economic stabilization, monetary and fiscal policies, price control and inflation and more topics to be covered.

ITD 707.2 Econometrics

This course is designed to provide students with the quantitative skills needed in understanding and application of mathematical reasoning and methods in economics. Topics such as the nature and scope of econometrics and methodology will be examined in the course.

ITD 708.2 International Law

All countries regulate trade. The objective of this course is to acquaint students with various international laws that are used to regulate the mobility of labour and capital among nations. Issues relating to immigration, regulation and nationalization and international dispute resolution will also be covered in the course.

ITD 709.2 Trade Negotiation

Traditionally, international trade analysis had focused primarily on the transfer of physical goods from one country to another. But in recent times, the emphasis is on trade in services. Trade in services also plays a major role in the process of economic progress especially in developing countries. This course therefore, examines the objectives of international trade negotiations, types of trade negotiations and the legal dimension of trade negotiations.

ITD 710.2 History of African Trade

The objective of this course is to introduce students to the historical development of trade in Africa. The prospects and challenges in African trade will also be examined in the course.

ITD 711.2 International Relations

This course is designed to acquaint students with various theories of international relations. It will examine also the distribution of power, interactions among nations, national interest and instruments of foreign policy.

ITD 704.1 Marketing Management

Application of managerial functions of planning, organization, directing and controlling on the four Ps of marketing, to set the organization strategic objectives. New product development. Micro and macro environments of marketing. How to manage decline in sales, market segmentation and other strategies.

ITD 713.2 International Finance

The objective of this course is to acquaint students with the various theories and policies of international finance. The role of the International Monetary Fund (IMF) the World Bank, World Bank Group and the African Development Bank (ADB) in mobilizing long-term funds for rapid economic growth and development will also be examined in the course.

ITD 714.2 Regional Development Planning

This course involves a discussion of the concepts of development and dependency theories as they apply to regional development planning. It also covers an overview of economic and related theories and policies of regional development planning.

ITD 715.2 Supply Chain Management

The course will expose students to the challenges involved in managing supply chains and understand the complexity of inter-firm and intra-firm coordination. What is supply chain management, the importance of supply chain management, matching supply chains with products, supply chain value adds, supply chain information technology and integrated supply chain management.

ITD 716.2 Physical Distribution and Logistics Management

A study of the broad range of marketing functions, which include warehousing, inventory management, order processing and the movement of goods across-the-border trade. Logistics management address the

trade activities that are performed to facilitate the efficient movement of goods and their ownership from one nation to the other.

ACADEMIC STAFF LIST

S/N	Name of Staff	Qualification and Educational Institutions Attended	Rank	Area of specialization
1	Ohale, L.	B.Sc, M.Sc. and Ph.D (UPH)	Professor & Director of Institute	Development Economics
2	Gbosi, A. N.	B.Sc New Hampshire, MSc and Ph.D Northeastern	Professor	Labour, Monetary and International Economics
3	Onuchuku, O.	B.Sc, M.Sc and Ph.D(UPH)	Professor	Public Sector and Quantitative Economics
4	Arokoyu, S. B.	B.Sc, M.Sc and Ph.D(UPH)	Professor	Regional Development Planning
5	Nwinee B. F	B.sc (RSUST), MBA, M.Sc, Ph.D (UPH)	Professor	Finance
6	Barikor, I.P	B.Sc, M.Sc, PhD (UPH)	Senior Lecturer	International Relations
7	Kalu, I. E.	B.Sc, M.Sc and Ph.D(UPH)	Professor	Development Economics
8	Kalu, S. E.	B.Sc, BSBA (Manila), MBA, DBA (Philippines)	Professor	Strategic Marketing Management
9	Gbanador, C. A.	B.Sc., M.Sc. and Ph.D (UPH)	Professor	Monetary and Quantitative Economics
10	Udeorah, S. F.	B.Sc, M.Sc, and Ph.D (UPH)	Lecturer, Deputy Director & Coordinator of Programmes	Labour / Human Resources Economics

M.Sc. IN INTERNATIONAL TRADE AND DEVELOPMENT

Admission Requirements

The programme is open to applicants who possess a Post Graduate Diploma of the Institute (IITD) or a bachelor's degree in Economics, Political Science, Finance, Foreign Languages, Accounting, History, Marketing, Management, Geography or related fields in Education or have earned a Law degree

from recognized institutions. Candidates with HND in related fields will be considered for admission. Candidates in the trade related industry with at least five (5) years working experience with university degrees or HND outside the ones listed above may also be considered for admission into the programme. This is a 12 calendar month programme, minimum and maximum of 24 calendar month.

M.Sc. Course Description

ITD 800.1 Microeconomic Analysis

This course is designed to deepen and widen the critical and analytical understanding of theoretical and methodological issues in microeconomics. It also addresses the basic questions of resource allocation within our society and the appropriate role of government intervention in the economy.

ITD 810.1 Econometrics

This course is designed to provide students with the quantitative skills needed in understanding and application of mathematical reasoning and methods in economics. Topics such as the nature and scope of econometrics and methodology will be examined in the course.

ITD 820.1 International Trade Theory and Policy

Over the past two decades, there have been fundamental structural changes in the global economy. These changes include trade and payments liberalization, globalization and rapid integration of national economies. This course therefore, is designed to acquaint students with the basic theories and policies of international trade.

ITD 830.1 Development Economics

This course is intended to survey the basic literature in development economics. It covers the general approaches to the development process, methodological issues, measuring economic development and problems and policies of development.

ITD 850.1 International Finance

The objective of this course is to acquaint students with the various theories and policies of international finance. The role of the International Monetary Fund (IMF) the World Bank, World Bank Group and the African Development Bank (ADB) in mobilizing long-term funds for rapid economic growth and development will also be examined in the course.

ITD 840.1 International Law

All countries regulate trade. The objective of this course is to acquaint students with various

international laws that are used to regulate the mobility of labour and capital among nations. Issues relating to immigration, regulation and nationalization and international dispute resolution will also be covered in the course.

ITD 870.1 History of African Trade

The objective of this course is to introduce students to the historical development of trade in Africa. The prospects and challenges in African trade will also be examined in the course.

ITD 800.2 Macroeconomic Analysis

Macroeconomics studies the functioning of the economy as a whole. Therefore, the main objective of this course is to enable students have a good understanding of macroeconomic theory and policy. Macroeconomic problems and policies including the tools used in stabilizing the macro economy are also explored in the course.

ITD 810.2 Regional Economic Co-operation and Integration

Any form of external economic relations is regarded as a form of economic and monetary co-operation. Therefore, this course is designed to enable students have a broader knowledge of regional economic and monetary co-operation concepts including preferential Trade Agreement, Free Trade Area, Customs Union, Common Market and Economic Union.

ITD860.1 International Trade Organization/ Global Trade Negotiations

Traditionally, international trade analysis had focused primarily on the transfer of physical goods from one country to another. But in recent times, the emphasis is on trade in services. Trade in services also plays a major role in the process of economic progress especially in developing countries. This course therefore, examines the objectives of international trade negotiations, types of trade negotiations and the legal dimension of trade negotiations.

Several international trade organizations have been established to facilitate the free flow of goods and services among nations. These international trade organizations include the World Trade Organization (WTO) and General Agreement on Tariff and Trade

(GATT). The purpose of this course is to examine the economic and political roles of these organizations. In addition, the role of the United Nations Conference on Trade and Development (UNCTAD) will be critically examined.

ITD 830.2 Research Methodology

This course is designed to assist students acquire skills and techniques used in analyzing broad economic and social data.

ITD 860.2 International Relations

This course is designed to acquaint students with various theories of international relations. It will examine also the distribution of power, interactions

among nations, national interest and instruments of foreign policy.

ITD 870.2 International Marketing

The objective of this course is to acquaint students with basic international marketing concepts. It will also cover planning of international marketing operations, evaluating international markets and environmental factors in international marketing.

ITD 880.2 The M.Sc. Dissertation

An original thesis is required of all students in accordance with the general regulations of the University of Port Harcourt, College of Post-Graduate Studies.

**MSc (Customs Administration/Border Management),
MSc (Ports Management and Maritime Administration) MSc (Shipping and Maritime Security)**

Admission Requirements

Candidates seeking admission into the M.Sc. (Customs Administration/Border Management),

M.Sc. (Ports Management and Maritime Administration) and M.Sc. (Shipping and Maritime Security), must satisfy the following conditions in addition to satisfying the conditions specified by the School of Graduate Studies.

- (a) The programme is open to applicants who possess a good bachelor's degree (second class lower division) in any field of the Social Sciences or Management Sciences. Also, good

degree in some selected field in the Arts/Humanities; including History, International Relations, Law etc with not less than **second class lower division** from a reputable University, shall be considered.

- (b) A good degree in Education or Business with cognate work experience in Customs, Immigration, Navy, Nigerian Port Authority or any trade related industry with at least 7 years working experience.
- (c) Third Class Honours Degree in any of the above fields and evidence of Post Graduate Diploma in relevant fields, shall be considered.
- (d) Higher National Diploma with a minimum of Upper Credit in related field of study and evidence of Post Graduate Diploma in relevant fields, shall be considered.
- (e) Holders of a Post Graduate Diploma from the Institute of International Trade and Development with a minimum CGPA of 3 point.
- (f) Evidence of NYSC discharge certificate.

Duration of Programme

This programme is designed to last for a minimum of 12-calendar months and a maximum of 24 calendar months. It shall run on three (3) full time (FT) modules of intensive teachings after which there shall be examinations in line with approved University guidelines.

Graduation Requirement

To qualify for the award of MSc (Customs Administration and Border Management, Port Management and Maritime Administration, Shipping and Maritime Security);

- (b) Candidate must, in addition to preparing and presenting a Research Dissertation, accumulate a Maximum of forty-eight (48) units as specified in the programme; including all compulsory courses and courses for each area of specialization as follows:

	Credit Unit
Six (6) Compulsory courses of 3 and 2 credit units each	15
Five (5) General courses of 3 credit units each	15
Four (4) Core courses (specialization) of 3 credit units each	12
Dissertation of six credit units	6
Total	48

- (c) To be eligible for the award of this degree, the candidate must take and pass all required courses with grade not less than 50 percent. Any student who scores less than 50 percent in any course shall be deemed to have failed the course.

- (d) Each course besides the thesis shall be examined at the end of each module in line with the laid down rules of the University.

Specific Course Description

ITD 800.1 Microeconomic Analysis

This course is designed to deepen and widen the critical and analytical understanding of theoretical and methodological issues in microeconomics. It also addresses the basic questions of resource allocation within our society and the appropriate role of government intervention in the economy.

ITD 800.2 Macroeconomic Analysis

Macroeconomics studies the functioning of the economy as a whole. Therefore, the main objective of this course is to enable students have a good understanding of macroeconomic theory and policy. Macroeconomic problems and policies including the tools used in stabilizing the macro economy are also explored in the course.

SGS 801.1 ICT and Research Methodology

This course is designed to assist students acquire skills and techniques used in analyzing broad economic and social data. The students will be acquainted with essentials of spreadsheet, Internet Technology, Statistical Packages, Precision and Accuracy Testing, Organization of Research, Report Writing and research management.

SGS 801.2 Management and Entrepreneurship

This course seeks to equip students with entrepreneurial knowledge and skills in a vast and rapidly changing world, where paid employment is going into extinction. The knowledge and skills so imparted are to be concertized in practical case studies, delivered in seminar presentation. Specifically, the course provides the student with an overview of concepts, principles, theoretical and methodological foundations and techniques, and would have learnt how to identify project opportunities, formulate business project and test them for technical, financial, economic, social, political viability and sustainability.

ITD 820.1 International Trade Theory and Policy

Over the past two decades, there have been fundamental structural changes in the global economy. These changes include trade and payments liberalization, globalization and rapid integration of national economies. This course therefore, is designed to acquaint students with the basic theories and policies of international trade.

ITD 840.1 International Law

All countries regulate trade. The objective of this course is to acquaint students with various international laws that are used to regulate the mobility of labour and capital among nations. Issues

relating to immigration, regulation and nationalization and international dispute resolution will also be covered in the course.

ITD 860.2 International Trade Organizations/ and Global Trade Negotiations

Several international trade organizations have been established to facilitate the free flow of goods and services among nations. These international trade organizations include the World Trade Organization (WTO) and General Agreement on Tariff and Trade (GATT). The purpose of this course is to examine the economic and political roles of these organizations. In addition, the role of the United Nations Conference on Trade and Development (UNCTAD) will be critically examined.

Traditionally, international trade analysis had focused primarily on the transfer of physical goods from one country to another. But in recent times, the emphasis is on trade in services. Trade in services also plays a major role in the process of economic progress especially in developing countries. This course therefore, examines the objectives of international trade negotiations, types of trade negotiations and the legal dimension of trade negotiations.

ITD 810.2 Regional Economic Co-operation and Integration

Any form of external economic relations is regarded as a form of economic and monetary co-operation. Therefore, this course is designed to enable students have a broader knowledge of regional economic and monetary co-operation concepts including preferential Trade Agreement, Free Trade Area, Customs Union, Common Market and Economic Union.

ITD 850.2 International Relations

This course is designed to acquaint students with various theories of international relations. It will examine also the distribution of power, interactions among nations, national interest and instruments of foreign policy.

ITD 810.3 International Customs Instruments and Customs Legislation in Nigeria

This course is designed to x-ray the various legal customs instruments of operation both locally and internationally. It further examines the performance of the Nigeria Customs Service within this framework with a view to ascertaining compliance with global best practices. Students will gain knowledge in international customs laws, key conventions and protocols.

ITD 840.3 Tax Law, Tariffs and Compliance

The main objective of this course is to examine the various tax laws and tariffs vis-a-vis compliance by various trade agents especially within the framework of the Nigerian environment. Generally, it discusses the nature, meaning and purpose of tax as well as management of tariff collection, review analysis and maintenance of logistics database. It includes various forms of ports operations and the application of appropriate taxes and tariffs.

ITD 860.3 Customs Administration: Theory and Practice

In a nutshell, this course is designed to examine the customs and Excise Management Act with a view to educating students on the role of the customs in economic development of a country. Students will study the roles and policy objectives of customs administration. Understanding the duties of the customs in domestic and world economies is important in the 21 century. Information Technology (IT) skills, effective communication and efficient service delivery are core ingredients in the performance of modern day customs functions.

ITD 870.3 Legal Framework for Trade and Maritime Laws

Discusses all legal instruments relating to trade across borders. Students of this course will gain knowledge about existing maritime laws and their application in various countries.

ITD 830.3 Border Management: Customs Procedure and Logistics Planning

The customs environment like most establishments is constantly changing. This course provides students with advanced and technical knowledge in the field operations of the customs. The students will examine the strategic and operational issues in the customs; including international trends that impacts customs and international trade such as social expectations, emerging technologies and the global economies.

ITD 820.3 Port Management and Shipping

Shipping and Port Management is very important to International Trade. This course therefore should

deal with general ports operations and management. Students should learn and appreciate the nature of ports, Seaport and dry Port, Resource Planning and allocation, Port Security and Safety as well as general port and shipping management.

ITD 850.3 Trade Facilitation and Maritime Security

This course deals with general issues on trade facilitation including government policies in this direction. Students will appreciate issues relating to trade across border, supply chain management, transportation logistics, maritime safety and security etc.

ITD 880.1 Human Resources Economics and Personnel Management

The intention is to provide participants in the course with a broad range of topics and issues related to development, management and the utilization of human resources in the economy or in the process of social development. The selection we have made or offered, hopefully, will be wide enough to capture the interest of the students and other external participants. The basic idea is to provide students with exposure to participate in the field of human resources economics, work environment and its role in national development. We also hope to relate these topical issues or principles to practical realities of the labour market in developing economies and applying them in simulated experiences.

ITD 890.3 Computer Appreciation and Informatics

Informatics study is the representation, processing and communication of information in Natural and engineering systems. It has computational, cognitive and social aspect. This course will therefore expose participating students to basic skills in the use of computer in the first instance. Thereafter, students are exposed to new technological knowledge including: computer science, cognitive science, artificial intelligence, data management, computing and analysis etc.

Course Description

ITD 900.1 Advanced Microeconomic Theory

The major objective of this course is to deepen and widen the critical and analytical understanding of theoretical and methodological issues in microeconomic theory. Topics such as demand and supply functions, general equilibrium model, consumer revealed theory, theory of market structure, theory of costs and revenue, and welfare economics will be covered in the course. A good understanding of linear algebra analysis will be useful to students taking the course.

ITD 900.2 Advanced Macroeconomic Theory

Macroeconomics studies larger components of the economy. Therefore, the purpose of this course is to enable students have a good understanding of advanced topics in macroeconomic theory and policy. Topics to be covered in the course include consumption and investment theory, money demand and supply, government spending and taxation and the problems of inflation and unemployment. The on-going debate between Keynesians and monetarists are critically examined in the course.

ITD 910.1 Selected Topics in International Trade Theory and Policy

Over the past two decades, there have been fundamental structural changes in the global economy. These changes include trade and payments liberalization, globalization and rapid

integration of national economics. This course surveys selected topics in international trade theory and policy. Topics such as international trade theory, the politics of international trade policy, balance of payments theory and international mobility of capital and labour will be discussed.

ITD 910.2 Selected Topics in Development Economics

Development is one of the most important challenges facing the human race. Despite the vast opportunities created by the technological revolution of the 20th century, more than 10 percent of the world's population live on less than one dollar per day. The situation is very disturbing in Africa relative other developing regions of the world. In this course, the focus will be on selected topics in Development Economics. Such topics include General Approaches to Development processes, Economic Growth, Neoclassical and Keynesian Development Policy and the millennium goals.

ITD 920.1 Research Methodology/ Techniques in Dissertation Writing

This course introduces students to various research methodologies. The various techniques used in dissertation writing are also presented in the course. Such techniques include Simple Linear Regression Model, Correlation Model, Analysis of Variance and Statistical Test of Significance of estimate.

ITD 930.1 Selected Topics in Advanced Econometrics

This is an advanced course in quantitative techniques. The purpose of the course is to acquaint students with advanced quantitative skills needed in understanding and application of mathematical

reasoning and methods in social and management sciences. Topics to be covered include methodology of econometric research, co-integration theory and error correction model, three stage least squares and auto correlation.

ITD 930.2 Selected Topics in International Economic Relations

All countries around the world regulate trade through various national policies. Therefore, this course is designed to acquaint students with various theories of international economic relations. Some of the topics to be covered include International Organizations such as the United Nations (UN), the European Union (EU), African Union (AU), International Criminal Justice System and International Law.

ITD 940.1 African Trade and the Global Economy

International trade plays a major role in promoting economic growth and development. Therefore, the purpose of this course is to analyze globalization integration and trends in African trade in the global economy. Topics such as Trade and Development in Africa, the prospects and challenges of African Trade, the role of the African Development Bank (ADB) in Promoting African Trade and barriers to African Trade, will be covered.

ITD 940.2 Selected Topics in International Trade Financing

This course analyzes the various methods used in financing foreign trade. Students can choose their seminar topics from the role of Export-Import Banks, Export and Import Financing, and Contemporary Issues in International Trade Financing, and the role of the International Monetary Fund (IMF) will be examined.

ITD 950.1 Seminar in Regional Economic Integration

This course enables students to write a seminar paper in regional economic integration under the supervision of the seminar coordinator. Seminar topics can be selected from areas such as Trade Negotiations, the World Trade Organization (WTO) and Trade Regulation, the European Union, International Trade and Tariff Aggregations and Regional Integration in Africa.

ITD 950.2 Seminar in Development Finance and Trade

One of the sources of development finance is through trade. Apart from trade, other ingredients of Development are, remittances and external loans. Students are expected to write a seminar paper in any of the areas outlined above under the supervision of the seminar coordinator.

