THE NATIONAL ANTHEM

*Arise, O compatriots, Nigeria's call obey
To serve our fatherland
With love and strength and faith
The labor of our heroes past
Shall never be in vain
To serve with heart and might
One nation bound in freedom, peace, and unity.*

*Oh God of creation, direct our noble cause
Guide our leaders right
Help our youth the truth to know
In love and honesty to grow
And living just and true
Great lofty heights attain
To build a nation where peace and justice shall reign.*

THE NATIONAL PLEDGE

*I pledge to Nigeria, my country
To be faithful, loyal, and honest
To serve Nigeria with all my strength
To defend her unity
And uphold her honor and glory
So help me God.*

UNIVERSITY OF PORT HARCOURT ANTHEM

*On the green low lands and swampy plains
of the New Calabar River stands
The University of Port Harcourt;
A citadel of learning and excellent education
A home of academic enthusiasts,
Searching, searching for knowledge and wisdom.
Enlightenment and self- reliance, our mission,
Our hope in the future is rooted in God alone;
The vision of our fathers shinning in the stars,
Opportunities, unlimited and equal,
Our progenies citizens of the universe,
From far and near: the pride of Uniport echoes.*

Refrain:

*Unique, Unique. Unique, Uniport
Unique, Unique, Unique Uniport*

FOREWORD

The School of Graduate Studies has produced quality graduates with serious minded Academics ready to impart unique world standard knowledge into the students. The University was operating a “School” system at the time it was established. Schools of Humanities and Biological Sciences were the pioneer beneficiaries of post-graduate programme. Students were admitted into the M.A. Comparative Literature and M. Sc Plant Physiology and Fisheries Biology Programme.

Professor E.J. Alagoa (1982-1983 & 1985 -1987) became the pioneer Dean in 1982 when the Graduate School was established as an entity with eight students graduating in that year. Other Deans that have contributed to the growth of the School include Professor Francis Onofeghara (Late; 1983-1985) Professor T.J.T. Princwill (1987-1990), Professor Kay Williamson (Late; 1990-1991), Professor A.T. Salau (Late; 1991-1994), Professor E.O. Anosike (1994-1996) Professor William Ogionwo (Late; 1996-1999), Professor E.A. Elechi (Late; 1999-2006), Professor Winston Bell-Gam (2003-2005), Professor(Mrs.) Bene Willie-Abbey (2005-2011), Professor (Mrs.) Roseline S. Konya JP, (2011-2015 who was Dean and the Pioneer Provost of the School of Graduate Studies, until it reverted to the School) Professor Regina E. Ogali, Professor Anthonia A. Okerengwo, Professor Barisua F. Nwinee and Professor Kinikanwo A. Anele the current Dean. The Graduate

Studies Officers who were responsible for the administrative duties of the School were Mr. I.A.T. Allison (the pioneer Graduate Studies Officer), Mrs. S.O. Mengot, Mr. Finor K. Puene, Ms. O.E. Alabukun (Worika) Mrs. N.V. Dimkpa, Mrs. May Amaewhule, Mr. Abiye S. Kiri, Mr. L.C. Okere (Late), Mr. K.C. Alerechi, Mr. D.C. Amadi (Late), Mrs. Flora F. Iyagba, Dr. (Mrs.) D.I. Charles Granville, Dr. (Mrs) A.O. Ataga and Mrs. Christy U. Nworu (Late) and Mrs. Flora F. Iyagba, the current GSO.

There is no doubt that the School of Graduate Studies has contributed immensely to National Development. The Alumni of the School include people in positions of authority ranging from Chief Executives of Companies, to Governors and even a former President of the Federal Republic of Nigeria Dr. Goodluck Ebele Jonathan GCFR who graduates with an M.Sc degree in 1985 and Ph.D in 1995.

This prospectus is expected to be a graduate student’s companion and also to provide relevant information for intending students.

The National Universities Commission (NUC) Core Curriculum and Minimum Academic Standards (CCMAS) for Postgraduate Programmes are incorporated in this edition.

Prof. Kinikanwo A. Anele
Dean

Winner of Nigeria Universities' Doctoral Theses Award Scheme (NUDTAS)

SCHOOL OF GRADUATE STUDIES

UNIVERSITY OF PORT HARCOURT

1.0 BACKGROUND

1.1 History of the School of Graduate Studies

At its 12th Meeting held on Wednesday, 19th July, 1978, Senate considered and approved Paper No. SP 77-78/060 titled “The General Regulations for Graduate Studies”. This paved the way for the take-off of graduate training in the 1979/80 academic year. The then School of Humanities and Biological Sciences gave admission to candidates in the programmes of M.A. Comparative Literature and M.Sc. Plant Physiology and Fisheries Biology.

Initially, the graduate programmes were administered by the School (now Faculties) and the Registry. In October 1982, the School of Graduate Studies was formally established with Professor E. J. Alagoa as the first Dean, and it became necessary to streamline the procedures for the operation of graduate programmes. The General Regulations approved by Senate required each Faculty to set up Departmental Graduate Studies Committees to make recommendations regarding all matters concerning graduate programmes to its Faculty Board. Senate also established the “Higher Degrees Committee” (a Committee of the School of Graduate Studies) to “advise Senate on all matters relating to higher degrees”.

Further in 1984, the Higher Degrees Committee recommended for the approval of Senate a paper entitled “Proposals for Amendment/Streamlining of the School of Graduate Studies” initiated by the then Dean Professor Francis A. Onofeghara. At its 68th Meeting held on 23rd May, 1984, Senate considered and approved the paper No. SP/83- 84/134, which among other things, established the Board of

the School of Graduate Studies to replace the Higher Degrees Committee, and a new organizational structure for the School of Graduate Studies with effect from October 1984.

Due to the expansion in the scope of activities of the School, the Senate of the University, at its 386th meeting held on 29th August, 2012, upgraded the status of the School of Graduate Studies to College of Graduate Studies with four Graduate Schools.

In 2015, at the 411th Senate meeting held on the 26th August 2015 the College reverted back to School of Graduates Studies.

1.2 Vision of the School

To be ranked among the best Graduate Schools in Africa, in the provision of quality staff, programmes and facilities and renowned for its teaching, research, innovation and knowledge transfer.

1.3 Mission of the School

To pursue academic excellence, advancement of knowledge and community service through capability development, promotion of scholarship and policy relevant researches that address the challenges of contemporary society.

1.4 Objective

To implement Senate Policy and Guidelines for the initiation, consolidation and co-ordination of innovative research, provide quality administrative support for graduate programmes, equip research laboratories in the academic departments and ensure availability of data for national development.

THE BOARD OF THE SCHOOL OF GRADUATE STUDIES

The composition of the Board of the School and its terms of reference are as approved by Senate.

2.2 Terms of Reference of the Board

The Board, School of Graduate Studies, which meets on the 2nd Tuesday of every month on behalf of Senate is to consider and approve all matters relating to higher degrees and report to Senate. These shall include:

- (i) The award of University Scholarships and Research and Teaching Assistantship to graduate students.
- (ii) The formulation of Strategies for supervision of graduate students.
- (iii) The promotion of active graduate research and training in the University, including soliciting and securing outside grants.
- (iv) Fostering and development of group multidisciplinary research in the University.
- (v) The admission of Graduate Faculty Members.
- (vi) The disbursement of funds allocated for graduate work

2.3 The Functions of the Board

- (i) Admission and registration of students for graduate work.
- (ii) Approval of general fields of study and nomination of supervisors.
- (iii) Approval of title of theses and dissertations.
- (iv) Approval of appointment of internal and external examiners.
- (v) Co-ordination of all graduate programmes in the University.
- (vi) Regulation and enhancement of the quality of graduate instruction and research in the University.
- (vii) Monitoring and evaluation of the progress of graduate work in all academic departments.
- (viii) Preparation of estimates for the capital and recurrent expenditure of the school
- (ix) Making recommendations on provision of appropriate facilities for graduate work
- (x) Encouragement of the publication of the outcome of Graduate Studies in the form of journal articles, monographs and books.
- (xi) Publication of prospectus of Graduate Studies and annual reports on graduate work including titles and abstracts of theses and dissertations accepted for higher degrees.
- (xii) Publishing the graduate programmes and graduate research activities of the University extensively in order to attract good candidates and financial support.

- (xiii) Annual review and report to Senate on the development of Graduate Studies in the University.

2.4 Frequency of Board Meetings and Quorum

The Board of the School of Graduate Studies is made up of the Dean, the Associate Dean, Provost, College of Health Sciences, all Deans of Faculties, two representatives of Senate, Director, Centre for Research Management and Development.

- (iv) An emergency meeting may be summoned following written request to the Dean by at least five members of the Board drawn from two Faculties. The purpose of such a meeting shall be specified and such business be the only business of the day.
- (v) The quorum for the transaction of any business at a meeting of the Board shall be one third (or the nearest whole number) of the total membership.
- (vi) If a quorum is not formed one hour after the scheduled time of the meeting, that meeting shall stand adjourned *sine die*.

While undergraduates have two levels in which matters concerning them are considered before presenting to Senate, the graduate student has 3 levels of consideration before presentation is made to Senate. The Board monitors and regulates the programmes in line with the regulation and guidelines approved by Senate.

2.5 Channel of Communication with the School of Graduate Studies

The implication of the organizational structure of the School of Graduate Studies is that all matters concerning the Graduate School, even those originating from students should be addressed to the Dean of School of Graduate Studies. However, such matters should first be discussed at the Departmental Graduate Studies Committee and the minutes containing the recommendation forwarded to Faculty Graduate Studies Committee who in turn should do same and forward the final recommendation to the School of Graduate Studies.

3.0 FACULTY GRADUATE STUDIES COMMITTEE

3.1 Membership

- Dean of the Faculty (Chairman)
- Professors in the Faculty
- All Heads of Departments in the Faculty
- Two Representatives from each Department not below the Rank of Senior Lecturer

- Chairmen, Departmental Graduate Studies Committee
- Co-ordinators of Inter-disciplinary Programmes
- Faculty Officer (Secretary)

3.2 Terms of Reference

- Co-ordinate and control the quality of all graduate work in the Faculty;
- Recommend to the Board of the School of Graduate Studies the appointment of supervisors;
- Recommend new graduate programmes originating from Departments;
- Require the study or further study of any language or languages prescribed by the Department and make recommendations to the Board, School of Graduate Studies;
- Receive annual progress reports from the candidates and comments by their supervisors and forward them with recommendations to the Board School of Graduate Studies;
- Make recommendations of candidates for the award of grants and fellowships and the award of higher degrees and graduate diplomas, to the Board of the School of Graduate Studies;
- Recommend to the Board, School of Graduate Studies the extension of graduate scholarships and those who need to undertake part of their works in other institutions in Nigeria or abroad;
- Recommend external examiners and Board of Examiners to the Board of the School of Graduate Studies;
- Recommend candidates for admission to the Board, School of Graduate Studies;
- Approve course work results from Departments and forward such results to the Board of School of Graduate Studies;
- Deal initially with all matters involving examination malpractices and make recommendations to the Board;
- Approve all corrected theses/dissertations;
- Periodically review all Faculty graduate programmes;
- Promote group and multi-disciplinary research programmes in the Faculty;
- Carry out any other functions assigned to it by the Board, School of Graduate Studies.

4.0 DEPARTMENTAL GRADUATE STUDIES COMMITTEE

4.1 Membership

- The membership shall consist of all academic staff involved in the graduate programmes in the department. Staff who are postgraduate students cannot be members.

- There shall be a Chairman elected by the membership from the senior members of academic staff who shall not be below the rank of Senior Lecturer. However, leadership by seniority is encouraged. The tenure of the Chairman shall follow the university's established tenure system.
- The Office of the Head of Department shall provide the Departmental Graduate Studies Committee with secretarial services and other needed support.

4.2 Terms of Reference

The Departmental Graduate Studies Committee shall:

- Co-ordinate and control the quality of graduate teaching and research in the Department;
- Ensure regular attendance by students at the graduate research seminars;
- Review applications for graduate admission and. make recommendations to the Faculty Committee;
- Promote group and multi-disciplinary research programmes in the Department
- Recommend the appointment of supervisors to the Board, School of Graduate Studies through the Faculty Committee;
- Recommend the appointment of members of the Board of Examiners to the Board, School of Graduate Studies through the Faculty Committee;
- Recommend External Examiners to the Faculty Committee
- Carry out any other functions assigned to it by the Board, School of Graduate Studies.

Some Decisions Taken by the Board School of Graduate Studies and the Senate Yearly Student Academic Progress Report

In its bid of ensuring that students leave the School at the expiration of their approved study period, the School has re-activated its erstwhile yearly Academic Progress Report on each student. The Report which is to be completed by individual student supervisors would pass through the Chairman, Departmental Graduate Studies Committee/HOD and Dean of the Faculty before being sent to the Graduate School.

With the report, the Graduate School can easily access the academic standing of every student and determine what judgment to pass on such student at the appropriate time. With this in place, the era of permanent residency for students is over.

Seminar for All Final Year PhD Students

The Board of Graduate School has instituted the concept of Public Seminar for all final year PhD students. The students are expected to deliver a Public Seminar on the subject of their respective Theses before Senior academics, prior to their being allowed to appear before their External Examiners. The aim is to present and expose the potential philosophers to defend their works before the public which is expected to make inputs where necessary.

Admission into Ph.D and Masters (MA, MSc) programmes

Senate considered and approved the following recommendations from the Board, School of Graduate Studies.

- i. That a candidate with a recognized University first degree, who also scores 3.5 CGPA in his/ her PGD programme would be eligible for admission into University of Port Harcourt Masters Degree programme in the relevant field.
- ii. That a candidate with an Upper Credit HND could be admitted into departments that admit HND holders into their PGD programme:
- iii. That a candidate with an Upper Credit HND who scores an aggregate of 3.5 CGPA in the PGD programme, would be eligible for admission into the Masters Degree programme in the same field with effect from 2006/2007 session.
- iv. That a candidate who scores 3.50 CGPA in his/her Masters degree programme would be eligible for admission into the University of Port Harcourt Doctorate (Ph.D) degree programme except otherwise stated by the National Universities Commission (NUC).

4.3 Date of Completion of Programme.

The Board decided and approved the following:

- i. That a student is said to have completed his programme when he/she had defended his/her thesis, carried out the Minor or Major corrections as directed, have the work certified by the appropriate officers and submitted to the department for submission to Graduate School.
- ii. That from the date the corrected, certified and bound project was submitted to the department, the student would no longer be liable to any further payment of school fees.

B) Effective Date of Award of Degree/Result

THE EFFECTIVE DATE OF ANY RESULT OR CERTIFICATE REMAINS THE DATE ON WHICH SENATE APPROVES/RATIFIES THE RESULT.

5.0 GENERAL REGULATIONS GOVERNING THE SCHOOL OF GRADUATE STUDIES

5.1 ADMISSION

5.1.1 Types of Admission

There are two types of admission, full time (FT) and part-time (PT).

5.1.2 Full Time Admission

Full-time admission can be offered only to candidates who can satisfy the School of Graduate Studies that they are not in employment, or that they have been relieved by their employers to undertake full time studies. Candidates found to have made a false declaration in this respect shall be asked to withdraw from the University.

5.1.3 Part-Time Admission

Candidates may be admitted to part-time registration if they are members of the staff of the University. All part-time candidates shall be engaged in approved employment and submit evidence that they can devote a good proportion of their normal working year to their studies and satisfy the Departmental Graduate Studies Committee that they will be available for attendance at courses and for regular consultation with their supervisors.

5.1.4 Application for Admission

A. Application Forms

Advertisements for admission normally appear in two Nigerian Daily newspapers with details in the University of Port Harcourt's website.

B. METHOD OF APPLICATION

Candidates should visit the School www.cgs.uniport.edu.ng and click on application procedure.

6.1.5 Procedure for Admission

- (i) Eligible candidates wishing to be admitted into the higher degree programmes of the University of Port Harcourt shall purchase an application form. The completed form should be accompanied by a validated transcript and be submitted in duplicate to the Faculty Representative in the School of Graduate Studies
- (ii) The candidates forms accompanied by the validated transcripts shall be sent to the Head of the Department into which the candidate is seeking admission for processing and recommendation following School of Graduate Studies criteria for admission
- (iii) The Head of Department in consultation with the Departmental Graduate Studies Committee using the eligibility criteria form

of Graduate School shall recommend the candidates to be admitted.

- (iv) The Departmental recommended admission list endorsed by the Head of Department and the Chairman of the Departmental Graduate Studies Committee shall be forwarded to the Faculty Graduate Studies Committee which shall have the responsibility of rejecting candidates if they fail to meet the eligibility criteria.

The Faculty Graduate Studies Committee shall submit to the School of Graduate Studies vetted recommendation list with covering letter only signed by the Chairman of the Faculty Graduate Studies Committee. Recommended list not endorsed by the Faculty Chairman, Faculty Graduate Studies Committee shall not be accepted by the Graduate School.

- (v) The recommended list shall follow the format given by the School of Graduate Studies.
- (vi) The School of Graduate Studies shall vet the submissions from the Faculties. The criteria used by the School of Graduate Studies amongst others shall be as follows:

- (1) Authenticity of the credentials submitted by the candidate
- (2) Compliance with the set CGPA for admission
- (3) Incomplete information on the recommended list sent from the Department/Faculty to School of Graduate Studies
- (4) Recommendation of candidates who have not successfully completed one programme of POD but listed for higher level programme (M.Sc). Such recommendation shall be disqualified.
- (5) Availability of academic staff to supervise the candidates.
- (6) The recommendations shall hereafter be presented to the Board who has been vested with the authority by Senate to admit candidates into higher degree programmes.

No candidate shall be admitted to a programme unless his application has been approved by the Board.

5.1.6 Admission Requirements

(1) O'LEVEL

All candidates require a credit pass in English Language and Mathematics for all the courses. However, candidates who obtained their O'Level Certificates before 2012 without a credit pass in Mathematics and wish to gain admission into the following Departments are eligible to apply:

Faculty of Humanities

All the Departments in the Faculty of Humanities.

Faculty of Education

All the Departments in the Faculty of Education.

Faculty of Social Sciences

All the Departments in the Faculty of Social Sciences except the Department of Economics.

(2) Post-graduate Diploma Programmes

An applicant should be a graduate of University of Port Harcourt or a graduate from any other University recognized by the Senate of University of Port Harcourt. For Departments admitting candidates with HND background, such candidates must have upper credit. In addition, satisfy the departmental requirements specified in the respective programmes of study.

(3) Master's Degree Programmes

Admission to the Master's degree programme shall be from the University's own B.A., B.Ed., B.Sc. or from any other recognized University. The degree shall normally be not less than second class lower division.. A CGPA of 3.5 is required for those from PGD to Masters. Special departmental requirements are specified in the respective programmes of study.

(4) Doctor of Philosophy Programmes

Candidates for the Ph.D. programme shall have a Master's degree and should normally have had a minimum CGPA of 3.50 on a 5-point scale or its equivalent grade as required by specific Faculties/Departments/ Programmes. For candidates who obtained their Master's exclusively by research assessment, admission will be based on the quality of their theses. Final selection of candidate will be based on interview performance. Special departmental admission requirements are specified in the relevant programme of study.

(5) Doctor of Medicine/Master of Surgery (M.DJM.S)

Candidates must be either Medical Graduates (MBBS) of the University of Port Harcourt for not less than 5 years or confirmed and experienced academic staff of the University with Medical degree of recognized Universities. Additional admission requirements are specified in the relevant programme of study.

5.2 REGISTRATION

5.2.1 Procedure for Registration at School of Graduate Studies

Candidates whose applications have been approved by the Board shall be issued letters of admission for the commencement of registration.

- i. All fresh candidates who have been offered admission shall proceed to the Registration Unit of the School of Graduate Studies to be registered by the Registration Officer with the following documents
 - (a) Admission Letter
 - (b) Original Certificate for verification
 - (c) NYSC discharge certificate
 - (d) Evidence of payment of prescribed fees
- ii. The candidate shall submit photocopies of receipts to the Registration Officer and in turn obtain student information forms and course registration forms

5.2.2 Procedure for Registration in the Department

When a candidate has been duly registered in the School of Graduate Studies he/she shall proceed to the Department where his/her choice of programme is for briefing by the Head of Department and Course Registration in the Department. The underlisted documents shall be presented for the Departmental Registration -

- (a) Admission Letter
- (b) Evidence of Registration at School of Graduate Studies
- (c) Evidence of payment of all dues.

Every student is expected on first registration to sign the University Register of Graduate Students at the School of Graduate Studies.

When all these procedures have been accomplished, the candidate has become a bonafide graduate student of the University of Port Harcourt.

5.2.3 Deferment of Registration

A candidate may be allowed for good reasons to defer his/her registration for a year on the recommendation of his/her Faculty Graduate Studies Committee through the Departmental Graduate Studies Committee. Candidates applying for such deferment of registration shall complete the prescribed forms obtainable from the School of Graduate Studies on payment of a prescribed deferment fee. The maximum period allowed for deferment of registration shall normally be one year. Amount of fees for deferment of registration shall be as prescribed from time to time by the School of Graduate Studies.

5.2.4 Renewal of Registration

Candidates shall renew their registration yearly at the commencement of each academic session until the completion of their higher degree/diploma programmes. Renewal of registration shall involve:

- (i) Submission to the School of Graduate Studies a satisfactory Annual Progress Report duly approved by the Supervisor and the Chairman, Departmental Graduate Studies Committee/Head of Department of the candidate.
- (ii) Presentation to the School of Graduate Studies evidence of payment of the prescribed renewal fees.

5.2.5 Late Registration

All admitted candidates who fail to register within the registration period shall pay prescribed penalty fees.

5.2.6 Lapsed Registration

A candidate's registration shall be deemed to have lapsed on the following grounds:

- (i) Failure to renew registration in anyone session
- (ii) Failure to present oneself for examination at the expiration of the approved maximum period of the programme
- (iii) Inability to complete the requirements for the programme within the approved maximum period.
A registration that has lapsed on the grounds stated above shall not be reactivated.

Graduate students are required to undergo registration procedures at the beginning of each academic year during the course of their programme until the programme is completed.

5.2.7 Multiple Registration

No student shall be allowed to register for more than one higher degree programme of the university at the same time. A student must complete the programme registered for, before embarking on another.

6.0 DURATION/ RESIDENTIAL REQUIREMENTS

All lecturers of graduate programmes, Heads of Department, Chairmen of Departmental Graduate Studies Committee and Faculty Graduate Studies Committee and students shall cooperate fully with the School of Graduate Studies to enforce compliance of programme duration

6.1 Postgraduate Diploma in Education (PGDE)

For the PGDE programme, the course shall normally last for a minimum of 12 calendar months for full-time students or two consecutive vacations of eight weeks each (sand-wich programme) for part-time students. There shall be six week period of internship during which the student shall undertake supervised teaching practice. The maximum time allowed shall be 24 months for full time students and 3 long vacations for the part-time students (Sandwich programme).

6.2 Postgraduate Diploma in Petroleum Engineering (PGDPE), and Postgraduate Diploma in Chemical Engineering (DCHE)

The PGDPE programme lasts for a minimum of twelve months and a maximum of 24 months, during which period student will be required to spend a minimum of two months in the field or laboratory, gaining practical and industrial experience.

6.3 The Postgraduate Diploma Programme of Arts, Science, Social Sciences, Engineering and Management Sciences

The programmes will normally be for a period of 12 calendar months full-time.

6.4 Master's Programme

Full-time candidates will be required to spend a minimum of 12 calendar months and a maximum of 24 calendar months. Part-time candidates will be required to spend a minimum of 24 calendar months and a maximum of 48 calendar months.

6.5 Master of Business Administration Programme

Full-time candidates will be required to spend a minimum of 24 calendar months and a maximum of 36 calendar months. Part-time candidates will be required to spend a minimum of 36 calendar months and a maximum of 48 calendar months.

6.6 Sandwich Programmes for Master's Degree

The Sandwich programmes shall run for a minimum of three long vacations and a maximum of five long vacations as follows:

- (i) Course work shall be completed in two consecutive long vacations.
- (ii) The theses shall be completed within the third long vacation. Candidates who are unable to complete within the normal schedule may be allowed up to five vacations.

6.7 Doctor of Philosophy (Ph.D)

Full-time candidates will be required to spend a minimum of 24 calendar months and a maximum of 60 calendar months.

Part-time candidates will be required to spend a minimum of 36 calendar months and a maximum of 84 calendar months.

6.8 Doctor of Medicine (M.D), Master of Surgery (M.S)

The programme will be for a minimum of 24 calendar months and maximum of 36 calendar months.

6.9 Notification of Expiry date of Studentship

In case of students whose maximum period in a programme is about to expire, e.g. 24 months for M.Sc. Full-time, the Graduate Studies Officer shall normally notify them 6 months before the expiry date for students that are in good standing with updated registration.

7.0 SCHEME OF STUDY FOR POSTGRADUATE DIPLOMA, MASTERS AND DOCTOR OF PHILOSOPHY

7.1 The Postgraduate Diploma courses shall consist of

- (i) Taught courses
- (ii) Practical and industrial attachment which ever is applicable
- (iii) Submission of written reports on projects.

7.2 The Postgraduate Diploma in Education shall consist of

- (i) Studies in theory and practice of education
- (ii) Specialized procedure in teaching of subject
- (iii) Supervised practice in teaching
- (iv) Supervised project

7.3 The Master's and Doctor of Philosophy Programmes shall consist of

- i) Taught courses/Seminars
- ii) Attendance and participation in research seminars
- iii) Preparation of thesis dissertation/project.

7.4 Withdrawal from the University

- (i) A student may be asked to withdraw on grounds of the following
 - (a) Unsatisfactory academic performance such as having a CGPA of less than 2.75 at the end of 1st year course work
 - (b) Failing a course twice
 - (c) Poor and irregular lecture attendance
 - (d) Ill health and
 - (e) Misbehaviour
- (ii) A student may also voluntarily withdraw his studentship.

8.0 APPOINTMENT OF SUPERVISOR

On the recommendation of the Departmental Graduate Studies Committee through the Faculty Graduate Studies Committee, the Board of the School of Graduate Studies shall

- (i) Appoint a supervisor for the thesis
- (ii) Approve the termination of a candidate or extend the period of study if so advised by the report of the supervisor.

8.1 CONTINUATION REQUIREMENTS

- (a) A graduate student is expected to pass all taught courses with a minimum grade of "C"

- (b) A student who fails a course shall re-register for it at the next available opportunity. A graduate student will not register for a course more than twice. Failure of a course twice amounts to automatic fail out/withdrawal from the programme.
- (c) At the end of the First Year Course Work, the student should have a cumulative grade point average of not less than 2.75. A student who does not meet the minimum CGPA at the end of the First year shall be asked to withdraw.
- (d) No student shall proceed to the thesis without a cumulative grade point average of 3.00 or above. A student who has exhausted both opportunities for all required course without attaining a CGPA of 3.00 shall be asked to withdraw.
- (e) Course work grading system shall be as follows:

70 and above	A	5.00
60 - 69	B	4.00
50 - 59	C	3.00
0 - 49	F	0

MA/M.Sc RESEARCH SEMINAR

- (f) An important and integral part of the MA/M.Sc shall be the research seminar and attendance shall be obligatory. Such seminar will be organized at least twice a month (A seminar is defined as a place where research projects and their results, including those of the candidates, are presented and critically assessed).

8.2 RESIT EXAMINATION

Resit Examination of Graduate Programme has been abolished. However, failed courses may be retaken at one attempt only.

*8.3 EXAMINATION MISCONDUCT

Any student in the School of Graduate Studies found guilty of examination misconduct of any sort shall be expelled. For clarity, examination misconduct is defined as all forms of cheating which directly or indirectly falsify the ability of a student. In other words, examination misconduct denotes any form of fraud committed by a student in order to pass an examination which under normal circumstances he or she would not have passed. Its forms are various, ranging from cheating in the examination hall such as impersonation, smuggling into the examination hall/room scribes of already prepared answers, copying from each other or one another (collusion), oral or written communication between/amongst students during examination, plagiarism of project, Dissertation and Thesis, etc.

8.4 CONSTITUTION OF THE BOARD OF EXAMINERS FOR EXAMINATION OF THESES AND DISSERTATIONS

For the examination of the candidates' thesis/dissertation, the Board of examinations shall consist the approved External Examiner to the university, supervisors, Chairman, Departmental Graduate Studies Committee, the Head of Department, Dean of the Faculty, and the Dean, School of Graduate Studies, who shall be the Chairman of the Board of Examiners.

8.5 TITLE OF THESIS/DISSERTATION

Candidates shall submit for approval the title of their thesis/dissertation to the Departmental Graduate Studies Committee. The candidate shall, not less than two months before submitting himself for examination, notify the Board of the School of Graduate Studies in writing and state the full title of his thesis/dissertation.

8.6 SUBMISSION OF DISSERTATION

- (a) A candidate shall submit six copies of his/her thesis in paper binding to the Faculty Committee not later than two months to the date of the oral examination.
- (b) Before the degree is conferred, three copies of the very thesis accepted shall be bound in a manner approved by the University Library and these shall become the property of the University.
- (c) Regulations for the P.G.D project and will be specified by the Departmental Graduate Studies Committee

8.7 EXAMINATION OF THESIS/ DISSERTATION

- (a) Each candidate shall be examined by not less than four examiners in accordance with regulations stipulated above. The examination shall be oral and questions asked and topics undertaken during such examination should not be limited to the context of his/her field of specialization.
- (b) After the examination and with or without further consultation or correspondence among the examiners, the examiners shall submit to the appropriate Faculty Committee on a prescribed form a joint report on the candidate. The report shall contain:
 - (i) a clear and detailed evaluation of the research work as summed up in the thesis/dissertation;
 - (ii) a clear assessment of the candidate's knowledge and understanding of the subject as stated in the thesis and subsequent examination;
 - (iii) an unequivocal declaration as to the acceptability, or otherwise, of the thesis/dissertation in fulfillment of the requirements of the degree;
- (c) In cases of difference of opinion, the examiners shall submit separate reports to the relevant Faculty Committee which shall

make an appropriate recommendation to the Board of the School of Graduate Studies.

8.8 REQUIREMENTS FOR THE AWARD OF POSTGRADUATE DIPLOMA

Each student's Performance shall be based on:

- (a) Continuous assessment and final examination in the taught courses
 - (b) Assessment of supervised teaching/seminars;
 - (c) Assessment of project.
- Continuous assessment shall count 30% of a student's grade for each taught course.

Final examinations shall be awarded with a distinction, upper credit, lower credit, merit or fail based on a candidate's cumulative grade point average score as follows:

4.50-5.00	-	Distinction
4.00-4.49	-	Upper Credit
3.50-3.99	-	Lower Credit
3.00-3.49	-	Pass
0.00-2.99	-	Fail

However, classification of Postgraduate Diploma in Education are shown below:

4.50-5.00	-	Distinction
3.50-4.49	-	Credit
3.00-3.49	-	Merit
2.50-2.99	-	Pass
Below 2.50	-	Fail

Any candidate who resits any course shall not be eligible for a Distinction; and no candidate who fails to meet the graduation requirement within the normal period of his programme shall be eligible for the award of credit grade.

8.9 MASTER DEGREE PROGRAMME

Duration of Programmes

Full-time candidates will be required to complete the programme in a minimum of 24 calendar months and a maximum of thirty-six calendar months.

Part-time candidates will be required to spend a minimum of thirty-six calendar months and a maximum of forty-eight calendar months.

8.10 DOCTOR OF PHILOSOPHY PROGRAMME

The regulation for the Ph.D. programme shall be as for Master's degree in Arts or Science except in the following areas:

(i) Admission Requirements

As stated in the general admission requirements above

(ii) Duration of Programmes

As stated under duration above

(iii) Scheme of study and appointment of Supervisor.

The Ph.D. is principally a research degree finally examined by thesis. The Departmental Graduate Studies Committee on the approval of the Board of the School of Graduate Studies shall:

- (a) Prescribe for each candidate on admission a minimum period of study (normally 2 calendar years).
- (b) Appoint a supervisor.
- (c) Require attendance of any advanced courses approved by Senate for Ph.D.
- (d) Require the study or further study of any language or languages prescribed by the supervisor if appropriate.
- (e) Satisfy any further conditions which may be specified by the Departmental Graduate Studies Committee concerned.
- (f) Require regular attendance at the research seminars which will be organized at least twice a month.
- (g) Require the presentation of Public Seminar at the School of Graduate Studies.

8.11 Examination Requirements for the Award of Ph.D Degree

The examination requirement for the award of the degree shall include any or all of the following as approved by the Senate for each candidate:

- (a) Passing of written examination in the areas of the candidate's programme;
- (b) Proof of proficiency in the language prescribed for each candidate, if any;
- (c) Submission of a Thesis and its acceptance by the examiners appointed for the purpose;
- (d) Passing of an oral examination on the subject of the Thesis and related subjects.

8.12 Title of Thesis

The candidate shall in not less than two calendar months before submitting himself for examination, notify the Board of the School of Graduate Studies in writing through the appropriate Faculty Committee and state the title of his Thesis.

8.13 Submission of Thesis

- (a) A candidate shall, submit four copies of the Thesis in paper binding to the Faculty Committee not later than the beginning of the last semester of the prescribed period of study and not later than two months to the date of the examination.
- (b) A Thesis must conform to the specifications laid down by the School of Graduate Studies
- (c) Before the degree is conferred, three copies of every Thesis accepted shall be bound in a manner approved by the University Library and these shall become the property of the University.

8.14 Examination of Thesis

- (a) Each candidate shall be examined by not less than four examiners approved by the Board of the School of Graduate Studies in accordance with regulation (5) above. The examiners shall be oral and shall include the subject of the research and related subjects.
- (b) After the examination and with or without further consultation or correspondence among the examiners, the examiners shall submit to the Faculty Committee on a prescribed form a joint report on the candidate.

The report shall contain:

- (i) a clear and detailed evaluation of the research work as summed up in the thesis, including an assessment of its originality and its contribution to the advancement of knowledge;
- (ii) a clear assessment of the candidate's knowledge and understanding of his subject as shown in the thesis and subsequent examination;
- (iii) an unequivocal declaration as to the acceptability or otherwise of the thesis in fulfillment of the requirement of the degree, The report shall thereafter be forwarded by the Faculty Committee to the Board, School of Graduate Studies.
- (c) In case of difference of opinion, the examiners shall submit separate reports to the Faculty Graduate Studies Committee, which will make an appropriate recommendation to the Board, School of Graduate Studies.

8.15 CONDUCT OF GRADUATE EXAMINATIONS:

(i) *Circulation of Academic Calendar:*

The School of Graduate Studies shall circulate the Academic Calendar to the Heads of Department at least two weeks before the commencement of a new session. The Heads of Department should thereafter circulate the Academic Calendar to the various Chairmen, Departmental Graduate Studies Committees and to all Course Lecturers involved in the Graduate Programmes.

(ii) *Collection of Answer Scripts/Booklets and Envelopes:*

The Heads of Department should pick the answer scripts and envelopes from the Office of the Chief Accountant, School of Graduate Studies a week before each semester examination.

8.16 PRESENTATION OF RESULTS:

(i) *Semester Results*

ALL semester results must reach the School of Graduate Studies not later than six (6) weeks after examinations (i.e. 1st and 2nd Semesters) indicating the outstanding courses and course lecturers in the 'remark' column.

- SGS 801.1 - 1st Semester (ICT and Research Methodology) and
- SGS 801.2 - 2nd Semester (Management and Entrepreneurship) shall carry a uniform credit load of 2 units as stipulated in the prospectus.

(ii) *Failed Courses:*

If a student passes a repeat examination, the failed and passed scores must be indicated on the Mark-sheet in the appropriate column and graded with a "C".

(iii) *Presentation of Final Results*

The presentation of the Master Mark-sheet for the award of Degree shall be in tabular form and shall contain the following details:

- Full names of the students (surname should be in capital letters)
- The students' Registration Numbers
- Course Codes
- Credit Units
- TQP = Total Quality Points
- TCU = Total Credit Units
- CGPA = Cumulative Grade Point Average
- Area of Specialization (for Masters and PhD)

The Mark-sheet shall be certified by the following signatories:

- Chairman, Departmental Graduate Studies Committee
- Head of Department
- Dean of Faculty
- Dean, School of Graduate Studies

(iv) *Submission of Master Marksheet, External Examiner's Report Form and Thesis/Dissertation*

- a) The HOD should submit the above items within six (6) weeks after the external defense, while the students should submit their corrected theses/dissertations to their departments within four (4) weeks after external defense.

b) *Delay in Submission of Results*

Note that in the event of delay in submitting the results to the School of Graduate Studies, the Head of Department will be held responsible and appropriate sanctions shall apply.

9.0 REGULATIONS GOVERNING THE PRESENTATION OF THESIS/DISSERTATIONS

The regulations stated below which have been approved are to be strictly followed:

9.1 Size of Paper

The approved size of paper for writing up is A4 and in case of scarcity approval could be sought for use of Foolscap size.

9.2 Signatories

The underlisted members of a candidate's Board of Examiners should sign the certification of theses/dissertations.

Supervisor(s)
Head of Department
Chairman, Departmental Graduate
Committee
Dean of Faculty
External Examiner
Chairman, Board of Examiners

9.3 Length

Word count for Thesis/Dissertation in the Department of Mathematics and Statistics, Physics, Computing, Physics/Electronics/Production in SSLT, Faculties of Engineering, Pharmaceutical Sciences and Agriculture should be a minimum of 20,000 words for Masters and 40,000 words for PhD, while other Faculties/Departments not mentioned here would maintain the status quo of 25,000 words for Masters Dissertation and 50,000 words for Ph.D Thesis. The font of writing shall be font 12 and style is Times New Romans.

9.4 Binding

(a) Colours for Binding

Each thesis/dissertation should be bound in the colour of the awarding Faculty and the colours approved for various faculties are:

College of Health Science	Purple
Education	Blue
Humanities	Terra cotta
Social Sciences	Black
Science	Gold
Engineering	Orange
Management Science	Beige

It is expected that all theses/dissertations should be well bound or cased in boards. It should open easily.

9.6 MODIFIED STANDARD FORMAT OF THESIS/DISSERTATION AMENDED AT THE 281ST MEETING OF THE SCHOOL OF GRADUATE STUDIES BOARD (2023).

Font type for all Thesis/Dissertation should be in Times New Roman and the Font Size is 12. The body of the Thesis/Dissertation should be in double line spacing except the abstract.

Prospective compilers of theses/dissertations should consult the University Librarian for uniformity.

(b) Binding Specifications

The technical and other requirements are listed below

Style: Library Binding or full bound

Size of Book: A4, 210 x 297mm

Weight of Board: 400gms

End papers Cartridges: Paper (clothlined joints or made end papers)

Blocking Gold or Aluminum foil.

Title: and author cover and spine

Strengthening Material: Mull. Calico. Tape

Round and Back Yes

Cover Materials: Art canvas, leather cloth, waterproof library cloth buckram (A good quality material that will take hard wear for a considerable time and will have much better tensile strength and resistance to abrasion)

Linings: Crepe Kraft with split board

Decoration: Headband (optional)
Write your name, degree, Department and year on the spine of the bound thesis/dissertation.

9.5 Masters Dissertation and Ph.D. Thesis Defense

Masters students should have at least one Journal publication while Ph.D students should have two journal publications. Abstract should be maximum of 350 words for Ph.D Thesis and 300 words for Masters Dissertation. It should be descriptive and informative.

PRELIMINARY PAGES

- Cover Page
- Title Page
- Declaration
- Certification
- Dedication should be simple and to the point
- Acknowledgements (should be one page starting with the supervisor/s)
- Abstract - (single line spacing and not more than 350 words for Thesis and 300 words for Dissertation and not italicized.
- Table of Contents (there should be no lines)
- List of Tables (if applicable)
- List of Figures (if applicable)
- List of Plates (if applicable)
- List of Abbreviations/Symbols (where applicable)

CHAPTER ONE: INTRODUCTION

- 1.1 Background to the Study
- 1.2 Statement of the Problem
- 1.3 Aim and Objectives of the Study
- 1.4 Research Questions/Hypothesis (if applicable)
- 1.5 Significance of the Study (Benefits derivable from study)
- 1.6 Biography of the Author of the works being studied (if applicable)
- 1.7 Scope of the Study/Delimitation

CHAPTER TWO: LITERATURE REVIEW

- 2.1 Conceptual Framework (if applicable)
- 2.2 Theoretical Framework (if applicable)
- 2.3 Empirical Review (aim, methods, findings of previous works) if relevant.
- 2.4 Periodization of existing literature/stylistic development/genres (if applicable)
- 2.5 Gap Identification

Note: For College of Health Sciences, Faculties of Science, Pharmaceutical Sciences, and some Departments in Agriculture and the School Laboratory Technology students should concentrate on Empirical Review.

CHAPTER THREE: METHODOLOGY (MATERIALS AND METHODS)

- 3.1 Research Design
- 3.2 Study Area (if applicable)
- 3.3 Population for the study (if applicable)
- 3.4 Sample(s) and Sampling Techniques (if applicable)
- 3.5 Nature/Sources of Data— Primary/Secondary (if applicable)
- 3.6 Methods of Data Collection/Instrumentation (if applicable)
- 3.7 Validity/Reliability of Instrument (if applicable)
- 3.8 Methods of Data Analysis
- 3.9 Ethical Approval (if applicable)

CHAPTER FOUR: RESULTS AND DISCUSSION

- 4.1 Research and Analysis (Addressing objectives and hypotheses (where necessary, substantiated with tables, figures, plates, theorems)
- 4.2 Discussion of Findings

CHAPTER FIVE: SUMMARY, CONCLUSION AND RECOMMENDATIONS

- 5.1 Summary of Findings
- 5.2 Limitations (if applicable)
- 5.3 Conclusion
- 5.4 Recommendations

5.5 Contributions to knowledge (preferably original, novel, specific and emanating from the work)

References American Psychological Association style 7th edition should be adopted.

APPENDICES To be structured according to the chapters.

N/B

- Tables should be on separate pages. Without grids or lines
- Figures on separate pages
- Plates on separate pages.

(If possible multiples of tables or figures or plates can be on a page)

Numbering of Tables, Figures, Plates and Equations should be Chapter specific.

- Pagination: Roman numerals (Preliminary pages) and Arabic numerals (the rest of the Thesis/Dissertation), numbering: bottom-centred
- Colour: Faculty Colour
- Effective Date – 2022/2023 Academic Session

N.B. Students are to contact their Chairman, Departmental Graduate Studies Committees/Heads of Departments or Graduate Studies Officer to confirm the form of the Title and Certification pages. Details on styles of presentation are expected to be provided by the respective disciplines.

10.1 GUIDELINES ON THE SUPERVISION OF GRADUATE STUDENTS BY AN ACADEMIC STAFF

- (a) An academic staff member below the rank of Reader/Professor should not supervise more than THREE Master's students and ONE Doctoral student from any annual intake
- (b) A Reader/Professor may supervise THREE Master's students and TWO Doctoral students from any annual intake

- (c) Faculties of Education and Management Sciences are allowed a maximum of FIVE Master's students
- (d) Academic staff supervising Ph.D. students should not be below the rank of Senior Lecturer
- (e) Academic staff supervising Master's students should normally not be below the rank of Lecturer I. However, M.Sc holders are not encouraged to supervise M.Sc students.

10.2 SCHOLARSHIPS

The school awards a number of scholarships per session to the value determined regularly by the Development Committee of the University per recipient as allowance, in addition to free tuition and accommodation.

Eligibility for the Award

Holders of at least a second class upper division degree of the University of Port Harcourt or other recognized Universities after successful screening by an interview panel. Holders should not have a paid employment.

11.0 FINANCIAL INFORMATION

Duration of the Award

The award shall be for one year only, subject to satisfactory progress and availability of funds.

10.3 TEACHING AND RESEARCH ASSISTANTSHIP

In addition to scholarship, the School provides for the award of Research and Teaching Assistantships to a carefully selected number of top candidates with

at least a 2nd Class Upper Degree who will, in addition to being registered for a specified higher degree, be required to assist in grading of scripts and in the research programme of academic staff, subject to a maximum of specified number of contact hours.

Eligibility

All holders of 2nd class upper and above honours degree of the University of Port Harcourt and other recognized Universities who are registered for the Ph. D programmes. Holders should not have any paid employment.

Value of the Award

Remunerations shall normally be fixed by the University.

Successful candidates shall in addition to being registered for a specific degree, assist in the grading of scripts and in the research programmes of the department.

Duration

The Assistantship Award is for one year but could be renewed for another year subject to availability of funds and satisfactory progress.

Fresh and Returning students are expected to pay N3,000 only as ICTC charges. Foreign students are to pay N39,500 only.

ACCOMMODATION

Post Graduate Diploma students are not entitled to accommodation. Bed spaces are limited for Masters and Doctoral students and subject to confirmation of bed space by the Students Affairs Unit, accommodation fee is fixed by the University.

11.7 Pro Rata Fees

Payment on a pro rata basis has been abolished with effect from the 1991/92 Session.

11.8 Refund of Fees

- (1) No partial refunds shall be made for courses dropped by a student. To be eligible for refund a student must withdraw from all other courses.
- (2) To be eligible for refund a student who withdraws from all his courses must do so with the knowledge and consent of his

Supervisor/Adviser who will communicate his comments to the Dean, Graduate School through the Faculty Graduate Studies Committee or Head of Department.

- (3) Refunds will be pro-rated as follows
- (i) 100%: if student is required to withdraw for academic reasons
 - (ii) 80%: if done within the first two weeks after the beginning of C lasses
 - (iii) 50%: if done within the first six weeks after the beginning of Classes

Thereafter no refund will be made.

11.9 CHEATING IN EXAMINATIONS

Any graduate student found cheating in any Examination shall be expelled from the University. The comment “W” (Withdrawal) shall be used for the record of students that withdraw from their programmes.

11.10 ACCOMMODATION

Graduate Students are accommodated in the Graduate Hostel at University Park. The University

does not guarantee hostel accommodation for every student.

11.11 HEALTH SERVICES

Health Services are provided for all students and members of staff at Medical Centre situated at the Choba Park. The services include the General Out-patient Clinics and Emergencies, Environmental and Public Health Immunization, Family Planning and referrals. All students and members of staff are required to register at the Medical centre. Any candidate unable to sit for an examination on account of illness duly certified by a medical authority approved by the University’s Director of Medical Services may be allowed to take the examination at the next period as first attempt. The candidate shall notify the Dean, School of Graduate Studies through the Head of Department and the Dean of Faculty of this fact and shall submit a valid medical certificate to be authenticated by the Director of Medical Services (MDS).

OVERSTAY ON POSTGRADUATE PROGRAMMES

Senate at its 381st meeting held on Wednesday, February, 29, 2012, approved the School of Graduate Studies Overstay Report. The implementation is with effect from March 21, 2012.

The approved decisions are as follows:

S/N	PROGRAMME	OVERSTAY
1.	Ph.D	(a) Full-Time Candidates are deemed to have overstayed after the period of 6 years that is, 1 extra year after the statutory 5 year. (b) Part-Time Candidates are deemed to have Overstayed after the period of 9 years that is, 1 extra years after the statutory 7 years.
2.	Masters	(a) Full-Time Candidates are deemed to have overstayed after the period of 36 calendar months, that is, 12 Calendar months (1 extra year) after the statutory 24 Calendar months. (b) Part-Time Candidates are deemed to have overstayed after the period of 60 Calendar months, that is, 12 extra Calendar months after the statutory 48 Calendar months.
3.	PGD	Candidates in the Full-Time POD programmes are deemed to have overstayed after a period of 24 Calendar months, that is, 12 extra Calendar months, after the statutory 12 Calendar months.
	PGD (Full-Time)	Full-Time Candidates in the PGDE programme are deemed to have overstayed after a period of 24 Calendar months, that is, 12 extra Calendar months after the statutory 12 Calendar months.
	PGDE (Sandwich)	Sandwich candidates in the PGDE programme are deemed to have overstayed after a period of 4 long vacations, that is, 1 extra long vacation after the statutory 3 long vacations.

The Senate also **approved** that:

1. Candidates who have overstayed the newly approved duration of the programmes should re-apply and start afresh. That is, purchase new forms and get new registration number as new students.
2. Candidates' old results, fees, etc. will be considered null and void.

SCHOOL OF GRADUATE STUDIES COURSES DESCRIPTION

SGS 801.1: ICT AND RESEARCH METHODOLOGY (2 Credit Units)

This course should cover essentials of spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Scientific Research, Concepts of Hypothesis, Formulation and Testing, Organization of Research and Report Writing.

SGS 801.2: MANAGEMENT AND ENTREPRENEURSHIP (2 Credit Units)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

FACULTY OF HUMANITIES

COMPARATIVE LITERATURE PROGRAMME

Preamble. The MA degree in comparative Literature was the first higher degree programme ever inaugurated by the University of Port Harcourt barely one year after under graduate teaching has commenced. In 1982, the PhD degree was added to the programme. The Comparative Literature programme is run by a committee drawn from five departments, namely, Foreign Languages, English Studies, Linguistics and Communication Studies, Fine Arts and Design, Theatre and Film Studies. The Chairman of the committee is the coordinator of the programme.

OUR VISION. To become the reference point and the centre of Excellence in the Comparative study of Literature across borders and of the interception of Literature with Culture, Politics, Postcoloniality globalization, development etc.

OUR MISSION. To train students with core inter-cultural and inter-disciplinary competence who will be able to make the study of literature relevant to the needs of national development and moral progress.

PHILOSOPHY. The philosophy of the inter-disciplinary Comparative Literature Programme is to train students who are already proficient in at least two world languages to be able to acquire an expanded inter-cultural awareness and enhanced cross-cultural analytic abilities which will prepare them for life and career in a globally connected world. The products of the programmers having been exposed to trans-national literary traditions as well as inter-disciplinary methodologies will be able to teach in more than one national literature department or work in any organization that requires cross-cultural or translational competences.

AIM AND OBJECTIVES. The programme aims at equipping students with enlarged linguistic, theoretical and inter-disciplinary competences that will enable them to meet the professional requirement of teachers, translators, global cultural workers and as well as integrations facilitators at the ECO was or the AU.

DEGREES OFFERED. MA Comparative Literature, PhD Comparative Literature.

ADMISSION REQUIREMENTS. Subject to the general regulations of the University of Port Harcourt, School of Graduate Studies, the following regulations shall govern admission to MA/PHD in comparative literature.

[1] Candidates for admission to MA Comparative Literature shall possess a good honours degree in French, German or Literature from a recognized university. Graduates of literature in English have to African language is also necessary.

[2] Candidates for admission to the PHD in comparative Literature must possess MA in comparative Literature, or MA in French or German. Candidates with MA in Literature in English must show evidence of a working knowledge of French or German. All candidates for PHD admission must have a CGPA not below 3.5 on a 5 point scale.

DURATION. MA. Full-time students will be required to spend a minimum of 12 calendar months and a maximum of 24 months. Part time students will be required to spend a minimum of 24 months and a maximum of 36 months.

PhD. The PhD degree extends over four to six semesters for full-time students while part-time students may be allowed a period of eight semesters but not extending beyond ten semesters.

COURSE REQUIREMENTS/EXAMINATIONS. MA students are to register for a maximum of five courses per semester and to submit a thesis of not more than 20,000 words excluding bibliography and appendices. PHD students shall register for two courses per semester and present one graduate seminar. In addition they shall submit and defend a dissertation of not less than 100000 words excluding bibliography and appendices.

	TOTAL REQUIRED	27 units

COURSE DESCRIPTION

HUM 800.1 Research methodology in Comparative Studies

Apart from a general overview of literary research and scholarship, the course will acquaint students with the current methodological issues in comparative analysis as applied to the discipline of comparative Literature.

HUM 801.1 Principles of Comparative Literature

The Course examines, from a diachronic perspective, the various definitions, principles, and schools of Comparative Literature. Students will also study the most current trends in the discipline including post-colonial / post-imperial studies, inter-cultural comparatism, globalization/transnational studies etc.

HUM 802 .1 Literary Theory

After a general overview of the nature, functions and forms of literature from the Greeks to the 19th century, the course will focus on major trends in contemporary theories of literature from structuralism to post-modernism, feminism, cultural studies and post-colonial theory.

HUM 803.1. The Legacy of Colonial Literature

The earliest manifestation of Modern African Literature can be seen reactions against the writings of European authors dealing with Africa, mainly during the colonial period but to some extent also in the Post-independent era. It is therefore important to define the scope and conditions of the growth of colonial literature including its aftermath and to analyze its ideological assumptions and main themes. Since these are mostly based on stereotyped view of Africa, a critique of such stereotypes will be attempted and their survival in contemporary literature traced.

HUM 804.1. Literary Translation

Translation studies being one of the core areas of comparative literature, this course will acquaint students with the theories, techniques and cross-cultural competences needed for literary translation. It will focus attention of literary texts e.g Knowledge of the culture and society involved, cultural differences between writer and translator. It will also tackle the linguistic aspects of literary translation.

HUM 805.1

World Literature. A survey of the idea of World Literature since its conception by Goethe, the course will not only study selected masterpieces from major world cultures and traditions but will also focus on the transnational evolution of literary trends, themes and other shared worries of the global age.

HUM 806.2 Post- Colonial Studies

The course undertakes a systematic study of the emergence and evolution of the post-colonial

paradigm, with theoretical insights drawn from the works of Edward Said, Homi Bhabha, Spivak, Anthony Appiah and others, the students will study representative works of post-colonial literature from Africa, Asia, and Latin America.

HUM 807.2. Reading 19th Century Europe through post-colonial eyes

Major writers and thinkers of 19th century Europe such as Dickens, Hardy, Balzac, Zola, Auguste Comte, Spencer wrote about Europe transiting from the old world to a modern industrial age. What can Africa, now trapped in a rather difficult transition to modernity/ development, learn from the descriptions and analyses of transitional societies offered by these authors? A study of representative works of these authors pitted against the works of some African Post-Colonial writer shade some light on some current difficulties of Africa's post-colonial transition to modernity.

HUM 808.2 Modernism of African Literature, Art and Cinema

Modernism had dominated the Literary/Cultural imagination not only in Europe but also in the cultures that were conscripted into modernity via imperialism. African Modernism, mostly a response to the encroachment of European modernity, will be studied as an Ideologies-aesthetic umbrella under which students will study the intersection of themes. Cultural worries, political motifs and formal trends in the literature, art and cinema of both anti-colonial and post-colonial Africa.

HUM 809.2 Black Literatures and Ideologies in the New World

This course exposes the student to the Pan-African literary linkages between Africa and the Black peoples of the US, the Caribbean and Latin America. Through the study of selected writers and ideological movements such as the Negro Renaissance, French Antillean Negritude etc, students will understand the cultural/ ideological cross-currents between Africa and the Black Diaspora. Attempts will be made to see how the writers of these zones grapple with the difficult memory of slavery and how they have used their

works to forge a vibrant post-slavery identity politics.

HUM 900.1. Comparative Literature in the age of Globalization

The course is meant to further acquaint students with the most current global debates around the discipline of Comparative Literature in the era of an inexorable globalization process. From an identity crisis of the discipline signaled by Spivak's *The Death of Discipline* to a view of Comparative literature in the global space as the discovery of new territories, the discipline seems to have taken a firm departure from its imperial past in order to be reborn into a post-Eurocentric global concern for humanity's shared values and problems.

HUM 901.1 Beyond Negritude: Post-Africanism/ Afropolitanism in Culture, Art and Theory

After Negritude, what are Africa's new contributions to global literary/ ideological thoughts? Post-Africanism and Afropolitanism now compete for a post-colonial world. The course will introduce students to the current debates in art, culture and literary theory around the notions of Post-Africanism and Afropolitanism

HUM 903.2 Literature and Philosophy

The course is about the intersection of literature with philosophy, history of ideas and social theory. From Aristotle to Derrida, philosophy and literature seem to be organically entwined. Through the works of Sartre, Derrida, Nietzsche, Foucault etc, the student will study the powerful cross-fertilization of literature and philosophy through the ages.

HUM 904.2 African Literature and Democracy/ Development

The role of literature in the struggles for the political normalization of Africa as well as the alleviation of poverty and suffering in the continent has remained undisputed. In this course, the student will study not only how major post-colonial writers refract in their texts the collapse of political normality and the reign of poverty and under-development but also how the alternative visions of society that nourish their works can help bring about the birth of a democratic and prosperous new Africa.

LIST OF ACADEMIC STAFF

S/NO	NAME	QUALIFICATION	AREA OF SPECIALIZATION	DESIGNATION
1	EKPO D.P	B.A (Calabar), M.A, PhD Bordeaux (France)	Comparative Literature	Professor

DEPARTMENT OF ENGLISH STUDIES POSTGRADUATE PROGRAMME

The Philosophy of the Programme

The philosophy of the programme is as follows: In a country where English is used as an added language, a major official language, a lingua franca, and the language of instruction in the educational system, a high level of proficiency in it is usually expected from the graduates of higher institutions, especially the universities. A higher level of competence and communication skills is expected even more from graduates of English. This is why there is a need for devoting greater attention to the achievement of improved knowledge of English and the acquisition of oral and written skills in it. Holders of higher degrees from the Department of English Studies, University of Port Harcourt, should be clearly and positively identified with adequate proficiency in pronunciation, articulateness in speech, correctness of grammar and usage, elegance and style in diction in the choice of an appropriate variety of English for various academic leadership positions, administrative and professional job opportunities available in the labour market, in literary and creative writing domains, and in teaching and research in language, literature, popular culture and media studies.

Aim of the Department

- (i) To instil in the student a sound knowledge of the varieties of English Language usage in its dynamic and changing forms.
- (ii) To reveal to the student through exposure to the multi-faceted nature of *belles lettres*, the aesthetic value of ideas.
- (iii) To develop in the student the ability to understand, analyze, and discuss critically any piece of literary writing by helping him to develop his own powers of written and oral expressions in the English Language.
- (iv) To produce competent teachers in English Language and Literature in English in Nigerian Schools and Colleges.
- (v) To prepare the students for Graduate work in either Language or Literature.

Admission Requirements

M.A Programme

In addition to the general regulations governing the admission of candidates into the Masters degree, applicants for admission into M.A. degree programmes of the Department of English Studies will be required to meet the following conditions:

- (i) Possess a first degree of the University of Port Harcourt or any other recognized university with at least a Second Class (Lower Division)
- (ii) **Candidates whose first degree is from a cognate discipline other than English will be required to have a CGPA of 3.50 on a 5-point scale.**
- (iii) The candidates may be required to pass a qualifying entrance examination where necessary and may be required to attend an oral interview

Duration

The duration of the M. A. degree programme is 12 months (two semesters of course work) plus a long vacation used for writing of dissertation) for full time students and 24 months for part-time students.

Ph.D. Programme

Subject to the provisions of the university-wide regulations governing the admission of candidates into the Ph.D. programme, candidates seeking admission into the Ph.D. degree programme of the Department of English Studies will be required to meet the following conditions:

- (i) Possess a master's degree in English (or a related discipline) obtained from the University of Port Harcourt or any other recognized university
- (ii) Candidates who possess the qualification stated in (i) above will be expected to have at least a CGPA of 3.5 on a 5-point scale in the course work leading to the award of their Master's degree
- (iii) In addition to fulfilling conditions (i) and (ii) above, applicants for admission into the Ph.D. programme will submit a topic proposal of minimum of 5 pages based on area of interest to the Chairman of Departmental Graduate Studies Committee. Only students who scored 60% in the oral interview will be recommended for admission.
- (iv) Supervisors will be assigned to the students based on their area of interest at the end of the First Semester course work.
- (v) Students have two course seminars to present before the Departmental Graduate Studies Committee as part of the course work. Seminar 1 will hold in the first semester, while Seminar 2 will hold in the second semester on the Department stipulated seminar day(s). They are expected to work closely with the Seminar Course lecturers

- who will present them to the Graduate Studies Committee. The scoring for the seminars will be: Course Lecturers/Coordinators 40%; Graduate Studies Committee 60%
- (vi) In order to proceed further with the programme, a candidate admitted into the Ph.D. programme shall do a Proposal defence within the first semester of the second year of study, which should consist of the first three chapters of the thesis and the whole thesis outline. The candidate will also be required to defend the said proposal at a qualifying oral examination before the Graduate Studies Committee of the Department that approves the continuation of the research.
 - (vii) Internal Defence will hold by the first semester of the students' third year of study and only students who scored 60% and above will be allowed to proceed to the Faculty Seminar.
 - (viii) Candidates from other universities whose admission qualifications show a deficiency in course offerings will be required to take remedial courses from the courses available in the M.A. programme of the Department.

Duration

Minimum of Two Calendar years (24 months) & Maximum of Five calendar years (Full Time)
 Minimum of Four calendar years (48months) & Maximum of Six calendar years (Part Time)
 Alterations to the above time schedules can only be made by special written permission of the Board, School of Graduate Studies.

Requirements for Graduation

M.A. Programme

To graduate with the M.A. degree in English (Language or Literature/Area of Specialisation), a candidate must have taken and passed the prescribed number of compulsory and required courses listed in the approved list and totalling 43 units as shown below.

Core Courses	37 units
Dissertation	6 units
Total	43 units

Completed M.A. dissertation shall be submitted at least three months before the stipulated completion date, which should correspond with the date of the oral examination.
 Oral Examination

The M.A. degree candidate will be required to defend his/her dissertation in a final oral examination before a panel of examiners constituted as follows:

- (i) Chairman, Board of Examiners
- (ii) An External Examiner duly appointed by the Faculty Board and Senate
- (iii) The Representative of the College of Graduate Studies
- (iv) The Head of Department
- (v) The Chairman, Departmental Graduate Studies Committee
- (vi) The candidate's supervisor(s)
- (vii) Other members of the Departmental Graduate Studies Committee

Ph.D. Programme

To graduate with a Ph.D., candidates must take and pass all the requisite courses as prescribed in the Ph.D. course list totalling 27 units as shown below.

Core Courses	18 units
Thesis	9 units
Total	27 units

Completed Ph.D. thesis shall be submitted at least three months before the stipulated completion date, which should correspond with the date of the oral examination.

Graduate Programme in English

The Graduate Programme of the Department of English Studies offers M. A. English and Ph.D. English. Under these broad categories the student can pursue a programme in either Literature or Language.

The Literature component emphasizes the following fields of specialization:

- (a) Literary Theory and Critical Studies
- (b) Modern African Literature, Postcolonial and Transnational Literatures
- (c) African Oral Literature
- (d) Contemporary European and American Literature
- (e) African American and African Diaspora Literatures
- (f) Women's Writings and Gender Studies while the Language component emphasizes the following fields of specialization:
 - (a) Phonology of English
 - (b) English Morphology and Syntax
 - (c) Semantics of English
 - (d) Sociolinguistics
 - (e) Applied English Linguistics
 - (f) Discourse Analysis and Pragmatics
 - (g) English as a Second Language
 - (h) Linguistic Stylistics

M.A. COURSES

The students are expected to offer not less than six (6) courses in each semester.

A. Literature Option

First Semester

MASTERS' COURSE DESCRIPTION

(a) Literature Emphasis

EST 800.1: Linguistics and the Study of Literature

The nature of language; major language families; linguistics and traditional grammar; synchronic and diachronic linguistics; the comparative method; phonetics; various branches of linguistics explained and literary genres.

EST 801.1: Oral Literature

By a comparative study of selected examples of African tales, poems, narratives and dramatic forms, the course will establish some typologies for oral literature in Africa. Comparison may then be attempted with the characteristics of oral literature outside the Continent. Knowledge of African languages will be built upon as much as possible; otherwise, English translations will be used.

EST 803.1: Literary Theory and Criticis

This course will first concern itself with the nature and functions of literature and the various approaches to criticism, before moving on to the history of literary criticism, from Plato to Roland Barthes.

EST 805.1: Studies in Modern African Literature

This is an intensive study of Modern African Literature in European languages in the different genres. The course will emphasize the sociological and historical contexts of the different genres including fiction, drama, poetry and autobiography. The major theoretical and formal strategies of the works of selected authors from the different sub regions will be highlighted.

EST 807.1: Modern European Literature

This course will adopt a comparative method in order to survey the major responses of writers from Europe to the modernist movement. A selection of primary texts will be made from the different genres of fiction, drama and poetry.

EST 809.1: Popular Literature and the Mass Media

The course will examine the interface of literature, literacy and the institutions of popular, mass culture, festival events, radio, television, newspaper, music, video, film computers and the electronic media. Theories of literacy and what Walter Ong has called "Technologizing the world will be considered.

EST 830.2: Seminar on a Special Author

The course aims mainly at providing guidance to graduate students in their chosen genre of concentration for their Graduate Seminar paper either in the Novel, Drama, Poetry or Oral Literature. Comparative Approaches to the chosen genre will be insisted upon and students will be encouraged to study works of Anglophone and francophone expression through lectures, guided discussions, and seminar-type class presentations by the students themselves. Students will also be

encouraged, wherever possible, to proceed to their dissertations from topics chosen during the course.

EST 832.2: Thesis

The thesis shall conform to all the requirements laid down by Senate and shall not be below 25,000 words. The closing date for submission shall be laid down from year to year by the Graduate Studies Committee.

EST 834.2: Research Methods

The course will deal with the efficient handling of research materials such as journals, book indexes, guides to periodical literature and recorded sources. Apart from being given practical assignments to trace information in libraries and in the field, the students will be taught how to organize data and present them in a scholarly form.

EST 836.2: Literary Theory & Criticism II

This is an advanced course focusing on the major movements in contemporary literary theory, with special emphasis on any two of the following: Structuralism, Semiotics, Deconstruction, Sociology of Literature, Formalism and Postcolonial Aesthetics.

EST 838.2: Black Literature in the New World

This course is meant to acquaint the students with significant themes in the literature of black peoples in the United States, the Caribbean and in Central and South America (Cuba and Brazil in particular). Attempts will be made to see how the writers of these zones deal with the themes of slavery, domination and alienation, of violence and liberation. The image of the white man and the idea of Africa in the various literatures will also be examined. Cultural cross-currents between Africa and the Black Diaspora, as well as the influence of the metropole-cultural and otherwise –will constitute importance points for investigation.

EST 840.2: Modern British and American Literature

This course undertakes a broad survey of the major authors and literary movements of the 19th and 20th centuries of British and American Literatures.

(b) Language Emphasis

EST 810.1: Advanced Stylistics

This course gives opportunity for graduate students to have a firm grasp of landmarks in general linguistics with emphasis on key figures from Edward Sapir to Noam Chomsky, importance schools like those of Britain and America and recent advances such as clinical and forensic linguistics. More importantly, the course will explore the possibility of relating linguistics knowledge to the study of literature.

EST 811.1: The Syntax of Modern English

This course aims at giving graduates of English an opportunity to consolidate their understanding of English syntax through a study of various structural issues and grammatical models which propound them. The course assumes a good knowledge of general structural patterns in English.

EST 813.1: Research Methods

This course will train graduate students in current approaches to research: data collection and processing procedures; appropriate bibliographical entries. Emphasis will also be placed in specific requirements for research in English and the format of presentation of findings in the discipline.

EST 815.1: Advanced Phonology of English

The purpose of this course is to train graduate students to master the phonological processes and organization of sound of the English Language; the different phonological theories, phonological rules and annotations which explain such patterning. Attention is also paid to specialized issues such as M. A. K. Halliday's system of intonation, as well as recent relevant phonological controversies. Students should also be able to attempt a contrastive analysis of the phonology of English and that of their indigenous languages.

EST 817.1: Discourse Analysis and Pragmatics

The course examines the ways post-structuralist theories inform the analysis of texts. It employs the terms and methods of linguistics to study two related areas of study, Discourse Analysis and Pragmatics. Primarily, these fields of study are preoccupied with the description of written and spoken language in use. They aim to identify the systems and patterns within discourse and to relate these features to the context in which texts are produced. The course also seeks to establish and explore the relationship between discourse considerations can explain language users' choices, and the effects on hearers and readers if those choices, once they are made, Other areas of Pragmatics to be considered include speech act theory, implicatures, and context of situation, as they apply to texts.

EST 818.2: Studies in Sociolinguistics

Sociolinguistics will first be distinguished from sociology of language. The course will expose students about the study of language in relation to social factors including variations according to region, class, occupation, age, gender, style, etc. It also covers issues bilingualism and multilingualism and cognition. The course will also treat cultural norms expectations, and context affecting language use. It describes the social functions of language.

EST 820.2: Advanced Semantics

This course seeks to give graduate students of English an opportunity to undertake a critical study and analysis of the theories of meaning (past and current), the factors which explain such theories and the possible applications of major Semantics concepts in practical situations. Attention is also paid to recent advances in the subject.

EST 822.2: Studies in World Englishes

This course gives graduate students to understand the emerging varieties of English in the World. It will also provide them an opportunity to consolidate and deepen their understanding of style in various forms of communication, in various situations, in various literary genres, as well as specific usages of English in various regions of the world.

EST 824.2: English as a Second Language

This course differentiates ESL from EFL and covers the principles and theories of language acquisition and learning in a Second language situation. The course also examines the challenges and prospects of English in a multilingual situation. It will also treat techniques and procedures of second language teaching and learning from the traditional to the modern times. The course also includes production and critique of materials necessary for language teaching and learning in a second language situation.

EST 826.2: Psycholinguistics

Psycholinguistics is also called psychology of language. This course will describe the relationship between psychology and linguistic behaviours such as processes of language acquisition in human; how humans comprehend and use language. It covers mechanisms in which languages are processed and represented in the brain. The course will also describe popular psycholinguistics theories.

EST 828.2: Language Seminar

This course aims at training graduates students in the selection of appropriate seminar topics; the format of presentation and the mode of delivery of a seminar to an academic audience.

EST 832.2: Thesis

The MA thesis is planned to give graduate students an opportunity for a reasonably independent research, the supervisor providing only essential guidance. The course seeks to encourage the students to utilize the knowledge acquired in their training in EST 813.1 (*Research Methods*) and to present their dissertation in format which follows in every detail the guide as approved by the Department of English Studies and the School of Graduate Studies.