CENTRE FOR LOGISTICS AND TRANSPORT STUDIES (CELTRAS)

Preamble

The University of Port Harcourt was founded among other things “to contribute to national development, self-reliance and unity through the advancement and propagation of knowledge, and to humanity”. This University has been achieving this not only through the conventional Faculties and Departments but through specialized Centres and Institutes. As is the case in many other universities all over the world, specialized Centres and / or Institutes focus specifically on aspects of socio-economic phenomena which gives the university concerned an advantage in promoting the existential realities of its immediate and wider environment. In addition to the academic and practical objectives of such Centres / Institutes, they have the added value of generating enormous funds for the University. It is against this background that the University of Port Harcourt through its Department of Geography and Environmental Management, Faculty of Social Sciences established the *Centre for Logistics and Transport Studies (CELTRAS)*.

The Philosophy of the Programme

The *Centre for Logistics and Transport Studies* will offer that desire to improve on the general absence of proper planning, coordination and efficient management of and logistics activities in both public and private sectors of the economy by preparing and training qualified transport and logistics professionals.

The different areas of specialization reflect and emphasize the dynamic nature of the programmes while allowing for the flexibility of the graduates to move from one transport/logistics-oriented job to another.

Vision

CELTRAS envisages the professionalization of the logistics and transport sector of the Nigerian economy such that in the not too distant future the transport and logistics sectors of the Nigeria economy will be managed by well trained and better qualified persons.

Mission Statement

The mission of CELTRAS is to produce qualified professionals in transport planning and management as well as logistics/supply chain management as well as in, for the Nigerian economy in particular and Africa in general. The idea is to provide adequate knowledge and practical skills for understanding and solving transportation and logistics and supply chain problems in Nigeria as well as generate international support in funding for

intellectual exchanges through conveyances, seminars and publications.

Objectives

The objectives of CELTRAS include to:

- Encourage the study of the science and art of transport and logistics and supply chain management,
- Provide educational programmes through research and examination leading to postgraduate degrees in transport/logistics and supply chain management,
- Provide an opportunity for in-service training for staff of logistics and transport and related institutions and organizations,
- Assist in the development and improvement of logistics and transport sector through research.
- Provide students with solid intellectual, theoretical, methodological foundations and skills to work competently in varied logistics and transport planning and management positions in the public and private sectors.

PROGRAMMES

The academic programmes of the Centre include:

- Postgraduate Diploma. [PGD]
- Master of Science [MSc]
- Doctor of Philosophy [Ph.D]

POSTGRADUATE DIPLOMA [PGD]

Admission Requirements

- a. A minimum of a third class Honours Degree in any academic discipline from the University of Port Harcourt or any other recognized University
- b. A HND or its equivalent with at least an Upper Credit;
- c. Holders of recognized professional qualification in logistics/transport with at least an Upper Credit e.g. Chartered Institute of Logistics and Transport [CILT]; Institute of Transport Engineers; Chartered Institute of Transport Administration, [CIOTA] etc with at least 5 years working experience in a transport or related organization.
- d. Candidate must have completed the National Youth Service where applicable

Duration of the Programme

The programmes shall be on Full/Part Time basis.

- The Full-Time PGD run for a minimum of 12 calendar months and a maximum of 24 calendar months.

- Part-Time shall run for a minimum of 24 calendar months and a maximum of 36 calendar months.

Graduation Requirements

To obtain a degree in PGD in Transport/Logistics Management candidate must have passed ALL 36 course units including research Project.

Course Organization

The PGD in Transport and Logistics programme requires a minimum of 36 credit units made up as follows:

- Ten courses (3 credit units each) 30 units
- Project 6 units
- Total 36 units

All courses must be taken and passed as well as the Project.

Pass Mark

To pass a course the mark must be 50% and above.

Course Code and Numbering System

The course code for the PGD programme is LAT and the numbering for the courses is between 701 & 798. Research Project is numbered: 799

Course Description

Code	No	Description	Unit	Status
LAT	701	Transport Geography	3	C
LAT	702	Transport Economics	3	C
LAT	703	Fundamentals of Logistics & Supply Chain Management	3	C
LAT	704	Urban and Rural Transport	3	C
LAT	705	Research and Quantitative Methods	3	C
LAT	706	Law of Business and Carriage	3	C
LAT	707	Purchasing and material management	3	C
LAT	708	Information systems in logistics and transport and ITS	3	C
LAT	709	Transport/Logistics Safety & Security	3	C
LAT	710	Introduction to Transport Planning	3	C
LAT	799	Project	6	C
		Total	36	

All 36 course units must be taken in the 12 months for full-time students.

The modules may not be taught in the serial order listed.

COURSE CONTENT/DESCRIPTION

Module 1 [3 Weekends]

LA T 701: Transport Geography

History of transport development; management of Technology in transport; modal characteristics; comparative advantages and disadvantages, infrastructure/network; etc. Transport theories, concepts and models: the Gravity Model, the Spatial Interaction Model etc. models of Network evolution and development, theories of mode choice, theories of competition in transport, transport and development, etc. Transport flows, trip generation, attraction and distribution, modal split and competition. Transport data. Pedestrianisation. public transport, urban and rural transport; Technical aspects of transport and world standards.. Energy and Transport. Modal systems and the Environment

Module 2 [3 Weekends]

LAT 702: Transport Economics and Management

Characteristics and scope of transport economics; analysis of demand; analysis of supply; models of passenger traffic; pricing policies in transport; investment; the structure of transport costs and the location of economic activity; transport- cost minimization models, government transport policy - scope, rationale and effects; transport subsidies 1 fares and charges; demand and supply; economics of scale; cost/benefit analysis. Transport needs and accessibility, politics and transport and economic planning.

Module 4 [3 Weekends]

LAT 703: Fundamentals of Logistics and Supply Chain Management

Definition of logistics management; Development of logistics; Systems approach/integration; The role of logistics in the economy; The role of logistics in the organization; Total cost concept; Channels of distribution; Why do channels of distribution develop; Structure and operations of channels of distribution; Logistics and supply chain management for logistics activities; The relationship of logistics activities to logistics costs; Issues in logistics.

Module 3 [3 Weekends]

LA T 704: Urban Transport

Introduction; Classification of transport operation: mode of operation; principles; Categories of transport operation: Passenger transport, Freight

transport and their types; Determinants of passenger transport operation; Quality of service measures; Costs in transport operation. Vehicle maintenance; Vehicle replacement; Transport integration. Inter-modalism and modern logistics. Transport coordination. Challenges of public transport Operations and management in Nigeria

Module 5 [3 Weekends]

LAT 705: Research and Quantitative Methods in Transport & Logistics

Research project writing: determination of the research problem, choosing a topic, development of central idea and research questions, literature review. Types of transport data: origin destination survey, trip purpose and accident survey. Instruments of data collection: questionnaire, interview, and observation. Sampling. Application of statistical / mathematical concepts in transport planning and supply chain management. Parametric and non- parametric tests, regression and correlation analysis and other data analytical techniques. Result interpretation. Referencing. Writing an abstract.

Module 6 (3 Weekends)

LAT 706: Insurance and Law of Business and Carriage

Law of business and carriage; contracts agency and transport liability. Liability for loss and damages of freight/passenger regarding sea, air and land-based transport. Various Rules and Conventions in air and sea transport Acts/decrees on carriage of freight/passenger. Carriage of animals and dangerous goods. Special considerations affecting the use of containers. Legal basis of statutory transport organizations and statutory obligations of transport undertakings. Principles of insurance in transport industry; Air, land and marine insurance. Insurance law and practice, Cargo practice, Oil rigs insurance, protection and indemnity (P& I) cover and pipeline insurance.

Module 7 [3 Weekends]

LAT 707: Purchasing and Material Management

The role of purchasing in supply chain purchasing activities, purchasing research and planning; purchasing cost management; E-procurement-paperless purchasing. Nature and importance of warehousing. Types of warehousing; warehousing; operations, warehouse productivity, financial dimensions. Basic inventory concepts and management; Inventory costs; poor inventory management; improving inventory management; Case studies. Scope of materials management; forecasting; Total Quality Management (TQM); materials flow, logistics/ manufacturing interface; case study. Materials handling equipment packaging; reverse logistics.

Module 8 [3 Weeks]

LAT 70H: Information and communication and intelligent transport Systems in Transportation and Logistic

Introduction, customer order cycle; advanced order-processing systems; inside sales/telemarketing; Electronic data interchange; integrating order processing; financial considerations; Decision Support Systems; artificial intelligence and expert systems; Data base management; case study. Transport: Intelligent Transportation; Communication as a substitute for transportation.

Module 9 [3 Weekends]

LAT 709 Transport/Logistics Safety

Road transport safety regulations and traffic accident trends; Rail transport safety regulations and railway accident trends; inland water way safety regulations and accident trends; maritime transport and accident trend; maritime transport safety regulations and accident trend; Air Transport safety regulations and accident trends; Pipeline safety regulations and accident trends. Material handling safety and management.

Module 10 [3 Weekends]

LAT 710: Introduction to Transport Planning

Transport demand and supply, transport pricing, taxes and subsidies in transport, consumer satisfaction. Examples from models of transport .Transport networks, transport flows, modal split, transport competition, land use/transportation Transport data: origin-destination matrix. Public transport and mass transit; public and private involvement in public transportation. Organization and control of transport, laws and regulations to improve traffic flow. Traffic signal and control; pedestrianisation; builder and user cost; operation and administration of public transport, public transport in Nigeria the different programmes by local governments, states and the Federal Government. Land use/transportation planning, trip generation, trip distribution traffic assignment, traffic forecasting, urban transport, public transport in Nigeria. Organization and control of transport, traffic signals and control transport policy.

LAT 799: PGD Research Project

Students' independent research works. Projects should be a minimum of 5,000 words or 50 pages of A4 paper typed double spacing.

MASTER OF SCIENCE (M.SC) IN TRANSPORT/LOGISTICS MANAGEMENT

Programme Specialisation

The Centre comprises six (6) programme specialisations as follows:

1. Road Transportation Management
2. Rail Transportation Management
3. Maritime Transport Management

4. Air Transportation Management
5. Pipeline Transportation Management
6. Logistics and Supply Chain Management

Admission Requirements

- a. A Postgraduate Diploma in Transport and/or Logistics Management from a recognized University.
- b. A First Degree (not lower than Second Class Lower) in Transport, Logistics or related disciplines e.g. in Social Sciences, Management Sciences, Health Sciences, Town Planning, Engineering, etc.

Duration of the Programmes

The programmes shall be on Full/Part Time basis. The Full-Time M.Sc. shall run for a minimum of 12 calendar months and a maximum of 24 calendar months.

Part-Time shall run for a minimum of 24 calendar months and a maximum of 36 calendar months.

Requirements for the Award of M.Sc

Transport/Logistics Management Degree in area of Specialisation

Candidate shall be allowed to graduate when he/she obtains in not less than 12 calendar months for Full-Time or 24 calendar months for part-time at least 36 course units including a Dissertation approved by the University Senate on the recommendations of the CELTRAS and the School of Graduate Studies.

The MSc in Transport and Logistics programme requires a minimum of 36 credit units made up as follows:

- Ten courses (3 credit units each) 30 units
- Dissertation 6 units
- Total 36 units

All courses must be taken and passed as well as the Dissertation.

Pass Mark

To pass a course the mark must be 50% and above.

Course Code and Numbering System

The course code for the programme is: LAT and the numbering for the courses starts from 801 - 898. Dissertation is 899.

Course Code and title

Summary

1. General Courses: 21 Units
 2. Programme Specialization 9 Units
 3. Dissertation 6 Units
- Total 36 Units**

COURSE CONTENTS

SGS 801.1: ICT and Research Methods

Data Requirement for regional models: Inventory of existing conditions, land use data, demographic and economic data, travel inventories, house hold interview survey, transit onboard survey, workplace survey, external survey, commercial vehicle survey. Regional travel demand models: Networks; "Four-Step" Modeling Process: Trip purposes, trip generation, trip attraction, trip distribution, mode choice, time of day models, trip assignment. Model Calibration and Validation: Land use and trip generation; network development; mode choice vehicle assignment validation, transit time validation. Evaluation of Options. Regional software packages, Improvement to regional models. Introduction to discrete models. Traffic simulation models. Site Traffic Analysis: Traffic forecasting; level of service analysis; mitigation; impact fees. Post processors. Limitations of the Models. Statistical Analysis: General observations, Descriptive Statistics, Probability Distributions, normal distribution, sampling and inference, Regression overview.

LAT 801: Transportation, Society, Energy and Environment

Transportation and economic development; possible changes in the future; Intelligent transportation system. Congestion, history, measurements, Tolerance; Operational efficiency and congestion pricing. Communication as a substitute for transportation; growth in intermodal transportation; safety; public expectation of transportation. The concept of predictive modeling. Noise Analysis: Basics of sound, Highway traffic noise analysis, Airport noise analysis, Rail noise Analysis. Air Quality and Water quality: Regulations; description of air pollutants; Emissions; Dispersion modeling; Analysis. Energy Considerations: Petroleum dependence; consumption analysis. Environmental laws and regulations. Global change.

LAT 802: Transport Finance and Economics

Cost estimating; Funding Sources and Allocation; Sources, public-private ventures; Financial Analysis; Economic Evaluation Tools; Societal Quantification of Costs and Benefits; Setting Priorities and Developing and Implementing Programs; Uncertainties: Information credibility, contingency and cost ranges, risk and sensitivity analysis.

LAT 803: Logistics and Supply Chain Management

Definition of logistics management; Development of logistics; Systems approach/integration; The role of logistics in the economy; The role of logistics in the organization; Total cost concept; Channels of distribution; Why do channels of distribution develop; Structure and operations of channels of distribution; Logistics and supply chain

management; Key logistics activities; The relationship of logistics activities to logistics costs; issues in logistics.

LAT 804: Transportation Planning Studies

Overview of Principal Planning Studies; Description of Specific Methods; Capacity Studies; Travel time Studies; Trip Generation; Modal Studies, Statistical Analysis.

LAT 805: Information & Communication Systems in Transportation & LSCM

Introduction; Data Modeling and Data Base Design; GIS-T Data Models; Transportation Data Sources and integration; Shortest Path and Routing; Network Flows and Facility Location; GIS-Based Spatial Analysis and Modeling; Transportation Planning; Intelligent Transportation Systems; Transportation, Environment and Hazards; Logistics.

SGS 801.2: Entrepreneurship and Management

PROGRAMMES SPECIALISATION

Specialization 1: Road Transport Management

LAT 810: Road Transport Operations

Historical perspectives; the sub modal agencies; road network and analysis; Road Transportation infrastructure; Flow Analysis; Safety and Security issues; Recent technological Developments. Freight Transport; Modal Choice; Intermodal Transport, Intercity Transport, The Nigeria's scenario.

LAT 811: Road Transport Management

Background and Perspectives, the Spectrum of Strategies; Planning Vision; Design and Implementation; Freight Transport; Vehicle replacement, selection, costing and legislation, unions. Road transport policy of Nigeria. Road transport regulations, Road Safety Corps of Nigeria institutional frameworks fed min of transport, state transport ministries.

Lat 812 Urban Transport and Intercity Travel

Introduction and background. Understanding the urban transportation plan, public participation; goals and objectives; financial plan; metropolitan transportation system; travel characteristics; inventories, forecasting travel, etc. Urban Transit: Transit in cities; defining transit; transit use and performance trends; transit modal design; system design; transit planning and operations; Para- transit service organization and financing. Intercity Passenger Travel: introduction ad definitions; dimensioning existing intercity passenger travel and trends affecting future of intercity travel.

LAT 899: DISSERTATION

Students' independent research works. Dissertation should not be less than 25,000 words or 100 pages of A4 papers typed double spacing.

Specialization 2: Rail Transport Management

LAT 820: Rail Transport Operations

Historical perspectives; the sub modal agencies; rail transportation network and analysis; Rail transportation infrastructure; Flow Analysis; Rail transportation Data Safety and Security issues; Policies and recent technological Developments, etc. The economics of rail manning and operations. Navigation planning; the trip planning, collision avoidance systems planning, cargo operations; cargo planning and loading shipboard maintenance and safety; fire containment methods. Human factors in rail operations. Commercial practice, marketing analysis in rail transport. The management of human resource Personnel development.

LAT 821: Rail Transport Management

Development of rail transport in the world and Nigeria in particular; Types of rail transport; The rail network and its maintenance; Route determination and selection; Methods of financing the rail infrastructure; track and load gauge in use and advantages and disadvantages; optimizing line capacity.

Performance characteristics of motive power units; inter-relationship of rail transport to other modes; intercity commuter passengers services; and high speed container and bulk commodity freight services. National, regional and Local organization of rail transport; Policy formulation and implementation.

Operation practice in railway management operation. Legal requirements for safety of operation and training of operating staff; the Rail Act. NRC Act etc; government regulations, social services and subsidies/grants. **LABORATORY:** Project Work.

LAT 822: Freight Transport and Intermodal Transport

Transport mode characteristics, operational factors; consignment factors; cost and service requirement intermodal equipment; intermodal vehicles; intermodal infrastructure; freight facilities grants; vehicle selection; vehicle costing; vehicle costing, road freight legislation, Road freight transport planning and resourcing.

LAT 899: Dissertation

Students' independent research works. Dissertation should not be less than 10,000 words or 100 pages of A4 papers typed double spacing.

Specialization 3: Maritime Transport

LAT 831: Maritime Transport Operations

The economics of ship manning. Shipboard operations. Navigation planning; cargo operations; fire containment methods. Human factors in shipboard operations. Commercial practice, marketing analysis in shipping. Major shipping line of the world, types of sample, performance and capacity. Various means of motive power; palletisation and containerization. Shipping in relation to other forms of transport. Multipurpose vessels etc. Maritime transport organization. Management and operation, policy formulation and implementation, operating practices (schedule, routes and Crews). Legal requirement and operation. Design and construction of vessels, the prevention, maintenance of vessels and equipment, Training and licensing operating crews. Marketing and commercial policy. Regulatory licensing of maritime transport. Future development in maritime transport.

LAT 832: Maritime/ Transport Management

Historical perspectives; the sub modal agencies; maritime network and analysis; Maritime transportation infrastructure; Flow Analysis; Safety and Security issues; Policies and recent technological Developments. The maritime industry in Nigeria, the current structure and composite financial and traffic statistics; the Port Concession Act; the Cabotage Act; the growth of regional carriers; problem and prospects. Economic characteristics of the Maritime industry.

LAT 833 Port and Shipping Administration

Shipping and export; imports ownership structure; organization of a shipping company; policy formulation and implementation. Distraction and control. Liner inferences, Tramps, Types of charters and charter parties. The ship broker, freight rate, port dues and rate. Ship chartering, management techniques, control and operating cost, transshipment and distribution of cargo.

Cargo clearing and forward. The IMO, UNCTAD and the Liner Code and Conventions on pollution. The Nigerian Shipping Council, National Maritime and Safety Agency. Corporate planning, directing and control of sea pollution, training and certificate navigation and engineering officers. Relevant international adversary and regulatory use analysis. Administration of individual Nigeria merchant and Naval ports. Documentation procedures at the ports. Comparison of global practices in ports administration.

LAT 899: Dissertation

Students' independent research works. Dissertation should not be less than 10,000 words or 100 pages of A4 papers typed double spacing.

Specialization 4: Air Transport Management

LAT 840: Air Transport Operation

The characteristics, scope, and major economic significance of the aerospace industry and its major segments: the government market and the commercial market for air transport and general aviation aircraft; definition of the air transport industry and its economic importance; global historical perspectives [emphasis on the US]; the Airline Deregulation Act of 1978 and post deregulation ; spatial and temporal development in the aviation industry; Air transportation regulators and associations; statistics in the general aviation industry; general aviation airports and the general aviation support industry - the manufacturers, the fixed-base operators [FBO]; and the users of general aviation aircraft. The airport types and characteristics, flight delay cancellation. Causes and coping strategies.

The airline industry in Nigeria, the current structure and composite financial and traffic statistics; the Deregulation Act of 1988; the growth of regional carriers; problem and prospects. Economic characteristics of airlines

LAT 841: Airline Management

Airline Management and Organization - Forecasting Methods - primary forecasting methods used by firms engaged in air transportation. Airline Passenger Marketing: Computerized reservation systems [CRSs], travel agents. Hub-and-spoke service. Airline Pricing, demand, and Output determination: determinants of airline passenger demand and elasticity of demands, air fares, pricing process - pricing strategies and objectives; Air Cargo; Principles of Airline Scheduling; Fleet planning - Aircraft Selection Processes; Airline Labour Relations; Airline Financing.

LAT 842: Air Transport Management

International Conferences and Conventions [ICAO and IATA] and their impacts on world aviation; the International Aviation Market/ International Air Transportation Act of 1979; globalization and international airline alliances; airline security and safety. Flight delay and cancellation – passengers rights etc.

LAT 899: Dissertation

Students' independent research works. Dissertation should not be less than 10,000 words or 100 pages of A4 papers typed double spacing.

Specialization 5: Pipeline Transport Management

LAT 850: Pipeline Transport Operation

The characteristics, scope, and major economic significance of the pipeline industry and its major segments: the government market and the commercial market for pipeline transport; definition of the pipeline transport industry and its economic importance; global historical perspectives; Pipeline transportation regulators and associations; statistics in the pipeline industry; general aviation airports and the general aviation support industry - the manufacturers, the fixed-base operators [FBO]; and the users of general aviation aircraft.

The pipeline industry in Nigeria, network, flows; the current structure and composite financial and traffic statistics; the growth of regional carriers; problem and prospects. Economic characteristics of the pipeline industry.

LAT 851: Pipeline Transport Management

The principal characteristics and organization of pipeline and petroleum Transportation Terminal and handling equipment in petroleum marketing; Interface with other modes and terminals; Route determination and selection; development and closure of lines; methods of optimizing pipeline capacity on distribution system; Land-use pattern in relation to pipeline and petroleum development; Marketing and distribution of petroleum products, the effects of subsidy on petroleum consumption; environmental considerations in oil exploration, distribution and marketing.

LAT 852: Oil and Gas Pipeline Transport

Description and Importance, Oil and Gas pipeline layout, oil pipeline laying configuration; Oil pipeline vandalism and sabotage politics of oil and gas pipeline transportation; the Nigerian experience.

LAT 899: Dissertation

Students' independent research works. Dissertation should not exceed 10,000 words or 100 pages of A4 papers typed double spacing.

Specialization: 6: Logistics and supply Chain Management

LAT 860: Procurement, Materials Management/ Warehousing and Storage

The role of purchasing in supply chain purchasing activities, purchasing research and planning; purchasing cost management; E-procurement paperless purchasing. Basic inventory concepts and management; Case studies; Scope of materials management; forecasting; Total Quality Management[TQM]; materials flow; logistics/manufacturing interface; case study; Materials handling equipment packaging; reverse

logistics; Principles of Warehousing; Storage and Handling Systems; Receiving and Dispatch.

LAT 861 Planning Logistics

Importance of logistics planning process, factors in logistics planning process: product characteristics, product life cycle, packaging and unit loads. Key logistics processes, tools and techniques of logistics planning process. Logistics network planning, logistics management and organisation.

Manufacturing and materials management concepts: introduction; just-in-time concept, materials Requirement Planning [MRP, Manufacturing Requirement Planning [MRP]; The MRP System; Flexible fulfillment [postponement]; the Effects on distribution activities.

LAT 862: Global Logistics

Global logistics definition; International distribution channel strategies; Management of export shipment; Characteristics of global markets. Definition of strategy and strategic planning; logistics and corporate strategy; organization and planning process; the strategic logistic plan. Challenges and critical issues.

LAT 899: Dissertation

Students' independent research works. Dissertation should not be less than 20,000 words or 100 pages of A4 papers typed double spacing with Times New Roman font.

DOCTOR OF PHILOSOPHY (PH.D)

The Centre offers a doctor of philosophy degree with specialization in:

- Transport Management
- Logistics & Supply Chain Management

Admission Requirements

An M.Sc Degree in Transport. Transport Economics, Transport Geography. Transport Management, Transport Engineering. LSCM etc with a minimum CGPA of 3.5 on a 5 point scale.

Duration of the Programme

The programme shall be on Full/Part-Time basis. The Full-Time shall run for a minimum of 24 calendar months [2 years] and a maximum of 48 calendar months [4 years],

Part-Time shall run for a minimum of 48 calendar months [4 years] and a maximum of 72 calendar months [6 years].

Requirements for the Award of PhD Transport/Logistics Degree

Candidate shall be allowed to graduate when he/she obtains in not less than 2 years for Full-Time or 4 years for Part-Time, a minimum of an average of 60% in a Thesis approved by the University Senate on the recommendations of CELTRAS through the

Faculty of Social Sciences Graduate Board of Studies and the School of Graduate Studies.

The academic programme comprises

- Courses
- Seminars
- Thesis

Each of the *PhD* programmes in *Transport or Logistics* require a minimum of 24 credit units made up as follows:

- Five courses (3 credit units each) 15 units
- Thesis 9 units
- Total 24 units**

All courses must be taken and passed as well as the Thesis.

Pass Mark

To pass a course the mark must be 50% and above.

Course Code and Numbering System

The course code for all the programmes is: LAT and the numbering for the courses begin with 901. The code for the thesis is 999.

Course Code and Title

Year 1

All:

LAT 901	Research Processes in Transport & LCSM	3 Units
LAT 902	Statistical Package for Social Sciences (SPSS)	3 Units

Transport Management Option

Course Code	Course title	Unit	Status
LAT 911	Information System and Communication Technology in Transportation (Seminar)	3	B
LAT 912	Entrepreneurship in Transportation (Seminar)	3	B
LAT 913	Contemporary Issues in Transportation (Area Paper).	3	B
LAT 999	Ph.D Thesis	9	B
Total (6+ 9+ 9)		24 units	

Logistics & Supply Chain Option

Course Code	Course title	Unit	Status
-------------	--------------	------	--------

LAT 921	Information Systems and Communication Technology in Logistics and Supply Chain Management (Seminar)	3	C
LAT 922	Entrepreneurship in Logistics and Supply Chain Management (Seminar)	3	C
LAT 923	Contemporary Issues in Logistics and Supply Chain Management (Area Paper).	3	C
LAT 999	Ph.D Thesis	9	C
Total (6+9+9)		24 units	

Course Content/Description

LAT 901: Research Processes in Transport and LSCM

Transport/Logistics Research Problem identification. Relationship between the research problem, research questions, research topic and objectives of study. Transport Data and Services. Literature search in transport studies. Relationship between gap in literature, findings and recommendations. Data collection and analysis in transport and logistics research.

LAT 902: Statistical Package for Social Sciences (SPSS).

This is a workshop.

Seminars

LAT 911-913 Seminars Courses for Transport Management option.

LAT 921-923 Seminars Courses for Logistics & Supply Chain Management Option.

LAT 999: PhD Thesis

Students' independent research. The thesis should not be less than 50,000 words or 200 pages on A4 sized paper typed double spacing with New Times Roman Font and size 12..

CELTRAS ACADEMIC STAFF LIST

S/N	NAME	QUALIFICATIONS	AREA OF SPECIALIZATION	DESIGNATION
-----	------	----------------	------------------------	-------------

CLAUDE AKE SCHOOL OF GOVERNMENT MASTER IN PUBLIC ADMINISTRATION (MPA) PROGRAMME

INTRODUCTION

PHILOSOPHY

The Claude School of Government aims to be a centre of excellence both in the training and retraining of manpower for the public service, in promoting research and scholarship that will contribute positively in improving the quality of governance in the society as well as in raising public consciousness that will press public institutions to be responsive and accountable. Because of the primacy which the School attaches to scholarship, it seeks collaboration with national and international institutions with similar interests and objectives and will strive to attract to its faculty (retired and serving) academics and administrators who have distinguished themselves in their areas of service. Those who pass through the portals of the School will be trained to take pride in their culture and country: to regard as unacceptable the status quo that encourages servility and poor governance. The School will encourage its alumni to stay involved in public affairs, always seeing themselves as active agents of positive change wherever they are.

The Claude Ake School of Government will not engage in scholarship for its own sake. It will engage in scholarship that is relevant to identified social, economic and political needs of the country in particular and Africa in general. It will not shy away from in engaging in policy advocacy, promoting policy positions it feels will improve governance as well as enhance the delivery of public goods and services. But in doing so, it will always be fiercely objective and non-partisan. Needless to say, the School will collaborate with other non-partisan bodies and institutions interested in promoting quality scholarship, good governance, pro-poor policy positions and in enhancing the quality and level of public services delivery.

Vision Statement:

The Claude Ake School of Government, working with the best international practice and standards, will always be Africa's number one centre for transformation where theory meets practice, intuition and thought guide public policy to deliver public goods and services as well as to improve governance.

Mission Statement:

To produce manpower and carry out research that will drive the wheels of good governance and responsible service delivery through quality learning and application of thought.

ACADEMIC PROGRAMME:

At present the School runs a Master in Public Administration (MPA) degree programme aimed at improving the skills and orientation of senior administrators. Details of the current programme, as approved by the Senate of the University of Port Harcourt, are presented below:

A. Programme Objectives

The objective of the programme of the Claude Ake School of Government is to train administrators in Nigeria's public and private sectors as k contribution by the University of Port Harcourt to the promotion of good governance and productivity in the civil service and in the economy. The MPA provides an advanced and specialized course in Public Administration and Management. It is aimed at improving the administrative and analytical skills of mid-career officers in the private and public sectors, who have had several years of practical experience, so that they easily reach the higher levels in administration and management.

The programme has been designed as an executive, hands-on and problem-solving type. It will emphasize case studies and deal with the daily challenges that administrators face at work. Holders of the MPA will find it an advantage if in future they plan to do a PhD course but they may not present it as a prerequisite for admission into a PhD degree course of study.

The programme of study takes the modular format. At the end of each module/week participants will be examined to test their comprehension of what was taught. Any participant who fails such an exam will have to take it again in the subsequent year in order to earn the MPA degree.

On completion of the executive MPA degree programme participants would have

- acquired the analytical skills to qualify for promotion into the highest echelons of administration in both the public and private sectors
- gained the skills and orientation required of policy advisers and planners
- acquired critical knowledge of the politics and economy of the country
- vastly improved their writing and presentation skills

B. Admission Requirements

1. Any applicant for admission to the MPA degree course shall be:
 - a) a graduate of the University of Port Harcourt; or

- b) a graduate of any other approved University; or
 c) a person who holds a recognised qualification approved by the Senate of the University of Port Harcourt.

2. The applicants first degree shall be at least a Second Class Honours Lower Division, However, candidates with third class or pass degree classifications, or those whose degrees are not normally classified, may be considered, provided such candidates have been in relevant employment for not less than five (5) years for those with third class or seven (7) years for those with pass degrees, from the date of their graduation.

C. Programme Duration

The duration of the Executive M. P. A. programme is twelve (12) calendar months, consisting of two semesters and field research/report writing and presentation period.

D. Requirements for the Award of Degree

1. In line with the School of Graduate School Regulation, to fulfil the requirements for the award of the Diploma/Degree, every candidate shall:

- a) obtain a weighed minimum coursework average of 50 (C) or better in the written examination as a whole and a grade which is not less than 50% (C) in any written paper(s) and
 b) satisfy any other additional requirements of the School.

2. No Post graduate student shall fail (that is, score less than 50% (C) in more than two modules/courses in a session at any level of coursework. If a student fails ANY one of the repeated modules/courses, he/she shall be asked to withdraw irrespective of the weighted average at the time of failure of the repeated course(s).

3. Where a candidate has been absent with good cause approved by the Senate, he/she shall be allowed to take the examination at the next available opportunity without penalty.

4. Each module carries 3 credits, except for module 9 (Field Research/Report Writing) which carries 6 credits. A student who has taken and passed 33 credit units of modules/courses and earned a CGPA of at least 3.0 shall be recommended for the award of the Executive M.P.A degree.

39	PAD 810-3	"
40	PAD 810-4	"

F. Course Description

1. PAD 801: Sustainable Development

One of the contemporary imperatives for any serious training is some critical understanding of the concepts of development and sustainable development. This course will sensitize the administrator to the debate on what constitutes sustainable development and the urgency of weaving it into all aspects of policy and practice both in the public and private sectors. It will focus less on the theoretical issues and more on the practical situation, drawing attention to the need to incorporate it in regional planning, and the reduction of the factors militating against sustained and sustainable development - such as corruption, low level of public ethics as well as and lack of transparency and accountability.

2. PAD 802: Sectoral Administration

This course focuses on the administration of social service institutions such as in education and health, as well as in agriculture. It will examine the nature of educational; administration at the primary, secondary and tertiary levels. It will also examine the challenges of education management; strategies and problems of curriculum designing; evaluation of programmes; problems of administering higher educational institutions; case-studies of management education programmes; food and security issues; patterns of agriculture in Nigeria; philosophy and strategies of government intervention; management of public agricultural agencies; role of international institutions; administrative and policy issues of rural agricultural development; politics of institutional cooperation.

3. PAD 803: Governance and Policy Analysis

Definition; structure and operation of the Nigerian political process; governance problems from the perspective of key institutions, political actors and groups in Nigeria; managerial and leadership strategies and skills; case studies and practice in selected institutional and leadership contexts; issues of policymaking, policy implementation and policy

analysis which are germane to occupants of top-level policy positions

4. PAD 804: Public Finance and Budgeting

Principles of public finance, taxation public finance in a Federal System, Fiscal Policy, Public Debt Management.

Relationship between Fiscal Policy and Monetary Policy. Budgeting, Budget Concepts, Budgeting process in Government, Budgets and National Development Plans, Preparation of Estimates, Financial Regulations and Budgetary Control, Control of Expenditure, Concepts and Practices of Financial Management, Pricing of Public Services.

5. PAD 805: Development Administration and Project Management

The course sensitizes the participants to the nature of public enterprises: their origins, development and classification. A survey of the major issues in the management of public enterprises; organizational patterns; financial management, staffing control and relations with other public. Private enterprises and the public, It examines in addition, the politics of administration and the often subtle but significant impact it plays in development planning and administration; the strategic place of the local system in planning and implementing development as well as field administration systems. Significance of local governments. Special problems encountered by local governments in respect of intergovernmental relations, finance, and personnel resources management. Also why public enterprises tend to fail, and how to make them sustainable.

6. PAD 806: Intergovernmental Relations

A study of intergovernmental relations, as a growing sub- theme of public administration. Federalism and intergovernmental relations as well as their management. Issues in the management of intergovernmental relations: constitutional, legal, political, economic, financial, personnel. Also to be examined include institutional mechanisms for

managing intergovernmental relations; fiscal federalism in Nigeria in a comparative perspective, with special reference to the experience of countries such as the U.S.A., India, Brazil and Canada.

7. PAD 807: Regulation Processes and their Administration

With deepening globalization, the debate on whether to regulate or not to regulate will get more prominence, with the tendency that international capital will discourage regulation and push for deregulation. Public servants must be in a position to know the implication of either side of the debate in order to guide their principals aright. On focus will be existing regulatory processes and policies in Nigeria, their successes and challenges

8. PAD 808: Research and Analysis

Recognizing that there is a dearth of accurate data for policy making and implementation, the course will provide the participants the relevant skills to gather, store and retrieve data, as well as those they need to engage in planning and analysis. It will cover the methods, purposes and tools of social investigation; scientific method; purpose of research; observation, questionnaires, interviews and focus group discussions, secondary sources, proxy, measures; graphic representation of data; frequencies; central tendency; dispersion normal distribution and probability

9. PAD 809: Field Research/Report Writing

As essay of between 7,000 words - 10, 000 words, on some practical challenge faced by senior management staff in Ministries and companies under the supervision of a Lecturer in the School on a chosen topic. Topics would have been agreed on before hand and a supervisor assigned.

10. PAD 810: Field Report Seminar

Course participants make presentations on their field experience and research.

CENTRE FOR DISASTER RISK MANAGEMENT AND DEVELOPMENT STUDIES (CDRMDS)

Programme Course Structure and Description

FIRST SEMESTER

1. DRM 801.1: Research and Analytical Methods (3 Units)

The course is concerned with exposing the students to the scientific methods for collecting organizing, summarising, presenting, and analysing data. Emphasis will be on field processes, research design, hypotheses testing, probability assessment; descriptive, simple inferential and spatial statistics.

2. DRM 802.1: Fundamentals of Disaster Management. (3 Units)

Introduces students to the Global Disaster Risk situation, basic concepts, elements, disaster categories and overview of disaster management. It will cover the various categories of environmental hazards such as extreme geo-physical, atmospheric, hydrologic, biologic and technologic events.

3. DRM 803.1: Teaching Tools in Disaster Risk Management. (3 Units)

It will introduce students to various tools of disaster management such as remote sensing, global positioning system (GPS) and geographic information system. Emphasis will be on their applications to planning, mitigation and management of disaster risk situations.

4. DRM 804.1: Disaster Risk Assessment /Analysis. (3 Units)

Introduces students to the dimensions to hazards and risks impacts and trends covering identification, nature, categories, perception, communication, assessment, and management of risks. Emphasis will be on the assessment of damage, loss and recovery.

5. DRM 805.1: Disaster Risk Vulnerability and Adaptation Planning. (3 Units)

Introduces students to disaster risk vulnerability and adaptation planning. Covers concepts, elements and factors of human vulnerability and adaptation. Also emphasizes vulnerability and capacity assessments, procedures, index and framework.

6. DRM 806.1: Disaster Preparedness Planning. (3 Units)

Covers principles, dimensions, measures and problems of disaster preparedness planning. Also involves disaster preparedness practices, information resources, setting up disaster committee, documenting disaster arrangements, conducting preparedness training and testing preparedness arrangement.

7. DRM 807.1: Development Planning. (3 Units)

This course covers basic development planning issues and theories with regards to disaster prone areas. Emphasis on basic development concepts, processes, issues and problems, planning issues, variables and strategies of sustainable development; mainstreaming disaster risk reduction into development planning, Millennium Development Goal, Hyogo Framework for Action and Africa Regional Strategy for Disaster Risk Reduction.

SECOND SEMESTER

8. DRM 808.2: Modern Safety and Emergency Services 3

(Additional emphasis on Fire Safety). Course covers the following: dynamics of hazards and safety challenges, safety audits and accident investigations. It also covers basics of fire prevention and protection, fire spread mitigation measures, fire emergency procedures, emergency response as well safety challenges in National Development among others.

9. DRM.809.2: Oil & Gas Disaster Risk, Response and Management.

It covers factors exacerbating community vulnerability — coping capacity to natural hazards, and resilience of communities. It will provide knowledge of community participatory approaches to risk identification, assessment, evaluation, communication, prediction and formulation of community disaster risk management systems and implementation.