Ph.D. COURSE DESCRIPTION

(a) Literature Emphasis

EST 901.1: Methods and Techniques of Critical Discourse

This course is designed to provide in-depth knowledge of the theories of literary production, of criticism, and criticism as a mode of production. In doing these it will emphasize the debates that have informed critical discourse and their major schools – sociological, the formalist, the structuralist, the feminist, and the Marxists and the versions of post-structuralism, and postcolonialism. This course is also designed to create awareness of the process of the Africanization of literary theory and critical procedures in Africa. At the end of the course the students will gain deeper understanding of the following:

- i. The difference between method and technique in critical discourse
- ii. Know how Rene Descartes' *Discourse on Method* can be said to have laid the foundation for critical discourse
- iii. Come to terms with the possible logic of interpretation
- iv. Wonder whether interpretation is of any ideological relevance
- v. Question the available strategies of interpretation and propose new ones
- vi. Ask questions about what constitutes correctness or relevance in literary and critical discourse
- vii. These and other issues will form the core of our concern in this course.

EST 903.1: World Literature Written in English

From the second half of the twentieth century, there occurred a global explosion in English Language Literature. This explosion coincided with the debates over the disciplinary status of postmodernism, post-colonialism and cultural studies. Against this background postcolonial studies became the congenial theoretical heading for world literature in English. The reason for this is that much of this literature is being written in former colonies. Consequently, this course is essentially a comparative survey of the contribution of the English Language to the emergence and development of the literature of the formerly colonized people and nations in Africa, Asia, the Caribbean and the Oceania. Apart from the influence from European colonization the course will explore the impact of knowledge of the English Language in recording migrant experiences in North America especially the United States and Canada.

EST 905.1: PhD Course Seminar I

This course and the second part offered in the second semester (**EST 906.2: PhD Seminar II**) are guided advanced seminars on a diversity of issues in literary

theory and criticism. It is a course/series of presentation in one package. In the introductory technical part, the students will undergo discussion and exercises in presentation skills and documentation. Students should be conversant with the relevant Word applications, pdf format, power point presentation skills. They should be taught the rules of conference preparation and presentations, group discussion skills, audience sensitivity and time-management. The second practical part will include presentations and discussion on topics either selected by the lecturer or following his/her recommendation and approval by the students. The topics will be based on the issues that drive debates in literary studies. At the discretion of the lecturer the Seminar could solicit presentations from scholars/writers as guest speakers. On such occasion the Seminar could open its doors to other members of staff and graduate students especially in the MA class to be in attendance. Such gesture is to sustain the overall goal of the Seminar which is to encourage discussion and debate on contemporary literary concerns. Ultimately, students should be encouraged to follow and possibly attend the proceedings of major international Seminars in the field including, the Salzburg Seminars in Austria, the Oxford Round Table (not connected with the Oxford University), the School of Criticism and Theory at Cornell University.

EST 902.2: Literature and Ideas

Given that ideas are central to human existence, the overall concern of this course is that of understanding the relationship between literary representation and the reigning or moving ideas of any given moment. We are keen in understanding whether there are literary works or genres that have either propagated or militated against particular ideas in the African context and beyond especially given the interconnection between African and both the Atlantic and European worlds. In the light of this the discussion will review and examine the significance of works like Frantz Fanon's *The Wretched of the Earth*, Paul Gilroy's *The Black Atlantic*, Achille Mbembe's *On the Postcolony*, Mahmoud Mamdani's *When Victims Become Killers*, and other main frame theoretical contributions like them to underscore their significance in the emerging literatures. How can we account for the narratological and aesthetic implications of such forms of representation? The main objective of this course is to arouse in the student his/her innate critical and interpretative potentials. It will achieve this by insisting that the student read and reread literary works and works from definite literary traditions and to see these

works as representations of the world, culture and times. The course will draw materials from a diversity of backgrounds that enunciate the literary or non-literary representation of ideas.

EST 904.2: Main Currents in African Literature

The course will adopt a historical approach in order to study the emergence and development of modern African literature in the European languages. As writers and intellectuals such as Chinua Achebe, Mudimbe, and others have argued, African literature was spurned by the twin acts of reinventing and *re-storying* the African world and identity. This course will explore the factors that make the twin acts of reinventing and *re-storying* possible; it will examine the debates provoked and the diversity of strategies adopted by the writers from a diversity of backgrounds. Questions to be addressed will include: is there a monolithic Africa or are there many *Africas*? What is African identity? To what extent do models and approaches such as Negritude, African Personality, *womanism*, etc. succeed in evoking a concrete sense of African identity? Is the language question still of relevance to our apprehension of African literature? The implicit politics and interests that generate the voices in modern African literature in the genres, including the novel, drama, poetry, and autobiography will be considered. The practical study of selected texts from a diversity of backgrounds will explore the writers' act of social responsibility and their attendant will to power and desire to restructure inherited structures and their effects on experience.

EST 906.2: Ph.D. Course Seminal II

This course aims at training doctorate students in the selection of appropriate seminar topics; the format of presentation and the mode of delivery of a seminar to an academic audience. It involves presentation on topical issues in language, literacy, and literature and how these affect society and are in turn affected by society.

PhD English (Language Option)

EST 907.1: Advanced Linguistic Theory & Present Day English

This course presents current linguistic theories and how they are used in present day research. Students

are exposed to construction and deconstruction of theories in linguistics.

EST 909.1: English-based Pidgins and Creoles & Decreolization

The course describes pidgin, creole, their status and types. It traces the origin of English-based pidgins and creoles around the globe and explains how pidgins develop. It investigates what kind of linguistics structure a pidgin language has. It further explains why linguists are interested in studying pidgins and peoples' various attitudes towards pidgins. It narrows it down to the use of pidgin in Nigeria, its characteristics, functions and place in the multilingual Nigeria.

EST 911.1: PhD Seminar I

This course aims at training doctorate students in the selection of appropriate seminar topics; the format of presentation and the mode of delivery of a seminar to an academic audience.

EST 908.2: Applied Linguistics of English

This course aims at training doctoral students in the discipline of applied linguistics and the application of linguistics to various domains of language use and context such as education and her professions. It also covers such areas as methods in language teaching and learning, interference, contrastive and error analysis, language learning and acquisition, bilingualism education, multilingualism, literacy, language and development.

EST 910.2: Language Therapy and National Development

The course starts with speech and language disorders which include phonological and neurological disorders. It describes a language therapist, and examines available therapies for different disorders. This course also focuses on the role of language in national development – be in indigenous languages or a second language in national development. It explicates the constraint placed on national development by the linguistics situation in developing African nations.

EST 912.2: Ph.D. Course Seminar II

This course aims at training doctorate students in the selection of appropriate seminar topics; the format of presentation and the mode of delivery of a seminar to an academic audience. It involves presentation on topical issues in language, literacy, and literature and how these affect society and are in turn affected by society.

DEPARTMENT OF FINE ARTS AND DESIGN

Introduction: The need to establish the graduate degree programmes in Fine Arts and Design is defined by the felt needs to be up to date with global trends of in-depth research development and problem solving. To this end, the programme is aimed at harnessing skills and talents that are critical to the individual in meeting with global standards and challenges that regularly confront society. University of Port Harcourt is therefore not insulated from this as it is centrally located in the deep of the Niger Delta region where current issues of development critically challenge the need towards a concrete development strategy. The University of Port Harcourt therefore, through the Graduate degree programme of Fine Arts and Design, is finding solution to myriads of problems in its environment and beyond by establishing quality teaching and research team for a modern university as University of Port Harcourt.

The programme of the Department of Fine Arts and Design is designed therefore to cater for the interest of students who would offer the MA degree and further his research quest in the PhD degree that are available in different areas of specialisation. It is designed to take care of the critical areas of art as an aesthetics element married with functionality in an environment where industry can play important role. It is therefore both theoretical and practice led programme for those who wants to either focus mainly on the theoretical as applicable to Art History or Design History, and or the studio specialisations of Painting, Sculpture Ceramics, Graphics and Communication Design, or in Textiles and Fashion.

Vision: The University of Port Harcourt's mission is to contribute to national development, self-reliance and excellence through the advancement and propagation of knowledge and in like manner use such knowledge for service to humanity and the community.

To this end, the Department of Fine Arts and Design shall be one of the leading departments in art and design education; in teaching and generating new knowledge through research development for the uplift of humanity. It aspires to achieve this by attracting a core of highly led and motivated academics and students in order to provide creative solutions to demands of society

Mission

- The Department shall endeavour to attain a leading position in the University, the Niger Delta, Nigeria and in global contexts by developing creative solutions towards ideals for which creative impulses have always

been instigated in human consciousness for the growth of cultures.

- The Department is committed to promote a well- rounded art and design education, which includes studio supplementary disciplines of art criticism/appreciation and art history to facilitate a hike in visual literacy among students and staff and the immediate locus of the university and beyond.
- The Department's commitment to art education includes providing talented and highly motivated students and staff with theoretical, conceptual and technical skills needed to excel as professional artists and designers who are able to cope with the demands of a dynamic and changing society.
- The department is poised to compete with other disciplinary focuses in the University, relevant Government and non-governmental agencies to bring about the integration of the town and gown for the purpose of uplifting the Department and the University as it provides and offers alternative ways of appreciating cultural progress and advancements in human societies.

Objectives

- 1) To prepare students as research scholars, teachers and as practitioners in the areas of Art and Design practice.
- 2) To encourage an in-depth study of specific areas within the subject in a way to stimulate independent, critical, and creative constructive minds.
- 3) To inculcate Art and Design orientation for creative problem solving and its universal application.

Future Prospects

- The Fine Arts and Design Department aims strategically to offer the best programme, working consciously towards building sound knowledge and character in its syllabus. It has a crop of sound intellectuals internationally acknowledged by some of the best institutions of art in the world.
- Hence, a Masters in art or design from the University of Port Harcourt gives you the penultimate professional qualification to practice- if you are looking for an ongoing career in academia, a PhD research degree is the next step in your development.
- The programme equips the individual to go on to find employment in the visual art or design in one of the creative industries in the private sector, or in a relevant department of the public sector.

- There is huge potential for self-employment as an artist or designer, in areas as diverse as ceramics, product design, Textiles and Fashion, fabric design, media theory, sound and video recording, community art and education, furniture design, television graphics, conceptual art, glass blowing, curating, environmental design, web design, graphic communications, web games, environmental art, interior architecture, web graphics, interior design, product design, painting and illustration, etc..
- The programme is also targeted at skills for an employer in any sector where a clear sense of personal inquiry, creativity and confidence in the development of technical skills is valued. In particular, you could work in museums, art galleries, arts administration, art history, curating, teaching or in the multimedia industry.

Admission into the Programmes

Admission into the M.A programmes will be open to candidates with a B.A. degree in Fine Arts & Design and other related areas such as Industrial Design, Art History from the University of Port Harcourt and other institutions recognized by University of Port Harcourt. Subject to the general admission regulations of the school of Graduate Studies, the class of B.A. degree must not be lower than a Second Class Lower Division. HND holders with Upper Credit and above may be considered if the candidate holds in addition a PG Diploma in art or in a related area. The methods of application are as spelt out in the Graduate School's Guidelines.

Requirements & Duration of the Programmes

MA DEGREE PROGRAMME

The M.A. Degree in Fine Arts & Design extends over 12 calendar months, i.e. 2 semesters up to a maximum period of 24 calendar months. Part time is 24 calendar months to a maximum of 48 months.

The Fine Arts & Design specialization options are clearly spelt out to include:

1. African Art History
2. Design History
3. Painting
4. Sculpture
5. Ceramics Design
6. Graphic Design and Communication, and
7. Textiles and Fashion Design.

Assessment

Overall assessment will be based on coursework, and examination at the end of each semester and a satisfactory completion/defence of a Thesis and an art exhibition. To fulfil the requirements for the award of the degree, a candidate must obtain at least

an average grade of C'. Scoring will adopt the Graduate School format of Continuous Assessment C/A= 30%, Examination= 70%, Total= 100%

Code of Practice

The responsibilities of the supervisor, exercised on behalf of the Graduate School, include the following:

- Supervisors should meet with their research students for formal consultation at least three times a semester in the case of full-time students or at least twice a semester in the case of part-time students. The number of formal consultations may be varied by mutual agreement as circumstances may require. They may also maintain contact through regular seminar meetings, in accordance with college and school policy, and in the light of discussion of arrangements with the student. Supervisors should be accessible to the student at other appropriate times.
- Supervisors should give guidance on the nature of research and the standard expected, the planning and scope of the research programme, literature and sources, attendance at taught classes, research techniques (including arranging for instruction where necessary) and the avoidance of plagiarism.
- Detailed advice should be given on the necessary completion dates of successive stages of the work, so that the whole may be submitted within the scheduled time.
- Written work should be requested as appropriate and returned with constructive criticism, and in reasonable time.
- Arrangements should be made as appropriate for the student to talk about his or her work to staff or in graduate seminars and to have practice in oral examinations.
- The supervisor should ensure that the student is made aware of any inadequacy of progress or of standard of work below that generally expected.

In appropriate cases, the supervisor should be prepared to refer to the student for professional guidance in respect of personal or other problems not necessarily directly related to the research.

The supervisor will report annually to the school sub-committee on the student's progress and any problems encountered during the year. The supervisor will also comment, as appropriate, on the student's own report, which is submitted to the sub-committee through the supervisor.

Study Opportunities

Our students have many different reasons for choosing to study here. For some, the quality of the course is important; for others it is the social life and facilities offered by the city of Port Harcourt. A proportion of students tell us they chose UNIPORT because the city does not leave them feeling overwhelmed; others wish to be close to their homes. Whatever are the reasons for choosing UNIPORT, our students say that when they leave us at the end of their course they take with them memories of friendship, warmth and hospitality.

Links with Industry

The Department is collaborating with small and medium-sized companies for exciting research challenges such as the development of joint research in Anatomical modelling, product designs, Infusion of Clay and glass designs, Design of house building bricks, Digital and web design, Animation modelling for the moving image, Fashion magazine and wears, etc.

International Links

UNIPORT places great importance on the need to prepare students for the increasing opportunities for work study home and abroad. Work placements and study visits outside Nigeria are best established together with a thriving programme of student exchange schemes with many UK institutions. As such University of Wolverhampton, the Centre of African Studies, School of Oriental and African Studies, University of London and London University of the Arts are some of the associated links.

UNIPORT – A Quality Education

UNIPORT provides education and training opportunities that are accessible, flexible and of the highest quality, and has been independently acclaimed for his high academic standards and its high level of student satisfaction. A measure of success being that in 2003, UNIPORT was recognised as the best quality undergraduate programmes in all Nigerian universities as rated by NUC.

Opportunities for Scholarships and Bursaries

There are a number of scholarships and bursaries, grants and loans available to deserving graduate students of Fine Arts and Design in each year of study. They range from scholarships, teaching and research assistantship to soft loans and grants towards the upkeep of students research projects. The modes and methods of application are available in the School of Graduate Studies prospectus.

Research Resources

Resource centres such as the main University library, the University Museum, and the National Gallery of Modern Art stands as resource centres for the acquisition of knowledge for research students

within the University campus. However, the Department of Fine Arts and Design has an up to date digital Library with collection of textbooks, journals, newspapers and magazines and a mini computer laboratory for art history and design. There are also facilities for power-point lecture delivery and seminars.

Student Life

The University of Port Harcourt have many social clubs and societies run for students, by students. University is not just about reading, writing and revision. It would be dull if it was. University life is about life. And there is plenty of it; New interests, new discoveries, and new friends. What you do here will never leave you. So make sure you take an active part in the incredible range of activities we have to offer you here at Uniport. We are not one of the largest universities in Nigeria for nothing. Take a look at its sporting activities which is number one in the west coast of Africa, its theatres and dramatic performances that places him as number one in the production of Nollywood movie stars in Africa, operatic music in the city and the Fine Arts and Design.

COURSES

MA African Art History

Year 1 (Semester I)

COURSE CODE	COURSE TITLE	Credit Unit
FAD 800.1	Research Methodology	3
FAD 801.1	African Art Historiography	3

Total Credit Units 40

COURSE DESCRIPTION FOR MA AFRICAN ART HISTORY

FAD 800.1: Research Methodology

This course examines the technical and methodological field gathering approaches. Here, Art historical methodological roles in multidisciplinary teams of innovative research techniques in oral tradition, interviews, participant observation, library/secondary data shall be explored. Approaches such as before the field, on the field, and after the field shall form the basis of writing research, reports, essays, papers, manuscripts and thesis.

FAD 801.1: African Art Historiography

A survey and distribution of art within the African continent. A consideration of the various contextual issues of theories and concepts in the development of the study of African art. Emphasis shall include methodologies of representations as in biographical historicism and orality as process of interpretation in art history as well as in field, data gathering and utilization.

FAD 802.1: Theories of African Art and Interpretations

This course will evaluate the critical underlying notions and theories in African Art and how they are located in the broader theories of art History. In this case, theories of primitivism, evolutionary, holistic, and stylistic developments will be examined within the context of interpretation.

FAD 803.1: Aesthetics and Art Criticism

A study of the theories, principles and practice of art in Africa in relation to critical areas of thought such as in religious institutions political, social and economic. Some terminologies such as African aesthetics, African art, Nigerian art, Niger Delta art etc. shall be examined as issues and ideas of modern concern in the context of world art.

FAD 804.1: African Art & Religious Symbolism

This course is intended to evaluate the various aspects of African religious art forms from the various religious groups such as indigenous African religions, Christianity, Islam and other images of worships. In this regard, the use or the intentionality of objects, image or icon shall be examined against the background of style,

FAD 805.2: Critical Studies in Contemporary African Arts

Studies at critical dimensions of today's Visual Arts in Africa and their relationship with other world, their relevant theories of aesthetics, form, style and content. Presentations in exhibition galleries,

museums show cases, acquisition patterns and experiential determinants to work produced. Comparative studies in media, form, function will be examined in relation to studio masters in the practice.

FAD 806.2: Themes in Contemporary Nigerian Art

A detailed study and examination of contemporary Nigerian art in thematic structure, typology, form and function.

FAD 807.2: African Art in the Diaspora

An identification, classification and documentation of African art to private and public collections overseas. Attempts should be focused on the mode of movement and transportation of such works to their present location. Attempts also should focus on their histories and current use.

FAD 808.2: Museums Methods and Practice

Methods and theory of conservation, ethnographic, archaeological, and monuments conservation, handling, restoration, preservation, storage and display of museum specimens, materials and environmental reaction of ethnographic objects. Aspects of preventive conservation, monitoring environs, examining objects and documenting their state, and identifying sources of deterioration. Students to conduct tests, evaluate exhibition and storage areas, and help to improve museum conditions. The role of museums to national building.

MA Design History

Year 1 (Semester I)

COURSE CODE	COURSE TITLE	Credit Unit
FAD 800.1	Research Methodology	3
SGS 801.1	ICT & Research Methods	2
FAD 809.1	Theories/History of Industrial Design	3
FAD 810.1	African Designers and Society	3
FAD 611.1	Iconography & African Design Systems	3
FAD 603.1	Aesthetics and Art Criticism (Elect. Course)	3

Year 1 (Semester II)

COURSE CODE	COURSE TITLE	Credit Unit
FAD 812.2	Critical Studies in Contemporary World Designs	3
SGS 801.2	Management and Entrepreneurship	2
FAD 813.2	Issues in Art and Design	2

FAD 814.2	Themes in Contemporary Nigerian Designs	2
FAD 815.2	Design Galleries and Curatorial Practices	3
FAD 843.2	Graduate Seminar	3
FAD 845.2	Thesis Orals and Defence	6
	Total Credit Units	40

COURSE DESIGN DESCRIPTION FOR M.A. AFRICAN ART HISTORY

FAD 809.1: Theory/History of Industrial Design

The course examines the epoch of industrial design in Europe starting from the 17th, 18th century industrial revolutionary years; its historical and cultural impact on Design theories and concepts in the modern world. Centres of industrial designs in the world should be examined in comparison with Nigeria as an industrializing nation.

FAD 810.1: African Designers & Society

The course focuses on African designs as communication symbol complex. It will examine the modes of practice, tools, types, practical involvement in industry and environmental impact of their works. Case studies of designers in the African society should be examined for greater understanding.

FAD 811.1: Iconography and African Design Systems

The course aims to review and trace the origin of symbols systems in Africa as they relate to numerology, image formation and use, teachings and narrative writings, adaptation for use in various institutions and societies in North Africa, W/Africa, East/Africa and South Africa. The current state of iconographical use such as nags as identity, images as power for worship, calligraphy as a writing and graphic form, etc. Focus on African decorative tradition and crafts.

FAD 812.2: Critical Studies in Contemporary World Design

Design 360 examines design and design development as a global phenomenon. It focuses on new design approaches and techniques in today's design world, in gallery presentation/exhibitions versus installations worldwide. Critical studies would be carried out in design reviews and outlets such as in the electronic media of the internet, print and the verbal.

FAD 813.2: Issues in Art and Design

The course is designed to examine critical issues of art and design as it relates to aesthetics, form and function. Issues relating to craftsmanship and design, product design and industry should be critically addressed. Other issues of include the socio-cultural context of design, the economic,

context personal, project management and theoretical design models.

FAD 814.2: Themes in Contemporary Nigerian Designs

This course will attempt to identify and define some of the major categories of Contemporary Nigerian designs and to suggest how they are related to one another in the whole gamut we call Nigerian design. The following aspects will be highlighted Design, Art and Architecture, industrial design, environmental design, Digital art practice, Animation, Film/Video and the theatre.

FAD 815.2: Design Galleries and Curatorial Practices

The course is designed to focus on the role of the curator in art and design management, with in-dept investigation into the educational values of Galleries established for the purposes of show-easing industrial inventions and creative works. It will also define the nature of galleries, sites, function and typology worldwide

MA Painting

Year 1 (Semester I)

COURSE CODE	COURSE TITLE	Credit Unit
FAD 800.1	Research Methodology	3
CGS 802.1	ICT & Research Methods	2
FAD 816.1	Theories/History of Painting	3
FAD 817.1	Advanced Painting Techniques and Processes I	3
FAD 818.1	Mixed Media Painting	3
FAD 835.1	Advanced Digital Art and Design (Elect. Course)	3

Year 1 (Semester II)

COURSE CODE	COURSE TITLE	Credit Unit
FAD 805.2	Critical Studies in Contemporary African Arts	3
CGS 801.2	Management and Entrepreneurship	2
FAD 819.2	Advanced Painting Techniques and Processes II	3
FAD 820.2	Advanced Studio Workshop Management	3
FAD 821.2	Independent Study (Research in Painting)	3
FAD 843.2	Graduate Seminar	3
FAD 844.2	Graduate Art Exhibition	6
FAD 845.2	Thesis Orals and Defence	6
	Total Credit Units	40

COURSE DESCRIPTION FOR M.A. PAINTING

FAD 816.1: Theory/History of Painting

The course shall examine painting from the earliest times up through to the late 19th century. Areas of focus shall be Western, oriental and Afro America paintings. Of particular interest shall be the styles, materials, techniques and function.

FAD 817.1: Advanced Painting Techniques and processes 1

Technical approaches to painting with emphasis on the aesthetic and style. Basic focus shall be contextual dimensions in compositional dexterity, medium and studios involving life and still life.

FAD 818.1: Mixed Media Painting I

Advanced studies of the theory and practice of painting utilizing a variety of painting media. Individual interest and focus shall be encouraged,

FAD 819.2: Advanced Painting Techniques & Processes II

Continuation of FAD 617.1 Aspects and areas of emphasis shall be new techniques and medium such as advanced drawing leading to wash drawings, cartooning and illustration.

FAD 820.2: Advanced Studio Workshop Management I

Painting composition of Landscapes, seascapes, construction and detailed studies figures such as animals, human, architecture of buildings, cities etc.

FAD 821.1: Independent Study (Research in Painting)

Individually conceived research are designed to espouse on a specialized route which will lead into a final project.

MA Sculpture

Year 1 (Semester I)

COURSE CODE	COURSE TITLE	Credit Unit
FAD 800.1	Research Methodology	3
SGS 801.1	ICT & Research Methods	2
FAD 822.1	Theory/History of Sculpture	3
FAD 823.1	Advanced Sculpture Studio Design I	3
FAD 824.1	Advanced Product Sculpture	3
FAD 835.1	Advanced Digital Art and Design (Elect. Course)	3

Year 1 (Semester II)

COURSE CODE	COURSE TITLE	Credit Unit
FAD 805.2	Critical Studies in Contemporary African Art	3
SGS 801.2	Management and Entrepreneurship	2

FAD 825.2	Advanced Sculpture Workshop Management	3
FAD 826.2	Metals, plastic and Polyesters	2
FAD 827.2	Independent Study (Research in sculpture)	3
FAD 848.2	Graduate Seminar	3
FAD 849.2	Graduate Art Exhibition	6
FAD 850.2	Thesis Orals & Defence	6
Total Credit Units		46

COURSE DESCRIPTION FOR M.A. SCULPTURE

FAD 822.1: Theory History of Sculpture

The course shall examine sculpture from its rudimentary stages. Highlighting the features that projected certain sculpture, their forms in the Western world up through to the late 20th century

FAD 823.1: Advanced Sculpture Studio Design I

This course is designed to encourage individual initiative in the student. It encourages an innovative encounter in materials depending on the student's choice.

FAD 824.1: Advanced Product Sculpture

This is a hand-on studio course and it is focused on machine and workshop practices and techniques exploring precision measurements in materials such as wood, materials and clay. An important aspect of this course is the development of moulds for multiple replications from mechanized or modelled processes.

FAD 825.2: Advanced Sculpture Workshop Management

This course is a forum for students to give and receive critiques in the area of sculpture studies and will emphasize issues in student's studio specialization. The workshop also focuses on proposal development in individual projects in the context of peer review and proffering solutions to a defined problem through audience analysis informed by the student's work. Discussions draw on diverse critical methods and techniques. A significant proportion of the work is self-motivated and self-directed.

FAD 826.2: Metals, Plastics and Polyesters

Practical studio practice covering wide range of materials for sculptural production. A study of the chemistry and composition of materials such as concrete, clay, wood, metal, stone, plastics and glass. Understanding the relationship between materials and factors affecting choice of such materials and forms is important.

FAD 827.2: Independent Study (Research in Sculpture)

Individually conceived research in the area of sculpture materials and technology designed to espouse on materials on a specialized route which will lead into a final project.

MA Ceramics Design

Year 1 (Semester I)

COURSE CODE	COURSE TITLE	Credit Unit
FAD 800.1	Research Methodology	3
SGS 801.1	ICT & Research methods	2
FAD 809.1	Theory/History of Industrial Design	3
FAD 828.1	Advanced Glaze Chemistry	3
FAD 829.1	Advanced Ceramics Studio Design I	3
FAD 835.1	Digital Art and Design (Elect. Course)	3

Year 1 (Semester II)

COURSE CODE	COURSE TITLE	Credit Unit
FAD 812.2	Critical Studies in Contemporary World Design	3
SGS 801.2	Management and Entrepreneurship	2
FAD 830.2	History of World Ceramics	3
FAD 831.2	Advanced Ceramics Studio Design II	2
FAD 832.2	Independent Study (Research in Ceramics)	3
FAD 843.2	Graduate Seminar	3
FAD 844.2	Graduate Design Exhibition	6
FAD 845.2	Thesis Orals & Defence	6
Total Credit Units		46

COURSE DESCRIPTION FOR MA CERAMICS DESIGN

FAD 828.1: Advanced Glaze Chemistry

Theoretical study of the geology for potters, their mineralogical composition in clays, silicates and analysis. Emphasis shall be on local raw materials and their potential for sustainable ceramic transformation.

FAD 829.1: Advanced Ceramics Studio Design I

Conceptual design framework for ceramic sculpture, architectural ceramics, ceramic decor etc. detailed working sketches of designs, and exploration into mixed media forms shall be stressed.

FAD 830.2: History of World Ceramics

A history world ceramics its practice from medieval to the contemporary highlighting world centres of

ceramic production such as African, British, Japan, Australia and the Americas.

FAD 831.2: Advanced Ceramics Studio Design II

Continuation of FAD 629 .1 Resolution of more complex ceramic designs xnceptual dimension, context and content/function.

FAD 832.2: Independent Study (Research in Ceramics)

This course will examine a detailed and in-depth investigation in a project to be carried out by the student. Aspects such as architectural ceramics, table works, ceramics, sculpture etc

MA Graphic Design & Communication

With Specialisation in Graphic Design, Animation, Illustration, Photography and Printmaking

Year 1 (Semester I)

COURSE CODE	COURSE TITLE	Credit Unit
FAD 800.1	Research Methodology	3
SGS 801.1	ICT & Research methods	2
FAD 802.1	Theories/History of Industrial Design	3
FAD 833.1	Theory/History of Graphic Design	3
FAD 834.1	Advanced Graphics Studio Design I	3
FAD 835.1	Advanced Digital Art and Design	3
FAD 818.1	Mixed-Media Painting I (Elect. Course)	3

Year 1 (Semester II)

COURSE CODE	COURSE TITLE	Credit Unit
FAD 812.2	Critical Studies in Contemporary World Design	3
SGS 801.2	Management and Entrepreneurship	2
FAD 836.2	Printmaking/Photography/Advertising	3
FAD 837.2	Advanced Graphics Studio Design II	3
FAD 843.2	Graduate Seminar	3
FAD 844.2	Graduate Design Exhibition	6
FAD 845.2	Thesis Orals & Defence	6
Total Credit Units		46

COURSE DESCRIPTION FOR MA GRAPHIC DESIGN & COMMUNICATION

FAD 833.1: Theory/History of Graphic Design

A history of the development of graphic design from the beginning of present, highlight epochs. Major

themes that confront graphic design processes will be examine

FAD 834.1: Advanced Graphic Studio Design I

This is a hand-on focuses on the symbolic aspects of design, using semiotics, visual rhetoric and other communication models. Emphasis is on developing a strong formal foundation and general conceptual skills. Exercise are designed to home students’ skill at controlling meaning through the use of words, images, graphic elements, motion, behaviour, etc.

Additionally, this course aims at developing the students critical and visual vocabularies and evaluating aspects of form, audience interaction, social concerns, personal voice, function, and professional convention and structures. Broad issues such as colour, typography, illustration, photography/film sequence, composition, technical skills and production technology are addressed through studio assignments, workshops and seminars.

FAD 835.1: Advanced Digital Art and Design

This course is an introduction to computational forms and the constraint of practice in the entrance of digital culture in art and design. The goal is to look closely at the unique formal characteristics of a computational medium, and through a series of explorations, to invent and extend a formal vocabulary. Class time is spent looking at examples of digital work, talking about computational form and interactive design concepts, discussing related readings, and reviewing assignments and the inherent problems of translation from one medium to another as both a constraint and a source of inspiration.

FAD 836.2: Printmaking/Photography Advertising

The course is advancement on the exploration into printmaking mediums but limits the graduate student to three techniques where competence will be demonstrated in bi-weekly presentation of works in the course and group critiques. It is also an investigation into the process of photographic reproduction and practices like the silver and non-printing devices like platinum, palladium, computer and kali, type process. Finally, it focuses on experimental conceptual thinking through design making and the critical context that surrounds design practice. Students will be encouraged to tackle imaginative problem defining and solving with a focus on experimentation, research, working methodologies, and ideation. In addition, they will be required to define the criteria by which they evaluate design within their visual ecology by analyzing existing work and making a reasoned original work in response.

FAD 837.2: Advanced Graphics Studio Design II

Continuation of FAD 634.1 but with emphasis on more complex design forms

MA Textiles & Fashion Design

Year 1 (Semester I)

COURSE CODE	COURSE TITLE	Credit Unit
FAD 800.1	Research Methodology	3
SGS 801.1	ICT & Research methods	2
FAD 809.1	Theory/History of Industrial Design	3
FAD 838.1	Theory/History of Textiles & Fashion	3
FAD 839.1	Advanced Textile Studio Design I	3
FAD 835.1	Advanced Digital Art and Design (Elect. Course)	3

Year 1 (Semester II)

COURSE CODE	COURSE TITLE	Credit Unit
FAD 812.2	Critical Studies in Contemporary World Design	3
SGS 801.2	Management and Entrepreneurship	2
FAD 840.2	Fashion Drawing	3
FAD 841.2	Advanced Textile Studio Design II	3
FAD 842.2	Advanced Studio Workshop Management	3
FAD 843.2	Graduate Seminar	3
FAD 844.2	Graduate Design Exhibition	6
FAD 845.2	Thesis Orals & Defence	6
Total Credit Units		46

COURSE DESCRIPTION FOR MA TEXTILES AND FASHION DESIGN

FAD 838.1: Theory and History of Textiles & Fashion

The course examines the epic of industrial design in Europe starting from the 17th, 8th century industrial revolutionary year, its historical and cultural impact on Design theories and concepts in the modem world. Comparative relationship with Nigeria is essential. The evolution of the fibre act, textile design and practice over time should be examined through lectures, group discussion, critics, etc. The history of African textiles till date, the North Africa, East Africa, the West Coast of Africa and the Southern Africa and their use till date. The impact of industrial revolution and the development of local fabrics should be considered.

FAD 839.1: Advanced Textile Studio Design I

The course provides background to processes and production in fabrics decorations, application of design to textile materials and equipment for prints, fashion and woven fabrics and products emanating from research of different applications and processes of design would constitute seminar presentations in consultation with the course lecturer. Areas of focus shall include (a) woven and non-woven fabrics, (b) textile and fashion use, (c) textile and the environment, and (d) fabric structure and construction.

FAD 840.2: Fashion Drawing

The course will focus on sketch drawings and standardisation of designs for personal and industrial fabrics. Emphases shall be on clothing construction, standardising systems and sizes for body form, variance, designing for production and manufacturing clothes.

FAD 841.2: Advanced Textile Studio Design II

Continuation of studio design FAD 639.1, emphasis is on fabric structure and construction. It will focus on advanced techniques of designing fabrics for production, use and testing analysis, representation of weave on point paper showing drafting, pegging plans and colouring. Transferring design to fabric on the loom following design specifications. Exploration into weave combination to product a variety of fabrics including tapestry design will be encouraged.

FAD 842.2: Advanced Studio Workshop Management

The production and design of textiles tools and fashion accessories. The design and construction of simple tools like looms, local dyes, etc will be encouraged. The following area of fabric wears should be considered and explored (1) children’s wears, (2) men’s wears, (3) women’s wears, (4) sports wears, and (5) men and women’s underwears (lingerie).

FAD 843.2: Graduate Seminar

Topics for seminar will be channels through which students training in their chosen research field shall be presented. These should reflect main aspect of their dissertation.

FAD 844.2: Graduate Exhibition

Students shall mount selected works over the period of their studies for examination which shall from the graduate exhibition reflecting a theme of ideas.

FAD 845.2: Thesis Orals and Defence

As part of the requirements for graduation, a student is expected to produce a dissertation from a well-researched area of study which should have been earlier juried in a graduate seminar. The thesis must

conform to all requirements as spelt out in the school of graduate studies prospectus.

PhD PROGRAMME AND REQUIREMENTS/ DURATION OF PROGRAMME (PhD)

Ph.D. Full Time candidates will be required to spend 36months and a maximum of 60 months 3years to maximum of 5 years.

Part Time candidates are to spend 48 calendar months and a maximum of 84 calendar months4 years to maximum of 7 years

SPECIALIZATION OPTIONS

The Fine Arts & Design specialization options are clearly spelt out to include:

1. African Art History
2. Design History
3. Painting
4. Sculpture
5. Ceramics Design
6. Graphic Design and Communication
7. Textiles and Fashion Design

General Requirements and Pre-requisite Courses

1. Take All Courses Required as may be prescribed for entry into the programme in the first year if your Masters degree is from Other Institutions
2. Present Two (2) Graduate Seminars at Departmental Level in the first two years.
3. Present a seminar at the Faculty level and another at the Graduate School before final defence of the PhD thesis,
4. An Art and Design Exhibition to accompany the final defence.
5. The following shall be the main courses for the PhD programme without prejudice to other recommended courses.

COURSE CODE	COURSE TITLE	Credit Unit
FAD 900.1	Advanced Research Theory and Methods	3
FAD 901.1	World Art and Design Theorization (for Art and Design Historians)	3
FAD 902.1	Research Seminar I (At Department)	3
FAD 903.2	Advanced Studio Practice and Design	3
FAD 904.2	Research Seminar II (2nd Year)	3
FAD 905.2	Advanced Graduate Art Exhibition	9
FAD 906.2	Thesis Orals and Defence	9
Total Credit Units		33

COURSE DESCRIPTION

FAD 900.1 Advanced Research Theory and Methods

This course focuses on contemporary literary theory and critical analysis of the concept and nature of research, scientific processes in research, problem definition, variable identification, sources of research topics, theory construction and hypotheses formulation and testing; techniques and literature review; principles of design, instrumentation, data collection, techniques for data analysis and presentation of results. Students must be computer compliant with software techniques in education.

FAD 901.1: World Art and Design Theorization (for Art and Design Historians)

The aim of this course is to examine critically the extent of literary output since the outbreak of the industrial revolution that swept across Europe and the United States bringing to bear major influences in the understanding of world art and design including the African continent in the early 20th century, in politics, economy and art. Special topics as they relate to individual area of specialization should be examined and explored for discourses.

FAD 902.1: Research Seminar I (At Departmental Level)

A general seminar topic chosen to from area of study or a general topic in art and design that will contribute to new knowledge in the field.

FAD 903.2: Advanced Studio Practice and Design

This course is an advancement on the exploration and contextualization of the area of specialization or the field of the student's studio practice. The processes and production ultimately should form the final exhibition display of the student.

FAD 904.2: Research Seminar II (2nd Year)

This presentation should dwell on the student's main topic of his/her thesis and should hazard preliminary statements of research on his/her field of study leading to the thesis.

FAD 905.2: Advanced Graduate Art Exhibition

From the continuation of FAD 903.2 students should attempt to mount a comprehensive final art exhibition from works produced as course works and their independent researches as well as a clearly defined final works representing the thesis studio practice.

FAD 906.2: Thesis Orals and Defence

As a requirement for graduation, a student must compulsorily produce a final thesis that should conform to the standards spelt out in the School of Graduate Studies prospectus and should be defended successfully before a committee of both Internal and an External examiners.

ACADEMIC STAFF

SN	NAME OF STAFF	QUALIFICATION	DESIGNATION	AREA OF SPECIALIZATION
1	P. I. Cyril-Egware	BA (ABU), MFA (UNN), PhD UPH	Professor	Textiles and Fashion Design
2	J.T. Agberia	BA, Benin, MA, Ibadan, PhD, UPH,	Professor	Art and Art History, Design History, Ceramics Design, Museum and Heritage Studies, Art Curating, Iconography & Religious Symbolism
3	C.C. Chukueggu	BA, Ife, MA, Ibadan, PhD, UPH	Professor	Nigerian Art History and Textile Design
4	Prof. Frank Ugiomoh	BA (Benin), MA (Ibadan), MA, Ph.D (UPH)	Professor	Aesthetics/Criticism, Art History/Sculture
5	B.O.N. Nwanze	BA, Ife, PGDE, UPH, MFA, Benin, PhD Ibadan	Professor	Painting, Art History, Women's Art Studies
6	Prof. Antonia Okogwu	BA (UNN), MFA (ABU), PhD (Delsu)	Professor	Sculpture
7	N.O. Ubogu	BA, MFA, Benin, PhD, UPH	Professor	Painting and Theory of Art
8	Dr. E.E. Peters,	BA, UYO, MFA, PhD, UNN	Professor	Ceramic Design/Art Education
9	Dr. E. E. Inyang	BA, ABU, MFA, UYO, PhD, UPH	Snr. Lecturer	Graphic Design & Communication
10	Dr. J.J. Umoh	BA UYO, MFA UNN, PhD UPH	Snr. Lecturer	Ceramics Art
11	Dr. M. Ajiginni	HND Auchu, PGDE UPH, MFA, PhD Delsu	Snr. Lecturer	Textile Design
12	Dr. Francis Okoronkwo Ikechukwu	BA UPH, MFA UNN, PhD UPH	Lecturer 1	Painting

DEPARTMENT OF FOREIGN LANGUAGES & LITERATURES

POSTGRADUATE PROGRAMMES IN FRENCH

OUR VISION

To become one of the true Centres of Excellence in French Studies and by so doing help to create a world in which language shall no longer be a barrier to mutual intelligibility, world peace and global progress.

OUR MISSION

To train the bilingual manpower (Linguists, teachers, translators, interpreters, writers, etc) needed in the public and private sectors of our national economy and international relations across linguistic boundaries.

PHILOSOPHY

The philosophy of the PGD, M.A. and Ph.D. programmes in French Language/Linguistics, Literatures and Translation, in the Department of Foreign Languages and Literatures, is to train and develop scholars whose critical ability in the use of the French Language as a medium of communication, in both regular linguistic exchange and critical or scientific writing, would reassert human values. This ability would enable them to appreciate the complexity of human motivations and actions. This is against the backdrop of Nigeria's interaction in this era of globalization with Francophone societies and cultures in the ECOWAS region/Africa in particular and the world as whole. The products of the PGD, M.A. and Ph.D. programmes are therefore expected to acquire such linguistic, critical and analytic competences that would guaranty a higher degree of proficiency in the production/interpretation and analysis of French Language texts in a variety of discourse situations

AIM AND OBJECTIVES

The PGD, M.A and Ph.D. programmes in French shall provide students with higher linguistic, analytic and practical competences to meet the professional needs of teachers, translators and other categories of manpower. In view of Nigeria's strategic role in the ECOWAS subregion and given her neighbouring Francophone countries, products of these programmes would be expected to apply their knowledge not only for national development, but also for African and global advancement.

HIGHER DEGREES PROGRAMMES IN FRENCH

1. Admission Requirements

Subject to the general regulations of the School of Graduate Studies, University of Port Harcourt, the following regulations shall govern admission to the

Higher Degree Programmes in the Department of Foreign Languages and Literatures.

- i. All candidates must possess the minimum of five 0' Level Credit Passes which must include English Language.
- ii. Candidates for the Postgraduate Diploma must possess at least a Third Class (Single Honours) degree in French or a Second Class (Combined Honours) degree in French and any other subject (e.g. B.A. French/German, B.Ed. French or B.Sc. in any discipline obtained in a French speaking university, etc.)
- iii. Candidates for admission into the M.A. programmes must possess at least a Post Graduate Diploma (PGD) with a minimum average score of 60(B) or a CGPA of not less than 3.50 on a 5 point scale from the Department of Foreign Languages and Literatures, University of Port Harcourt, or a Second Class Honours Degree, Lower Division in French from the University of Port Harcourt or any other recognized University.
- iv. Candidates for admission into the Ph.D. Programmes in the Department of Foreign Languages and Literatures must possess, in addition to a good first degree in French, an M.A. in the relevant area from the University of Port Harcourt, or any other recognized University, with a minimum CGPA of 3.50 on a 5 point scale. They must also submit a proposed Plan of Research along with their application.
- v. All candidates shall be interviewed before final admission is granted.

2. Areas of Specialization

Candidates for the PGD, M.A. and Ph.D. programmes in the Department of Foreign Languages and Literatures may specialize in any of the following general areas:

- i. French Language/Linguistics
- ii. French Literature/Civilization
- iii. Francophone African Literature
- iv. Translation.

3. Duration of Programmes (See SGS Overstay Policy)

a) PGD

- i. Full-time POD programme would run for a minimum of two semesters of course work and a maximum of four semesters.
- ii. Part-time PGD programme would run for a minimum of three semesters of course work and a maximum of four semesters

B) M.A.

- i) Full-time M.A. (French Language/Linguistics, French Literature/Civilization and Francophone African Literature) programmes would run for a minimum of two semesters of course work and a maximum of four semesters.
- ii) Part-time M.A. (French Language/Linguistics, French Literature/Civilization and Francophone African Literature) programmes would run for a minimum of four semesters and a maximum of six semesters
- iii) Full-time M.A. Translation (French/English) programme would run for a minimum of three semesters of course of work and a maximum of four semesters.
- iv) Part-time M.A. Translation (French/English) programme would run for a minimum of four semesters of course work and a maximum of six semesters.

c) Ph.D.

- i) Full-time Ph.D programmes would run a minimum of six semesters and a maximum of ten semesters.
- ii) Part-time Ph.D programme would run for a minimum of eight semesters and a maximum of twelve semesters

4. Degrees to be offered

The following are the designations to be used for the Postgraduate Degree (PGD) and the degrees of Master of Arts (M.A.) and Doctor of Philosophy (Ph.D) in the various options listed below:

- i) PGD (French Language/Linguistics)
- ii) PGD (French Literature/Civilization)
- iii) POD (Francophone African Literature)

5. REQUIREMENTS FOR GRADUATION

A) Postgraduate Diploma Programme

i) Language Requirements

Candidates will be taught in French or English depending on the course but shall write their Research project or dissertation in French.

ii) Course Requirements

Every Postgraduate Diploma student shall register for 6 courses (18 credit units) in the first semester and four (12 credit units) in the second and pass them with a Grade of at least 50(C).

iii) Award of the Postgraduate Diploma (PGD)

To be awarded the PGD in any of the areas of specialization in the Department of Foreign Languages and Literatures, a candidate must have taken and passed the prescribed number of compulsory and required courses selected from the approved list and totaling 30 units as follows:

Core/Elective Courses	30 units
Dissertation	6 units
Total	36 units

In addition to the successful completion of the prescribed courses and presentation of the Graduate Seminar, candidates will be required to submit and defend their research project or dissertation of not less than 10,000 words, excluding notes, bibliography and appendices, in French before a Postgraduate Panel of Examiners.

b) Master of Arts (MA.)

(Language/Linguistics, Literatures/Civilization)

i) Language Requirements

Candidates will be taught in French or English depending on the course but shall write their dissertation or thesis in French.

ii) Course Requirements

All candidates have to register for a maximum of five courses per semester in the case of full-time students, and a minimum of 2 courses per semester in the case of part-time students, and pass them with a Grade of at least 50(C).

iii) Award of the M.A. Degree in French Language and Literature

To be awarded the M.A. degree in the areas of French Language! Linguistics, French Literature/Civilization and Francophone African Literature, a candidate must have taken and passed the prescribed number of compulsory and required

courses selected from the approved list and totaling 30 units as follows:

Core/Elective Courses	30 units
Dissertation	6 units
Total	36 units

In addition to the successful completion of the prescribed courses and presentation of the Graduate Seminar, candidates will be required to submit and defend in viva voce a thesis of not less than 20,000 words, excluding notes, bibliography and appendices, in French before a Postgraduate Panel of Examiners.

c) M.A. Translation (French/English)

i) Language Requirements

Candidates will be taught in French or English depending on the course but shall write their dissertation or thesis in French.

ii) Course Requirements

- a. Candidates must register for all core courses and one elective course per semester for the first two semesters.
- b. Candidates must audit ECO 334.2 International Economics, POL 522.2 International Law, MGT 601.1 Business Law and POL 520.1 Theories of International Relations as the basis for the terminological work in French for the following courses: FLL 833.2 Terminology of International Economics, FLL 834.2 Terminology of International Law, FLL 835.2 French Registers in Business Law and FLL 836.1 French in International Relations.
- c. Candidates are required to present a graduate seminar in their area of specialization before defending their thesis.

iii) Award of the M.A. Degree in Translation (French/English)

To be awarded the M.A. degree in the area of Translation (French/English), a candidate must have taken and passed the prescribed number of core and required courses selected from the approved list and totaling 31 units as follows:

Core/Elective Courses	31 units
Dissertation	6 units
Total	37 units

In addition to the successful completion of the prescribed courses and presentation of the Graduate Seminar, candidates will be required to submit and

defend in viva voce a thesis of not less than 20,000 words, excluding notes, bibliography and appendices, in French before a Postgraduate Panel of Examiners.

d) Ph.D. French (Language/Linguistics, Literatures/Civilization)

i) Language Requirements

Candidates will be taught in French or English depending on the course but shall write their dissertation or thesis in French.

ii) Course Requirements

In each semester, all candidates have to register for at least two courses and one doctoral seminar depending on their areas of specialization, and present one graduate seminar. Should their background turn out to be deficient in significant areas, they may take a maximum of two additional courses as prescribed by the Departmental Graduate Committee or the School of Graduate Studies.

iii) Award of the Ph.D. Degree in French

To be awarded the Ph.D. degree in French (Language! Linguistics, French Literature! Civilization, Francophone African Literature), a candidate must have taken and passed the prescribed number of required courses and seminars totaling a minimum of 18 credit units and a maximum of 22 credit units as follows:

Core/Elective Courses	22 units
Dissertation	9 units
Total	31 units

e) Ph.D. Translation (French/English)

i) Language Requirements

Candidates will be taught in French or English depending on the course but shall write their dissertation or thesis in French.

ii) Course Requirements

In each semester, all candidates have to register for at least two courses and one doctoral seminar depending on their areas of specialization, and present one graduate seminar. Should their background turn out to be deficient in significant areas, they may take a maximum of two additional courses as prescribed by the Departmental Graduate Committee or the School of Graduate Studies.

iii) Award of the Ph.D. Degree in Translation (French/English)

To be awarded the Ph.D. degree in Translation (French/English), a candidate must have taken and

passed the prescribed number of core and required courses and seminars totaling a minimum of 18 credit units and a maximum of 22 credit units as follows:

Core/Elective Courses	22 units
Dissertation	9 units
Total	31 units

Note 1: In addition to the successful completion of the prescribed courses and presentation of the Graduate Seminars, Ph.D. candidates shall submit and defend in viva voce a dissertation or thesis of not less than 60,000 words and not more than 100,000 words, excluding notes, bibliography and appendices, in French before a Postgraduate Panel of Examiners.

Note 2: In addition to the requirements above, Ph.D. candidates who did not offer CGS 802.1 ICT and Research Methods and CGS 801.2 Entrepreneurial Skills at the M.A. level, shall be required to register and pass them.

6. Examinations, Grading Procedure and Results

- i) For each course 60% is allotted to Examination and 40% to Continuous Assessment to make up the total score of 100%.
- ii) The minimum pass mark for all postgraduate (PGD, M.A., Ph.D.) courses shall be 50% (C).
- iii) Any student whose CGPA falls below 2.50 after the second semester is deemed to have failed out and shall withdraw from the programme.

Note: Scoring and grading of courses shall be as follows:

(i) Credit Units	(ii) % Score	(iii) Letter Grade	(iv) Grade Point	(v) Grade Point Average	(vi) Cum. Grade Point Average	(vii) Class of Degree
Vary according to contact hours assigned to each course per week per semester, and load carried by	70 – 100	A	5	Multiply (i) and (iv) and divide by total credit units	4.50 - 5.00	DISTINCTION
	60 - 69	B	4		3.45 - 4.49	CREDIT
	50 - 59	C	3		3.00 - 3.44	PASS
	Below 52	F	0		Below 3.00	FAIL

7. DETAILED STRUCTURE OF HIGHER DEGREE PROGRAMMES

a. PGD French Courses

(Language/Linguistics and Literature/Civilization)

First Semester

Course Code	Course Title	Credit Units
FLL 700.1	Advanced French Composition and Comprehension	3
FLL 701.1	French Grammar and Linguistics in Texts	3
FLL 702.1	Readings in French and Francophone Literatures	3

COURSE DESCRIPTION

PGD COURSES:

FLL 700.1: Advanced French Composition and Comprehension I

This course focuses on skills and techniques of written communication in French for different purposes (Telling a story, writing a report, letter writing, synopsis writing, descriptive and expository essays, commentaries, etc). The candidate shall also learn to distinguish between technical and non-technical texts (denotational, connotational/pragmatic meanings) as well as general problems of register and style, punctuation, cogency and other minimum conditions of texts as “product” and as “production”.

FLL 701.1: French Grammar and Linguistics in Texts I

The mastery of French grammar and its manipulation in texts is the focus of this course. With the aid of varied texts in French, the candidate would be guided to an understanding of the inter-relationship between grammar and text-types. General notions in normative grammar/Linguistics and the concept of grammatical correctness shall be taught alongside general notions in Linguistics such as sign theory, textual adequacy, cogency (cohesion and coherence). Elements of grammatical analysis of texts shall also be taught.

FLL 702.1: Readings in French and Francophone Literatures

A selection of French and Francophone authors in the three genres (novel, play, poetry) by Africans and Foreigners of French expression shall form the corpus for this course. Emphasis here shall be on the “Explication de texte” approach i.e. considering

Literary productions as expressing social, cultural and political realities and as reflection of dominant Literary visions of the time and space of production.

FLL 703.1: Research Methods and Computing

This course teaches techniques of research with special emphasis on academic writing skills (research topic delimitation and outline) data search and appropriation, use of real and virtual libraries, use of bibliographical cards, computers and the internet. It emphasizes the knowledge of sources through bibliographical norms with a bias for the single/multiple author entries for articles, monographs, multiple editions) MLA style sheet. General problems of proposal writing, presentation/packaging of research work, edition, critical edition, annotations, footnoting etc as well as ethical problems of citations and plagiarism shall be studied.

FLL 704.1: French and Francophone Civilization

Since Language is also a reflection of and an expression of the humanity that speaks it, this course concentrates on contemporary French and Francophone societies and their cultures. Aspects to be studied include the Press, Religion, Social security, the Judiciary, ECOWAS, Francophony, French/Francophone educational system, Agriculture, Sports, Political systems, Family ties, National Service, Tourism and contemporary historical landmarks. Such institutions as the Alliance Française, L’Académie Française, and National/International figures that bestride the French/Francophone landscape, like Charles De Gaulle, Leopold Sedar Senghor, Ahmed Sékou Touré, Frantz Fanon, etc..., shall be singled out for study.

FLL 705.1: Spoken French and techniques of oral Communication

This course derives from the philosophical view that we are “logocentric” giving primacy to speech: “Speech is the image of thought; writing the image of speech”. Language is first spoken and the aim is to ensure, through sustained practice that candidates acquire the critical techniques of speaking (seminars, exposé, debates, drama etc).

FLL 706.2: Advanced French Composition and Comprehension II

This course is a continuation of FLL 700.1: Advanced French Composition and Comprehension I. At this level, greater emphasis should be on practical rather than theoretical work. Topics for composition and texts for reading and comprehension should include fields like sports and entertainment, Commerce and Industry, the

Judiciary and the Armed Forces, Science and Technology as well as Mass Media, Management Sciences, Education and Politics.

FLL 707.2: French Grammar and Linguistics in Texts II

This is a continuation of FLL 701.1: French Grammar in Texts I. There is a shift towards logical analysis and basic discourse analysis emphasizing understanding of the participants in a discourse activity and the relationship between text-intention and choice of grammatical forms. Exercises in commentary, adaptation, rewriting, summary, etc, in addition to exercises in Grammar in varied texts, notional and pragmatic French Grammar/ Linguistics.

FLL 708.2: Introduction to Literary Theory

This course stems from the assumption that Literature is a cultural product and is open to plural readings or interpretations. Different readings derive from different “ideas” on what Literature is, how it is constructed, why it is constructed. These ideas form the Kernel of “theories” of Literature. The candidate would therefore be exposed to traditionalist/modernist theories and “New” or Postmodernist ones. The course is panoramic in nature and would touch on “author-centred” and “reader-centred” as well as sociological, historical, Marxist, and the more recent structuralist, poststructuralist, post-colonialist strands under the general label “Postmodernism”.

FLL 709.2: Introduction to Linguistics

Linguistics is a critical discipline in language studies. Consequently, the candidate who enrolls for a course in language should be familiar with basic concepts in linguistics. This course covers general areas of descriptive linguistics (phonology, syntax and semantics) with special emphasis on sign theories, generative and transformational grammar, meaning relations at the word, sentence and text levels, including such other concepts as, implicature, cogency and basic problems of enunciation.

FLL 710.2: Seminar on Topics in Contemporary French

This is a seminar course and candidates will present seminars in French in their areas of interest in either Language, Linguistics, Literature or Culture and Civilization.

FLL 711.2: Research Project

Each candidate is required to present for defence a “Research Project” of not less than 10,000 words, in his/her area of interest (Language, Linguistics,

Literature, Culture and Civilization). The defence shall be administered viva voce by a panel of Examiners.

FLL 712.2: Introduction to Translation: Theory and Practice I

This course introduces translation studies essentially as practice. Through “induction” arising from translating varied texts, candidates would understand the theoretical assumptions implied in different definitions of translation. The first step would lead to “deductive” exposure to theories of translation and facilitate understanding of criteria for production/evaluation of quality translation.

FLL 713.2 Terminology Studies

This course defines terminology in Translation studies and the uses and limits of terminology studies. Terminology studies open the translator to a deeper understanding of words as “tools” in time and space of human communication by redefining terminology “as the way working people talk and write” rather than as an abstract list of words to memorize in isolation.

EST 701.1: The Syntax of Modern English

This course aims at giving graduates of English opportunity to consolidate their understanding of English Syntax through a study of various structural issues and grammatical models which propound them. The course assumes a good knowledge of general structural patterns in English.

FLL 714.2: Introduction to Translation: Theory and Practice II

This course is continuation of FLL 712.1: Introduction to Translation: Theory and Practice I. It would widen the scope of practice on varied texts and explore such problems as equivalence, text typology, translatability/ untranslatability and some compensatory strategies to improve on quality of translated texts.

FLL 715.2: Introduction to Interpreting

Interpreting would be taught as the “oral” version of translation (which is written). This includes signed, consecutive and simultaneous interpreting as well as problems of “time”, “text-difficulty”, defects in “rendition by speaker”, fidelity and listener-audience. Discussion would also dwell on distinctions between translation/interpreting, problems of terminology, grammar, etc.

FLL 716.2: Seminar Topics in Linguistics and Translation

This is a seminar course that insists on individual presentations by candidates. Topics would include semantics and translation, pragmatics and translation, quality evaluation in translation, translation and target-audience, cultural transposition in translation, terminological research, translator and the information technology, translation and ideology, fidelity, fidelity to Source Text (ST) or equivalence, stylistics and translation, grammar in Source-Text (ST) reader and Source-Text/Target Text (ST/TT) fidelity, ST-author and Translator, qualities of a good translator, the Revisor and the translation activity, text-typology and translation difficulties etc.

FLL 717.2 Research Project (a minimum of 10,000 words)

The candidate shall choose a practice-based topic in the areas of interpreting or translating implying any of the areas covered from terminology, grammar, Translation theories, linguistics and translation. Any topic chosen must be related to solving a translation or elucidating thorny practical problems through sustained enquiry and theorization. Defense of thesis shall be administered viva voce by a panel of examiners.

M.A. COURSES:

SGS 801.1	ICT & Research Methods
SGS 801.2	Mgt&Entrepreneurship
FLL 801.1	Literary Theory and Criticism

This course examines the diversities of critical issues and approaches at the basis of differing theories of literature and practices of criticism-biography, chronology, sources, influences and biography in relation to literature, the intersections of literature and other disciplines, etc. Literature's interactions with philosophy, psychology, sociology, ideology and the way literary theories are enriched by inter-disciplinary thrusts will be discussed.

The theory and practice of literary criticism as they have evolved in various parts of the world since Aristotle will be examined. Theories such as formalism, structuralism, post-structuralism, and Reader-response theory will be critiqued. More modern and contemporary criticism and theories that will be studied include semiotics, Deconstruction, post-modernism, gender theories, intertextuality, psycho-analysis and symbolism.

Students will study specific classical and modern critics of France as illustrations of the ideas introduced into literary theory and criticism.

FLL 802.1: The Francophone African Novel in Colonial Times

This course examines the emergence and phenomenon of the African novel during the colonial era. Representative works of fiction will be closely studied to highlight the *raison d'être* of African literature, the issue of commitment, and protest against oppressive colonial rule with its attendant loss of identity, alienation, conflict of civilizations, etc.

FLL 803.1: Francophone African Theatre and Drama

This course seeks to lay emphasis on the contributions of African drama to socio-political change, the epico-historical dimensions of the genre will be examined. Notable dramatists such as Bernard Dadié, Guillaume Oyono-Mbia, Charles Nokan, etc will be studied.

FLL 804.1: Issues in Comparative Literature

An introductory course to the general issues and problems of Comparative Literature; history and methods; evaluation, history of ideas, style and taste, stylistics, psychoanalysis and archetypes, image studies, sociology of arts, genre theory, thematic and moral criticism, structuralism, etc. Using the theories of Vladimir Propp, the course will also deal with the dialectics of orality and literary discourse in some African texts.

FLL 805.1: Translation

This course will provide students with ample practice and skills in translating different types of texts ranging from literary to technical/scientific and pragmatic texts.

FLL 806.2: Post-Independence African Fiction: Feminism and Disillusionment

This course highlights the orientation of African fiction since independence in the 1960's. The butt of African criticism shifts from anti-colonialism (criticism of the aberrations of the colonial system) to the criticism of the failure of post-colonial structures. Works of representative male and female African writers will be used to exemplify the movement from hetero-criticism (criticism of the other) to auto-criticism (self-criticism).

FLL 807.2: Francophone African Poetry

The objective of this course is to analyse critically the fundamental themes and techniques of representative works of poetry from the Négritude beginnings to the present. Attention will be focused

on selected poems of L.S. Senghor, D. Diop, Tchicaya U'Tamsi and others.

FLL80S.2: Afro-American and Caribbean Literature in French

This course stresses significant issues such as African traditional culture in Francophone literature written in the New World and the influence of the New World on African writers. Specific Afro-American and Caribbean works will be studied to illustrate how issues like the

Negro-Renaissance and the search for identity can be related to contemporary developments in Africa. The contributions and impact of J. Zobel, E. Glissant, Jacques Roumain, J.S. Alexis, Aimé Césaire, Maryse Condé, etc, will be highlighted.

FLL 809.2: Feminism and Francophone Female African Writers

This course discusses feminist/womanist theories from their origins, stressing their aims and achievements in relation to women's experiences delineated in literary works. The theoretical discussion will be buttressed with examples from detailed studies of some representative Francophone Female African writers.

FLL 810.2: Seminar

Graduate students are required to present a seminar in their field of specialization.

FLL 811.2: Thesis

In addition to the successful completion of the graduate courses and seminar, graduate students will be expected to write a supervised thesis in French. The oral examination will be conducted by a panel of examiners.

FLL 812.1: French Fiction since the 19th Century

This course embraces a careful study of the themes and techniques, as well as the philosophical thoughts that inform the body of French fiction, ranging from Romanticism, Realism and Naturalism in the 19th century, to the distinctive features, styles and dominant preoccupations that underpin French fiction in the 20th century.

FLL 813.1: French Drama from Classicism to Romanticism

This course lays emphasis on the ideas and literary theories that inform French drama in the 17th and 18th centuries, and the radical departures and innovations of 19th century dramatists. The works of some major dramatists such as Racine, Corneille, Moliere, Moliere, Moliere, Beaumarchais, V. Hugo,

Musset, Vigny and Lamartine will be given close attention.

FLL 814.2: Major Movements in French Poetry in the 19th and 20th Centuries

This course traces and analyses the sensibilities and techniques that inform French Poetry from Romanticism, the Parnasse to Symbolism and Surrealism. Representative authors will be studied to highlight the originality and flavour of each poetic current.

FLL 815.2: Modern French Theatre and Drama

This course examines the development of French theatre and drama before and after the Absurd. Selected works of Anouilh, Montherlant, Mauriac, Claudel, Giraudoux, Camus, Sartre, Beckett, Adamov and Ionesco will be carefully studied to identify the ideas, the metaphysical agony, existentialism and the Absurd philosophy that underpin them.

Emphasis will be laid on how the disconcerting perspectives and structures of antitheatre and avant-garde theatre attempt to mirror the problematics of human nature/condition.

FLL 816.2: La Francophonie and Francophone Literature

A study of the Francophonie movement and its impact on the development of Literature in the Francophone world. The course will examine the geo-strategic importance of La Francophonie both as a tool of France's post-imperial self-assertion and as a vehicle of a specific francophone post-coloniality.

FLL817.2: French Fiction of Revolt

This course focuses on modern literature of revolt in France. The works of Sartre and Camus, among others, will be carefully studied to highlight the philosophical ideas that underline their literary universe. The literary expression of the sentiment of revolt will be defined through a careful analysis of characters, themes, styles and techniques.

FLL 818.1: Survey of General Linguistics

This course will x-ray the principles of Linguistics with a view to highlighting the essential attributes of human language and Linguistics as a science of language: sign theory, types of Linguistics (diachrony and synchrony), main levels of linguistics-phonetics, phonology, morphology, semantics, syntax, lexicology, language and society.

FLL 819.1: Syntax and Morphology of French

This course will deal with a comprehensive study of French morphological and syntactic patterns. Attention will be paid to word formation and basic sentence structures and their relationships.

FLL 820.1: Lexicology, Semantics and Pragmatics

This course will focus on the Theories involving lexicology, semantics and pragmatics based on the various problems of French lexis: origin, development, functions and usage with particular reference to areas in pragmatics such as factors governing speaker's choice of language in communication, speech act theory: implicitness, deictic categories, context and communicative competence and rhetorical devices.

FLL 821.1: Bilingualism and Multilingualism

This course will examine bilingualism and multilingualism from the point of view of languages in contact as a feature of colonial heritage and multi-ethnic societies and their implications for language learning (Foreign and indigenous), language planning and national development and unity.

FLL 822.1: Phonetics and Phonology

This course will undertake a more in-depth study of French phonetics and phonology. It will include the identification and description of French speech sounds and their various prosodic features (syllabisation, accents, accentuation, intonation, rhythm) and principles of phonemic analysis as well as contrastive study of phonemic features of French and other languages such as English and any Nigerian Language.

FLL 823.2: Grammatical Systems of French

Lectures will focus on syntactical and morphological relations (predication, modification, coordination, complementation), argumentation, distribution, word classes and order, simple and complex sentences, constituent structural analysis: immediate constituent structural analysis: immediate constituent analysis, finite grammar, phrase structural and transformational generative grammar.

FLL 824.2: French for Specific Purposes

The aim of this course shall be to equip the student with the principles and techniques of the study of the language usage of certain specialized domains of human endeavour and professional disciplines such as aviation, business, tourism, etc. It will involve each student in a practical study in a domain or discipline of his/her choice.

FLL 825.2: Contrastive Linguistics Analysis

This course introduces students to the fundamentals and methodology of contrastive linguistic analysis. It will also prepare them for possible contrastive analysis of any aspect of the grammatical structure of French and that of any other language/languages taught in the Faculty of Humanities, (specifically English).

FLL 826.2: Applied Linguistics in French

This course will apply the findings of General Linguistics and other related disciplines (such as bilingualism and multilingualism) to the teaching of Foreign Languages (with particular reference to French). It seeks to train students to prepare, evaluate and adapt foreign language teaching methods and materials to specific needs such as language planning and development, communication disorders, lexicography, error analyses, etc.

PLL 827.1: Advanced Theory and Methods of Translation I

It will focus on the theoretical problems of translation applied to texts in various disciplines: politics, business, reports, administration, etc. It will equip students with the means of solving such problems to arrive at an acceptable translation in the target language.

FLL 828.1: Technical Translation (Science & Technology) I

The practical orientation of this course will be towards giving students thorough and exhaustive exercises in translation of texts chosen from specialized modern technical fields such as cybernetics, space technology, military technology, etc.

FLL 829.1: Machine Translation

This course introduces students to machine translation and translation memory, which are technologies revolutionizing the manner in which target-language text and speech are delivered. With the knowledge of these technologies, students will be able to translate volumes of text within a relatively shorter time. It will further enable students to better evaluate the benefits of these technologies within their career field.

EST 431.2: Semantics of English

Study of the meaning of English with particular emphasis on denotative and connotative meanings, lexical and grammatical meanings, synonymy and antonym, ambiguity and paraphrase, contrasts and contradiction, implication in discourse, metaphor

and irony, discussion of the relation between syntax and semantics as exemplified by selectional reconstructions.

FLL 830.2: Literary Translation: Theory and Practice I

This course will focus attention on the metalinguistic problems involved in the translation of literary texts, (e.g. knowledge of the culture and society involved, cultural differences between the writer and his translator). It will also deal with the linguistic aspect of literary translation (style, vocabulary, syntax).

FLL 831.2: Technical Translation (Economics) II

This course, built on the general skills acquired in Technical Translation in FLL 828.1, deals with the translation of documents issued by national and international bodies; fields covered will include health, technology, foreign affairs, economics, commerce and law. Special attention will be paid to the stylistic peculiarities of various technical documents; letters, speeches, minutes of meetings, reports and others.

FLL 832.2: Conference Interpreting

This course introduces students to conference interpreting, sight translation and consecutive interpreting. It lays a foundation for the development of professional skills in interpreting, emphasizing the ability to understand and analyze a message in the source language and convey it in the target language clearly. More emphasis is placed on active listening and concentration skills, memory, the ability to abstract information for subsequent recall and basic elements of note-taking.

FLL 833.2: Terminology of International Economics

This course provides students a practical knowledge of the terminology of international economics in French based on the knowledge acquired in ECO 334.2 International Economics which every student must audit. This course deals with the following: World economy and its structure in developed and less developed countries, the evolution of the theory of international trade, the role of multinationals, international trade and finance, balance of payments, protectionism and regional integration.

FLL 834.2 Terminology of International Law

This course provides students a practical knowledge of the terminology of international law in French based on the knowledge acquired in POL 522.2 International Law which every student must audit. This course focuses on the role of international law

in the regulation of economic, financial, technological and political relations between states as well as international laws governing CATT, the Seas, IMF, Expropriation, Investment Guarantee, Litigations, etc.

FLL 835.2: French Registers in Business Law

The aim of this course is to provide students with a basic knowledge of French registers in Business Law based on the knowledge acquired in MGT 601. 1 Business Law which every student must audit. This course deals with the following:

- Law of Contract

Introduction, formation of a contract, contractual terms, forms of contract, capacity of contract, vitiating elements of contract, contractual remedies.

- Law of Agency

Formation of relationships between principal and agent and their parties termination of agency.

- Negotiable Instruments

Nature and requisites of negotiability. Bills of exchange=parties to the bill, the drawer, acceptor, the bearer, the holder and the holder in the due course. Promissory notes, cheques and bills of lading, etc.

- Sales of Goods

Nature of contract, rights and obligations of sellers and purchasers, other aspects of contract. Hire Purchase transactions.

- Insurance

Nature of life, Marine and Fire Insurance, accidents and loss of profits insurance.

FLL 836.1: French in International Relations

This course provides students with a practical knowledge of the terminology of International Relations in French based on the knowledge acquired in **POL 520.1 Theories of International Relations** which every student must audit. This course offers a critical analysis and appraisal of analytical models for explaining the distribution of power, interaction among states, national interest and instruments of Foreign Policy.

Ph.D COURSES:

FLL 900.1 Current Methods and Techniques of Critical Discourse in Africa

The course focuses on contemporary literary theory and techniques of critical analysis ranging from Post-structuralism, Deconstructivism, Feminist theory, to post- colonial theories. Emphasis will be placed on the domestication of these discourses in

Africa through such critical trends as Afro-politanism, post-Africanism, African feminism etc.

FLL 901.1 World Literatures in French (Outside the Black World)

This course aims at a general survey of literature as a global/universal phenomenon; its manifestations and development in different French speaking regions outside the Black World, as well as the themes and the main features that characterize each region will be defined through a close study of some major writers in Québec (Canada), the Maghreb, etc.

FLL 902.1 Doctoral Seminar I

Doctoral students must present a seminar which will involve a close examination of aspects of their particular areas of specialisation, with the aim of discussing issues of crucial interest to researchers.

FLL 903.1 Francophone Literature in West Africa Since 2000

One of the main objectives of this course is to critically evaluate to what extent the literary output since 2000 articulates the pulse of contemporary West African society. The exploration of new horizons, as well as thematic structures and innovative techniques will be carefully examined.

FLL 904.2 African and Black World Literatures in French

Here special emphasis will be laid on selected literary masterpieces from Africa and the Black World.

FLL 905.2 Doctoral Seminar II

Doctoral students must present a seminar based on their fields of research; the seminar should highlight and discuss some of the main issues that will feature in the dissertation.

FLL 906.2 PhD Dissertation

After a successful completion of the graduate courses and the seminars, PhD candidates will be expected to write and defend an original dissertation in French in consultation with a supervisor. The oral examination will be conducted by a panel of examiners.

FLL 907.2 What is Literature? Current Methods and Techniques of Critical Discourse in France

This course aims at succinctly analyzing the evolution of French Literature, and at highlighting the new perspectives. Currents of Literary criticism ranging from Marxism to Structuralism, Semiotics, Deconstruction, etc, will be discussed in some detail.

FLL 908.2 French Literature after Existentialism and the Absurd

Selected works from some major authors will be studied to show to what extent their invention of new themes and techniques represents a departure from Existentialism and the Absurd. A careful selection can be made from the works of the following authors: Louis Ferdinand Céline, Raymond Queneau, Henri Michaux, Georges Bataille, Paul Valery, Francis Ponge, Paul Eluard, Jean Grosjean, André Frénaud, Jacques Roubaud, Robbe Grillet, Michel Butor, Nathalie Sarraute, etc.

FLL 909.1 Contemporary Linguistic Theories of French

This course will examine the major linguistic theories/schools of thought- Saussureanism, structuralism, distributionalism, chomskyan transformational-generative grammar, case grammar and speech acts theories, with a view to familiarizing students with their general characteristics, techniques, strengths/weaknesses and applications to the study of French.

FLL 910.1 Discourse Analysis

This course will survey the principles of discourse analysis of language use in communication taking into consideration speech acts, rules governing oral and written communicative/ discursive interactions and competence. Discourse strategies shall be considered in relation to semantic and pragmatic application.

FLL 911.2 Foreign Language Acquisition

This course will deal with theoretical and practical issues associated with the teaching and learning (or pedagogy) of second and foreign languages: Theories of language learning and acquisition, role of first/mother language in foreign language learning; socio-cultural and cognitive variables at play, interferences and error analysis and evolution of methods of foreign language teaching and learning.

FLL 912.2 Semantics

This course will deal with the various theoretical approaches to the study of meaning in French: interaction between semantics, contexts and syntactical components as well as denotative and connotative meanings, synonyms, antonyms, contrasts and contradictions and use of figures of speech such as metaphor, irony, metonymy, etc.

FLL 913.1 Advanced Theory and Methods of Translation II

This course is the continuation of FLL 827.1. It will expose students to more complex problems of translation posed by texts from domains such as politics, correspondences, certificates, reports of

various types, etc. This course will also provide students with the theoretical and practical skills of documentary research, the efficient use of reference materials and expose them to more difficult vocabulary and expressions.

FLL 914.1 Technical Translation III

This course deals with the translation of specialized texts and more complex problems they pose. Fields to be covered by this course include health, power generation, water resources, technology, commerce, mineral extraction, aviation, agriculture, etc. Special attention will be paid to the characteristics and terminology of these texts. Practical translation exercises in class will highlight these peculiarities.

FLL 915.2 Literary Translation II

This course which is a continuation of FLL 832.2, focuses on the extra-linguistic determinations in the translation of literary texts (cultural transposition, literary norms, stylistic dominants (obsessions/word systems), idiotisms, etc.). It also deals with the problematic of translatability/ untranslatability with regard to literary texts (poetry, prose and drama) and the linguistic/ stylistic aspects of literary translation.

FLL 916.2 Comparative Morpho-Syntax (contrastive studies)

This will provide students with the fundamentals of contrastive linguistic analysis. It will also prepare them for possible contrastive analysis of any aspect of the grammatical structure of French and that of English or any other language. It is also aimed at making the students know the peculiarities of their working languages.

ACADEMIC STAFF

DEPARTMENT OF PHILOSOPHY

GRADUATE PROGRAMMES IN PHILOSOPHY

The M.A/Ph.D programme in Philosophy is designed to deepen the students' knowledge of philosophy and to develop a more critical, independent and creative approach to reality.

AIM AND OBJECTIVES:

The programme aims at:

- i) Equipping the students to rationally meet the challenges of life.
- ii) Empowering the students to play leadership roles in nation building.
- iii) Preparing students for research and university teaching.
- iv) Enabling students to be effective in policy decision making.
- v) Helping graduates develop problem solving capabilities through critical, innovative and creative approach to analyzing problems.
- vi) Communication competency, ability for logical analysis, social responsibility, gender sensitivity and conflict resolution.

ADMISSION REQUIREMENTS

a) M.A Programme

- 1) A candidate must possess the minimum of O' Level Credit Passes which must include English Language.
- 2) A candidates must possess a minimum of second class (lower division) in the Bachelor's degree in Philosophy from a recognized University.
- 3) Candidates shall be subjected to a selection process.

b) Ph.D Programme

A candidate must possess a good Master's degree in Philosophy from a recognized University, with a CGPA not below 3.5 on a five-point scale.

Candidates who did not make up to 3.5 on a 5.00 scale or 2.80 on a 4.00 scale will be required to register for the M.Phil/Ph.D programme. Such candidates must present two seminars and a research proposal for grading and must score a minimum CGPA of 3.5 before proceeding to the Ph.D, otherwise the M.Phil Degree should be awarded upon the submission of a thesis. The thesis would be examined following the procedure of a Ph.D thesis.

AREAS OF SPECIALIZATION (M.A & Ph.D)

The following are the areas in which candidates could specialize:

- (a) Metaphysics
- (b) Epistemology
- (c) Ethics
- (d) History of Philosophy
- (e) African Philosophy
- (f) Political Philosophy
- (g) Philosophy of Social Sciences
- (h) Logic and Methodology

COURSE STRUCTURES

MASTER OF ARTS (MA) PROGRAMME

a) 1ST SEMESTER: CORE/COMPULSORY COURSES

All candidates, irrespective of their areas of specialization must take the following core courses in their 1 Semester;

(a) First Semester

Course Code	Course Title	Credit Units
PHL 800.1	Research Methodology	3
PHL 801.1	21 st Century Epistemology	3
PHL 802.1	Theories of Ethics	3
PHL 803.1	Themes in the History of Philosophy	3
SGS 801.1	Entrepreneurship & Management	3
Total		15

(b) Second Semester

All candidates must take in the 2nd Semester;

Course Code	Course Title	Credit Units
PHL 804.2	2st Century Metaphysics	3

GRADUATE SEMINAR

All candidates must take in the 2nd Semester;

Course Code	Course Title	Credit Units
	(Any three courses of 3 credits each from the area of specialization)	9
SGS 801.2	ICT & Research Methods	3
Total		15

c) Areas of Specialization and Courses

Metaphysics			Course Code	Course Title	Credit Units
PHL 805.2	Greek Metaphysics	3	PHL 827.2	African Metaphysics	3

PHL 922.2	Advanced Philosophy of Religion	3	
	Total	39	

epistemological claims of the empiricist will be critically examined.

PHL 816.2 Contemporary Ethical Problems

This course is a study of some of the controversial ethical problems such as the problem of freedom and determination, the universality and relatively of morals, euthanasia, abortion, moral principles and their application to concrete situations.

PHL 817.2 Ethical Issues in Science and Technology

This course focuses on the numerous ethical problems in science and technology like, in vitro fertilization, cloning, surrogate motherhood parenting, environmental issues, and advertising.

PHL 823.2 Medieval Philosophy

This course focuses on the development of philosophy in the Middle Ages and its link with both ancient and modern philosophy to be studied includes Boethius. St. Bonaventure. St. Thomas Aquinas, etc.

PHL 824.2 Modern Philosophy

This course focuses on the rise of modern philosophy. Rationalism and Empiricism will be studied through philosophers like Descartes. Leibniz, Spinoza, Locke, Berkeley and Hume.

PHL 827.2 African Metaphysics

This course is concerned with issues such as the ways and modalities of knowledge, the contents and source of knowledge, mind, body problem and

epistemological queries about the African theory of knowledge.

PHL830.2 Contemporary African Socio-Political Philosophy

This course is a study of the works of present-day African philosophers, and trends in contemporary African philosophy.

PHL 831.2 Contemporary Issues in African Philosophy

This course examines the various theories and definitions of African philosophy. What are the essential features that distinguish it from western or Eastern philosophies? What is the relation between philosophy and culture? Can there be a philosophy that is not culture-bound. Etc

PHL 832.2 Greek Political Philosophy

This course examines the political philosophy of ancient Greek philosophers, such as Plato, Aristotle, the Stoics etc.

PHL 833.2 Medieval Political Philosophy

This course examines the political philosophy of medieval philosophers. Such as St. Augustine, St. Thomas Aquinas, William of Ockham, Machiavelli St. Thomas Moore and Jean Bodin.

PHL 834.2 Marxist Political Philosophy

This course examines the political theory of Karl Marx and Lenin, the revolution, Dialectical materialism economic determinist ideology, class struggle, and capitalism.

ACADEMIC STAFF

16	C. I. C. Ihejirika	Epistemology, Philosophy of Religion, African Philosophy, Philosophy of Education	PhD, M.A(UPH), B.A. (Calabar), PGDE (Kaduna), Dip. Theo & Rel. Stud. (Umuahia)	Senior Lecturer

DEPARTMENT OF THEATRE & FILM STUDIES

DIPLOMA PROGRAMME IN THEATRE & FILM STUDIES

PHILOSOPHY

This programme is designed to instruct new entrants in the performing arts, especially graduates from other disciplines who want to make a living in Theatre and Film Production or to update the knowledge of the graduates of the discipline who made Third Class and below. This programme is therefore designed to teach the students modern theories and practices that define the performing arts, and the media avenues through which they can practice their trade. The curriculum is designed to orient the students towards conceiving stage and media entertainments that will help to facilitate social, political and economic development of the Niger Delta region.

RATIONALE

The Post-Graduate Diploma in Theatre and Film Studies is designed to run for twelve (12) calendar months to enable students from related disciplines and those with Third Class transit to the MA programme.

AIM AND OBJECTIVES

The aim of this programme is to equip students for the media needs of the present century. Its specific objectives are:

- a) To provide a programme of studies that will facilitate teaching and research in theatre and media arts, focusing on skill acquisition of students in meeting the socio-economic demands of the modern era, nationally and internationally.
- b) To use theatre and the medium of radio, television and film in projecting the cultural aspirations of the Niger Delta region and the generality of the Nigerian nation.
- c) To train teachers in Theatre and Film Production for meeting the needs of aspiring young artists in the creative arts particularly in the secondary and tertiary levels of education in Nigeria.
- d) To arouse critical consciousness in students of Theatre and Theatre and Film Production through learning academic publications and distribution.
- e) To generate economic drive among students and scholars of Theatre and Theatre and Film Production through artistic and creative

productions in Theatre and Theatre and Film Production as commodities.

- f) To impart on students and associates intellectual and critical awareness through seminars and workshops and the imitation of projects as the case may be.

ADMISSION REQUIREMENTS

To qualify for admission into the Postgraduate Diploma programme, the candidate must obtain a first degree in the disciplines within the Humanities or a first degree from any discipline.

PROGRAMME DURATION

This is a one-year programme of two semesters.

AREAS OF SPECIALIZATION

1. Theory and Criticism
2. Performance Studies
3. Tourism and Cultural Administration
4. Theatre and Arts Administration
5. Theatre in Education
6. Theatre-for-Development
7. Screen and Playwriting
8. Film Production
9. Scenography and Lighting
10. Costume and Make-up Arts
11. Dance and Choreography
12. Radio and Television Production
13. Directing
14. Acting
15. Stadup Comedy

COURSE DESCRIPTIONS

FIRST SEMESTER: PGD PROGRAMME

TFS 700.1: Research Methodology

This course will examine the principles that govern research methodology with emphasis on documentation, citations, paraphrasing, topic sentence, thesis statement and mechanical accuracy. Students will also be exposed to the basic notes that apply in the APA and MLA documentation style sheets.

TFS 701.1: Period Studies in Theatre and Film Production

The course will carry out an in-depth examination of the various theatrical trends, traditions and movements in theatre history. It will explore the similarities and dissimilarities between classicism and romanticism. Representational texts will serve as instructional materials.

TFS 702.1: Advanced Dramatic Theory and Criticism

The course will explore students to contemporary concepts, theories and approaches to dramatic criticism. It will examine such theories. As post modernism, post-structuralism, Marxism, feminism etc. selected texts will be used as samples.

TFS 703.1: Arts of the Theatre and Film Production

Students will be allowed to choose three sub courses out of the following

- (i) Playwriting/Screenwriting
- (ii) Acting
- (iii) Directing
- (iv) Costume Design and Makeup
- (v) Dance and Choreography
- (vi) Scenography and Lighting

Note:

There is always a coordinator in this course to collate questions, administer examinations and compute results of the examination.

TFS 704.1: Directing I

This course will afford students the opportunity to understand performance theories and principles of directing for stage and media. While the stage component will address such areas as stage orientations and stage geography, the media constituent will introduce students to such basic elements of production as camera, microphone, lights, sound and editing.

TFS 705.1: Script Writing for Stage, Film, Radio & Television

This course will expose students to the tenets and methods of script development for the stage, film, radio and television. It will examine how the raw idea and story line is transformed into patterned script or text. Students will be involved in the practical process of developing a forty-five-minute script for stage, television, radio or film.

TFS 706.1: Principles of Radio and Film Production

This course will expose students to contemporary approaches, methods and techniques of radio and film production. It will emphasize the difference between producing a film and television drama. The course will involve a practical component where students will produce either a thirty minutes radio drama or a forty-five-minute television drama.

TFS 707.1: Ethics in Theatre, Film Production and Society

This course introduces students to some Classical, Modern and Contemporary theories of ethics as they relate to the theatre and society. The study will take into cognizance how emerging trends in the theatre affect the cultural and moral values of societies. Attention will be focused on how a proper understanding and application of ethical themes can shape and enhance cultural and moral values of societies through the theatre.

SECOND SEMESTER: PGD PROGRAMME

TFS 707.2: Advanced Scenography & Lighting

This course will examine the concept, objectives and history of technical theatre. It will identify its components and their functions. The importance of design shall be discussed in relation to lighting, sound, costume, make-up and set which comprises such stage orientations as proscenium, arena, thrust, created and found spaces. From the aesthetic perspective, the course will treat scenic environment, the central image or metaphor of the design concept, the locale, period, tone and style whether realistic or non-realistic scenery. The place of colour in design shall be highlighted. The course will examine practical coordination particularly in the determination of the relationship between the collaborators in technical theatre.

TFS 708.2: Film Production Techniques

This course will expose students to the techniques of producing for the film medium. It will have both theory and practice that require students to produce either a short film or Radio programme.

TFS 709.2: Theatre and Film Administration

This course will expose students to the tenets of managing a live theatre outfit, radio and television houses and film production companies. The basic principles and approaches to management will be explored.

TFS 710.2: Advanced Sociology of Theatre and Film Production

In this course, students will be exposed to the healthy relationship that exists between drama and the society. It will examine the impact of theatrical products to the society. Representational play texts, radio dramas, video films and television dramas will serve as instructional materials.

TFS 711.2: Advanced Theatre in Education

The course will explore and discuss the rhetoric and dynamics of theatre as a veritable tool for education. It will emphasize the theatre as a vehicle for the enhancement of the psychological, cognitive and personality development of the child.

TFS 712.2: Directing II

In continuation of work started in the first semester, the course is designed as a comparative examination of the conventional and unconventional/experimental forms of directing in an attempt to underscore their points of convergence and variance. The focus will be on the concept, characteristics, types, directorial approaches and factors that influenced the rise of the unconventional/experimental theatre. Techniques of production for stage and media at the pre-production, production and post-production stages shall be examined. Each student would be required to produce a full-length stage play, radio drama or film (documentary or feature) as part of the course requirements.

TFS 713.2: Women in African Theatre

This course is designed to introduce students to the works of both male and female African playwrights. The main objective is to critically examine how women are portrayed in these plays right from the pre-colonial to modern times. Students will be required to critically study select plays by African playwrights.

TFS 714.2: Research Project

This course involves a documentation of students' research efforts in their areas of specialization. Students will be expected to submit four bound projects that must have been read, supervised and approved by the Department Board of Graduate Studies.

MASTER'S DEGREE PROGRAMME IN THEATRE & FILM STUDIES

INTRODUCTION

This programme is designed to ground the students in modern theories and practices that define the performing arts, and the stage and media avenues through which they can practice their trade. The curriculum is designed to orient the students towards conceiving stage and media entertainments that will help to facilitate social, political and cultural development of the Niger Delta region. The programme is designed to challenge the intellectual reasoning power of the students as young upcoming scholars in the discipline of performing arts. The orientation is towards independent reasoning, research conceptualization and general scholarship in the field. Through regular seminar presentations, production workshops and essay writing, the students are trained to be able to conceive and produce entertainments through several media

outlets and also undertake pedagogical duties in the discipline.

PHILOSOPHY

The philosophy of the Master's Degree programme in Theatre and Theatre and Film Production is to apply scholarship and research to the advancement of knowledge in Theatre practice and media management.

VISION

It is the express purpose and vision of the Department to produce a cadre of professionals in the practice of Theatre and Theatre and Film Production that are aware of the technological trends and their place in them. Indeed, this is with respect to the demands of a modern economy that is competitive as it is one of expertise.

JUSTIFICATION

This MA programme is for the up-dating and re-training of students to meet the needs of the labour market in the present age especially as it concerns Drama and Media. In other words, the need to integrate the use of electronic equipment such as camera chain, editing suit, microphones, adequate lighting gadgets and installations in screen and stage performances to meet the challenges of times is the bedrock of this new programme.

PROGRAMME DURATION

The MA Programme has been designed to run for twelve (12) calendar months at the end of which students are expected to write an MA thesis.

AREAS OF SPECIALIZATION

The following are the areas of specialization in this programme:

1. Theory and Criticism
2. Performance Studies
3. Tourism and Cultural Administration
4. Theatre and Arts Administration
5. Theatre in Education
6. Theatre-for-Development
7. Screen and Playwriting
8. Film Production
9. Scenography and Lighting
10. Costume and Make-up Arts
11. Dance and Choreography
12. Radio and Television Production
13. Directing
14. Acting

FIRST SEMESTER: MA PROGRAMME

SGS 801.1: ICT & Research Methods

Rightly one can say that technology presently is the soul of development. Learning by means of information and communication technologies is one area students of this programme will benefit more since they will be taught how to appreciate and use tools of digital technology creatively.

TFS 800.1: Research Methodology

Regulation governing the presentation of scholarly works and the Modern Language Association (MLA) and American Psychological Association (APA) will be reviewed in details. Students will be introduced to the various approaches to research and their techniques e.g. library, historical, sociology or aesthetic models will be studied and practical exercises undertaken. Those exercises will relate to the student's projects.

TFS 801.1: Theories of Theatre and Film Production

This course introduces the students to media theories especially as they relate to production codes and conventions. This will involve an appraisal of their application in selected media programmes. The course will also examine the use of these theories, codes and conventions in programme censorship.

TFS 802.1: Advanced Dramatic Theory and Criticism

The course will expose students to contemporary concepts, theories and approaches to dramatic criticism. It will examine such theories. As post modernism, post-structuralism, Marxism, feminism etc. selected texts will be used as samples.

TFS 803.1: Theories of Costume & Make Arts

The course is an intensification of the principles of costume design, production and application for stage and media production specifically. Students are also expected to appreciate the design and application of make up for period plays. The ability of students to appreciate the psychology of perception of color and the principles of application to productions is of interest.

TFS 804.1: Directing I

This course, largely introductory, will examine the concept, history and theories of directing. Composition, picturization, rhythm, movement and pantomimic dramatization, as fundamentals of directing, shall be analyzed. The media component of the course will introduce the students to such production elements as camera, microphone, lights and sound.

TFS 805.1: Women in African Theatre I

This course is designed to introduce students to the works of both male and female African playwrights. The main objective is to critically examine how women are portrayed in these plays right from the pre-colonial to modern times. Students will be required to critically study select plays by African playwrights.

TFS 806.1: Topics in Theatre in Education

This course examines Topics in History of Theatre in Education and trends in theory and practice in the discipline.

TFS 807.1: Feminist Theories I

The course explores information on contemporary feminist debate as articulated in Structuralism, Marxism and Socio-cultural studies, to mention a few. The primary objective is to analyze unequal conditions of male and female sexes in society. It provides an opportunity to critical issues such as sexuality, values and identity. The African context of feminist theory is equally discussed.

TFS 808.1: Gender and the Media I

The course will critically examine different presentations of masculinity and femininity in respect to gender mainstreaming, role expectations, expected code of conduct, language, dressing and sexuality in a dynamic socio-economic condition. The course will also explore the different avenues through which social change can be achieved.

TFS 809.1: Acting for the Media

The course will examine the history, importance and theories of acting. The theories of such authorities as Constantine Stanislavsky, Jerry Grotowski, Michael Chekhov and Bertolt Brecht shall form the basis for appreciating the principles and techniques employed in acting over the ages.

TFS 810.1: Advanced Theory of

This course will expose students to the history, theory and practice of the different areas of the media. It will also expose them to further studies in Media Production Techniques. It will involve

lessons on related areas like censorship and copyright.

TFS 811.1: Ethics, Theatre, Film and Society

This course introduces students to some Classical, Modern and Contemporary theories of ethics as they relate to the theatre and society. The study will take into cognizance how emerging trends in the theatre affect the cultural and moral values of societies. Attention will be focused on how a proper understanding and application of ethical themes can shape and enhance cultural and moral values of societies through the theatre.

SECOND SEMESTER: COURSE DESCRIPTIONS FOR THE MA PROGRAMME

SGS 801.2: Entrepreneurship & Management

Students offering this course will be guided in how to be innovative in generating ideas regarding film production themes, distribution and marketing strategies. The course will also ground them in the skills of film business and enterprise.

TFS 811.2: Advanced Theatre and Film Production History

This course encourages the study of the periods in Theatre and Film Production History with a view to determining trends, ideological departures, breakthroughs in theatre and film practice practice and theories from pre-historic to modern times. The course also examines the development of theatre practice in Nigeria with particular reference to Yoruba, Igbo, Hausa and ethnic groups.

TFS 812.2: Film Production Techniques

This course examines the production techniques employed at the different stages of a media production. It introduces the students to the rudiments of camera work as involved in programme production and news gathering. It involves a practical segment whereby the students put their knowledge of the techniques into work.

TFS 813.2: Theories of Costume & Make Arts II

This is the continuation of Theories of Costume & Make Arts I, is an intensification of the principles of costume design, production and application for stage and media production specifically.

TFS 814.2: Gender and the Media II

The course will continue the exploration of how the media construct images of both men and women. It will examine the existence and extent of gendered

patters in media presentations and the impact of these expressions.

TFS 815.2: Topics in Creative Dramatics

This course investigates theories and applications of theatre for clinical and therapeutic functions in medicine, psycho-social and communication disorders. Students shall be required to carry out experimental projects where the remarkable impacts of creative exercises foster the correction of various disorders.

TFS 816.2: Directing II

This course examines the art and techniques of directing for stage and media (radio, television and film). It will focus on textual analysis (including story development, genre, conflict, dialectics, plot structure, time, form and style), rehearsal techniques, casting, screen grammar, voice and sound effects training, radio skills which include microphone techniques, radio acting, radio directing (sign language), cue rehearsal, broadcast and listening. For television and film, the course will, among other things, examine developing a crew, *mise en scene*, types of shots, camera angles, directing the actors, calling the shots, continuity and editing.

TFS 817.2: Women in African Theatre II

This is the continuation of Women in African Theatre I, designed to introduce students to the works of both male and female African playwrights. The main objective is to critically examine how women are portrayed in these plays right from the pre-colonial to modern times. Students will be required to critically study select plays by African playwrights.

TFS 817.2: Acting for the Media II

In continuation of work begun in the first semester, this course will concentrate on script, analysis, characterization, stage geography, actor and audience relationship, team spirit, the imaginary world of the actor, naturalistic/realistic acting techniques, the training of the actor, physical movement, vocal delivery, improvisation, imagination and exercises (physical, mental and vocal). The involvement of students in practical productions is mandatory to demonstrate their understanding of the course.

TFS 816.2: Theatre and Film Administration

This course is to expose students to advance management and administration of media institution such as theatre houses, TV/radio stations, cinema etc. Emphasis is on how performing and traveling

theatres are managed. Marketing principles and publicity strategies are also explored.

TFS 817.2: Sociology of Theatre and Film Production

This course shall investigate the relationship between social organizations and drama as an art form. The approach shall be through an examination of the various theories of the sociology of literature such as Marxism, the English School, popular Arts, structuralism, Hermeneutics and mass communication. It shall look at work of drama as social documents from the points of view of the socio-economic basis of the actions of man as they are expressed in conflicts involving characters and their resolutions. This shall be done with reference to selected texts.

TFS 818.2: Playwriting for Stage and screen

This course involves rapid introduction to the fundamentals of playwriting. Students will be encouraged in this course to appreciate basic theories of communication as they concern playwriting. The theories include the logics and existence of dramatic text. Ferdinand de Saussure's distinction between Langue and Parole, Jacobson's six factors of a communication process, semiology and Charles S. Pierces semiotics. The course will examine the formal peculiarities of Print, Radio, Television and Film as media of communication. Students will be exposed to practical playwriting workshop situations for the development of play writing skills in the above-mentioned media of communication.

TFS 819.2: Graduate Seminar

Students will be expected to present before the departmental postgraduate committee seminars on relevant topics approved for them.

TFS 820.2: Dissertation

This course involves a documentation of students' research efforts in their areas of specialization. Students will be expected to submit four bound projects that must have been read, supervised and approved by the Department Board of Post Graduate Studies.

DOCTORATE PROGRAMME IN THEATRE & FILM STUDIES

INTRODUCTION

This programme is designed to ground students in modern theories and practices that define the performing arts, and the stage and media avenues through which they can practice their trade. The

curriculum is designed to orient the students towards conceiving stage and media entertainments that will help to facilitate social, political and cultural development of the Niger Delta region. The programme is equipped to challenge the intellectual reasoning power of the students as young upcoming scholars in the discipline of performing arts. The orientation is towards independent reasoning, research conceptualization and general scholarship in the field.

PHILOSOPHY

The philosophy of the Ph.D. Degree programme in Theatre and Theatre and Film Production is to apply scholarship and research to the advancement of knowledge in Theatre practice and media management.

VISION

It is the express purpose and vision of the Department to produce a cadre of professionals in the study of Theatre and Theatre and Film Production that are aware of the technological trends and their place in them. Indeed, this is with respect to the demands of a modern economy that is competitive as it is one of expertise.

MISSION

While not narrowly concerned with Theatre Arts per se, it is the mission of the programme to provide a broad-based platform for facilitating academic research and professional excellence in the theory and practice of the discipline of the theatre and media arts. Its major concern, which is to project the humanities in the Niger Delta beyond its immediate confines, is seen in the context of identifying with other cultures of the Nigerian nation.

RATIONALE AND JUSTIFICATION

This Ph.D. programme is for the up-dating and re-training of students to meet the needs of the labour market in the present age especially as it concerns Drama and Media. In other words, the need to integrate the use of electronic equipment such as camera chain, editing suit, microphones, adequate lighting gadgets and installations in screen and stage performances to meet the challenges of times is the bedrock of this new programme.

AIM AND OBJECTIVES

The aim of this programme is to equip students for the media needs of the present century. Its specific objectives are:

- a) To provide a programme of studies that will facilitate teaching and research in theatre and media arts, focusing on skill acquisition of

- students in meeting the socio-economic demands of the modern era, nationally and internationally.
- To use the stage and other media platforms in projecting the cultural aspirations of the Niger Delta region and the generality of the Nigerian nation.
 - To train teachers in Theatre and Theatre and Film Production for meeting the needs of aspiring young artists in the creative arts particularly in the secondary and tertiary levels of education in Nigeria.
 - To arouse critical consciousness in students of Theatre and Theatre and Film Production through learning, academic publications and distribution.
 - To generate economic drive among students and scholars of Theatre and Theatre and Film Production through artistic and creative productions in Theatre and Theatre and Film Production as commodities.
 - To impact students and associates with intellectual and critical awareness through teaching, seminars and workshops as the case may be.

ADMISSION REQUIREMENTS

To qualify for admission into the Ph.D. Programme, the candidate must obtain a first degree in Theatre and Film Studies. The following CGPA scale will be used in admitting candidates to the Ph.D. programme:

- Candidates with Master's Degree on 5pt scale – with a CGPA not below 4.00
- Candidates with Master's Degree on 4pt scale – with a CGPA not below 3.20
- Candidates based on percentage - with not less than 60%

PROGRAMME DURATION

The Ph.D. Programme will run for the following duration:

- Full Time: 2 – 5 years
Part Time: 3 – 7 years.

AREAS OF SPECIALIZATION

The following are the areas of specialization in this programme:

- Theory and Criticism
- Performance Studies
- Tourism and Cultural Administration
- Theatre and Arts Administration
- Theatre in Education

- Theatre-for-Development
- Screen and Playwriting
- Film Production
- Scenography and Lighting
- Costume and Make-up Arts
- Dance and Choreography
- Radio and Television Production
- Directing
- Acting

TFS 905.2	PhD Seminar	3
TFS 906.2	PhD Dissertation	12
Total Credit Units for First Semester		21

In addition to these courses, students from outside the University of Port Harcourt will be required to undertake the following courses if they did not take them in their master's programme:

SECOND SEMESTER

Course	Course Title	Credit Unit
SGS 801.1	ICT & Research Methods	2
SGS 801.2	Entrepreneurship & Management	2

COURSE DESCRIPTION

FIRST SEMESTER: Ph.D. PROGRAMME

TFS 900.1: Methodology and Techniques of Research in Theatre and Film Production

This course is designed to provide thorough understanding of methodology and techniques of research in Theatre Arts. Attention shall be drawn to the emphasis on the APA documentation style sheet, by College of Graduate Studies.

TFS 901.1: Topics in Dramatic Theory and Criticism

This course draws detailed attention to various topics in New Criticism, Contemporary theory and criticism, as well as shades of post-modern studies as they affect the discipline of Theatre Arts.

TFS 902.1: Contemporary Theatre, Film Theory and Criticism

This course examines contemporary trends in Media Theory and Criticism, particularly as they affect post-modern research inclinations and global media practice. Studies shall be exposed to in depth case studies in local and global practice.

SECOND SEMESTER: Ph.D. PROGRAMME

TFS 903.2: Theatre and Development

This course affords students the opportunity of training in development studies and how the performing arts can contribute to societal wellbeing and welfare.

TFS 904.2: Contemporary Issues in Theatre and Film in Education

This course is designed to expose students to contemporary issues in Theatre in Education Theory and Research. It examines relevant theories and practice in the applications of theatre studies to various contemporary professional practices in various disciplines.

TFS 905.2: Ph.D. Seminar

This course is a continuation of TFS 902.1. It affords students the opportunity of further training in the selection of seminar topics, the format of seminar presentations as approved by the College of Graduate Studies, and the preferred mode of delivery of a seminar to an academic audience.

TFS 906.2: Ph.D. Dissertation

SGS 801.1: ICT & Research Methods

Rightly one can say that technology presently is the soul of development. Learning by means of information and communication technologies is one area students of this programme will benefit more since they will be taught how to appreciate and use tools of digital technology creatively.

SGS 802.2: Entrepreneurship & Management

Students offering this course will be guided in how to be innovative in generating ideas regarding film production themes, distribution and marketing strategies. The course will also ground them in the skills of film business and enterprise.

	Dr. P. Agha	Lecturer I	B.A, M.A, PhD	Theatrical Design/Film Documentary.

DEPARTMENT OF RELIGIOUS AND CULTURAL STUDIES

GRADUATE PROGRAMME ADMISSION POLICIES AND GUIDELINES FOR GRADUATE COURSES (PGD, M. A. & PhD)

POST GRADUATE DIPLOMA (PGD) RELIGIOUS AND CULTURAL STUDIES

Objectives

In view of the dynamic nature of academics, the Department of Religious and Cultural Studies has passed various changes and modifications in her curriculum aimed at meeting the changing needs of the society. With the growing population of candidates seeking for admission into the Graduate Programme of this Department from other disciplines, it becomes imperative to incorporate Diploma Programme to allow more students to attempt our existing graduate programmes.

Aim and Objectives

In recent years, there have been a growing number of non-Religious Studies Graduate applying for our graduate programmes both at the M.A. and Ph.D. levels. Most of them have been denied admission due to their non-religious studies background. This programme (PGD) in Religious and Cultural Studies is therefore designed to provide non-graduates of Religious and Cultural Studies with the basic essentials of Religious and Cultural Studies within 12 calendar months. It is also designed graduates of Religious and Cultural Studies (RCS) who had less than 2.00 CGPA in their bachelor degree, which will prepare them for Masters Programme. The aim is not only to prepare them for a Masters' Arts degree in Religious and Cultural Studies, but also to equip them careers in which a working knowledge of religious and culture essential, especially now that a Religious Ministry and problems a marketable fields in Nigeria. Moreover, the graduates in Humanities Education, Social Sciences, Law, Management Sciences and Tourism will find the programme as a beneficial blend. Among the addition targeted professionals to benefit from this programme are all forms protocol and public relation officers in the public service, staff of Public Affairs and Community Relations, Departments in multinational companies, Ministry of Culture and International Affairs, Tourism Development, Inter-Cultural and Religious Affairs and development in Religious Ministries.

Certificate Classification

The Certificate classification is as follows:
Class

Average (CGPA)	Cumulative Grade Point
Distinction	4.70-7.00
Credit	4.00-4.49 Upper Credit
Merit	3.70-3.99 Lower Credit
Pass	3.00-3.49 Merit
Fail	0.00-2.99 Fail

Course Codes and Titles

1. RCS 700.1 Theories of Religion
2. RCS 701.1 Research Methodology
3. RCS 702.1 Fundamentals of African Indigenous Religion
4. RCS 703.1 Fundamentals of African Christianity
5. RCS 704.1 Fundamentals of Islam
6. RCS 705.2 Advanced Philosophy of Religion
7. RCS 706.2 Fundamentals of Biblical Studies
8. RCS 707.2 Ethical Teachings in Three Major African Religious Tradition
9. RCS 708.2 Issues in Sociology of Religion
10. RCS 709.2 Religion and Cultural Tourism Resources
11. RCS 710.2 Project Writing

First Semester

1. RCS 700.1 Theories of Religion
2. RCS 701.1 Research Methodology
3. RCS 702.1 Fundamentals of African Indigenous Religion
4. RCS 703.1 Fundamentals of African Christianity
5. RCS 704.1 Fundamentals of Islam

Second Semester

1. RCS 705.2 Advanced Philosophy of Religion

2. RCS 706.2 Fundamentals of Biblical Studies
3. RCS 707.2 Ethical Teachings in Three Major African Religious Tradition
4. RCS 708.2 Issues in Sociology of Religion
5. RCS 709.2 Religion and Cultural Tourism Resources
6. RCS 710.2 Project Writing

Duration of Programme

Students for the PGD programme will be required to spend a minimum of twelve calendar months. This comprises of two academic semesters plus a period of long vacation in which they will write their projects.

Course Requirements

For the PGD in Religious and Cultural Studies, candidates will:

- [1] Take ten courses, five in each semester, including two general courses and eight in the specialty areas. All these courses will be taught courses at 3 credit units each.
- [2] Submit a project (long essay of 6 credit units) of not less than 10,000 words on A4 sheet, excluding notes, bibliography and appendices.
- [3] Candidates will have at least a "C" grade (Merit 3.00-3.49) for pass in the programme in accordance with the University regulations.

COURSE DESCRIPTION

RCS 700.1: Theories of Religion

The course will treat certain themes above the undergraduate level and below the advanced theories of religion at the M.A level-such issues as some contemporary theories like phenomenology, rational choice, economics of religion and cognitive perspectives, among others.

RCS 701.1: Research Methodology

This course is designed as a preparation for the project writing in all aspects, as it applies to the required standards for the Arts in the University of Port Harcourt. Special consideration may be given to some writing techniques like the use of information, design and administration of questionnaires, proper methods of documentation

and the different use of APA, MLA and other methods of academic writings.

RCS 702.1: Fundamentals of African Indigenous Religion

The course serves as the summary of the major issues in African Indigenous Religion such as the aspects of the data and interpretation of the indigenous religions of Africa, cosmology, terminology, myths and gender, major traditional beliefs and practices, and the effect of modernization on African Indigenous Religion.

RCS 703.1: Fundamentals of African Christianity

The course introduces the origin and development of African Christianity with an overview of Western Christianity in Africa. The course will lay a special emphasis on post-Christian era of Christianity in Africa. It will also have an overview of the Nigerian Church History and the emergence of new Religious Movements.

RCS 704.1: Fundamentals of Islam

This course examines the early history of Islam, its doctrines, sources and pillars of Islam. It also examines Islam and Science and modernization processes with reference to gender, economy, politics and evolution of Islamic groups.

RCS 705.2: Advanced Philosophy of Religion

The course examines the relationship of philosophy of religion to other disciplines; forms of religious experience; revelations and miracles in religion, religious language; religious pluralism and personal faith.

RCS 706.2: Fundamentals of Biblical Studies

This course examines the origin, forms and methods of Biblical Studies.

It exposes the students to the study of the various divisions of the Old & New Testament scriptures. It introduces the various literature and history of the Inter-Testamental biblical period and the sources of New Testament Studies and writings, including the Christian and Non Christian writings.

RCS 707.2: Ethical Teachings in Three Major African Religious Traditions

This course compares and evaluates the ethical teachings of Christianity, Islam and African Indigenous Religion. It examines the theories of ethics and the social function of ethics in these three

major African religions. Contemporary ethical issues in Africa are to be examined: such as leadership and accountability/responsibility; social justice, corruption, war and peace, racism, human rights, sanctity of life, suicide and euthanasia, poverty, greed, alcoholism, drug abuse, human sexuality, family values, marriage issues, inheritance, bio-ethical issues — abortion, family planning, surrogate motherhood and artificial insemination as taught, believed and practiced in the three major religions.

RCS 708.2: Issues in Sociology of Religion

The course examines the major patterns of religion such as aspects of primitive religion, Religion in Historical perspective; Religion in Modern Industrial Societies, and mixed patterns of religion in the Modern World. It also considers the issues of religious problems of analysis and interpretation; religion and social and cultural differentiation such as religion and social change; politics; social stratification; religious collectivities and religious authority and specialization.

RCS 709.2: Religion and Cultural Tourism Resources

The course deals with the interconnectivity of Religion, Culture and Tourism. It gives the basic definitions and concepts of Religion, Culture and Tourism. It examines culture as the resource and product of Tourism, how religion and culture shape tourism; impact of religion and culture on tourism, amongst others.

RCS 710.2: Project Writing

Students are required to write and submit a project (of 6 credit units) of not less than 10,000 words on A4 sheet, excluding notes, bibliography and appendices.

M.A. RELIGIOUS AND CULTURAL STUDIES

Objectives

- (i) To deepen the candidates' critical and analytical understanding of Religious and Cultural traditions of mankind and with special references to the African context.
- (ii) To encourage an in-depth study of specific areas within the subject with a view to specialized research.
- (iii) To produce graduates familiar with the methodological and theoretical developments in the relevant fields of

Religion and Cultural Studies who will be able to apply their knowledge to their environment and also make their own contribution to universal scholarship.

- (iv) To help students to develop independent thought and critical judgment and tolerance in the field of Religion and Culture with a view to greater understanding and harmonious living in society.

Area of Specialization

1. African Indigenous Religion
2. Biblical Studies: Old and New Testaments
3. Church History
4. Islamic Studies
5. Religious Ethics
6. Sociology of Religion
7. Philosophy of Religion

M. A. Admission Requirements

Admission to the M. A. programme will be open to candidates with the B. A. degree in Religious and Cultural Studies, Islamic Studies, Theology or other related disciplines such as Philosophy, History, Sociology and Anthropology, on a CGPA of 3 points on a 5-point scale, from the University of Port Harcourt or any other institution recognized by the Senate of the University of Port Harcourt.

The method of application will be as specified in the Graduate School's guidelines. Candidates will be admitted for both the full-time and part-time studies.

Duration of Programme

Students for the M. A. degree will be required to spend a minimum of twelve calendar months for the programme; i.e. two academic semesters plus a period of long vacation for full-time studies a maximum of twenty-four calendar months. Candidates for the part-time programme must provide evidence that they will be available for attendance at courses and for regular consultation with their academic supervisors. They will be required to spend a minimum of twenty-four calendar months and a maximum of forty-eight calendar months for the M. A. Programme.

Course Requirements

For the M.A. degree, candidates will:

- (1) Take six courses, including one (1) course in Special Methodology, three (3) courses in the General Area of Religious and Cultural Studies and two (2) courses in the Specialist Area. The six (6) courses will be taught courses (3 credit units each).

- (2) Present work as well as participate actively in Graduate Seminar (3 credit units), and pass same with at least a C grade.
- (3) Submit a thesis (6 credit units) of not less than 20,000 words or 60 A4 pages, excluding notes, bibliography and appendices.
- (4) In addition to the successful completion of the courses and seminar (with at least a C grade in each course and seminar), defend a thesis in an oral examination, before a panel of examinations to be set up in accordance with University regulations.

COURSE DESCRIPTION

First Semester

RCS 801.1 Trends in Methodology of Religious Studies

The course aims at understanding the main issues and perspectives in the methodology of religious studies. It will pay particular attention to the initiatives and activities of the International Association for the History of Religions (I. A. H. R.) towards the evolution and promotion of a widely acceptable and viable methodology. In addition to examining in detail the phenomenological and historical methods, the course will review the other theoretical perspectives that are being utilized by scholars including the sociological, cultural, anthropological, psychological reasons for their rise with particular attention to Aladura Praying Movements, Healing Churches and Messianic Churches. The course deals with the place of Abiodun Emmanuel and Garrick Braide, the new wave of Pentecostalism, public response to New Religious Movement and concludes with New Religious Movements and Contribution to the modernization of Nigeria.

RCS 802.1 Themes in Comparative Religion

This course will try to identify and define some of the major aspects of religious life the world over, and to suggest how they are related to one another in the whole we call “a religion”. The following themes will be given special attention: Religious language, Divinity, God and Gods, Mythology and Cosmology, Ritual and Symbolism. Other themes include: Scripture and Oral Texts, Worship including Prayer and Sacrifice, Calling, Asceticism and Mysticism, Pilgrimage, Priesthood, Prophecy/Divination/Revelation and Ecstasy (spirit possession), Priesthood, etc. For each aspect, there will be brief working definition, followed by a critical review of current themes and an attempt to show its relations to other aspects.

RCS 803.1 New Religious Movements in Africa

The course examines the rise of New Religious Movements, the Typology of New Religious Movements in African Traditional Religions, Islam and Christianity. It also examines the first wave of the African Churches and reasons for their rise with particular attention to Aladura Praying Movements, Healing Churches and Messianic Churches. The course deals with the place of Abiodun Emmanuel and Garrick Braide, the new wave of Pentecostalism, public response to New Religious Movement and concludes with New Religious Movements and contribution to the modernization of Nigeria.

RCS 804.1 Perspectives and Issues in the Study of African indigenous Religions

The course will discuss in detail the historical evolution of the systematic study of African Indigenous Religions and highlight the different perspectives scholars have utilized in the study. It will also try to expose the general issues of methodology and conceptual framework in the study to date:

- i. The evolution of and general perspectives in the study of African Traditional Religion.
- ii. Issues in Methodology.
- iii. Implications of the nature and general features of African Indigenous Religion.
- iv. The challenge oral sources.
- v. Developing viable conceptual schemes for analysis.
- vi. Issues of current debate in scholarship.
- vii. Continuity and change in African Indigenous Religion.

RCS 804.1 Old Testament Covenant and Monarchy in Israel

This course is aimed at exposing the origins and development of Covenant and Monarchy in Israel, paying attention to their presence in the Book of Exodus and the Historical Books. It highlights the following areas:

- [a] Historical origin and development of Old Testament; Covenant concept and the Monarchy in Israel.
- [b] The Sinai periscope, Escape or Expulsion from Egypt.
- [c] Exegesis and Theology of Selected texts of Exodus, especially Chapters 12-15 and 18-24.
- [d] Study of the Covenant as Liberation and the relevance of the Covenant in African Society.
- [e] The narrative stories of kingship and the cycles of the monarchy in Israel from Samuel to Omri (the Books of Samuel and Kings).

RCS 804.1 The Origin and Growth of Western Christianity in Africa

This course is aimed at examining the origins and growth of Western missionary branch of Christianity in Africa. It thus attempts a survey of the early Christian beginnings in North, West, East-Central and South African sub-regions. It examines the European missionary patterns of evangelism and the African responses; the conflict and cohesion in mission communities in Africa; the interrelationships between the European missionaries and the colonial masters and settlers in the Christianization progress in Africa; the influence of colonialism on the growth of mission communities. The course concludes with a critical assessment of the European missionary contributions to the growth of Christianity in Africa.

RCS 804.1 Islam in Africa

The course is aimed at examining the role of Islam and Muslims in Africa. It highlights the Muslim brotherhood and Islamic activism in Africa, the state of Islam in Africa since independence in countries like Nigeria, Algeria, Egypt and others as focus. The course examines Islam and politics in Africa, Islamic attitude to women with emphasis on gender equality, education, dressing, seclusion and polygyny. It also includes contemporary issues like the OIC, the Shariah, Human Rights, globalization and crisis in Muslim education system.

RCS 804.1 Foundations of Religious Ethics

The course examines the historical development of religious ethical teachings: it investigates the sources of religious ethics, including God, divinities, natural laws, customs, education, taboos,

prohibitions, myths, folklores, fairy tales, fables, proverbs, professional codes of ethics, and oracle. The ethics is taught by methods of oral traditions, plays, storytelling, apprenticeship and imitation. Conflict with modern system of ethics and its decline will be examined comparatively. The course also analyses personality and legal models of ethical decision-making, including an investigation into the use of sources, scriptures, human reason, and experience. Theological notions of virtue and sin, good and evil, the nature and role of personal conscience and conversion are emphasized. The validity of moral norms and moral absolutes in a conceptualist age is investigated.

RCS 804.1 Social Theories of Religion and Human Relations

This course examines the religious theories of Comte, Marx, Durkheim, Weber and Freud as related to the meanings and functions of religion in society. It seeks to appropriate their insights as they apply to social development in Africa and religious factors underlying human personality and human relations.

RCS 804.1 The Early Christians and Scholastic Philosophers

This course is an investigation into the writings of some Christian philosophers from the early Church period to the Scholastic period (between the 111 and 131 centuries). It considers some philosophical schools of thought such as Epicureanism; Stoicism and neo-Platonism of Plotinus, which influenced early Christian thought and philosophy.

Second Semester

RCS 805.2 Religion and Modern Change in Africa

The course begins with the examination of Religion as a catalyst and recipient of change. The course discusses processes and patterns of socio-religious change and factors responsible for social change. The course also examines the modern trends in religious change and issues like Religion/State Relations in Africa, Religion and Politics in Africa, Religion and Economy in Africa, Religion and Education in Africa, and the issues of Religion and the family institution in Africa. The course provides insights into Secular Alternative to Religion, Religious Interaction and Dialogue in a Plural Society, and Religion and Globalization.

RCS 806.2 African Indigenous Religious Mythology and Cosmology

The course will discuss the inherent issues connected with the nature of African Indigenous Religions, as well as the evolution of the systematic

study and their implications for methodology and conceptual scheme. It will also treat various substantial aspects of the indigenous religions of the peoples of Sub-Saharan Africa, including:

- [i] General features of traditional African myths.
- [ii] Traditional cosmology and gender.
- [iii] Principal traditional religious beliefs.
- [iv] Traditional ritual, symbolism, iconography and festivals.
- [v] Traditional religious personages and officials.
- [vi] Divination, healing and witchcraft.

Efforts will be made, in discussing the topics, to account for the impact of social and religious change on the indigenous religious life of the continent. The course will also try to handle such issues as the place of indigenous religion in social control, religion and art in traditional African societies, as well as the portrayal of African traditional religions in contemporary literary works.

RCS 806.2 The Miracles and Parables of Jesus in The Gospels

The course will review the literary genres of the New Testament and thereafter discuss the Miracles and Parables of Jesus in the Gospels. The following areas will be highlighted:

- (a) Major contemporary approaches to the study of Gospel Miracles and Parables.
- (b) Gospel Miracles and the Laws of Nature.
- (c) Study of Parables in the literary sense in the Ancient Near-East.
- (d) Structure, purpose and meaning of Miracles and Parables of Jesus.
- (e) Use of Miracles and Parables in Jesus Ministry.
- (f) Parables and Proverbs: Comparisons and Contrasts.
- (g) Hermeneutic principles of Jesus Miracles and Parables in African context.

RCS 806.2 Evolution and Growth of African Christianity

This course attempts a study of the evolution and growth of African Christianity in its total religious, socio-political and cultural contexts with the aim of determining the African Christian spirituality since the attainment of religious independence from the mission churches. The course also helps to point the way for the church to exist in post-Christian era in Africa.

Thus the course begins by examining the basic causative factors responsible for the rise of independent churches in Africa (with case studies of

“African” and “Ethiopian” churches) and New Christian Religious Movements (with case studies of mass movements and initiatives of prototype prophets and evangelists). The course also examines such issues as continuity and unresolved conflicts in African Christianity; the origins and problems in African Christian Theology; enculturation and its obstacles in African cultural heritage; Liberation Theology and African Christianity. The course ends with a manifesto on the significance of modern African Christianity.

RCS 806.2 Muslim Revivalist Movements in Africa

The course is an in-depth study of the lives and works of African Muslim reformers and revivalists and the development of Islam. Prominent reformers and revivalists for study include the Sufi reformers like Ahmad Bamba, the Sokoto Caliphate reformers, Hassan al banna and the Muslim Brotherhood, Sayyid Qutb, Bamidele and Lanase Movement of Nigeria, Jamaldin al-Afghani, Muhammad Abduh, Rashid Rida and Muslim Modernist movement. The course also examines the formation of Salafiyah movements and particular attention will be placed on Hassan Turabi (Sudan), Mahmud Gumi and Izalah of Nigeria, the Nahdah Movement in Tunisia, Muslim Organizations in Nigeria and the formation of Nigeria Supreme Council for Islamic Affairs.

RCS 806.2 Bio-Ethics and HIV/AIDS in Africa: The Religions’ Response

The course will be concerned with both religious ethical methodology and with content questions. The course will investigate in detail moral responsibilities toward human life both in its inception, its care during life, and at death. Among the issues to be examined are those of the laboratory generation of human life, abortion, care of handicapped children, capital punishment, killing in war, care of the dying. The specific questions to be considered include sterilization, abortion, transplantation, experimental death, manipulation; other current concerns in bio-ethics. The course also examines human sexuality and HIV/AIDS: prevention, management and control of HIV/AIDS and the religious response in the light of religions’ attitude to the outcasts; counseling and care.

RCS 806.2 Society and Secular Alternatives to Religion

This is an advanced critical study of the alternatives offered to human religious traditions and heritage. Emphasis will be on understanding the nature of society/states and types of religious interaction in them; the concept of secularity and secularism; Modern challenges to religion; Secular alternatives

to religion: Science and positivism; Marxism and economic salvation; Humanism: August Comtes stages and religion of humanity, Rudolf Bultman’s demythologization, Jeremy Bentham and J. S. Mill’s Utilitarianism, Ludwig Feurbach’s humanism etc; Society and religion in contemporary society.

RCS 806.2 Issues in Philosophy of Religion

This course will first examine the problem of evil; various arguments for the existence of God; contemporary trends in Philosophy of Religion; the rapid changing contours of African religious life in the face of increasing and ever recurrent religious conflicts and the truth/claims of the major religions and reasons for religious conflict.

RCS 807.2 Seminar

RCS 808.2 Thesis

(B) Ph.D RELIGIOUS AND CULTURAL STUDIES

Areas of Specialization

- [1] African Indigenous Religion.
- [2] Biblical Studies: Old and New Testaments.
- [3] Church History.
- [4] Islamic Studies.
- [5] Religious Ethics.
- [6] Sociology of Religion.
- [7] Philosophy of Religion.

PhD Admission Requirements

Subject to the provision of the University-Wide regulations governing the admission of candidates into the PhD programmes, candidates seeking admission into the PhD degree programme of the Department of Religious and Cultural Studies will be required to meet the following conditions:

- [1] Admission to the PhD programme will be open to candidates with the M. A. degree in Religious and Cultural Studies, Islamic Studies, Theology or other related disciplines such as Philosophy, History, Sociology and Anthropology, on a CGPA of 3.5 points on a 5-point scale, from the University of Port Harcourt or any other institution recognized by the Senate of the University of Port Harcourt.
- [2] Candidates with the M. A. degree in related disciplines such as Philosophy, History, Sociology and Anthropology will be required to take all M. A. taught courses in Religious and Cultural Studies and score at least a C grade to advance to the PhD.
- [3] Candidates (from other universities) whose admission qualifications show deficiencies in the courses offered as shown in their

transcripts will be required to take some remedial courses from the courses available in the M. A. programme of the Department and score at least a C grade to advance to the PhD.

- [4] In addition to the above, candidates will be required to satisfy the Graduate Studies Panel of the Department at an oral interview before final admission can be offered.

The method of application will be as specified in the School of Graduate Studies Guidelines. Candidates will be admitted for both the full-time and part-time studies.

Duration of Programme

Students for the PhD degree will be required to spend a minimum of three years for full-time studies and a maximum of five years. Candidates for the part-time programme must provide evidence that they will be available for attendance at courses and for regular consultation with their academic supervisors. They will be required to spend a minimum of five years and a maximum of seven years for the PhD degree.

Course Requirements

- 1] Register for two (2) compulsory courses in General Religious Studies and four (4) courses in the Specialized Area (3 credit units each) and pass same with at least a C grade.
- 2] Register and present two (2) Departmental Seminars (3 credit units each) detailing research orientations in the discipline, and pass same with at least a C grade.
- 3] Pass with at least a C grade, a written comprehensive examination in two (2) papers: one in the major field, the other in a related minor field.
- 4] Present the mandatory seminar to the School of Graduate Studies.
- 5] Present a well-researched dissertation (6 credit units)
- 6] Defend the dissertation at an oral examination before a Panel of Examiners as stipulated by the School of Graduate Studies.

The comprehensive lists of courses for the PhD programme are as listed below:

COURSE DESCRIPTION

Core Compulsory Courses

RCS 901.1 Advanced Theories of Religion

The course aims at outlining and explaining the more recent theoretical developments and propositions of scholars both in the subject proper and in kindred disciplines bearing on Religious Studies. The developments include current findings in the historical method and phenomenology of religion, as well as issues arising from cognitive theories, neurobiological theories and sociological/anthropological theories of religion.

RCS 902.1 Contemporary Themes in Comparative Religion

The course will treat certain themes of current relevance in Religious Studies and interrelated fields. Such issues is Religious language, Religious fundamentalism, Religious life in Secular Societies, Modern Atheism, Religion and Gender Issues; Religion, Development and Ecology; Religion and Globalization/Free market Economy; Religion and Disease/Poverty Alleviation, Religion and Bio-Ethical Issues, Religion and the Mass Media, etc.

AREAS OF SPECIALIZATION

(1) African Indigenous Religion

RCS 903.1 Contemporary Issues in the Study of African Traditional Religion

This is a critical examination of issues about the nomenclature, such as African Traditional Religions, Ancestrlogy and some derogatory terms used in describing the religion. The resilience of the religion in contemporary society as the keeper of the Tradition, Sexuality, Commitment, Family life, Traditional Medicine and Bioethics, and major issues like poverty, war, gender, inequality, governance and corruption will also be studies from A. T. R. perspectives.

RCS 904 Symbolism in African Traditional Religion

This course investigates the nature and functions of symbols and signs, myths and rituals in religious beliefs and organizations. It also examines symbolic forms and processes of rites of passage and festivals; Symbolism of some religious and cultural events, symbolic religious communication such as colour, numerology, seasons and astrology.

RCS 905.1 Seminar

Presentation of academic seminar detailing research orientations in the discipline.

RCS 906.2 Phenomenology of Religion and African Traditional Religion in the Diaspora

This course deals with the study of the world major religions in a comparative manner within the context and framework of African Traditional Religion on one another and on man. The course also examines the development and practice of African Traditional Religion among the African Americans, particularly those in Brazil, Cuba, Mexico and the Caribbean.

RCS 907.2 African Culture and Elements of Worship in African Traditional Religion

This course is a comparative investigation of the African culture with examples from major cultures, highlighting their ideological, philosophical, anthropological practices and ways of life of the people. This course also studies the meaning and purpose of worship; types and occasions of worship; sacrifice. Different types of Divination and Sacrifice as well as the purpose and significance of confession in the liturgy are also examined.

RCS 908.2 Seminar

Presentation of academic seminar paper detailing research orientations in the discipline.

RCS 909.2 Dissertation

Completed dissertations in respect of the programme shall be submitted at least three months before the stipulated completion date which should correspond to the date of the oral examination. A candidate for the degree shall be required to defend the dissertation at an oral examination before a panel of Examiners as stipulated by College of Graduate Studies.

(2) Biblical Studies

The Old Testament

RCS 903.1 Methods and perspectives in Old Testament Studies

The focus of this course is building interpretative skills. In addition to learning and applying critical methods and perspectives to various texts, students will also examine the philosophical and theological presuppositions of the methods and perspectives. Students will consider issues relating to the interpretation of the text, such as the canonical process, the authority of the text, the relationship of the Old Testament to the New, History of Old Testament, Biblical Criticism; methods and perspectives of the Old Testament: textual criticism, source criticism, form criticism and traditional history; reduction criticism, canonical criticism, rhetorical criticism, narrative criticism, psychological criticism, socio-scientific criticism, postmodernist criticism. The course will end with a review of notable Old Testament Biblical critics.

RCS 904.1 Deuteronomistic History and Theology

The course will involve an intensive examination of, as well as an attempt to evaluate the major theories concerning the composition and history of the Deuteronomistic history from North (1943) to the present; a consideration of the principal themes of Deuteronomistic theology, e.g. the Deuteronomist and his materials, basic principles and features of the Deuteronomist, covenant, Yahwehism, cult, land, etc.

RCS 905.1 Seminar

Presentation of academic seminar paper detailing research orientations in the discipline.

RCS 906.2 Prophetic Movement in Israel

This course is aimed at exposing the origins and development of the Prophetic Movement in Israel, paying attention to their presence in the Historical Books and in the Prophets. It highlights the following areas:

- (a) Historical origin, nature and development of Prophecy in Israel and a reading of some books of the Major and Minor Prophets (e.g. Isaiah, Jeremiah, Ezekiel, Amos, Hosea, etc.).
- (b) The cycles of Prophetism in Israel.
- (c) The role of prophecy in Israelite society from the point of view of the Covenant.
- (d) The relevance of Prophetism in African Society.

RCS 907.2 Wisdom Literature

The course discusses Ancient Near-Eastern background, sources, origin and principal genres of Wisdom Literature in the Old Testament; Structural and stylistic analysis of selected passages; Development of principal themes, e.g. God perceived through nature, individual retribution, the nature of wisdom, Wisdom literature and proverbs in Africa, etc.

RCS 908.2 Seminar

Presentation of academic seminar paper detailing research orientations in the discipline.

RCS 909.2 Dissertation

Completed dissertations in respect of the programme shall be submitted at least three months before the stipulated completion date, which should correspond to the date of the oral examination. A candidate for the degree shall be required to defend the dissertation at an oral examination before a Panel of Examiners as stipulated by the School of Graduate Studies.

The New Testament

RCS 903.1 Critical Problems and Methods

The course studies the synoptic problem, Relation between the Synoptic Gospels and the Fourth Gospel; Relation between the Acts of the Apostles and Paul's letters; background to Paul's letters; Third World Theologies; Contemporary Theological Issues (Gay, Stem Cell Research and Anglicanism and the Global South, etc);

Pentecostalism; Interpretation of the New Testament in African context.

RCS 904.1 Texts and Canon of the New Testament

The course examines the earliest Texts of the New Testament; types of texts versions and quotations: Principles and Methods of Textual Criticism (History and Exegetical methods); Formation of the Canon of New Testament (Apocryphal Gospels Polycarp, 1 Clement, Shepherd of Hermas, Epistle of Barnabas, and Didache); Apologetic, Marcionite Prologue, Muratorian Canon, Wisdom of Solomon; Early History of Undisputed Books (Hebrews, Apocalypse, Epistle of James, Marcion and Tetian, etc).

RCS 905.1 Seminar

Presentation of academic seminar paper detailing research orientations in the discipline.

RCS 906.2 Johannine Literature and Hebrews

The course studies the structure, source, authorship and purpose of John's gospel; Johannine Epistles; The Epistle to the Hebrews (Exegesis and theology, Problem and Structure, Style and Kingship characteristics; Study of the theology and Ethics of the synoptic Gospels).

RCS 907.2 Paul's Theology and the Resurrection of Jesus in the New Testament

The course examines the basic features of Pauline mission, nature and polity of the church as well as ethics in Paul's theology; The Resurrection of Jesus in the gospel tradition and apostolic interpretation with particular reference to Paul (Appearances, Bodily Resurrection, Fable of the Empty Tomb, etc); The Resurrection and Reincarnation in the African context.

RCS 908.2 Seminar

Presentation of academic seminar paper detailing research orientations in the discipline.

RCS 909.2 Dissertation

Completed dissertations in respect of the programme shall be submitted at least three months before the stipulated completion date, which should correspond to the date of the oral examination. A candidate for the degree shall be required to defend the dissertation at an oral examination before a Panel of Examiners as stipulated by the School of Graduate Studies.

(3) Church History

RCS 903.1 Controversies and the Early Church Councils

The course traces the origin of the early Church controversies and their impact on the Church in Africa, the roles played by various Church Councils, Nicea (323 AD, and Chalcedon (451 AD) in resolving the controversies as well as the legacy inherited from the decisions of these Councils by the Church.

RCS 904.1 The Reformation and the Counter Reformation

The purpose of the course is to examine the History of Christianity with special reference to the rise of Protestantism and Protestant theology. The course also examines the efforts of the Roman Catholic Church to deal with the Protestant Reformation.

RCS 905.1 Seminar

Presentation of academic seminar paper detailing research orientations in the discipline.

RCS 906.2 Christianity in Africa

The purpose of this course is to examine the history of Christianity in Africa with special reference to its operation within the secular structures in Africa since its inception. The following topics will thus constitute the focus of the study: The characteristic features of the origin of Christianity in Africa; the missionary factor with emphasis on the dynamics of mission expansion, mission policies and practices; the missions, state and education; Christianity and nationalism; the missions and colonialism/imperialism; the church in socio-political crises in Africa; African responses to Christian missions; the mission and the rise of religious independence in Africa.

RCS 907.2 Jansenism in the Church

Special attention will be devoted to Jansenism as a generic term used to describe a certain type of religious principle and social behaviour in Europe during the seventeenth and eighteenth centuries. The course discusses Jansenism as a coherent movement, evolving from mysticism to revolt and from resistance to organized revolution. The course seeks to approach the issue by reconstructing the different aspects of Jansenism as they have been observed in the religious history of the period and in today's Church History.

RCS 908.2 Seminar

Presentation of academic seminar paper detailing research orientations in the discipline.

RCS 909.2 Dissertation

Completed dissertations in respect of the programme shall be submitted at least three months before the

stipulated completion date, which should correspond to the date of the oral examination. A candidate for the degree shall be required to defend the dissertation at an oral examination before a Panel of Examiners as stipulated by the School of Graduate Studies.

(4) Islamic Studies

RCS 903.1 Heresiology

The objective of the course is to clarify the foundational principle in Islam as a call to unity and firm adherence to the Qur'an and Sunnah, emphasizing that division is always the product of extremism and deviant thought. Awareness of ancient sects which appeared in Muslim history enables the students to understand the present and the historical roots of contemporary sects. The course also provides students with a historical background of roles played by deviant sects during Islamic history and reasons for the appearance of sects. The groups to be examined include Khaarijites: their origin, opinions, and sub-sects; Shi'ites: Twelvers, Zaydites, Ismailites; Baatinites, past and present; Qaramantians, Babakites, Nusairites, Druze, Bahai, Qadianites. The scholastic sects: origins and teachings; including Jabrites, Qadarites, Murji'ites, Mu'tazilites, Ash'arites and Maatureedites.

RCS 904.1 Objectives and Goals of Shari'ah (Maqaasid Ash-Shari'ah)

The course examines the concept of Maqaasid alShari'ah, identifying the importance. The relationship between Maqaasid and Fiqh, Emergence, development, and analysis of main documented work in the domain; Ways of identifying the goals of Shari'ah. Kinds of goals: General and specific goals, comprehensive and partial goals. Relationship between bases of jurisprudence and Public Interest/Unrestricted Interest. Peculiarities of public interest/unrestricted interest. Steps/Stages of goals of Shariah according to its degree: essentials/ necessities (Daruriyyah), embellishment/comforts (Hajiyyat) and complementary/ Luxuries (Tashniyyat). The course concludes with goal of the Legislator in establishing the Shari'ah and the importance [in] prioritizing benefits, balancing, determining the more correct when benefits conflict.

RCS 905.1 Seminar

Presentation of academic seminar paper detailing research orientations in the discipline.

RCS 906.2 Ethics in Islam

The course examines ethics and the basis of ethical teachings in Islam. The Qualities of believers in Qur'an, Muslim ethical teachings from Qur'an and Hadith, Muslim ethical teachings with reference to the work of al-Ghazali; Muslim and ethical issues in the Modern Age; Cloning, Euthanasia, suicide, capital punishment. Islam and Public life; transparency, accountability, justice, power and leadership, human rights/injustice, rule of law and the problem of absolute/dictatorial rulers among Muslim states; Ethical writings of Maududi and contemporary revivalist movements.

RCS 907.2 Islam and Gender Studies in Africa

The place of gender in Islam, Humanity from the same source, equality of the two sexes before Allah, the Prophet examples and teachings on women in Islam; Modesty and Hijab of women. Feminism, gender and Islam, role of women, men in Islamic society, women education, Muslim women and Public life; freedom and liberty within Islam; family planning, contraception and Muslim women; Gender and discrimination; Polygyny in Islam, female circumcision and child marriage; Muslim women domestic violence; adultery and rape laws, women voices and Islamic Movements in Africa, Muslim Women organization and Islamic Activism in Sub-Saharan Africa.

RCS 908.2 Seminar

Presentation of academic seminar paper detailing research orientations in the discipline.

RCS 909.2 Dissertation

Completed dissertations in respect of the programme shall be submitted at least three months before the stipulated completion date, which should correspond to the date of the oral examination. A candidate for the degree shall be required to defend the dissertation at an oral examination before a Panel of Examiners as stipulated by the School of Graduate Studies.

(5) Religious Ethics

RCS 903.1 Social Theories of Religion and Contemporary Moral Issues

The course examines the religious theories of Comte, Marx, Durkheim, Weber and Freud as related to the meanings and functions of religion in society. It seeks to appropriate their insights as they apply to social development in Africa. The course also considers specific moral issues in areas of sexuality, unity, social justice, and bioethics within the context of Christian moral theology. Selected issues in personal and social morality will be

addressed within a framework of traditional and contemporary ethical teachings.

RCS 904.1 Religious Economy and Business Ethics in a Religiously Plural Society

The course is a sociological analysis of forms of the religious economy in a religiously plural society. Their foreign and local sources with special attention to the doctrine of prosperity in relation to spirituality, authority and power, will be examined. The course is also an analysis of the religious ideas and practices as they relate to production, distribution and marketing of goods and services. The study examines the effect of the religious beliefs and attitudes on trade and commerce. Attention will be given to the issues of the immoral practices in business.

RCS 905.1 Seminar

Presentation of academic seminar paper detailing research orientations in the discipline.

RCS 906.2 Ethics and the Natural Law

The course will investigate the development of natural law thinking in Christian moral theology. After the study of the pre-Thomistic traditions in natural law thinking, it will focus on the work of St. Thomas, the shift in natural law thinking in such writers as Duns Scotus and Francis Suarez, and it will then take up major twentieth century developments in natural law thinking, including a discussion of natural law and the contemporary discussion among Christian authors in the natural law.

RCS 907.2 Virtue and the Religious Life

This course will begin with an investigation of the meaning of virtue in Aristotle's Nicomachean Ethics. It will then focus on the teaching of St. Thomas Aquinas on virtue in contemporary moral thought, with attention to the work of a. McIntyre, S. Hauerwas, G. Meilaender, and G. Grisez among others.

RCS 908.2 Seminar

Presentation of academic seminar paper detailing research orientations in the discipline.

RCS 909.2 Dissertation

Completed dissertations in respect of the programme shall be submitted at least three months before the stipulated completion date, which should correspond to the date of the oral examination. A candidate for the degree shall be required to defend the dissertation at an oral examination before a Panel of

Examiners as stipulated by the School of Graduate Studies.