10. DRM. 810.2: Climate Change Impact, Mitigation & Adaptation Basic Climatology and weather patterns; Factors influencing climate fluctuations at varying scales; The Greenhouse Effect - Natural forcing - Water vapour - Solar inputs - CO₂ and its feedbacks with temperature - Anthropogenic forcing, Agriculture The Global Carbon Balance - Carbon pools and their relative significance. Evidence for Recent Climate Change - Global air temperature records (ground based and satellite) — Sea-level rises - Arctic sea ice decline - Global glacial retreat - Animal behavioural modifications - Changes in floral timings, eg flowering, fruit set, harvest times - Species extinctions and vulnerabilities - Increases in extreme events eg heat- waves, fires, drought severity, hurricanes - Ocean acidification Future Climate Scenarios and the IPCC - Likely climates in 50, 100 years - Positive and negative feedbacks as the climate warms.

11. DRM. 811.2: Public! Occupational Health & Safety Management. This course will promote

improved disaster preparedness and response in the health sector and increase capacity of health workers and volunteers to response to disasters. Critical issues include: the management and coordination of health personnel and equipment, emergency health facilities, first aids, movement of victims, public health risks of disasters and handling pandemic health emergencies-influenza (fowl/swine flu), cholera, anthrax etc.

12. DRM.812.2: National Disaster Management Systems [with additional emphasis on Humanitarian Principles & Values] The course focuses on the concept, philosophy, institutional arrangement, organisational structures, issues and problems in the formulation of efficient national disaster risk management systems. Also covers environmental management systems standardization and the reviews of national disaster risk management systems of selected countries.

13. DRM. 813.2: Capacity Building for Disaster Reduction [with additional emphasis on Knowledge Management & Community participation] Provides assistance to national disaster management institutions to formulate and design disaster management strategy. Issues include the role of experts, information dissemination,

capacity-building principles, coordination of planning and management teams. It also covers best practice in disaster mitigation financing.

14. DRM.814.2: Disaster Response & Recovery Planning/Mitigation Management. The course seeks to provide adequate knowledge on the immediate and long- term management of post-impact phase of a disaster. It covers units such as themes, activities, structure and challenges of disaster response management; damage and loss estimation; damage and reconstruction needs assessment; themes of disaster response planning; resource mobilization for reconstruction; and case studies and simulation exercises.

15. DRM.815.2: Transportation Disaster Risk & Management [with additional emphasis on Search & Rescue Operations]. The focus of this course is to introduce students to basics of transportation safety management. Emphasis is placed on Air and Road transport Safety, journey management planning, external influences on human error, accident investigation and risk assessment. Moreso, the concept of search and rescue operation is introduced as accident management technique.

ACADEMIC STAFF LIST

S/NO	NAME OF STAFF	RANK / DESIGNATION	QUALIFICATION	AREA OF SPECIALIZATION
1	Mbee Daniel Mbee	Director	M.Sc (Manchester), M.Sc, B.Sc (Uyo)	Geo-Informatics System (GIS)
2	S.B. Arokoyu	Professor	Ph.D, M.Sc., B.Sc. (UPH), REM (USA)	Regional / Rural Development, Resource Management, Env. Mgt.
3	P.C. Mmom	Professor	Ph.D (Calabar), M.Sc. (UPH), B.Sc. (Ibadan), REM (USA)	Urban planning / Environmental & Resource Management, ETA
4	A.A. Obafemi	Professor	Ph.D, M.Sc., (UPH), M.Sc., (Lagos), B.Sc., (Ilorin), REM, (USA)	Cartography, Env. Mgt., Urban Geography, Techniques / Application
5	O.S. Akpoghomeh	Professor	Ph.D, M.Sc, B.Sc (Ibadan), CMILT	Transport Geography, Tourism Development, Env. Mgt. & EIA
6	C.H. Wazor	Professor	Ph.D (UPH), M.Sc., B.Sc. (UPH)	Urban Geography
7	V. Weli	Professor	Ph.D (Ibadan), M.Sc., B.Sc. (UPH)	Climatology
8	Johnson Nna	Professor	B.Sc., M.Sc., Ph.D	International Relations/ Development Studies
9	J.E. Ugbebor	Reader	B.Eng., M.Eng, PhD	Environmental Engineering
10	Allwell Ntegha	Reader	B.Sc, M.Sc, Ph.D (UPH)	Development/ Quantitative Economics
11	E. Elenwo	Senior Lecturer	Ph.D. (RUST), M.Sc. Phil, B.tech	Environmental Management
12	M. Ogoro	Senior Lecturer	Ph.D	Coastal Geomorphological Studies, Geo-Spatial Technique (Cartography, GIS and Remote sensing)
13	Deekor T.N.	Senior Lecturer	M.Sc (UPH), B.Sc (Calabar)	Biogeography
14	O.S. Eludoyin	Reader	Ph.D, M.Sc (UI), B.Sc (ED) (Ife)	GIS/Biogeography, Techniques/ Application
15	G.O. Chuku-Okeah	Senior Lecturer	B.Sc, M.Sc. (UPH)	Geomorphology
16	Ejeba, S. O.	Senior Lecturer	BA ABU, MA, PhD UPH	Morphology and syntax
17	Austin Sado	Senior Lecturer	BA, PGDPR, MSc (UNN), Ph.D (UPH)	Kiswahili, Sociolinguistics, Applied Linguistics, Ethnography of Communication, Obolo, Creoles Studies

CENTRE FOR GENDER AND DEVELOPMENT STUDIES (CGDS)

GUIDELINE FOR POST GRADUATE DIPLOMA (PGD), MASTERS (M.SC.) AND PhD IN GENDER AND DEVELOPMENT STUDIES; UNIVERSITY OF PORT HARCOURT.

HISTORY

Centre for Gender and Development Studies (CGDS) University of Port Harcourt came into being following the de-emerging of former Centre for Conflict and Gender Studies (CCGS) by the university authority in March, 2021. The authority's reason for de-emerging of the Centre is that each study area should be able to be visible as to attract international and national supports.

The core mandate of this Centre revolves around research, teaching and community service which is stemmed on research thereby providing evidence without creating ambiguity in the minds of such organizations as to what the Centre stands for.

This Centre is wired to make relevant contributions in the area of gender and development through research, teaching and community service by addressing challenges that arise in our society due to power relations between the gender which is a major obstacle to development and an anathema to the improvement in the social status of women in the nation's development studies. It will further provide ways and means (way forward) for the elimination of practices that hinder and prevent the two groups that make up gender from existing harmoniously thereby enthroning gender equity and inclusiveness.

PHILOSOPHY

The philosophy of the Centre is to promote harmonious existence between the males and females by encouraging the complementarily in their roles thereby bringing about gender equity that will lead to meeting the sustainable development goals of equality of human species.

VISION

This Centre seeks to be the best in global south when it comes to Gender and Development research, teaching, training and community services. The multi-disciplinary nature of its staff and team of experts. Its ability to establish and carry out responsibilities in compliance with global best practice and professional standards.

MISSION

Our Centre mission is to expose male and female populations to the knowledge of social, cultural, economic and political hindrances to development at the local, national and international levels, in order to attain peaceful co-existence for sustainable development. This will be achieved by

the application of relevant skills and competencies toward evidence based policy research in gender and development studies.

RATIONALE /JUSTIFICATION

The location of gender matters/issues is an index to measure development. The continued hues and cries as occasion by the deprivation, oppression and exclusion of some humans by others especially in the developing nation are undesirable, therefore gender and development practitioners need specialized skills and knowledge in order to bring about gender mainstreaming and ensure national and institutional polices on gender which is needed to bring equality of humans.

OBJECTIVE OF THE POST GRADUATE PROGRAMME

the goal of the postgraduate programme is to provide quality graduate training and research that students need to be able to identify challenges gender divide contribute to the under development of people and therefore adopt appropriate measures / strategies to eliminate or bring them to the barest minimum. The specific objectives of the programme include;

1. To deliver high level post-graduate programmes at the Post-graduate Diploma, Masters' and Doctoral Philosophy levels.
2. To prepare students with theoretical, methodological and practical skills and knowledge in contemporary gender and development studies.
3. To enable those who have interest in gender and development discourses, whose first degrees are not in the opportunity to achieve their desired target
4. To engage in practical projects that build capacity for achieving sustainable development goals through community engagement, dialogue, negotiation and networking.

ELIGIBILITY

To be eligible for admission into the Post-graduate diploma programme, a candidate must possess a first degree, and/or HND degree with a third class or, pass from any recognized university. For admission into a master's degree and Doctor of Philosophy degree. The requirements are as stipulated by the school of graduate studies, University of Port Harcourt.

DURATION

The Post Graduate Diploma programme is for a period of twelve months.

The Master's Degree, a maximum of twenty four months; while the Ph.D. Programmes tests for a maximum of thirty six months. All the programmes run on modular basis.

MODE OF APPLICATION

The request for application form should be made to the centre for Gender and Development Studies, University of Port Harcourt accompanied by the stipulated fee. The applicant's name, address and desired course written at the reverse side of the receipts.

METHOD OF TEACHING

The course will include lectures, group work, case studies, directed reading, presentation and individual assessment. There will be some video materials utilized to support theoretical concepts in ceruse of the lectures.

METHOD OF ASSESSMENT

A three – hour examination will be written by each student for each course. Examinations are conducted to enable us test for the student understanding and critical evaluation. A term paper and test shall be part of a continuous assessment.

GRADUATION

A student shall be eligible for the award of Postgraduate Diploma if;

- He/She obtains a cumulative CGPA of 3.00 on a 5 point grading scale at the end of the programme
- He/She has obtained a "Pass" in the project To obtain a Master's and /or Doctoral degrees shall follow the school of Graduate Studies guideline to the latter.

COURSE REQUIREMENTS

To graduate from the Diploma programme, a candidate must obtain a minimum of 30 credit units. This credit load will include a research project of 6 credits to be completed after the course work, the students are required to take at least 2 elective courses per quarter (module). For the Masters' and for Ph.D, this is in with the School of Graduate Studies Guidelines.

POST-GRADUATE DIPLOMA (PGD) IN GENDER AND DEVELOPMENT STUDIES

QUALIFICATION FOR ADMISSION:

To qualify for admission into the Post-Graduate Diploma programme, a candidate must possess a third class (3rd) degree or equivalent level with a

CGPA of 1.5 points on 5-point scale of the University of Port Harcourt in any field. For HND background, lower credit pass shall be considered

DURATION:

The Post-Graduate Diploma programme in Gender and Women Development Studies runs full time for twelve (12) calendar months minimum duration and 24 months maximum duration.

REQUIREMENTS:

A candidate is required to offer nine (9) taught courses which shall lay emphasis on gender and women development issues. In addition, one seminar paper is to be presented by every candidate before graduation. On successful completion of the programme, each candidate is awarded a PGD Certificate in Gender and Women Development Studies.

FIRST QUARTER

Course Code	Course Title	Credit Unit
GDS 701.1	Introduction to Gender and Development Studies	2
GDS 702.1	Gender, Culture and Society	2
GDS 703.1	Male and Masculinity versus Female and Femininity	2
Total		6

SECOND QUARTER

Course Code	Course Title	Credit Unit
GDS 704.1	Introduction to Feminist Theory	2
GDS 705.1	Gender, Education and Politics	2
GDS 706.1	Gender Relations in Organizations	2
Total		6

THIRD QUARTER

Course Code	Course Title	Credit Unit
GDS 707.2	Gender, Science and Technology	2
GDS 712.2	Women and Development	2
GDS 709.2	Gender and Law	2
Total		6

FOURTH QUARTER

Course Code	Course Title	Credit Unit
GDS 710.2	Introduction to Research Method	3

GDS 711.2	Research Seminar on Domestic Violence	3
GDS 708.2	Individual Research Project	6
Total		12

COURSE ASSESSMENT

Each course will be assessed on the basis of

- 30% continuous assessment
- 70% end of semester written examination.

Candidates are expected to obtain a minimum grade of 'C' (50%) in each course they registered for and a seminar in order to be qualified for the award of the Post-Graduate Diploma in Peace and Conflict Studies. Grades per performance shall be:

A	=	70% - 100%
B	=	60% - 69%
C	=	50% - 59%
F	=	0% - 49%

DIPLOMA CLASSIFICATION

The PGD in Peace and Conflict will be awarded with Distinction, Upper Credit, Lower Credit and a Merit. The cumulative grade point for classification shall be:

CLASS OF DIPLOMA	CGPA
Distinction	4.50 – 5.00
Upper Credit	4.00 – 4.49
Lower Credit	3.50 – 3.99
Merit	3.00 – 3.49
Fail	1.00 – 2.99

COURSE DESCRIPTION

GDS 701.1 Introduction to Gender and Development Studies

This course aims to highlight the key role women have and can play in economic development. Basic Concept will be looked at like; Gender, Sex, Gender Roles, Gender Equity, Gender Equality and development. Individual, community lands, gender inequalities in development will also be looked at. An introductory survey of conceptual approaches to gender is followed by a treatment of central topics which include; the move from Women in Development (WID) to Gender and Development (WAD) as critical perspectives in development studies, conceptual approaches to households, men and masculinities in development, globalization and women's employment, gender, state and governance, women's movements and state-civil society relations, gender, conflict and post-conflict, and finally an appraisal of prospects for gender-aware planning and empowerment.

GDS 702.1 Genders, Culture and Society

Examination of the international emergence of the field of women's studies; the achievements and limitations of scholarly work exploring oppression

and discrimination based on sex and sex differences; the development of the category "gender" and its uses and abuses; and the relevance of changing understandings of the term "culture" for the study of women, gender, and/or sexuality across diverse historical periods, regions, nations, and societies. Particular attention devoted to the ways in which "gender" as practice, performance, and representation has differed for women and men according to race, class, and other divisions.

GDS 703.1 Male and Masculinity versus Female and Femininity

Masculinity (also called manhood or manliness) is a set of attributes, behaviours, and roles associated with boys and men. Although masculinity is socially constructed, some research indicates that some behaviour considered masculine is biologically influenced. "Femininities" and "Masculinities" describe gender identities. They describe socio-cultural categories in everyday language; these terms are used differently in biology (see below). Because femininities and masculinities are gender identities, they are shaped by socio-cultural processes, not biology. Femininities and masculinities are plural and dynamic; they change with culture and with individuals. Students will be taught the Single-factor as well as Multi-factorial Approaches to Masculinity and Femininity. We will also at different types of abuses as well as sexual harassment.

GDS 704.1 Introduction to Feminist Theory

This course will familiarize students with some of the key issues, questions, and concepts in feminist thought. The readings included in the syllabus reflect a range of perspectives and methodologies. Through readings and discussions, we will explore the ideas and methods that articulate and define the field of feminist theory. This course is designed to introduce you to some of the canonical texts in feminist thought, and to enhance your ability to think critically about the world we live in. Students are expected to participate in classroom discussions every week. This course fulfils both the "writing intensive" and "philosophy" general education requirements.

GDS 705.2 Gender, Education and Politics

The course examines feminist theories in relation to male and female participation in education and politics. Critical analysis of both legal and legislative demands of women in both developed and developing countries will be considered.

GDS 706.2 Gender Relations in Organisations

This course focuses on a study of different social relationships among and between males and females in different organisations. Such areas include job position/responsibility, promotions,

violence and the like. This provides an opportunity to observe and reflect on the already acquired knowledge.

GDS 707.2 Gender, Science and Technology

This course's topic touches on central and controversial issues in our lives and society, namely sex and gender, and particularly interaction between sex and gender and medicine, science, and technology. The main theoretical lenses for the course will include feminist philosophy, critical gender studies, history and philosophy of science, and philosophy of technology. This course will build on the lectures in this year's Centre for Values in Medicine, Science, and Technology series, "Sexing Science, Gendering Technology: Rethinking Sex and Gender in Science, Technology and Medicine." Students will have opportunities to attend lectures and interact with experts in the field.

GDS 712.2 Women and Development

Women's role expectations in traditional and modern periods are compared. Particularly, attention is given to role expectations of women in the globalizing world. Discussions include recent policies that focus on women development in the New Millennium. Responses from different developing countries, especially in Africa, are compared in order to identify possible obstacles and propose the way forward.

GDS 709.2 Genders and Law

The aim of the course is to analyse legal phenomena from a gender perspective. To achieve this aim, the course starts with a general overview of different gender theories, for example feminist theories, post-modern gender theory and Queer-theories. Starting from these theories particular fields of application of the law where gender has significant importance will be studied. With these theories as a basis field of application is chosen where gender have significant importance. Special attention is directed to issues about equality, affirmative action and discrimination and violence.

GDS 710.2 Introduction to Research Methods

Areas to be covered include an introduction to the principles of research in gender and women development studies, bearing in mind the multidisciplinary nature; design of research instrument; empirical studies design as well as the qualitative and quantitative methods of analysis, bearing in mind the different approaches for project writing.

GDS 711.2 Research Seminar

Independent topics in different areas of interest are to be researched and presented as seminar series. However, chosen topics shall be supervised to be

in line with the area of specialization of each candidate.

GDS 708.2. Individual Research: Write, Submit and Present (Core) – 6 CREDITS

Every student will write, defend and submit a research project at the end of the course work, leading to the Submission of a project. The topic of research must fall within one of the research areas in peace and conflict studies.

MASTER OF SCIENCE (M.Sc.) IN GENDER AND DEVELOPMENT STUDIES

QUALIFICATION FOR ADMISSION:

The qualification for admission into the Master of Arts programme will be considered as follows:

- A candidate must possess at least a Second Class Lower Division (2²), in Gender and Development Studies or a degree in Social Sciences/Humanities/Education from any recognized Tertiary Institution, with a CGPA of 3.00 on 5-point scale of the University of Port Harcourt.
- A candidate must possess the University of Port Post-Graduate Diploma in Gender and Development Studies, with a minimum grade of merit.

DURATION:

The Master's Degree Programme in Gender and Development Studies shall run full time for one year minimum duration and two years maximum. On the other hand, the Part-time will run for two years minimum duration and four years maximum duration.

REQUIREMENTS:

For the Master's Degree programme, a candidate is required to offer eight (8) taught courses, including Seminar and Thesis, all of which shall focus on gender and women development issues. On successful completion, each candidate is awarded a Master of Arts Degree in Gender & Development Studies.

FIRST QUARTER

Course Code	Course Title	Credit Unit
GDS 801.1	Feminist Theories	3
SGS 801.1	ICT and Research Methods	2
GDS 803.1	Introduction to Gender and Development Studies	3
Total		8

institutions, and the distribution of power and resources in Nigerian society? The ways that ethnicity, 'race' and class modify and give meaning to gender debates in an Nigerian and international context will also be a central concern.

GDS 804.2 Race and Culture in Africa

Topics should concentrate on contemporary issues in different parts of Africa to be able to compare and contrast different experiences of gender and development issues with local experiences such as anatomy and control, equality of educational opportunity, stratification and employment opportunity, gender and occupational choice, etc.

THIRD QUARTER

Course Code	Course Title	Credit Unit
GDS 805.2	Gender, Peace and Conflict Management	3
GDS 806.2	Advanced Theories in Gender and Development Studies.	3
GDS 807.2	Gender and STEM	3
Total		9

GDS 805.2 Gender, Peace and Conflict

This course focuses on the intersection between gender and peace and conflict research. It aims to develop students' abilities to understand the complex role that gender plays in patterns of war and peace. Gender is defined as the "socially constructed roles, behaviours, activities, and attributes that a given society considers appropriate for men and women" The course will explore topics such as gendered differences in participation and suffering; sexual violence in armed conflict; the social and political variation associated with gender equality goals and outcomes; the challenges of peacekeeping; women's participation in conflict resolution; and implications for peace building and transitional justice.