(6) Sociology of Religion

RCS 903.1 Religion and the Interaction of Social Institutions of Society

This is a comprehensive study of the religious content and understandings between religion and other institutions, structures and systems in different religious and spheres of the world. Emphasis will be on the following main and sub-institutions of society: Religion and economic institutions; Religion and political systems; judiciary, search monarchy/kingship, marriage and family, secret societies; Health, welfare institutions, age grade etc.

RCS 904.1 Religion, Culture and Gender Studies

This course is aimed at using religion to bring women into critical focus. However, our emphasis will be on African women theories of gender and sexuality; United Nations and Women Development; African concept and World View on sexuality; Culture and Women; values, status, labels and stereotypes; Cultural institutions of women's honour, dignity and of denigration of women in world religions; Women in African political economy: traditional and modern; women's protest; African women and modern gender ideals.

RCS 905.1 Seminar

Presentation of academic seminar paper detailing research orientations in the discipline.

RCS 906.2 Issues in Sociology of Religion

This is a thematic study of selected theses and issues in sociological study of religion. Some of the issues include Liberation theology; religion and environment (ecotheology), religion and stratification, religious proliferation, prosperity preaching, mass media evangelism, religion and crime in society; social change, revivalism, fundamentalism and fanaticism in modern society. The course also includes sociological analysis of selected religious issues such as ritual/sacrifice, prayer, the sacred, religion and symbolic communication, functional theories of myth in religious societies.

RCS 907.2 Religion and Cultural Tourism

This course is a study of the interplay between religion and cultural tourism, with emphasis on Africa. Issues to be discussed are; the concept and content of cultural tourism; relationship between religion and culture; culture and tourism. Religion and tourism; policy, planning and strategies in cultural tourism; cultural tourism and culture

conflict (culture shock, religious arrogance etc.), religious festivals and cultural tourism research and forecast; cultural tourism services and ethics in African culture; Human relation strategies: cultural tourism and community relations; organization and management principles; cultural revival and community development (case studies like the Arugungun Festival; the Oshogbo Cline, Ifa Divination etc are discussed); Culture and development; UNESCO and World Tourism Organization.

RCS 908.2 Seminar

Presentation of academic seminar paper detailing research orientations in the discipline.

RCS 909.2 Dissertation

Completed dissertations in respect of the programme shall be submitted at least three months before the stipulated completion date, which should correspond to the date of the oral examination. A candidate for the degree shall be required to defend the dissertation at an oral examination before a Panel of Examiners as stipulated by the School of Graduate Studies.

(7) Philosophy of Religion

RCS 903.1 Philosophy of Religion

This course is designed to provide an insight into the freewill debate from its beginning to the present stage. It will examine the works of Alvin Planting, Ninian Smart, J. L. Mackie and Antony Flew. There will be an attempt to solve some of the problems. There also be a close examination of the problems we are faced with when we try to reconcile religion and philosophy.

RCS 904.1 Metaphysical Issues in Religion

Metaphysical issues in religion are raised in this course. These include miracles, mythology, resurrection, the soul, and reincarnation. Witchcraft and allied beliefs are examined and their implications for religion discussed.

RCS 905.1 Seminar

Presentation of academic seminar paper detailing research orientations in the discipline.

RCS 906.2 Religion and Science in Contemporary Society

The study traces the history of the contact of religion with science. It also examines what caused the strain in relationship in the last two centuries, and the role each played in their mutual development and interaction. A few of the new areas of contact between religion and science are discussed. This will

include such topics as cloning, transplant, blood transfusion, test-tube babies, etc.

RCS 907.2 The Logic and Consequences of Prosperity Preaching

The course is a philosophical examination of the premises and arguments leading to prosperity teaching and the consequences for the message of religions as well as for public and private morality;

RCS 908.2 Seminar

Presentation of academic seminar paper detailing research orientations in the discipline.

RCS 909.2 Dissertation

Completed dissertations in respect of the programme shall be submitted at least three months before the stipulated completion date, which should correspond to the date of the oral examination. A candidate for the degree shall be required to defend the dissertation at an oral examination before a Panel of Examiners as stipulated by the College of Graduate Studies.

DEPARTMENT OF HISTORY & DIPLOMATIC STUDIES

INTRODUCTION

The Department of History and Diplomatic Studies occupies a pride of place in the annals of the University of Port Harcourt. It is one of the pioneer departments of the University. Again, it had the rare privilege of being the department into which the very first student of the University was admitted in 1976.

In the beginning, the programme was domiciled in the defunct School of Humanities with a Director of Studies administering it. In 1982, however, when the school system was discontinued and the Faculty/Department system was introduced by Senate, it metamorphosed into the Department of History. A further programme review in 2002 brought in the Diplomacy component, and thus, the change of nomenclature to the Department of History and Diplomatic Studies. It is important to note that from its inception, the Department consciously encouraged and promoted an inter-disciplinary approach to the study of History.

At its inception, this Department ran a graduate programme leading to the Masters and Doctorate Degrees in African History with emphasis on (a) *History of Nigerian Communities*, and (b) *History of West Africa*. Against the backdrop of recent realities this was no longer good enough and realistic as it led to the underutilization of the expertise and experience of the staff of the Department. It was the realization of this that made the Department to change its name and focus in 2002 from 'History' to 'History & Diplomatic Studies'. Its graduate programme was also reviewed in 2010 to make it more specialised and socially relevant, viz:

- (a) Post-Graduate Diploma in History and Diplomacy (PGDHD)
- (b) MA and PhD in Diplomacy
- (c) MA and PhD in Niger Delta Studies
- (d) MA and PhD in African History and Development Studies
- (e) MA and PhD in Cultural Heritage Management.

We have been able to admit only two sets of students into the above programmes, the first among which is concluding their studies.

In compliance, however, with the *'NUC Benchmark Minimum Academic Standard for Post Graduate Programmes in History and its variance'* over which we have little or no choice, we submit herewith a new, but in our view, not a very progressive programme.

POSTGRADUATE PROGRAMMES IN HISTORY AND ITS VARIANT

The broad view of the Benchmark statements indicate the minimum requirements which each University in Nigeria should attain in respect of the MA/PhD programmes in History and its variants

PHILOSOPHY

The M.A/PhD programme in History and Diplomatic Studies are designed to produce highly qualified and competent historians and experts in the discipline. It is intended that the products will be equipped with necessary skills with which to undertake critical analyses of issues to meet the challenges of modern society in a globalized world.

AIM AND OBJECTIVES

The aim of the M.A and Ph.D Programmes in History and Diplomatic Studies are:

- i) Providing students with requisite historical knowledge, highly developed sense of balance as well as considerable breadth and depth of knowledge of the local, national, African and international communities and environments,
- ii) To enable the students to develop the spirit of enquiry
- iii) To train the students in critical and rational thinking and judgment
- iv) To produce students who can assume leadership roles in the task of nation-building, in teaching and research, in policy decision making, in administration and management of affairs as well as in international and foreign relations
- v) To enable students to avail themselves of the lessons of history and apply them as appropriate to resolving national developmental challenges.

ADMISSION REQUIREMENTS

Basic Admission Requirements

- (a) The criteria for admission into the M.A. Programme will be as follows:
 - i) Candidates for the M.A. programme in History or its variants must have five (5) credit passes including English, History and/or Government at the 'O' Level as basic requirement.
 - ii) Candidates with Bachelors degree in Arts (BA) in History, History and International Studies, History and Diplomatic Studies, History and International Relations as well as History and Strategic Studies. The candidates must be graduates of approved

and recognized Universities, and must obtain a minimum of Second Class Lower Division.

- iii) Candidates must take and pass a qualifying examination administered by the University.

Ph.D PROGRAMME

Only candidates with a good Master's degree in History or its variants from a recognized* University, with a CGPA not below 3.5 on a five-point scale. Candidates who did not make up to 3.5 will be required to register for the M.phil/Ph.D programme. Such candidates must present two seminars and a research-proposal for grading and must score a minimum CGPA of 3.5 before preceding to the Ph.D, otherwise the M.phil Degree should be awarded upon the submission of the thesis. The thesis should be examined following the procedure: of Ph.D thesis.

AREAS OF SPECIALIZATION

Areas of specialization in which candidates could specialize include:

- Social and Political History
- Economic History
- Diplomacy & International Relations

DURATION OF PROGRAMMES

- a) M.A.**
- i) The full time M.A. programme would run for a minimum of three semesters (the final semester being fully devoted to writing the thesis) and a maximum of four semesters.
- ii) The Part-time M.A. programme would run for a minimum of six semesters and maximum of eight semesters.
- b) Ph.D**
- i) The full time Ph.D. programme would run for a minimum of six semesters and a maximum of eight semesters,
- ii) The part-time Ph.D programme would run for a minimum of eight semesters and a maximum of ten semesters.

REQUIREMENTS FOR GRADUATION

(a) M.A Programme

To be awarded the M.A. degree, candidates must have taken and passed the prescribed number of compulsory and required courses selected from the provided list, and totaling 30 units as follows:

Core Courses	24 units
Dissertation	6 units
Total	30 units

In all cases, M.A. students must write and submit to the Department a thesis duly supervised by a lecturer

in the Department whose qualification is not below the Ph.D. degree. Such a thesis must be defended before an external examiner nominated by the Department and appointed by Senate for that purpose.

b) Ph.D. Programme

To graduate, all Ph.D. candidates must take and pass all the requisite courses as prescribed in the Ph.D course list below totaling 27 units as follows: Core Courses 18 units (including Seminars I and II and two other compulsory courses)

Thesis	9 units
Total	27 unit

Every Ph.D. candidate must submit a Dissertation on a chosen and approved topic, supervised by a member of staff whose qualification is not below the Ph.D, and who is not lower than Senior Lecturer in rank.

The Ph.D. thesis must be defended before an external examiner duly nominated for that purpose and appointed by Senate.

POST-GRADUATE DIPLOMA IN HISTORY AND DIPLOMACY

(i) Objectives and Target

In recent years, there have been a number of non-history graduates applying to our graduate programmes both at the MA and PhD levels. Most of them have been denied admission due to their non-history background. This programme is designed, therefore, to provide non graduates of History & Diplomatic Studies with the basic essentials of History and Diplomacy within 12 calendar months. The aim is not only to prepare and qualify them for a Masters of Arts degree in Diplomacy but also to equip them for careers in which a work knowledge of History and Diplomacy is essential accordingly, the graduates in the Humanities, Social Sciences, Education, Law and the Management Sciences will find the programme beneficial. Among the additional targeted professionals expected to benefit from the programme are Protocol Officers in the Public Service, diplomatic correspondents in media houses, career diplomats and aspiring diplomats.

(ii) Qualification for Admission:

To be eligible for admission into the Post-Graduate Diploma programme in History and Diplomacy, a candidate must have good honour degree in the Humanities, Social Sciences, Education, Law and the Management Sciences.

(iii) Duration:

The Post-Graduate Diploma in History and Diplomacy is designed for 12 calendar months full time.

PGD COURSE DESCRIPTIONS

FIRST SEMESTER

HDS 700.1 THEMES AND METHODS IN PRE-COLONIAL AFRICAN HISTORY

This is a survey course designed to familiarize the students with History as an academic discipline. The areas of emphasis will include issues such as the evolution of historical thought, the nature of History, methods of history and themes in the pre-colonial past, among others.

HDS 701.1 INTRODUCTION TO DIPLOMACY

The course is designed to introduce them to diplomacy as an adjunct discipline of history. As a result, it will also trace the origins of diplomacy from ancient to modern times. Students will be familiarized with the basic concepts and institutions through which foreign policy is executed.

HDS 702.1 FUNDAMENTAL FRENCH FOR DIPLOMATIC STUDIES

This is a beginner's course in French language. It is essentially communication-based, dwelling on basic French grammar and general vocabulary build-up. Using simple French texts with wide

thematic scope, students learn to read, speak and write.

HDS 703.1 THE POLITICAL AND ECONOMIC DEVELOPMENT OF AFRICA SINCE 1900:

The course seeks to explain why development seems to have eluded the African continent. The course will examine the historical roots of Africa's underdevelopment since its incorporation into the World economic system, as well as those internal factors within the African continent, such as the problems of apartheid and the liberation movements, which contributed to creating the crisis of development.

HDS 704.1 INTERNATIONAL LAW, SECURITY AND DIPLOMACY

This course seeks to examine the threat to law and security, international. It will examine the beginning of the arms race after the Second World War and the various efforts to reduce strategic arms. The course will also examine how the quest for national identity and religion constitute a threat to international security. The attempts of the US and UN to control nuclear proliferation and the consequences of these will also be examined.

SECOND SEMESTER

HDS 705.2 THE NORTH AND SOUTH IN WORLD POLITICS AND DIPLOMACY

This is an introductory course to international political economy. The course will examine how unequal exchange brought about a basic division of the world economy into a rich north and poor south and how the North uses its economic power to achieve its political goals in international relations. Other issues to be examined include trade, investment and monetary relations amongst the industrialized countries.

HDS706.2 POLITICAL DEVELOPMENTS IN NIGERIA SINCE 1900

This course deals with the major themes in Nigerian political history. These include the amalgamation, constitutional reforms, the nationalist movement, the formation of political parties, independence, military intervention, the civil war and States creation.

HDS 707.2 FOREIGN POLICY FORMULATIONS AND IMPLEMENTATIONS IN NIGERIA SINCE INDEPENDENCE

What are the objectives of Nigerian foreign policies, and what are the elements which influence policy making in Nigeria? This course will examine these factors and related questions

including the interest which African states seek to secure in international relations, both within and outside the continent. The foreign policy machinery in Nigeria under civil and military regimes will also be discussed, as well as the role of the bureaucracy in the policy making process.

HDS 708.2 INTERNATIONAL ORGANIZATIONS AND AGREEMENTS

This course seeks to teach students how world and regional organizations function in the conduct of diplomacy, as well as the role, privileges and immunities of international officials. Students will be taught the place of agreements in the conduct of diplomacy, the meaning of treaties and conventions; how agreements can be drawn up and ratified, as well as other technical matters pertaining thereto. Others are the entire spectrum of the functions and role of consular officials, how they are appointed as well as their immunities.

HDS 709.2 HUMAN RIGHTS AND ENVIRONMENT IN CONTEMPORARY DIPLOMACY

The protection of human rights and the natural environment have become key issues in contemporary international relations and diplomacy. Definitions of human rights have transcended the traditional notion of civil liberties and self-determination to include a widening range of economic, political and social rights. At the same time critical disappearance of an increasing range of plant and animal species, the rapid consumption raising concerns about the environment to new levels. This course deals with this wide spectrum of human rights and environmental issues. It examines how these issues are being played out in the diplomatic arena where national interests have often undermined the efforts to forge a common consensus.

M.SC COURSE DESCRIPTION

FIRST SEMESTER

HDS. 800.1 THEORIES AND METHODS OF HISTORY

This course takes a critical look at the rationale behind the various approaches adopted by historians in different societies and epochs, highlighting their strengths and weaknesses. It will also examine the fundamental questions of objectivity and truth in historical research. The potentials and limitations of the disciplines related to history, including archaeology, paleontology, biology, historical linguistics, the social sciences, statistics and computer science for historical reconstruction would also be highlighted. The course will also introduce the students to the essentials of Historical and Social

(environmental) Impact Assessment methodology, the use of archival sources, and the issues of documentation and copyright.

HDS 801.1 ADVANCED STUDY IN PHILOSOPHY OF HISTORY

The course examines the meaning, nature, significance and relevance of history to society. Topics like ultimate history, objectivity in history, causation in history, moral judgment in history, history as science and/or art as well as the history of history writing and the development of history as a discipline will be discussed and examined.

HDS 802.1 COLONIALISM, NATIONALISM AND INDEPENDENCE IN AFRICA

The course takes a critical look at the impact of colonialism in Africa; the internal and external factors of African nationalism nationalist movements in Africa: the philosophy of African nationalist leaders like Kwame Nkrumah, Nnamdi Azikiwe, Ahmed Ben Bella, Gamal Abdel Nasser and Houphouet-Boigny; nationalism in settler and non-settler colonies and attainment of independence by African countries.

HDS 803.1 EVOLUTION OF LIBERAL DEMOCRATIC GOVERNMENTS

The course examines the origins of liberal democratic forms of government namely: Parliamentary form of government practised in Great Britain and France and the Presidential system practised in USA and some African countries.

HDS 804.1 RELIGION AND THE STATE IN AFRICAN HISTORY

The course deals with the issue of religion and the State in Africa in time perspective. Indigenous religious traditions and beliefs, Islam and Christianity are the major religions to be examined.

SECOND SEMESTER

HDS 805.2 NATION-BUILDING IN POST-INDEPENDENCE AFRICA

The course examines approaches to nation-building in global comparative perspective. Case studies of plural societies illustrate how particular peoples and nations have dealt with the challenges of nation-building, drawing lessons for African countries. The problem of nation-building examined in this course include: the party systems; the problems of one-party system in a democratic polity; post-independence African political **economy**, **foreign policy issues**; **problems of political** stability, ethnic national boundaries; bilateral and multilateral relationships in Africa.

HDS 806.2 THE BLACKS IN DIASPORA

The focus here is on the history of Africans in the Americas. The course will specifically examine the trans-Atlantic slave trade, comparison of the status and treatment of slaves and the mulattoes in British French Spanish and Portuguese colonies; the abolition of the **slave** trade and slavery; the civil rights movement in the United States; African Americans and the political and economic development of Africa and Africa in America today,

HDS 807.2 THE MILITARY AND POLITICS IN NIGERIA

The course discusses military intervention and **Governance in Nigeria. Topics discussed here include** the various military' regimes in Nigeria beginning with **The** Major Nzeogwu Coup of 1966 to the regime of General Sani Abacha. Why each military regime came to **power**, what they achieved as well as their failures are highlighted; finally the opinion that military is an aberration and undemocratic is popularly expressed.

HDS 808.2 URBAN HISTORY OF AFRICA

The course deals with urbanization from prehistoric **time** to the present. It highlights changes wrought by technology, trade, warfare, migrations, imperialism and **other** factors. Issues to be examined include the **economy**, politics and social conditions in African cities, and the rise and challenge of mega-cities in Africa

HDS 809.2 STUDIES IN STRATEGIC ISSUES SINCE THE 20TH CENTURY

The course deals with events and issues in the 20th and 20th centuries that are of strategic relevance. The contributions of Hitler, Mao Zedong, Alfred Mahan, Thomas Schelling and Robert McNamara on the subject will be examined. Such modern concepts and theories as game theory, theory of conflict and conflict resolution, deterrent strategic planning, defence policies, foreign policy analysis and the role of science and technology in strategic thinking and planning will be discussed. In addition an attempt will be made to apply the various theories to selected case studies.

810.2 M.A. THESIS

The topic chosen by the candidate will be researched under supervision.

COURSE DESCRIPTION

FIRST SEMESTER

HDS. 800.1 THEORIES AND METHODS OF HISTORY

This course takes a critical look at the rationale behind the various approaches adopted by historians in different societies and epochs, high

lighting their strengths and weaknesses. It will also examine the fundamental questions of objectivity and truth in historical research. The potentials and limitations of the disciplines related to history, including archaeology, paleontology, biology, historical linguistics, the social sciences, statistics and computer science for historical reconstruction would also be highlighted. The course will also introduce the students to the essentials of Historical and Social (environmental) Impact Assessment methodology, the use of archival sources, and the issues of documentation and copyright,

DEPARTMENT OF LINGUISTICS

GRADUATE PROGRAMMES

The department offers the following graduate programmes:

- Postgraduate Diploma in Linguistics
- MA and PhD Linguistics
- MA and PhD Linguistics /Igbo, Ikwere, Izon, Kalabari, Kana

POSTGRADUATE DIPLOMA IN LINGUISTICS

Aim and Objectives

The programme aims to provide the equivalent of the Linguistics content of the four-year

undergraduate programme in a single intensive year. It is a good qualification for any career that recognizes the central role of communication in all aspects of our everyday life. The programme is intended for the following categories of people:

- Graduates in a language subject or Education or any other discipline wishing to acquire basic linguistic knowledge in order to work on the development of a Nigerian Language;
- Language teachers wishing to strengthen their linguistics background in order to teach English;
- Those wishing to pursue a career in Linguistics Studies, e.g. professional speech writers.
- Editors, book publishers, press and company secretaries;
- Civil servants in the special education unit of the Ministry of Education.
- Information officers, etc.

Qualifications for admission

To be eligible for admission into the programme, a candidate must have a good honours degree in any field from any recognized university. Candidates with HND Upper Credit are also eligible for admission into the PGD programme.

Programme structure and content

The programme is designed for one academic session of course work comprising two (2) semesters. **A student is to register for 15 Credit Units per semester and pass them with grade of at least C.** Candidates who fail to meet the requirements for graduation may be allowed at most one academic session to repeat the courses they failed.

Classification of Certificate:

The classification is as follows:

Class	Cumulative grade Point Average (CGPA)
Distinction	4.60 – 5.00
Credit	3.80 – 4.59
Merit	3.50 – 3.79
Pass	3.00 – 3.49

List of Courses for the Postgraduate Diploma

First Semester

Course Code	Course Description	Credit Unit
LIN 700.1	Language and Linguistics	3
LIN 701.1	Basic Phonetics	3
LIN 702.1	Basic Phonology	3
LIN 703.1	Basic Morphology	3
LIN 704.1	Sociolinguistics	3

Second Semester

Course Code	Course Description	Credit Unit
LIN 720.2	Basic Syntax	3
LIN 721.2	Basic semantics	3
LIN 722.2	Study of a Nigerian Language	3
LIN 723.2	Applied Linguistics	3
LIN 724.2	Stylistics	3

COURSE DESCRIPTIONS

LIN 700.1 – Language and Linguistics

The course will focus on the uniqueness of human language and linguistics as the science of language. Lectures will cover basic characteristics of language, the organs of speech production, the analysis and description of human speech sounds, the structure of words, phrases and sentences, language and meaning, language variation from a purely synchronic point of view; the social considerations that influence language use, language variation from a diachronic perspective; methods for establishing genetic relationship among lects; language and human intelligence, language and artificial intelligence, etc. The close relationship between language and linguistics will be highlighted.

LIN 701.1 – Basic Phonetics

This course covers main issues of phonetic theory from a study of the different organs adapted for speech sound production, the respiratory system in speech to the ways in which they are co-ordinated to produce speech sounds; the main acoustic features of speech sounds and how these features are perceived by humans. The traditional description and classification of speech sounds, tones and other suprasegmentals. Implications for models of speech production for phonological theory will also be considered. Use of instruments in phonetics.

LIN 702.1 – Basic Phonology

This course covers a study of the basic principles of phonemic analysis; phonemes in minimal pairs, etc., allophones in free variation and complementary distribution; interpretation of doubtful segments and sequences; consonants and vowel systems of selected languages and major phonological processes. Students will be taught how to analyze phonological data from different languages; morphological alternation and neutralization; relationship between phonetics and phonology.

LIN 703.1 – Basic Morphology

This course introduces students to understand the structure of word and develop the ability to analyze the structure of different languages. At the end of the course, students should be able to describe the nature of word and different word formation processes.

LIN 704.1 – Sociolinguistics

The students will be acquainted with various concepts in language variation ('language', 'dialect', 'idiolect', 'accent', 'register', etc.). Multilingualism and related concepts ('diglossia', 'code-switching', 'code-mixing'). Language maintenance and shift. Language planning (with focus on the development of Nigerian languages). Indigenous lingua francas. English and Arabic in Nigeria. An overview of the principal theories concerning the origin, development, and sociolinguistic import of pidgin and creole languages. Basic characteristics of pidgins. More topics will be selected from the following: monogenesis, polygenesis, and hybridization; language contact and the influence of basilect and acrolect; pidginization, creolization and decreolization; linguistic universals, linguistic simplification and expansion, etc.

LIN 720.2 – Basic Syntax

This course introduces students to the fundamentals of syntax as a level of linguistics concerned with the study of the structure of phrases and sentences. Lectures will focus on the task of grammar, levels of grammatical adequacy, competence and performance, word-level categories, phrasal-level categories, intermediate categories, phrase markers, constituent analysis, generative grammar, finite state grammar, phrase structure grammar, transformational generative grammar, simple syntactic argumentation.

LCS 721.2 – Basic Semantics

This course is concerned with the study of meanings of words and sentences. The distinction between sense and reference; the role of meaning in communication; lexical and sentential semantics (e.g. synonymy, polysemy, homonymy, antonymy, ambiguity, paraphrase, entailment, presupposition, etc.); truth-conditional semantics, speech act theory.

LIN 722.2 – Study of a Nigeria Language

This course seeks to remedy the widespread illiteracy in languages which students already speak, and to apply the linguistic principles they are

learning in other courses to these languages. Lectures on general principles will be reinforced by practice in small groups based on the languages represented in the class. Students learn to transcribe their languages, to write them in the current linguistically acceptable orthography, and to analyze their basic grammar. Principles of a good orthography. Application of those principles to the writing of students' languages; vowel phonemes of the languages; phonetic and phonemic vowel charts; writing of vowels and vowel harmony; consonant phonemes of the languages; phonetic and phonemic consonant charts; tone in the languages including level and gliding tones, allotones, down drift and down step, tone classes of nouns and verbs, and tone changes in different environments; word division in writing, including the treatment of compounds, and conventions for the writing of clitics and of assimilated and contracted forms. Basic grammatical structure of the languages; SOV and SVO, position of inflectional markers, noun modifiers, adpositions, and adjuncts. Verbal categories; tense, aspect, perfect, mood, negation, interrogation. Nominal categories; number, gender, noun classes, case, definiteness. Emphasis will be placed on the categories represented in the languages spoken by the class.

LIN 723.2 – Applied Linguistics

The aim of this course is to introduce students to the practical applications of general linguistic theory to other disciplines outside the core area of linguistics, such as second or foreign language teaching, language planning and development, stylistics, lexicology and lexicography, book editing and publishing, mass media, public relations and advertising, communication disorders, etc.

LIN 724.2 – Stylistics

The course equips students with knowledge of the current theories of stylistics, paying particular attention to the place of aesthetics in media production. It will also help the students know the rudiments in book editing and publishing.

3.2 MA and PhD Programmes

Areas of Specialization

a) The following are areas of specialization for MA and PhD Linguistics majors:

- Descriptive Linguistics
- Applied Linguistics (Language Teaching)
- Applied Linguistics (Clinical Linguistics)
- Historical Linguistics

- Sociolinguistics

3.2.1 MA Programmes (Full-time & Part-time)

Admission Requirements: Candidates wishing to enroll in Linguistics must hold at least a Second Class Lower degree or a Merit pass with a CGPA of 3.50 on a 5 point scale in Postgraduate Diploma in Linguistics.

Part-time Registration: Candidates who register on a part-time basis must provide evidence that they:

- are engaged in regular employment,
- can devote a good proportion of their normal working year to their studies, and
- will be available for attendance at courses and for regular consultation with their supervisors.

Duration: The duration of the MA degree programme is 12 months (two semesters of course work plus a long vacation used for the writing of a thesis) for full-time students and 24 months for part-time students. Students who are unable to complete the thesis within the normal period must apply for an extension to the graduate studies Committee.

Degree Requirements: To obtain an MA, students must:

- pass all the registered courses for their programme with a grade of at least C
- present work at the graduate Seminar and participate in seminar discussions, obtaining at least a C grade.
- Submit a thesis of not less than 80 A4 pages, and obtain at least a C grade.

Pass an oral examination in defense of the thesis before a panel of examiners set up in accordance with University regulations.

List of Courses for the MA Programme

FIRST SEMESTER

MA in Linguistics

Course Code	Course Description	Credit Unit
SGS 801.1	ICT and Research Methodology	3
LIN 800.1	Advanced Phonetics	3
LIN 801.1	Advanced Phonology	3
LIN 802.1	Advance Morphology	3
LIN 803.1	Advanced Syntax	3
LIN 804.1	Advanced Semantics	

MA in Linguistics & a Nigerian Language

Course Code	Course Description	Credit Unit
-------------	--------------------	-------------

LIN 800.1	Advanced Phonetics	3
LIN 801.1	Advanced Phonology	3
LIN 802.1	Advanced Morphology	3
LIN 803.1	Advanced Syntax	3
SGS 801.1	ICT and Research Methods	3
LIN 841.1	Advanced Research Methods	3

Any One of the following:

Course Code	Course Description	Credit Unit
EST 801.1	Oral Literature	3
EST 836.2	Literary Theory and Criticism	3

SECOND SEMESTER

MA Linguistics

Course Code	Course Description	Credit Unit
SGS 801.2	Management and Entrepreneurship	3
LIN 841.2	Research Methods	3

Choose any four from the following:

Course Code	Course Description	Credit Unit
LIN 805.2	Sociolinguistics	3
LIN 806.2	Advanced English Grammar	3
LIN 807.2	Language Teaching & Learning	3
LIN 808.2	Language & Style in the Media/Stylistics	3
LIN 809.2	Communication Disorders	3
LIN 810.2	Historical Linguistics	3
LIN 811.2	Cognitive Linguistics	3

MA in Linguistics & A Nigerian Language Option

Course Code	Course Description	Credit Unit
SGS 801.2	Management and Entrepreneurship	3
LIN 841.2	Research Methods	3
Any Four of the following:		
LIN 805.2	Sociolinguistics	3
LIN 821.2	Language Teaching & Learning	3
LIN 826.2	Phonology of a Nigerian Language	3
LIN 827.2	Grammar of a Nigerian Language	3
LIN 828.2	The Development of a Nigerian Language	3

LIN 829.2	Comparative Study of an African Language Family	3
LIN 830.2	Dialectology of a Nigeria Language	3
LIN 831.2	Classification of an African Language Family	3
LIN 832.2	Written Literature in a Nigerian Language	3
LIN 811.2	Cognitive Linguistics	3

Third Semester (For all Options)

Course Code	Course Description	Credit Unit
LIN 840.3	Graduate Research Presentation	3
LIN 850.3	Dissertation	6

COURSE DESCRIPTIONS FOR MA PROGRAMMES

LIN 800.1 Advanced Phonetics: The course exposes students to the principles of articulatory and acoustic phonetics. Its main aim is to introduce students to phonetic fieldwork by teaching them how to carry out articulatory and acoustics analysis of speech sounds, engaged in instrumental methods of phonetic analysis and make empirical observations and theoretical generalizations. At the end of the course, students should be able to apply their knowledge of phonetic fieldwork to various research problems in both phonetics and phonology.

LIN 801.1 Advanced Phonology: This course focuses on the principles of establishing underlying forms predictability, economy, simplicity and naturalness; relating underlying forms to surface forms through phonological processes and rules. Ordering relationship; CV patterns and the association of tones; syllables and syllabification. The course will also involve the treatment of some suprasegmental phenomena such as tone, stress, intonation, etc. An overview of the progress of phonology from the theory of the phoneme through generative autosegmental and CV phonology, lexical phonology, metrical phonology, etc., to experimental phonology.

LIN 802.1 Advanced Morphology: This course focuses on topical issues in morphology. Topics that will be covered include: morphemes (affixes, bases and roots), morphs and allomorphy; word in typological perspective; types of word; inflection and derivation (number, person, verbal extensions, reduplication, compounding, incorporation, back-formation, clipping, conversion, etc.); properties of inflection and derivation; morphological change (pattern loss, coalescence, analogical change, etc.);

clitics and clitic phenomena; problems in isolating clitics; morphology and its relation to phonology and syntax.

LIN 803.1 Advanced Syntax: A study of syntax (within the framework of transformational generative gramme) not merely for its own sake, but also as a demonstration of argumentation in linguistics. A survey of transformational generative grammar from 1957 to the present. Emphasis will be laid on the relevance of the standard theory to subsequent frameworks, such as th the extended standard theory, revised extended standard theory, principles and parameters syntax: government-binding theory, minimalist program, etc. Students will also be encouraged (and guded) to study particular grammatical topics in some detail (e.g. relativization, complementation, serialization, nominalization, conjunctions, adjectives, adverbs, negation, interrogation, etc.).

LIN 804.1 Advanced Semantics: The course will examine various topics in lexical and sentential semantics and pragmatics, with focus on concepts and theories that are relevant to the relationship between syntax and semantics.

LIN 841.1 Advanced Research Methods: The course aims at taking advanced students through the fundamental issues involved in research presentation and the objectives and current approaches to research in Linguistics and social sciences. Differences in style-sheets (e.g. LSA, MLA, APA, etc.) will be examined. The course will be practice-oriented, and each candidate will be required to present a short research proposal applying the techniques they acquired in the course.

LIN 805.2 Sociolinguistics: Different approaches to language study (e.g. language as a stable structural system or language in terms of its relation to social factors); functions of language; the relationship between language variation and change (language loyalty and intelligibility; social and regional dialects; register; pidgins and creoles); language attitudes; bilingual and multilingual situations; diglossia; code-switching; language planning; speech function and speech acts; the structure of discourse, paralinguistic phenomena, research methods.

LIN 806.2 Advanced English Grammar: Building on the contributions of contemporary schools of linguistic theory, the course weeks to provide the kind of advanced academic study of

English grammar that will enable students to operate as well-informed users of descriptive and pedagogic grammars of English in the language-teaching classroom and elsewhere. Topics to be treated in detail include those that present special problems in the teaching of English as a second language or foreign language (e.g. tense and aspect, modals, the article system, phrasal verbs, Concordia relations, etc). The course will also offer individual students an opportunity to remedy the inadequacies of their previous learning of English grammar.

LIN 807.2 Language Teaching & Learning: The focus will be on second language teaching and learning or on mother-tongue teaching (with special focus on the teaching of Nigerian languages). The theories of language acquisition; the psychology of language teaching and learning; second language learning (error analysis, contrastive analysis, interlanguage, models of leaning and second language; course design and syllabus planning; evaluation of language teaching materials and programmes.

LIN 808.2 Language & Style in the Media/Stylistics: The course focuses on the principles and practice of textual analysis (especially media texts; covert communication, ostensive-inferential communication, semiotic and linguistic approaches in the study of style, figures of speech, pictorial metaphor in advertising. Language use in the various media.

LIN 809.2 Communication Disorders: The course presents the neuroanatomical and neurophysiological mechanisms that underlie the human communication process. Individual sections of the course are devoted to the neural mechanisms of speech, hearing and language along with the associated communication disorders. It studies, in particular, disorders associated with cleft, cleft palate/lip and craniofacial anomalies. The practical component involves experience with persons manifesting communication problems on the description of the disorder and assessment techniques with possible intervention strategies; language structure and function as it relates to the normal and variant population.

LIN 810.2 Historical Linguistics: Genetic relationship of languages. Mass comparison and lexicostatistics to establish subgrouping. Processes of phonological change. The comparative method

and the reconstruction of a protolanguage. Analogy and morphological change. Syntactic change. Lexicosemantic change. External influences: borrowing, language shift, pidginization and creolization.

LIN 826.2 Phonology of a Nigerian Language: A phonological study of a particular Nigerian language, relating it to current theories of phonology. Vowels; vowel harmony; consonants; syllable and word structure; tone and intonation; phonological processes.

LIN 827.2 Grammar of a Nigerian Language: A study of the grammar of a Nigerian language, with focus on topics of general typological interest; word classes, grammatical categories associated with nouns and verbs (e.g. gender, modality) sentence types (including verb serialization, relative clauses, causative constructions) word order (phrasal and sentential; basic and derived). Students will be required to apply the knowledge gained in the course to the description of particular grammatical phenomena in languages of their special interest.

LIN 828.2 The Development of a Nigerian Language: This course will relate general principles for language development to a particular Nigerian language. Orthography and its revision. Development of a standard language for writing. Technical terminology. The production of textbooks. Creative writing. Mass media.

LIN 829.2 Comparative Study of an African Language Group: A comparative – historical study of an African language group, applying recognized historical techniques. Lexicostatistics. The comparative method applied to the reconstruction of vowels, consonants and tones. Reconstruction of some major morphological and syntactic structures.

LIN 830.2 Dialectology of a Nigerian Language: The history of the study of dialectology; dialectology and related fields; techniques and methods of dialectology. Designs and uses of dialect atlases. An overview of the modern dialects of a chosen language; major isoglosses and dialect areas; the standard variety. Application of findings of dialectology. Students will design and carry out a small-scale dialect survey.

LIN 831.2 Classification of an African Language Family: History of the classification of the family up to Greenberg. Greenberg's classification. Development since Greenberg. Major

characteristics of the language family and its branches.

LIN 832.2 Written Literature in a Nigeria Language: The course uses specific texts from various genres (poetry, drama and fiction) of literature in a Nigerian language to dramatize the dominant traits of the literature. Attempts are made to point out the indebtedness of the literature to aspects of oral tradition.

LIN 811.2 – Cognitive Linguistics: This course examines language from the point of view of cognitive processes. Theoretical frameworks about language and cognition will be applied to the study of language, thought and culture. Students will learn about systems of conceptual organization through the study of categorization, metaphors, cultural models and grammar. Other topics include representation of space and time and cognitive motivations for language change and language universals. The approach is multi-disciplinary as evidence is drawn from text analysis, language acquisition, language change, psycholinguistic experimentation, and brain imaging, among others.

LIN 840.3 Graduate Research Presentation: The course will be concerned with methods of data collection, presentation and documentation, argumentation/reasoning. Students will be taught the major features of and techniques for academic papers, the differences between LSA,

APA/MLA style-sheets with particular focus on referencing for academic purposes, suitability of existing theories to one's data. At the end of the course, each student is required, with the assistance of a supervisor, to prepare and present a seminar paper before other graduate students and academic staff of the Department. The graduate seminar topic must be related to student's proposed thesis topic. Credit is given for content, presentation, and handling of discussion. Candidates who score below a C in their presentation will be given another chance to re-do the work.

LIN 850.3 Dissertation: The thesis is to present the results of an original research topic. Credit is given for originality, presentation, and use of previous literature in the area.

3.2.2 PhD PROGRAMME (FULL-TIME & PART-TIME)

Admission Requirements: Candidates wishing to enroll in the Communication component must hold

at a Masters degree with a CGPA of at least a CGPA of 3.50 on a 5 point scale in Mass Communication. Communication Studies/Arts. Candidates wishing to enroll in the Linguistics component must possess the same qualifications in Linguistics or a subject with a strong linguistic component. In addition, candidates seeking admission into the PhD programme in the Department must submit to the Departmental graduate Studies Committee a written proposal of a topic of their interest which they must defend before the admission can be granted.

Duration: The duration of the PhD programme is 24 months for full-time students and 36 months for part-time students. Students who are unable to complete the thesis within the normal period must apply for an extension to the Graduate Studies Committee.

Degree Requirements: To obtain a PhD in the Department, students must:

- Pass all the registered courses for their programme with a grade of at least C.
- Pass a comprehensive examination
- Present work at the graduate seminar and participate in seminar discussions, obtaining at least a C grade.
- Present a dissertation of not less than 200 pages to the Department.
- Pass an oral examination in defense of the dissertation before a panel of examiners set up in accordance with University regulations.

Programme Content:

First Year Semester 1

PhD Linguistics

Course Code	Course Description	Credit Unit
LIN 900.1	Topics in Phonetics & Phonology	3
LIN 901.1	Topics in Morphology	3
LIN 902.1	Topics in Syntax	3

COURSE DESCRIPTIONS FOR THE PhD PROGRAMMES

LIN 900.1 Topics in Phonetics & Phonology: This course focuses on areas and concepts in Phonetics and phonology that are difficult for students to grasp. The course is in two parts. The phonetics component will include: the production of glottalic and velaric sound, the nature of labial velar stops, aspiration, and the instrumental investigation of phonetic problems. The phonology component includes a brief review of the principles of phonological analysis, phonological processes, phonological representation and alternations; rule formalization, and rule ordering: feeding order, bleeding order, etc. also to be taught are a review of recent and current approaches to phonology: autosegmental representation of tone, vowel harmony and nasalization; the syllable: CV phonology, lexical phonology, metrical phonology and optimality theory.

LIN 901.1 Topics in Morphology: The course studies topics in morphology with respect to the students' areas of specialization situating them within dominant and current morphological frameworks. In addition, topics relevant to African linguistics such as verbal extensions, noun class systems, nominal and verbal compounding, ideophones, associative constructions, serialization, cliticization, etc. students would be taught to collect and process empirical data on morphology and its interfaces.

LIN 902.1 Topics in Syntax: This course explores current trends in syntactic theory and analysis as well as the interfaces of syntax. Topics to be taught include syntactic phenomena that are prevalent in

African languages, such as the expression of information structure, DPS, wh-questions, logophoricity, anaphora, relative clauses, complementation, Inherent Complement Verb, etc.

LIN 903.2 Topics in Semantics and Pragmatics:

Lectures in this course will examine aspects of lexical and sentential semantics. Focus will be on theories underlying different approaches to semantic investigation and current issues. Efforts will also be made to study the relationship between semantics and pragmatics.

LIN 904.2 Topics in Applied Linguistics: The course studies the practical application of linguistic theories to other fields of study. Special attention will be paid to the relevance of the linguistic science to language teaching; contrastive and error analyses, design of pedagogical materials; child language development, lexicology and lexicography, translation, speech therapy, stylistics, media issues, etc. students will be given the opportunity to address specific problems in these areas.

LIN 905.2 Topics in Language and History: The aim of the course is to study the interconnection between language and history. Efforts will be made to show how linguistic evidence can be used to arrive at some conclusions about the prehistory and history of a people. The course will cover the following: genetic relationships, language families and their characteristics, techniques for language classification: reconstruction, mass comparison, comparative methods, lexicostatistics and glottochronology; language spread and migration theory; language change; language shift; language endangerment and death.

LIN 906.2 Topics in Sociolinguistics: This course will examine some recurrent issues in language and society. Lectures will focus on such topics as: language variation (language and other speech forms); language and identity; language endangerment, language maintenance and shift, language death, language revitalization, ect; language and national development/underdevelopment; pidgin and creole languages (with particular reference to their influence and relevance in the Nigerian society); bilingualism and multilingualism; and any current sociolinguistic topics of interest.

LIN 912.3 Comprehensive Examinations: There will be two parts in the comprehensive examinations. Part A is for candidates that registered for PhD in linguistics/linguistics and a Nigerian Language options. It will test the students' general knowledge of language and linguistics. Part B is for PhD candidates of the Communication Studies option. It will test the students' knowledge of information and communication studies generally. Each part shall comprise three papers (A, B and C). The Chief Examiner for each year shall determine the contents of each paper and inform the candidates in advance. Any student who fails the comprehensive examinations will not be allowed to proceed with the next stage of the programme. The candidate can, however, be allowed to re-take the comprehensive examinations at the next available opportunity.

LIN 913.3 Doctoral Research Presentation: Every student must, with the assistance of a supervisor,

prepare and present a seminar paper before other graduate students and academic staff of the Department. The seminar paper must be related to the student's proposed thesis topic. Credit is given for content, presentation, and handling of discussion. Candidates who score below a C grade in their presentation will be given another chance to re-do the work. Candidates who have successfully presented their departmental graduate seminar shall be recommended to the School of Graduate Studies for the final doctoral seminar presentation. Only successful candidates at this stage shall be prepared to face the external examiner.

LIN 914.3 Doctoral Thesis: The doctoral dissertation is to present results of an original research topic. Credit is given for originality, the contribution of work to knowledge, presentation, and use of previous literature in the area.

TEACHING STAFF LIST

S/N.	NAMES OF ACADEMIC STAFF	QUALIFICATIONS	DESIGNATION/ RANK	AREA OF SPECIALIZATION
1.	Alerechi, R.I.C (Mrs.)	BA, MA, PGDE, PhD <i>UPH</i>	Professor (HOD)	General Phonetics & Phonology, Morphology, Dialectology, Historical Linguistics, Ikwere
2.	Ndimele, O.M	BA, MA, PhD <i>UPH</i>	Professor	Syntax, Semantics, Pragmatics, English Grammar, Igbo, Communication Studies, Editing & Book Publishing
3.	Ejele, P.E (Mrs.)	BA <i>Ife</i> , PGDL, MA, PhD <i>London</i>	Professor	Syntax, Semantics, English Grammar, Pragmatics, Human Communication & Stylistic analysis of texts (literary and media), Edoid (esp. Esan)
4.	V.C. Onumajuru	BA, MA France; PhD <i>UPH</i>	Professor	Phonetics/Phonology, Morphology, Igbo, French
5.	Isaac, BH	BA, MA, PhD <i>UPH</i>	Senior Lecturer	Linguistics & theory of Communi-cation/Morphology, Syntax; English Grammar, Applied Linguistics, Gokana
6.	Ayuwo, J.G.I	BA <i>UPH</i> , MA Ibadan, PhD. <i>UPH</i>	Senior Lecturer	Sociolinguistics, Applied Linguistics, Development Communication, Pragmatics, Obolo, Creoles Studies, Kiswahili, Onomastics.
7.	Oweleke, E.N. (Mrs.)	BA, MA, PhD. <i>UPH</i>	Senior Lecturer	Morphology, Semantics, Lexicography, Applied Linguistics, Igbo
8.	Obikudo, E. F.	BA, MA, Ph.D <i>UPH</i>	Senior Lecturer	Descriptive Grammar writing, Ijoid grammar, especially phonology&morpho-syntax
9.	Eze, E. A.	BA, MA, Ph.D <i>UNN</i>	Senior Lecturer	Morphology, Semantics, Lexicography, Igbo
10.	Ejeba, S. O.	BA ABU, MA, PhD <i>UPH</i>	Senior Lecturer	Morphology and syntax
11.	Osuagwu, E. C.	BA, MA, PHD. <i>UPH</i>	Senior Lecturer	Morphology and syntax
12.	Joshua S. F.	BA, PhD. <i>UPH</i>	Lecturer I	Syntax, Pragmatics and General Linguistics

DEPARTMENT OF MUSIC

A. MASTER OF ARTS PROGRAMME IN MUSIC

1.0 INTRODUCTION

The Master of Arts (M.A.) programme of the Department of Music is designed to produce highly skilled music specialists, researchers and music entrepreneurs capable of assuming artistic and leadership roles in the various areas of the music industry in Africa. With structured information, understanding, and acquired skills, graduates are expected to function maximally to elevate the musical and cultural milieu of humanity for which they are being prepared. Areas of instruction and mentorship include Ethnomusicology, Composition, Theory and Analysis, Musicology, Music Education, Music Therapy and Rehabilitation Services, Music Business Administration, Music Technology and Audio Engineering (Sound Engineering and Multimedia, Music Instrument Technology), Applied Instrument Performance Studies, Conducting and Ensemble Administration (Choral/Instrumental), Film Music, Sacred/Church Music Studies, and Popular Music Studies.

1.1 PHILOSOPHY

The Master of Arts Degree in Music, University of Port Harcourt, is intended for high skill acquisition and intellectual development. The programme is designed to train and equip students who desire to specialize in different areas of music. The programme provides an avenue for producing high quality teachers and leaders in the music profession in our society to be engaged in institutions of higher learning, ensemble organisations, media houses, research centres, religious establishments, arts and cultural centres, health and rehabilitation centres, policy and strategic agencies, the armed forces, and similar organisations.

1.2 VISION

To create opportunities to train interested qualified members of the society in musical scholarship that can enable them to be

Independent in their areas of specialisation within the global space.

1.3 MISSION

To provide an outstanding higher education programme for holders of first degree or its equivalent in Music in an environment that enriches the human mind and spirit.

1.4 RATIONALE

To meet the needs of the teeming population of graduates who desire to attain higher educational training in music scholarship.

1.5 AIM AND OBJECTIVES

The aim of the M.A. degree programme in Music is to develop the scholarship prowess of qualified music graduates in their different areas of specialisation. The objectives of the programme include to:

- Develop professional proficiency of students.
- Contribute knowledge to the development of music education in our community, as well as to build world-class musicians and music scholars.
- Train the graduate students to conduct research in their various areas of interest towards the development of the music industry in our society.
- Produce well-grounded musicians and scholars in their various areas of specialization capable of providing Nigerian music education a national identity as well as making it relevant to the African and global contexts.
- Equip graduates with competent creative contexts.

2.0 ADMISSION REQUIREMENTS

Candidates with a recognised University bachelor's degree in Music, with a minimum of second class lower division or as may be stipulated by the School of Graduate Studies from time to time. Bachelor of Church Music (BCM) holders from a recognized theological institution or any other accredited institution may be considered for admission into the M.A. programme if their transcripts reveal that the courses and tutelage covered in the BCM programme are equivalent to those in Bachelor of Music and Bachelor of Arts in Music programmes of conventional higher institutions. In cases where remediable deficiencies are discovered in the BCM programmes undertaken, the candidate shall audit relevant courses at the undergraduate level, or go through the PGDM programme.

NOTE: Shortlisted candidates for the M.A. programme shall be required to present themselves for oral and written interviews before the final determination of their applications. Admissions into these graduate programmes are considered on an individual basis. Interested candidates are advised to contact the Department of Music for necessary information regarding their intending areas of specialisation prior to application for admission.

3.0 PROGRAMME DURATION

The programme structure shall be in consonance with the policy of the School of Graduate Studies of the University of Port Harcourt. Without prejudice to the above policy statement, the duration of the M.A. Degree programme shall be a minimum of 18 months as full time, and 30 months as part time.

4.0 GRADUATION REQUIREMENTS

The requirements for graduation from the M.A. in Music programme shall be in consonance with the policy and guidelines of the School of Graduate Studies. In addition the students shall be expected to meet the peculiar departmental requirements.

5.0 TABLE OF LIST OF COURSES, CODES AND CREDIT UNITS

Students in the Master of Arts programme are required to take six compulsory core (general) courses. In addition to these general courses, students shall take 12 courses in their various areas of specialisation, as well as a graduate seminar and a thesis. A student may choose one or more elective courses under the guidance of the advisor. The required general courses are listed below:

- 1) SGS 801.1 – ICT and Research Methods
- 2) SGS 801.2 – Management and Entrepreneurship
- 3) MUS 800.1 – Advanced Theory of Music
- 4) MUS 801.1 – Perspectives in Western Music History
- 5) MUS 802.1 – Advanced African Music: Theory and Practice
- 6) MUS 803.1 – Research Methodology and Bibliography

The minimum credit units required for graduation in the M.A. are 50. The course schedule for each semester of the M.A. programmes is shown below.

5.1 PERFORMANCE STUDIES

- I. Music Instrument Performance (Keyboard (Piano/Organ), Voice, Strings, Woodwinds, Brass, Percussion, and African Melorhythm instruments)

a) First Semester

Course Code	Course Title	Credit Units
SGS 801.1.1	ICT and Research Methods	3
MUS 800.1	Advanced Theory of Music	3
MUS 801.1	Perspectives in Western Music History	2

MUS 802.1	Advanced African Music: Theory and Practice	2
MUS 803.1	Research Methodology and Bibliography	3
MUS 804.1	Score Study and Analysis	2
MUS 805.1	Ethics in Music and Performance Standards	2
MUS 806.1	Literature and Criticism in Context	2
MUS 807.1	Instrumental Techniques and Pedagogy	3
TOTAL =		22

b) Second Semester

Course Code	Course Title	Credit Units
SGS 801.2	Management and Entrepreneurship	3
MUS 800.2	Graduate Seminar	3
MUS 801.2	Performance History in Context/Societal context of African Music 1	3
MUS 802.2	Advanced Technical Proficiency and Delivery Methodology in Performance	3
MUS 803.2	Instrumental Aesthetics, Physiology and Performance Practices	2
MUS 804.2	Humanity Principles in African Music	3
MUS 805.2	Creativity and Performance	2
MUS ...	Recital I	2
	Electives (Choose any two courses from below)	2
TOTAL =		21

Elective Courses (Choose any two courses)

Course Code	Course Title	Credit Units
MUS 806.2	Choral/Vocal Techniques (Physiology and Diction for singers)	1
MUS 807.2	History of African Musical Arts (Theatre and Opera)	1
MUS 808.2	Studio Performance Techniques in Context	1

MUS 809.2	African Melorhythmic and Western Percussion Instruments	1	MUS 805.2	Recital I	2
			MUS 810.2	History and Practice of Choral/Instrumental Music up to the 21 st Century	3
c) Third Semester			MUS 811.2	Style and Technical Proficiency in Choral/Instrumental Conducting	3
Course Code	Course Title	Credit Units	MUS 812.2	Advanced Conducting Techniques II	3
MUS 800.3	Thesis	6	MUS 813.2	Vocal Aesthetics, Physiology and Performance Practices	2
MUS 801.3	Recital II	2	MUS ...	Electives (Choose any two courses from below)	2
	TOTAL =	8		TOTAL =	21

Additional Requirement for Graduation: Proficiency in ONE Nigerian/African language, and ONE foreign language other than English (German, French or Italian).

II. Conducting and Ensemble Administration (Choral, Orchestral, Concert Band)

a) First Semester

Course Code	Course Title	Credit Units
SGS 801.1	ICT And Research Method	3
MUS 800.1	Advanced Theory of Music	3
MUS 801.1	Perspectives in Western Music History	2
MUS 802.1	Advanced African Music: Theory and Practice	2
MUS 803.1	Research Methodology and Bibliography	3
MUS 804.1	Score Study and Analysis	2
MUS 805.1	Ethics in Music and Performance Standards	2
MUS 808.1	Advanced Conducting Techniques I Rehearsal, Performance	3
MUS 809.1	Principles and Techniques	2
	TOTAL =	22

b) Second Semester

Course Code	Course Title	Credit Units
SGS 801.2	Management and Entrepreneurship	3
MUS 800.2	Graduate Seminar	3

Elective Courses (Choose any two courses)

Course Code	Course Title	Credit Units
MUS 814.2	Contemporary Choral/Instrumental Music Theory and Practice	1
MUS 815.2	Choral/Instrumental Repertoire: Sacred and Secular	1
MUS 816.2	Choral/Instrumental Ensemble Administration	1
MUS 817.2	Philosophical and Psychological Issues in Choral/Instrumental Music	1

c) Third Semester

Course Code	Course Title	Credit Units
MUS 800.3	Thesis	6
MUS 801.3	Recital II	2
	TOTAL =	8

Additional Requirement for Graduation: Proficiency in ONE Nigerian/African language, and ONE foreign language other than English (German, French or Italian).

5.2 THEORY AND COMPOSITION

a) First Semester

Course Code	Course Title	Credit Units
SGS 801.1	ICT and Research Method	3
MUS 800.1	Advanced Theory of Music	3
MUS 801.1	Perspectives in Western Music History	2

MUS 802.1	Advanced African Music: Theory and Practice	2	MUS 802.3	Advanced Contrapuntal Techniques	2
MUS 803.1	Research Methodology and Bibliography	3	TOTAL =		8
MUS 810.1	Advanced Transcription and Analysis	3	Additional Requirement for Graduation:		
MUS 811.1	Common Practice Theory	2	Proficiency in ONE Nigerian/African language, and ONE foreign language other than English (German, French or Italian).		
MUS 812.1	African and Western Music Structures and Techniques in Composition	2	5.3 ETHNOMUSICOLOGY		
MUS 813.1	Advanced Composition: Fugue	2	a) First Semester		
TOTAL =		22	Course Code	Course Title	Credit Units
b) Second Semester			SGS 801.1	ICT and Research Method	3

5. DESCRIPTION OF COURSES

MUS 800.1 Advanced Theory of Music:

This course involves a review of the convention of music theory from the fundamentals – scales, keys, chords, cadences, rhythms, melodic and harmonic structures, notation – to modulations, forms, analysis, tonality and atonality. The course will cover diverse issues including practical investigation of the basic principles of tonal and atonal harmony, counterpoint, and composition through exercises in analysis, motivic development, phrase, rhythm, texture, form, performance, and model composition. A survey of contemporary issues in theory, genres, composers and their works in the 20th and 21st century and beyond will be an essential part of the course. Emphasis on ear training and dictation is fundamental to the theoretical discussions.

MUS 801.1 Perspectives in Western Music History:

This course is a detailed study the origin and development of Western Music, the principal styles of Western art music through examination of works by outstanding composers. It covers from the beginning of music writing from the neumes and medieval composers through the twenty-first century composers, including the various genres, and styles of music of these periods.

MUS 802.1 Advanced African Music: Theory & Practice:

This course is a survey of the study of the traditional, popular and contemporary art music of the north and sub-Saharan Africa. Focus is on selected music and music cultures of Nigeria, Egypt, Ethiopia, Tunisia, Guinea, Mali, the Gambia, Senegal, Ghana, Zimbabwe, and South Africa. This course involves a survey of the principal styles of African music through examination of the creative rationalization and performative processes traditional and popular music genres. Also, it will cover the development of contemporary art music in

Africa in the nineteenth- and twentieth-century: composers, genres, and styles of music in the continent.

MUS 803.1 Research Methodology and Bibliography:

This is a graduate-level research course that prepares students to identify and explore a wide array of research materials available for in-depth study of topics within the musical discipline. The course introduces the students to philosophical foundations and theories of naturalistic inquiry and experimental-type researches as well as their implications and methodologies/designs in music research. Also, it includes a review of important literature in music, proposal writing, design, data analysis and scholarly writing styles used in graduate research. It engages students in field-specific and interdisciplinary professional research literature, and develops ability to critically read and understand research literature. It is a writing intensive course requiring readings, writing assignments, guided online discussions and a series of short-term research projects requires the development of a research proposal.

MUS 804.1 Score Study and Analysis:

Advanced Score study and analysis develops strategic and analytical approaches to learning a piece of printed music. A variety of scores from different genres of music, both vocal and instrumental media are studied. Emphasis will be placed on the characteristics of music, historical background, socio-political and cultural influences, score signs and expression marks, tempo markings, expressive methods, styles, moods, theme, harmonic structure, cadences, forms, texture, instrumentation, and other features associated with the music. Approaches/Techniques of Score Analysis include melodic, harmonic, schematic, descriptive and graphic as well as semiotic semantic, cognitive and Schenkerian.

MUS 805.1 Ethics in Music and Performance Standards:

The focus of this course is on the ethics of music in relation to both creative and performance standards. It equips the student towards the promotion of the arts, industries, functional and entertainment quality. It is also intended to equip the students with ethical and legal knowledge that would better prepare them for professional music practice. This course involves research and seminar presentations.

MUS 806.1 Literature and Criticism in Context:

This course examines literatures on Music with emphasis on classical and contemporary

scholarship, philosophy, criticism, aesthetic theories utilitarian principles and their application in diverse areas of Music, including African and Western composition, performance, theory, analysis, history, and ensembles, etc.

MUS 807.1 Instrumental Techniques and Pedagogy:

This course investigates, at advanced level, the various techniques associated with sound productions in a particular instrument. It also explores the methods of acquiring these techniques and the soft science of African instruments.

MUS 808.1 Advanced Conducting Techniques I:

This course deals with advanced technical security of the baton, asymmetrical and divided beat patterns as well as mixed meters and other conducting challenges. Refinement of gestures towards performance, establishment of the musical work, and expressive conducting are considered.

MUS 809.1 Rehearsal, Performance Principles and Techniques:

This course exposes students to techniques of and strategies for planning rehearsals, modalities and performance preparations and principles. Methods of introducing new works are examined. Repertoire and concert programming are also considered.

MUS 810.1 Advanced Transcription and Analysis:

The purpose of this course is to familiarize students with various sound structures through intense listening, transcribing, and analysis of selected pieces from Western and non-Western music cultures. It includes the study of techniques of transcription and re-composition and visual representation of musical sounds are dealt with as it appears in Western and non-Western musical tradition as well as in current scholarly works. In addition, students will explore various analytical techniques, formalistic, semiotic and semantic among others using different theoretical approaches including cultural, philosophical, and critical. Assignments involve transcription of various musical styles and the classes focuses on discussing the validity and the problems of transcription in each case. Through transcription, analysis, and discussions, the course also aims to develop skill in listening and the appreciation of unusual melodic and rhythmic structures, providing an introduction to the folk music of several ethnic groups. The deep structures of indigenous African music theory will be explicated in practice.

MUS 811.1 Common Practice Theory:

This course aims at exposing students The course essentially focuses on the study of the Common

Practice period (ca. 1600-1900), its history and influence on musical practices across the globe as well as the analytical techniques for Tonal music. Also, it involves in-depth analyses of common-practice repertoire through multiple techniques, including the study both of pitch and of rhythm.

MUS 812.1 African and Western Music Structures and Techniques in Composition: This is an advanced course in composition dealing with various materials, structures and forms in musical creativity. Also, it exposes students to the techniques of composing music of different genres and their unique characterizations. Works of some of the major composers in the Romantic, Twentieth Century and Twenty-first Century periods as well as African-derived compositions will be studied in terms of their structures and compositional techniques such as African Pianism.

MUS 813.1 Advanced Composition: Fugue: This course explores the full application of counterpoint and fugue in the traditional sense of J.S. Bach. It also investigates how other composers from J.S. Bach to Stravinsky and, some contemporary composers have used the fugal methods in musical creativity.

MUS 814.1 Theory and Methods in Ethnomusicology: The course examines the formation of ethnomusicology through a survey of its intellectual history, theories, methodologies, and research practices. It discusses the works of major scholars in the field and reviews their intellectual contributions. The course explores some theoretical orientations and examines the interdisciplinary nature of ethnomusicology, particularly its relationship with historical musicology, anthropology, folklore, linguistics, communication, performance theory, media studies, philosophy and cultural studies. It discusses a range of musical styles, practices, and ways of thinking about sound in varied geo-cultural areas of the world. A few special projects will complement theoretical discussions and technical aspects of research activities commonly associated with the history of the field— such as fieldwork and transcription—will be briefly covered. The course will further focus on Africa, its systems, theories and methods.

MUS 815.1 Philosophy, Psychology and Aesthetics of African Music: African musical arts is grounded in firm philosophical and psychological rationalizations. These inform creative exploration and configurations, which are humanity framed. The result is that appreciation and evaluation focuses on

functional aesthetics ideology because African music does not reckon with flippant/purposeless entertainment as a creative intention and activity. The course will unpack these authoritative African musical arts ideations.

MUS 816.1 Field Investigation of Performance Practice in African Music: This course should emphasize fieldwork research in African music, which must privilege the explications of expert indigenous Knowledge practitioners encountered. Fieldwork should precede published literature in order not to prejudice researchers' minds and attitudes. The knowledge creators/practitioners can best explain what they do, which have strong, even though unnecessarily articulated, foundations and formulations. Observation and discussion of performance practice in African music must be conscious of the principle of Performance Composition, which is the African developmental ideology and practice of allowing contextual activities to inform spontaneous creative elaborations of a theme.

MUS 817.1 African Music as Mass Media: The course will investigate and explain how African musical arts fulfilled the divine role of impartially managing virtually all societal systems, critiquing and disseminating information as well as ensuring public discipline in indigenous Africa. It will then research the possibilities of repositioning, reconstituting and advancing musical arts practices in the contemporary milieu to be purposive with the collaboration of modern mass media, education and bureaucracy organs.

MUS 818.1 History of Music Education in Nigeria: This course defines the concept of Music Education starting from the traditional society of Nigeria, and looks at the concept as introduced at the emergence of the colonial education till the present day. The course will take statistics of level of independence between 1914 when Nigeria was forged into one nation and the contemporary Nigeria as an independent nation in 1960.

MUS 819.1 Global Methods of Teaching Music: This course takes a comprehensive look at the conventional methods of teaching – The Orf-Schulwerk, Kodaly, Dalcroze, Suzuki, Eclectic etc. The course stretches further to study how relevant these methods are to Nigerian music education system that will be conscious of humanity moulding integrity.

MUS 820.1 Curriculum Development and Implementations: This course focuses on principles in curriculum planning and stages of planning. Considerations of facilities and instructional materials shall be looked at in developing the curriculum towards achieving goals and objectives. The Nigerian society shall be considered in its holistic form in suggesting types of purposive curricular needed for stages of its educational system.

MUS 821.1 African Music Pedagogy: Music pedagogy in indigenous Africa is philosophically rationalized to transpire in play-mode formality, which obviates the stress and control syndromes of imported modern classroom learning. Musical arts knowledge in indigenous Africa was then systematically acquired in interactive experimental and creative forum from early childhood. This needs re-institution with advancement initiatives, which the course will debate. The indigenous African philosophy is that every normal human is born already musical. Cultural knowledge resources, which categorize age levels and gender specialties in practicalized knowledge lore acquisition as need be, have routinely been memorially and performatively recycled as well as updated over generations. Beyond babyhood impressions, adults are expected to be circumspect in intruding into children's autonomous learning sites, which in the musical arts emphasize learning through interactive, collaborative knowledge creations, performances and critiques. Such humanity framed learning sites, materials and experimentations engender exercising individuality in communality, which implant self-expression and self-confidence in other life situations. The course will require postgraduate students to mount expressive and creativity activities/projects in junior and secondary school sites adopted by the Department as outreach locations.

MUS 822.1 History of Christian Worship and Evangelism in Nigeria: The course is a study of music in Christian worship and evangelism, its biblical (Old and New Testament), historical development, impact of Reformation, and liturgical revival, cultural awakening in Nineteenth century Nigeria. It entails a comparative study of denominational worship patterns, the selection of music for worship and evangelism, inter-staff relationship in worship and evangelism in relation to preaching, music and growth of the participants in present day Nigeria.

MUS 823.1 Hymnology: The course is an in-depth and systematic study of Hymns, hymnology,

sacred choral literature, their performance structure and their related forms, which include their origin, development, classification, biblical and theological foundations, musical and poetic qualities, their use in worship and evangelism. It focuses on Christian congregational songs and singing, ranging from Old Testament psalms and psalmody to contemporary praise-worship songs/choruses, from traditional Western hymnody to global worship songs, with some attention to African cultural context and practical—African hymnody. In addition, it examines the 19th and 20th century Gospel hymns and their effective use in the Christian church of today.

MUS 824.1 Development of Church Music from Medieval to Classical Periods: The course is an advanced exploration of the development of Church music from the medieval to the classical periods. It covers the emergence of chant and its progression and use in the church, the Mass and its music repertoire, Liturgical plays and dramas, polyphonic tradition beginning with the organum of Notre Dame, Cathedral Schools, sacred music in the era of the reformation, oratorio, and cantatas. Instrumental music, composers (men and women) and their life and compositional styles will also be given in-depth attention.

MUS 825.1 Church Music: Organ and other Instruments I: The course introduces the student to the Organ or any other instruments used to accompany music in the liturgy or service. The student is guided by his/her instructor in the art of playing the organ that will enable the student to accompany simple hymns during the liturgy or services.

MUS 800.2 Graduate Seminar: This seminar course deals with research skills, sources and resources (libraries, internet, published items, etc.) pertinent to understanding, making, assessing and using different types of musical materials for graduate-level writing and presentations. Focus is on issues that reflect on the theoretical, analytical and performative discourses on all types of music, musicians (performers, historians, composers, etc.) and musical phenomena. Also, it involves more general 'study skills' component relevant to the final project works and the professional presentation of written works on the various pathways of the students' Master's program. In addition, it includes a survey and discussion of the many ways in which a composition and/or musical performance might be preserved (paper, recording, computer-file, oral tradition, etc.) and disseminated for further usage.

These discourses will focus strongly on the interface between theory and practice in music and students' presentations and participations in the seminar are core part of the entire program.

MUS 801.2 Performance History in Context/Societal context of African Music: This course deals with the instruments, staging, patronage, composition, and performance styles in the history of the development of music.

MUS 802.2 Advanced Technical Proficiency and Delivery Methodology in Performance: This course focuses on prospecting for high technical proficiency in applied music and performance. Students are guided to acquire advanced skills and the methods of delivering these skills in interpreting the score/music through the relevant instruments.

MUS 803.2 Instrumental Aesthetics, Physiology and Performance Practices: This course deals with human vocal structures, and the organs responsible for sound production and sound generation, articulatory phonetics and principles of phonology. It also examines the proper ways and techniques of pronunciation of words for singers. Students will investigate places and manners of articulation, as well as consonant and vowel classifications. Ear training and performance practices in sound production are key indices for this study. As an important aspect of applied music vocal performance, English phonetics and the phonetics of selected Nigerian/African and Western languages are also examined. These descriptions also apply to instruments (other than the voice) of the students' choice.

MUS 804.2 Humanity Principles in African Music Creativity and Performance: The course will establish how the indigenous African philosophical and theoretical rationalizations in music are circumscribed by humanity ideology and principles: African musical arts is conceived, created and practiced as a utility organ that aims to entrench fellow humanity consciousness in life attributes and societal systems. The theories of creativity, conformation, expression and application of the sonic phenomenon as well as its siblings of dance and drama derive from humanity ideologies experienced for instance in the Ensemble Thematic Cycle logic that captures ideal family construct, and performance composition in thematic elaboration, which commands situation/contextual consciousness that ignites purposive intellection as a life attribute.

MUS 805.2 Recital I: Students are expected to embark on performances reflective of their areas of specialization. As the first of two recitals, the recital shall showcase the student's skills and competence. It shall not be less than 45 minutes in duration. Students are guided by their advisors.

MUS 806.2 Choral/Vocal Techniques (Physiology and Diction for singers): This course is a study of vocal function, anatomy and pedagogical methodology of the voice with focuses on its application to choral singing and directing. Activities in this class create the development of quality repertoire in the diverse styles of choral literature appropriate in difficulty and range for the students. Students will be exposed to the choral compositions/repertoire of various composers from the baroque to contemporary music of living composers. Consequently, students will develop the ability to understand and convey the composer's intent in order to connect, as performer, with the audience. Also, the course explores the natural and variable vocal, musical and personal qualities for the different age-brackets and appropriate, age-optimal techniques to nurture singing. With these techniques and information, both teachers and choral conductors can strive to work within realistic limits, yet neither below nor beyond them. Vocal physiology, vocal health and development, vocal qualities and textures, music literacy skills, including sight-singing and rhythmic reading will be taught alongside music repertoire. Students must participate in performance opportunities outside of the school day that support and extend learning in the classroom.

MUS 807.2 History of African Musical Arts (Theatre and Opera): The course entails unpacking how the conception and theory of the musical arts result in a creative and performative synthesis of the sonic, the choreographic, the dramatic and the expressive, texted materials, which identify artistic productions that are authoritatively indigenous African. Hence the idea of the modern operatic or musical theatre has original African conceptualizations and practice. The artistic creations were deployed, experienced and evaluated as utilitarian total theatre media, which managed virtually all aspects of societal living. The substructural African commonalities as well as the superstructural cultural peculiarities will then be analysed as deriving from cosmic and environmental sensitizations as well as inter-cultural mixing, which are critical factors of creativity. The course will historically track the cultural contacts and human movement experiences among traditional Africans

up to the external hegemonic factors that imposed Northern operatic and musical styles, which have since colonial mind-domination severely impacted modern musical arts education and experiencing in contemporary Africa.

MUS 808.2 Studio Performance Techniques in Context: This course enhances skills in a range of studio and performance techniques as well as creative methods, supported by an understanding of related key concepts. These include recording, editing and mixing, field recording, spectral manipulation, sound synthesis and placement, and electroacoustic compositional methods. Emphasis will include an understanding the fundamentals of digital audio and studio-based production as well as the acquisition of working knowledge of a professional audio editor/mixer (e.g. at least one of the following: Pro Tools, Logic, Digital Performer, Cubase) as well as the ability to compose studio-based or electronic music that demonstrates an understanding of contemporary techniques and concerns. The soft wares to be used include Pro Tools, Audiosculpt, and Metasynth among others. Special attention is given to multi-channel sound work using the EMS Multi-channel Studio and 5.1 Studio. Also, issues related to technology-based composition are explored, such as listening, spatialization, transformation, site/location and context. Readings in performance practices as related to periods, analytical reports and practical applications would be integral in the course delivery.

MUS 809.2 African Melorhythmic and Western Percussion Instruments: The course will explicate the prevalent African concept of melorhythm instruments, which is misconceived and misconstrued in Western instruments classification categories as percussion. Grounded perception and literacy study of melorhythmic musicking necessitates modifying the conventional staff notation system to capture the sonic peculiarities of notating music for African melorhythm instruments. The course will underscore methods and expertise in creating, notating and performing music for melorhythm instruments.

MUS 810.2 History and Practice of Choral/Instrumental Music up to the 21st Century: This course looks at the history and practice of choral and instrumental music in terms of their developments and distinctive characteristics. Performance practices throughout music periods, diverse genres and settings up to the present century are investigated.

MUS 811.2 Style and Technical Proficiency in Choral/Instrumental Conducting: The art of Conducting, whether choral or instrumental, requires certain musical training, styles and technical proficiency for effective conveyance of gestures. This course exposes these requirements through secured baton techniques, score study and analysis, practical application, as well as the administrative responsibilities and duties.

MUS 812.2 Advanced Conducting Techniques II: This course deals with advanced technical security of the baton, asymmetrical and divided beat patterns as well as mixed meters and other conducting challenges. Refinement of gestures towards performance, establishment of the musical work, and expressive conducting are considered.

MUS 813.2 Vocal Aesthetics, Physiology and Performance Practices: This course is designed to teach students advanced singing techniques and how to use these techniques to expand their vocal range, sight-reading skills and music theory concepts that will enable them to perform with more confidence. Studying a wide variety of repertoire from the Renaissance to contemporary living composers, students will develop the ability to understand and convey the composer's aesthetical intent in order to connect them as performer with the audience. Vocal physiology, vocal health and development, vocal qualities and textures, music literacy skills will be taught alongside music repertoire.

MUS 814.2 Contemporary Choral/ Instrumental Music Theory and Practice: This course explores the nature and practices of contemporary choral and instrumental music. It lays emphasis on the theoretical, analytical and performative issues associated with choral and instrumental music practice in the contemporary times.

MUS 815.2 Choral/ Instrumental Repertoire: Sacred and Secular: The course focuses on the study of choral and instrumental music repertoires from the renaissance era to the contemporary times. Students are exposed to a survey both secular and sacred music repertoires.

MUS 816.2 Choral/Instrumental Ensemble Administration: In this course, students engage in the study of the rubrics of the organization and administration of choral and instrumental music ensembles ranging from small chamber to large-scale choral and instrumental groups.

MUS 817.2 Philosophical and Psychological Issues in Choral/Instrumental Music: This course exposes students to the philosophical foundation and debates in choral and instrumental music practice. Also, themes for discussion include the psychological issues that bother on the organization and functioning of choral and instrumental music in context.

MUS 818.2 20th and 21st Century Music Theories, Principles, Techniques and Practices: The dynamics and complexities of the modern music, materials and techniques of 20th and 21st centuries' music are studied under this course. Arnold Schoenberg's dodecaphonic series, Olivier Messiaen and Pierre Boulez's serialism, John Cage's chance music (indeterminacy), Steve Reich and Philip Glass' minimalism, quotations, cultural borrowings, and so on are dealt with in terms of their theoretical concepts, principles and creative and performance techniques especially as derived from African theoretical constructs.

MUS 819.2 Schenkerian Theory and Analysis: This course examines the nature and application of the theory and analytical method of Heinrich Schenker for the music of 18th and 19th centuries. It provides students with high-level skills in Schenkerian theory and analysis with all the required technicalities (including the system of graphic notation) for graduate-level discussions. Focus will be on such themes as, the instrumental or vocal cycle, the status of the motive in the structural levels and the validity of Schenkerian analysis as a tool for interpreting twentieth-century tonal music. Students will engage substantial readings of works by Beethoven and his contemporaries (mainly Clementi, Hummel, Czerny, and Weber), the theoretical question governing the work being the possibility of a "Beethoven counterpoint" to substitute for the Fuxian species and figured bass as the foundation of an analytic method for traditional European tonal music. The course will provide the opportunity to develop Schenkerian analytic skills to a level approaching that of a professional practitioner through the study of works that emphasize a pragmatic poetics, that is to say, a critical, hands-on approach.

MUS 820.2 Perception and Cognition in Music Theory: This course provides in-depth study of historical and current approaches to questions about the perception and cognition of music theory. Topics include psychoacoustics; the cognitive neuroscience of music; relationships between music and language; the nature of musical knowledge; and debates about

aesthetics as well as discussions on the sensory, perceptual, and cognitive foundations of listening, performing, and composing. Other topics include relations among various acoustical and perceptual characterizations of sound; perceptions of pitch, time, temporal relations, timbre, stability conditions, and auditory space; auditory scene analysis and perceptual grouping mechanisms; perceptual principles for melodic, rhythmic, and harmonic organization; orchestration as spectral composition. Also, the course will involve the study a number of cognitive models for various aspects of music. The exact topics will be determined in part by the interests and backgrounds of the class participants, but may involve musical grammars, categorization, similarity, representation, segmentation, and Gestalt theory. Musical domains studied may include tonality, atonality, and rhythm and meter. Emphasis will be on cognitive, perception and production, models. It is hoped that the course will include a balance of students within and outside of music, which will allow for some collaborative work involving "content experts" from both music and cognitive science-related areas. The course research project should involve the analysis of musical examples or perceptual and cognitive issues in music theory.

MUS 821.2 African Soft Science of Functional Aesthetics and Theoretical Logic of Music: Indigenous African musical arts is conceived, designed and actualized as a soft science of societal and humanity management focussing principally on mind management. Structural logic researches scientific idioms that impact and manage the mind. African music objective and evaluation reckon with functional aesthetics.

MUS 822.2 Orchestral Composition (African and Western): This course provides the student the opportunity to create high artistic and technically competent works under the guidance of the lecturer, leading to such large-scale forms as Sonata-Allegro, Concerto, Rondo, Cantata and Oratorio forms, as well as multimedia and film music. In the second part of this course, the student continues to create diverse music with advanced techniques. Operatic music and other theatrical/large stage works are studied. Students are guided to compose accordingly, engaging in contemporary music creative practices and debates.

MUS 823.2 Electroacoustic Music Composition and Performance: Students are taught the concept, dynamics and performance techniques of electronic music. The history and literature of, and instruments

used for electroacoustic music compositions are discussed. Music concrete and digital music synthesis and processing techniques, sound designs and devices, as well as the major composers of this genre are considered.

MUS 824.2 Analysis of Masterworks: The course aims at exposing students to the study of major works of Western and African music composers. Examples of works to be studied in the course will be representative of diverse genres (such as motet, madrigal, Mass, concerto, fugue, symphonies, and African pianism) and their composers.

MUS 825.2 Chromaticism and Extension of Tonal Principles: The development and inclusion of Chromatic principles from the Renaissance to the twilight of the 20th century are considered. The chromatic extension and application of the tonal principles are reviewed.

MUS 826.2 Presentation of Works in Concert: Compositions written while enrolled in M.A. programme at the University of Port Harcourt are expected to be performed. Under the student's examining committee, the duration of the concert shall be a minimum of 45 minutes.

MUS 827.2 Sound Design for Theatre and Electronic Media: The course provides deep understanding of the techniques and processes of sound design for theatre and video productions. Students are guided to explore and develop their creative potentials and talents, while acquiring resource and people management skills necessary for successful planning and execution of sound design projects. Student teams are required to undertake and manage sound design for productions of the Department of Music, and other creative arts departments in the university.

MUS 828.2 African Music: Transcription and Analysis: The contemporary literacy approach to African musical arts education should imperatively derive from grounded knowledge of indigenous epistemology. The course will emphasize capability to transcribe and analyse extant and recorded indigenous samples and models for purposes of analyses and contemporaneous re-deployment in both classroom education and public enlightenment practices. As such the course is expected to be practice-intensive deriving from cognitive understanding of the basic African Ensemble Thematic Cycle, which enables perceiving and isolating structural inter-relationships that factor indigenous creative matrix and idiomatic

rationalizations for transcription and analysis exercises.

MUS 829.2 Organology and Theories of Notation: The fact that not all African music instruments fit into the conventional taxonomy of music instruments (idiophones, chordophones, membranophones and chordophones) warrants the cognizant knowledge of the peculiar performative and sonic specifications that distinguish such prevalent indigenous African instruments as membrane and slit drums and bells. The available notation systems so far invented by scholars do not capture the sonic peculiarities of the instruments and misinterpret African creative theory. This course will take note of such exogenous notation attempts, which distort cognizant perception and transcription. Then the students will learn the appropriate drum notation symbols, which have been designed to authoritatively capture the creative and structural intentions and sonic features of African drum music. Modern African classical drumming notation accommodates already appropriate staff notation stave along with unique drumming symbols especially since metric order in African indigenous music are either 4/4 or 12/8 time with rare exceptions.

MUS 830.2 Social Content, Musical Styles and Performance Practices and Functional Essence in Africa: The two major categories of musical arts ideation in indigenous Africa are Event Music and Music Event. Event Music, which commands functional creativity, is predominant. The course will delve into the philosophy, psychology and creative ideology distinguishing the two categories. It will specify the Event typologies. Event Musical arts commands that the theoretical rationalization, conformation and deployment of an Event type must signify, interpret and marshal the societal context, scenaric activities and moods of the event that warranted its creation. In short, creative formulation and procedure make meaning in the context of identifiable functional objectives and attributes. Musical arts items within the Event style are collectively identified with the name of the event. Assessment will then be based on how effectively a performance has enabled the accomplishment of its Event assignment. The Music Event category is the few instances of entertainment-intended musical arts types, which most times still serve humanity purposes, often psychological.

MUS 831.2 Indigenous Knowledge Systems: Principles and Practices in World Music: African indigenous musical arts are theoretically stable, always having a systematic format for form and

structural idioms. The developmental principle is Performance Composition, which captures and sonically translates the procedure and interactive contingences of an event it is transacting. The standard theoretical formula for the structural conformation of ensemble music in indigenous Africa is Ensemble Thematic Cycle: Instruments play individuality Roles, which yield the composite ensemble theme (microform -Ensemble Thematic Cycle) instead of the Principal and Subordinated instrument parts, which mark Western music theory. The indigenous African knowledge principles will then be projected into world music creative formulae.

MUS 832.2 Music, Dance, Rituals and Theatre in African Culture: The course covers the study of African performing arts ranging from vocal and instrumental music, dance and theatre to pantomime, sung verse and beyond. These include varied cultural expressions that reflect human creativity found in most African traditional music. It will further elaborate on ritual and its connectedness with dance, a complex phenomenon that deals with physical body movements, steps and gestures, which express and illustrate specific events and/or daily acts such as rites of passage, religious, hunting, warfare, *inter alia*. Music, dance and theatre are often major features of cultural promotion intended also to attract tourists.

MUS 833.2 African Art Music and Creativity: This is a practical course, which will engage a student in major original compositions the creative configurations of which will be analysed, and possibly performed. A creative product could be an advancement-oriented updating of an existing, studied indigenous musical arts style/type.

MUS 834.2 African Music and the Diaspora: The course will trace the movement of African musical arts heritage through slave trade to the United States of America and Latin American countries. The psychical survival of the slaves was ensured by the psychic-sustenance science of indigenous African musical arts idioms which accorded them mental coping at labour and leisure. The culturally dislocated Africans then used their inherent African musical arts idioms as creative foundations, which they merged with their virtual perceptions of host countries' music resources to configure new, authoritative musical arts genres that birthed jazz, capoeira, samba etc. The course will decipher the African structural idioms that mark Diaspora music styles, as well as the incorporated elements. It will further discuss how their new music creations were

first resisted and derogated by host nations (e.g. jazz as 'rubbish'), and then adopted into world music exemplars.

MUS 835.2 African Popular Music Styles and Performance Practices: This course examines the development of African popular music, its genres and styles as well as performance practices from their roots to the present. It will involve the study of literature on the trends in the history and practice of the said genres and expressive practices that create senses of community at the same time that they may reinforce political and religious differences, with special attention to modern issues and processes. Discussions will include the cultural, social, economic, technological, and political conditions surrounding that music. Also, the course will engage popular music culture as a means to identify newly emerging publics across the continent in a bid to facilitate the theorization of the intersection of aesthetics, politics and religion and also utilize social media and theorize its role in disseminating creative practices. In addition, this course will develop historical and theoretical perspectives on materials ranging from literature and satirical comedy to protest song and slogans, including hiphop, dabke, and other forms of African culture. Students will explore various case studies from the continent and develop tools to interpret their musical value and contextual meaning.

MUS 836.2 African Music: Historical Perspectives: The course will discuss features of pre-colonial African musical arts ideations, creativity and practice, which warrant the use of the referential and discursive expression AFRICAN MUSIC encompassing all music expressions authentically sub-Saharan African. The sub structural commonness in the basic sound of music that sounds authoritatively African resulted from ancient history of human movements in Africa, and the normative integration of expressive practices engineered by other-human disposition and inter marriages between natives and the new, fellow human arrivals who were re-locating. Generally, then, the fact is that at the sub structural level of creativity and practice all African cultures share common creative ideology, theory as well as basic structural conformations in music. Cultural peculiarities at the super structural level of theory and creativity feature and factor preferential cultural sounds derived from cosmic and environmental factors of habitation location. Then the course will consider the negative impacts of colonization and foreign religions on African minds, life systems and creative imagination. These have resulted in African

minds and life systems becoming overwhelmed by puppet/mimic mentality, which overwhelm virtually all aspects of contemporary African sense of history, cultural identity and human integrity - with respect to systems practices and life orientations as well creative originality, including the current over-riding commodity/entertainment oriented musical arts imagination and practices.

MUS 837.2 Music Educational Policy Development and Administration in Nigeria:

This course looks at various educational policies from the independence era till date, and evaluates how these policies have been effectively implemented in the context of Nigerian cultural integrity.

MUS 838.2 Sociology of Music Education: This course focuses on the effects of the social context of music upon musical meaning, musical ability, and access to musical opportunity. This course looks at the degree of relationship between music production and the society. It focuses on issues with relationship to the multiplicity of musical styles available in a multi-ethnic society like Nigeria. It will also provide a window for comparative analysis of the general social, political and economic factors and institutions that influence the form, content, acquisition and development of music education in different countries, paying particular attention to the development and social context of the music curriculum and music educational practices.

MUS 839.2 Music Education: Analytical Techniques, Assessment and Evaluation in Nigeria: This course focuses on techniques and procedures of research in music education with special emphasis on basic statistical concepts in assessment and evaluation. Foundational attention will be given to the values and benefits of indigenous African assessment and evaluation process.

MUS 840.2 Multimedia Tools for Music Education: This course discusses multimedia tools involved in Music Education and their effectiveness in teaching and learning in the contemporary society. Emphasis is on the knowledge of multimedia hardware and software systems, essentially as they relate to music. The course combines reading, discussion, and hands-on projects to achieve an understanding of how computers work and how they can be incorporated effectively in the music classroom. Also, it examines various innovative ideations, development of new tools and patterns of implementation. Development of

multimedia projects by students is an integral part of the course.

MUS 841.2 Principles and Practices of Music Education and Indigenous Knowledge Systems in Africa:

An appraisal of educational policies on music education in Nigeria and Africa at large shall be studied and reviewed *vis-a-vis* current state of music education in all tiers of the educational system.

MUS 842.2 Music Education and Child Psychology:

This course examines how various developmental processes of the child are enhanced through appropriate blend of psychology and music in the child's education. The course focuses is on the child's cognitive, physical and affective/emotive domains using music platform.

MUS 843.2 Music Education and Gender in Africa:

This course studies historically the involvement of men and women as listeners, performers, teachers, and technologists in musical studies in Africa noting that in indigenous African conceptual philosophy and functionality music is a woman.

MUS 844.2 Applied Music Instruction and Pedagogy:

This course aims at exposing students to advanced proficiency on one musical instrument/voice. Emphasis is on the study of the art of teaching musical instruments and techniques for voice including discussions on the philosophy of teaching, learning process itself, teaching of musical interpretation, individualized study of various considerations (for example physical/technical aspects and pedagogical repertoire, peculiar to the teaching student's major instrument). Students will engage in a thorough investigation of vocal mechanism and its use as well as the study of noted teachers of past and present.

MUS 845.2 Advanced Survey in Developmental Psychology:

This course involves and in depth study of the processes of human development across the lifespan with an emphasis on psychosocial and emotional development. Major theories and models of normal development from infancy to old age are discussed. Development of ego functions and personality as well as deviations from normal development, are also covered in a lifespan framework. Also, philosophical, conceptual, theoretical and research issues pertinent to human development from prenatal life to adulthood are presented. The core conceptual issues of development, such as the nature-nurture controversy, the continuity-discontinuity issue, and

the issue of stability-instability, are discussed, and their relationships to the major theories in developmental psychology are examined.

MUS 846.2 Church Music Composition and Analysis: This course focuses on the theoretical and practical study of church music compositional techniques and procedures. Selected works from the Medieval, Renaissance, Baroque and classical era will be used. In addition, African compositional techniques and analysis will be used in evaluating contemporary African church music compositions

MUS 847.2 Development of Church Music from the Late Classical Period to the 21st Century: The course is an advanced exploration of the development of Church music from the Late Classical to the 21st century periods. It examines the development of various genres of sacred/church music of these eras including oratorios, choral music and choral societies, Catholic sacred music and Protestant church services music, the use of sacred texts in operas, symphony of Psalms, music and spirituality as evident in the works of Olivier Messiaen. Relevant examples of composers and their music styles, instrumental music, and sacred music in the Americas—Spirituals, will be discussed in detail.

MUS 848.2 Church Music, Programming and Administration: This course provides a range of effective programming and administration skills to support essential operation and on-going activities in the church. The course focuses on the development of financial, operational and managerial skills to maintain good leadership. It deals with Church music programming in the context of church (government) administration, which includes, graded ensembles: choral and instrumental, congregational activities, training for and promotion of music ministry, and the role of the minister of music as a staff member in a multi-staff context. The student will gain experience in creating effective management frameworks that prepares him/her to further their church's mission through spiritual formation, communications plans/planning and human resource practices.

MUS 849.2 Fundamental Theology of Christian Liturgy and Performance Ethics: This course is an exploration of the meanings of theology, Christian liturgy (worship): its history, principles and practice, spirituality, prayer and their relevance in the church, institutions and the society. It explains the role of theology and prayer in Christian worship, demonstrating how sound theology of worship and

prayer can enhance the ethical performance of Christian liturgy and thus improve the life of the Christian faithful.

MUS 850.2 Church Music: Organ and other Instrument II: The course is a continuation of Church Music: Organ and other instruments I. The history and development of the organ or other instruments of the students' choice, notable church music composers and repertoires will be studied. The student is expected to play some of these repertoires, especially those suggested by the course lecturer.

MUS 851.2 Contemporary Trends, Theories and Practices in Worship: This course is focused on current trends and issues in Christian worship discourses so as to engender critical thinking and other analytical skills. Such issues include but not limited to theoretical basis for diverse kinds of worship practices, impact of worldviews/philosophies on worship styles and music, use of multimedia and lighting in contemporary worship, practices that aid manipulation and extortion in worship by means of the arts.

MUS 852.2 Church, Music and Politics: A study of the doctrine of the church, giving a careful attention to biblical traditions, historical development of ecclesiology; the use of music in the church worship, proclamation of the gospel, Christian education, pastoral care and fellowship. Also, the course will emphasize on the discourses of power play within and between stakeholders in administration of the church and its music. The course further highlights the influences of politics in the Church, the orthodox and others.

MUS 853.2 Indigenous African Church/Sacred Music Composers: The course is an in-depth survey and study of African Church/Sacred music composers of Nigeria specifically, those of the Niger Delta region of Nigeria. Their historical background, denominational affiliations, collection/documentation of choral, congregational and instrumental works will be given prime focus. In addition, the liturgical function of the compositions of these church musicians will be examined. The distinctive characters and idioms unique to African sacred music shall be explored.

MUS 854.2 Indigenous Patterns and Practices in Sacred Music: This course examined the emergence and development of indigenous patterns, practices and performance styles of music(s) of

African initiated churches. Influence of cultural identity, indigenous method of communicating biblical messages by means of such identities leading to African church spirituality will be exposed. Further, the course investigates the local patterns, contents and practices inherent in indigenous Sacred Music in Nigeria in particular, and in Africa in general, including the instrumental resources.

MUS 800.3 Thesis: The student, in consultation with the supervisor/advisor, is expected to complete a project thesis during the final semester of his/her M.A. studies.

MUS 801.3 Recital II: (See MUS 813.2: Recital I) This is the final recital/performance for students in Performance Studies (Music Instrument Performance, and Conducting and Ensemble Administration).

MUS 802.3 Advanced Contrapuntal Techniques: The course focuses on the compositional processes and analyses of various contrapuntal forms ranging from small chamber to large-scale works such as the fugue. Representative works in these forms are included in the course materials.

MUS 803.3 African and Global Perspectives in Music and Gender: The course will discuss the nature of gender and age delineations in African life philosophy and practices. In music, as terminological evidences from culture groups instruct, is a Woman as much as men could feature more visibilities in instrumental performances for gender role and mystical reasons. African metaphorical ideology rationalizes that in the process of performances a man transforms into feminine gender attributes and emotions; hence indigenous African terminology encrypts mother musicianship/instrument instead of the modern conventional master musicianship/instrument as the

attributive label for specialist expertise in music-ness. The impact of modern Western gender theories, imaginations and prejudices on contemporary African mentality and societal practices will then be discussed as they deviate from or contradict original African perceptions/prescriptions that ensured mutual gender consciousness, respect and practices.

MUS 804.3 Music Pedagogy in Special Education: This course focuses on psychology of students with various disabilities and methods of impacting on them. The characteristics of each of the 'special children' (mentally retarded, behaviour disorders, speech disorders, visual and auditory impairment) shall be studied.

MUS 805.3 Chants, Sacred Sounds, and Spirituality: Music and religion are two universal features of human life. Across a broad spectrum of cultures around the world, music and musical practices have been an integral part of spirituality and religion. Focusing on the music and religious phenomena, this course aims at exploring the various kinds of music used in major world religious traditions (Hinduism, Buddhism, and the Abrahamic religions of Judaism, Christianity, and Islam) and how these sacred sounds are employed to enable the individual(s) discover the essence and values of their being. Although diverse in theological orientation, the preceding religions share some common traits including chant. The course is, thus, organized around two related sections. The first part of the course will be devoted to chant since chants play a vital role in the rituals and worship of these major world religions. The second section focuses on the music of composers (particularly Judeo-Christian composers) whose works are imbedded with spiritualized sonic and aesthetic appeals.

ACADEMIC STAFF

S/N	Name	Qualification	Designation	Area of Specialization
1.	Meki Nzewi	B.A. (Hons) (Nigeria) Ph.D. (Belfast)	Professor	Ethnomusicology, African Music Theory & Performance
2.	Onyee N. Nwankpa	B.A. (Hons) (Nigeria), M.A. (Lagos), M.Mus & Ph.D. (Calgary), GDFA (Calgary), Dip. Mus.Ed. (Nigeria) PAMTA, SOCAN	Professor	Composition, Theory, Conducting, Performance, Music Therapy & Music Business
3.	AdeOluwa A. Okunade	B.A. (Hons) Nigeria, M.A. (LASU), M.A. (OAU), Ph.D. (Ibadan), Dip.Mus.Ed. (Nigeria)	Professor	Ethnomusicology, Educational Management & Church and Sacred Music
4.	Ngozi V. Okonkwo	B.A. (Hons.) Nigeria, M.A. & Ph.D. (Abraka)	Associate Professor	Voice Pedagogy, Performance & Music Business
5.	Patience U. Oguoma	B.A. (Hons) Nigeria, M.A. Awka, M.A. Nigeria Ph.D. (Awka) Dip.Mus.Ed. (Owerri)	Associate Professor	Ethnomusicology, Music Education, African Music,
6.	Marie Agatha Ozah	N.C.E. (Uyo), B.A. & B.M. (PIMS, Rome), Licentiate (PIMS, Rome), M.A. (PIMS, Rome), Doc. Certificate (Pittsburgh, U.S.A), Ph.D. (Pittsburgh, U.S.A)	Senior Lecturer	Ethnomusicology (African Music), Cultural Studies, Sacred Music & Performance
7.	Isaac O. Ibude	BCM (Hons), MCM M.A. & Ph.D. (Ibadan), PGDE (Calabar)	Senior Lecturer	Ethnomusicology Performance Church & Sacred Music
8.	David Bolaji	N.C.E. (Oyo) B.A. (Abraka) M.A. (Abraka) Ph.D. (Abraka)	Senior Lecture	Composition, Theory, Operatic Studies and Production
9.	Eyiuche R. Modeme	B.A.Ed. (Nigeria), M.A. (Nigeria)	Senior Lecturer	Music Education & Music Therapy
10.	Rita Sunday-Kanu	B.A. (Nigeria), M.A. (Lincoln), M.A. (NAU)	Senior Lecturer	Music Media and Culture, & Ethnomusicology

FACULTY OF COMMUNICATION AND MEDIA STUDIES

DEPARTMENT OF FILM AND MULTI MEDIA

M. Sc. PROGRAMME IN FILM & MULTI MEDIA STUDIES

INTRODUCTION

The Master's Degree Programme in Film & Multi Media Studies is conceived to pragmatically expose the students to the core historical, theoretical issues, and best practices in the discipline of Film & Multi Media Studies. The Programme is deliberately designed to strike a balance between theory and practice. The intention is to produce skilled manpower that will be able to completely discuss issues related to the discipline as well as empower them to be able to set up independent production outfits to provide employment to the teeming population of the Nigerian youths. The Department believes that this programme will encourage the students to take up the challenges of improving their skills and proficiency in communication with the larger society through the medium of film and multi Media studies.

PHILOSOPHY

The philosophy of this programme is to combine education and applied research for the advancement of knowledge in filmmaking, marketing and media management generally.

VISION

It is the express purpose and vision of the Department to produce a cadre of professionals in the practice of Film & TV production that are aware of the technological trends in the discipline. Indeed, this is with respect to the demands of a modern economy that is competitive and responsive to societal development.

MISSION

While not narrowly concerned with Film/TV per se, it is the mission of this programme to provide a broad based platform for facilitating academic research and professional excellence in the theory and practice of the discipline of Film & TV Studies. Its major concern, which is to project the humanities in the Niger Delta beyond its immediate confines, is seen in the context of identifying with other cultures of the Nigerian nation.

RATIONALE/JUSTIFICATION

The Nollywood film industry in Nigeria has been labelled the second largest film industry in the

world, given the number of productions it releases annually. However, many stakeholders in the industry are yet to come to terms with its professional demands. Thus, the idea of this programme is to create a platform for an industry-driven professional collaboration in the area of film production in the country in order to create, educate and train the next generation of Nigerian filmmakers.

AIM AND OBJECTIVES

The aim of this programme is to equip students for the media needs of the present century. Its specific objectives are:

- a) To provide a programme of studies that will facilitate teaching and research in theatre and media arts, focusing on skill acquisition of students in meeting the socio-economic demands of the modern era, nationally and internationally.
- b) To apply the medium of film and television in projecting the cultural aspirations of the Niger Delta region and the generality of the Nigerian nation.
- c) To train teachers for meeting the needs of aspiring young artists in the creative arts particularly in the secondary and tertiary levels of education in Nigeria.
- d) To arouse critical consciousness in students of Film/TV Studies through learning, academic publications and distribution of media products.
- e) To generate economic drive among students and scholars of creative productions to see their arts as commodities.
- f) To positively impact students and associates with intellectual and critical awareness of phenomena through seminars and workshops.

ADMISSION REQUIREMENTS

To qualify for admission into the MSc programme, the candidate must obtain a first degree in Film/TV Studies or a related discipline with a result not below second class lower division.

PROGRAMME DURATION

The MA programme has been designed to run for twelve (12) calendar months, at the end of which students are expected to write an MSc thesis.

**AREAS OF SPECIALIZATION/
CERTIFICATION**

The following are the areas of specializations in the Graduate Studies programme of the Film & Multi Media Studies:

- i. Film History
- ii. Film Theory & Criticism
- iii. Film & Gender Studies
- iv. Film & Popular Culture
- v. Film/Video & Globalization

TABLE OF LIST OF COURSES, CODES AND CREDIT UNITS IN THE MA COURSE PROGRAMME STRUCTURE

FIRST SEMESTER

Course	Course title	Credit Unit
SGS 801.1	ICT & Research Methods	2
FMS 800.1	History and Principles of Film Criticism	3
FMS 801.1	West African Cinemas/Videos (1900-2010)	3
FMS 802.1	African Diaspora Cinema (North America)	3
FMS 803.1	Hollywood Cinema (1903-1960)	3
FMS 804.1	Film Theory and Criticism	3
FMS 805.1	Ethics, Cinema and Society	3
FMS 806.1	Research Methodology	3
	Total	23

SECOND SEMESTER

Course	Course Title	Credit Unit
SGS 801.2	Management & Entrepreneurship	2
FMS 805.2	Narrative Theories & the Cinema	3
FMS 806.2	Film Criticism/Textual Analysis	3
FMS 807.2	European Cinemas – A Case Study of Two Countries	3
FMS 808.2	African Diaspora Cinema (Western Europe)	3
809.2	Graduate Seminar	3
810.2	MA Research Dissertation	6
	Total	23
	Grand Total	46

COURSE CONTENT (MASTER’S DEGREE)

FIRST SEMESTER: MA PROGRAMME

SGS 801.1: ICT & Research Methods

Rightly one can say that technology presently is the soul of development. Learning by means of information and communication technologies is one area students of this programme will benefit more since they will be taught how to appreciate and use tools of digital technology creatively.

FMS 800.1: History and Principles of Film Criticism

In this course, students will be taught the key topics in the course, which includes: Historical Criticism, Political/Marxist Criticism, Third Cinema Theories, Theories of National Cinema, Genre Theories, Auteurist Theories and Psychoanalytic Theories.

FMS 801.1: West African Cinema/Videos (1900-2014)

This course will expose students to the history of West African film and video industries. The scope includes both Anglophone and Francophone West African cinemas. In teaching this topic, students will be exposed to the French colonial policy of assimilation and the British colonial policy of association, in terms of their responses to traditional African socio-political institutions, belief-system and moral values. The study will also deal with the context of the emergence of the film/video industries in the West African sub-region.

FMS 802.1: African Diaspora Cinema (North America)

This course will expose students to the history of African American filmmaking, from the silent era, with special emphasis on the works of Oscar Micheaux, Richard Edward Norman, Richard D. Maurice, George and Noble Johnson, Zora Neale Hurston and Eloyce King Patrick Gist. The course would equally give an outline history of Black Independent filmmakers.

FMS 803.1: Hollywood Cinema (1903-1945)

In this course, students will be taught the history of Hollywood cinema, beginning with Edwin S. Porter, through the Nickelodeon boom, Motion Picture Patents, the rise of the feature film, the star system, Hollywood classicism, up to the Hollywood studio system.

FMS 804.1: Film Theory & Criticism

In this course, students will be taught the key concepts and authorities of the following theories: Spectatorship Theories, Feminist Theories, Structuralism, Post-Structuralism/Deconstruction, Post-Colonial Theories and Queer Cinema Theories, Genre Theories, etc.

FMS 805.1: Ethics, Cinema and Society

This course introduces students to some Classical, Modern and Contemporary theories of ethics as they relate to the cinema and society. The study will take into cognizance how emerging trends in the cinema affect the cultural and moral values of societies. Attention will be focused on how a proper understanding and application of ethical themes can shape and enhance cultural and moral values of societies through the cinema.

FMS 806.1 Research Methodology

This course has to do with teaching students how to carry out research and the different kinds of documentation style sheets.

SECOND SEMESTER: MA PROGRAMME

SGS 801.2: Management & Entrepreneurship

Students offering this course will be guided in how to be innovative in generating ideas regarding film production themes, distribution and marketing strategies. The course will also ground them in the skills of film business and enterprise.

FMS 805.2: Narrative Theories and the Cinema

This course is intended to ground the students in the history of narrative theory in terms of its genealogy and early developments, beginning from structuralism to the present.

FMS 806.2: Film Criticism/Textual Analysis

In this course, students will be taught how to apply the various theoretical approaches in critical analysis of selected film (texts taken from filmmaking cultures across the world).

FMS 807.2: European Cinemas – A Case Study of Two Countries

In this course, students will be grounded in history and production contexts of filmmaking in the selected cinemas: British Cinema, French Cinema, Italian Neo-Realism, Scandinavian Cinema, German Cinema and Russian Cinema.

FMS 808.2: African Diaspora Cinema – Western Europe

This course will examine the socio-political context within which Black British Cinema flourished in the 1980s. The key figures of the period such as Isaac Julien, Maureen Blackwood, Coco Fusco, Kobena Mercer, etc., and the film workshops which nurtured their works such as Sankofa and the Black Audio Film Collective, will be examined in detail. Films such as *Territories* (Isaac Julien, 1984, 25 mins), *Passion of Remembrance* (Isaac Julien and Maureen Blackwood, 1986, approx. 80 mins), *Looking for Langston* (Isaac Julien, 1989, 40 mins) and *Handsworth Song* (Black Audio Collective – John

Akomfrah, Reese Auguiste, Lina Gopaul and Avril Johnson, 1985, 60 mins) will be analyzed.

FMS 809.2: Graduate Seminar

Students are exposed to the rudiments of writing seminar and upon completion of their course work, will present a Departmental seminar on their research project.

FMS 810.2: MA Research Dissertation

Students will write and defend their dissertations before a team of assessors at the end of their course work.

**MFA (PROFESSIONAL)
PROGRAMME IN
FILM & MULTI MEDIA STUDIES**

INTRODUCTION

The Department of Film and Multi Media Studies espouses the philosophy of pragmatic assessment of this programme from time to time to meet the demands and realities of the moment. In doing so, the department believes that by this new programme, students will be persuaded to take up the challenges of improving their skills and proficiency in communication with the larger society through the medium of television and film. This we believe has in-built power to reach mass audiences – in that a global outreach is envisaged through the window of the programme offered in this reviewed curriculum.

PHILOSOPHY

The philosophy of the MFA (professional) programme is to combine education and applied research for the advancement of knowledge in film/television production, marketing and management through hands-on training.

VISION

It is the express purpose and vision of the department to produce a cadre of professionals in the practice of Film production that are aware of the technological trends and their place in them. Indeed, this is with respect to the demands of a modern economy that is competitive as it is one of expertise.

MISSION

While not narrowly concerned with Film & TV per se, it is the mission of this programme to provide a broad based platform for facilitating academic research and professional excellence in the theory and practice of the discipline of Film and Television Studies. Its major concern, which is to project the humanities in the Niger Delta and beyond its immediate confines, is seen in the context of identifying with other cultures of the Nigerian nation.

RATIONALE/JUSTIFICATION

While the Nollywood film industry in Nigeria has been labelled the second largest in the world given the number of productions it releases annually, many stakeholders in the industry are yet to come to terms with its professional demands. Thus, the idea of this programme is create a platform for an industry-driven professional collaboration in the area of film production in the country in order to create, educate & train the next generation of Nigerian filmmakers.

AIM AND OBJECTIVES

The aim of this programme is to equip students for the needs of the present century in the area of film and Multi Media production. Its specific objectives are:

- a) To provide a programme of studies that will facilitate teaching and research in Film & TV Studies, focusing on skill acquisition of students in meeting the socio-economic demands of the modern era, nationally and internationally.
- b) To use the medium of radio, television and film in projecting the cultural aspirations of the Niger Delta region and the generality of the Nigerian nation.
- c) To arouse critical consciousness in students through learning, production and distribution of media products.
- d) To generate economic drive among students and scholars of Film and TV studies through artistic and creative productions in arts as commodities.
- e) To impact on students and associates the intellectual and critical awareness through seminars and workshops and the imitation of projects as the case may be.

ADMISSION REQUIREMENTS

To qualify for admission into the MFA (professional) programme, the candidate must obtain a first degree in a related discipline to Film and TV Studies with a minimum of second class lower division.

PROGRAMME DURATION

The programme is designed to run for twelve (12) calendar months at the end of which students are expected to write a dissertation.

AREAS OF SPECIALIZATION

The following are the areas of specialization:

- Film/Video Production Management
- Film/Video Directing
- Film Acting
- Screen Writing
- Cinematography/Still Photography
- Costume Design & Production/Make Up
- Film Editing
- Film Advertisement/Publicity
- Film Marketing/Distribution, and
- Documentary Film.

ADMISSION REQUIREMENTS FROM MFA TO Ph.D. PROGRAMME

Students wishing to proceed for the Ph.D. programme after the MFA (professional programme) are required to take all the First Semester courses in the M. Sc. (Film/Multi Media Programme) with the exception of SGS 801.1 (ICT & Research Methods) and FMS 805.1 (Ethics, Cinema and Society).

TABLE OF LIST OF COURSES, CODES AND CREDIT UNITS IN THE MFA (PROFESSIONAL) PROGRAMME COURSE STRUCTURE

FIRST SEMESTER

Course	Course Title	Credit Unit
SGS 801.1	ICT & Research Methods	2
MFA 800.1	Screen Writing	3
MFA 801.1	Techniques and Methods of Film Directing	3
MFA 802.1	Techniques and Methods of Film Acting	3
MFA 803.1	Film Editing (Linear/Non-Linear)	3
MFA 804.1	Documentary Film Production	3

MFA COURSE CONTENTS

FIRST SEMESTER

SGS 801.1 - ICT & Research Methods

Rightly one can say that technology presently is the soul of development. Learning by means of information and communication technologies is one area students of this programme will benefit more since they will be taught how to appreciate and use tools of digital technology creatively

MFA 800.1 – Screen Writing

This course will guide students in the development of storylines and different methods of treating them. It will take into cognizance, the art of developing storyboards and shooting scripts for various media purposes.

MFA 801.1 – Techniques and Methods of Film Directing

This course will examine the concept and methods of directing in terms of composition, picturization, rhythm, movement and pantomimic dramatization. It will also explore production values of proper use of camera, microphone, lights and sound in film/tv art.

MFA 802.1 – Techniques and Methods of Film Acting

The course will examine the techniques and methods of Acting especially as propounded by such authorities as Constantine Stanislavsky, Jerry Grotowski, Michael Chekhov and Bertolt Brecht.

MFA 803.1 – Film Editing (Linear/Non-Linear)

The art of editing is one area the students of this programme will be exposed to so as to equip them with the different strands of its components and how the syntactic principles of mise-en-scene and montage are implicated in the illusion of continuous motion in Film/TV construction.

MFA 804.1 – Documentary Film Production

Students will be taught the rudiments of documentary filmmaking and its various strands. They will be expected to undertake some practical assignments as well during the course.

MFA 805.1 – Ethics, Cinema and Society

This course introduces students to some Classical, Modern and Contemporary theories of ethics as they relate to film, television and society. Attention will be focused on how a proper understanding and application of ethical themes can shape and enhance cultural and moral values of societies through the screen representations.

SECOND SEMESTER

SGS 801. 2 – Management & Entrepreneurship

Students offering this course will be guided in how to be innovative in generating ideas regarding film production themes, distribution and marketing strategies. The course will also ground them in the skills of film business and enterprise.

MFA 805. 2 – Film/Video Production Management

This course examines the production techniques employed at the different stages of film and video production. It introduces the students to the rudiments of camera work as involved in programme production and news gathering. It also involves a practical segment whereby the students will be expected to put their knowledge of the techniques into work.

MFA 806. 2 – Cinematography/Still Photography

In this course, students will be taught the rules of engagement in cinematography and photography. This will help them appreciate beauty in arts, especially as it pertains to aesthetics and semiotics in media production.

MFA 807. 2 – Film Distribution/ Advertisement/Publicity

The course will introduce students to the rudiments of turning their arts into commodities. They will also be exposed to the principles of art evaluation as well as practical steps in publicizing productions through everyday contacts and the social media platforms.

MFA 808.2 - Costume Design, Production Design & Make-Up

The course is an intensification of the principles of costume design, production and application for screen specifically. Students are also expected to appreciate the design and application of make-up for period plays. The ability of students to appreciate the psychology of perception of color and the principles of application to productions is of interest here.

MFA 809. 2 – Graduate Seminar

Students are exposed to the rudiments of writing seminar and upon completion of their course work, will present a Departmental seminar on their research project.

MFA 810. 2 – MFA Production Dissertation

Students will write and defend their dissertations before a team of assessors at the end of their course work.

Ph. D PROGRAMME IN FILM & MULTI MEDIA STUDIES

INTRODUCTION

The PhD Degree Programme in Film & Multi Media

Studies is conceived to pragmatically expose the students to the core historical, theoretical issues, and best practices in the discipline of Film & TV Studies. The intention is to produce skilled manpower that will be able to completely discuss issues related to the discipline.

PHILOSOPHY

The philosophy of this programme is to combine education and applied research for the advancement of knowledge in film and television studies generally.

VISION

It is the express purpose and vision of the Department to produce a cadre of professionals in the area of Film & Multi Media studies that are aware of the technological trends in the discipline. Indeed, this is with respect to the demands of a modern economy that is competitive and responsive to societal development.

MISSION

While not narrowly concerned with Film/Multi Media per se, it is the mission of this programme to provide a broad based platform for facilitating academic research and professional excellence in the theory and practice of the discipline of Film & Multi Media Studies. Its major concern, which is to project the humanities in the Niger Delta beyond its immediate confines, is seen in the context of identifying with other cultures of the Nigerian nation.

RATIONALE/JUSTIFICATION

The Nollywood film industry in Nigeria has been labelled the second largest film industry in the world, given the number of productions it releases annually. However, many stakeholders in the industry are yet to come to terms with its professional demands. Thus, the idea of this programme is to create a platform for an industry-driven professional collaboration in the area of film production in the country in order to create, educate and train the next generation of Nigerian filmmakers.

AIM AND OBJECTIVES

The aim of this PhD programme is to equip students for the media needs of the present century. Its specific objectives are:

- a) To provide a programme of studies that will facilitate teaching and research in film and television studies, focusing on skill acquisition of students in meeting the socio-economic

demands of the modern era, nationally and internationally.

- b) To apply the medium of film and television in projecting the cultural aspirations of the Niger Delta region and the generality of the Nigerian nation.
- c) To train teachers for meeting the needs of aspiring young artists in the creative arts particularly in the secondary and tertiary levels of education in Nigeria.
- d) To arouse critical consciousness in students of Film/Multi Media Studies through learning, academic publications and distribution of media products.
- e) To generate economic drive among students and scholars of creative productions to see their arts as commodities.
- f) To positively impact students and associates with intellectual and critical awareness of phenomena through seminars and workshops.

ADMISSION REQUIREMENTS

To qualify for admission into the Ph.D. programme, the candidate must obtain a master's degree in Film/TV Studies. The following CGPA scale will be used in admitting candidates to the Ph.D. programme:

- Candidates with Master's Degree on 5pt scale – with a CGPA not below 3.50
- Candidates with Master's Degree on 4pt scale – with a CGPA not below 3.20
- Candidates based on percentage - with not less than 60%

PROGRAMME DURATION

The Ph.D. Programme will run for the following duration:

- Full Time: 2 – 5 years
Part Time: 3 – 7 years.

AREAS OF SPECIALIZATION/ CERTIFICATION

The followings are the areas of specializations in the Graduate Studies programme of the Film & TV Studies:

- i. Film History
- ii. Film Theory & Criticism
- iii. Film & Gender Studies
- iv. Film & Popular Culture
- v. Film/Video & Globalization

TABLE OF LIST OF COURSES, CODES AND CREDIT UNITS IN THE Ph.D. COURSE PROGRAMME STRUCTURE

FIRST SEMESTER

Course	Course Title	Credit Unit
MFA 900.1	Film/Video Textual Analysis	3
MFA 901.1	History of African Cinema/Video	3
MFA 902.1	Cinema & Society in Africa	3
Total Credit Units for First Semester		9

This course will expose students to the history of West African film and video industries. The scope includes both Anglophone and Francophone West African cinemas. In teaching this topic, students will be exposed to the French colonial policy of assimilation and the British colonial policy of association, in terms of their responses to traditional African socio-political institutions, belief-system and moral values. The study will also deal with the context of the emergence of the film/video industries in the West African sub-region.

SECOND SEMESTER

Course	Course Title	Credit Unit
MFA 903.2	PhD Seminar	3
MFA 904.2	African Popular Culture & Cinema	3
MFA 905.2	Gender, Society & Cinema	3
MFA 906.2	PhD Thesis	12
Total Credit Units for Second Semester		21
TOTAL CREDIT UNITS		30

FMS 902.1: Cinema & Society in Africa

This course will examine the interface between the cinematic institution and the society.

SECOND SEMESTER: PhD PROGRAMME

FMS 903.2: PhD Seminar

FMS 904.2: African Popular Culture/Cinema

This course will examine the relationship between film/video and popular culture within the context of transglobalization and in terms of identity construction in Africa. The issues are examined within the broad contexts of historical and theoretical frameworks.

FMS 905.2: Gender, Society & Cinema

This course will ground the students in the history and theories of gender studies in terms of their relationship to the cinema.

FMS 906.2: PhD Thesis

SGS 801.1: ICT & Research Methods

Rightly one can say that technology presently is the soul of development. Learning by means of information and communication technologies is one area students of this programme will benefit more since they will be taught how to appreciate and use tools of digital technology creatively.

SGS 801.2: Management & Entrepreneurship

Students offering this course will be guided in how to be innovative in generating ideas regarding film production themes, distribution and marketing strategies. The course will also ground them in the skills of film business and enterprise.

*In addition to these courses, students from outside the University of Port Harcourt will be required to undertake the following courses if they did not take them in their master's programme:

SECOND SEMESTER

Course	Course Title	Credit Unit
SGS 801.1	ICT & Research Methods	2
SGS 801.2	Management & Entrepreneurship	2

FIRST SEMESTER: PhD PROGRAMME

FMS 900.1: Film Criticism/Textual Analysis

In this course, students will be taught how to apply the various theoretical approaches in critical analysis of selected film (texts taken from filmmaking cultures across the world).

FMS 901.1: History of West African Cinema/Video

ACADEMIC STAFF

	Names	Qualification	Field of Specialization	Designation
1.	Prof. F.O. Shaka	BA (Benin) MA (Ibadan) Ph.D. (Warwick, UK).	Film History, Theory & Criticism/Mass Media Theories	Professor
2.	Prof. I. E. Uwah	B. Phil, B.Th. (Rome) MA (Calabar), Ph.D. (Dublin)	Media Theories and Film Criticism	Reader

PREAMBLE

The communication subsector has remarkably changed since the middle of the last century and that change has become even more rapid in the last few decades. The strategic role of communication and particularly broadcasting, in contemporary times has necessitated the training of students and broadcast practitioners who would be well positioned not only to appreciate and respond to the changing media space but also be able to deploy the evolving media technologies to tackle contemporary challenges especially in developing nations which are in urgent need of catching up with the rest of the world. A Graduate programme in Broadcasting therefore will prepare another set of management level manpower for an industry that is increasingly dynamic where people are either interested in applying communication principles in dealing with contemporary issues in communication or have found themselves in broadcasting but desire to acquire additional skills to better position themselves for today's realities. This consciousness explains and justifies the running of Graduate programme in Broadcasting. This is also in compliance with the directive of NUC to Nigerian universities to unbundle the rather wide mass communication discipline for greater efficiency.

Philosophy

The Graduate programme in Broadcasting has been designed to provide advanced hands on experience and theoretical knowledge in broadcast media management and production as well as scientific research approaches needed to appreciate and expand the frontiers of theory and practice of broadcasting.

Vision

In accordance with the vision of the Faculty of Communication and Media Studies and University of Port Harcourt, the proposed Department of Broadcasting shall strive to build and develop a model Department of Broadcasting in Nigeria and contribute in making the University of Port Harcourt a citadel of excellence among other Universities in Nigeria, offering high quality and standard broadcasting education that would lead to the production of broadcast professionals who would advance and utilize such knowledge for service to humanity.

Mission

To achieve the above vision, the proposed Department of Broadcasting has the mission of pursuing academic excellence through quality teaching, academic research, training and community service as well as promote the grooming

of well-rounded broadcast professionals and researchers.

Rationale

The rapid expansion in broadcasting both as a profession and academic discipline, the increasing interest of people in this area as well as its complex nature and role in the economy, politics, governance and all other aspects of today's society makes it necessary to train practitioners, scholars and researchers in this area. This is the justification for a graduate programme in broadcasting.

Aim and Objectives

The aim of the programme is to produce senior cadre manpower in the broadcast industry who will be able to respond to the information need of contemporary society in the area of broadcasting. The specific objectives of the programme are:

- a. to produce senior level staff to man the ever-challenging broadcast industry and respond to global challenges requiring up-to-date skills in broadcasting and media studies as well as package programmes on radio and television to meet the standards in our changing world;
- b. to provide students with both the basic techniques of broadcasting analysis and with the practical tools for media in the global village for today and tomorrow;
- c. to produce post-graduate students with well-rounded education, who are not only professional broadcasters but also experts in media studies
- d. to give students broader understanding of the scientific studies of broadcasting in both theory and practice.
- e. to produce students who are up to date with current trends in the field of broadcasting and competently serve in the industry in senior positions.
- f. expose students to contemporary and advanced research techniques needed to analyse broadcasting and development issues.

PGD PROGRAMME IN BROADCASTING

The programme is designed to provide students with a range of requisite knowledge, skills and understanding of broadcasting and media studies terrain with the objectives of:

- i. generating sensitivity to the broadcast environment and its impact upon decision-making in the sphere of development-oriented affairs;
- ii. introducing knowledge and providing an understanding of the relationship between broadcasting for development planning and human resources;

- iii. providing broadcast practitioners in the field who do not have the relevant academic requirement for further studies at higher levels and opportunity to do so;
- iv. providing the opportunity for a foundation in rigorous, systematic, high-quality communication research for those interested in further studies.

Admission Requirements

- a. In addition to the university matriculation requirement of five credits including English Language and Mathematics at O/Level, a candidate seeking admission into this programme shall possess any of the following:
- b. Higher National Diploma of Upper Credit classification in Mass Communication or any other related discipline in Communication or Social Sciences/Business Administration from a recognized polytechnic or university approved by the Senate of the University of Port Harcourt
- c. Bachelor's degree with at least second-class division from areas not related to Communication.
- d. Bachelor's degree not lower than third class division in a Communication related discipline of a recognized university.

Programme Duration

The duration of the programme shall be a minimum of two semesters and a maximum of four semesters for full-time students.

LIST OF COURSES AND UNITS

First Semester

Course Code	Course Title	Units
BMS 701.1	Principles of Mass Communication and the Media	2
BMS 702.1	News reporting and writing	2

BMS 711.2	Writing for the Broadcast Media	2
BMS 712.2	Digital Broadcasting	3
BMS 713.2	Radio and Television Production Technique	3
BMS 714.2	Research Project	6
Total		21

COURSE DESCRIPTION

BMS 701.1: Principles of Mass Communication and the Media

This course exposes students to the fundamentals of mass communication: rudiments of communication in general; conceptual definition and explication of mass communication; basic processes, dimensions and adjuncts of mass communication; forms of the mass media; normative and functional theories of mass communication; time/space perspectives on the advent of mass communication and its relationship with and departure from public sphere communication.

BMS 702.1: News Writing and Reporting

Since some students in the programme may not have mass communication background, this course will take learners from the rudimentary to the advanced and contemporary stages of news writing and reporting. Topics will include rudiments of news reporting; information-gathering techniques and problems; types of reporting including investigative journalism; organizing news stories using both the conventional and the hourglass, circle and block styles of reporting stories; reporting for print and broadcast media; and computer-assisted reporting. Course should cover skills in and approaches to reporting activities in such specialized areas of human endeavour as the economy, government and politics, crime and security, aviation, labour, sports, the courts, the environment and science and technology. Enterprise or creative reporting shall also be highlighted.

BMS 703.1: Principles and Practice of Broadcasting

A review of basic elements of broadcast production, namely, the studio, camera movements and shots, control room techniques and editing, sound; the dynamics of the microphone, sound effects, music techniques and terms, will be taught. The formats and styles of scripting for broadcasting will be discussed in-depth. News and current affairs, programming and production will also be covered.

Equally covered are issues of ownership and control as well as regulation of broadcasting.

BMS 704.1: Announcing and Performance

The course considers the fundamentals of voicing and the nature of speech for professional broadcasters. Examination of performance types, including the announcer, the actor, the jockey, the reporter, the interviewer, the moderator, and the narrator. Review of performance techniques with regard to the microphones and the camera, as well as with regard to the performance types. The course covers practical performances by students using the studio facilities.

BMS 705.1: Indigenous African Media Systems

Lectures will cover African culture and communication forms, oral-media, African oral literature, the functions and characteristics of traditional media, communication in transition, traditional media in mass communication, proverbs as the language of social communication in traditional societies, influence of political culture on African communication systems, indigenous communication systems in media globalization and strengths and weaknesses of indigenous media.

BMS 706.1: Communication, Culture and Society

Examination of the media of communication as social institutions with particular attention to pertinent sociological concepts, themes and problems; the role and relationship of the broadcast media vis-à-vis other major social institutions. Focus on the sociology and professionalism of media communicators, media contents and the issue of cultural imperialism and media dependency; internal dynamics and control of broadcast organizations and mass communication politics. The media as instrument for the promotion and transfer of cultural values are examined, along with the relationship between the media and popular culture. The role of communication in development is critically examined.

BMS 707.1: Research Methods and Statistical Analysis

The various social science research designs including content analysis as well as quantitative and qualitative methods of data analysis should be discussed. Students shall be exposed to basic statistical tools that will sharpen their understanding of data analysis.

BMS 708.2: The State, the Media, Law and Ethics

Politics, government and governance, public policy, the environment and Nigeria's contemporary economy will be analyzed through the mirror of the

media. The law and ethics of Mass communication vis-à-vis the state will be emphasized in such a way that will eliminate uncertainties for young media practitioners and entrepreneurs.

BMS 709.2: Mass Communication Theory

An examination and critical analysis of major Mass communication theories as well as the theories of the construction of social reality will be covered in a manner that is hinged on the reciprocity of theory and practice.

BMS 710.2: Broadcast Media Management

The course will examine economic principles and theories applicable to mass media (especially broadcast) businesses, including production cost, audience promotion and advertising revenue. It will also discuss management theory that fits the broadcast media industry. Case studies will be used to help students deal with ethical work dilemmas. Among the topics to be discussed are: history, theory and practice of management, media ownership patterns, characteristics of organisations, organisation of broadcast newsrooms and the communication structures in media organisations; leadership styles, public and private ownership of media houses, staff management, financial management, advertising and distribution.

BMS 711.2: Writing for the Broadcast Media

This course provides a framework for instruction on writing the broadcast media script. It seeks to help students develop and improve their general journalistic writing skills, acquaint themselves with journalistic style and improve their proficiency in grammar and the use of language. Emphasis is placed on scripting the different genres of broadcast programmes such as drama, commercials, documentary, writing to piece and other formats.

BMS 712.2: Digital Broadcasting

This course will expose students to the dynamics of internet broadcasting. It will also appraise Web 2.0 including social networking sites/social media such as Facebook; Twitter, LinkedIn, etc. and their impact on news gathering and reportage, peddling of harmful information, citizenship power; connectivity and access. The course also covers digital postproduction software packages, working with timelines, continuity and complexity editing. It also examines screen space visualization, time and motion, meaning and types of animation (2D & 3D animation), computer animation, combining computer animation and live action, working and synchronizing sound and outputting edited work.

BMS 713.1: Radio & Television Production

The course covers comprehensive analyses of the production processes in radio and television; intense practical exercises in the design, production and

evaluation of radio and television programmes and commercials for radio and television services will also be covered. It discusses the techniques involved in sending signals from the studio to receivers at home as well as put the students through operations in the studio and use of broadcast equipment. The film angle of the course seeks to expose the student to the philosophical and practical aspects of aesthetics as applied to film and video production. The plot structure of a story and how the story could be converted to screen script will be taught. Students will be expected to probe into the process of producing the Nigerian video film and familiarize themselves with the regulations and policy of the Nigerian Film and Video Censors Board (NFVCB). For drama and documentary, topics will include the basics of pre and post- production formalities, processes and editing. Planning, casting, performance and budgeting will also be covered. The course is largely a practical course.

BMS 714.2: Research Project

Students will be required to write and submit a well-researched project in any aspect of broadcasting.

M.Sc. PROGRAMME IN BROADCASTING

Admission requirements

For admission into this programme, a candidate is required to possess any of the following:

1. Upper credit level in HND and above whose holder has successfully completed PGD programme in Communication Studies with a CGPA of not less than 3.50
2. A Bachelor's Degree not lower than Second Class Lower Division with a Broadcast Media Studies or any related discipline in Communication from a recognized University approved by the Senate of the University of Port Harcourt.
3. MA Degree in communication related discipline with a CGPA of not less than 3.50 on a 5point scale or 3.00 on a 4point scale.

Duration

The duration of the M.Sc. programme in Broadcasting and Media Studies shall be a minimum of four semesters and a maximum of six semesters for full time students and a minimum of six semesters and a maximum of eight semesters for part-time students.

LIST OF COURSES AND UNITS

First Semester

Course Code	Course Title	Units

BMS 812.2	Advanced Studies in International Communication	3
BMS 813.2	Advanced Drama Production in Broadcast Media	3
BMS 814.2	Dissertation	6
Total		24

COURSE DESCRIPTION

SGS 801.1 ICT and Research Methodology

This course should cover essentials of spreadsheets, Internet technology, statistical packages, precision and accuracy of estimates, principles of scientific research, concepts of hypothesis formulation and testing, organization of research and report writing.

BMS 802.1 Advanced Broadcast Media and Development Studies

This is an advanced course aimed at offering current knowledge on development and how broadcast media can be used to approach aspects of development in the society. Students will be taken to appreciate how the broadcast media can be used to mobilize supports for development. It will also expose students to models of development and how they can be applied to solve specific development challenges.

BMS 803.1 Advanced Studies in Media and Society.

The course will focus on the relationship between media and society; the media and the socio-political and economic environments, media organizations and their various publics, the relationship between broadcast media and culture, international communication, a comparative study of media politics and policies in selected countries of the world; communication and conflict management and designing information system for a developing economy.

BMS 804.1. Advanced Studies in Community and Public Service Broadcasting

This course is designed to provide advanced analysis of community (rural and urban) needs and problem with regards to the power of radio and television.

The course will further explore advanced knowledge in planning and designing community development projects for implantation through community radio, television and webcasting. It also discusses issues of public service and public interest broadcasting in the era of digitization.

BMS 805.1 Advanced Communication Research

The course aims at taking students through the advanced issues involved in research presentation and objectives as well as current approaches to research in broadcasting and social sciences. It will expose the students to the different research designs, analysis and presentations as well as an examination of the APA style sheets. The course will be practical oriented, and students will be required to present a short proposal applying the techniques acquired in the course.

BMS 806.1 Advanced Studies in Announcing and Performance.

The course will offer advanced training in voicing and speech production. The course will take students further into advanced training in announcing, acting, jockeying, reporting, interviewing, live commentaries and moderation of different programme formats on radio and television.

BMS 807.1 Advanced Broadcast Studio Operations.

This course is designed to provide students with advanced knowledge of radio and television studio and control room principles, technologies and disciplines. The course will provide further insight into the nature of sound and light as they relate to studio production values. It will encourage practical exercise in studio setup, standard operation procedures, use of studio facilities and equipment.

SGS 801.2 Management and Entrepreneurship

This course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

BMS 808. 2 Advanced Studies in Communication Theories

This course is an exploration and analysis of major theories that deal with the nature, uses and effects of media and communication; the relationship between theory and research and the relevance of the latter to the success of the former are discussed at an advanced level.

BMS 809. 2 Advanced Digital Communication

This is an intensive and practice oriented course in which students will learn the technical and conceptual tools to understand the basics of digital communication. Students will develop their own blog and websites as means of communicating and presenting work to a wider audience. Also, students will be introduced to the dynamics of social media platforms and their applications in broadcasting. Emphasis will be placed on using digital media channels as broadcast media.

BMS 810.2 Advanced Broadcast Production Techniques.

The aim of this course is to provide students with advanced and comprehensive knowledge and analysis of the production processes in radio and television. Attention will be focused on design and evaluation of broadcast programmes and commercials for radio and television. Critiques of radio and television programmes will also be a part of the course.

BMS 811.2 Advanced Broadcast Media Management.

This course is designed to provide advanced analysis of the principles, structures and processes of management and organization of broadcasting stations. Issues of licensing, frequencies, resources, structure will be in focus in great details. Current challenges of broadcast media management will be discussed in detail. Management principles and theories as applicable to the running of broadcast stations will also be taught.

BMS 812.2 Advanced Studies in International Communication.

This course is designed to provide a framework for students to be schooled in the operations of wire services, the mass media worldwide, globalization of media corporations and contents; intercultural communication, historical background of foreign broadcasting and socio-economic, political and ideological characteristics of international broadcasting.

BMS 813.2 Advanced Broadcast Media Drama Production.

This course is designed to provide students with advanced knowledge in writing of different types of

radio and television drama script such as serials, romcom, sitcom and docudrama; the techniques for editing drama scripts; casting, the production and presentation of broadcast drama are studied.

BMS 814.2. Dissertation

The thesis shall present results of an original work anchored on contemporary and systematic methodology. Data should be analysed using highly scientific tools and consideration will be given to the contribution of the work to knowledge.

PhD IN BROADCASTING

Degree in view

The programme design is built on the pedagogy and epistemology that systematically leads to the award of Doctor of Philosophy (PhD) in Broadcasting and Media Studies.

Admission requirements: Candidates wishing to pursue a PhD programme in the department must hold a Master's degree with a CGPA of 3.50 on a 5-point scale in Mass communication, Communication Studies/ Arts. In addition, candidates seeking admission into PhD programme in the department must submit to the Departmental Graduate Studies Committee, a written proposal of a topic of their interest which they must defend before the admission can be granted.

Membership of professional bodies such as APCON, NIPR, ACCE, etc may not be compulsory but may be an advantage. To this end, all successful candidates must at the time of admission or upon completion show prove of membership.

Duration: The duration of the PhD programme is a minimum of 24 calendar months for full time and 36 calendar months for part time students. Students who are unable to complete the thesis within the normal period must apply for a fresh admission from the Graduate School as stipulated by the Graduate School prospectus.

Graduation Requirements: To obtain PhD in the department of Broadcasting, students must:

- i) Pass all the registered courses for their programme with a grade of at least C.
- ii) Pass a comprehensive examination;
- iii) Present a seminar work at the Graduate Seminar and participate in seminar discussion, obtaining at least a C grade;
- iv) Present a thesis of not less than 50,000 word count to the department;
- v) Pass all oral examination in defence of the dissertation before panel of examiners set up in accordance with University regulations.

Other Graduation Requirements

The programme shall essentially be segmented into:

i. Course work – Lecturers/Seminars

This will feature classroom interface on a semester basis for a maximum of two semesters. Assessment will be:

1. Continuous Assessment (term paper, seminar, etc) 30%
2. Examination (written). 70%
3. 100%

Course load

Candidates must take and pass a minimum of thirty-four (35) units made up of twenty-five (26) units of compulsory courses, three (3) units of seminar and six (6) units of research report writing (thesis)

COURSE STRUCTURE

First Semester

Course Code	Course Title	Units
BMS 901.1	Advanced Research Methods Techniques	2
BMS 902.1	Seminar in Digital media production	3
BMS 903.1	Seminar in Media and Society	3

BMS 907.2	Seminar in Broadcast Media Management	3
BMS 908.2	Seminar in International Communication	3
BMS 909.2	Seminar in Sports & Specialized Broadcasting	3
BMS 910.2	Doctoral Seminar Presentation	3
BMS 910.2	Thesis	6
Total		21

COURSE DESCRIPTION

BMS 901.1 Advanced research methods and techniques.

This course focuses on basic concepts in research with emphasis on social science research methodologies bearing in mind qualitative and quantitative dimensions. Design such as surveys, content/textual analysis, focus group

discussions/participant observations in data collection, analysis and reporting are highlighted. Ethical issues in social science research covering areas like voluntary participation, anonymity and confidentiality of sources are also highlighted as well as the use of software packages in both qualitative and quantitative research.

BMS 902.1 Seminar in Digital Media Production

This course is designed to provide students with knowledge and application of digital software and hardware in online Broadcast media production. The course will treat tele-conferencing, globalization and impact of ICT on news credibility and ethical and legal concerns in the use of ICTs in broadcast media among others.

BMS 903.1 Seminar in Media and Society

Discussion will be on the relationship between media and society, media and culture, issues of ideology, the media and the socio-political and economic environments, media organizations and their various publics, family and community in communication advocacy and marginal communities; communication and conflict management, designing information system for a developing economy and other issues affecting the society.

BMS 904.1. Seminar in Broadcasting and Development.

This course will provide students with knowledge in areas such as the role of broadcasting in development projects with particular interest in cultural differences and their influence in the acceptance and rejection of any new idea. The emphasis will be on how to design broadcast media campaigns in agriculture, nutrition, sanitation, hygiene, education, community self-help projects, family planning and birth control in order to achieve the campaign objectives in a multi-cultural country like Nigeria. The course also covers design and execution of special projects and syndication especially for development purposes.

BMS 905.1. Seminar in Broadcast studio operation

This course is designed to enhance students' knowledge of broadcast studio and control room management and principles. Practical exercises will be given on camera operations for effective production, achievement of special effects, editing techniques and related subject matters.

BMS 906.2. Seminar in Broadcast Production Techniques

The course provides an overview of the various aspects of research in the broadcast media and

expanded knowledge in the understanding of the broadcast media production, production philosophy, programming and the technologies involved in modern day productions. It explores special effects applicable in the various broadcast techniques as well as criticism of productions in the broadcast industry.

BMS 907.2. Seminar in Broadcast Media Management.

This is designed to provide students with advanced knowledge in the principles of broadcast media management. Focus will be on the classical and contemporary theories of management; planning and leadership as important concepts in management. It also discusses management approaches and broadcast media economics in contemporary times.

BMS 908.2. Seminar in International Communication

This course highlights the major issues of international communication; the disparity in media coverage of the developed and developing world; international discourse on the dimensions to media and politics. The course will also treat economics of media ownership and financing and the position of national and regional media agencies in bridging the gap in the coverage of development and emerging issues between developed and developing nations. It will also treat issues relating to international politics and broadcasting among others.

BMS 909.2. Seminar in Sports and Specialized Broadcasting.

This course is designed to focus on practical experience in writing, reporting and presentation of sports news and other special programmes in the broadcast tradition. The course will also deal with sports commentary, management of outside (ceremonial) broadcast, and others. It treats the various ways that sport broadcasts can be used for integration. It explores youths attitude towards the broadcast of foreign sports such as premierships, La Liga etc.

BMS 910.2. Doctoral Seminar Presentation

Every student must, with the assistance of a supervisor prepare and present a seminar paper before other graduate students and academic staff of the Department. The seminar paper must be related to the student's proposed thesis topic. Credit is given for content, presentation, and handling of discussion. Candidates who score below a C grade in their presentations will be given another chance to re-do the work. Candidates who have successfully presented their departmental graduate seminar shall be recommended to the Faculty Seminar Committee and then to the School of Graduate Studies for the final doctoral seminar presentation. Only successful

candidates at this stage shall be prepared to face the external examiner.

BMS 912.2. Thesis:

The thesis to be presented is expected to take the structure, mechanics and style and be patterned after

the guidelines of the school of postgraduate studies. At this stage, candidates will be expected to be conversant with trends in research and be able to write and report on well researched subjects in broadcasting.

ACADEMIC STAFF

DEPARTMENT OF JOURNALISM AND MEDIA STUDIES

Introduction

This is a description of programme contents and courses for the award of higher degrees in Journalism and Media Studies..

Philosophy

To provide knowledge-based interactions geared towards facilitating effective research into journalism and social economic and political development in Nigeria; with journalism and media serving as catalysts. This is premised on the belief that journalism and media studies should be provide a platform for popular enlightenment and social transformation, anchored on advanced media instruction in pursuit of high quality media research, training and vibrant professional acculturation.

Vision

To produce high-level researchers, consultants and media administrators that will change the face of national and global journalism and media studies landscape.

Aim and Objectives

The programme aims at producing high calibre journalism researchers, experts and consultants who will be able to ventilate credible ideas on issues of social and national concern. To this end, the specific objectives include the need to:

- i. Train graduates to develop ability for critical judgment through a broad knowledge of theoretical and practical issues in media work.
- ii. Enable graduates acquire advanced skills and competences in media research geared towards responding to the socio-economic and political needs of an evolving nation like Nigeria.
- iii. Train skilled manpower for educational institutions and professional media organizations in both the public and private sectors and by extension, international organizations.
- iv. Acquaint graduates with the dominant ethics of professional practice as well as orientations on the notions of social responsibility.