FOURTH QUARTER

Course Code	Course Title	Credit Unit
GDS 812.2	Seminar on Gender and Globalization	3
GDS 809.2	Seminar on Globalisation and the Environment.	3
GDS 811.2	Research Methods in Gender and Development Studies	3
GDS 808.2	Individual Dissertation	6
Total		15

GDS 810.1 Gender Issues on Health

To realize gender equality in health care, sex and gender dimension needs to be integrated in all aspects of research and clinical practice. This course brings together experts from a multitude of disciplines including clinical, basic science, public health and policy and provides participants with resources that will assist them in developing and strengthening gender-equal clinical care and research programs. The course will focus on the critical health issues for women and men through the life cycle, challenges of integrating sex and gender from the health research, practice, and policy perspectives, as well as strategies to address these challenges.

COURSE DESCRIPTIONS

GDS 801.1: Feminist Theories

The course explores information on contemporary feminist debate as presented Structuralism, Marxism and Socio-cultural studies, to mention a few. The main objective is to analyse unequal conditions of male and female population in society. It provides an opportunity to critical issues such as sexuality, values and identity. The Nigerian context of feminist theory is equally discussed.

GDS 803.1 Introduction to Gender and Development Studies

Gender is encountered in every aspect of our lives. It informs public debate, legislation, how much money we earn, who dies younger and our exposure to risk and sexual violence. The course examines contemporary gender relations in Nigerian society, in our everyday lives, the school, the workplace, and the home. To what extent can we explain these relations in terms of women's and men's choices and to what extent in terms of masculinities and femininities, laws and

GDS 807.2. Gender and Stem

This course examines the historical path of the subject matter and how men and women's lives have been impacted in the process of developing The Third World Nations. It will evidentially using statistics to expose how STEM contributes to the incorporation of our region to global economic and political systems of the globe. The course begins with theoretical and concept clarifications, inhibitors to the effective utilisation of STEM in

national development and thereby make recommendations that will bring out development of the nation.

GDS 812.2 Seminar on Gender and Globalisation

The concept of globalization is examined. The course introduces gender issues in development, particularly with reference to developing areas where poverty, high illiteracy rate, unemployment, underemployment and early retirement appear to be common, yet the effort is to achieve partnership between and among nations. In addition, both feminist and queer theories are considered as issues of nationality, ethnicity, race and sexuality are discussed in the effort to identify a universal ground to effectively accommodate male and female population in the globalized world.

GDS 809.2 Seminar on Globalisation and the Environment

This course exposes students to the various issues relating to the environment, especially environment protection and preservation. It will also examine the role of environmental groups and NGOs to ensure that big corporations reduce greenhouse emission significantly. The course shall highlight the difficulties and challenges faced by poor and developing countries in ensuring that advanced countries enforce Laws against environmental pollution due to greenhouse emission.

GDS 811.2 Research Methods on Gender and Development Studies

Gender plays a major role in structuring societies. It is also an innovative concept that grasps sexual differentiation and reproduction of inequalities between men and women in an increasingly numerous and varied number of fields. The development of a genuine interdisciplinary approach around these questions has contributed to the emergence of an impressive range of theories and methods. However, the plurality of institutional contexts in which gender is mobilised as well as its privileged but complex relationship with the different branches of feminist theorization and practice make it sometimes difficult to use. If, in theory, any situation or phenomenon is likely to be subject of a gender analysis, the choice and establishment of a method is certainly an issue in itself. The aim of this course is to introduce students to research methods in gender studies. It teaches different ways of mobilising the concept in order to produce a critical emancipatory knowledge. It also examines the epistemological challenges of the research process in the context of gender studies. The aim is to equip students so that they can carry out their own reflections on a subject of their choice. The course also examines

whether and how research methods involving gender lead to doing research in a “different” way.

GDS 808.2 Supervised Individual Dissertation

A candidate’s choice of topic must be related to his area of specialisation, and the work must be original

Ph.D. IN GENDER AND DEVELOPMENT STUDIES

Eligible candidate for admission into the Ph.D Programme must possess a Master’s Degree in Gender & Development Studies from recognised University and should have an average score of 60% or its equivalent grade. Candidates who possess a Master’s degree in other fields of study must also have a postgraduate diploma or Master’s Degree in Gender and Development Studies with a minimum of grade “C” to qualify for admission. Admission will also be based on interview performance.

METHOD OF APPLICATION

Same as in the Masters programme, the PhD candidate must in addition submit a proposed plan of research along with his/her application.

DURATION OF PROGRAMME

- (c) The Full-Time Ph.D programme in Gender and Development Studies should run for a minimum of Six (6) Semester or a maximum of Ten (10) semesters.
- (d) The Part-time programme should run for a minimum of Eight (8) semester, and a maximum of Twelve (12) semesters.

REQUIREMENTS FOR GRADUATION

A candidate must have fulfilled the following conditions to be awarded a Ph.D. degree in Gender and Development Studies.

- (a) To proceed to Ph.D. candidacy, a candidate must pass a comprehensive upgrading examination at a minimum score of CGPA of 4.0 or 60%.
- (b) A candidate who after two attempts fails a comprehensive examination shall be asked to withdraw.
- (c) The degree of Doctor of Philosophy enables a student with an interest to carry out independent, original research culminating in a thesis. This programme is usually completed within three years. A PhD thesis should not exceed 100,000 words and must be a thorough, comprehensive and original study of a topic or issue which makes a significant contribution to the knowledge of the particular field.

FIRST QUARTER

Course Code	Course Title	Credit Unit	COURSE DESCRIPTION FOR Ph.D. IN GENDER STUDIES
GDS 900.1	Advanced Feminist Theories	3	<p>FIRST SEMESTER</p> <p>CGS 900.1. Advanced Feminist Theories The course explores information on contemporary feminist debate as presented by Structuralism, Marxism and Socio-cultural studies to mention a few. The main objective is to analyse unequal conditions of male and female population in society. It provides an opportunity to critical issues such as sexuality, values and identity. The Nigerian context of feminist theory is equally discussed.</p> <p>GDS 901.1. Gender and Domestic Violence This course will explore violence against women, focusing specifically on domestic violence, intimate partner violence, sexual assault, stalking, sexual harassment, and human trafficking. Additionally, the course will examine issues related to same-sex violence and cross-cultural abuse, how violence against women becomes normalised, and the role of male allies (HE FOR SHE).</p> <p>GDS 902.1. Gender and Development In this course we will analyse the varieties of women experiences in contemporary world, consider how gender relations may be changing, and investigate the historical, social, political, economic, and cultural forces that shape our lives relative to gender (power relation). Feminist thinking within and across academic disciplines frames the exploration of these topics. We will also explore relations of inequality organised along lines of race, ethnicity, nationality, class, sexuality, ability, appearance, age, and other categories of difference, in addition to gender.</p> <p>SGS 903.1. ICT and Research Methods This course is School of Graduate Studies' and it is compulsory for all the students and a success in this course guarantee's the graduation of the student. It will expose the students on how to carry out their research and in line with international best practice standards.</p> <p>GDS 904.1. Total		15	

The course introduces the students to the concepts and theories used in the gender and development studies. It traces the evolution of the discipline and its main concerns; as well as it orients the main philosophical thoughts and social science theories that impacted on the evolution of gender and development studies as an academic discipline.

(ELECTIVE COURSES – CHOOSE ONE)

GDS 906.1. Gender Violence, Law and Social Justice

This course offers an in-depth examination of the phenomenon of gender-motivated violence. Following a survey of the prevalence and varieties of sexual violence and coercion around the world, we consider questions such as: How, if at all, is violence against women different from other types of violence? How effective have been legal strategies to address violence against women, and what shifts in thinking about gender-motivated violence would be necessary finally to eradicate it? How does the toleration of sexual violence shape people's expectations and sense of entitlements? What are the implications of gender-based violence for the constitutional guarantee of equal protection of the laws? Does equal protection itself have a gendered meaning and impact? Among the types of violence against women we will consider are: intimate-partner violence; domestic homicide; prostitution; rape; sex trafficking; and violence facilitated by the Internet.

GDS 907.1 Gender and the Environment

This course will compare relationships between gender and the environment in a developed country, the U.S., and a developing country, Nigeria. We will look at the history of gender constructions of nature and natural resources and their relationship to environmental practices. We will examine the disproportionate impact of environmental destruction on women and children, particularly from poor and minority communities, as well as rapidly changing ideas and practices about environmental degradation and climate change.

SECOND SEMESTER

GDS 909.2 Gender And Religion

The theme of gender and religion preoccupies increasingly academic research as well as the public sphere, in institutional, national, and global contexts. This course's focus is the intertwining of gender and religion, and various positioned attempts to comprehend and see through, or beyond, the tangle. We are concerned with religious realities in their own terms: gendered visions of power in mythic, symbolic, and ritual phenomena. We also want to consider the ways religious realities reflect and mould gender roles and gender hierarchies in society, and the ways

political and economic conditions influence these configurations.

GDS 910.2 Gender and Governance

Students will be taught how governance in this nation and beyond had been and this will enable them to identify any gap based on gender in this area. This course aims to introduce you to the various approaches and assumptions that are implicit in the phrase Gender and Governance. It also seeks to know why the popular argument that women should be given opportunity to participate in the governance of where ever they may be. Any myths and misconceptions surrounding women participating effectively in governance in this region will be cleared.

GDS 911.2. Gender Mainstreaming and Nation Building

This course will scholarly conceptualise major concepts relevant to it, identify the link between the subject matter. It will also find out and elaborate on gender policies and programmes and explore if gender mainstreaming is actualized in Nigeria. If yes, how has it contributed to the development/ transformation of the nation and if no, identify and expatiate on the limiting factor(s) and then proffer solution(s). It will further identify nations where gender is mainstreamed and thus draw the comparison as to how such influences the quality of life of the people. Any other useful and relevant points to enhance and improve the standard of living of the people will be addressed.

GDS 912.2 Research Seminar

Independent topics in different areas of interest are to be researched and presented as seminar. However, chosen topics shall be supervised to be in line with the area of specialization of each student.

GDS 999.2 Supervised Thesis

Every student will write, submit, and defend a research at the end of the course work, leading to the submission of a dissertation. The topic of research must fall within one of the research areas in Gender and development studies and the work must be adjudged to be original to the student

GDS 913.2 Gender, Migration and Human Trafficking

The purpose of this study is to contribute to the identification and understanding of what it means to be 'taking into account the gender perspective, to strengthen the prevention of this crime and protection of the victims thereof', as required in Article 1 of European Union (EU) Directive 2011/36/EU on Preventing and Combating Trafficking in Human Beings and Protecting its Victims in the context of the EU Strategy (COM

(2012) 286 final) Towards the Eradication of Trafficking in Human Beings. The study addresses the five priorities of the EU Strategy: identifying, protecting, and assisting victims of trafficking; stepping up the prevention of trafficking in human beings; better law enforcement; enhanced coordination and cooperation among key actors and policy coherence; and increased knowledge of an effective response to emerging concerns. Through narratives, case studies and secondary data from different regions and countries, it points out the very different significance of female labour migration compared to men's. On-going conflicts and forcible displacement against 'newcomers', where women are particularly vulnerable, are discussed, as are the complexities of ethnic identity. This book will give readers a comprehensive idea of the scale and complexity of women's migration today. The study identifies and draws on EU law and policy competence in gender equality in its identification of the gender dimensions of trafficking. The gender dimensions are clustered into five issues: gender specificity and equal treatment; gender expertise, gender balance in decision-making and gender mainstreaming; the relationship between prostitution and trafficking; gendered policy fields and strategic priorities; gendered systems and the theory of prevention.

ELECTIVE COURSES (CHOOSE ONE)

GDS 914.2 Genders, Culture and Human Development

The main objective of this study is to present cultural concepts, traditions and practices as important determinants of development in Africa. It is also aimed at enunciating how cultural knowledge and traditional practices structure and shape gender relations. Other specific objectives include a review of diverse definitions of culture and development concepts as they intertwine to form a framework for assessing the increasing

awareness of the need to mainstream cultural approaches to development strategies in Africa. Another important objective is to reveal the centrality of cultural approach to development in the on-going international call for an inclusive gender and development strategy to enhance sustainability. The new emphasis on cultural approach to development can be traced to the World Conference on Cultural Policies (MONDIACULT) held in Mexico City in 1982 and the subsequent declaration of the United Nations Decade of Culture. This global awareness has contributed to the global reawakening to the centrality of culture to any meaningful progress in the development process.

GDS 915.2 Gender and Health Issues

In this course, we will examine woman's health issues from multiple standpoints, theories, and methods, drawing upon perspectives from the social sciences, humanities, and sciences. Students will have the opportunity to meet and engage with subjects experts from across the University and beyond. Together, we will investigate, interrogate, and critique research and research methodologies related to specific health issues experienced primarily by women¹. Through dialogue and debate, critical thinking skills will enhance as dominant lines of scholarship and innovative methodologies are considered across disciplinary domains and epistemologies.

Visiting Lecturers and Partners

The Centre will draw expertise and occasional guest lecturers from the Gender and Development Studies Programme, University of Ibadan; and Institute of Gender and Development, Abuja. The Centre will also collaborate with West African Civil Society Institute (WACSI), Ghana, West Africa Network for Peace building (WANEP) and Open Society Initiative of West Africa (OSIWA), Nigeria, Partnership Initiative for Peace Building in the Niger Delta (PIND), etc.

LIST OF ACADEMIC STAFF

S/NO.	NAME	QUALIFICATION	AREA OF SPECIALISATION	DESIGNATION
1.	Ifeanacho, M. I.	B.Sc., M.A., Ph.D.	Human Resources Management	Professor
2.	Okodudu, B.S..	B.Sc., M.Sc., Ph.D. UPH	Development Studies	Professor

11.	Dr. C. Erondu	Ph.D, M.Sc and B.Sc	Development Studies	Senior Lecturer

COUNSELLING AND HUMAN DEVELOPMENT CENTRE (CHDEC)

Introduction

Counseling Psychology is a specialized profession that deals with various mental health, emotional, educational, vocational and other psychosocial problems of clients. It is a hybrid profession in Psychology because the trained counselors will work with diverse clients in diverse settings and fields, hence it is very important for them to acquire general counseling skills, competences as well as specialized skills and competences that will enable them discharge their functions effectively and efficiently. This specialization course is a timely shift and incorporation that will help our students to acquire sellable skills, be more marketable, relevant and globally accepted.

Vision

Our vision is to become the leading institutional Centre in Counselling Psychology

Mission

Our mission is to meet the needs of the various clients in school and non-school settings (the society at Large) in the area of Counselling Psychology. This will be achieved through commitment to outstanding training of Counsellors with adequate theoretical background, techniques and skills to deliver widely accepted services

Rationale

The Counselling Association of Nigeria (CASSON) in its quest for professionalization and licensure has tasked counsellor Training Institutions and centres to train specialists in specific disciplines of Counselling Psychology, thus the breaking down of the General Counselling Psychology into specialization areas at Masters and Ph.D levels for training. Each of the specialization areas in Counselling Psychology is targeted to train, reposition, and equip the products (trained counsellors) with the necessary universally accepted skills thus increasing their marketability globally.

POST GRADUATE DIPLOMA PROGRAMME IN COUNSELLING PSYCHOLOGY

Admission Requirements

Candidates who possess a Bachelor's degree from a recognized University with a minimum of Third Class Honors or Higher National Diploma (HND) from a recognized Polytechnic with a minimum of Upper Credit in Social Science and Education or any other related field would be considered.

Programme Duration

The full-time programme is for a minimum of 12 calendar months and maximum of 24 calendar months while Part-Time is for a minimum of 24 calendar months and a maximum of 48 calendar months, during which the student is expected to take the complete modules and carry out an individual project.

The programme is both Modular and On-line. It is a standalone programme.

Graduation Requirements

A student is presented for graduation after attempting and passing all fourteen modules, including individual research project as well as fulfilling all School of Graduate Studies requirements; and in good standing with the university policies.

Course Outline

Code	Course title	Credit units
DIC 701	Fundamentals of Education Research	3
DIC 702	Fundamentals of Guidance and Counselling	3
DIC 703	Group Dynamics and Procedures in Counselling	2
DIC 704	Theories and Techniques in Guidance and Counselling	2
DIC 705	Family and Couple Counselling	2
DIC 706	Adolescent/Youth Counselling	2
DIC 707	Special Needs Counselling	2
DIC 708	Addiction and Crisis Counselling	2
DIC 709	Career and Vocational Counselling	2
DIC 710	Introduction to Gerontological Counselling	2
DIC 711	Mental Health Counselling/Rehabilitation	2
DIC 712	Practicum in Counselling	3
DIC 713	Seminar and presentations	2
DIC 714	Use of ICT in Counselling	2
DIC 715	Project	4
	Total Credit Units	35

COURSE DESCRIPTION

DIC 701: Fundamentals of Educational Psychology and Research 3

What is Education?; Overview of Fundamental Concepts in Psychology, Branches of Psychology and their contributions, Sports in Counselling, Types of Research in Psychology

DIC 702: Fundamentals of Guidance and Counselling 3

Overview of basic Concepts in Guidance and Counselling, Principles of Guidance and Counselling, Counselling skills; Umbrella services in Guidance, Specialization areas in Counselling, Ethical Code of Conduct in Counselling

DIC 703: Group Dynamics and Procedures in Counselling 2

Definition of basic concepts, Group work in Counselling, Use of Counselling Theories in Group Work, Group work with special populations

DIC 704: Theories and Techniques in Counselling 2

Overview of Counselling Theories; Techniques applied in Counselling; Tools used in Counselling; Practical application of the Theories and Techniques

DIC 705: Family and Couple Counselling 2

Overview of Family Life and Marital Relationship; Pre-marital Counselling and Dating; Dysfunctional Families and Marriage; Approaches to Family and Couple Counselling; Family Mental Health

DIC 706: Introduction to Adolescent/Youth Counselling 2

Counseling across the Lifespan; Concept of Adolescence and their basic needs; Problems of Adolescents; Drug Use and Abuse among Adolescents; Food and Spending Spree; Pornography and Sex Obsession; Depression among Adolescents; Use of Sports in Adolescent Counselling

DIC 707: Special Needs Counselling 2

Different Special Needs areas among children; Family and Parenting of Special Needs children; Learning Disabilities and Counselling; Mainstreaming and Inclusion of Special Needs children; History and Myths behind Special Needs children

DIC 708: Addiction and Crisis Counselling 2

Overview of Addiction and Behaviour; Difference Areas/Types of Addiction; Crisis Intervention Strategies; Various Management Strategies of Addiction

DIC 709: Career and Vocational Counselling 2

Overview of various Career Areas and needs of students; Vocational Theories and their applications; Instrumentation in Vocational Counselling

DIC 710: Introduction to Gerontological Counselling 2

Overview of Gerontological Counselling; Needs of the Aged; Theories of Human Aging and Interventions; Crisis in Aging and Interventions

DIC 711: Mental Health Counselling 2

Overview of Mental Health across various ages and gender; Various Mental Health Needs and problems in Families and Organizations; Stress; Burnout; Depression; Suicide; Use of Sports in Mental Health Counselling; Sexual Deviations

DIC 712: Practicum in Counselling 3

What is Practicum in Counselling (various tools); Why Practicum in Counselling (responsibilities of the various stakeholders); Areas of concerns in schools and non-school settings; Establishment of Counselling Offices/Centres

DIC 713: Seminars and Presentations 2

Seminar Writing Skills; Seminar Presentations; Presentation Skills;

DIC 714: Use of ICT in Counselling 2

Use of On-line Counselling Site (better help, Regain, Faithful Counselling, Camelry, Teen Counselling, talk space, on-line-therapy.com, text, voice, live video); Web tools (wikis, blogs, youtube, fb, googledocs) for on-line Counselling Services.