POSTGRADUATE DIPLOMA IN JOURNALISM AND MEDIA STUDIES

Admission Requirements

- e. In addition to the university matriculation requirement of Five Credits including English Language and Mathematics at O/Level, a candidate seeking admission into this programme shall possess any of the following:
- f. Higher National Diploma of Upper Credit classification in Mass Communication or any other related discipline in Communication or

Social Sciences/Business Administration from a recognized polytechnic or university approved by the Senate of the University of Port Harcourt

- g. Bachelor's degree with at least a **Second Class Division** from areas not related to Communication.
- h. Bachelor's degree of not lower than **Third Class Division** in communication studies of a recognized university.

Programme Duration

The duration of the programme shall be a minimum of **two semesters** and a maximum of **four semesters** for full-time students.

Graduation Requirements

To obtain a PGD in Journalism and Media Studies, students must:

- a) Pass all the registered courses for the programme with at least a 'C' Grade
- b) Present a Seminar at the Department and obtain at least a 'C' Grade.
- c) Present a Project of not less than 60 pages to the Department

The programme shall essentially be segmented into:

i. Course work – Lectures/Seminars

This will feature classroom interface on a semester basis for a maximum of two semesters. Assessment will be:

- | | |
|------------------------------------------------------|-------------|
| a. Continuous Assessment (term paper, seminar, etc.) | 30% |
| b. Examination (written) | 70% |
| Aggregate | 100% |

JMS 709.2	Mass Communication Theories	2
JMS 710.2	Print Media Production	2
JMS 711.2	Journalistic Writings	2
JMS 712.2	Editorial Writing	2
JMS 713.2	Print Journalism Seminar	2
JMS 714.2	Specialized Reporting	6
	Total	18

COURSE DESCRIPTION

JMS 701: Principles of Journalism and Media Studies

Course exposes students to the fundamentals of communication. Here, the rudiments of communication in general; conceptual definition and explication of communication studies and basic processes will be explained. The studies will also include the dimensions and adjuncts of mass communication; forms of the mass media; normative and functional theories of mass communication; time/space perspectives on the advent of Mass communication and its relationship with and departure from public sphere communication.

JMS 702: News Writing and Reporting

Since some students in the programme may not have communication studies background, this course will take learners from the rudimentary to the advanced and contemporary stages of news reporting and writing. Topics will include rudiments of news reporting; information-gathering techniques and problems; types of reporting including investigative journalism; organizing news stories using both the conventional and other styles of reporting stories. A distinction will be made between reporting for print and broadcast media; and computer-assisted reporting. Course should cover skills in and approaches to reporting activities in such specialized areas of human endeavour as the economy, government and politics, crime and security, aviation, labour, sports, the courts, the environment and science and technology. Enterprise or creative reporting shall also be highlighted.

JMS 703 Elements of Style in Journalistic Writings

This course introduces the students to the intricacies of style in media writing. Emphasis will be laid on house style or style guide for reporters and how to prepare copies for the media houses. Issues like sentence structure, diction, spellings, punctuation and paragraphing, Headline writing and journalese would form an integral part of this course.

JMS 704: Printing and Publishing

Students are expected to have a firm knowledge of types of printing, presses, the publishing process,

kinds of book publishing, problems and prospects of publishing in Nigeria. The place of graphics in printing and publishing as well as binding, finishing operations and marketing, will be treated. Desktop publishing shall be emphasized while legal aspects of publishing shall also be examined.

JMS 705: Indigenous Media Systems

Lectures will cover African culture and communication forms, oral-media, African oral literature, the functions and characteristics of traditional media, communication in transition, traditional media in mass communication. Issues like the place of proverbs as the language of social communication in traditional societies, influence of political culture on African communication systems, indigenous communication systems in media globalization and strengths and weaknesses of indigenous media.

JMS 706: Feature Article Writing

Course will teach the students the basic principles and practices in feature writing as well as explain the differences between feature and other genre of print media writings. Emphasis, here, will be on the relevance of investigation in feature writing, the types of feature articles, topics and how to generate ideas for feature article and of course, the techniques for writing an interesting and readable feature article.

JMS 707: Research Methods and Statistical Analysis

The various social science research designs including content analysis as well as quantitative and qualitative methods of data analysis should be discussed. Students shall be exposed to basic statistical tools that will sharpen their understanding of data analysis such as spreadsheets and SPSS.

JMS 708: The State, the Media, Law and Ethics

Politics, government and governance, public policy, the environment and Nigeria's contemporary economy will be analyzed through the mirror of the media. The law and ethics of communication, media and journalism vis-à-vis the state will be emphasized in such a way that it will eliminate uncertainties for a young media entrepreneur.

JMS 709: Mass Communication Theories

An examination and critical analysis of major mass communication theories as well as the theories of the construction of social reality will be covered in a manner that is hinged on the reciprocity of theory and practice.

JMS 710: Print Media Production

This is a practical-oriented course that exposes the students to hand on experience in print media production. It takes the student through the

rudiments of copy editing, headline writing and counting, page planning and make up, copy fitting, photo cropping and scaling and marking of the copy while taking cognizance of balance, focus and aesthetics.

JMS 711: Journalistic Writings

This course provides a framework for instruction on writing for the Mass media with major emphases on development of the journalistic style and proficiency in grammar and the use of language.

JMS 712: Editorial Writing

The course takes an in-depth excursion into the world of editorial and editorial writing. It exposes the student to an understanding of the need for editorial writing in print media, types and functions and how to generate ideas for an editorial as well as the structure.

JMS 713: Print Journalism Seminar

In this course, students will be required to present well-researched seminar papers for discussion and assessment. Such seminars will centre on media ownership and control, censorship, media laws and ethics, new media convergence and media entrepreneurship.

JMS 714: Specialized Reporting

This course gives advanced instruction and practice in writing news stories, especially on specialized subjects such as population, environment, agriculture, fashion, freight and automobiles, medicine, religion, sports, crime, technology, entertainment and the arts and the like.

M.SC. PROGRAMME IN JOURNALISM AND MEDIA STUDIES

Admission Requirements

For admission into this programme, a candidate is required to possess any of the following:

- Upper Credit level in HND and above whose holder has successfully completed a **PGD** programme in Communication Studies with a CGPA of not less than **3.50**
- A Bachelor's Degree not lower than a **Second Class lower Division** in Communication Studies from a recognized university approved by the Senate of the University of Port Harcourt.

Programme Duration

The duration of the M.Sc. programme in Journalism and Media Studies shall be a minimum of four semesters and maximum of six semesters for full-time students and a minimum of six semesters and a maximum of eight semesters for part-time students.

Graduation Requirements

To obtain an M.Sc. in Journalism and Media Studies, students must:

- Pass all the registered courses for the programme with at least a 'C' Grade
- Present a Seminar at the Department and obtain at least a 'C' Grade.
- Present a Dissertation of not less than 100 pages to the Department
- Pass an oral examination in defence of the Dissertation before a panel of examiners set up in accordance with University's regulations and conducted by the School of Graduate Studies.

The programme shall essentially be segmented into:

- Course work – Lectures/Seminars
- This will feature classroom interface on a semester basis for a maximum of two semesters. Assessment will be:
- | | |
|-----------------------------------------------------|-------------|
| a. Continuous Assessment (term paper, seminar, etc) | 30% |
| b. Examination (written) | 70% |
| Aggregate | 100% |

NOTE: To qualify for external Examination:

- The student must have published one article from his/her Dissertation with his/her supervisor(s) in a reputable journal; and
- submit the Dissertation to the School of Graduate Studies for Plagiarism test which must not exceed 20 Points

	Total	26

COURSE DESCRIPTION

SGS 801.1: ICT and Research Methodology: This course should cover essentials of spreadsheets, Internet technology, statistical packages, precision and accuracy of estimates, principles of scientific research, concepts of hypothesis formulation and testing, organisation of research and report writing.

JMS 801.1 : Advanced Studies in Journalism and Communication

Lectures for this course will take a panoramic view of communication and journalism. Focus will be on the meaning, models, modes and role of communication and the media in society. It will also include a discourse on the traditional systems of communication as well as the legal and ethical implications for journalism and media practice in Nigeria

JMS 802.1: International Communication/ Journalism

The course shall provide a framework for students to be schooled in the operations of wire services, the Mass media worldwide; globalization of media corporations and content; intercultural communication; historical background of foreign media and their socio-economic, political and ideological characteristics.

JMS 803.1: Studies in Media, Society and Gender Studies

This course will entail the examination of the media of communication as social institutions with particular attention to pertinent societal developmental needs. Focus will be on the media and peace building, gender equality, societal coexistence, especially among the different socio religious and political groups in the Nigerian polity. Issues of professionalism of media communicators, internal dynamics and control of media

organizations and mass communication politics, will be discussed.

JMS 804.1: Community Journalism and Child Rights Reporting

The focus of this course will be on grass roots reporting of events by community-based media and media practitioners who live and report from the community. Special attention will be paid to rural reporting techniques and the seeming difficulties. On the other hand, the discourse will dwell on the basic rights of the child and the techniques and ethics of reporting these rights in Nigeria

JMS 805.1: Print Media Seminar

The course focuses on the history of print journalism production in Nigeria; media management and ethics with particular focus on the Nigerian media law; news editing, planning and production in the print media; editorial objectives and policies; techniques in news gathering and writing: news, features, photojournalism the importance of language in news; news values, social and economic factors in news selection; social semiotics in news discourse; ideological roles in the press; practice in news casting.

JMS 806.1: Advanced Communication Research Methods

The course aims at taking advanced students through the fundamental issues involved in research presentation and the objectives and current approaches to research in communication and media studies. It will expose the students to the different research designs, analysis and presentations as well as an examination of the APA style-sheets. The course will be practice-oriented, and each candidate will be required to present a short research proposal applying the techniques they acquired in the course.

JMS 807.1: Advanced Digital Communication

This course provides an in-depth discuss on New Communication Technologies (NCTs). Special attention will be paid to online journalism, multi-media convergence, webcasting, twittering, face booking, multi-casting and ethical issues in digital journalism plus advanced insights in streaming media techniques. Lectures will include procedures in computer operation, components of the computer (hardware and software), application software; digital and analog systems for persuasion.

SGS 801.2: Management and Entrepreneurship:

This course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving

JMS 808.2 Comparative Media Systems

The course focuses on world press systems (e.g. paternalistic, authoritarian.): their tenets, strengths, weaknesses, politics where practiced, how practiced and implications for their political systems.

JMS 809.2: Advanced Studies in Environment, Health and Population Reporting

The focus of this course is on the relationship between the media and the environment and the socio-political and economic milieu of media organizations and their various audiences: Special attention will be on the maintenance of environmental sustainability for healthy society and the designing of information system for developing a healthy population.

JMS 810.2: Language & Style in the Media

The course focuses on the discourse of the language used in the media. Specifically, the course exposes the students to the language used in the different media and adjuncts of the mass media. It studies the language of advertising for instance, which does not obey fully the rules of grammar e.g. hooklines, puns and other attention-getting devices. It also explains the many devices used by media producers for the different genre of the media, including public relations to convey meanings to their audiences. The course also explains the dos and don'ts in media language use.

JMS 811.2: Studies in Intercultural Media Dynamics

This course will seek an understanding of the intercultural intricacies in media practice. The focus shall be on the need to observe the cultural tenets of the different ethnic groups in the reportage of events to ensure harmony among the various ethnic and linguistic groups in Nigeria. Issues to be discussed among others, how the media can influence cultural hegemony and ameliorate culture shock among audiences etc.

JMS 812.2: Advanced Print Media Reporting and Production

The course will focus on Print Journalism production and media management in Nigeria. Particular focus on news editing, planning and production; editorial objectives and policies; techniques in gathering and writing: news, features, photojournalism; the importance of language in news; news values, social and economic factors in news selection; social semiotics in news discourse; ideological roles in the press.

JMS 813.2: Journalism and Peace Building

Although conflict is an inevitable occurrence within interacting groups, but constant conflicts is detrimental to society. This course aims at equipping the students with practical communication tools towards conflict management for a peaceful society.

Major themes to be handled in the course include: types of conflict, necessary communicative skills for dialogue and negotiation; and culturally fluency.

JMS 814.2: Dissertation

The dissertation shall embody the results of an original research work anchored on contemporary and systematic methodology. Data should be analysed using highly scientific tools and consideration should be given to the contribution of the work to knowledge.

PHD IN JOURNALISM AND MEDIA STUDIES

Degree in View

The programme design is built on the pedagogy and epistemology that systematically leads to the award of: Doctor of Philosophy (PhD) in Journalism and Media Studies.

Admission Requirements

Candidates wishing to pursue a PhD programme in Journalism and Media Studies must hold a Master's Degree with a CGPA of at least 3.50 on a (five) 5-point scale in Mass Communication, Communication Studies/Arts. In addition, candidates seeking admission into the PhD programme must submit to the Departmental Graduate Studies Committee a written proposal on a topic of their interest which they must defend before the admission can be granted.

Membership of professional bodies such as APCON, NIPR, ACCE, etc., may not be necessary but may be an advantage.

Programme Duration

The duration of the PhD programme is a minimum of 24 and not more than 60 months for full-time students. For part-time, it is 36 and not more than 84 months.

Graduation Requirements

To obtain a PhD in Journalism and Media Studies, students must:

- d) Pass all the registered courses for the programme with at least a 'C' Grade
- e) Present a Seminar at the Department and Faculty and obtain at least a 'B' Grade.
- f) Present their thesis at the School of Graduate Studies Seminar obtaining at least a 'B' Grade.
- g) Present a thesis of not less than 150 pages to the Department
- h) Pass an oral examination in defence of the thesis before a panel of examiners set up in accordance with University regulations and conducted by the School of Graduate Studies.

The programme shall essentially be segmented into:

- i. *Course work – Lectures/Seminars*

This will feature classroom interface on a semester basis for a maximum of two semesters. Assessment will be:

a. Continuous Assessment (term paper, seminar, etc.)	30%
b. Examination (written)	70%
Aggregate	100%

NOTE: To qualify for external Examination:

- i. The student must have published two articles from his/her thesis with his/her supervisors in reputable journals; and
- ii. submit the thesis to the School of Graduate Studies for Plagiarism test which must not exceed 15 Points.

Course Load

Candidates must take and pass a minimum of thirty-four (34) units made up of twenty-five (25) units of compulsory courses, three (3) units of seminar and six (6) units of research report writing (thesis).

COURSE STRUCTURE

***A clear standing on all semester courses is a precondition for the research phase of the programme. In other words, only students who have passed all their course examinations, on the programme listing, with a minimum of 50% (C Grade) shall be eligible for seminars in research areas (JMS 909 & JMS 910).**

3.6 COURSE CONTENT/DESCRIPTION

MCS 901 – Advanced Communication Research Methods and Techniques

Content will focus on basic concepts in research with emphasis on social science research methodologies bearing qualitative and quantitative dimensions. Designs such as survey, content/textual analysis, focus group discussions/participant observations in data collection, analysis and reporting will be highlighted. Ethical issues in journalism and media research covering such areas like voluntary participation, anonymity and confidentiality of sources will be highlighted and the use of software packages in both qualitative and quantitative analysis will be stressed.

JMS 902: Journalism And Society: This course is intended to acquaint students with the expertise in undertaking research into the relationship between journalism practice and the various strata of the society. It will highlight the indispensable contributions of journalism to the society just as the society determines the kind of journalism that is practised. The society's products inform the viability of journalism practice in such society and in return, journalism contributes to the society in terms of construction of realities and Gross Domestic Products.

JMS 903: Global Media Systems: The discourse on this course will focus on the various systems and climes under which the media operate in the different societies of the world. From indigenous media systems in traditional communities to modern societies in which media practice is technologically driven, global media systems are determined by people's needs, economic and socio-political factors operational in such societies. This therefore, makes possible the application of the normative media theories upon which different media systems form their bases.

JMS 904: New Media Dynamics And Journalism

Practice: The course focuses on the place of the new information and communications technologies (ICTs) on modern journalism and media practice. The emphasis of the course will include application of digital software and hardware in-online media production, issues of citizens reporting and social media as news sources and User Generated Content (UGI), tele-conferencing; globalization and impact; ICTs on news credibility, authenticity and ethical and legal concerns in the use of digital media in news management.

JMS 905: Media Economics and National

Politics: The course focuses on the emerging issues in print journalism management. It discusses the prospects and challenges of establishing and managing a print media organisation in a globalized economy, especially in the face of new media convergence. Emphasis shall be placed on the new frontiers and the opportunities and challenges they present for managing a media organisation profitably. Issues of staffing, funding, collaborations and political affiliations as well as the role of professional organisation and regulation agencies in the success and survival of a print media organisations will be discussed.

JMS 906: Media Ownership and Objectivity in Journalism Practice. This course shall enable students to carry out research into the theories of media ownership, control and objectivity. Objectivity which is claimed to be the hallmark of journalism practice has always been subjected to the debate of relativity. The course shall highlight factors applies to the press as the watchdog of the society and the extent to which this maxim is applicable. With this knowledge, students will be able, at the completion of the course, to serve as consultants to print media owners, as well as managers of print media organizations.

JMS 907 Journalism and Environmental Matter

This course exposes students to the needs of researching into application of journalistic tactics to solving environmental issues such as the ones in Nigeria, in general and in the Niger Delta in particular. Emphasis shall be placed on how journalists and media organizations can through editorial policies make use of journalism practice to sensitize the people and draw the attention of concerned authorities to environmental needs of the society, especially effects of man-made devastations in order to engender environmental friendly practices.

JMS 908: Ethical and Legal Issues in Journalism

Studies. The dominant feature of this course is a discourse on the legal and ethical considerations in journalism and media practice. Attention shall be focused on politics, government and governance, public policy, the environment and Nigeria's contemporary economy will be analyzed through the mirror of the media.

JMS 909 Doctoral Seminar Presentation

Every student must, with the assistance of supervisors, prepares and presents a seminar paper before other graduate students and academic staff of the Department. The seminar paper must be related to the student's proposed thesis topic. Credit is given for content, presentation, and handling of discussion. Students who score below a 'C' grade in their presentation will be given another chance to redo the work. Candidates who have successfully presented their departmental graduate seminar shall be recommended to the Faculty Seminar Committee and then to the School of Graduate Studies for the final doctoral seminar presentation. Only successful candidates at this stage shall be prepared to face the external examiner.

JMS 910 – Thesis

Structure, mechanics and style shall be patterned after the guidelines of the School of Postgraduate Studies.

DEPARTMENT OF PUBLIC RELATIONS & ADVERTISING

Introduction

The Department of Public Relations and Advertising awards graduate degrees in Public Relations and Advertising to qualifying candidates. Below are the

philosophy, vision, mission, rationale, aim and objectives, admission requirements, programme duration, graduation requirements, list of required

courses, course descriptions and list of staff qualified to teach the programmes.

Philosophy

Relationship and reputation management have become dire needs for many companies and organisations operating in a world laden with environmental, natural and operational crisis. Learning the skills necessary to establish and maintain goodwill and mutual understanding between corporate bodies and their stakeholders is always critical, especially in contemporary society. Therefore, Public Relations is one of the most sought-after degree programmes in media and communication training schools in Nigeria and across the world. Many people want to major in public relations primarily due to the exciting, prestigious and lucrative nature of this discipline. The field of public relations is rapidly evolving because the business of creating favourable images for organizations is still the only business, and image remains everything for both commercial and non-profit making organizations.

The philosophy underlying the discipline of Public Relations is to produce professionals imbued with the ability to understand and make contribution to the development of Nigeria and the global community.

Vision

The Department of Public Relations and Advertising of the University of Port Harcourt aspires to be truly a citadel of theoretical cum practice oriented learning. We are poised to deliver excellent education in Public Relations, keeping alive the vision of the founding fathers of the University of Port Harcourt. It is our dream to provide equal and unlimited opportunities for our students in this lucrative discipline of Public Relations.

Mission

To translate our vision to action we are committed to training communication professionals who are highly knowledgeable in theory and practice in strategic and corporate communication at advanced levels. Specifically we are focused on producing Public Relations Professionals who will demonstrate expertise in reputation and corporate relationship management skills.

Rationale

The graduate degree in Public Relations is designed to produce highly knowledgeable, skilfully and socially responsible, and self-reliant individuals, who are equipped with entrepreneurial knowledge and proficiency in Public Relations or other components of strategic/corporate communication

to enhance development in all sectors of the Nigerian society.

Aim and Objectives

The aim of offering these graduate degree programmes is to empower our graduates with the requisite knowledge and competency for either a career enhancement/job placement in Public Relations. To this effect, the programme objectives are to:

- i. Train students to have a good balance of theoretical and practical knowledge of strategic communication at advanced levels.
- ii. Empower students with the skills required to become professionals in Public Relations.
- iii. Give the students advanced training in corporate reputation and relationship management skills.

A POSTGRADUATE DIPLOMA IN PUBLIC RELATIONS & ADVERTISING

Admission Requirements

In addition to the university matriculation requirement of Five Credits including English Language and Mathematics at O/Level, a candidate seeking admission into this programme shall possess any of the following:

- i. Higher National Diploma of Upper Credit classification in Mass Communication or any other related discipline in Communication or Social Sciences/Business Administration from a recognized polytechnic or university approved by the Senate of the University of Port Harcourt.
- ii. Bachelor's degree with at least second class division from areas not related to Communication.
- iii. Bachelor's degree not lower than third class division in a Communication related discipline of a recognized university.

Programme Duration

The duration of the programme shall be a minimum of one academic session (two semesters) and a maximum of two academic sessions (four semesters) for both part time and full-time students.

Graduation Requirements

To qualify for the award of a Postgraduate Diploma in Public Relations and Advertising students must obtain at least a 'C' Grade in all the 16 courses offered by the department for the Postgraduate programme.

11. COURSE DESCRIPTIONS

PRAD 701.1: Principles of Mass Communication

The course exposes students to the fundamentals of Mass Communication: rudiments of communication in general; conceptual definition and explication of Mass Communication; basic processes, dimensions and adjuncts of Mass Communication; forms of the Mass Media; time/space perspectives on the advent of Mass communication and its relationship with and departure from public sphere communication.

PRAD 702.1: Research Methods and Statistical Analysis

Students are taught various social science research designs such as survey, content analysis,

experimental and ethnographic approaches. Quantitative and qualitative methods of data collection and analysis should be discussed. Students shall be exposed to basic statistical tools that will sharpen their understanding of data analysis.

PRAD 703.1: Principles and Practice of Public Relations

The course will survey definitions, concepts, theories, models, problems and prospects of public relations in contemporary society. Students should be made to understand the underlying philosophies/principles of Public Relations.

PRAD 704.1 Corporate Social Responsibility

Students will be taught the place of Corporate Social Responsibility (CSR) as the anchor of corporate philanthropy as well as the tenets and uses of CSR. Such tenets include corporate social investment, patronage, donations, and endorsement. How these are used to uplift the society will be exposed, so is how corporate organizations can use them to leverage its reputation, brand, personality, etc.

PRAD 705.1 Community Relations

An understanding of the principles and techniques of profitable engagements with community publics are examined. The concept of community, theories of community relations, managing community issues and concerns, historical development of community relations in Nigeria, planning and execution of community relations programmes and case studies in community relations are discussed.

PRAD 706.1: Principles and Practice of Advertising

The course will survey definitions, concepts, theories, models, problems and prospects of advertising in contemporary society. Students should be made to understand the underlying philosophies/principles of Advertising.

PRAD 707.1 Introduction to Branding

The course explores strategic and creative decisions to manage, build, and measure brands. Brand management issues to be investigated include consumer perceptions, competitive analysis, new product development, crafting communication messages, etc.

PRAD 708.1 Introduction to Copy Writing

This is a skills oriented course which focuses on the creative aspects of advertising. Students will learn how to write advertisement copies as well as develop advertising plans and executions. Though this process, students will learn how to research for information on the product, the consumer and apply these information in developing campaign strategy.

Students will learn to write advertising messages for print and broadcast, design print ad layouts, and plan and prepare broadcast story boards. Internet advertising will also be studied.

PRAD 709.2: The State, the Media, Law and Ethics

Politics, government and governance, public policy, the environment and Nigeria's contemporary economy will be analyzed through the mirror of the media. The law and ethics of Mass communication vis-à-vis the state will be emphasized in such a way that will eliminate uncertainties for a young media entrepreneur.

PRAD 710.2: Mass Communication Theory

An examination and critical analysis of major Mass Communication theories as well as the theories of the construction of social reality will be covered in a manner that is hinged on the reciprocity of theory and practice.

PRAD 711.2 Media Relations

The course exposes students to knowledge and skills in their engagement with media stakeholders, including journalism, broadcasting, entertainment media, media regulatory bodies and media publics.

PRAD 712.2 Writing for Public Relations

Students are to learn how to write specific public relations items. These include press release, feature articles, proposals, re-joinders, letter, speech/address, invitation card and how to produce educational literatures like diary, calendar, annual reports, corporate brochures, direct mail, leaflets and handbills.

PRAD 713.2: Business Writing and Presentation Skills for Public Relations

The course equips students with the knowledge and skills for business writing and presentation. It includes writing for internal communications in business, government and non-governmental organisations. It also equips students with skills for speech delivery, writing newsletters, business proposal writing and making pitches in PR, Advertising and other promotional areas.

PRAD 714.2: Organizational Communication

The course takes the student deep into the various forms, modes and channels of communication in an organization: written, spoken and mediated communication; official letters, memoranda, minutes; speech and report writing. Lectures will also include formal and informal communication networks like vertical and horizontal communication as well as rumour, gossip and the

grapevine. The effects of the various communication media on productivity should be analyzed. Emphasis should be placed on personal marketing/communication in such area as curriculum vitae, job applications, interview and public address/presentation mannerisms.

PRAD 715.2: Fundamentals of Integrated Marketing Comm.

This course introduces students to the fundamentals of Integrated Marketing Communications (IMC). Brief introductions on various components of IMC are offered, including advertising, public relations, sales promotion, word-of-mouth, direct marketing, events management, etc. Students acquire basic knowledge of the workings and expectations of the IMC programme; traditional media in IMC; digital media in IMC; importance and techniques of integration of communication strategies in corporate and public communications.

PRAD 716.2 Project Research

On completion of course work students write and submit an original well-researched project work on either Public Relations or Advertising related topic which will be assessed internally.

B M. Sc. PUBLIC RELATIONS

Admission Requirements

Candidates wishing to enroll in M. Sc. Programmes must hold at least a Second Class Honours degree (BSc or BA) in Public Relations, Advertising, and any Mass Communication related area or a merit pass with a CGPA of 3.5 on a 5 point scale in Postgraduate Diploma in Public Relations and Advertising.

Candidates who register on part-time basis must provide evidence that they

- i. Are engaged in regular employment,
- ii. Can devote a good proportion of their normal working year to their studies, and
- iii. Will be available for attendance at course and for regular consultation with their supervisors.

Programme Duration

The duration of M Sc. degree programmes is one academic session (two semesters of course work plus a long vacation used for the writing of a dissertation) for full-time students and two academic sessions for part-time students. Students who are unable to complete the dissertation within the normal period must apply for an extension to Graduate Studies Committee.

Graduation Requirements

To obtain an MSc, a student must:

- i. Pass all the required courses for their programme with at least a 'C' grade.
- ii. Present work at the Graduate Seminar and participate in Seminar discussions, obtaining at least a 'C' grade.
- iii. Submit a dissertation of not less than 100 A4 pages, and obtain at least a 'C' grade.
- iv. Pass an oral examination in defense of the dissertation before a panel of examiners set up in accordance with University regulations.

Total **23**

COURSE DESCRIPTIONS

SGS 801.1 ICT and Research Methodology

This course should cover essentials of spreadsheets, Internet technology, statistical packages, precision and accuracy of estimates, principles of scientific research, concepts of hypothesis formulation and testing, organization of research and report writing.

PRS 801.1 Advanced Communication Research

This course is aimed at teaching the graduate students the academic research processes in communication. The students will be taught the scientific process in research, how to generate a research problem, preliminary studies and issues related to the choice of theories and their implication to a research would be elucidated. Other areas to be covered include statistical tools employed in analyzing data in communication research; various levels of measurement such as nominal, ordinal, interval, ratio, mean, mode, median/average etc.; measurements of relationships including chi square, Z-test, R-test, ANOVA etc.; measurements of correlation using Person moment correlation coefficient, Ps formular etc; frequency and simple percentage measurements. This course will also teach students the rigours of effective and efficient data presentation such as tables building, graphs, histogram, pie chart, bar chart, graphs and illustrations as means of data presentation. The student would also learn how to manipulate data following prescribed procedures to arrive at acceptable results.

At the end of the course the students are expected to have very clear understanding of how to go about conducting the project. The course also aims at taking advanced students through the fundamental issues involved in research presentation; the objectives and current approaches to research in social sciences. Differences in style-sheet will be examined especially the style sheet adopted for communication research – the APA will be carefully examined. Practical application of what has been learned would be required by assigning the student to conduct a mini research which would be presented possibly as part of the continuous assessment for the course.

PRS 802. 1 Advanced Digital Communication

This is an intensive and practice oriented course in which students will learn the technical and conceptual tools to understand the basics of digital communication. Students will develop their own blog and websites as means of communicating and presenting work to a wider audience. Also, students will be introduced to the dynamics of social media platforms and their applications in public relations.

ADV 802.1 Advanced Digital Communication

This is an intensive and practice oriented course in which students will learn the technical and conceptual tools to understand the basics of digital communication. Students will develop their own blog and websites as means of communicating and presenting work to a wider audience. Also, students will be introduced to the dynamics of social media platforms and their applications in advertising. Emphasis will be placed on using digital media channels as advertising vehicles.

ADV 803.1 Advanced Studies in Advertising

The course broadens the knowledge of the students in advertising's concepts, principles, models, theories, tools, techniques, developments and general advertising processes.

ADV 804.1 Fundamentals of Marketing

This course would further advance and deepen the students' understanding of the fundamentals of marketing in relation to local marketing practices. Emphasis would be given to marketing environments and market forces in Nigeria, features of industrial products, challenges of distributive trade, market segments, theories of marketing, marketing research and intelligence, international marketing etc.

ADV 805.1 Ad Copy Writing and Creative Content Development

This course is aimed at widening the students' idea about Ad copy conception/ideation, creation and production taking into consideration the growth and advancements in technology and the taste of the contemporary consumers. The course would teach the student about contemporary processes in ad copy writing design and production etc. Students will enhance their knowledge of writing advertising messages for print, broadcast and digital media. They will design print ad layouts, and plan and prepare broadcast story boards.

ADV 806.1 Case Studies in Advertising

Selected foreign and indigenous cases of Advertising campaigns in several sectors of the economy, business, politics and social / behavioural change communications are examined. Each student presents a discussion on a selected case.

ADV 807. 1 Integrated Marketing Communication

The aim of this course is to advance the students' knowledge in understanding current trends in the operation and application of the principles of IMC in products and organizational promotion and marketing. The course will give consideration to IMC programmes management, workings and expectations. It will also x-ray the techniques of integration of communication strategies in corporate and public communications.

SGS 801.2 Management and Entrepreneurship

This course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

ADV 808. 2 Advanced Studies in Communication Theories

This course is an exploration and analysis of major theories that deal with the nature, uses and effects of media and communication; the relationship between theory and research and the relevance of the latter to the success of the former are discussed at an advanced level.

ADV 809.2 Advanced Advertising Production Techniques (Multimedia/Interactive)

This is an advanced practical course that allows students to plan, produce and present communication campaigns suitable for the various challenges of advertising, using multimedia and interactive devices. Skills in PowerPoint Presentation, use of Excel, Photo shopping and animation schemes are acquired.

ADV 810.2 Media Planning, Buying and Execution

This course is designed to give the students advanced knowledge and skills in advertising media planning, placement, monitoring and evaluation. Issues controlling choice of media and media planning would be discussed. There would be an elucidation on media research and regulatory agencies.

ADV 811.2 Ad Campaign and Execution

The course is designed to teach the student the processes and procedures of developing advertising campaigns. It involves issues in environmental impact assessment, funding, planning and execution and post campaign evaluation procedures. Key issues to be treated include campaign planning, execution and evaluation, Advertising agency business and operations, coordination and integration of advertising with other promotional activities, assessing advertising information processing trends in the face of competition, feasibility studies etc.

ADV 812.2 Organisation and Management of Ad firms

Students are exposed to theories and practice of management. Specific attention is devoted to management issues in advertising and related IMC firms. Client-agencies relationships are discussed, along with accounts management. The crux of this course is to keep the advanced students of advertising awake to the demands of the times in managing advertising processes and activities. The student would learn how to effectively manage and coordinate corporate strategic communications using the instrumentality of the new media. The course would treat issues related to advertising consultancy affairs, advertising planning, billing methods, monitoring and evaluation of advertising campaigns, theoretical implications in the face of advancing technologies, the need to advance new theories to meet the exigencies of time etc.

ADV 813.2 Dissertation

Students are required to present the results of an original research topic. Credit is given for originality, presentation and use of previous literature in the area.

SGS 801 .2 Management and Entrepreneurship

This course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

PRS 808. 2 Advanced Studies in Communication Theories

This course is an exploration and analysis of major theories that deal with the nature, uses and effects of media and communication; the relationship between theory and research and the relevance of the latter to the success of the former are discussed at an advanced level.

PRS 809.2 Advanced Studies in International Public Relations

This course focuses on the analysis of trends, issues and problems confronting Public Relations organisations in international trade and politics. It also covers principles of Public Relations in various countries, cultural norms and choosing of appropriate symbols and image.

PRS 810.2 Advanced PR Prod. Techniques (Multimedia/Interactive)

This is an advanced practical course that allows students to plan, produce and present communication campaigns suitable for the various challenges of public relations, using multimedia and interactive devices. Skills in PowerPoint Presentation, use of Excel, Photo shopping and animation schemes are acquired.

PRS 811.2 Organisation and Management of PR firms

Students are exposed to theories and practice of management. Specific attention is devoted to management issues in public relations and related IMC firms. Client-agencies relationships are discussed, along with accounts management. The crux of this course is to keep the advanced students of public relations awake to the demands of the times in managing public relations processes and activities. The student would learn how to effectively manage and coordinate corporate strategic communications using the instrumentality of the new media. The course would treat issues related to Public relations consultancy affairs, public relations planning, billing methods, monitoring and evaluation of public relations campaigns, theoretical implications in the face of advancing technologies, the need to advance new theories to meet the exigencies of time etc.

PRS 812.2 Media and Communication Planning and Strategy

The course addresses the role of media analysis and planning in Public Relations. It covers basic media terminology and media math, the distinctions between media objectives, strategies and tactics and

the different ways of allocating resources in media. Students will be introduced to tools of strategic planning like SWOT, TOWS, PEST, Porter's Five Forces, etc.

PRS 813.2 Dissertation

Students are required to present the results of an original research topic. Credit is given for originality, presentation and use of previous literature in the area.

POST DOCTORAL PROGRAMMES

D. Ph.D. PUBLIC RELATIONS

Admission Requirements

Candidates wishing to enroll in any of these two doctoral programmes offered by the department must hold a Master's degree with a CGPA of not less than 3.00 on a 5 point scale in any of these areas: Mass Communication, Public Relations, Advertising, and any Mass Communication related area. Such candidates must also submit a written proposal on a topic of interest in their desired area of study to the Departmental Graduate Studies Committee. The proposal must be satisfactorily defended before the committee prior to admission shortlisting.

Candidates who register on part-time basis must provide evidence that they

- i. Are engaged in regular employment,
- ii. Can devote a good proportion of their normal working year to their studies, and
- iii. Will be available for attendance at course and for regular consultation with their supervisors.

Programme Duration

The duration of the PhD degree programme in either of the disciplines is a minimum of 24 months and not more than 60 months for full time students. For part time programme the minimum is 36 months while the maximum is 84 months. Students who are unable to complete the thesis within the normal period must apply for an extension to Graduate Studies Committee.

Graduation Requirements

To obtain a PhD in either Public Relations or Advertising, a student must:

- i. Pass all the required courses for their programme with at least a 'C'. Grade.
- ii. Present their work at the Department and Faculty Graduate Seminars and participate in Seminar discussions, obtaining at least a 'B' grade.

- iii. Present their work at the Graduate Seminar and participate in Seminar discussions, obtaining at least a 'B' grade.
- iv. Submit a thesis of not less than 150 A4 pages, and obtain at least a 'B' grade.
- v. Pass an oral examination in defense of the thesis before a panel of examiners set up in accordance with University regulations.

The programme shall essentially be segmented into:

i. Course work – Lectures/Seminars

This will feature classroom interface on a semester basis for a maximum of two semesters. Assessment will be:

a. Continuous Assessment (term paper, seminar, etc.)	30%
b. Examination (written)	70%
Aggregate	100%

NOTE: To qualify for external Examination, the student must:

- i. have published two articles from his/her thesis with his/her supervisors in reputable journals; and
- ii. submit the thesis to the Graduate School for Plagiarism test which must not exceed 15 Points.

LIST OF COURSES

First Semester

Course Code	Course Title	Units
PRS 901.1	Case Studies in Public Relations	3
PRS 902.1	Corporate Social Responsibility and Stakeholder Relations	3
PRS 903.1	Corporate Communication	3
PRS 904.1	Public Relations Writings and Presentations	3
	Total	12

Table 2: Second Semester

Course Code	Course Title	Units
PRS 905.2	PR Campaign Planning and Execution	3
PRS 906.2	Topics in Public Relations	3
PRS 907.2	Legal and Ethical Issues in Public Relations	3
PRS 908.2	Thesis	6
	Total	15

COURSE DESCRIPTIONS

PRS 901.1 Case Studies in Public Relations

This course would handle specific selected cases in Public Relations campaigns in different sectors of the economy, business, politics and social/behavior communication change. Topic assigned to each student would be written and presented during a class discussion.

PRS 902.1 Corporate Social Responsibility and Stakeholder Relations

This course will underline the place of corporate social responsibility as the anchor of corporate philanthropy and bring out the tenets and their uses. Such tenets include corporate social investment, patronage, donations, and endorsement. How these are used to uplift the society will be exposed, so is how corporate organizations can use them to leverage their reputation, brand, personality, etc.. The course identifies critical stakeholders of an organization and relationship management techniques with each stakeholder group. Efforts will be made to differentiate publics of a firm from the stakeholders of the firm as well as what stake the stakeholder is holding in an organization.

PRS 903.1 Corporate Communication

The strategies, techniques, tools and communication process which corporate bodies adopt for relating with their internal and external publics are highlighted with emphasis on issues and crises management, relationship and reputation management, and management approaches.

PRS 904.1 Public Relations Writings and Presentations

The course equips students with knowledge and skills for business writing and presentation. It includes writing for internal communications in business, government and non-governmental organisations. It also equips students with skills for speech delivery, writing newsletters, business proposal writing and making pitches in PR, Advertising and other promotional areas.

PRS 905.2 Advanced PR Campaign Planning and Execution

The course is designed to teach the students the processes and procedures of developing and executing public relations campaigns. It involves issues in environmental impact assessment, funding, planning, execution and pre/post campaign evaluation procedures.

PRS 906.2 Topics in PR

This course is designed to expose the students to the various issues raised in PR. The student would be expected to choose a topic on any public relations

issue of interest for examination and analysis and present findings in a class.

PRS 907.2 Legal and Ethical Issues in Public Relations

This course refreshes the students understanding and application of ethics in Public Relations practice. The student is abreast of the legal and ethical issues, the implications and the enforcement procedures involved in the practice of PR.

PRS 908.2 Thesis

Students are required to present the results of an original research topic. Credit is given for originality, presentation and use of previous literature in the area.

E. Ph.D. ADVERTISING

LIST OF COURSES

First Semester

Course Code	Course Title	Units
ADV 901.1	Case Studies in Advertising	3
ADV 902.1	Art Direction and Design	3
ADV 903.1	Advertising Media Planning, Buying & Execution	3
ADV 904.1	Advanced Studies in Brands and Brands Building	3
Total		12

\Second Semester

Course Code	Course Title	Units
ADV 905.2	Creative Content Marketing for Advertising	3
ADV 906.2	Integrated Marketing Communications and Digital Media	3
ADV 907.2	Legal and Ethical Issues in Advertising	3
ADV 908.1	Thesis	6
Total		15

COURSE DESCRIPTIONS

ADV 901.1 Case Studies in Advertising

This course would handle specific selected cases in advertising campaigns in different sectors of the economy, business, politics and social/behavior communication change. Topic assigned to each student would be written and presented during a class discussion.

ADV 902.1 Art Direction and Design

This course broadens the knowledge of the student to gain expertise in the practical aspects of graphic design, related to the communication of concepts. Issues related to the role of the Art Director/Creative Director in developing and realizing ideas through leadership, management and commissioning of individuals and teams of designers, photographers, film makers, advertisers, illustrators or other media specialists in the creative industry.

ADV 903.1 Advanced Studies in Advertising Media Planning, Buying and Execution

This course encourages further practical production of student-initiated projects in any chosen area of concentration under the supervision of academic staff. At this level students are expected to carry out projects independently.

ADV 904.2 Advanced Studies in Brands and Brands building

This course stabilizes the students' ability to understand the process of building brands identity, image and franchise, brand loyalty, brand positioning and brand acceleration. The course also explores the impact of current advertising/marketing issues from business, economic, political, social, legal, and ethical perspectives.

ADV 905.2 Creative Content Marketing for Advertising

Content marketing is a strategic marketing approach to attract and retain clearly defined audience and

ultimately, to drive profitable customer action. Students will therefore be exposed to the various process, techniques and skills of writing to sell ideas, products or brands across multi channels.

ADV 906.2 Integrated Marketing Communication and Digital Media

This course teaches students Integrated Marketing Communications (IMC) approaches such as advertising, public relations, sales promotion, word-of-mouth, direct marketing, events management, etc. applied as a mix of marketing tools. Students acquire basic knowledge of the workings and expectations of both the traditional and contemporary IMC strategies and media; importance and techniques of integration.

ADV 907.1 Legal and Ethical Issues in Advertising

This course refreshes the students understanding and application of ethics in Advertising practice. The student is abreast of the legal and ethical issues, the implications and the enforcement procedures involved in the practice of Advertising. The place and role of APCON and other key control agencies is emphasized and discussed.

ADV 908.2 Thesis

Students are required to present the results of an original research topic. Credit is given for originality, presentation and use of previous literature in the area.

TEACHING STAFF LIST

S/N	Name	Qualifications	Rank	Mode	Area of Specialization
1.	Ihejirika, W. C.	BA, MA, PhD (Rome)	Professor	FT	Communication Theory, Dev. Communication.
2.	Okon, G.B.	BA, MA, UNN, PhD Uyo	Professor	Adjunct	Public Relations, Advertising, Corporate Communication.
3.	Udoudo, A. J.	BA, MA, PhD Uyo	Professor	FT	Public Relations, Advertising, Print Journalism.
4.	Emeji, Michael J.	BFA, USA M. Sc. U.S.A Ph D. U. S.A.	Professor	Adjunct	Graphic Communication, Advertising.
5.	Ohiagu, O. P.	BA UNN, MSc Unilag, PhD UPH, PG Cert in Corporate Comm. CHE (NL)	Senior Lecturer	FT	Public Relations, Advertising, Corporate Communication, Digital Comm./New media.
6.	Ochonogor, C.I.	BA, MA UNN, PhD UPH	Senior Lecturer	FT	Print Journalism, Dev. Communication.
7.	Mbazie, S. J.	BA, MA, UNN, PhD UPH	Senior Lecturer	FT	Advertising, Public Relations.
8.	Sado, A. A.	BA, PGDPR, MSc, UNN, PhD UPH	Senior Lecturer	FT	Public Relations, Advertising, Dev. Communication.
9.	Agbo, B.O.	BA, MA, UNN, PhD ESUTH	Senior Lecturer	FT	Advertising, Public Relations.
	Nwachukwu, F. G	BA, MA, PhD, Uyo	Senior Lecturer	FT	Advertising, Public Relations, General Communication.
11.	Usua, +Ntiense J.	BA Calabar, PGD NIJ Lagos MA Abuja, PhD (UPH)	Senior Lecturer	FT	Broadcasting, Radio/TV Prod., Journalism, Cultural Communication,
12.	Inyang, Etiido E.	B.A. ABU, MFA Uyo PhD UPH	Senior Lecturer	FT	Graphic Communication, Advertising

FACULTY OF SOCIAL SCIENCES

DEPARTMENT OF ECONOMICS

GRADUATE PROGRAMMES IN ECONOMICS

The revised graduate courses offered in the department of economics, Faculty of Social Sciences, University of Port Harcourt include the under listed courses using the Bench Mark Approved by the NUC.

ECO 752.2	Labour and Manpower Economics	3
ECO 718.2	Industrial Relation	3
ECO 717.2	Economics of Petroleum and Energy	3
ECO 702.2	Agricultural Economics and Rural Development	3

ADMISSION REQUIREMENTS

To be admitted into M.Sc. programme, candidates must have a minimum of second class honours lower division in Economics. For the Ph.D. in Economics, an overall CGPA of 3.5 on a 5-point scale is required. Students with good honours degrees in any discipline can be admitted into the PGD programme.

NOTE: The successful completion of the programme requires a total of 27 credit units.

PGD IN ECONOMICS

FIRST SEMESTER

Course Code	Course Title	Credit Units
ECO 701.1	Microeconomics	3
ECO 703.1	Mathematics for Economics	3
	<i>Any two other course from area of Specialization</i>	6

42

Ph.D IN ECONOMICS

FIRST SEMESTER

Course Code	Course Title	Credit Units
ECO 900.1	Selected Topics in Microeconomics	3
ECO 901.1	Advanced Project Management I	3
	Seminar I	3
	Seminar II	3
Total		2

SECOND SEMESTER

Course Code	Course Title	Credit Units
ECO 900.2	Selected Topics in Macroeconomics	3
ECO 901.2	Advanced Project Management II	3
	Seminar III	3
	Seminar IV	3
ECO 999	Thesis	6
Total		18

NOTE: Seminar on ECO 904.1 (History of Economic Thought) is compulsory for all students. Thereafter students are free to choose the remaining

three from among the under listed courses for seminars II, III, and IV.

Course Code	Course Title	Credit Units
ECO 904.1	History of Economic Thought	3
ECO 905.1	Reading in Economic Development	3
ECO 906.1	Macroeconomics of the Open Economy	3
ECO 907.1	Manpower Economics	3
ECO 908.1	Reading in Public Policy Economics	3
ECO 904.2	Advanced Economics	3
ECO 905.2	Agriculture and Economic Development	3
ECO 906.2	Petroleum and Energy Economics	3
ECO 907.2	International Trade and Finance	3

NOTE:

1. Before proceeding to the Thesis stage, the student must have passed all the approved courses.
2. The student must have also passed a qualifying examination which comprises Economic Theory and area of specialization.
3. Total credit units required for graduation is 30

COURSE DESCRIPTION

ECO 801.1 Advanced Microeconomics

The objective of this course is to deepen and widen the critical and analytical understanding of theoretical and methodological issues in microeconomics as well as problems of application of microeconomics models to real phenomena beyond the undergraduate training. Accordingly, it is aimed at exploring advanced literature, material and methodology. The audience is assumed to possess sound mathematical background. To benefit from the course, students need to have or to develop a reasonable amount of mathematical sophistication. That is, the need to understand the concept of a proof and to be able to construct simple proofs themselves. The foundation for developing this skill is a good understanding of calculus and familiarity with elementary linear algebra analysis.

Course schedule

1. Introduction: The Role of Theory, Microeconomics and the Role of mathematics
2. Demand and supply functions
3. Elasticity of Demand and supply functions
4. Theory of Consumer Behaviour
 - i. Cardinal Unity Approach

- ii. Ordinal Utility or Indifference Curve Approach
- iii. Revealed Preference Approach
- 5. Theory of Production
 - i. Production function
 - ii. Short-run Production function / analysis
 - iii. Long-run Production function / analysis
- 6. Theory of costs and revenue
 - i. Short-run cost functions
 - ii. Long-run cost functions
 - iii. Cost minimization
 - iv. Total Marginal and Average Revenue Function
- 7. Theory of Market Structure
 - i. Perfect competition
 - ii. Monopoly-pure monopoly, price Discriminating Monopoly, Multi-plant Monopoly
 - iii. Monopolist competition
 - iv. Oligopoly, duopoly
- 8. Theory of distribution and factor pricing
- 9. Theory of General Equilibrium
- 10. Welfare Economics

ECO 801.2 Advanced Macroeconomics

Macroeconomics as the study of the behavior of aggregate magnitudes including that of the macroeconomy as a whole in this presentation is aimed at achieving three substantive objectives. The basic objectives relate to the substance, methodology and organization of the material presented. Specifically, it presents skeleton of the macroeconomy and how its parts relate and interact.

Course schedule

- 1. Macroeconomic framework
- 2. Macroeconomic supply function
- 3. The expenditure sector
 - i. Consumption function and equilibrium national income
 - ii. Investment function and equilibrium income/IS curve
 - iii. Government expenditure / taxation and equilibrium national income / IS curve
 - iv. Expenditure and tax multipliers
- 4. The monetary sector
 - i. Money Demand
 - ii. Money Supply
 - iii. Equilibrium in the Monetary sector / LM curve
- 5. General Equilibrium Analysis
- 6. The External Sector
 - i. Foreign Exchange market
 - ii. Imports, Exports and the Balance of Payments
 - iii. Balance of Trade and the Income Determination Model

- 7. Macroeconomic Problems / Objectives
- 8. Macroeconomic policy measures or theory of stabilization policy.

ECO 800.1 History of Economic Thought and Method (Qualitative Method)

The course involves an in-depth and critical examination of the major schools of economic thought spanning from the ancient to the current era. Special attention is paid to the pre-capitalist 17th century mercantilist economists to the contemporary mainstream and alternative economic viewpoints.

Course Outline

- 1) Method and Introduction of History of Economic Thought
- 2) Family Tree of Economics
- 3) The Ancients and Middle Ages
 - a) Judaic and Greek Thought
 - b) Scholastics, Christianity and Islam
- 4) The Age of Reason Emergence of Modern World Perspective and “Science”
- 5) Classical Economics
 - a) Scottish Renaissance
 - b) Adam Smith
 - c) Jeremy Bentham and Utilitarianism
 - d) Thomas Malthus
 - e) David Ricardo
 - f) Jean Baptist Say
 - g) Nassau Senior
 - h) John Stuart Mill
- 6) Marxian Critique of Capitalism
 - a) Pre-Socialist Commentators (Utopians)
 - b) Karl Marx
 - c) Other Socialists
- 7) Historical School
 - a) German Historical
 - b) British Historical School
- 8) Marginalis School
 - a) Forerunners
 - b) French Engineers
 - c) British Utilitarian’s
 - d) Austrians and Methodenstreit
- 9) Neo – Classical Synthesis
 - a) Alfred Marshall
 - b) Leon Walras
 - c) Vilfredo Pareto
 - d) John Bates Clark
- 10) Critique of Neo-Classicism
 - a) Pragmatists
 - b) Thornstein Veblen and the Old or Original Institutionalists
 - c) John R-Commons

- d) Richard T. Ely
- e) John Maurice Clark
- f) Clarence Ayres

- 11) Microeconomics and the Great Depression
 - a) Joan Robinson
 - b) Edward Chamberlin Cycles
 - c) Gardner C. Means Keynes

- 12) Macroeconomics and the Great Depression
 - a) Money
 - b) Business Cycles
 - c) John Maynard Keynes
 - d) Frederich Hayek

- 13) Return to Individualism and the Market Ideology
 - a) The Chicago school
 - i) Old Chicago School
 - ii) Chicago School
 - b) Monetarism and Rational Expectations
 - c) Public Choice, Property Rights and law
 - d) The New Institutionalists

- 14) What next?

- 9. Special kind of linear programming- Assignment model and transportation model
- 10. Games theory
- 11. Network analysis and application
- 12. Applications of Static and Dynamic programming in theories of household and Firm Behaviour theories of Household and Firm Behaviour
- 13. Dual programming
- 14. Simulation model and applications
- 15. Queuing theory and application
- 16. Partial and General equilibrium and Welfare Economics
- 17. First Order Difference Equation
- 18. Higher Order Difference Equation
- 19. Differential Optimal Growth path
- 20. The Application of Wairasian competitive economics and the Jacobain Matrix and Global Univalence

ECO 831.1 Mathematical Economics

This course is designed to enhance the technical ability and competence of specialists in economic theory and quantitative economics in particular and the analytical ability and logical thought structure of doctoral students in general. Given that mathematical logic principles and techniques would unveil the secrets of economic relationship through abstract by logical argumentation and thereby illuminate the intuitive understanding of economic events. Mathematical treatment of economics uncovers the economic truth in a strictly logical fashion deducing propositions about the economic world from few premises or axioms. Unfortunately, however, the advantages of this procedure are accessible only to the initiated. Hence all graduate students are encouraged but doctoral students are required to stand the long endurance test in mathematics.

Course Schedule

The topics to be covered here include:

1. Logarithms, Exponents and Growth mathematics
2. Differential calculus and application to economic analysis.
3. Integral Calculus and applications to economic analysis.
4. Matrix Algebra and applications
5. Input-output Analysis
6. Comparative Statics
7. Optimization Theories
8. Linear programming and non-linear programming

ECO 812.1 Issues in Entrepreneurship

The course issues in entrepreneurship, seeks to equip graduate students, with entrepreneurial knowledge and skills in a vast and rapidly changing world, where paid employment is going into extinction.

The knowledge and skills so imparted are to be concretized in practical case studies, delivered in seminar presentation.

Specifically, the course provides the student with an overview of the concepts, principles, theoretical and methodological foundations and techniques, and would have learnt how to identify project opportunities, formulate business project and test them for technical, financial, economic, social, political viability and sustainability.

Course Schedule

- 1) An introduction to entrepreneurship: who is an entrepreneur?
- 2) Entrepreneurship and wealth creation
- 3) Entrepreneurship theory and practice: inter-disciplinary perspectives
- 4) Distinguishing entrepreneurial from organization behavior
- 5) Persons, process, choice: the psychology of new venture creation
- 6) A finance view point in Entrepreneurship
- 7) Marketing interface to advance Entrepreneurship
- 8) Differentiating entrepreneurs from small business owners
- 9) Entrepreneurial risk and strategic decision – making.
- 10) Environmental influence on Entrepreneurship
- 11) Government/legal influences of Entrepreneurship

- 12) Entrepreneurial strategy making and firm performance: tests of contingency and configurationally models
- 13) Evaluation of organizational performance in small business research
- 14) Competing change: strategies for industrial and technological innovation
- 15) Entrepreneurship issues in a digitalized economy
- 16) Existing business models and pioneers
- 17) Preferred solutions to some issues in entrepreneurship in Nigeria

ECO 820.1 Monetary Theory and Policy

Monetary Theory and Policy is both a theoretical and applied science. The course therefore aims to thoroughly integrate into a theoretical structure substantial history and institutional material in analyzing the effects of money and finance on goal variables – output, prices and economic growth and the complex dynamics of growth and decay and policy action and reaction within the changing orientation of Monetary control on real economics.

Course Schedule

1. The role of money in the economy
2. The role of Financial institutions and credit
3. International Banking Monetary theory
4. Determinants of the Money Supply- Monetary base, money multiplier
5. Control of the Money supply
6. Relationship between the Money supply and credit
7. The demand for money
8. Money in General Equilibrium
9. The monetarists controversies
10. Structure of Interest Rates
11. Economic Problems: Inflation, Unemployment, Recession.
12. Goals of monetary Policy, Instruments of and Targets of Monetary Policy.
13. Theory of monetary Policy
14. The Politics of Money
15. The Political Economy of Monetary Policy Making
16. The implementation of Monetary Policy
17. History of Monetary Policy in Nigeria
18. Effectiveness of Monetary Policy
19. Rules Versus Discretionary Policy
20. Empirical Evidence
21. Finance and the Allocative Mechanism
22. The Transmission process and Policy Implication
23. Expectations, Stagflation and Monetary Policy
24. Balance of Payments and Monetary Policy
25. Money and the World Economy.

ECO 870.1 International Monetary and Financial System

The course seeks to discuss in detail balance of payments concepts and measures, international monetary systems, floating as opposed to fixed exchange rates, internal and external balance, monetary integration, foreign exchange markets, international liquidity and reform of the international monetary system, determinant of demand for money in developing combine comparison of banking systems in selected advanced and developing countries.

ECO 810.1 Economic Development

This is an advanced survey of basic literature is the field. It is directed towards providing a base from which intending specialists in this field can acquire technical competence. The methodological principle allows for lectures and discussions which provide each student with an opportunity to present a review of new developments in one of the areas of topical literature covered.

Prerequisites

The expositional principles assume broad training core theory-Macro and Micro-economics and competence in using quantitative techniques.

Course schedule

1. General Approaches to Development Process: Methodological issues, Measuring Economic Development, Patterns of Development, Inductive Approaches.
 - (a) Changes in Economic Structure (Clark, Kuznets, Chenery).
 - (b) Social and Political Concomitants (Adelman, Moris)Theories of Development: (a) Traditional Theories, (b) Radical and Marxian Approaches
2. Development as Generalized (Macro) Economic Growth: Neoclassical and Keynesian Growth Theory, Capital Formation and Development, the monetary system and Development, the Public Sector and Development.
3. Development as Structural Change: models of Dualistic Development, Agriculture and Development, Industry and Development, Labour Force Transfer and Urbanization, Income Distribution, Demographic Change, Skill Creation, The human Capital Approach.
4. Development in a World Economy: models of Trade and Development, the “Vent”, “Dualistic” and “Unequal Exchange” Approaches, Trade Policy, Openness Vs autarchy, XP Vs ISI. The use of External resources.
 - (a) Aid and Indirect Investment
 - (b) Direct Foreign Investment: The multinational corporation and its Consequences

5. Issues in Nigerian Development Policy and the Millennium goals.

ECO 811.1 Economic Planning

The quest for ordered socioeconomic development is predicted on economic planning because as Abraham Lincoln puts it, “if we could first know where we are, and whether we are tending to, (relative to where we want to be), we could better judge what to do and how to do it (and possibly do it well). “it is therefore not surprising that planning as an instrument of stock-taking, analysis and mechanism of management has been viewed as essential and perhaps the only institutional and organization mechanism for overcoming the major obstacles to development and for ensuring sustained high rate of economic growth and desired structural transformations. The course therefore provides a survey of the basic literature on theoretical concepts, principles, theories and models or development planning focusing on economic problems and issues of policy significance.

Course Schedule

1. The meaning, nature and scope of Development Planning
2. Basic Concepts.
3. The rationale for development planning
4. The Role of Theory, Quantitative Policy and Economic Planning
5. National Accounts
6. The Planning process
7. Ends-Means-Instruments Consistency and measurability.
8. Models of Development Planning and Policy: Short-term macroeconomic models, based on national accounts Economy-wide models, Medium and Long run macro Growth Models.
9. The mehalanobis and Two-Gap models, Dualistic Models, mathematical techniques-input-output Models, Linear programming and Dynamic optimization models.
10. Closing input-output Models inter-industry Planning models for Multi-Regional economy Tinbergen’s approach and multiple goals; substitution and nonlinear-rites in Planning Models.
11. Models for Employment and Educational Planning
12. Organization and implementation process
13. The crisis in planning computable general equilibrium models
14. An overview of the Historical Development of the Nigerian Economy.
15. The Nigerian Experience with Planning.
16. Lessons from other Experiences
17. Problems and prospects for development planning in Nigeria.

ECO 880.1 Industrial Economics

This course provides an application of theoretical and analytical tools of economics useful in management decision making. The course offers rigorous treatment of economics theory and analysis with a focus on the tools and techniques that are useful and useable for decision making purpose. Examples and problems are used to illustrate the application of theory to a variety of decision situation. The nature of the decision process and the role that economic analysis plays is the focal point of emphasis.

Topics to be discussed include: Nature, scope and methodology of industrial economics, fundamental concepts, industrial structure, and definitions of problems and measurement theories of the firm, economic optimization, the growth of the firms. It will also cover diversification, mergers, innovation and investment, economic risk, and uncertainty analysis, demand theory and forecasting analysis, industrial pricing and marketing price and marketing of public goods, cost of capital, source of finance, resources allocation and production of economic cost, theory of linear programming, market structure analysis of profitability of output changes, short-term and long-term planning, capital budgeting, industrial location practices, problems of regulation and policies in Nigeria. Pre-requisite – mathematical methods of economics, intermediate microeconomics.

ECO 830.1 Advanced Mathematical Economics

1. The topics to be discussed include:
2. Economic applications of graphs and equations
3. Derivatives and rules of differentiation
4. Uses of derivatives in economics
5. Calculus of multivariable functions in economics
6. Exponential and logarithm functions in economics
7. Fundamentals of linear – matrix algebra
8. Matrix inversion
9. Special determinants and matrices and their uses in economics
10. Linear programming! Simplex algorithm and the dual theorem
11. Integral calculus and economic analysis
12. Differential and difference equations
13. Calculus of variations

ECO 850.1 Labour Economics and Industrial Relation

This is a graduate level survey extensive literature, methodologies, analytical concepts, principles and theories applicable to a wide variety of labour issues.

Course Schedule

1. Theories of Labour Market Behaviour: Determinants of the Size, Structure and dynamics of Labour Supply and Demand.

2. Analysis of Contemporary Trends in Wages, Employment and Unemployment.
3. The Role of Education and Training
4. Intervening Variables: Institutional Variables Collective Bargaining, Labour Union and Employers Association.
5. Arbitration and Contract Administration Panels
6. Other Government Agencies, Minimum Wage Laws, Safety Regulations, Conditions of work and Work Conditions, Mandatory retirement and Benefit Issues.
7. Issues in productivity, income and Employment

ECO 801.2 Advanced Macroeconomics

This seeks to provide rigorous and structures mathematical treatment of macroeconomic issues and phenomena, concepts, principles and theories. Topics covered include basic macroeconomic concept's, principles and theories, basic models of income determination, extension from the simple closed two-sector model to open four-sector model of macroeconomics theories of consumption, business fixed investment, residential investment, inventory investment, replacement investment and the foreign sector, rigorous and critical survey of the various macroeconomic schools of thought, classical, neo-classical, Keynesian, structuralists, supply side models of the macroeconomic with particular focus on employment, output, growth and price stability, theories of the supply of money and financial sector equilibrium. The government sector and the budget constrained. Theories of money, prices and interest. Theories of general equilibrium, theories of growth and business cycle macroeconomics. Policies stabilization adjustment and resources allocation.

ECO 805.2 Quantitative Research Method – Econometrics

This course is designed to provide non-specialists in quantitative economics with skills in the understanding and application of mathematical reasoning and quantitative methods in order to follow modern developments in economic theory and understand the empirical results derived in econometrics which reflects the growing reliance upon mathematical and statistical techniques in economic analysis. Since the more recent evolution of economics has encompassed a remarkable development of econometric techniques and their uses in empirical economic analysis, econometrics is no longer the preserve of a select few but has now become a basic ingredient in the training of virtually all students of economics. Because these methods are integral aspects of the methods of scientific inquiry through which hypotheses are developed and tested. Therefore, maturity in quantitative methods

is expected of the products of all our graduate programmes.

Course schedule

1. Nature and scope of Econometrics
2. Methodology or Econometrics Research
3. Correlation Theory
4. Simple Linear Regression Model
5. Statistical Tests of Significance of Estimates
6. Properties of the Least square Estimates
7. Multiple Regression Model
8. Regression and Analysis of Variance
9. Regression Analysis Extensions and Dummy Variable
10. Heteroscedasticity
11. Multicollinearity
12. Autocorrelation
13. Cointegration Theory and Error Correction Model
14. Lagged Variables and Distributed-Lag Model
15. Vector Autoregression Models (VAR)
16. Simultaneous Equation Models
17. Identification Problem
18. Mixed Estimation Technique
19. Maximum Likelihood Method
20. Three Stage Least Squares

ECO 821.1 Nigerian Financial System

The course covers the overview of the Nigerian financial industry, Nigerian financial markets, money, capital and foreign exchange markets, performance of the financial service industry, the relationship between global financial and the Nigerian financial environments.

ECO 870.1 International Monetary and Financial System

The course seeks to discuss in detail balance of payments concepts and measures, international monetary systems, floating as opposed to fixed exchange rates, internal and external balance, monetary integration, foreign exchange markets, international liquidity and reform of the international monetary system, determinant of demand for money in developing combine comparison of banking systems in selected advanced and developing countries.

ECO 812.2 Project Analysis and Evaluation

The art of project analysis or the ability to identify, formulate, appraise, and select desirable and feasible development and social change projects, has long been, and continues to remain in critically short supply. This course therefore seeks to provide an opportunity to learn the core of this vital art through a graduate level survey of methodological foundations of project planning and evaluation and to consider a number of its problems and issues.

Courses Schedule

The proposed course schedule includes;

1. Introduction and overview
2. Project planning contexts and perspectives
3. Project identification and formulation.
4. Project feasibility dimensions
5. Technical and Environmental aspects
6. Cost-Benefit Analysis
7. Financial and Economic aspect
8. Social Cost-benefit Analysis and impact Assessment
9. Organization, Managerial and Institutional Aspect
10. Risks and uncertainties
11. Sensitivity Analysis
12. Major project Planning problems and issues
13. Review and Evaluation
14. Network analysis and application to project management.

ECO 814.2 Problems and Policies of Development

Topics include the general nature of the development problems, some case studies, general theories of development, the classical theory of capitalist of development, growth model of growth and collapse, other theories of growth lessons of history, theories of underdevelopment, geographic determination, dualistic stabilization and adjustment policies.

ECO 860.2 Agricultural Economics and Rural Development

The subject of agricultural economics involves the application of economics to the operations of the agricultural industry. It deals with the organization of farms, the study of demand and supply of agricultural products, the availability of inputs and their prices, such as labour use on the farm, wage rate and incentives to farm workers, capital and its availability, marketing system for agricultural products, policies and programs of government. The organization of both producing and marketing cooperatives are also within the area of agricultural economics.

The following subject matter will be introduced in this course:

- 1) Farm management
- 2) Farm records and accounts
- 3) Farm budgeting
- 4) Agricultural business management
- 5) Agricultural development and agricultural policy
- 6) Agricultural finance
- 7) Agricultural cooperatives
- 8) Agricultural marketing
- 9) Human resources management in agriculture.

ECO 813.2 Public Sector Economics

The course shall cover nature and scope of public sector economics, measurement of social welfare, welfare maximization and pareto optimality, market failure and government intervention, theories of public goods, externalities, theory and empirical evidence on expenditure development and tax structure, fiscal policy and non-fiscal policy and economic revenue of some selected countries, federalism and fiscal adjustment theory and practice in selected countries.

ECO 893.2 Theory and Practice of Economic Policy

This course aims at deepening the student's understanding of the theories and principles of fiscal economics and the tools for analyzing the implications of alternative fiscal proposals and institutional changes.

Course Schedule

1. Review of Basic Concepts
2. Fiscal Functions and Institutions
3. Economic Aspects of Government
4. Budgeting as a policy and Programme Instrument, fiscal Intervention and the Allocation of Resources
5. Legal and Basic principles of taxation and tax administration in Nigeria.
6. The Sequence of fiscal Policy in Nigeria and the Underlying Socioeconomic.
7. Political and Institutional forces
8. Monetary Policy.

ECO 830.2 Advanced Econometrics

Having offered introductory econometrics this course is designed as 400 level econometrics, in year 3, which seeks to expose the students to high level econometric tools to enable them apply the techniques in their research work. The topics include multiple regression and analysis of variance, dummy variable regression models, heteroscedasticity, autocorrelation, multicollinearity, simultaneous equation models and methods, concepts in time series econometrics, stochastic processes, unit root stochastic process, stationarity and non-stationarity, stationarity and unit root test, cointegration and error correction mechanism as well as vector autoregression.

ECO 883.2 Environmental Economics

This course is aimed at exposing the students to fundamental issues in environmental economics.

The course shall cover the following areas:

- (1) The economy and its management
- (2) The framework for understanding the ecological perspective
- (3) Environmental micro-economics and macroeconomics
- (4) Resources, environment and economic development in the Niger Delta

- (5) The future of economic growth and the environment in the Niger Delta
- (6) Economic analysis of environmental issues in the Niger Delta
- (7) Valuing the environment
- (8) Ecological economics of the Niger Delta Region
- (9) National income and environmental accounting
- (10) Modeling economic and ecological systems
- (11) Environment trade and development
- (12) Pollution analysis, policy and sustainable development in the Niger Delta region

ECO 882.2 Economics of Petroleum and Energy

The course shall expose the students to theoretical and methodological issues in economics of natural resources (petroleum resources), world energy demand and supply, externalities of oil production in Niger Delta Region as well energy consumption and sustainable development.

The course shall cover the following topics:

- (1) Energy and energy source in Nigeria
- (2) The dimension of energy problem in Nigeria
- (3) Energy consumption and sustainable development in Nigeria
- (4) Energy supply and utilization in Nigeria
- (5) Energy planning in Nigeria
- (6) Oil production and sustainable development in the Niger Delta Region
- (7) The economics of gas flaring

ECO 852.2 Manpower Planning

Manpower planning is a technique designed to ensure that the right people are in the right place at the right time. Therefore, the primary purpose of this course is to introduce students to various techniques used in manpower planning in both developed and developing countries.

The course will cover Principles, Theories and Techniques of Manpower Planning and Programming, as well as why study Manpower Development.

NOTE:

1. The Department of Economics has the following areas of specialization for its M.Sc. and Ph.D. programmes:
 - i. Monetary Economics
 - ii. Development Economics
 - iii. Quantitative Economics
 - iv. Energy and Petroleum Economics
 - v. Public Policy Economics
 - vi. Labour and Industrial Economics
 - vii. Project Planning and Evaluation
 - viii. International Trade and Finance
2. Total Credit Units required for M.Sc. graduation is 42. However, students are advised to audit at least one additional course.
3. Total Credit Units for Ph.D. is still 30.