DIC 715: Final Project (Each student is expected to choose a topic) 4

Each student will be guided by an experienced supervisor; Supervisors will ensure the use of acquired research skills in writing; Student will be assessed at major presentations namely: Proposal Stage, Post Field and Final Defense.

MASTER OF SCIENCE PROGRAMME IN COUNSELLING PSYCHOLOGY

Areas of Specialization:

1. SCHOOL COUNSELLING
2. MARITAL, COUPLE AND FAMILY COUNSELLING
3. CHILD AND ADOLESCENT COUNSELLING
4. ADDICTION AND REHABILITATION COUNSELING

5. CLINICAL AND MENTAL HEALTH COUNSELLING
6. GERONTOLOGICAL AND GRIEF COUNSELLING
7. SOCIAL WORK AND REHABILITATION COUNSELLING

Admission to the Master's Counselling Psychology is open to all candidates who hold a B.Sc./B.Ed in Social Sciences and Education or Post Graduate Diploma(PGD) in Guidance and Counselling, Social Work, Management and other related disciplines with at least second class lower division from a recognized University.

Status

Registration for the Masters programme shall be open to Full Time and Part Time students.

Duration of Programme

The full time programme is for a minimum of 12 calendar months and maximum of 24 calendar months while Part time is for a minimum of 18 calendar months and a maximum of 36 calendar months, during which the student is expected to take the complete modules and carry out an individual research project.

Award of Degree

Successful students at the end of the programme shall receive the appropriate degrees in Counselling Psychology of the University of Port Harcourt.

Admission Requirements

Mode of Study

The programme offers a flexible modular hybrid onsite and real-time video conferencing that offers students excellent choices of time of study.

Academic Staff

Lectures will be drawn from University of Port Harcourt, other universities and Industry.

Graduation Requirements

To qualify for an award of the Masters of Science in Counselling Psychology of the University of Port Harcourt, a student must meet the following requirements:

1. The student must have successfully completed and passed all the prescribed courses in the programme with at least C grades (50%);
2. The student must have met other requirements of the School of Graduate Studies and the University of Port Harcourt.

Course Grading System

The course work grading system shall be as follows:

% SCORE	LETTER GRADE	GRADE POINTS	CUM. GRADE POINT AVERAGE	CLASS OF DEGREE
70 and above	A	5.00	4.50 – 5.00	DISTINCTION
60 – 69	B	4.00	3.45 – 4.49	CREDIT
50 – 59	C	3.00	3.00 – 3.44	PASS
Below 50	F	0.00	Below 3.00	FAIL

MASTER'S DEGREE IN COUNSELLING PSYCHOLOGY

Areas of Specialization: MASTER OF SCIENCE (M.Sc.) IN

- SCHOOL COUNSELLING
- MARITAL, COUPLE AND FAMILY COUNSELLING
- CHILD AND ADOLESCENT COUNSELLING
- ADDICTION AND REHABILITATION COUNSELLING
- CLINICAL AND MENTAL HEALTH COUNSELLING
- GERONTOLOGICAL AND GRIEF COUNSELLING
- SOCIAL WORK AND REHABILITATION COUNSELLING

MASTERS IN SCHOOL COUNSELLING PSYCHOLOGY

TOTAL CREDIT UNITS			38

COURSE DESCRIPTION

SGS 801.1: ICT & Research Methodology (3 credit units)

Essentials of Spread sheet and Internet Technology, statistical packages, precision and accuracy of estimates, principles of scientific research, concepts of Hypothesis, Formulation and Testing, Organisation of Research and Report writing.

SGS 801.2: Management and Entrepreneurship (2 credit units)

Business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

MCP 802.1: Psychopathology and Counselling (2 credit units)

Intensive coverage of the ethology; diagnosis; and treatment of developmental problems and abnormal behaviour from infancy to adolescence. Counselling techniques and strategies for handling such **behavioural problems**, Application of rehabilitative counselling techniques, Ethics and Legal Issues in Counselling.

MCP 802.2: Fundamentals of Educational & Social Psychology (2 credit units)

This course will inform the students about Psychology, the different branches and better understanding of basic concepts that will help them as counsellors.

Meaning and nature of social psychology, rationale for the study of perception, pro-social behaviour, social influence, aggression, attitudes, application of the study to life situations, theories in the study of social psychology (Reward, Balance, Reinforcement theory, social interaction).

MCP 804.1: Advanced Practicum I (other areas of specialization) (4 credit units)

A supervised practicum in counselling techniques and guidance activities. The course has the following objectives, to upgrade a student's counselling knowledge and attitude in working with youths/adults; to integrate his theories with practice in the road fields of counselling and promising organization pattern of practices. Opportunities are provided for practical application of testing vocational and personal social information and referred procedures.

MCP 804.1: Advanced Practicum in Social Work (4 credit units)

Students participate in supervised social work practice internship in community agencies and facilities. Students apply classroom knowledge to activities and interventions serving individuals, families, groups and communities for a specified period

MCP 805.1: Fundamentals & Principles of Social Work (2 credit units)

This course will expose the participants to the detailed study of Social Problems and interventions - Promoting social change, development, coercion and empowerment of people and communities. It will help them to understand individuals, groups, community and institutions in relation to the social boundaries of each category.

MSC 806.1: Principles & Techniques of Creative Thinking (2 Credit Units)

Mental abilities and man, thinking, types of creative thinking, application of creative thinking in science, technology, business, arts, academics etc. Tools and techniques of creative thinking; Barriers to creative thinking.

MSC 807.1: Ethics and Professional Issues in School Counselling (2 credit units)

A study of ethics and ethical standards in counselling theory and practice; Current discussions in professional issues in relation to school counselling.

MSC 808.1: Psychology of Academic Adjustment (2 credit units)

This includes a study of personality, personality and adjustment, types of adjustment, rationale for the study of psychology or adjustment. Theoretical models of adjustment (moral, medico-biological, socio-generic/cultural, socio-psychological/behaviour mode). Theories of psychological adjustment; Freud psychoanalytic; Adler's individual, Jung Karen, frustration and adjustment.

MSC 809.1: Planning, Implementation & Evaluation of Guidance and Counselling programmes (2 credit units)

Planning programme evaluation(what do you want to evaluate, what information is needed). Major types of programme evaluation (evaluating progress processes, goals, outcomes etc) overview of methods to collect information (questionnaires, interviews, focusing groups etc) selecting methods, analysing and interpreting information, reporting evaluation results and content evaluation plan.

MSC 810.1: Career Guidance and Counselling (2 credit units)

A survey of the theories of career guidance - Ginzberg, Supper, Holland, meaning of career, career choice and career development relationship between career choice and personality development, career aspiration, patterns of satisfaction.

MSC 811.1 Adolescence Psychology (2 credit units)

This course examines the physical, cognitive, social and moral development of adolescent in the contexts of family, peers, school work and media. It discusses major theories, methods of studying adolescent, adolescent development in contemporary and adolescents issues concerns and problems (eg information and communication technology, sexuality, etc.).

ELECTIVES – Offer any ONE course related to area of specialization

MCP 812.1: Principles of Teaching and Learning (2 credit units)

This course will expose the participants to who a Teacher is, a Learner, responsibilities and management of the classroom and various problems of the learners.

MCP 812.2: Developmental Milestones across Life-span (2 credit units)

This course will help the students understand the stages of Development, when life starts and ends; the principles of growth and development, the Developmental task of each stage of Development, etc.

MCP 812.3: Behaviour Modifications (2 credit units)

This will equip students in the understanding of the different behaviour modification strategies, management and interventions.

MCP 812.4: Introduction to Personality Development & Theories (2 credit units)

This course will give students understanding of whom they are and their clients. The theories will enable them to manage the various clients effectively with their basic knowledge of persons and their traits.

MCP 813.1: Seminars (3 credit units)

Clinical analysis and discussion of cases resulting from field work experience.

MCP 813.2: Dissertation (6 credit units)

Candidates are required to demonstrate research competencies by selecting a topic in their relevant areas of specialization. The research is carried out by the individual student under the guidance of a competent supervisor according to the graduate School requirements. The candidate is expected to make some significant contributions to knowledge. The Dissertation is defended before an appropriate constituted examining committee chaired by the Centre Director, External Examiner's verdict shall override all other decisions.

A system approach to the Dysfunctional family and amental health; culturally diverse families and mental health; mental Development in Childhood and its effect on mental wellbeing; personality development theories, emotional, social and physical development.

CMC 809.1: Multicultural Counselling and Mental Health (2 credit units)

Racial and Religious heritage; sexual orientation/deviation differences; culturally diverse groups and mental health conditions.

CMC 810.1: Foundation and Ethics of Mental Health Counselling (2 credit units)

Professional dilemmas in mental health; choice of management/intervention strategies; record keeping, third party involvement, Ethical Boundaries, etc

CMC 811.1: History & Development of Clinical/Mental Health Counselling (2 credit units)

This course examines the principles, models and documentation format of bio psychosocial case conceptualization and treatment planning; theories and models related to mental health counselling; diagnostic process, including differential diagnosis and use of current classification, systems (DSM) of mental disorder, etc.

ELECTIVES – Offer any ONE course related to area of specialization

MCP 812.1: Principles of Teaching and Learning (2 credit units)

This course will expose the participants to who a Teacher is, a Learner, responsibilities and management of the classroom and various problems of the learners.

MCP 812.2: Developmental Milestones across Life-span (2 credit units)

This course will help the students understand the stages of Development, when life starts and ends; the principles of growth and development, the Developmental task of each stage of Development, etc.

MCP 812.3: Behaviour Modifications (2 credit units)

This will equip students in the understanding of the different behaviour modification strategies, management and interventions.

MCP 812.4: Introduction to Personality Development & Theories (2 credit units)

This course will give students understanding of whom they are and their clients. The theories will enable them to manage the various clients effectively with their basic knowledge of persons and their traits.

MCP 813.1: Seminars (3 credit units)

Clinical analysis and discussion of cases resulting from field work experience.

MCP 813.2: Dissertation (6 credit units)

Candidates are required to demonstrate research competencies by selecting a topic in their relevant areas of specialization. The research is carried out by the individual student under the guidance of a

competent supervisor according to the graduate School requirements. The candidate is expected to make some significant contributions to knowledge. The Dissertation is defended before an appropriate

constituted examining committee chaired by the Centre Director, External Examiner's verdict shall override all other decisions.

MASTERS IN GERONTOLOGICAL AND GRIEF COUNSELLING

MODULE	TITLE CODE	COURSE TITLE	CREDIT UNIT
GENERAL	SGS 801.1	ICT & Research Methodology	2
	SGS 801.2	Management & Entrepreneurship	2
	MCP 802.1	Psychopathology and Counselling	2
	MCP 803.1	Fundamentals of Educational & Social Psychology	2
	MCP 804.1	Advanced Practicum	5
	MCP 805.1	Fundamentals & Principles of Social Work	2
GERONTOLOGICAL AND GRIEF	MGC 806.1	Geriatric Counselling and Management of the Aged	2
	MGC 807.1	Theories of Individual, Family, Learning and Personal Development	2
	MGC 808.1	Aging and Nutrition	2
	MGC 809.1	Advocacy and Empowerment of the Aged	2
	MGC 810.1	Multicultural and Pluralistic Trends	2
	MGC 811.1	Aging and Comorbidities	2
ELECTIVE *students are expected to compulsorily offer any ONE of these courses related to their area of specialization	MCP 812.1	Principles of Teaching & Learning	2
	MCP 812.2	Developmental Milestones across Life-span	2
	MCP 812.3	Behaviour Modifications	2
	MCP 812.4	Introduction to Personality Development & Theories	2
SEMINAR	MCP 813.1		3
DISSERTATION	MCP 813.2		6
TOTAL CREDIT UNITS			38

COURSE CONTENTS

SGS 801.1: ICT & Research Methodology (3 credit units)

Essentials of Spread sheet and Internet Technology, statistical packages, precision and accuracy of estimates, principles of scientific research, concepts of Hypothesis, Formulation and Testing, Organisation of Research and Report writing.

SGS 802.2: Management and Entrepreneurship (2 credit units)

Business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

MCP 802.1: Psychopathology and Counselling (2 credit units)

Intensive coverage of the ethology; diagnosis; and treatment of developmental problems and abnormal behaviour from infancy to adolescence. Counselling techniques and strategies for handling

such **behavioural problems**, Application of rehabilitative counselling techniques, Ethics and Legal Issues in Counselling.

MCP 802.2: Fundamentals of Educational & Social Psychology (2 credit units)

This course will inform the students about Psychology, the different branches and better understanding of basic concepts that will help them as counsellors.

Meaning and nature of social psychology, rationale for the study of perception, pro-social behaviour, social influence, aggression, attitudes, application of the study to life situations, theories in the study of social psychology (Reward, Balance, Reinforcement theory, social interaction).

MCP 804.1: Advanced Practicum I (other areas of specialization) (4 credit units)

A supervised practicum in counselling techniques and guidance activities. The course has the following objectives, to upgrade a student's counselling knowledge and attitude in working

with youths/adults; to integrate his theories with practice in the road fields of counselling and promising organization pattern of practices. Opportunities are provided for practical application of testing vocational and personal social information and referred procedures.

MCP 804.1: Advanced Practicum in Social Work (4 credit units)

Students participate in supervised social work practice internship in community agencies and facilities. Students apply classroom knowledge to activities and interventions serving individuals, families, groups and communities for a specified period

MCP 805.1: Fundamentals & Principles of Social Work (2 credit units)

This course will expose the participants to the detailed study of Social Problems and interventions - Promoting social change, development, coercion and empowerment of people and communities It will help them to understand individuals, groups, community and institutions in relation to the social boundaries of each category.

MGC 806.1: Geriatric Counselling & Management of the Aged (2 Credit Units)

Meaning of Aging; things applied to aging; effects of aging on the body system; Depression management, loneliness and isolation, retirement, Dementia training, Suicide ideations; various care systems of the Elderly – Home care, Institutional care, community care, etc.

MGC 807.1: Theories of Individual, Family, Learning and Personality Development and Transition (2 credit units)

A study of family organisation; socialization; technological distancing; early upbringing and morals; neurobiological behaviour; emotional development and wellbeing across life span; intellectual development; physical development, etc.

MGC 808.1: Aging and Nutrition (2 credit units)

This includes a study of Selection of Food (Fibres, fruits, veggies, etc); Change of Lifestyle/Education; Common Diseases if the Elderly; Geriatric Rehabilitation.

MGC 809.1: Advocacy and Empowerment of the Aged (2 credit units)

Pre-retirement training; sports and gardening; Poultry/Livestock Farming; Health Promotions.

MGC 810.1: Multicultural and Pluralistic Trends (2 credit units)

Understanding Aging in diverse cultures; education on Aging in a pluralistic society; Cultural taboos and myths about aging.

MGC 811.1: Aging and Comorbidities (2 credit units)

This course examines the conditions that may result from Aging – sedentary, Poor diet, Hypertension, Diabetes, Arthritis, Chronic Pain Disorder, Overweight, Tobacco and Alcohol Use.

ELECTIVES – Offer any ONE course related to area of specialization

MCP 812.1: Principles of Teaching and Learning (2 credit units)

This course will expose the participants to who a Teacher is, a Learner, responsibilities and management of the classroom and various problems of the learners.

MCP 812.2: Developmental Milestones across Life-span (2 credit units)

This course will help the students understand the stages of Development, when life starts and ends; the principles of growth and development, the Developmental task of each stage of Development, etc.

MCP 812.3: Behaviour Modifications (2 credit units)

This will equip students in the understanding of the different behaviour modification strategies, management and interventions.

MCP 812.4: Introduction to Personality Development & Theories (2 credit units)

This course will give students understanding of whom they are and their clients. The theories will enable them to manage the various clients effectively with their basic knowledge of persons and their traits.

MCP 813.1: Seminars (3 credit units)

Clinical analysis and discussion of cases resulting from field work experience.

MCP 813.2: Dissertation (6 credit units)

Candidates are required to demonstrate research competencies by selecting a topic in their relevant areas of specialization. The research is carried out by the individual student under the guidance of a competent supervisor according to the graduate School requirements. The candidate is expected to make some significant contributions to knowledge. The Dissertation is defended before an appropriate constituted examining committee chaired by the Centre Director, External Examiner's verdict shall override all other decisions.

TOTAL CREDIT UNITS			39

COURSE CONTENTS**SGS 801.1: ICT & Research Methodology (3 credit units)**

Essentials of Spread sheet and Internet Technology, statistical packages, precision and accuracy of estimates, principles of scientific research, concepts of Hypothesis, Formulation and Testing, Organisation of Research and Report writing.

SGS 801.2: Management and Entrepreneurship (2 credit units)

Business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

MCP 802.1: Psychopathology and Counselling (2 credit units)

Intensive coverage of the ethology; diagnosis; and treatment of developmental problems and abnormal behaviour from infancy to adolescence. Counselling techniques and strategies for handling such **behavioural problems**, Application of rehabilitative counselling techniques, Ethics and Legal Issues in Counselling.

MCP 802.2: Fundamentals of Educational & Social Psychology (2 credit units)

This course will inform the students about Psychology, the different branches and better understanding of basic concepts that will help them as counsellors.

Meaning and nature of social psychology, rationale for the study of perception, pro-social behaviour, social influence, aggression, attitudes, application of the study to life situations, theories in the study of social psychology (Reward, Balance, Reinforcement theory, social interaction).

MCP 804.1: Advanced Practicum I (other areas of specialization) (5 credit units)

A supervised practicum in counselling techniques and guidance activities. The course has the following objectives, to upgrade a student's counselling knowledge and attitude in working with youths/adults; to integrate his theories with practice in the road fields of counselling and promising organization pattern of practices. Opportunities are provided for practical application of testing vocational and personal social information and referred procedures.

MCP 804.1: Advanced Practicum in Social Work (5 credit units)

Students participate in supervised social work practice internship in community agencies and facilities. Students apply classroom knowledge to

activities and interventions serving individuals, families, groups and communities for a specified period.

MCP 805.1: Fundamentals & Principles of Social Work (2 credit units)

This course will expose the participants to the detailed study of Social Problems and interventions - Promoting social change, development, coercion and empowerment of people and communities. It will help them to understand individuals, groups, community and institutions in relation to the social boundaries of each category.

MSW 806.1: Foundation social Work (2 Credit units)

This course, in addition to assisting students in expanding an intermediate level of knowledge, values, and skills in the area of ethics in social work, explores generalist social work theory and practise methodology in problem solving with individuals, families, organisations, communities and groups, emphasizing data collection, assessment, intervention planning and evaluation. As a skill development course, it will also develop the student's interpersonal and communication skills with clients and other professionals.

MSW 807.1: Human Behaviour in Individual, Family, Local and Global Social Environments (2 Credit Units)

This graduate course presents individual and family dynamics across the life cycle, centring on human development, individual and group strengths, and the effects of cultural diversity. It enhances critical thinking and assessment skills about human behaviour in social environments, and incorporates material on professional values, ethics, and social justice through learning content on diversity, populations at risk, and social economic justice using developmental and eco-systems frameworks.

MSW 808.1: Advanced Social Work Intervention (2 credit units)

This course focuses on

- i. Drug Addiction & Abuse: Commonly used and abused drugs as well as the dynamics and treatment of addiction emphasizing on intervention aimed at addiction prevention and treatment.
- ii. Child Abuse & Neglect: Child Welfare services available to abused and neglected children in their own homes, in substitute care, and through the community, emphasizing intervention with children and their families.
- iii. Interdisciplinary Perspectives on Aging: Knowledge and skills used to address a wide

range of needs among the aging population, their families and support systems.