LIST OF ACADEMIC STAFF

S/N	NAME OF STAFF	RANK	QUALIFICATION	AREA OF SPECIALIZATION
1	Willie J. Okowa	Professor	B.Sc. Lagos Ph.D. Uppsala	Development Economics
2	T.J. Agiobenebo	Professor	B.Sc. ABU M.Sc. and Ph.D. Pittsburgh	Microeconomics/ Mathematic
3	Steve O. Tamuno	Professor	B.Sc., MBA and Ph.D. UPH	Rural Development Economics
4	Okechuku Onuchuku	Professor	B.Sc., M.Sc. and Ph.D. UPH	Economic Theory/ Quantitative Economics
5	Lawrence Ohale	Professor	B.Sc., M.Sc. UPH Ph.D.	Development Economics
6	Ijeoma E. Kalu	Professor	B.Sc., M.Sc. and Ph.D., UPH	Development Economics
7	Godly Otto	Professor	B.Sc. and M.Sc. UPH, Ph.D., Nigeria	Development Economics
8	Clever A. Gbanador	Professor	B.Sc., M.Sc., and Ph.D. UPH	Monetary Economics
9	Monday O. Robinson	Professor	B.Sc., M.Sc. Jos and Ph.D. Calabar	Development Economics
10	Peter N. Medee	Reader	B.Sc., M.Sc., and Ph.D. UPH	Monetary Economics
11	Ezaal Okowa	Reader	B.Sc., M.Sc. and Ph.D. UPH	Monetary Economics
12	Alwell Nteegah	Reader	B.Sc., M.Sc. and Ph.D. UPH	Development/ Quantitative Economics
13	Henry U. Agbarakwe	Senior Lecturer	B.Sc., and M.Sc., UPH, Ph.D., Nigeria	Development Economics
14	Simeon G. Nenbee	Senior Lecturer	BED, Ibadan M.Sc. and Ph.D. UPH	Monetary/ Quantitative Economics
15	Sylvester F. Udeorah	Senior Lecturer	B.Sc., M.Sc. and Ph.D. UPH	Labour/Human Resource Economics
16	Chioma Chidinma B. George-Anokwuru	Senior Lecturer	B.SC., IMSU, M.Sc. and , Ph.D. UPH	Monetary Economics
17	Emeka Nkoro	Senior Lecturer	B.Sc. UNIBEN,, M.Sc., and Ph.D. , UPH	Monetary Economics/Econometrics
18	Ito. E. Bosco	Lecturer I	B.Sc., M.Sc., UPH	Monetary Economics
19	Stanley Okorie	Lecturer II	B.Sc., M.Sc. UPH	Energy/Transport Economics
20	Boma Tubotamuno	Lecturer II	B.Sc., M.Sc., UPH	Monetary Economics
21	O'Neal E. James	Research Fellow I	B.Sc., M.Sc., UPH	Econometrics/Health Economics
22	Moses O. Vincent	Research Fellow I	B.Sc., M.Sc., UPH	Development Economics/ R & D
23	Kelechi C. Nnamdi	Lecturer II	B.Sc., Nigeria; B.Sc., UPH; M.Sc., Uyo; Ph.D. RSU	Econometrics and Development Economics

DEPARTMENT OF POLITICAL SCIENCE AND ADMINISTRATIVE STUDIES

The History of the Department

The foundation for the Department of Political and Administrative Studies was laid by the late Professor Claude Ake who, until September 1983, was Dean of the Faculty of Social Science. Himself, a Political Scientist of international repute, Professor Ake assembled a team of competent lecturers and provided valuable leadership which gave the Department a clear focus.

The Department has continued to maintain the standard for which Professor Ake laid the foundation. From the 1983/84 session the Department started a graduate programme with the following specializations

- (a) Theory and Methodology
- (b) International Relations
- (c) Development Studies
- (d) Nigerian Government and Politics
- (e) Public Administration
- (f) Peace and Conflict Studies

The Department has been an active voice in the University of Port Harcourt. In 2015 the Department successfully hosted the Annual Conference of the Nigerian Political Science Association (NPSA).

THE PHILOSOPHY OF THE DEPARTMENT

The Department of Political and Administrative Studies derives its philosophy from the ideals which inform the *raison d'être* of the University of Port Harcourt as a centre of excellence in learning and research which is at once relevant to our environment and operates with the best international standards. The Department contributes to the achievement of the vision of the University through the training of such manpower in Political and Administrative Studies as well as contribute to the development of Nigeria and who will project it internationally by their intellectual and other achievements. Because scholarship is a serious enterprise, the Department will ensure it has the right calibre of staff, who will inspire and excite students by their work, world view and general conduct.

The Department's curriculum will always be sensitive to the gross underdevelopment of Nigeria and the African continent, and the urgent need to find lasting solutions to the resulting misery of the majority of the population. It will therefore contribute in producing graduates who can critically understand the problems of underdevelopment from a holistic perspective, so that they can offer practical solutions to those problems; graduates who have the

requisite knowledge and skills to make informed choices and decisions and thus live useful lives and impact positively on their immediate and larger communities. Thus, the Department encourages students to understand and use as many skills as possible from other social science disciplines.

Objectives of the Department

The objectives of the Department follow from the above general philosophical disposition. Specifically, the objectives are:

- * To make an outstanding contribution in the training of manpower that can propel Nigeria's development.
- * To help create critical awareness among students and enable them appreciate their political, economic and social environments.
- * To contribute to the understanding of the cause and nature of Nigeria's and Africa's underdevelopment.
- * To foster a nationalist and African perspective in social, economic and political problems.
- * To stimulate students' interest in the discipline in particular and enhance their thirst for scientific knowledge in science engineering in general.
- * To actively participate in the programmes and activities of such regional organizations as African Association of Political Science (AAPS), Nigerian Political Science Association (NPSA), etc. in order to strengthen the intellectual and scholarly bond in Nigeria and Africa in general. To make the Department, its students, graduates and the staff the pride of University of Port-Harcourt by creating a good image, through unrelenting efforts, in quality teaching, research and community service. As steps towards achieving the above objectives, the Department:
 - (a) Has designed courses, which are relevant in analyzing Contemporary Nigeria and Africa;
 - (b) Emphasizes the scientific method in making analysis and arriving at conclusions and
 - (c) Encourages students through lectures, seminars, essays and through formal and informal interactions among themselves and with lectures to develop the habit of thinking critically.

The Academic Content of Higher Degree Programmes is as outlined below:

Admission for Diploma Programmes

Admission Requirements: Subject to the general regulations of the School of Graduate Studies the

following requirements guide admission into higher degree programmes:

- i. All candidates for higher degrees shall be admitted to the Masters Programme in the first instance.
- ii. Admission is open to holders of First or Second Class Honours Degree of the University of Port Harcourt or any other recognized University.
- iii. Every applicant shall:
 - a. Fill the prescribed application form.
 - b. Have a CGPA of at least 3.0 on a scale of 5 on first degree graduation.
 - c. Provide, under confidential cover, at least two letters of recommendation, one of which must be from the University where the Bachelor's degree was awarded. A copy of the candidate's academic transcripts must also be sent.
 - d. For the PhD degree, submit a copy of the Masters thesis/graduate research paper.
 - e. Be found admissible after an evaluation by the Graduate Studies Committee.
 - f. Part-time candidates must provide evidence that they are engaged in approved:
 - (i) Employment
 - (ii) Can devote a good proportion of their normal working year to their studies,
 - (iii) Will be available for attendance at course lectures and for regular consultation with their supervisors.

POST-GRADUATE DIPLOMA (PGD) PROGRAMME

The Department runs PGD Programmes for now only in its

International Relations area of specialization.

a) Duration of Programme

- i. Full-Time PGD shall run for a minimum of two (2) Semesters (one academic session) and a maximum of four (4) Semesters (or two academic sessions).
- ii. The Part-Time shall run for a minimum of four (4) semesters and a maximum of six (6) Semesters.

b) Requirements for Graduation

A candidate must have fulfilled the following conditions to be awarded the Postgraduate Diploma: The candidate must pass a minimum of 30 credit units made up of the following:

- 15 units of core courses
- 9 units of elective courses
- 6 units project.

c) Programmes Requirements

1. A student cannot withdraw from a course after five weeks of lectures in a given semester without permission from the Dean

of School of Graduate Studies.

2. A student who fails to sit for more than two courses at the end of a given semester shall be deemed to have withdrawn voluntarily from the programme.
3. A student must, in each semester, have a Cumulative Grade Point Average (CGPA) of not less than 3.00
4. A Candidate with less than 3.00 CGPA shall remain in the programme for the 1st semester but shall be withdrawn if he/she fails to attain 3.00 CGPA at the end of the second semester.
5. In order to be eligible for examination, in a particular course, a student should have attended a minimum of 75% of the total period of formal instructions delivered for the course.

MASTER OF SCIENCE (M. Sc.) PROGRAMME

a) Areas of Specialization

Candidates can specialize in any of the following areas:

1. Theory and Methodology
2. Nigerian Government and Politics
3. International Relations
4. Development Studies
5. Public Administration

b) Duration of Programme

- i) A full time Masters programme should run for a minimum of 4 Semesters and a maximum of 6 semesters,
- ii) Part-time Masters programme should run for a minimum period of 6 Semesters and a maximum of 8 Semesters.
- iii) For extension beyond the specified maximum period, a special permission of the Board of Graduate School shall be required.

c) Requirements for Graduation

To be awarded a Masters degree a student must obtain a minimum of 33 credit units made up as follows:

- Five core courses of 15 credit units.
- Three elective courses of 9 credit units.
- A student shall carry out research in any area of specialization in his/her discipline and submit an acceptable dissertation of 6 credit units.
- A student shall present at least one seminar of 3 credit units.

d) Programme Requirements

1. A student who withdraws or who fails to seek the permission of the Dean of the Graduate School shall be deemed to have failed the course. A student who fails to sit for more than 2 courses at the end of a given semester shall be deemed to have

- withdrawn from the programme.
2. To be in good standing, a student must, in each session, have a Cumulative Grade Point Average (CGPA) of not less than 3.00. A student whose cumulative grade point average is below 3.00 at the end of two consecutive semesters shall be deemed to have withdrawn from the Programme.
 3. In order to be eligible for examination in a "particular course, a student shall have attended a minimum of 75% of the total period of formal instructions after five (5) weeks.

DOCTORATE (PhD) PROGRAMME

a) Areas of Specialization

In addition those listed above for the Masters degree is Peace and Conflict Studies.

b) Duration of Programme

- i) A full-time Doctoral programme shall run for a minimum of six (6) semesters, (three academic sessions) and a maximum of ten (10) semesters (five academic sessions),
- ii) A part-time Doctoral programme shall run for a minimum of eight (8) semesters and maximum of twelve (12) semesters.
- iii) For extension beyond the specified maximum period, a special permission of the Board of the Graduate School shall be required.

c) Requirements for Graduation

Doctorate (PhD) programme primarily consists of course work (12 units) Seminars (6 units), and Thesis (12 units). Students must present at least three (3) major seminars; one in their area of specialization and one each in any two areas of specialization other than theirs, as well as a Thesis Proposal. In addition, candidates must pass a comprehensive examination in their major and minor areas of specialization. Candidates must also present a seminar paper constituting an interim report from their field work.

Where courses are prescribed:

- i) A student who fails to sit for more than 2 courses at the end of a semester shall be deemed to have withdrawn voluntarily from the programme.

d) Requirements for Graduation

To be awarded a Masters degree a candidate must obtain a minimum of 33 credit units made up as follows:

- Five Core courses of 15 credit units.
- Three Elective courses of 9 credit units.
- A student shall carry out research in any area of specialization in his/her discipline and submit an acceptable Thesis of 6 credit units.
- A student shall present at least one seminar of 3 credit units.

e) Programme Requirements

- i. A student who withdraws or who fails to seek the permission of the Dean of the Graduate School shall be deemed to have failed the course. A student who fails to sit for more than 2 at the end of a given semester shall be deemed to have withdrawn the Programme.
- ii. To be in good standing, a student must, in each session, have a Cumulative Grade Point Average (CGPA) of not less than 3.00. A student whose Cumulative Grade Point Average is below 3.00 at the end of two consecutive semesters shall be deemed to have withdrawn from the Programme.
- iii. In order to be eligible for examination in a particular course, a student should have attended a minimum of 75% of the total period of formal instructions after five (5) weeks.

C. The Dissertation

The M.Sc. Dissertation shall be original work, presented in accordance with regulations set by Senate on the recommendation of the Graduate School. The Dissertation shall be graded by at least three examiners which must include the thesis supervisor and one external examiner. A minimum grade of C for the thesis and for its defence is required for a pass.

AWARD OF THE PhD DEGREE

A. General Requirement

To qualify for the award of the PhD degree, a student must:

- i. Earn 30 additional credits (beyond the M.Sc.) of which 18 shall be in a course work and twelve for a thesis.
- ii. Remedy any deficiencies in courses as may be determined by the DGSC.
- iii. Satisfy the DGSC of his/her proficiency in a relevant modern language or in lieu of such language, special skills such as statistical methods. Proficiency will be determined by a test approved by the DGSC. The proficiency test approved by the DGSC. The proficiency test must be passed before the dissertation prospectus can be approved.
- iv. Pass with a minimum of C grade in each of a written comprehensive examination in 2 papers one in the major field the other in a minor field.
- v. Successfully complete and defend a thesis on a topic approved by his/her Dissertation Committee, (See section D below).
- vi. Satisfy all financial obligations to the University, as well as other requirements relating to residence and character as may be prescribed by Senate on the recommendation of the Graduate School. At present the residency requirement is four

- semesters for full-time students and eight semesters for part-time students. To that the 4 semester residency requirement is minimum to prepare for candidacy for the degree, that is, to complete all requirements but the dissertation.
- vii. No student may be registered for the PhD degree for more than five years if he/she is a full-time student or for more than seven years is a part-time student. In special circumstances, students may apply to the FGSC for extension/reduction.

B. THE COURSE WORK

The course work shall comprise:

- i. Three elective courses in the major field or distributed between the major and minor field and
- ii. One doctoral seminar on a theme/selected themes in a sub-field of the major filed. The doctoral seminar is intended to prepare the student for his/her PhD Thesis. Although students register with individual lecturers offering doctoral seminars in their area of specialization their final paper will be faculty approved.
- iii. Students preparing for their comprehensive examination or at the threshold of writing their proposals are advised to register for Directed Readings in their major field. Directed Readings for us and the fundamental literature in each of major areas of specialization in the major field are invaluable to the advanced student. Directed Readings are not credit earning but can be counted towards residency requirement.

C. THE COMPREHENSIVE EXAMINATION:

The PhD comprehensive examination is made up of two papers one in a major field; the other in a minor field. Except for students whose major field is Political Theory and Methodology, the minor field for all PhD students shall be Political Theory and Methodology. Students for whom Theory and Methodology is the major field shall choose a minor outside that field. Each paper shall be graded by three examiners. A minimum grade of C is required for pass in each paper.

D. THE THESIS:

a. PROPOSAL:

- i. The proposal shall be publicly defended at a faculty-wide forum. The purpose of this is to invite constructive criticism and gain useful insights.
- ii. The defence will be the second major public appearance of the PhD student. The defence of the proposal shall take place after and not

before passing the comprehensive Examination and satisfying the language/special skills requirements.

- iii. The Thesis Committee decides whether the proposal passes or not.
- iv. The Thesis Committee shall consist of;
 - (a) The Major adviser who shall be the Thesis supervisor and chairman of the committee.
 - (b) The minor field adviser
 - (c) Another Senior member of the Department
 - (d) One senior member of the faculty outside the Department

B. THE THESIS ITSELF

- i. The Thesis shall be original work, presented in accordance with regulations approved by Senate on the recommendation of the College of Graduate Studies.
- ii. The Thesis will be accepted only if it is deemed to make a substantial contribution to knowledge and shows evidence of originality.
- iii. The Thesis shall be graded by at least five people, namely the Thesis committee of four and one examiner, minimum grade of C for the Thesis and for its defence is required for a pass.

POL 713	Government and Politics in Nigeria	3

COURSE DESCRIPTION OF PGD INTERNATIONAL AFFAIRS

POL 703: Political Behaviour

Seeks to understand how actors behave and what defines and underlies their behaviour, this course deals with the diverse contexts of behaviouralism. Drawing from quantitative and qualitative forms of empirical analysis, it looks at the activities of interest groups, political parties, and citizen political participation. On the international plane it examines the behaviour of states and non-state actors.

POL 705: Contemporary Political Analysis

Discussion of major trends in Western political theory since about 1770. Topics include schools of thought such as Liberalism, Socialism, Marxism, Nationalism, and Feminism.

POL 707: Theories of International Relations

This is a presentation of the varied interdisciplinary theories of International Relations, classical and behavioural theories, realism and idealism as they explain the outcome of peace and war; the formation of international organizations with a focus on the UN and NATO and the prospects for regional and global-peace.

DIA 713: Research Methods & Statistical Process

Covers the elements of both the qualitative and quantitative methods of political analysis. Critically reviews the apparent dichotomy between them, and illustrates the benefit of combining them. It also explains the role of each method of analysis in the discipline; illustration and management of quantitative data.

POL 707: International Relations

An analytical presentation of the interlocking factors of geography, population, race, nationalism, and economics as fundamental forces in international relations. The study of diplomacy, ideology, imperialism and military rivalries in the contest for world power and dominance.

POL 708: International Organizations

An analysis of the origins and mission of international organizations and non-governmental organizations; their roles in peace and conflict

resolution with emphasis on the processes of rehabilitation, reconstruction and reintegration; disarmament, demobilization and reconstruction in territories where there had been conflict.

POL 709: Introduction to International Law

Sources of international law, customs, conventions, declarations, functions, peaceful resolution of disputes; International Court of Justice (ICJ), etc. International economic law, state responsibilities in international law.

POL 710 Sources and Responses to International Conflict

POL 711: Diplomacy and World Affairs

POL 712: Global and Regional Organization

POL 713: Modern Political Theory

The course covers essentially the major concepts and theoretical assumptions of liberal democracy, from the works of Hobbes, through Locke, Rousseau and the utilitarians. It will also include some examination of a contrary approach to democracy, by Marx. Emphasis will be on students reading and analyzing the original works by these theorists.

POL 714: Government and Politics in Nigeria

A study of the evolution of the Nigerian Political system from colonial period to the present; the emergence and growth of political institutions; Nigerians' participation in governance; political parties and the electoral process; military rule in Nigeria; oil, politics and the development crisis.

POL 721: PGD Project

COURSE DESCRIPTION OF MSC INTERNATIONAL RELATIONS

CORE COURSES:

POL 850: Theories of International Relations

An analytical and critical presentation of Traditional behavioral and post-behavioural approaches to the study of international relations; concepts of foreign policy behaviour and decision-making; Utopian and realist approaches; theories of integration and conflict; systems theory and the interplay between nationalism and internationalism. The relationship between theories of international relations and the assumptions of policymakers international plane it examines the behaviour of state and non-state actors.

POL 811: Methods & Techniques of Political Inquiry

The course deals with the logic, methods and philosophy of scientific inquiry as they relate to the social sciences in general and political science in particular, methods of data analysis, survey techniques as well as the process of theory building and model construction.

POL 812: Statistics & Mathematical Models

Focuses on basic mathematical concepts essential for formal and quantitative political analysis; probability theory; linear algebra and some calculus; use of theory of statistical inference; application of statistical procedures in political science research; game theory and related modelling techniques.

POL 813: Computer & Political Science Research

POL 814: Issues in Entrepreneurship

Electives:

POL 851: International Institutions

Theories regarding the nature and functions of international institutions; the idea of supranationalism; functional approach to integration; the theory of collective security; institutions as the highest forms of multilateral diplomacy, as exercised in community building and as instruments of change. Types and patterns of international organisations. The constitution, structure and experiences of institutions such as the League of Nations, the United Nations, ECOWAS, etc., as illustrating some of the major ideas and issues of international organisation.

POL 852: International Law

Development, functions, theories and sources. Prescriptions as rules of Law. Custom and general principles. The nature of horizontal legal order. International personality. Sovereignty and immunity. Exhaustion of local remedies and denial of justice. Recourse to force; the seas, airspace, Human Rights and minimum standards of justice. Limits of territorial sovereignty. Treaties and agreements; the role of diplomacy.

POL 853: The World System and International Trade Patterns

A critical analysis and assessment of the structure and patterns of international trade and investment with special emphasis on producer associations, balance of payments, debt burden, international lending policies and commodity agreements.

POL 854: Imperialisms and International Relations

An examination of the role of multinational corporations and international financial institutions in the development of the world new economic order; the scramble for African resources.

POL 855: Nigeria's International Relations

Detailed theoretical and empirical analysis of Nigeria's regional and global relations with emphasis on bilateral and multilateral treaties of economic, military and cultural nature; the role of Nigeria in global institutions and bilateral relations with small, medium, and great powers.

POL 856: Africa's International Relations

Pan-Africanism and the first phase of Africa's decolonization and neo-colonialism. The African regional order; the formation and operation of the OAU; boundary disputes; irredentism and secession

and external intervention in African conflicts. The role of African states in the international system; Africa and globalization.

POL 857: Foreign Policy Analysis

This course deals with ways in which international actors – primarily but exclusively states – formulate decisions and strategies for dealing with other members of the international community. Emphasis is on the interplay between domestic and external forces; on the organisation, psychology, and politics of small group decision-making; on the purposes behind foreign policy and on the instruments available to those who make it. Problems of comparison, choice, evaluation and rationality are also dealt with.

POL 858: The Middle East and North Africa in Global Politics

An analysis of the conflicting relationship between socio-political and economic interests and conflicts among regional groups and nations; the reaction of global powers to such conflicts; the interplay between religion, culture, economy and history.

SEMINARS

POL 859: Seminar on Comparative African Foreign Policy

Comparative analysis of the external and domestic sources of foreign policy in Africa. Focus on African international interests with developed states, examining attempts to improve African international status, the strategies used and the impact of competitive interaction of the global system on African states.

POL 860: Seminar of Regional Integration in the Third World

Theories and case studies of integration and customs unions in the third world. A study of integration as strategy for development with special focus on experiments in Africa.

POL 861: Seminar on Arms Control and Disarmament

Disarmament – concept, critique of theory. History, Arms control – concept; arms and control talks – SALT, NTP, etc.; basic requirements of viable arms control. Arms race, arms trade with the Third World. The Nigerian debate for the nuclear option; usefulness of arms control talks to the world.

POL 862: Seminar on Theories of Conflict and International Security

A review of the evolution of modern strategic thinking; major criticism of the subject and assessment of their validity. Use of force in the nuclear age. Theories of deterrence and crisis management; brinkmanship and escalation; conflicts and threat analysis relevant to the strategic

theory of African revolutionary warfare and the new revolutionary warfare alliance.

COURSE DESCRIPTION OF MSC INTERNATIONAL RELATIONS

CORE COURSES:

POL 810: Theory and Methods of Political Inquiry

This deals with the logic, methods and philosophy of scientific inquiry as it relates to the social sciences, and particularly political science, methods of data analysis and survey techniques are examined as well as the processes of theory building and model construction.

POL 811: Methods & Techniques of Political Inquiry

The course deals with the logic, methods and philosophy of scientific inquiry as they relate to the social sciences in general and political science in particular; methods of data analysis; survey techniques as well as the process of theory building and model construction.

POL 812: Statistics & Mathematical Models

Focuses on basic mathematical concepts essential for formal and quantitative political analysis: probability theory, linear algebra; and some calculus; use of theory of statistical inference; application of statistical procedures in political science- research. Game theory and related modeling techniques.

POL 813: Computer & Political Science Research

Familiarizes the student with the basic computer programmes - word, spread sheet; power point and excel - and how these can facilitate research and data management.

POL 814: Issues in Entrepreneurship

Elective Courses:

POL 863: The Citizen and the State

Using the social contract and the traditional African concept of society and the individual, the course examines the nature of political society and within it the tension between citizen, the community and the state. It seeks to answer the question of the relationship between individuals and between them and the state. What are the individual's rights and what is the extent of his freedom/liberty? If the state in advanced capitalist state holds together because it is based on some kind social contract, could this concept be meaningfully applied to the post-colonial state?

POL 864: Democratic Theory and Practice

Explores the theoretical and practical/empirical points of view, the gap between the normative ideals embedded in the theory of democracy and the evident gap between it and the democratic experience. Seeks to understand the obstacles against popular participation in democratic politics in both the advanced capitalist societies and in the post-colonial societies.

POL 865: Normative Political Theory

The state, power, freedom, equality, social class: those are the major issues which concern modern political theory. However, interpretations differ considerably. The focus here will therefore be on two influential and contrasting schools of thought - Positivism and Marxism. An introduction to their respective general methodologies will be studied. This will be followed by a consideration of the positivist and Marxist analyses of contemporary societies, concentrating on their different approaches to the issues outlined above. Finally, their views on the future will be assessed.

POL 866: Themes in Political Theory

Drawing from both ancient and modern theories, this course will survey of a number of themes including but not limited to the nature of authority, sovereignty, consent and obligation, justice based on the writings of Plato, Aristotle, Hobbes, Weber, and Arendt, among others.

POL 867: Political Philosophy

A critical analysis of selected problems in Political Philosophy. The nature of the state, authority and power. Theories of democracy, equality and freedom.

SEMINARS:

POL 868: Seminar on Classical and Modern Political Thought

Political thought from Plato to Mao Tse-Tung and other contemporary thinkers.

POL 869: Seminar on Marxist Political Thought

A survey of the development of Marxist thought in and outside Europe - adaptations in Russia, China, North Korea and in some African countries (especially Guinea Bissau, Angola, Mozambique and Namibia).

POL 870: Seminar on Democracy

Examines the historical development of democracy, from being criticized by the theorists like Plato and Aristotle to its contemporary status as the most desired form of government. Will bring into focus the impact of liberalism on the evolution of democracy.

POL. 872: Contemporary Political Theory

POL 873: Medieval Political Thought

A critical review of major themes and thinkers of the medieval era such as St. Augustine, St. Thomas Aquinas, Marsilius of Padua, Dante, William of Ockham, Catholicism & Protestantism, etc.

POL. 874: African Political Thought

Examination of selected themes in African Political thought such as Nkrumah, Nyerere, Mandela, Danquah, Sekou Toure, Azikiwe, etc.

POL 828: The M. Sc Dissertation

DOCTORATE (PhD) PROGRAMME

POL 930: Seminar on the Philosophy of Plato

Examines Plato's thoughts and his major contributions in metaphysics, epistemology; cosmology and ethics.

POL 931: Seminar on Variants of Marxism

Explores the roots of Marxist theory and its variants / adaptations in Europe and the Third World. Based on the works of Marx and Engels, Lenin, Luxemburg, Sorel, Mao, Gramsci, etc.

POL 932: Seminar on Hobbes, Locke and Rousseau

Theories by these thinkers have long shaped debate and politics of liberalism and democracy. This seminar provides an in-depth exploration of their work in order to better appreciate their ideas on the enduring questions of representation, rights of the sovereign and obligations of citizens, and individual freedom.

POL 933: Seminar on Civil Society and the State

Focuses on the civil society-state nexus. It will provide a critical analysis of the civil society construct, its value for understanding democratization in African countries as well as its role in societies of advanced capitalism.

POL 913: The PhD Thesis.

POL 834	Public Administration	3
POL 836	Seminar on Politics of Development Strategies	3

CORE COURSES:

POL 830: Theories of Development

This course surveys the major theories and concepts currently used to explain social change and political development. Basic models of political change formulated by Karl Marx, Max Weber W.W. Rostow, and their offshoot will be examined.

POL 811: Methods & Techniques of Political Inquiry

The course deals with the logic, methods and philosophy of scientific inquiry as they relate to the social sciences in general and political science in particular; methods of data analysis; survey techniques as well as the process of theory building and model construction.

POL 812: Statistics & Mathematical Models

Focuses on basic mathematical concepts essential for formal and quantitative political analysis: probability theory, linear algebra; and some calculus; use of theory of statistical inference; application of statistical procedures in political science research. Game theory and related modeling techniques.

POL 813: Computer & Political Science Research

Familiarizes the student with the basic computer programmes - word, spread sheet; power point and excel - and how these can facilitate research and data management.

POL 814: Issues in Entrepreneurship

Electives Courses:

POL 831: The Political Economy of Nigeria

This deals with the nature of the state, society and economy in Nigeria, the underlying basis of production and distribution and the role of the Nigerian state and social classes in the process; Nigeria and the world economy.

POL 832: Political Economy of Development

Entails a critical study and analyses of the theories of development and underdevelopment. It

will examine questions of alternative paths to development: private and state-capital or socialism. It will examine the methods and rationale of development planning and will analyze industrialization strategies and agricultural policies in selected African countries.

POL 833: Urban Poverty & Politics

Analysis of the causes and patterns of migration and the formation of towns under colonialism, focusing on the contemporary working poor and the lumpen elements, their nature and links with state and capital. There will be special emphasis on the persistence of petty commodity production, its relationship with the formal sector of the economy in national aggregate production and its place and significance in national policies and development theory.

POL 834: The Peasantry & the Development Process

In the clash between tradition and modernization the peasantry is caught in-between. This course will examine the changing political, social and economic conditions of the peasantry in Nigeria. It will seek to understand the how the peasants have participated or can participate in the development that affects their lives; peasant economic practices; changing cultural values as well as peasant responses to government development programmes.

POL 835: Development Economics

This course is a macro-economic survey of classical and modern thoughts and trends of economic development. It treats, among others the concepts of economic development; the problems of the measurement of development. The development of macro-economic thought and practice from the mercantilists and classical/laissez-faire thinkers to socialists/Marxist analysis and Keynesian theory; validity and relevance; analyses of selected major models and theories, of economic growth and development, such as the Ricardian, Rostow, Harod-Domar, Kaldon and the structuralist models. Finally, the development planning and implementation process in Nigeria will be reviewed as a case analysis in terms of the need to plan for economic development, types of planning, the planning machinery and, the planning process.

POL 836: Development Policy & Social Change

This course will focus on Nigeria's national development; case studies of different development policies over time e.g. Education, Health, Agriculture, Housing, Industrialization, etc. The relationship between this and social change in Nigeria will be the focus.

Seminars

POL 837: Modern Political Theory

The course covers essentially the major concepts and theoretical assumptions of liberal democracy, from the works of Hobbes, through Locke, Rousseau and the utilitarians. It will also include some examination of a contrary approach to democracy, by Marx. Emphasis will be on students reading and analyzing the original works by these theorists.

POL 838: Development Strategies

Exposes students to different strategies and theories of development; to the relationship between political and economic factors in development planning and implementation, as well as to the international dimension in determining development policies and strategies. Examples will be drawn from Nigeria and other African countries.

POL 839: Selected Problems in Developing Social Formations

Some of the problems to be examined here include internal colonialism, democracy, democratization and governance, management of diversity, fragile state systems, economic and political (under)development, etc.

POL 840: The Environment & Sustainable Development

Examines contending issues in the debate about climate change and its implications for human survival. It focuses on the Nigerian situation to demonstrate the dynamic link between development and the environment; issues of environmental degradation (oil spillages and gas flaring; erosion and deforestation) and sustainable development. Special attention will be paid to the situation in the Niger Delta and especially to the UNEP report on the Ogoni environment.

POL 820	Structure and Process of Local Politics	3

CORE COURSES:

POL. 810: Theoretical Approaches to the Study of Nigerian Politics

An examination of the tools and frameworks that have been employed by scholars in the study of Nigeria Politics, and an assessment of their respective explanatory potentials. Works by eminent scholars like Billy Dudley, Claude Ake, Peter Ekeh, Okwudiba Nnoli, Ikenna Nzimiro, Sam Oyovbaire, Bala Usman, Adele Jinaidu and Bala Mohammed, among others, will form the basis of discussions.

POL. 811: Methods & Techniques of Political Inquiry

The course deals with the logic, methods and philosophy of scientific inquiry as they relate to the social sciences in general and political science in particular; methods of data analysis; survey techniques also well as the process of theory building and model construction.

POL. 812: Statistics & Mathematical Models

Focuses on basic mathematical concepts essential for formal and quantitative political analysis:

probability theory, linear algebra; and some calculus; use of theory of statistical inference; application of statistical procedures in political science research. Game theory and related modeling techniques.

POL. 813: Computer & Political Science Research

Familiarizes the student with the basic computer programmes - word, spread sheet; power point and excel - and how these can facilitate research and data management.

POL. 814: Issues in Entrepreneurship

ELECTIVE COURSES:

POL. 815: Nigerian Federalism

A study of federalism as a form of union with emphasis on the historical development of Nigerian federalism from a historical, legal form to political-administrative form of union. The dynamics of the federal system focusing on federal-state relations in Nigeria and their impact on political and policy processes.

POL. 816: Nigerian Political Parties

Political parties are amongst the more pervasive organizational forms for the aggregation and articulation of political interests, and thus are of enormous import in shaping political processes of nation-states. This course will seek to analyze the social basis of Nigerian Political Parties and their role in the political and legislative processes.

POL. 817: The Political Economy of Nigeria

This deals with the nature of the state, society and economy in Nigeria, the underlying basis of production and distribution and the role of the Nigerian state and social classes in the process; Nigeria and the world economy.

POL. 818: Public Policy Process

The policy-making process. The factors influencing the content and consequences of public policies. Problems of evaluation of public policy. Examination of specific issues.

POL. 819: The Nigerian Constitution

An analysis of the relationship between constitutions, social structure and socio-economic power in Nigeria. Constitutional change, decolonization and the evolution of state forms in Nigeria. The role of Constitutions in regulating the internal relationships between organs of the state.

POL. 820: Structure and Process of Local Politics

Analysis of leaderships with mass, occupational groups, etc. and their impact on government and politics at the local level.

SEMINARS:

POL. 821: Seminar on the structure of political conflict in Nigeria

POL. 822: Seminar on the Political Economy of Nigeria. Examines in details Nigeria's economy, the changing class structure; the dynamics between economy, class and politics.

POL. 823: M.Sc. Dissertation

NIGERIAN GOVERNMENT AND POLITICS DOCTORATE (PhD) DEGREE

The Doctor of Philosophy degree programme is being proposed for consideration and approval, to run in the sub-fields of Peace and Conflict in the Department of Political and Administrative Studies, as provided by the National Universities Commission (NUC) Benchmark Minimum Academic Standards for Postgraduate Programmes in Social Sciences in Nigerian Universities. The subject matter of Peace and Conflict entails understanding the causes of violent conflict such as wars and other eruptions. The inevitability of conflict in human life, suggests high-level capacity building in tackling threats to peace and managing conflicts non-violently.

Philosophy

The proposed Peace and Conflict training at the doctoral level in the Department of Political and Administrative Studies, aims to produce researchers and teachers in the field. In addition, the field is designed to equip students with skills to respond to violent conflicts and manage conflict to prevent them from becoming violent. Finally, the programme is crucial both for analysis and practice in relation to policy and handling of conflict issues at inter-personal, group, local, national and international fronts.

Aim and Objectives

The overall goal of the Doctor of Philosophy degree programme is to provide quality graduate level training that enable students to analyse peace and conflicts. Furthermore, students are expected, to be able to analyse the underlying causes of violent conflicts and apply appropriate strategies to managing or resolving them. The specific objectives of the programme are:

1. Train a pool of candidates with capacity for cutting-edge research in the field of peace and conflict.
2. Train a pool of candidates with capacity and critical thinking to generate and transfer knowledge in conflict and peace dynamics through research, teaching, seminars and professional workshops.
3. Provide high-quality postgraduate programmes at the Doctor of Philosophy

level for the bureaucracy, academia, non-governmental sector, business, multilateral, and inter-governmental organizations.

4. Give students theoretical, methodological, and practical grounding in the emerging field of peace and conflict studies.
5. Train students in research on the causes of intra-state and international armed conflict; security; conflict resolution and post-conflict peace-building with special reference to Africa.
6. Introduce students to practical projects that build local capacities for sustainable development, community engagement, governance, and conflict transformation.
 - i. A full-time Doctoral programme in Peace and Conflict shall run for a minimum of twenty four (24) months and a maximum of sixty (60) months.
 - ii. A part-time Doctoral programme shall run for a minimum of thirty six (36) months and maximum of eighty four (84) months

a) Requirement for Graduation

PhD students shall be required to pass 12 units compulsory courses. In addition, students are expected to pass a comprehensive examination and do a presentation of field report seminars. Also, all students must successfully defend their thesis.

Mission

To build a team of people with capacity for cutting-edge research, analysis and teaching, who will also be able to work for the peace of society, at inter-personal, organizational, group, local, national and international fronts.

Vision

A world with nonviolent problem-solving people, governments, groups and organizations.

Rationale

Conflict is inevitable in human relations. This alone suggests a need for society to be proud of people with capacity and skills for explaining and understanding the nature of conflict, causes and how to manage them, such that they do not degenerate into violence. Violent conflict, involving governments, non-state groups, and use of dangerous weapons continue to threatened security and prosperity of communities and countries. Peace is an ingredient of development. Development itself easily relates to social, economic, political and other conditions that explain conflicts requires high-level training which the PhD programme in Peace and Conflict studies can provide.

Admission Requirements

In addition to admission requirements of the School of Graduate Studies, the following regulations shall

govern the award of the PhD in Peace and Conflict studies:

- a) Candidates for admission into the programme shall possess an appropriate Master of Science degree of the University of Port Harcourt or any other recognized university. Appropriate degree here means an MSc or Master of Arts (MA) degree in Peace and Conflict, in addition to a good Bachelor's degree. Preference shall be given to candidates doing related jobs in Government Ministries, the Private sector, and Security services.
- b) Candidates for admission shall possess a good Master of Science or Master of Arts degree with at least 3.5 CGPA, to qualify for admission obtained from University of Port Harcourt or any other recognized university.

		24

COURSE DESCRIPTION:

PAD 901- Seminar on Politics and Public Administration in Africa: It is a seminar course intended to expose students to the theories and main themes of the relationship between politics and African public administration. Students will become familiar with conversations about key issues in the areas of public administration of some African countries from a decolonial perspective in the post-colonial state.

PAD 902- Advanced Public Policy Analysis: This course is intended to introduce students to theories of public policy analysis and the art of policy analysis in the context of developed and developing countries. Students are expected to understand the public policy-making process at the various levels of government. At the end of the course, students should be able to critically analyse various public policies of the Federal, State and Local Governments in Nigeria, to ascertain their strengths and weaknesses, successes and failures and be able to proffer solutions to strengthening such policies.

PAD 902- Advanced Public Personnel Management: This course will explore the theories of public personnel management. It will focus on Nigeria, the development of the public service, manpower planning, unionization of public employees and recent trends in public personnel relations.

PAD 903- Seminar International Public Administration: Students will be exposed to the bureaucracy and policymaking processes and implantation in international organisations such as the United Nations, African Union, ECOWAS, European Union, etc), implementation of

international policies, procedures of their activities over the years, successes, and challenges.

PAD 904- Advanced Budget and Public Finance Management: This is course will expose Students to advanced concepts of public finance, processes of mobilizing public revenue, and principles of public finance. The course will cover topics such as taxation, borrowing, expenditure, fiscal policy, budgeting process, revenue etc.

PAD 906-Advanced Research Methodology: This course will take students through series of important themes in the research process and how to convert research outputs into publications and revenues. It will focus of qualitative and quantitative approaches to effective doctoral research.

PCS 805.2 - Nonviolent Conflict Transformation (3 Credit units)

The goal of this course is to provide students with the ideas, principles, techniques, or frameworks necessary to understand and apply nonviolent conflict transformation. The origins and causes of conflict, nonviolence, reconciliation, conflict analysis, the framework for intervening in conflicts and developing interventions, DDR, and other related topics will all be covered.

PCS 806.2 Contemporary Peacekeeping Operations (3 Credit units)

M.SC DEGREE IN PEACE AND CONFLICT STUDIES

Admission Requirements

Candidates for the Master’s Degree in Peace and Conflict Studies must have one of the following:
A good first-degree, honours, in any discipline with a minimum of a second-class lower division.

A minimum of a third-class honours degree from a recognized university plus Postgraduate Diploma in International Affairs (PGDIA), Public Administration or Peace and Conflict Studies.

An Upper Credit in HND with Postgraduate Diploma in Public Administration, Political Science, International Relations or Peace and Conflict Studies from a recognized university.
Evidence of NYSC discharge or exemption/exclusion certificate is required.

Duration of Programme

The Full-time Master degree in Peace and Conflict Studies shall run a minimum of 12 and a maximum of 24 calendar months. The Part-time programme shall run for a minimum of 24 and a maximum of 36 calendar months.

Requirements for Graduation

To qualify for the award of master's degree in Peace and Conflict Studies, a candidate must pass a minimum of 37 credit units comprising a core, elective and seminars courses and the Thesis.

1ST SEMESTER

Course Code	Course Title	Credit Unit
SGS 801.1	ICT and Research Methodology	2
PCS 800.1	Introduction to Conflict, Peace and Strategic Studies	3
PCS 801.1	Research Methodology in Peace and Conflict Studies	3

SGS 802.2	Management and Entrepreneurship	2
PCS 805.2	Advanced Seminar on Nonviolent Conflict Transformation	3
PCS 806.2	Advanced Seminar on Post-conflict Recovery Processes	3
PCS 807.2	Advanced Seminar on Politics and Violent Conflict	3
PCS 808.2.	Advanced Seminar on Contemporary Peacekeeping Operations	3
PCS 809-2	M.Sc. Thesis	3
Total		17

Elective Courses

Students must take at least one of the following elective courses each semester:

- PCS 811.1 International Organisations and Conflict Resolution
- PCS 812.2 Gender and Conflict Management

COURSE DESCRIPTION

SGS 801.1: ICT and Research Method (2 Credit Units)

This course should cover the essentials of spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Scientific Research, Concepts of Hypothesis, Formulation and Testing, Organization of Research and Report Writing.

PCS 800.1 Introduction to Peace and Conflict Studies (3 Credit units)

This course seeks to familiarize students with the fundamental ideas and theories in the subject so they may comprehend conflict causes, especially in terms of its violent manifestations, actors, and results. From a multidisciplinary standpoint, the concepts of conflict, peace, nonviolence, conflict transformation, conflict analysis, conflict management, etc. will be examined alongside other perspectives. The history of the field of peace and conflict studies as well as its connections to other academic disciplines including economics, political science, and international relations will also be covered in this course.

PCS 801.1 Research Methodology in Peace and Conflict Studies (3 Credit units)

The goal of this course is to introduce students to peace and conflict studies methodologies. Students will receive guidance as they investigate the key ideas in research. It discusses challenges with qualitative and quantitative research designs and instructs students on how to do research, gather data, analyse data using qualitative and statistical techniques, and write up research reports.

PCS 803.1. International Conflict and Security (3)

Theories of international conflict shall be examined in this course. International issues of terrorism, counterterrorism, sanctions, the application of force, the nature of strategy and international law will be explored.

PCS 804.1 Alternative Conflict Resolution (ADR) (3 Credit units)

The course explores the theory, practice, and applications of Alternative Dispute Resolution (ADR). This course prepares students to analyse, design, and implement effective ADR processes in various conflict situations. The focus of the course is on non-adversarial methods of conflict resolution such as mediation, negotiation, and cooperative problem-solving. It also examines the ethical considerations, cultural dynamics, and legal frameworks surrounding ADR practices. Students will be encouraged to register for certification as Mediator or Conciliator during their studies or after graduation, with the Chartered Institute of Mediators and Conciliators of Nigeria.

SGS 801.2 Management and Entrepreneurship (2 Credit Units)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

PCS 805.2 - Nonviolent Conflict Transformation (3 Credit units)

The goal of this course is to provide students with the ideas, principles, techniques, or frameworks necessary to understand and apply nonviolent conflict transformation. The origins and causes of conflict, nonviolence, reconciliation, conflict analysis, the framework for intervening in conflicts and developing interventions, DDR, and other related topics will all be covered.

PCS 806.2 Contemporary Peacekeeping Operations (3 Credit units)

Contemporary peacekeeping operations and outcomes will be explored in this course. The role of the United Nations, ECOWAS, and nongovernmental organisations shall be explored in relation to 'Responsibility to Protect' civilians in times of conflict. It will look at case studies

PCS 807.2 M.Sc. Dissertation (3 Credit units).

The M.Sc. dissertation should be an original work presented following the regulations of the Graduate School. It shall be accepted and deemed necessary to have contributed to knowledge.

Elective Courses

PCS 811.1 International Organisations and Conflict Resolution (3 Credit units)

This course explores the role of state and non-state international organisations in the response to national and international conflict. This also involves multilateral and inter-governmental organisations.

PCS 812.2 Gender and Conflict Management (3 Credit units)

Students will be provided with an opportunity to explore how gender matters in conflict management across levels of human interactions. Many violent conflicts in Africa are natural resource-based. The course is intended to highlight the role as well as the impact of violent conflicts on women and men how both are crucial in peace building processes

POL 913.1. Alternative Dispute Resolution (ADR)

This is a seminar course intended to introduce students to various concepts and the spectrum of alternative dispute resolution methods. Mediation, conciliation, negotiation, among others, will be explored. Students in the Peace and Conflict programme will be expected to register for certification as Mediator or Conciliator during their studies or after graduation and encouraged to take up internship at the Multi-Door House in Rivers State or any other state, or private mediation and conciliation company.

POL. 911.1. International Mediation

This is a seminar course aimed at exploring the meaning, nature and issues in international mediation, using specific case studies.

POL. 910.1 Research Methodology in Peace and Conflict Studies

This course will revisit key issues in research in the social sciences, including research philosophical traditions with implications for methods of data collection and analysis. It will explore practical ways of doing qualitative and quantitative research in the field of Peace and Conflict Studies. The role of theory in research, field data collection in conflict zones, technology and data analysis, proposal writing, research report writing, statistics, are among the issues that this course will revisit.

POL. 909.1 Advanced Theories in Peace and Conflict Studies

This course will revisit major themes, concepts and theories in peace and conflict studies. It will explore the interdisciplinary nature and development of the field, looking specifically into relationships between it and political science, sociology, economics, international relations etc. Furthermore, the state of the discipline from a comparative perspective will be explored in order to access its growths and impact in the overall management of conflict across several countries or continents. The social, economic, environmental, psychological, and political and gender dimensions of conflict will be explored. Alternation Conflict Resolution (ADR) and other western models of conflict management will be explored.

POL. 910.1 Research Methodology in Peace and Conflict Studies

This course will revisit key issues in research in the social sciences, including research philosophical traditions with implications for methods of data collection and analysis. It will explore practical ways of doing qualitative and quantitative research in Peace and Conflict. The role of theory in research, field data collection in conflict zones, technology and data analysis, proposal writing, research report writing, statistics, are among the issues that this course will revisit.

POL. 912.1. Theories of International Relations.

This course is intended to explore the nature of international relations in context of peace and conflict studies, theories of international relations, and address key issues of conflict; the use of force, interstate wars; nuclear proliferation and global peace; new actors in the international system; transnational networks; and terrorism.

POL. 915.1. Seminar on African Conflicts

This course is intended to examine in detail conflicts in selected African countries. The course will address the issues, causes, management and effects of the conflicts.

POL. 917.2 Advanced Seminar on Gender, Natural Resources and Conflicts in Selected Countries in Africa

Seminar on natural resources conflicts; concept of resource curse in relation to Africa; impacts on countries, and management. Gender and conflict management, post-conflict peace-building processes; United Nations, African Union and the women in conflict management.

POL. 919.2 Thesis

The Ph.D Thesis should be an original work presented in accordance with the regulations of the Graduate School. It shall be accepted and deemed necessary to have contributed to knowledge.

DEPARTMENT OF SOCIOLOGY

Graduate Diploma in Sociology

The Post-Graduate Diploma in Sociology (PGDS) was established in the year 2001/2002 session. It was designed as a bridge between the B.Sc and M.Sc degrees for those whose B.sc graduation grades in Sociology do not qualify for a direct admission into the M.Sc programme. The PGDS remedies deficiencies in undergraduate sociological knowledge. Students must pass the PGDS with not less than Upper Credit to qualify for admission into the master's programme

The programme is also designed to enable students from other disciplines acquire knowledge of the methods of Social Science research, as a result the PGDS qualification may not be used as entry requirements into the masters programme in sociology.

Aim & Objectives of Programme:

The Post-Graduate Diploma in Sociology is designed to:

- Enhance knowledge of Sociology and training skills of Social Work practitioners for effective performance in public and private economy sectors of the economy.
- Serve as a pre-condition for the eventual admission into the M.Sc Sociology programme.
- Provide opportunity for non-sociology students in related disciplines especially those that are working to update their academic profile.

Eligibility:

The following categories of candidates are eligible to apply for admission into the One-year PGDS Programme.

- Candidates who possess a minimum of a Third Class Degree in Sociology from any recognized university.
- Candidates who possess at least Second Class lower degrees in related disciplines.

Duration of Programme:

The Full-Time PGDS programme is designed to last for one academic session of two (2) semesters and no. longer than four (4) semesters. For a Part-Time programme, it is for a minimum of (4) semesters and maximum of six (6) semesters, commencing from the normal University of Port Harcourt Calendar year and ending at the end of the normal session.

Mode of Application:

(a) Requests for application forms should be made to the School of Post-Graduate Studies (SPS), The requests must be accompanied by

the stipulated fee made payable to the University of Port Harcourt with the candidate's name, address and course applied for, written at the reverse side.

Courses and Credit Load:

To qualify for the award of the Post-Graduate Diploma in Sociology a Candidate must; **Take and Pass**

- Five (5) core courses of three (3) credit units each:

Course Code	Course Title
SOC701.1	Fundamentals of Sociology
SOC 702.1	History of Social Thought
SOC 703.1	Research Methods in Sociology
SOC 704.1	Computer Appreciation
SOC 705.1	Social Work Issues in Entrepreneurship

- Three (3) Required courses of three (3) credit units each:

Course Code	Course Title
SOC 701.2	Sociology of Development
SOC 702.2	Criminology, Police Science & Social Work
SOC 703.2	Nature & Challenges of Human Resources Management

- Seminar and Project (in any of these areas) of five (5) credit units.

Course Code	Course Title
SOC 704.2	Sociology of Development & Social Change
SOC 705.2	Criminology & Sociology of Deviance
SOC 706.2	Human Resources Management
SOC 707.2	Demography & Population Studies
SOC 708.2	Industrial Relations

- Write a Project Report (3 Credit Units) on any of the Specialized Areas of Sociology stated in (b) above.

The total credit load per student required for graduation is 30 credit units.

Good Standing:

In each semester, a student must have a Cumulative Grade Point Average (CGPA) of not less than 3.00.

Withdrawal:

A Candidate with less than 3.00 CGPA shall remain in the programme for First semester, but shall be withdrawn if he/she fails to attain 3.00 CGPA at the end of the second semester.

Attendance:

A student is required to attain a minimum of 75% in attendance out of the total period of formal instructions delivered for the course in order for him/her to be eligible for examination in that particular course.

Completion of PGDS Programme:

Candidates must complete a total of 30 credit hours to complete the PGDS programme.

Course Assessment:

Each course will be assessed on the basis of:

- (a) 30% continuous assessment
- (b) 70% end of semester written examination, Candidates are expected to obtain a minimum grade of C (50%) in each course they registered and a seminar in order to qualify for the award of the Post Graduate Diploma in Sociology. Grades per performance shall be:

A	=	70-100
B	=	60-69
C	=	50- 59
F	=	0-49

Withdrawal:

A Candidate with less than 3.00 CGPA shall remain in the programme for First semester, but shall be withdrawn if he/she fails to attain 3.00 CGPA at the end of the second semester.

Attendance:

A student is required to attain a minimum of 75% in attendance out of the total period of formal instructions delivered for the course in order for him/her to be eligible for examination in that particular course.

Completion of PGDS Programme:

Candidates must complete a total of 30 credit hours to complete the PGDS programme.

Course Assessment:

Each course will assessed on the basis of:

- a) 30% continuous assessment
- b) 70% end of semester written examination. Candidates are expected to obtain a minimum grade of C (50%) in each course they registered and a seminar in order to qualify for the award of the Post-Graduate Diploma in Sociology. Grades per performance shall be:

A=	70-100
B=	60-69
C	= 50-59

F	=	0-49
---	---	------

Diploma Classification

The PGD in Sociology will be awarded with Distinction, Credit and Merit and it will be based on the Cumulative Grade Point Average (CGPA) earned at the end of the programme. It shall be classified as:

Distinction	-	4.50-5.00
Upper Credit	-	4.00-4.49
Lower	-	3.50-3.9
Merit	-	3.00-3.49
Fail	-	0.00-2.99

COURSE DESCRIPTIONS

SOC 701.1: Fundamentals of Sociology

The study of the Social System and its relationship to other systems, particularly the political and economic evolve differentiate, cohere or disintegrate. Introduction to basic concepts or Sociological analysis, such as roles, Social structure, function, conflict, class consensus, power, value, authority and culture.

SOC 702.1 - History of Social Thought:

An intensive review of the contributors to social thought and the rise and development of modern sociology. Emphasis will be placed on the impact made by the classical scholars in sociology and contemporary African Theorists on the theories of the social system.

SOC 703.1 - Research Methods in Sociology:

This course reviews the theoretical and methodological foundations of Social Science research. Issues treated include the nature of science; problems of scientific explanations; methodological problems of social science; concept formation theories and paradigms; the existential determination of knowledge and social science research techniques and procedures.

SOC 704.1 - Computer Appreciation:

Introduction to basic computer concepts. Hardware and software, programming languages and data capture techniques. Computer networks use of operating systems Microsoft windows and windows applications. Data processing and the internet system.

SOC 705.1 - Social Work Issues in Entrepreneurship:

Contemporary issues of entrepreneurship in social work will be discussed in the form of a colloquium. Some of the issues to be debated will include legal and ethical principles, economic and political issues; the issues of training, education and provision of social services.

SOC 701.2 Sociology of Development:

Major theoretical perspectives in development study and their relevance to understanding the development Crisis of third world countries.

SOC 702.2 - Criminology, Police Science & Social Work:

Sociological perspectives relating to various facets of criminal justice systems; such as socio-cultural foundation of criminal law, law enforcement function, operation and functions of courts and social institutions. The nature and scope of social work and

SOC 708.2 -Industrial Relations

A review and consideration of the major issues and problems in Industrial Sociology in modern society. It involves debates-discussions and an intensive analysis of selected topics by, the instructor.

GRADUATE DEGREES IN SOCIOLOGY:

The Department shall offer the MSc and PhD Degrees 'in the following areas of specialization:

- a) Industrial Relations & Human Resources Management (IRHRM)
- b) Criminology and Police Science.
- c) Sociology of Development

Admission Requirements:

Subject to the general regulations of the School of Postgraduate Studies (SPS), the following requirements govern admission into the higher degree programme.

Admission Requirement for MSc Programme:

Subject to the general regulations of the School of Postgraduate Studies, (SGS), the following requirement govern admission into the higher degree programme:

Candidate must have graduated with a minimum of Second Class honors lower division, or PGD in Sociology with a minimum of Credit pass, that is 3.5 on a five-point scale, from any recognized University in Nigeria.

AWARD OF DEGREE

The M.Sc

To qualify for the award of the M.Sc Degree, a candidate must.

- (a) Complete 33 semester hours of taught courses including seminar and score not less than C in any of the courses. It is required that candidates should take a course in their areas of specialization.
- (b) Satisfactorily defend a Dissertation written in his/her area of specialization. The Dissertation shall be computed as six (6) Credit Units.

- (c) Meet all financial obligations to the University as well as other requirements relating to residence, character as may be prescribed by Senate recommendation of the School of Postgraduate Studies. At present the residency requirement 12 months. (i.e 2 semesters, with the long vacation inclusive for full-time students, and 2 calendar years for part-time students.
- (d) No candidate will be registered for the MSc Degree for more than three calendar years, if a full-time student or for more than five years, if a part-time student. In exceptional circumstances Senate may on the recommendation of the Graduate Studies Committee and approved by the School of Postgraduate Studies waive this rule.

MASTER OF SCIENCE (MSc) IN SOCIOLOGY

Candidates must take and pass five (5) Core Courses of 3 credit units each.

- (a) Five (5) core courses of three (3) credit units each:

Course Code	Course Title
SOC 801.1	Advanced Sociological Theories
SOC 802.1	Advanced Sociological Research Methods
SOC 805.1	Statistical Methods in Sociology
SGS 801.1	ICT & Research Methods
SGS 801.2	Management & Entrepreneurship

A) INDUSTRIAL RELATIONS AND HUMAN RESOURCES MANAGEMENT (IRHM)

First Semester:

DOCTOR OF PHILOSOPHY (PhD) IN SOCIOLOGY

B. The PhD Programme:

Candidates for the Ph.D Programme should have a Masters' Degree and should normally have had a minimum of 3.5 on a five (5) point scale at the Masters level.

Methods of Application:

Same as in the Masters Programme. The Ph.D Candidate must in admission submit a proposed plan of research along with his/her application.

Five (5) Core Courses of 3 Credit Units each:

Course Code	Course Title
SOC 901.1	Applied Sociological Theories (Seminar)
SOC 902.2	Applied Sociological Research Methods(Seminar)
SOC 905.1	Statistical Methods in Sociology
SGS 903.1	ICT & Research methods
SGS 904.2	Mgt. &Entrepreneurship

Ph.D candidates who do not possess the Masters' Degree in Sociology but have its equivalent in Management, Development Studies, Personnel Management or Criminology shall if offered admission audit the following courses.

- Advanced Sociological Theories
- Advanced Sociological Research Methods and
- Statistical Methods in Sociology

A. INDUSTRIAL RELATIONS & HUMAN RESOURCES MANAGEMENT (IRHRM)

First Semester:

Course Code	Course Title	Credit Unit
--------------------	---------------------	--------------------

SOC 901.1	Applied Sociological Theories (Seminar)	3
SOC 905.1	Applied Statistical Methods in Sociology	3
SOC 910.1	Sociology of Work & Industry	3

SOC 902.2	Applied Research Methods in Sociology (Seminar)	3
SOC 932.2	World Population & Change	3
SOC 934.2	Seminar in Sociology of Development	3
SOC 924.2	Sociology of Deviance	3
	Total Credit Unit	12

GRAND TOTAL CREDIT UNIT = 24

RESEARCH PROJECT:

The PhD Thesis carries 6 credit Units. Candidates must write a Thesis in their area of Specialization.

The Ph.D:

To qualify for the award of the PhD Degree, a candidate must;

Take and pass:

- a) Five prescribed compulsory courses and two other courses in his/her major field (one of which must be a doctoral seminar).
- b) Take and pass elective courses to remedy any deficiencies in courses as may be determined by his/her supervisor.
- c) Take and pass the Comprehensive Examination in a most two sittings.
- d) Successfully complete and defend a Thesis on topic approved by the Graduate Studies Committee.
- e) Satisfy financial obligations to the University as well as other requirements relating to residence and character as may be prescribed, by Senate on the Recommendation of the School of Postgraduate Studies. At present, the residence requirement is six (6) semesters (3) academic sessions) for full-time students and ten (10) (5 academic sessions) semesters for part-time students.

No candidate will be registered for the PhD Degree for more than five years if he or she is a full-time student or for more than seven years if a part-time student.

Thesis:

Thesis shall be original work presented in accordance with the regulations approved by Senate on the recommendations of the School of Postgraduate Studies. The Ph.D Thesis will be accepted only if it is deemed to make contribution to knowledge and shows evidence of originality.

Theses shall be graded by at least two examiners, which must include the thesis supervisor and one external examiner. A minimum grade of C for the thesis and for its defense is required for a pass.

COURSE ASSESSMENT:

Each course will be assessed on the basis of 40% continuous assessment and 60% end of semester written examination. All candidates are required to obtain a grade of C or better in each course and in the Thesis in order to be awarded the Ph.D Degree.

COURSE DESCRIPTION:

SOC 801.1 - Advanced Sociological Theories:

This course offers a critical review of major themes and theories of classical sociology and an examination of selected contemporary Schools of Thought.

SOC 802.2 - Advanced Sociological Research Methods:

Logical Foundations of the social science; Problems in scientific methodology: Qualitative and quantitative methods. Research processes, survey design, sampling and data analysis.

SOC 805.1 - Statistical Methods in Sociology:

Statistical methods and reasoning in advanced statistical application of statistical methods. Prior knowledge of statistics is required.

SOC 816.1 - Foundation of Industrial Relations:

This course handles theories and practice of industrial relations in the developed and under-developed nations. It examines the relevant institutions of job regulation including labour union management and the state in the processes of job regulation. Cognizance is given to the dynamics of the relative strength of labour and management from the point of view of the factors influencing the national industrial relations systems, such as the economy, the political environment and character of the state.

SOC 818.1 - Human Resources Management (HRM):

Study of the basic principles, methods and practice in Human Resources Management. Management techniques, human resources development and management. The dynamics of interpersonal relationships including such factors as perception, motivation, belief systems and attitudes. Training

and executive development: decision-making policies and management of conflict.

SOC 819.2 - Theories of Industrial Management:

Emphasis is on theories and practice of industrial management. Industrial Resources Management Relationship between labour and management in historical and contemporary contexts, including the principles used in industrial management are discussed.

SOC 817.2 - Seminar in Industrial Relations & Human Resources Management:

Contemporary issues and problems in Industrial Relations & Human Resources will be discussed and debated upon. The instructor will lead the discussions and encourage students to participate.

SOC 822.1 - Advanced Criminology:

Consideration of major theories: Classical and contemporary theories of crime, delinquency, law and punishment. Evaluation and analysis of current issues and problems in crime causation and treatment. Emphasis will be placed on the explanation of contemporary problems associated with the control, detention and prevention of crime and delinquency in modern Nigeria.

SOC 822.2 - Social Work II: Juvenile Justice & the Administration of Criminal Justice Systems:

The study focuses on the juvenile and criminal court process of adjudication and the impact these processes have on both the juvenile and the adult offender, especially when they are remanded in juvenile institutions and prisons or correctional facilities.

Emphasis will be placed on youth crime and delinquency and the various techniques for the treatment and rehabilitation of offenders including the problems encountered in their application with special attention given to problems of resistance to treatment, issues of confidentiality and relationships with agency administration.

Milieu therapy, individual and group therapy, behavior therapy, therapeutic communities and the utilization of special rehabilitation agencies are studied.

SOC 823.1 - Victimology & the Criminal Justice System:

A critical evaluation of the current knowledge of the science of victimology with emphasis on the victims' characteristics, problems encountered by victims, including community attitude towards the victim, the interaction of the victim with the criminal justice system and programmes for rehabilitation of the victim. In addition, the course comprehends of

criminals, various techniques used at styles of policing and providing police services will be studied. The Legal Power of the police and problems associated with law enforcement are surveyed. Throughout the course; attention will be paid to law and politics applied in policing the city and whether not professionalism is maintained.

SOC 823.2 - Prisons & Juvenile Institutions (Treatment of Offenders):

The nature of prisons and juvenile institutions in Nigeria. The various techniques for the treatment and rehabilitation of offended problems encountered in their application with special attention given to problems of resistance to treatment issues of confidential and relationships with agency administration. Pragmatic justification and determination of the effectiveness of alternative penalties.

SOC 824.1 - Police & Policing the Society:

The course covers various aspects of policing a large urban area such as a metropolitan city. Emphasis is on the roles and function of the police in maintaining law and order, control, prevention and detection of crime, including the search and apprehension of criminals. Various techniques used and styles of policing and providing police services will be studied.

The legal Powers of the police and problems associated with law enforcement are surveyed. Throughout the course, attention will be paid too law and politics applied in policing the city and whether or not professionalism is maintained.

SOC 824.2/SOC924.2 - Sociology of Deviance:

The emphasis of this course is to examine the forms of deviance:

Juvenile delinquency and adult crime. The discussions will reveal the Sociological approaches to deviance: functionalism, conflict theories, interactionist approach, feminist approach and post-modern approach.

SOC 825.1 - Legalistic Criminology:

The application of criminomics in the analysis of criminal law and the determination of the cost implication of crimes. Emphasis is placed on the criminomics of crimes against the person and property, and on public order crimes (e.g. transnational crime) and white-collar crimes. Additionally, there will be a discussion on the criminomics of criminal justice system.

SOC 833.1 - Sociology of Development & Social Change:

Sociological theories of development and under-development with emphasis on contemporary schools of thought. Included will be the neo-Marxist analysis of imperialism liberal-capitalist

models, world system and dependency theories and relevant recent details. The study will also discuss social change and development of various social change theories, globalization, agrarian reforms, community development and urbanization.

SOC 834.1 - Capitalism & Development in the Third World:

An analysis of capitalist development and the incorporation of third world under-developing countries of Africa, Asia and Latin America.

SOC 835.2 - African Agrarian System & Sustainable Rural Development:

Issues: The structure of pre-industrial African societies; changes in the social structure of rural societies due to incorporation into the world capitalist system; the nature of the new social formations in the area of capitalist penetration. The issues of development; theories and methods of rural development; critical study of rural development in Nigeria and other African countries will be addressed.

SOC 835.1 - Demographic Resource Management & Development:

Emphasis is on the relationship between population, resource management and economic development, population change and effects on national resources development are examined. The relationship between population issues (fertility, mortality, migration, density and structure and development are studied). Policies on resource management based on population change will be discussed.

SOC 839.2 - Seminar in Sociology of development & Social Change:

A review and consideration of the major issues and problems in sociology for development and Social Change. It involves debates, discussions and an intensive analysis of selected topics by instructor(s).

SOC 910.1 - Sociology of Work & Industry:

The nature of work and industry. Working conditions and their relationship to productivity behavior and control on workers. Individual, group and industrial conflict. Arbitrations and other means of dispute settlements.

SOC 913.2 - Society and State in Industrial Systems:

Analysis of class and power in industrial societies. The ruling class, the proletariat, pressure groups and class struggle in Western Europe and North America. Socialist systems and their contradictions.

SOC 916.2 - Seminar in Industrial Relations & Human Resource Management:

A review of contemporary issues and problems in Human Resources Management. Discussions and debates will be organized in the form of colloquium.

SOC 926.1 - Theories of Deviant Behavior:

The review of theories of deviant behavior (e.g. Functionalism, Social disorganization and culture, Anomie, Differential association, Reference Groups, Neutralization and Drift). Also, the study will focus on the politics of deviance and the impact of class on deviance.

SOC 927.1 - Urbanization, Social Change & Criminality:

The Study of the fundamental feature and relationship between the phenomena of urbanization, social change criminality. Theories, themes and processes of urbanization and social change and how these affect/influence criminal behaviors will be discussed. It will involve an institutional analysis of the problems arising from these phenomena.

SOC 925.2 - Seminar in Criminology & Police Science:

Review of issues and problems in Criminology and Sociology of Deviance. Discussion and debates will be organized in the form of a colloquium.

SOC 932.2 - World Population & Change:

The emphasis of this course is on world population, urbanization of the environment. Theories of population growth globally and checking world population growth and the concept of New urbanites. Modernization and the global theories of social.

SOC 934.2 - Seminar in Sociology of Development & Social Change:

A review of issues and problems in Sociology of Development and Population Studies. Discussion and debates will be organized in the form of a colloquium.

Post Graduate Programme in Community Development

Community development is essentially a professional discipline within the Social Sciences, and is defined by the International Association for Community Development as “a practice-based profession and an academics discipline that promotes participative democracy, sustainable development, rights, economic opportunity, equality and social justice, through the organisation, education and empowerment of people within their communities, whether these be of locality, identity or interest, in urban and rural settings”.

Community development is rooted in the belief that all-inclusive development is possible, and

communities should be able to access the resources and opportunities imbued in their environment for sustainable growth. As an academic endeavour in Sociology, community development seeks to empower individuals and groups with the requisite skills and theoretical perspectives needed to effect change within communities.

Graduates of the programme will enjoy opportunities as community development practitioners, consultants in government and nongovernmental developmental programmes, researchers, local government administrators, development managers, and educators.

The target audience for this programme include:
Individuals wishing to develop skills in community development
Development practitioners and Community members
Educators, researchers and consultants in development studies
Community leaders
Social workers, public health practitioners and operators of NGOs
Governmental officials supporting community development projects

Aim and Objectives

The overall aim of the programme is to enhance the capacity and skills of individuals and development practitioners to engage communities as well as monitor and evaluate community development policies and programmes in Nigeria and any other clime.

Specifically, the programme is designed to:

- i. Introduce individuals to community development as a concept as well as basic skills in mobilising communities for development and influencing social change
- ii. Cater for students who are interested in doing graduate studies in Community Development.
- iii. Train individuals and groups that will become community developers.

POST GRADUATE DIPLOMA (PGD)

Entry Requirement

Candidates applying for this PGD programme in Community Development must possess a Bachelor’s Degree (B.Sc.) in Sociology or any other related field in the Social Sciences, Humanities, Management, and Education in any recognized and accredited University within and outside the country.

All PGD applicants deemed qualified may be required to undergo an interview in the department

to ascertain their capacity for rigorous work at the post-graduate level.

Programme Duration

PGD programmes in the Department of Sociology is designed to run for a minimum of 12 calendar months and a maximum of 24 calendar months (for full time) while Part Time programmes are designed to run for 24 calendar months (minimum) and 48 calendar months (maximum).

Graduation Requirements

All students are expected to obtain a minimum of a “C” grade in any exam undertaken at any level of post-graduate studies at the University of Port Harcourt. For a Post-Graduate degree in Community Development, satisfactory performance in all coursework examinations, as well as a completion of a dissertation or thesis is mandatory for graduation. The programme does require dissertation preparation and as such, the overall assessment of the student is placed on course work and results from the dissertation. Students with unsatisfactory scores less than “C” grades in four (4) courses and a cumulative grade point average of 3.00 shall not graduate and would be asked to withdraw from the programme.

Award of Degree

Students who must have completed and passed all prescribed courses at the end of the programme shall be awarded a Post Graduate Diploma (PGD) in Community Development (Sociology) from the University of Port Harcourt

Courses and Units

The total credit load per student required for graduation at this level is a minimum of 30 units. These are 9 units of major courses, 18 units of cognate courses, and 3 units of dissertation.

COURSE DESCRIPTIONS

SOC 701.1- Fundamentals of Sociology

The study of the Social System and its relationship to other systems, particularly the political and economic systems. Attempt to understand how social systems evolve, differentiate, cohere or disintegrate. Introduction to basic concepts or Sociological analysis, such as roles, social structure, function, conflict, class consensus, power, value, authority and culture.

SOC 703.1-Research Methods in Sociology

Research is an integral part of Social Sciences. This course reviews the theoretical and methodological foundations of Social Science research. Issues treated include the nature of science; problems of scientific explanations; methodological problems of social science; concept formation theories and paradigms; the existential determination of knowledge and social science research techniques and procedures.