- iv. Helping Troops Transition Back to their families and communities: The Invisible Wounds of War. Examines topics related to troops who are returning from current combat operations and their families.
- v. Innovative Community Engagement with Vulnerable Populations.
- vi. Advanced Assessment, Leadership and Supervision in Social Service Organisations.
- vii. Advanced Diagnostic Assessment and Intervention with Individuals.
- viii. Advanced Intervention with Families and Groups.

MSW 809.1: Social Work/ Health Care, Social Welfare Policy and Services (2 credit units)

This course provides a generalist view of social work practice in mental health and public health, considering the social problems that affect health care, and ethically and effective intervention strategies and service delivery systems. It will also look at the social welfare system, emphasizing how social welfare policies affect diverse populations through social welfare history; Policy Development, Implementation, Evaluation, and Values.

MSW 810.1: Advanced Social Policy and Social Justice (2 credit units)

This course, a study of social legislation affecting disadvantaged persons, emphasizes policy analysis, values, and advocacy through studying social policy history. Developing, implementing, and evaluating policy; and influencing social and economic justice.

MSW 811.1: International Social Work (2 credit units)

This course covers advanced theoretical and practical approaches to empowerment, social and economic justice, and rights. Particular cultures and specific global problems are examined in depth to promote student acquisition of an international worldview for human global change based on social work values and research-informed practice.

ELECTIVES – Offer any ONE course related to area of specialization

MCP 812.1: Principles of Teaching and Learning (2 credit units)

This course will expose the participants to who a Teacher is, a Learner, responsibilities and management of the classroom and various problems of the learners.

MCP 812.2: Developmental Milestones across Life-span (2 credit units)

This course will help the students understand the stages of Development, when life starts and ends; the principles of growth and development, the Developmental task of each stage of Development, etc.

MCP 812.3: Behaviour Modifications (2 credit units)

This will equip students in the understanding of the different behaviour modification strategies, management and interventions.

MCP 812.4: Introduction to Personality Development & Theories (2 credit units)

This course will give students understanding of whom they are and their clients. The theories will enable them to manage the various clients

effectively with their basic knowledge of persons and their traits.

MCP 813.1: Seminars (3 credit units)

Clinical analysis and discussion of cases resulting from field work experience.

MCP 813.2: Dissertation (6 credit units)

Candidates are required to demonstrate research competencies by selecting a topic in their relevant areas of specialization. The research is carried out by the individual student under the guidance of a competent supervisor according to the graduate School requirements. The candidate is expected to make some significant contributions to knowledge. The Dissertation is defended before an appropriate constituted examining committee chaired by the Centre Director, External Examiner's verdict shall override all other decisions.

ACADEMIC STAFF

S/N	Name of staff	Qualification	Specialization	Rank
1	Prof. T.A. Jamabo	Ph.D, M.Ed. (UNICAL) B.Ed. (UI)	Counselling Psychology	Professor
2	Prof. O.C. Nwankwo	Ph.D, M.Ed. (UNN), B.Sc. (UNIJOS)	Educational Psychology	Professor

CENTRE FOR MARINE POLLUTION MONITORING AND SEAFOOD SAFETY (CEMPOS)

VISION

The environmental pollution studies program aligns with the University of Port Harcourt's mission of being one of Africa's premier environmental investigation, research innovation, and knowledge transfer centers. The emphasis will be on providing a standard that will allow graduates to expand their knowledge and abilities and contribute to national development, self-reliance, or entrepreneurship, as well as knowledge propagation in the field of environmental pollution studies.

MISSION

The program's mission is to provide students with solid instruction in relevant practical, investigative, and research abilities that will allow them to build generic skills that will considerably boost intellectual capacity and critical reasoning.

RATIONALE

Today's globe faces enormous environmental difficulties that necessitate big changes in the way we work, play, live, and govern. Everyone will need to become better educated about environmental issues in order to learn how to adapt to or mitigate these changes. This reality emphasizes the necessity for graduates who are highly skilled in environmental pollution studies.

SPECIFIC OBJECTIVES

The program's goal is to contribute to the University's overarching academic goals, which are "TO CONTRIBUTE TO NATIONAL DEVELOPMENT, SELF-RELIANCE, AND UNITY THROUGH THE ADVANCEMENT AND PROPAGATION OF KNOWLEDGE AND TO USE KNOWLEDGE FOR SERVICE TO THE COMMUNITY AND HUMANITY."

The programme seeks to achieve this goal by focusing on the following areas:

1. Improving the quality of education, research, and skill acquisition.
2. Providing quality administration that is responsive to the requirements of both employees and students.
3. Using cutting-edge technology in teaching, research, and information transfer.
4. Establishing a functional e-library and information database.

PhD Programme: Doctor of Philosophy (Ph.D.) in Environmental Pollution Studies

Available Options

Full time – 24 calendar months (minimum) to 48 calendar months (maximum)

Part-time – 48 calendar months (minimum) to 60 calendar months (maximum)

Admission Requirements

1. Candidates admitted to any of the PhD programs must have:

- A relevant Masters' degree with a CGPA of at least 3.50 on a 5.0-point scale.
- Presented a statement of purpose, which should include a proposal for the research he or she intends to conduct;
- Provide two letters of recommendation, one from an employer or supervisor and the other from the university where the candidate obtained the master's degree; and
- Be found suitable for admission after an interview by the Faculty's Postgraduate Degree Committee.
- Candidates with master's degrees in food science and technology, food microbiology, and other related fields are eligible to apply for the PhD in nutritional biochemistry/toxicology.

2. Each PhD candidate will be allocated at least two supervisors who have conducted considerable research and published widely in the individual's intended area of inquiry. The primary supervisor will take the lead in providing research direction.

3. The candidate will be given a pathway that includes an interactive chronology of his or her important advancement milestones related to the study program. Candidates who have had their milestones interrupted, extended, or modified must notify the department's Postgraduate Committee of their new advancement milestone deadlines.

Graduation Requirements

To be eligible for the Ph.D., the candidate must have completed all of the prescribed courses in the program, completed a thesis under supervision, published a minimum of two (2) journal articles from their work in a reputable journal prior to their external defense, and attended a minimum of one (1) scientific conference.

The courses for the programmes are outlined below:

List of courses, code, and credit units

Code	Credit Unit	Course
EPS 901	2	Advanced Statistics and Data Science
EPS 902	3	Advanced Oceanography
EPS 903	3	Marine Oil Spill, Monitoring and Clean-up methods
EPS 904	2	ICT, Writing Skills & Research Methodology
EPS 905	2	Management and Entrepreneurship
EPS 906	3	Marine Biogeochemistry and Radioecology
EPS 907	3	Water Quality assessment and pollution monitoring
EPS 908	3	Aquatic Toxicology & Seafood safety
PUT 909	3	Seminar
EPS 910	12	Thesis
Total Credit Units	36	

COURSES DESCRIPTION

EPS 901: ADVANCED STATISTICS AND DATA SCIENCE - 2 Credits

MODULE CONTENT

The focus of this course is on the application of statistical and epidemiological approaches in public health research, which covers a selection of appropriate methods. The course covers use of survival analysis, meta-analysis, Bayesian statistics or general analysis of the paired data to analyze the main features of the processes under investigation. In this course, several regression models will be described and applied. The course will start with a repetition of linear and logistic regression models. Subsequently, several other regression models will be introduced and discussed, including Poisson-, Cox -and multilevel regression. Basic concepts in survival analysis will be described and discussed. The multilevel modeling course will cover both the linear and the logistic case. The Poisson regression course will focus on the analysis of aggregated and count data that are common in publicly available public health data, including the use of offset terms. As machine learning is a huge subject, this course will focus on “supervised learning” methods used in classification problems such as the prediction of patient risk. Furthermore, various epidemiological methods are introduced to analyze causality as well as aspects of data management and sampling. Public health research articles will be used for group discussion, where students focus on the application of the statistical and epidemiological methods. The theoretical part will be illustrated

using public health examples and students will practice the application of different analytical approaches in computer exercises and practical exercises.

MODULE CONTENT

Big Data in Health: We Will discuss issues relating to access, confidentiality, privacy and data stewardship; Methodological challenges related to data linkage will be discussed; working with large environmental databases including public health administrative data, and various other databases.

Biostatistics 1 with SAS or R:- introduction to important topics in biostatistical concepts and reasoning. Specific topics include tools for describing central tendency and variability in data, probability distributions, sampling distributions, estimation, and hypothesis testing. Assignments will involve computation using the SAS programming language;

Categorical and censored data analysis:- Overview of methods of analysis for binary and other discrete response data, with applications to epidemiological and clinical studies.; 2×2 tables, $m \times 2$ tables, tests of independence, measures of association, power and sample size determination, stratification and matching in design and analysis, interrater agreement, and logistic regression analysis; basic concepts for censored data and Kaplan-Meier; selection of appropriate methods and how to interpret the results from categorical data analysis and Kaplan-Meier.

Advanced Statistical Modelling: An introduction to the fundamental statistical methods used in environmental data science including the interpretation and communicating of the results of these methods, modeling using an epidemiological paradigm such as the assessment for modification and confounding. Fundamental health research methods including study design and the evidence hierarchy;

Data Science (R, SAS, and Python): introduction to data science using both the R and python or SAS programming languages; reproducible research, exploratory data analysis, data manipulation, data visualization techniques, simulation design, and unsupervised learning methods.

Hierarchical modeling and longitudinal data analysis:-Use of mixed-effect models, mixed-effect ANOVA, generalized linear mixed models (GLMM), mixed-effect Cox-regression, Bayesian hierarchical models, repeated measure and longitudinal data analysis with appropriate covariance structures;

Study Design:- description, application and measurement of environmental incidence and prevalence, and measures of effect; explanation of the basic principles underlying different study designs, including descriptive, ecological, cross-sectional, cohort, case-control and intervention

studies; assess strengths and limitations of different study designs; identify problems interpreting epidemiological data: chance, bias, confounding and effect modification; address validity, intra-rater reliability and inter-rater reliability;

Biostatistics II: Regression Analysis:- statistical methods for analyzing censored data, non-normally distributed response data, and repeated measurements data that are commonly encountered in environmental pollution research; linear regression, logistic regression, cox proportional hazards regression and generalized estimating equations. Examples from the environmental sciences; coding of explanatory variables, residual diagnostics, model selection techniques, random effects and mixed models, and maximum likelihood estimation.

EPS 902: ADVANCED OCEANOGRAPHY – 3 Credits

MODULE CONTENT

Introduction; Geological Oceanography:- Formation of the atmosphere and the ocean basins: Continental drift; plate tectonics; seafloor spreading; age of ocean floor; Major Plate boundaries; hotspots; Marine provinces; bathymetry; Marine sediments. **Chemical Oceanography:** Properties of water and seawater; salinity; acids, bases & buffers; thermocline & pycnocline; desalination of seawater; Major ions of seawater; Mass balance - the cornerstone of chemical oceanography; What controls the composition of river water and seawater: Equilibrium versus kinetic ocean:- •Gas exchange •The redox sequence and sediment diagenesis •Ocean carbonate system; •Radiocarbon and ocean age.

Physical Oceanography: - •Surface currents; gyres; Ekman transport; geostrophic currents upwelling & downwelling; circulation patterns; • ENSO effects; thermohaline circulation. •Power from ocean Currents– oceanic influences on climate; currents; waves and tides. • Waves & wave characteristics; wave development; wave interference; refraction & reflection. • Tsunami basics; historical tsunamis; tsunami warning system; wave power. • Gravitational attractions; tidal patterns; whirlpools; tidal power. • Beaches; sand movement; longshore drift & barrier islands; stabilization of shorelines. • Principles and components of the dynamic ocean system.

Biological oceanography:- •Marine Ecosystems; •Phytoplankton; •Zooplankton; •Marine Invertebrates; •Marine Mammal; •Fisheries; •Primary productivity patterns.

Ocean resources: - Coastal Ocean laws & EEZ; estuaries; lagoons; coastal wetlands; Marine pollution; historical oil spills; human impacts on

the ocean, biological deep-sea monitoring; sampling techniques of the deep sea

EPS 903: MARINE OIL SPILL, MONITORING AND CLEAN UP METHODS - 3 Credits

MODULE CONTENT:

Introduction; Causes of Maritime oil Spill: Natural Sources; Offshore drilling operations, Oil Spill Caused by Acts of War; Oil Spill During Maritime Transportation (Water Transportation using Oil Vessels; Oil Transportation Using Pipeline; Dry-docking; Marine terminals; Oil Bunkering); The Operation of Artisanal refinery; **Impacts Of Marine Oil Spill:-** Damage to coastal vegetation, Reduction in healthy Mangrove, Surface water Pollution, Sediment contamination, Impact on birds and marine mammals, Impact on fish, Destruction of food resources and habitats, Recreational areas, Disruption of fishing activities, Effects of spill on aquatic habitats;

Control Measures:- Oil Spill Response (Case Study: Niger Delta); Sampling and monitoring of Marine Oil Spill; Contingency planning for marine oil Spill;

Methods for Marine Oil Spill Cleanup: Natural dispersion of oil, Mechanical, Chemical, Biological, Enhanced Photo-oxidation, Etc.; Disposal of Oil and Debris; Treatment of Contaminated Sediments; Remediation approaches for Mangrove and other Vegetation; Challenges of Oil Cleanup, Recommendations

EPS 904: ICT, WRITING SKILLS & RESEARCH METHODS - 2 Credits

MODULE CONTENT:

essential computer applications and Internet technology skills for personal, academic, and professional success; use of current Windows operating system and appropriate file management resources; application of word processing and desktop publishing functions to create, edit, manipulate, format, cite resources, print, and store common personal and academic documents; apply spreadsheet functions to solve mathematical, and statistical problems; create and edit charts and graphs to interpret spreadsheet data; design and create databases to extract, sort, calculate, and report presentation; design, create, and PowerPoint presentation which includes appropriate text formatting, graphics, animation, and public speaking skills, and use the Internet in an ethical manner to research, communicate, collaborate, and efficiently retrieve information; Introduction to ICT Research Methodology and Statistics, ICT Research Tools and Techniques, ICT Research Methods, ICT / Software Research Methodologies, Ethical Issues in ICT Research; introduction to project design and planning;

various methods in conducting scientific medical research; quantitative and qualitative designs including how to conduct clinical trials and documentation. the use of computers in data analysis and the use of operational research and functional analysis in project design and evaluation; Planning a Research; Ethical Issues in Research; Study Designs in Environmental Pollution Studies; Choice of Topic; Introduction (Problem Definition, Objectives); Formulation of hypothesis; Testing of hypothesis; Literature Search/Literature Review; Materials & Methods; Sample Size determination/Calculation; Instrument for data collection; Data Collection/Management; Presentation of Results (Data Presentation, Analysis, etc); Discussion, Conclusion, and Recommendations; Referencing; Thesis Write-Up

EPS 905: MANAGEMENT & ENTREPRENEURSHIP

2 Credits

MODULE CONTENT

Covers concepts, history and development of entrepreneurship, the entrepreneur, Qualities and characteristics. The Entrepreneur and Business Environment, Identifying Business Ownership and Registration, starting and developing business ventures, Legal forms of business ownership and registration. Types of business ownership, feasibility studies, Role of Small and Scale Enterprise (SME) in the economy, Role of Government in Entrepreneurship, Business location and layout. Accounting for SME, Financing, SME, managing of SME, Risk Management of SME, success and failure factors of SME, Prospects, and challenges of Entrepreneurship in Nigeria Entrepreneurship in Nigeria Entrepreneurship. The practice of applied management and entrepreneurship. How to enhance entrepreneurship skills and manage a business. Business prospects for students in higher institutions would be taught and the student would learn how to get into the right business. Research as an enterprise, conversion of intellectual property to business, how to patent breakthroughs in research.

EPS 906: MARINE BIOGEOCHEMISTRY AND RADIOECOLOGY -3 Credits

MODULE CONTENT:

The distribution of chemical components into the ocean, their residence time and the ways in which they are transported; an overview of how different processes influence the chemistry of the ocean, including the role of vertical mixing, advection, biological processes and gas exchange between the

air-sea interface; The use of chemical tracer elements to quantify the mixing processes in the ocean. Based on the natural cycling of carbon; climate change, human influence, changes in the ocean uptake of carbon dioxide and ocean acidification; environmental radioactivity with sources of radionuclides in the environment, factors influencing radionuclide migration and uptake in food chains and our ecosystems; sampling (biological sampling, marine sediments), for radionuclide monitoring; pre-treatment of environmental samples, radionuclide separation methods and specific counting techniques for low-level samples; marine biogeochemistry of radionuclides; interactions of radionuclides with marine biota; sources and distribution of anthropogenic radionuclides in different marine animals ; anthropogenic radionuclides in the marine environment (Case studies); assessment of alpha, beta and gamma-emitting nuclides in marine samples; collection and preparation of marine samples for radionuclides analysis; radioecology in every-day life

EPS 907: WATER QUALITY ASSESSMENT AND POLLUTION MONITORING- 3 Credits

MODULE CONTENT

An introduction to water pollution: pollution, pollutants, sources, and types (point and area, primary and secondary), Chemical, Physical and Biological Properties of Water, Water ecosystems, Integrated Water Resources Management, Freshwater, brackish water, marine and groundwater pollution, types of aquatic pollutants, Sources, environmental effects, control and management strategies of following types of aquatic pollutants: sediments and suspended matter, nutrients and algal toxins, pesticides, Persistent Organic Pollutants, oil, human sewage, Waterborne Pathogen,s and Water Microbiology. Thermal pollution, Radioactive material, Acid deposition, Heavy metals, PAH, PCBs, Plastic waste, Monitoring of aquatic pollution, Water quality standards, Global and national case studies on aquatic pollution. Acidification, alkalization and salinization, Leaching requirement and other remedial measures, Water logging and reclamation of waterlogged fields, Water resourcing Monitoring, Point source Protection, water and sewage purification (treatment), Decontamination Methods, Water quality indicators, Water Legislations, Standards, Instructions.

EPS 908: AQUATIC TOXICOLOGY AND SEAFOOD SAFETY- 3 Credits

MODULE CONTENT

What is Aquatic Toxicology? The History of Aquatic Toxicology, The Main Present, and Future Challenges, what is measured?

What Causes Aquatic Contamination?; Introduction; Metals, Metalloids, and Organometallic Compounds; Other Inorganic Compounds, Including Factors Causing Eutrophication; Organic Compounds; Nanomaterials; Radiation; Genetic Modification;

Classes of toxic chemicals (carcinogens, mutagens, teratogens, and others); Sources of toxic chemicals entering the aquatic environment; Exposure pathways for aquatic organisms; Biological, physical, and chemical factors affecting bioavailability and toxicity; Bioaccumulation, bioconcentration, and biomagnification; Modes of toxic chemical action, including enzyme inhibition and endocrine disruption; Types of toxic effects: biochemical, molecular, physiological, behavioral, population, and community; Toxicity testing methods: acute and chronic, single and multiple species. Laboratory assessment of toxicity: LC50, EC50, NOEC, LOEC, MATC, and dose-response curves. Field application of toxicology using the biomarkers; emerging pollutants of concern such as heavy metals, organic pesticides, PAHs, PCBs, PBDEs, pharmaceuticals, personal care products, and nanoparticles. Fate and transport as it relates to bioavailability and pollutant partitioning in aquatic environments will be discussed.

WORLD SEAFOOD PRODUCTION AND CONSUMPTION; Fish utilization;

DEVELOPMENTS IN FOOD SAFETY AND QUALITY SYSTEMS; Traditional quality control, Principles of sampling, The concept of probability, Modern safety and quality assurance methods and systems; Methods to manage quality and safety; Risk analysis, food safety objectives;

ASPECTS OF SEAFOOD RISK ASSESSMENT; IDENTIFICATION OF

HAZARDS IN SEAFOOD, Statistics on seafood-borne diseases, Detentions and rejections of seafood in international trade, Natural toxins in fish;

CHARACTERIZATION OF HAZARDS IN SEAFOOD:- Biological hazards; Pathogenic bacteria, Production of biogenic amines, Viruses, Parasites, Aquatic biotoxins, Chemical hazards, Industrial and environmental contaminants, Veterinary drugs, Physical hazards;

RISK MANAGEMENT TOOLS:-

INTERNATIONAL REGULATORY FRAMEWORK FOR FISH SAFETY AND QUALITY, The World Trade Organization (WTO) agreement; The agreement on the Application of Sanitary and Phytosanitary Measures; The agreement on Technical Barriers to Trade; The Food and Agriculture Organization of the United Nations (FAO) ; Codex Alimentarius;

The FAO Code of conduct for responsible fisheries; Sediment toxicity and seafood safety

EPS 909: SEMINAR - 2 Credits

Seminar topics related to environmental pollution and seafood safety and in the candidate's area of interest will be developed and presented in a report and examined orally by a panel of internal examiners. The students are expected to undertake a detailed systematic review of current literature on the basic concepts that are related to the seminar topic

EPS 910: THESIS - 12Credits

The candidate must design and execute an acceptable original project in any area related to marine pollution monitoring and seafood safety under the supervision of an academic member of staff. For these projects, students will carry out original research. They will thus be exposed to practical research methods such as the design of empirical studies, data collection, collation, analysis interpretation, and reporting. Referencing shall be the APA style. Ethical approval MUST be obtained from the Research and ethics committee of the university. Defense of the completed project shall be done at a date fixed by the centre graduate committee and according to the guidelines set by the graduate school. The project shall be submitted in a quarto-size paper in BLACK bounded format and duly certified by the project supervisor and must be submitted before the closing date given by the Centre.

MSC PROGRAMME

Admission Requirements

Candidate must possess 5 credits in relevant subjects (Mathematics, English, Biology, Chemistry or Physics and one other subject) in addition to B.Sc. in Fisheries, Crop and soil science, relevant course obtained from institutions recognized by the Senate of the University of Port Harcourt. The degree should not be less than Second Class Lower Division.

PROGRAMME DURATION

The minimum and maximum length of time for a full-time M.Sc Degree candidate is 12 calendar months and Part-time 24 calendar months respectively.

GRADUATION REQUIREMENT

To obtain a Master of Science Degree in environmental pollution studies, the candidate must be registered in the programme for not less than 12 months, complete the academic programme, pass all courses and successfully defend a research dissertation.

M.Sc. Programme

Courses		Unit
EPS 801	Statistics and Modeling	2
EPS 802	Biogeochemistry	3
EPS 803	Oceanography	3
EPS 804	GIS and RS for Water Resource Management	3
EPS 805	Ecotoxicology and Risk Assessment	3
EPS 806	Environmental Policies and Laws	2
EPS 807	Seafood Safety and Quality Control	2
SGS 801.1	ICT & Research Methods	2
EPS 809	Aquatic Pollution Management and Restoration	3
EPS 810	Environmental Economics and Sustainability	2
EPS 811	Mangrove Biodiversity and other Aquatic Macrophytes	2
EPS 813	Sustainable Coastal Tourism	2
EPS 814	Seminar	2
EPS 815	Research Project	6
SGS 801.2	Management and Entrepreneurship	2
Electives (Choose any one of the electives courses below)		
EPS 808	Air quality evaluation and management	2
EPS 812	Environmental Physiology for Terrestrial and marine animals	2
Total Units		41

COURSE DESCRIPTION OF M.SC PROGRAMME

EPS 801.1 Statistics and Modeling- 2 Credit

Basic parametric and non-parametric statistics; probability theory; Bayesian theorem and use of risk analysis software; common experimental designs (CRD, RCBD, Latin-Square, Factorial Experiments, and Split plot); Simple linear regression, regression. Examples of statistical techniques in biological research

Research Method

- Academic writing (structure and contents);
- Hypothesis formulation and research question;
- Referencing;
- Research design; and
- Use of ICT in research.

ESP 802.1 Biogeochemistry- 3 Credit

Factors that influence Soil biogeochemical processes, chemical transformation, and spatial movement of materials (Soil, water-sediment exchange, plant uptake, and organic exports, etc.). Nitrogen cycle (nitrogen mineralization, ammonia transformation, and nitrification, nitrate transformations and denitrification, nitrogen

fixation); Sulfur and carbon cycles; Phosphorus cycle.

ESP 803.1 Oceanography- 3 Credit

General introduction; Topography (bathymetry) of the sea; Physical and Chemical Oceanography (density, temperature, illumination, electrical conductivity, diffusion, viscosity, pressure, acoustic characteristics, salinity, dissolved gases); Ocean Currents; Coastal Processes (waves, tides, and coastal erosion). Biological Oceanography; species composition, distribution, and adaptation of marine organisms (photosynthetic bacteria, cyanobacteria heterotrophic bacilliarophyta, chlorophyte phaeophytrhodophyta, plankton, invertebrates, fish, reptiles and mammals); Biological linkage with estuaries, and estuarine processes.

EPS 804.1 GIS and RS for Water Resource Management – 3 Credit

Introduction to Geographic Information Systems (GIS) and Remote Sensing (RS). Spatial data model and fundamentals of RS. Aquatic RS, sensors, data products and their uses, RS data processing tools relevant for water resources. Application of GIS and RS in water resources management.

EPS 805.1 Ecotoxicology and Risk Assessment – 3 Credit

Principles of toxicological hazard and risk assessment: Ecosystem concepts; Structure and function; The conceptual model and risk hypotheses; The risk assessment analysis; Hazard identification; Techniques for establishing dose-response relationships; Characterizing exposure concentration in the environment; Environmental sampling. Tiers in ecological risk assessment; Frameworks for ecotoxicological risk assessment; Toxicity, hazard and risk; The first tiers of risk assessment - scoring systems; Hazard quotients; The probabilistic approach; Uses of probabilistic risk assessment; Methods for conducting a probabilistic risk assessment; the exposure profile and case studies.

DEFINITION of Ecotoxicology Bioassays (Acute toxicity tests and chronic toxicity tests); Microbial bioassays (Microtox tests), Marine algal growth inhibition tests, Copepod acute toxicity tests, Oyster larval toxicity tests, acute toxicity tests using fish finger lines (*Tilapia guineensi*, *Mugilicephalus*); procedures for ecotoxicity tests (selection of test organism, acclimation tests preliminary range-finding tests, definitive toxicity tests); Determination of median lethal concentration using prohibit tests, logit tests, etc; Calculation of Toxicity factors, Synergistic ratios etc.

EPS 806.1 Environmental Policies and Laws- 2 Credit

Concept and importance (Sources) of Environmental Laws, Environmental protections and Enforcement, the Constitutions and ownership of private property, Right to private Recourse, Nuisances, Negligence, the Rule in Ryland V Fletcher, liability for Animals, trespass. Environmental Impact Assessment (EIA), Minimum Contents of an EIA, and advantages of EIA, EIA process and procedure, Environmental legislation in Nigeria; National and international Environmental protection Policies and laws. Impact Assessment (Environmental Impact Assessment (EIA), Environmental Evaluation studies (EES/EER), Post Impact Assessment (PIA) Studies, Environmental Audits (EA), Environmental Compliance Monitoring studies (ECM), Environmental Baseline Studies (EBS), Biological Monitoring studies (BMS); Biodiversity Assessment studies; Impact Assessment tools; Federal Ministry of Environmental EIA procedure/ steps, Department of Petroleum Resources (DPR) EIA procedure/ steps; The role of National Regulations (FMEnv, DPR, NOSDRA, NIMASA etc) in Environmental Monitoring and Legislation;

EPS 807.1 Seafood Safety and Quality Control – 2 Credit

Food safety, seafood safety Hazards (biological, chemical (allergen, a chemical added intentionally and unintentionally) and physical), foodborne illness, Harvesting of finfish and shellfish, Handling and Storage of seafood, Quality aspect associated with seafood, Microbiological contamination and Spoilage, seafood-borne diseases (intoxication-shell fish biotoxins, Tetrodotoxins, scombrottoxins, Ciguatera toxins Gempylotoxins and infections- Norovirus, Hepatitis A virus, *Vibrio vulnificus*, *Vibrio parahaemolyticus*, *Vibrio cholera*, *Staphylococcus aureus*, *Salmonella sp*, *Listeria monocytogenes*, *Bacillus cereus*, *Clostridium botulinum*) Microorganisms of public health significance and their control, Methods of quality assessment, Hazard Analysis Critical control point (HACCP) for fish and fishery products, Microbiological critical for seafood. Seafood Quality Monitoring and National and International Legislation for seafood quality and Standards (NAFDAC, Codex etc.)

SGS 801.1 ICT & Research Methods – 2 Credit

Academic writing (structure and contents); Hypothesis formulation and research question; Citation and Referencing; Research design; and Use of ICT in research (MS Excel, MS PowerPoint, SPSS/SAS/STATA).

EPS 809.2 Aquatic Pollution Management and Restoration- 2 Credit

Sources, extent and characterization of aquatic pollution; Physical, chemical and biological processes affecting the distribution, fate and transport of contaminants in water, sediments and biota (natural and anthropogenic toxic contaminants - nutrient input and dynamics, eutrophication, thermal pollution, oil pollution and other global environmental changes); Concept of water quality and environmental management and restoration of degraded hydro-ecosystem; In-situ, ex-situ and onsite remediation techniques (chemo, phyto, rhizo and general bioremediation), coastal resource management and conservation (exploring conventional and non-conventional techniques); Traditional and integrated approach in managing the aquatic ecosystem. Students are expected to undertake some practical work that applies classroom knowledge to field experience.

EPS 810.2 Environmental Economics and Sustainability – 2 Credit

Definition of Sustainability, type of Sustainability (Social, Economic, Environmental). Issues of Sustainability in Nigeria. Basic Concepts of Environmental Economics. Theories in Environmental Economics, Tools and Policies in Environmental Economics (PPP, Pigno Tax, Tax, Tariffs, Levy etc) Coase Theorem and marked Principles in Environmental Economics.

EPS 811.2 Mangrove Biodiversity and Other Aquatic Macrophytes - 2 Credit

Distribution/structure of the mangrove ecosystem; Flora and fauna diversity in mangrove ecosystem; ecosystem dynamics in mangroves; socioeconomic and ecological importance of the mangrove ecosystem; Drivers of mangrove deforestation and degradation; regeneration and restoration of mangroves; mangrove biodiversity assessment.

EPS 813.2 Sustainable Coastal Tourism – 2 Credit

Tourism operations, activities, facilities and coastal environmental pollution and protection; Event management in coastal areas; Safety issues in coastal tourism; Effect of tourism on wildlife species; Conservation of Manatee, Sea turtle, Crocodiles, Hippopotamus and other wildlife species in the coastal environment; Impact of coastal tourism on destination host communities.

EPS 814.2 Seminar – 2 Credit

Candidates must extensively review a current topic in a discipline complementary to their area of

training to broaden their knowledge of Environmental Pollution.

EPS 815.2 Research Project – 6 Credit

An innovative research project to be carried out by the candidates following stringent scientific procedures that will yield results acceptable by experts worldwide. Each project must contribute to knowledge in Environmental Pollution Studies.

SGS 801.2 Management and Entrepreneurship – 2 Credit

This course covers business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem-solving.

ELECTIVES (Choose any one of the electives courses below)

EPS 808.2 Air Quality Evaluation and Management – 2 Credit

Type and sources of gaseous air pollutants, particulate matter, hazardous air pollutants, global and atmospheric climate change, health effects, effects on various segments of the ecosystem. Measurement of air quality, Air quality control.

EPS 812.2 Environmental Physiology for Terrestrial and Marine Animals – 2 Credit

Climate and the interrelationship between terrestrial and marine animals; Acclimatization and Adaptation of terrestrial and marine animals; Physiological basis of their adaptation; Heat stress and their physiological response to it; Heat stress index; Modification of the micro-climate to enhance their productivity.

PGD PROGRAMME

Admission Requirements

Candidate must possess 5 credits in relevant subjects (Mathematics, English, Biology, Chemistry or Physics and one other subject) in addition to B.Sc. in Fisheries, Crop and soil science, relevant course obtained from institutions recognized by the Senate of the University of Port Harcourt. The degree should not be less than a third class degree.

PROGRAMME DURATION

The minimum and maximum length of time for a full-time PGD Degree candidate is 12 months and Part-time 24 calendar months respectively.

GRADUATION REQUIREMENT

To obtain Postgraduate Diploma in environmental pollution studies, the candidate must be registered in the programme for not less than 12 months, complete the academic programme, pass all courses and successfully defend a research project.

TABLE OF LIST OF COURSES, CODE AND CREDIT UNITS FOR PGD PROGRAMME

Courses	Credit units
EPS 701 Statistics and Modeling	2
EPS 702 Biogeochemistry	3
EPS 703 Oceanography	3
EPS 704 GIS and RS for Water Resource Management	3
EPS 705 Ecotoxicology and Risk Assessment	3
EPS 706 Environmental Policies and Laws	2
EPS 707 Seafood Safety and Quality Control	2
EPS 708 Seafood and Safety	2
EPS 709 Aquatic Pollution Management and Restoration	3
EPS 710 Environmental Economics and Sustainability	2
EPS 711 Seminar	2
EPS 712 Research Project	6
EPS 707 Air quality evaluation and management	2
Total Units	35

COURSE OUTLINE FOR PGD PROGRAMME

EPS 701.1 Statistics and Modeling – 2Credit

Basic parametric and non-parametric statistics as applied to marine pollution studies; Simple linear regression, regression. Basic application of statistical analysis in biological research, Multivariate statistical techniques and Referencing.

EPS 702.1 Biogeochemistry – 3 Credit

Air and water pollution (sources, effects and abatement) Water chemistry and water pollution, characteristics and methods of control of pollution, Biogeochemical cycling - Nitrogen cycle (nitrogen mineralization, ammonia transformation and nitrification, nitrate transformations and denitrification, nitrogen fixation); Sulfur and carbon cycles; Phosphorus cycle.

EPS 703.1 Oceanography – 3 Credit

General introduction to Oceanography: Topography (bathymetry) of the sea; Physical and Chemical Oceanography (temperature, illumination, electrical conductivity, acoustic characteristics, salinity, dissolved gases); Ocean currents; Coastal Processes (waves, tides and coastal erosion). Biological Oceanography; species composition, distribution and adaptation of marine organisms plankton, invertebrates, fish, reptiles and mammals); Biological linkage with estuaries, and estuarine processes.

EPS 704.1 GIS and RS for Water Resource Management – 3 Credit

Introduction to Geographic Information Systems (GIS) and Remote Sensing (RS). Basic applications of GIS and RS in water resources management.

EPS 705.1 Ecotoxicology and Risk Assessment – 3 Credit

Basic concepts of toxicology, Principles of toxicological hazard, toxicological evaluation, pesticide pollution, pollution by heavy metals, biotransformation, bioaccumulation, biodeterioration and biocorrosion. Ecosystem concepts; characterizing exposure concentration in the environment; Environmental sampling. Frameworks of ecotoxicological risk assessment.

EPS 706.1 Environmental Policies and Laws - 2 Credit

Concept and importance (Sources) of Environmental Laws, Environmental protections and Enforcement. Nuisances, Negligence, the Rule in Ryland V Fletcher, liability for Animals, trespass. Definition and concepts of Environmental Impact Assessment (EIA). Environmental legislation in Nigeria.

EPS 707.1 Air Quality Evaluation and Management – 2 Credit

Type and sources of gaseous air pollutants, hazardous air pollutants, climate change, health effects, effects on various segments of the ecosystem. Measurement of air quality, Air quality control.

EPS 708.2 Seafood Safety – 2 Credit

Importance of seafood safety, symptoms of foodborne illnesses, Morphology and physiology of Pathogenic bacteria, helminths (Nematode,

Trematodes, cestodes), protozoa, yeasts molds and viruses of seafood, Laboratory methods for screening seafood, Mechanisms of spoilage, Handling Storage and preservation, Regulatory Agencies roles and responsibilities, National and International Legislation for food safety, introduction to Hazard Analysis and critical control points (HACCP).

EPS 709.2 Aquatic Pollution Management and Restoration – 3 Credit

Sources, extent and characterization of aquatic pollution; Physical, chemical and biological processes affecting the distribution, fate and transport of contaminants in water, sediments and biota (natural and anthropogenic toxic contaminants - nutrient input and dynamics, eutrophication, thermal pollution, oil pollution and other global environmental changes); Concept of water quality and practical field experience.

EPS 710.2 Environmental Economics and Sustainability – 2 Credit

Definition of Sustainability, type of Sustainability (Social, Economic, Environmental). Introduction to Coase theorem and market principles in Environmental Economics.

EPS 711.2 Seminar – 2 Credit

Candidates must extensively review a current topic in a discipline complementary to their area of training to broaden their knowledge of Environmental Pollution.

EPS 712.2 Research Project – 6 Credit

An innovative research project to be carried out by the candidates following stringent scientific procedures that will yield results acceptable by experts worldwide. Each project must contribute to knowledge in Environmental Pollution Studies.

LIST OF ACADEMIC STAFF

S/N	Name	Qualifications	Designation	Specialisation
1	Prof. F. Sikoki	PhD	Professor	Eco-Toxicology
2	Prof. O. Akaranta`	PhD	Professor	Writing skills
3	Prof. L.O. Odokuma	PhD	Professor	Environmental Microbiology
4	Prof. O.S. Akpogomeh	PhD	Professor	Environment Management
5	Prof. O.E. Orisakwe	PhD	Professor	Toxicology
6	Prof. Leo Osuji	PhD	Professor	Petroleum and Environmental Assessment
7	Prof. P.C. Mmom	PhD	Professor	Environmental Management
8	Prof. E.B. Essien	PhD	Professor	Nutritional Biochemistry/ Toxicology
9	Prof. A.O. Asimiea	PhD	Professor	Environmental Remediation
10	Prof. C. Ugwu	PhD	Professor	ICT
11	Prof. N. Zabbey	PhD	Professor	Hydrobiology/ Oceanography
12	Prof. C.J. Ogugbue	PhD	Professor	Environmental Microbiology
13	Prof. Chad Umoren	PhD	Professor	Radiation Toxicology
14	Prof. L.N. Onyejegbu	PhD	Professor	ICT
15	Prof. F.C. Anacletus	PhD	Professor	Medical Biochemistry
16	Dr. I. Vincent-Akpu	PhD	Professor	Ecotoxicology
17	Dr. K.C. Patrick-Iwuanyanwu	PhD	Reader	Toxicology/ Food Safety
18	Dr. M.C. Onojake	PhD	Reader	Petroleum Chemistry
19	Dr. O. Lawal	PhD	Reader	GIS/ Environmental Management
20	Dr. O. C. Eruteya	PhD	Senior Lecturer	Food Microbiology
21	Dr. Y. Momoh	PhD	Senior Lecturer	Environmental Engineering
22	Dr. A. Oji	PhD	Senior Lecturer	Chemical Engineering
23	Dr. A.O. Numbere	PhD	Senior Lecturer	Ecology
24	Dr. J.K. Igbo	PhD	Senior Lecturer	Oceanography
25	Dr. D. Amachree	PhD	Senior Lecturer	Hydrobiology/ Radioecology
26	Dr. M.A. Ijomah	PhD	Senior Lecturer	Statistics
27	Dr. O. Omokheyeke	PhD	Snr. Research Fellow	Hydrobiology / Oceanography
28	Dr. F. Obinduka	PhD	Research Fellow	Occupational Health, Safety & Environment