CDS 700.1-Introduction to Community Development

This course provides the foundation for understanding Community Development as a field of study. In this course, the various definitions, perspectives, and themes in Community Development; the features of Community Development, the components of Community Development, and the processes of Community Development, will be examined. Also, students will be exposed to how to identify issues to be actioned within the community.

CDS 701.1-Social Policy and Community Development Planning

This course examines how social, economic, political and governance factors affect and impact community development. It also interrogates the use of policies to drive community planning and strategies for achieving social, economic and environmental sustainability within a community.

CDS 702.1-Theories and Perspectives in Community Development

Theories are ideas used in explaining reality. In the Social Sciences, there is a variety of theories that are used to explain the structure of the society and the various events that impact social development. In this course, the classical and contemporary theories in Community Development will be examined.

SOC 701.2-Sociology of Development

This course introduces students to the key sociological concerns in development of societies and the factors that affect sustainable development. Major theoretical perspectives in development study and their relevance to understanding the development crisis of third world countries will also be interrogated.

CDS 700.2-Rural Environment and Sustainable Community Development

This course teaches how rural communities can achieve a quality of life for all their residents while maintaining nature's ability to function over time by minimizing waste, preventing pollution, promoting efficiency and developing local resources to revitalize the local economy.

CDS 701.2-Gender and Community Development

In this course, students will be exposed to the crucial interconnections between gender parity, gender empowerment and community development. Also, the course examines how gender issues in the community stimulate or impede sustainable development.

CDS 702.2- Methods and Techniques of Community Development

Highlights the different approaches and techniques employed in community development. Explores the import of community research, community education, community organizing, community mobilization and advocacy, and planning in community development studies.

Project for PGD programme –

Projects in Community Development will explore community revitalizing practices and policies and their effect on sustainable community development.

Master of Science (M.Sc.) In Community Development

Entry Requirement

Candidates applying for this M.Sc. programme must possess a Bachelor's Degree (B.Sc.) in Sociology or any related field in the Social Sciences, Humanities, Management, and Education in any recognized and accredited University within and outside the country with a second class honours lower division, or a Credit pass in Post Graduate Diploma (PGD) programme in Sociology.

Programme Duration

M.Sc. programmes in the Department of Sociology is designed to run for a minimum of 12 calendar months and a maximum of 24 calendar months (for full time) while Part Time programmes are designed to run for 24 calendar months (minimum) and 48 calendar months (maximum).

Graduation Requirements

All students are expected to obtain a minimum of a "C" grade in any exam undertaken at any level of post-graduate studies at the University of Port Harcourt. For a Post-Graduate degree in Community Development, satisfactory performance in all coursework examinations, as well as a completion of a dissertation or thesis is mandatory for graduation. The programme does require dissertation preparation and as such, the overall assessment of the student is placed on course work and results from the dissertation. Students with unsatisfactory scores less than "C" grades in four (4) courses and a cumulative grade point average of 3.00 shall not graduate and would be asked to withdraw from the programme.

Award of Degree

Students who must have completed and passed all prescribed courses at the end of the programme shall be awarded a Master's of Sciences Degree (M.Sc.) in Community Development (Sociology) from the University of Port Harcourt.

Courses and Units

The total credit load per student required for graduation is a minimum of 36 units for graduation, these are 15 units of major courses, 9 units of cognate courses, 6 units of optional courses and 6 units of dissertation.

COURSE DESCRIPTIONS

SOC 801.1- Advanced Sociological Theories

Theories are keys in social analysis, and they provide the framework for research and analysis in the social sciences. This course offers a critical review of major themes and theories of classical sociology, coupled with an examination of selected contemporary schools of thought. The course will also emphasize on the use of theories in understanding community development concerns and trajectories.

SOC 805.1 - Statistical Methods in Sociology

Without computation some sociological analysis may seem like impressionistic guesswork. As such, statistical tools are constantly applied in all social science endeavours. This course will introduce students to statistical methods, number reasoning, data analytics and analysis, as well as the application of statistical methods and statistical packages in social research and community development. In this

course, prior knowledge of statistics is required to help students understand the basic tools in statistical analysis.

SGS 801.1 - ICT and Research Methods

This course introduces students to the use of applications of ICT in Social research. In this course, students will be made to understand the various ICT tools and facilities that can be used for data gathering, data storing, data processing, and data analysis in social research.

CDS 801.1 - Governance and Rural Community Development

The course covers the critical assessment of competing theories of the role of the state and non-state actors in rural community development; the role of NGOs and public organisations; and the crucial link between governance and Sustainable community development.

CDS 802.1 - Vulnerability, Poverty and Community Development

Vulnerability and poverty are key community development concerns. This course discusses how poverty, vulnerability and social inequalities impact community development. It also interrogates questions such as what causes poverty and vulnerabilities, and what social protection policies apply to impacted countries.

CDS 803.1- Crime prevention and Community Safety

This course will examine how crime impacts on community development and how communities tackle crime, criminal damage and anti-social behaviour. It also examines the sources and implications of crime for community development, and identifies effective strategies for improving crime prevention and enhancing community safety.

SOC 802.2 - Advanced Sociological Research Methods

In this course, the logical foundations of the social science, the problems in scientific methodology: such as Qualitative and quantitative methods, will be examined. Also, research processes, research design, sampling processes and data analysis techniques will also be taught.

SGS 801.2 - Entrepreneurship and Management

This course teaches the fundamentals of entrepreneurship and how to leverage the power of entrepreneurship to address community economic, environmental, and social development challenges. Efforts will also be made to examine the nexus between entrepreneurship and community development.

CDS 801.2 - Community Development Advocacy

This course interrogates the processes and techniques employed in community development advocacy. Discusses the structure and functions of community development corporations, and community development non-state organisations.

CDS 802.2 - Community health and Community development

This course focuses on the vulnerabilities of communities to health challenges, and how community structures engender such vulnerabilities. Examines concepts such as community health, community health education and environmental health.

CDS 803.2 - Growth, Housing and Community Development

In this course, students will be helped to interrogate population dynamics in communities and the

DOCTOR OF PHILOSOPHY (PH.D.) IN COMMUNITY DEVELOPMENT

Entry Requirement

Candidates applying for this PhD programme must have completed a Bachelor’s Degree (B.Sc.) and a Master’s Degree (M.Sc.) programme in Sociology in any recognized and accredited University within and outside the country and should have a CGPA of at least 3.50 over 5.00

All PhD applicants deemed qualified may be required to undergo an interview in the department to ascertain their capacity for rigorous work at the post-graduate level.

Programme Duration

The programme will follow the University’s prescribed duration for post-graduate programmes. For PhD programmes in the department, the recommendation of the School of Postgraduate Studies is six (6) semesters (3 academic sessions) for Full-Time students and ten (10) semesters (5 academic sessions) for Part-Time students. It is important to note that No candidate will be registered for the PhD Degree for more than five years if he or she is a Full-Time student or for more than seven years if a Part-Time student.

Graduation Requirements

All students are expected to obtain a minimum of a “C” grade in any exam undertaken at any level of post-graduate studies at the University of Port Harcourt. For a Post-Graduate degree in Community Development, satisfactory performance in all coursework examinations, as well as a completion of a dissertation or thesis is mandatory for graduation. The programme does require dissertation preparation and as such, the overall assessment of the student is placed on course work and results from the dissertation. Students with unsatisfactory scores

implications of growth for community development. The course will also examine how housing challenges, housing policies and programmes, and urbanization are relevant for community development.

CDS 804.2 - Cooperatives, Corporations and Community Development

This course highlights the role of corporations and cooperatives in community development. It also interrogates the challenges and impediments to corporate social responsibilities, self-responsibility, and solidarity.

Dissertation - Dissertation research interests are expected to be drawn from key areas in Community Development practice.

less than “C” grades in four (4) courses and a cumulative grade point average of 3.00 shall not graduate and would be asked to withdraw from the programme.

Award of Degree

Students who must have completed and passed all prescribed courses at the end of the programme shall be awarded a Doctor of Philosophy Degree (PhD) in Community Development (Sociology) from the University of Port Harcourt.

Courses and Units

The total credit load per student required for graduation at this level is a minimum of 36 units for graduation, these are 9 units of major courses, 12 units of cognate courses, 3 units of an optional course, and 12 units of thesis.

COURSE DESCRIPTIONS

SOC 901.1- -Applied Sociological Theories

This course offers a critical review of major themes and theories of classical sociology, coupled with an examination of selected contemporary schools of thought. At the PhD level emphasis will be laid on the application of classical and contemporary theories in understanding community development concerns and trajectories.

SOC 905.1 - Statistical Methods in Sociology

Without computation some sociological analysis may seem like impressionistic guesswork. As such, statistical tools are constantly applied in all social science endeavours. This course will introduce students to statistical methods, number reasoning, data analytics and analysis, as well as the application of statistical methods and statistical packages in social research and community development. In this course, prior knowledge of statistics is required to help students understand the basic tools in statistical analysis.

CDS 901.1 - Models of Rural Development and Community Planning

This study exposes students to the key issues in rural development and how the different models of rural development are significant in engineering community development. Theoretical and practical issues in community planning will also be interrogated

CDS 902.1 - Migration, Population and Community Development

Migration as a demographic factor will be examined to show its implications for population growth and

community development. Students will also learn the dynamics of migration from a historical perspective paying particular attention to geo-political and economic concerns.

CDS 903.1 - Social risks Management and Social Protection

In this course, students will be exposed to the fundamentals of social risks management and social protection, and how to help at-risk communities build resilience, and anticipate and insure against risks.

SOC 902.2 - Applied Sociological Research Methods

This course exposes students to advanced research methods in the Social Sciences, contemporary research processes, research designs and types, and data mining and analysis processes.

CDS 901.2 - Planning and Administration of Community Development

This course focuses on the organisation and administration of community development. The various instruments that are used to implement comprehensive development plans will be examined, while the prerequisites of community development planning (such as leadership, community decision-making, budgeting, etc) will be interrogated.

CDS 902.2 - Fundamentals of Development Communication

The course will highlight the underlying principles of development communication, especially how development experts can engage stakeholders and policymakers, and establish conducive environments for community development.

CDS 903.2 - Conflict Management and Dispute resolution

This course interrogates the sources, dimensions and drivers of disputes and conflicts in developing communities. Students will also be exposed to theories of conflict management and dispute resolution, while interrogating the different measures, approaches and models for conflict management.

CDS 904.2 - Gender issues in Community Development

Gender issues have been noted to be cogent in all development concerns. Part of the challenges sustainable development plans hope to resolve include the issues surrounding gender parity, gender relations, and gender roles that contribute to the exploitation and marginalisation of men and women in the society. This course will offer students the opportunity to critically interrogate some of these gender concerns in community development, as well

as the key role gender equality plays in community development.

Thesis

PhD thesis will focus on a capstone project that directly applies the theories and models learned in the classroom to development projects, policies and practices within identified communities.

DEPARTMENT OF SOCIAL WORK

1.0 Introduction

The department of social work is one of the integral components of faculty of social sciences. The Post Graduate programmes in social work will provide opportunities for advanced knowledge and skill acquisition for a career in the private and public sectors of the national and global economies. Students should be able to articulate, develop and implement research using social work concepts and methodologies.

2.0 Philosophy

The philosophy underlying the Post Graduate programmes in social work is to produce a crop of academics and practitioners equipped with appropriate professional knowledge, attitude, skills and competencies in the resolution and/or management of social problems and make their contributions to the development of Nigeria, Africa and the global community.

3.0 Vision

To ensure that Nigeria has the manpower to train people to acquire professional knowledge, skills, and competencies to handle clients' emotional, physical and social problems as community developers.

4.0 Mission

To meet various challenges and difficulties in the different spheres of community life and to effect change in the society and human abnormality through the application of social praxis.

5.0 Rational

To address and fill in the acute shortage of social work professionals in academic in private at public sector in social work industries.

6.0 Aims

The Post Graduate programmes in Social Work are designed to:

- To strengthen the capacity in problem solving and analysis.
- Enhance the knowledge based and training skills of social work practitioners for effective performance in public and private economy sectors of the national and global economics.

7.0 Objectives

- To produce social work academics and professionals who intend to teach, research and practise social work in various relevant agencies and institutions in Nigeria and globally
- Inculcate into graduates theoretical, practical and research traditions relevant to problem identification, social policy formulation,

implementation, monitoring and evaluation of programmes.

- To produce highly skilled manpower in the areas of Social Work Education, practice and administration such that will fit into the public and private sectors.

POST GRADUATE DIPLOMA IN SOCIAL WORK

8.0 Admission Requirements

- Candidates must satisfy the matriculation requirements of the University including English Language and Mathematics at ordinary level.
- Candidates with Bachelor's Degree in Social Work with lower than Second Class division from an approved and accredited University degree in Social Work or related discipline awarded by an approved and accredited University.
- HND and / or professional qualifications cognate to Social Work from a recognized institution with not less than Upper Credit.

9.0 Programme Duration

- A full time Post Graduate Diploma in social work shall run for a minimum duration of 12 calendar months.
- Part-time Post Graduate Diploma shall run for a minimum of 24 months and a maximum of 48 months.

10.0 Graduation Requirements

To qualify for the award of the Post Graduate Diploma (PGD) the candidates must have fulfilled the minimum of 28 credit units made up of the following, She/He must pass a minimum of 28 credit units

- Core Courses 12 and Field Work Practicum of four (4) credit units.
- Elective courses of eight (8) credit units.
- A student shall carry out research in any area of specialization in his / her discipline and submit an acceptable dissertation of four (4) credit units.

COURSE DESCRIPTION

(a) PGD

SWK720.1 Research Project 4 Units

This is an original long essay on social service/ social problem/ social work practice selected by the student in consultation with a departmental supervisor. The research project will be based on library research and content analysis.

SWK 701. 1 & 702.1 Field Practicum I&II 4 Units

At beginning of each semester students are required to go on field work placement every Wednesday throughout the first and second semesters spread over family casework, medical social work, community development and school/ youth development. The course offers students an educational experience in social service agency under the supervision of a qualified professional. The purpose of the course is to integrate material

gained in academic course with practice in the field. At the end of the placement, the student will be expected to submit field practicum report using Department format.

SWK 711.1 Social Work Theories 2 Units

The course will focus on the early work as well as modern psychological theories as they are relevant to social work theory and practice. It will also consider early and modern sociological theory and their contributions to the understanding of social work theory and practices. Finally models of social work practice such as problem solving, psychosocial, the functional, behaviour therapy, crisis intervention, the four systems model, and task centred model etc.

SWK 712. 1 Research Methods for Social Work 2 Units

The course will emphasize the application of research methods for evaluation of practice effectiveness and/ or program outcomes in society. Students will deepen their understanding on the essential components of social work research. The students will be exposed to quantitative and qualitative research strategies necessary for evidenced-base practice. The roles of concept and theory, hypothesis formation, operationalization, research design, data collection, data processing, statistical analysis, computer skills and research report writing will be presented and discussed.

SWK 713.1 History of Social Work in Nigeria 2 Units

The course will trace the historical developments of social work practice in Nigeria from its British American origins. It will expose the student to the state of social work discipline/ profession and social welfare services (government and non-governmental/voluntary) provided in contemporary Nigerian society.

SWK 714.1 Computer Application in Social Work Research and Practice 2 Units

The course will introduce the use of computers in the practice of social work. The use of security code and adaptability to the principles of confidentiality in social work practice will be considered. The practical applications of computers in data analysis will be presented with software in hypothesis testing using NOVA, correlation, regression analyses, chi-square, and other inferential statistical tools will be presented and discussed.

SWK 715.1 Theories of Deviance and Criminal Justice System 2 Units

The goal of the course is to provide an appraisal of the foundations for understanding criminal behaviour. Students will be exposed to major current and classic theories about criminal behaviours,

delinquency and white collar crime. The course is designed to expose students with the latest theoretical, programmatic, policy issues in criminal justice system.

SWK 716.1 Social Policy, Planning and Administration 2 Units

This course will discuss the competing philosophic and ideological models of the roles of the state in the provision of and planning for social welfare services to individual, family and community. Historical and comparative approaches to the problems of social policy and planning will be discussed.

SWK 717.1 Family, Child And Youth Development 2 Units

The course will be divided into three parts; (i) family counselling (ii) child protection and (iii) youth development. The first part will examine the functions of the family and the various social problems, affecting the family. Issues such as marital dispute, separation, divorce, child custody, alibi/maintenance allowances, and kindred casework will also be presented and discussed. The second part begins with the conception of life, growth and birth. The course further discussed the physical, cognitive and social development of the child. The impact of various parenting styles on the child is also discussed.

SWK 718.1 Inter Group Relations and Conflict Management 2 Units

The course begins with the basic concepts of inter group relations. The nature and dynamics of inter group transactions, an examination of relations between peoples of different cultures. Ethnicities, ideologies, religions with special reference to plural Nigeria will be examined. Theories of group formation and inter group relations, social movements, inter group, social movements, inter group conflicts and conflict resolution will also be analysed. Definition of conflict, types of conflicts, causes of conflicts, factors for escalation and de-escalation of conflict, types of reactions to conflict, various stages of conflict resolution, types of mediation, principles of mediation, and personal qualities of mediator will all be presented and discussed.

SWK 722.2 Techniques, Principles, Ethics and Values in Social Work Practice 2 Units

The course is an examination of principles (i.e the principles of confidentiality, non-judgemental attitude, client self-determination among others) and techniques of social casework/counselling, interviewing processes, intervention models, communication and recording including the personal qualities of counsellor.

SWK 723.2 Rehabilitation Social Work 2 Units

The course introduces various forms of disabilities and their physical, emotional, social and economic impact on persons. The various forms rehabilitation (physical, emotional, educational, social and economic) service available in Nigeria are also discussed. The organization of rehabilitation services and modern trends in rehabilitation projects such as community based vocational rehabilitation (CBVR) will be examined.

SWK 724.2 Medical and Psychiatric Social Work 2 Units

The course provides the definition of medical social work as a specialty of social work which is known as hospital social work. The biological and social causes of illness are explained. The course also describes the role of the medical social worker in a hospital, outpatient clinic, community health care agency, skilled medical facility, long term care facility or hospice and other settings that have medical facets. The descriptions of the role of a medical social worker emphasises the use of social work principles, techniques and methods to strengthen the individuals personal, family and social life in order to improve his or her health status and ability to cope with, and adapt to life tasks or challenges.

SWK 725.2 Industrial Social Work 2 Units

The course will introduce student to the roles of the 20th century industrial revolution in Europe and the advances in social sciences in promoting the understanding of workers as a psycho-social entity in the industry and the work setting. It focus on the structure, nature, purpose, and development of significant trend and events within the organizations, as well as how they respond to workers and organizational needs, employer-employee, and harmonious relationship within the system. Labour laws and workmen's and employees compensation act (2010) will be presented and discussed. Emphasis will be placed on organizational theories and social workers roles in industrial context.

SWK 726.2 School Social Work 2 Units

This course will focus on the child as the object and subject of the interplay between the school, the home and the community. The knowledge, skills and abilities needed by social workers to effectively intervene in the school setting for effective teaching and learning by the child such as counselling, consulting, collaborating and cooperating key role players (parents, teachers, peers and the child) in the resolution of social problems of the school environment will be discussed.

SWK 727.2 Introduction to Community Service Practice 2 Units

This course will examine theory and skills necessary to support change through the practices of community organizing. It will also discuss strategies that social workers use in communities to effect change. Community organizing frameworks will be explored in the class. They include social action, locality development, and social planning.

SWK 728.2 Social Work Assessments and Intervention 2 Units

This course will focus on biological, neurological, psychological, social, spiritual and environmental aspects of late life as a foundation for the delivery of assessments and interventions to older adults. This course will present information on demographics projections, population's trends and theoretical perspectives that inform Gerontological social work practice.

12.0 Physical Facilities

The following facilities are available for the Programme:

Description	Number
PG Lecture Room	2
PG Common Room	1
Library facilities	1
Audio-visual Laboratory with Modern audio-visual facilities	1
Social Work Laboratory/Practicum Room	1

MASTER OF SCIENCE DEGREE PROGRAMME IN SOCIAL WORK

Admission Requirements

- Candidates must satisfy the matriculation requirements of the University including English Language and Mathematics at ordinary level.
- Candidates with Bachelor's Degree in Social Work with not lower than Second Class Lower division from an approved and accredited University degree in Social Work or related discipline such as (community and social welfare), awarded by an approved and accredited University.
- Candidates with a PGD in Social Work at credit level pass on weighted percentage average or CGPA of not lower than 3.0 on 5 point scale from an accredited university.

9.0 Programme Duration

- A full time Master's Degree programme in social work shall run for a minimum duration of 12 calendar months.
- Part- time Master's programme shall run for a minimum of 24 months and a maximum of 48 months.

10.0 Graduation Requirements

To qualify for the award of the Master's degree (MSc) the candidates must have fulfilled the minimum of 34 credit units made up of the following, She / He must pass a minimum of 34 credit units

- Core Courses 16 and Field Work Practicum of five (5) credit units.
- Elective courses of four (4) credit units.
- Seminar (3) credit units. A student shall present at least one seminar, submit and defend a dissertation.
- A student shall carry out research in any area of specialization in his / her discipline and submit an acceptable dissertation of six (6) credit units.

FIRST SEMESTER

CORE COURSES

COURSE CODE	COURSE TITLE	CREDIT UNITS
SWK 801.1	Field Work Practicum C	3
SWK 811.1	Advanced Social Work Theories C	
SWK 812.1	Advance Research Method for Social Work C	2
SWK 813.2	Computer application in Social Work research and practice C	2
SGS 801. 1	ICT and Research Methodology C	2

ELECTIVE

SWK 831.1	Advanced Community Development / Environmental Sustainability E	2
SWK 833.1	Issues in Adolescence and Youth Development E	2
Total		15

SECOND SEMESTER

CORE COURSES

COURSE CODE	COURSE TITLE	CREDIT UNITS
SWK 820.2	Research Project C	6
SWK 829.2	Seminar in research project C	3
SWK 822.2	Advanced Techniques, principles values in social work practices C	2
SGS 801.2	Management and	2
SWK 802.2	Entrepreneurship C	2
SWK821.2	Field Work Practical 11	
	Advanced statistical research methods in social work C	

ELECTIVES

SWK 857.2	Peace and Conflict Management / Rehabilitation E	2
SWK 847.2	Family, child protection and correction services	2
	Sub-Total	19

Minimum Graduation requirements: Core courses 16, Elective 4, Project 6, Seminar 3
Field Practicum 5 **Total 34**

C = Core Courses

E = Elective

SWK 801.1 Field work Practicum I (2 units)

At the end of the first session (that is beginning of second semester), students are required to proceed to field work placement for a period of 18 weeks. 16 weeks would be spent in the students area of specialization while one week each will be spent in two other areas of specialization. The course offers the student an educational experience in a social service agency under the supervision of a qualified professional. The purpose of the course is to integrate materials gained in academic course with practice in the field. At the end of the placement students will be expected to submit to field work practicum report to the department using the departmental format.

SGS 801.1 ICT and Research Methodology (2 units)

This course should cover essentials of spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Scientific Research, Concepts of Hypothesis, Formulation and Testing, Organization of Research and Report Writing.

SWK 811.1 Advanced Social Work Theories (2 units)

The course will be divided into two parts: (i) Foundational theories, and (ii) Social Work theories. The foundational theories will emphasize the importance of psychological and social work theories in the understanding of human behaviour and the treatments of social problems. Series such as psycho analysis, behaviourism, Gestalt psychology, motivation and personality, biopsychology and the cultural School of thought will be examined as they relate to social work practice. Models of social work practice such as problem solving, psychosocial, the functional behavioural therapy, crisis intervention, the first systems model, the four systems, task centred model, critical theory, game theory, health belief model, rational choice, strength perspective among others perform the basis of discussion.

SWK 812.1 Advanced Research Methods for Social Work (2 units)

The course will introduce the students to the application of social work research methods for evaluation of practice effectiveness. The quantitative and qualitative research procedures, research design, social service, sampling, interviews, questionnaires, focus group discussion and other qualitative instruments, case studies, and descriptive analysis will be presented and discussed. Students will be exposed to Advanced knowledge and process of developing research hypothesis testing and knowledge on models of inferential statistics.

SWK 813.1 Computer Applications in Social Work Research and Practice (2 units)

The course will introduce the use of computers in the practice of Social Work. The use of security code and adaptability to the principles of confidentiality in social work practice will be considered. The practical applications of computers in data analysis will be presented with software in hypothesis testing using NOVA, correlation, regression analyses, chi-square, and other inferential statistical tools will be presented and discussed.

SWK 831.1 Advanced Community Developments (2 units)

The course is designed to help student develop advance skills for assessing community needs and resources necessary for human survival, Growth, development and fulfilment. The students will be required to identify those social needs that are not being met and essential resources that are absent. The course will discuss the philosophy and approaches of community development and the methods of organizing communities to improve community life through collaborative problem solving. It will also examine the current debates on community empowerment and social action. Advocacy roles and dilemmas facing the community organiser will be discussed.

SWK 833.1 Issues in Adolescence and Youth Development (2 units)

The course will examine theories, principles and practise of social group work, the integrationist, preventive and rehabilitative approaches to understanding adolescence and youth behavioural patterns. Furthermore, students will be exposed to the various empowerment programmes and skill acquisition, National Youth Policy and Youth Development Programmes in general and in particular in Nigeria National Youth Award scheme. Leadership and citizenship training programmes and other leadership development programmes and the national will be discussed. The students will also be exposed to the consequences of social vices(such as cultism, robbery, gangsterism.

SWK 802.2 Field Work Practicum II (2 units)

The students will undergo the second field work placement at the following social work Institutions; Family Welfare Centre, Children Homes, Women Affair Ministry, Psychiatric Centres and Rehabilitation Centres, Industrial Centres etc. This course will integrate materials gained in academic course with practice in the field. At the end of the placement, the student will be expected to submit field practicum report using Departmental format.

SWK 820.2 Dissertation (6 units)

In the third semester the student is expected to carry out an original research project on the social service / social problems / social work practice and write a report under the direct supervision of a departmental staff. The research project maybe based on library and/or field work research. The research project report is to be submitted at the end of the third semester.

SWK 821.2 Advanced Statistical Research Methods in Social Work (2 units)

The course is designed to provide students with a firm grounding in the logics of hypothesis testing and knowledge on models of inferential statistics. It will provide students with a conceptual understanding of some basic Univariate and Bivariate statistical models, frequently used and encountered in social work research, as well as provide the necessary operational skills needed in using basic quantitative methodologies to answer a variety research questions. It will also provide for the students appreciation for the strengths as well as limitations of quantitative analysis.

SWK 829.2 Seminar in Research Project (2 units)

The seminar is set up to guide students in the writing of their thesis based upon the individual research they have conducted and discuss the written work of the students and their progress. The seminar is based on presentations by students, for instance, on their problem formulation and research design issues, the connection between theory and empirical research, and the level of abstraction of the various parts of thesis.

SWK 822.2 Advanced Techniques, Principles, Ethics and Values of Social Work Practices (2 units)

The course is an examination of the principles (ie the principles of confidentiality, non judgemental attitude, and client self-determination among others) and techniques of social casework/counselling, interviewing processes, intervention models, communication and recording including the personal qualities of counsellor. Topics to be covered in this course will also include strategy and methods of counselling. Ethical issues in relation to the rights of the client including the protection of the

rights of marginalized persons will be examined. The secular and scared perspectives in counselling.

SGS 801.2 Management and Entrepreneurship (2 units)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

SWK 857.2 Peace and Conflict Management /Rehabilitation (2 units)

The course will explore the theoretical and practical functions of various approaches to achieving social justice, equity and reconciliation. It will also examine peace keeping and humanitarian services as foundation for peace building. A range of conflict resolution methods and practices such as facilitation, negotiation, mediation, arbitration, adjudication and approaches to healing, restoration, reparation, forgiveness and reconciliation will be discussed. The course will present and discuss modern trends in rehabilitation projects and the organization of rehabilitation services such as community based rehabilitation (CBR) and home services. Types and methods of social services rendered will also be presented and discussed. Major challenges affecting rehabilitation will be identified and discussed.

SWK 847.2 Child Protection System and Correction Services

This course will explore the policies, functions, dynamic, ethics and values associated with case management of private and public child welfare services and examine the provisions of services for children aged below 18 years. It will focus on the knowledge, skills and competencies necessary to successfully work in organization and manage programmes providing such services. The course will present and discuss family high court, magisterial family course, institutional services, adoption services, family based foster care services are protective services provided under the child's right act 2003. Furthermore, child correctional services such as reformatories, correctional homes and borstal institutions shall be presented and discussed. Emphasis will be on the survival, development and protection of the child and his / her participation in family activities in line with best practices. The activities of other agencies and nongovernmental organisations involved in child protection and correctional services will be discussed.

12.0 Physical Facilities

The following facilities are available for the Programme:

Description	Number	Areas of Specialization for Masters (M.Sc) in
PG Lecture Room	2	Social Work
PG Common Room	1	i. Community Development/ Community Organization/ Cooperatives
Library facilities	1	ii. Family, Child, Youth Social Work
Audio-visual Laboratory with		iii. Peace and Conflict Management/ Rehabilitation
Modern audio-visual facilities	1	iv. Environmental Sustainability and Climate Change
Social Work Laboratory/Practicum Room	1	

ACADEMIC STAFF LIST

S/N	Name of staff	Qualifications	Designation	Areas of specialization
1	Prof. Paul, Eke	B.Sc, M.Sc, PhD.	Professor (HOD)	Conflict Management/ Resolution (Sociology)
2	Prof. A. Kinikanwo	LLB, BL, B.Sc, M.Sc, PhD	Professor	Social Problems/Change (Sociology)
3	Prof. O.M. Adesope	B.Sc, M.Sc, PhD	Professor	Rural Development; ICT, Research Methods and Statistics
4	Prof Zabbey, N.	B.Sc, M.Sc, PhD	Professor	Environmental Sustainability and Climate Change
5	Prof. Otu, Ekpenyong	BA, M.Sc, PhD	Professor	Sociology/Rural/Community Development
6	Dr. G. Adekola	B.Sc, M.Sc, PhD	Associate Professor	Community Development (Adult/Community Development) (Education)
7	Dr. John, Emaimo (Adjunct)	B.Sc, M.Sc, PhD	Associate Professor	Communication in Social Work/Rehabilitation (Social Work)
8	Dr. Okemini, E.	BA, M.Sc, PhD	Senior Lecturer	Sociology of Family/ Personnel Management
10	Dr. D.T. Uranta	B.Ed, PGD, M.Sc, PhD, (DSW)	Senior Lecturer	Ethics/Values, Family, Rural/Community Development (Social Work)
11	Dr. Oriji, C.	B.Sc, M.Sc, PhD	Senior Lecturer	Medical Sociology
12	Dr. Mina, Ogbanga	B.Sc, PGD, M.Sc, PhD	Lecturer 1	Social Work (Community Development/ Advocacy)
13	Dr. Destiny, A.	B.Sc, M.Sc, PhD	Lecturer 1	Criminology (Sociology)
14	Dr. P. Emejuru	(BA)Ed, MBA, PhD	Lecturer 1	Administration (Sociology)

DEPARTMENT OF GEOGRAPHY & ENVIRONMENTAL MANAGEMENT

POSTGRADUATE DIPLOMA IN GEOGRAPHY & ENVIRONMENTAL MANAGEMENT (PDGEM)

1.0 Introduction

Geographical studies have remained quite dynamic and the Department of Geography & Environmental Management in the University of Port Harcourt has not been insulated from the positive effects of the associated growth and intellectual development. In response to the contemporary challenges in its operational environment, where up-to-date geographical information and effective environmental management practices are in dire need, the review and expansion of courses and programmes offered in the department has become imminent.

The Postgraduate Diploma in Geography and Environmental Management (PDGEM) is therefore designed to bridge the gap between the B.Sc and M.Sc degrees for those whose B.Sc graduation grades may not qualify for a direct admission into the M.Sc programme. It also provides the opportunity to welcome non-geographers, environmental managers, planners, scientists and other allied professionals who may not have a background in geography, but are stakeholders in environmental issues.

2.0 Aim and Objectives of the Programme

In addition to providing a firm and sound foundation for Geographers at the graduate level, the Postgraduate Diploma in Geography and Environmental Management (PDGEM) is specifically designed to:

- (a) Advance the knowledge and training skill of geography and environmental management practitioners in important academic specialization and manpower needs for public and private sectors.
- (b) Enhance the admission potentials into the Department's M.Sc and PhD programmes by providing geography and environmental management foundations for non-geography graduates.
- (c) Provide modern training in geo-informatics aimed at improving the process and delivery of spatial data collection and handling for which the old manual and conventional techniques have become inadequate.

3.0 Admission Requirements

Admission is open to graduates of this university and other approved universities recognized by senate with a minimum of a bachelor's degree in sciences, Social Sciences, Medicine, Agriculture and Forestry, Environmental Science, Engineering, Urban and Regional planning, Surveying, and Architecture etc. Candidates who possess a lower class degree but have relevant working experience in the specialized areas of the discipline may also be considered. Candidates must have at least five o level credit passes including English and Mathematics.

4.0 Duration of the Programme

The PDGEM Programme is designed to last for one academic session of two (2) semesters commencing from the normal University of Port Harcourt calendar year and ending at the end of the normal session.

5.0 Mode of Application

Request for application forms should be made to the Graduate School and such requests must be accompanied by bank draft made payable to the University of Port Harcourt with the candidate's name, address and course applied for, written at the reverse side. Other details are as advertised by the Graduate School.

6.0 Programme Requirements

- (a) *Registration of Courses and Credit Load:*
 - (i) Candidates must register for six compulsory courses in the first semester and four in the second semester in addition to research project.
 - (ii) The total credit load required for graduation is 30 credit units.
- (b) *To qualify for the award of the PDGEM, a candidate in must:*
 - (i) Register and pass all the prescribed courses for their programme option with a grade of at least C;
 - (ii) Undertake a field work and present a project in area of specialization arising from it. Candidate must also participate in seminar discussions, obtaining a grade not less than C;

- (iii) Submit four properly bound copies of a research project in an area of specialization. The project should not be more than 60 pages of A-paper, or 20,000 words;
- (iv) Pass an oral examination in defense of the project before a panel of examiners set up in accordance with university regulations.

- (b) 60% end of semester written examination. Candidates are expected to obtain a minimum grade of 'C' (50%) in each course in order to be awarded the Postgraduate Diploma in Geography and Environmental Management (PDGEM). Grading system is as follows:
 A = 70-100%
 B = 60-69%
 C = 50-59%
 F = 0-49%

7.0 Course Description

7.1 Postgraduate Diploma in Geography & Environmental Management (PDGEM)

First Semester

Course Code	Course Title	Credit Units
PDGEM 701.1	Introduction to Geo Environmental Thought and Theory	2
PDGEM 702.1	Quantitative Techniques	2
PDGEM 703.1	Geographic Information Systems	2
PDGEM 704.1	Fundamentals of Physical Geography	2
PDGEM 705.1	Introduction to Environmental Monitoring & Assessment	2
PDGEM 706.1	Fundamentals of Human Geography	2
PDGEM 707.1	Ecology of Natural Resources (E)	1
Total		13

Second Semester

Course Code	Course Title	Credit Units
PDGEM 708.2	Spatial Aspects of Development Planning	2
PDGEM 709.2	Global Environmental Change	2
PDGEM 710.2	Environmental Resource Management	2
PDGEM 711.2	Transport Geography	2
PDGEM 712.2	Tourism and Recreational Planning (E)	2
PDGEM 713.2	Issues in Entrepreneurship	2
PDGEM 714.2	Project	5
Total		17
Grand Total		30

8.0 Course Assessment

Each course will be assessed on the basis of

- (a) 40% continuous assessment

9.0 Diploma Classification

The PGD in Geography and Environmental Management will be awarded with Distinction, Upper and Lower Credit, and a Merit. The cumulative grade point for classification shall be:

Distinction	4.50 -5.00
Upper Credit	4.00-4.49
Lower Credit	3.50-3.99
Merit	3.00- 3.49
Fail	0.00-2.99

10. COURSE DESCRIPTIONS FIRST SEMESTER

PDGEM 701.1: Geo-Environmental Thought and Theory

Introduction to basic concepts of Geo-environmental thought in relation to the history of science. Man - Environment Relations - Determinism, Possibilism, Probabilism and Human Ecology - sustainable and unsustainable human-ecosystem interaction. The role of theory in Science, Geography and Environmental management methods in the natural and social sciences.

PDGEM 702.1: Quantitative Techniques

Characteristics of Data. Measurement and instrumentation; Probability and non-probability sampling technique, Physical, human and socioeconomic data collection. Probability and non- probability sampling technique, multivariate classification, grouping and regionalization. Spatial analysis techniques, Questionnaire design and survey. Univariate, bivariate and multivariate techniques; Data processing and the use of the computer. Parametric and non-parametric tests. Regression, correlation and time - series analysis. Hypothesis Testing.

PDGEM 703.1: Geographic Information Systems

Introduction to Geo-informatics concepts, technology and functional components. Basic principles of Geo-environmental data acquisition/storing, data presentation, and data analysis. The use of relevant types of computer hardware and software e.g. scanning of maps into digital format. Digital Image processing, methods and tools necessary for converting scanned images into vector format. The application of GIS to Geo and environmental investigations, analysis and visual presentations. Selected application case studies e.g. land use planning, transportation planning, resource planning, conservation, spatial policy decision making etc.

PDGEM 704.1: Fundamentals of Physical Geography.

Composition and structure of the earth, crustal/lithospheric processes including continental drift, plate tectonics and their relationship to major topographic and marine features on the earth. The earth's radiation, atmospheric and oceanic circulation systems, recycling of matter and energy in the ecosystem, Factors and processes of soil formation. Soil and Vegetation distribution. Natural processes, environmental disequilibrium, current environmental problems such as air pollution, earthquakes, global warming, floods, desertification, erosion, drought, hurricane and other tropical storms will be examined.

PDGEM 705.1 Introduction to Environmental Monitoring and Assessment

Current status of major environmental resources, water, soils, minerals, wildlife, air, energy, ocean and - biological resources. Assessment and management of biological resources, wetlands and energy resources. Principles and procedures of ecological risk assessment and environmental modeling. Socio-economic assessment process; participatory rural appraisals, etc.

PDGEM 706.1: Fundamentals of Human Geography

The course offers insight into the interrelationships between the earth and man with emphasis on basic concepts of population, settlement, human activities, resources, spatial movement and land use. It covers theoretical bases of these concepts and their applications to human affairs in the area of production, distribution and consumption of goods and services; political organization; development process and planning process.

PDGEM 707.1: Ecology of Natural Resources.

Factors affecting flora and fauna distribution at various scales. The concept of ecosystem, natural

resources, ecological economics. The structure and functioning of terrestrial and aquatic eco-systems. Vegetation dynamics, adaptation, succession and climax. Farming systems, rural resources conservation / management. Techniques in natural resources conservation; sustainable resource systems and sustainable resource use. Eco-service of natural resources. Resources and the perception of limits; global common challenges and, environmental regulations etc.

SECOND SEMESTER

PDGEM 708.2: Spatial Aspects of Development Planning

This course encapsulates basic concepts of spatial organization principles of classification of Geo environmental phenomena; philosophical and theoretical aspects of planning; planning principles, research procedures and techniques; planning processes, theories, policies and practices in Nigeria. Elements of rural, urban, regional, and environmental planning will also be examined.

PDGEM 709.2 Global Environmental Change

This highlights the concept of global environmental change-physical, chemical, biological and ecological perspectives. Understanding the earth system and processes. Causes and consequences of global environmental change-population, Global emissions and warming, droughts and desertification, industrialization, deforestation, agriculture, tourism waters, natural causes. Responding to global environmental change. Globalization, International environmental laws and policies environmental politics and conflicts.

PDGEM 710.2 Environmental Resource Management

This course provides both the theoretical and conceptual foundation and practices of applied physical geography. Systems of land classification and evaluation with special reference to integrated surveys. Compilation of land and water resource maps. Utilization of strategic minerals for national development. It focuses on Environmental resource degradation, balance and Human livelihood techniques for sustainable development, and Bio-development.

PDGEM 711.2 Transport Geography

This course will introduce students to the subject of transportation in four main areas; these are the general principles and modes of transport, transport systems on regional basic. It will also review the nature of tourism, leisure and recreation. The concepts of Ecotourism and tourism definitions and

relationships. Globalization and Ecotourism. Development. Ecotourism programme planning and development, Ethics, feminism and Tourism. Attempt will be made to treat the problems and prospects of transported development in the developing countries.

PDGEM 712.2 Tourism and Recreational Planning

Course content include: The tourist industry, parks planning, camp grounds and recreation: urban recreation, wildlife parks and natural reserves, tourist and recreational services, transport, recreational resource management.

PDGEM 713.2 Issues in Entrepreneurship

The objective of this course is to make the student acquire skills for self-employment should the need arise. Areas of interest include: Field research; Geographic Information System (GIS); Digital Cartography; Surveying; Remote Sensing; Laboratory Techniques of Soil analysis.

PDGEM 714.2 Project

This shall be the original work of the student presented in accordance with regulations approved by the Departmental Graduate Committee.

MASTER OF SCIENCE DEGREE IN GEOGRAPHY & ENVIRONMENTAL MANAGEMENT

1.0 General Information

The department offers the Master of Science (M.Sc) degree programme in Geography and Environmental Management, with emphasis on the following areas of specialization:

- (a) Rural Land use and Rural Development
- (b) Urban Geography
- (c) Transport Geography
- (d) Regional Development Planning
- (e) Biogeography
- (f) Climatology
- (g) Geomorphology
- (h) Environmental Management
- (i) Geographic Information Systems
- (j) Hydrology and water resource management
- (k) Disaster Risk Management (Offered in Centre for Disaster Risk Management & Development Studies)

2.0 M.Sc. Admission Requirements

- Candidates must have at least five '0' level credit passes including English and Mathematics. Candidates with Bachelors Degree in Geography from an approved

university with its geography programme fully accredited.

- Candidates with a minimum of second class honours lower degree
- Candidates with a Post Graduate Diploma degree in Geography or from a cognate discipline awarded by a recognized institution with not less than a lower credit.

3.0 Duration of Programme

- (a) A full-Time Master's Programme shall run for a minimum of 12 Calendar months and a maximum of 36 months.
- (b) Part-time master's programme shall run for a minimum of 24 calendar months and a maximum of 48 calendar months.

4.0 Requirement for Graduation

To be awarded a Master of Science Degree in Geography and Environmental Management, a candidate must pass a minimum of 30 credits units made up as follows:

a) Compulsory courses

- Geographical Thought & Theory - 2 Units
- Methods and Techniques of Geographical Investigation - 3 Units
- ICT and Research Method - 2 Units
- Environmental Method Management Processes in Nigeria - 2 Units
- Environmental Perception in Management - 2 Units
- Fundamentals of GIS - 2 Units
- Issues in Entrepreneurship Management & Entrepreneurship - 2 Units

5.0 Award of M.Sc Degree

To qualify for the award of the M.Sc degree, a candidate must:

- (a) Complete 33 semester hours consisting of 24 semester hours of taught courses and a seminar of 3 semester hours. Candidates must score not less than the grade 'C' in any of the courses;
- b) Satisfactorily defend a six credit load dissertation written in his/her area of specialization.
- (c) Meet all financial obligations to the university as well as other requirements relating to residence and character as may be prescribed by Senate on the recommendation of the Graduate School. At present the residency requirement is 12 months, i.e. 2 semesters, plus the long vacation for full- time students, and 24 calendar months for part- time students;

- (d) No candidate may be registered for the M.Sc degree for more than three - calendar years if a full-time student or for more than five years if a part-time student. In exceptional circumstances Senate on the recommendation of the Graduate Studies Committee and approval by the Graduate School, may waive this rule;
- (e) No courses taken more than four years prior to the effective date of admission of a candidate to a higher degree will be credited towards the fulfilment of the requirements of that degree.

6.0 Additional Course Requirement

In addition to the compulsory courses in the department and major field of specialization, a candidate must take a course in any cognate minor area of specialization.

7.0 Part-Time candidates

Part-time candidates must provide evidence that they are:

- i) engaged in approved employment;
- ii) Can devote a good proportion of their normal working year to their studies;
- iii) Will be available for attendance at courses, seminars and for regular consultation with their Supervisors.

8.0 Dissertation:

Dissertation shall be the original work, presented in accordance with regulations approved by Senate on the recommendation of the examiners which must include the dissertation supervisor and one external examiner. A minimum grade of 'C' for the dissertation and for its defense is required for a pass.

9.1 COURSES DESCRIPTION

9.1.1 GENERAL COMPULSORY COURSES

GEM 800.1: Geographical Thought & Theory

The scientific methodology and geography. Hypotheses, models, theories and laws in geography. Normative, positive and systems theories in geography. Space-time concepts. Positivist, Structural, reflective and committed explanation in geography (compulsory for all Students)

GEM 801.1: Methods and Techniques of Geographical Investigation

Physical, human and socio-economic data collection; Measurements in Environmental Studies; data handling in social, economic and environmental research, Instrumentation -

sampling; questionnaires and interview designs; formulation and testing of hypotheses; multi-variate analytic techniques; Data programming and the use of computers — (compulsory for all Students)

GEM 802.1: Geo-information and Remote Sensing

The course focuses on the nature, sourcing and mapping of spatial data; geo-referencing of spatial data; spatial editing, input and management; raster and vector data analyses; GIS models and modeling; and environmental applications. Also covers principles of Remote Sensing, types and application to environmental issues. (Compulsory for all Students)

GEM 803.1 Entrepreneurship in Geography & Environmental Management.

The concept of entrepreneurship; Small - scale enterprise; Project identification selection, Formation and appraisal; Project financing, Ownership structural; Management and Franchising. Selected area of entrepreneurship - surveying, Cartography, GIS, Environmental Consultancy, Air Quality Assessment, etc. (Compulsory for all Students)

GEM. 804.2 M. Sc Dissertation

The Dissertation shall be original work on an approved topic in the candidate area of specialization, and in accordance with the regulations of graduate school as approved by senate. The dissertation is expected to contribute to knowledge in a chosen empirical and contemporary area of geography and environmental management.

9.1.2 AREAS OF SPECIALIZATION

(A) M.Sc IN RURAL LAND-USE AND RURAL DEVELOPMENT

GEM 805.1: Rural Resource Management

This involves study of rural areas: concepts, theories, land use systems issues and principles of resource identification, conservation and management. Examinations of selected rural problems and issues with an emphasis on strategies of rural transformation, resource conservation and management, and urban-rural integration. Policies and methods for prevention of rural environmental degradation. GEM 806.1: Rural Population and Settlement

Focuses on the spatial structure of rural population and settlements, problems of rural habitant, functions of rural settlements. Other themes are

rural-urban contrasts and interactions, location and functions of rural markets as well as analytical techniques and conceptual models for national development of rural environment.

GEM 807.1 Agricultural Land use

This covers various aspects of agricultural land use including physical environmental base, spatial patterns of rural economics, and systems of agricultural land use. Others are agricultural locations theories and optimization models, land tenure issues, and land use survey classification and planning. The course also examines population land use relationships, processes of agricultural change and diffusion models.

GEM 808.2: Tropical Agriculture

This gives insight into the import of agriculture in the tropics, problems of development and productivity etc. others themes include agriculture potential in the tropics, agricultural policies, and industrial-agricultural integration problems It examines geographical, social, economic and political problems confronting agricultural transformation in the tropics. Comparison of tropical agriculture and agriculture in advanced economics is an essential theme.

GEM 809.2: Seminar on Rural Development Planning

This emphasizes strategies and methods of rural development rather than policies and practice. It examines strategies and methods of rural development planning in historical perspective, the causes of failure of the adopted strategies, and why rural underdevelopment in Africa lingers till 21st century. New reformulated strategies that are ecological, tradition-based and relevant methods are advanced.

(B) M.Sc IN URBAN GEOGRAPHY

GEM 810.1: Urbanization in History

This will evaluate the hypotheses of urban origins, the urbanization in the developed and developing countries, and the pre-industrial city. It also considers the nature of cities for specific historical period's e.g Greek and Roman towns, early medieval towns and development of African urban system.

GEM 811.1: Urban Economics and Land use Analysis

This course examines the general models of urban spatial structure followed by a detailed study of urban modeling. Others include analysis of urban

land use such as residential, industrial, commercial, slums, transport, recreational etc. It also gives broad review general principles underlying ultra - urban business activity location decisions, urban rent and land values. Themes to be considered include basic and non - basic concepts, form & and informal economic activities, input - output, analysis, and agglomeration and de agglomeration analysis.

GEM 812.1: City Systems in the Third World Countries.

Basic problems and basic concepts in the Third World Cities. Past growth, present processes of change and city - system growth and development. The quality of life service availability. It also examines rank - size rule, urban primacy, urban hierarchy. urban sphere of influence, growth pole and center - periphery model, and regional economic impact.

GEM 813.2: Urban Environmental Management

This course examines in details urban management dimension contemporary urbanization problems: housing, transport, unemployment, and social facilities and services provision urban garbage. It also deals with management techniques, policy approach Environmental planning challenges.

GEM 814.2. Seminar on Urban Policies and Policy Making

Analysis of local, state and federal decision making processes as they affect pub policies in urban areas, impact of the forces of urban growth and changes on the urban political system, centralization and decentralization in the metropolis and inter-governmental relations.

(C) TRANSPORT GEOGRAPHY

GEM: 815:1 Transportation Modes and Technology

History of transport development; management of technology in transport behavior, characteristics; comparative advantages and disadvantages, infrastructure/network; etc, Environmental factors in transport, technical aspects of transport and world standards. Vehicle control and operation. Energy and Transport. Modal system land environmental pollution.

GEM 816:1 Theories and Models in Transport

Transport Theories, concepts and models: The Gravity Model, the spatial interaction Model etc. Models of network evolution and development;

theories of mode choice; theories of competition in transport; transport and development, etc.

GEM 817:2 Transport planning and Management

Land use/transportation planning; trip generation; trip distribution traffic assignment traffic forecasting; urban transport and public transport in Nigeria. Transport flows and modal split, transport competition. Transport data: origin- destination matrix. Public transport and mass transit; public and private involvement in public transportation. Organization control of transport; laws, and regulation to improve traffic now. Traffic signal and control; pedestrianization; builder and user cost; operation and administration of public transport, public transport in Nigeria-the different programme of local government, state and the Federal Government.

GEM 818:2 Seminar in Transport Policies and Safety

Transport and Development; transport policies and implementation. Evaluation of different transport policies in the different transport sub-sectors. Government and transport licensing. Traffic principles and culture; the Highway Code, and other regulations; pedestrian education; defensive driving law- enforcement agency - the police, the Federal Road Safety, SAR unit of NAMA and NEMA. Institutional frameworks for transport safety. The role of nongovernmental organizations, educational institutions, parents, passengers etc. traffic accidents and traffic statistics.

(D) M.SC IN REGIONAL DEVELOPMENT PLANNING

GEM 819:1 Regional Development Theory

This course involves a discussion of the concept of development, regions, structural and dependency theories, and national development process. It will be followed by a review of the state of the art of regional development theorizing which will involve an in-depth review of economic oriented theories of regional development and regional domination.

GEM 820:1 Techniques of Regional Analysis

This entails advanced appraisal of the various techniques of regional analysis including regionalization, regional economic analysis, etc. other planning statistics include descriptive data analysis, inferential statistics multivariate technique of spatial analysis of resource (population, settlements, minerals, ecological etc) as they affect location behaviour.

GEM 821:2 Regional planning In Developing Countries

Origin of regional development planning, basic concepts of regions and development. Typologies of region. Urbanization and development process; environmental degradation; slums and squatter settlements. Development of special regions e.g. Niger Delta Region. Government Policies on the development of problem regions. Regional Environmental Planning Policies.

GEM 822:2 Environmental Planning

Fundamental Principles, key issues and environmental planning process: legal, ethical, economic and ecological foundations of environmental planning: Aspects of environmental planning such as planning for sustainable water and, air quality, solid waste, toxic waste and natural hazards; planning for natural areas such as landscape, wetlands, coastal zones, etc. Case studies

GEM 823: 2 Seminar on Regional Planning Policies and Strategies

This reviews issues in regional policy evolution development plans. It looks into other areas such as philosophy of regional planning, evolution of regional development planning etc. Grass root approach to regional development contemporary strategies regional development. It will also discuss public policy and regional and regional developed and developing world, as well as planning strategies for rural urban region

(E) M.SC. IN BIOGEOGRAPHY

GEM 824.1: Biogeographical Analysis

Ideas and concepts of man and his environments; the environment as man's life support system; fundamental processes determining the nature of and spatial patterns in the biosphere; human impact of major world ecosystems. Research Frontiers; Biogeography; experimental design and techniques of biogeographical investigation.

GEM 825.1 Advanced Vegetation Studies

The course will investigate the distribution of natural vegetation and the relationships to soils and climate; vegetation structure, architecture diversity and production; vegetation succession, classification and mapping; structures and functions of Nigeria vegetation types: mangrove, freshwater, tropical rainforest and savanna, other aspect include vegetation resource inventory

methods; vegetation management and conservation.

GEM 826.1: Advanced Soil Studies

The course will focus on the principles and concepts relating to soil use and management, in the tropical region, tropics include soil classification and mapping; soil properties and characteristics of main soil types; the collection and testing of soil sample parameters; the concept of pedon as it relates to the tropical region; soil degradation and soil conservation practices.

GEM 827.2: Seminar on Biodiversity Conservation and Human Ecology

The values of biodiversity, sustainability and sustainable conservation, biomes and ecosystems under pressure, agriculture and biodiversity management of forests, wetlands, rangeland and wildlife, convention on biological diversity and implementation process. Human Ecology.

GEM 828.2 Land Resource Analysis

Economic analysis of existing natural resources complexes indifferent regions; the classification of land types and assessment of their development potentials; river basin planning; water resource development; perception of the natural environment

(F) M.Sc IN CLIMATOLOGY

GEM 829.1 Microclimatology

The physical bases of boundary layer climates, Climate of vegetated and non-vegetated surfaces and of nonuniform terrain, man modified atmospheric environments. Urban climatology, air pollution climatology, air quality assessment, construction and operational air quality impacts and mitigation especially a gas area, Air monitoring basics. Material and methods for air quality study, air toxic and air modeling. The air quality Act, the measurement and instrumentation for determining boundary layer climates.

GEM 830.1 Techniques in Climatology

The basic techniques in weather observation; analysis of data, various atmospheric motions and weather forecasting, satellite climatology. Applications of the basic techniques in radiation climatology, and geographical climatology. It involves climatological models of phenomena of weather and climate, cloud formation, airflow over barriers: Elements' of atmospheric circulation and

processes. Models of temperature and precipitation distribution on hemispheric or regional circulation of the atmosphere.

GEM 831.2 Agroclimatology

Climate-crop relation, agroclimatological zonations weather hazards in agriculture. Weather aspects of crop pests and diseases. Climate and animal husbandry, animal bioclimatology, crop-weather models, principles and practice for irrigation. Forestry and water management, weather hazards to forestry. Climate and agricultural planning and development.

GEM 832.2 Climate Change

Concepts and definitions of paleoclimatology and climate change, causes of climate change, current evidences of past climate of arid, Humid, Cold and warm climates. Theories of climate change, humanity, the climate system and climate. Physical and ecological impacts of climate change on agriculture, water resources and water resources management; impact on socio-economic and socio-cultural sectors health, nutrition and human development issues on response measures to global warming and climate change. The role of IPCC, the world climate programmes. El Nino southern oscillation events and their implications for weather and climate. International climate negotiations. Climate impact studies.

GEM 833.2 Regional Climatology

This course exposes students to various principles and factors underlying climatic variations and fluctuations at the regional level. Topics to be covered include: Atmospheric circulation, air masses and weather pattern; climatic classification; world climatic regions - tropical climates, temperate climates, high latitude and highland climates.

GEM 834.2 Seminar in Climate Resource Management

The concept of climate as a resource, the concept of weather modification and seedling, allocating weather and climate management efforts, cost-benefit analysis of climate parameters. Economic and decision-making analyses on management efforts, natural resource view of climate. Climate in economic analyses to climate variability. Determining the sustainability and potential for the implementation of climate policy.

(G) M.Sc IN GEOMORPHOLOGY

GEM 835.1 Research Techniques in Geomorphology

Geomorphological theories; Methods of geomorphological investigation- Induction, Deduction, Systems approach. Geomorphological techniques - Study of form: Morphometric Analysis; Geomorphological Mapping Techniques - Single purpose, multi-purpose, morphological & geomorphological maps, Land system maps. Digital Elevation Models (DEM). Weathering processes - methods of determining rates. Removal processes - Slope and channel processes and their measurement. Study of earth materials - description and strength of materials. Models in Geomorphology.

GEM 836.1 River Basin Studies

Principles of open channel flow. Flood routing techniques. Simulation methods. Pervious, impervious and semi-pervious rocks and their influence on porosity. The formation of aquifers and methods of ground water prospecting; instrumentation of well logging. The drainage basin as a physical unit, the parameters and their study. Development problems and practices including design and operation of comprehensive river basin development programmes. Water resource and flood control system.

GEM 837.2 Slope processes & Watershed Management

This course examines the various concepts, theories and processes of slope development, especially in the Tropics. The problem of sediment yield and runoff from slopes are examined. Integration of human socioeconomic activity within the constraints imposed by the physical environment. This is in order to minimize negative geomorphic responses. These are examined within an appropriate watershed management framework. Economic analysis of existing natural resources complexes in different regions; the classification or land types and assessment or their development potentials; river basin planning; water resource development; perception of the natural environment.

GEM 838.2 Geomorphology in Environmental Management

This course examines the interactions between cultural activity and geomorphic systems. It identifies some of the geomorphic and environmental impacts of resource recovery and use by man. Topics taught include: Geomorphological controls, processes and materials; Geomorphological resources, hazards

and risks; Normal versus human cycle of erosion and deposition; anthropogenic land forming processes and their impact on the environment; measurement and management of sheet and gully erosion; landslides and their management measures; geomorphic constraints of human use and modification of rivers; flood management; impact of reservoir and groundwater use; land systems, geomorphological mapping and digital elevation modelling; environmental and geomorphic impact assessment.

GEM 839.2 Advanced Fluvial Geomorphology

This is an advanced course that attempts an understanding of the dynamic principles, theories and processes guiding the activity of rivers and their resulting landforms. The course also reviews the available literature in fluvial geomorphology in order to expose the main research themes in the area. The role of tropical rivers in landscape development will be examined.

GEM 840.2 Seminar on Tropical Geomorphology

Seminar topic shall be selected from contemporary issues in Tropical geomorphology.

(H) M.Sc ENVIRONMENTAL MANAGEMENT

GEM 841.1 Environmental Perception in Management (R)

This course examines the philosophy, theory and practice of environmental perception research and its role in managing environmental issues and challenges. Topics taught include: theory of geographic space preference; environmental cognition and cognitive mapping; environmental hazard theory and assessment; environmental quality assessment and planning; environmental values, meanings and symbols.

GEM 842.1 Environmental Assessments and Modelling (C)

Current status of major environmental resources, water, soils, minerals, wildlife, air, energy, ocean and - biological resources. Assessment and management of biological resources, wetlands and energy resources. Principles and procedures of ecological risk assessment and environmental modeling. Socio-economic assessment process; participatory rural appraisals, etc. Air Quality Assessments and Management: atmospheric deposition, transportation; dispersion, types, sources and their effects; air quality assessment, measurement and monitoring; the measurement of

climatic and meteorological parameters. Others include air quality management system and air quality legislations.

GEM 843.1: Environmental Management Processes in Nigeria (R)

This course examines the Nigerian Environment and the approach to the management of environmental resources. It defines the scope and nature of the Nigerian Environment, the issues and challenges across various socio-ecological zones by thematic and geographical regions. Topics taught include: environmental regions of Nigeria; critical regions; the case of the Niger Delta and the peculiar management issues — wastes, pollution and gas flaring; environmental management institutions, organs and structure, national environmental goals, policies and legislation; environmental impact assessment processes in management.

GEM 844.2: Environmental Health and Safety (EHS) Management (C)

The course provides an overview of Environmental issues such as the fundamentals of developing EHS vision and policies; EHS Management Systems, Strategies and Components; EHS Legal and Regulatory Framework and EHS Internal Auditing System. It also covers the management of fire protection, occupation health and safety, air emission, industrial wastewater, solid and hazard wastes.

GEM 845.2 Environmental Laws and Policies (C)

The basis of national and international environmental laws; environmental issues and policy formulation; the national and international framework of environmental issues analysis; milestones in national and international policy formulation on environmental issues; policy circle; international treaties and conventions; Kyoto protocol, Rio declaration (IJCED Agreements) on environmental and development, law of the sea; Environmental and human right; National laws- FEPA Decree 1988; harmful waste Decree 1988; etc.

GEM 846.2 Corporate Environmental Management (E)

The course covers all aspect of environmental economics, auditing, valuation and accounting. Other aspect includes business environmental orientation and challenges; environmental regulations and standards; strategic environmental management; tools of the corporate environmental management; environmental management plans

and risk management strategies of corporate organizations.

GEM 847.2 Pollution, Toxicology & Waste Management (C)

Covers principles and procedures of pollution studies, monitoring and assessment. Also embraces the principles of toxicology, effects, control and acceptable risk. Environmental technology in pollution and waste management and basic principles of water, air, noise, remediation and risk assessment.

GEM 848.2 Management of Global Environmental Problems (E)

The course focuses on the nature of local and global environmental problems. It addresses the pattern of global environmental concerns, international approaches to defining and managing global problems through conventions and treaties, the politics of international environmental problems, international institutions and management agencies etc.

GEM 849.2 Landscape Assessment and Planning (E)

In this course, methods of landscape evaluation will be treated together with the philosophies underlying them. The object would be to acquaint students with several range of objective and subjective tools employed to analyze and assess landscapes, enabling them to evaluate landscape conditions for both academic and professional planning needs. Topics taught include: landscape perception theories, landscape assessment/perception, interpretation and evaluation paradigms, the role of surrogate stimuli in landscape research; landscape development and planning; recreation parks and gardens planning. Nigerian landscapes and the challenge of conservation.

GEM 850.2 Seminar in topical areas of environmental management. (R)

(I) Msc. HYDROLOGY & WATER RESOURCES MANAGEMENT

GEM 851.1 Advanced Hydrology

This is an advanced course in hydrology. The course attempts a detailed treatment of basic hydrological principles and reviews the available literature in hydrology to expose the main research themes in the field. The application of hydrological

principles in solving the water resource problems in Nigeria.

GEM 852.2 River Basin Studies

This course focuses on river basin development and watershed management. This will cover topics like: the drainage basin as a physical unit; water resource and flood control system; developmental problems and practices; developmental trend of river basin systems (Tropics and Temperate) and techniques of river basin studies.

GEM 853.2 Water Resources Management in Nigeria

This course presents integrated water resource geography of Nigeria. An attempt is made to bring together recent research in a number of fields in water resources, in order to relate the physical occurrence and natural variability of water to the social environment and the increasing demands being made on the available water in the country. Topics include: the identification of water resources in the country; methods for measuring the resources, systematic analysis of factors influencing water availability — including floods and droughts; the origins and growth of the current water situation in the country; the misdistribution of water and the significance of water quality in relation to urbanization and regional water problems and possible solutions in the country.

GEM 854:2 Surface and Groundwater Hydrology

Principles of open channel flow. Flood routing techniques. Simulation methods. Pervious, impervious and semi-pervious rocks and their influence on porosity. The formation of aquifers and methods of ground water prospecting; instrumentation of well logging.

GEM 855.2 Ecology of Coastal Wetlands

The coastal zone has potential for industrial, commercial, residential, and recreational uses which often result in conflicts for which the marine ecosystem suffers. Integrated coastal zone management is canvassed for resolving these challenges using the ecosystem approach. Topics taught include; Estuarine ecosystems and their components — Estuaries, Salt Marshes, Mangroves and sea grass systems; Rocky Shore and Beaches, Sandy Beaches; Shelf Ecosystems; The whole ecosystem approach to managing coastal waters; Challenges and prospects for the future.

GEM 856.2 Seminar in hydrology and water resources management.

(J) MSc GEOGRAPHIC INFORMATION SYSTEMS

GEM 857.1 GIS Fundamentals

Students would be introduced to the basic concepts in GIS, this would include components, data types and structure, projections as well as sources and methods of handling and processing spatial data. The course would also focus on the use of free and commercially available GIS software in for handling spatial Data. Practical and tutorial classes would cover the use of GPS and the tools and capabilities ArcGIS and QGIS in handling spatial and attribute data.

GEM 858.1 GIS and Natural Resources Management

The course would cover the use of geospatial data across different source in the analysis and monitoring of surface and sub-surface hydrology; watershed and catchments; forestry, wildlife and park. Extensive case studies would be examined especially in areas of environmental monitoring, climate change studies, resource management, agriculture, forestry, surveying and landscape management.

SGS 801.1 ICT and Research Method

This course is designed to give graduate students an appreciation of the significance of research and provide students with research skills, knowledge and understandings that will enable them to conduct their own research in a rigorous manner. The course shall include the design of data collection tools and an introduction to quantitative and qualitative data collection and analysis techniques through ICT. Students will gain an understanding of the c-library services and other relevant educational website directories.

SGS 801.2 Management and Entrepreneurship

This course strives to raise the level of academic work in the field of entrepreneurship, in methodological rigour, conceptual depth, and managerial applicability. It will also improve the odds of entrepreneurial success for the students. The course entails making use of the methods, theories and models taught in the classroom in the real world. The practice includes environmental impact assessment of a project, real time monitoring of natural resources and environmental hazards, and detailed and acceptable report writing.

GEM 859.2 Advanced Spatial Statistics and Modelling

The course would cover elementary two dimensional statistics, advanced statistics, non-stationarity, nonlinearity of spatial data, issues of spatial auto- correlation. In addition, it provide students with an introduction to modelling and analysis: the nature of modelling, crisp v. fuzzy, algorithms v. heuristics; Point data sets: representation, characterisation, clustering, spatial autocorrelation; Line data sets: representation, characterisation, generalisation; Polygon data sets: representation (fuzzy boundaries), characteristics (patch statistics and contiguity); Continuous data sets: representation, map algebra, filtering operations, cellular automata, cost surface analysis; Interpolation: sampling strategies, algorithms, evaluation techniques; Surface modelling: derivatives, hydrological and watershed analyses; Network analysis: representation of a network, concepts, techniques; Multi-criteria evaluation: concepts and techniques (linear weighting, ordered weighted averaging, multi-objective decision making), incorporating data error and decision rule uncertainty.

GEM 860.2 Seminar: Application Issues in GIS and Applied GIS

Students would make are make a seminar presentation on the application of GIS in a selected area on interest and showcase opportunities as well as challenges of such application with clear linkage to decision making.

GEM 861.2 GIS and Management Planning

This course would provide students with understanding of the process in the design and implementation of workflow for decision making in social, economic, demographic, health, transportation, urban and regional planning decision. The emphasis would be on showcasing and capturing the essentials of the application of GIS across these sectors and others.

GEM 862.2 Web-Based GIS (E)

This course introduces students to the growing field of distributed geographic information. The would cover the use of ArcGIS online platform for deploying web application as well as mobile application using spatial and attribute data. From these the learners would engage with technologies which will allow them to learn to create dynamic web and mobile application using spatial data and user submitted data. This course prepares students for the use and customization of web and mobile GIS applications.

GEM 863.2 Computer Programming In GIS (E)

Students will be introduced to programming concepts, structured design and the visual programming environment; Modular programming using Python: dialog boxes, input and output, database functions; Processing algorithms using Python: loops and decision- making, simple routines for analysing numerical data; write source codes for GIS basic functions, customize GIS Programs.

10. DOCTOR OF PHILOSOPHY IN GEOGRAPHY & ENVIRONMENTAL MANAGEMENT

1.0 General Information

The department offers Doctor of Philosophy (Ph.D) degree programme in Geography and Environmental Management, with emphasis on the following areas of specialization:

- a) Rural Land use and Rural Development
- b) Urban Geography
- c) Transport Geography
- d) Regional Development Planning
- e) Biogeography
- f) Climatology
- g) Disaster Risk Management
- h) Geomorphology
- l) Environmental Management

10.1 Admission Requirements

- i) All candidates must have the university minimum requirement for a B.Sc degree in Geography.
- ii) Candidates with Bachelor's degree from an approved university must obtain a minimum of a second class lower degree in the relevant discipline.
- iii) Candidates with a master degree with a CGPA of atleast 3.50 on a 5.0 point scale.
- iv) A brief statement of intended area of research.

10.2 Duration of Programme

The duration of the PhD programme is:

Full-Time: A minimum of six semesters and a maximum of ten semesters

Part-Time: A minimum of eight semesters and a maximum of twelve semesters.

10.3 Requirements for Graduation

Doctorate (PhD) programmes is primarily by research. However, the Departmental Postgraduate Committee prescribes courses, a total of 12 credit Units to be taken by doctoral students. Furthermore, a Doctoral (Ph.D) Thesis of 12 credit units must be defended before a panel of examiners.

10.4 Domain of Programme

All Ph.D. programmes shall be domiciled in the Department of Geography and Environmental Management in the Faculty of Social Sciences.

10.5 Student Enrolment

This shall be subject to the carrying capacity of the department.

10.6 Ph.D - Compulsory Courses

GEM 900.1 Seminar in the Philosophy of Geography, Environmental & Disaster Management (3 Credit Units)

This course consists of seminar presentations and discussion of students assignments on the various themes and philosophical streams in the discipline: schools of geographical thought; critical evaluation of the paradigms of determinism, possibilism, probabilism and human ecology in examining sustainable and unsustainable human-ecosystem interaction; theories, laws and models in Geography and environmental management; system analysis and its application in Geography; radical geography; humanistic Geography.

GEM 901.1 Seminar in Research Methods & Quantitative Techniques (3 Credit Units)

This is a directed reading course covering available literature in research methods and quantitative techniques in Geo-environmental studies. The application of each method in solving basic geography and environmental research problems will be emphasized. The advantages and limitations of each technique will be explored.

10.8 Area of Specialization

GEM 902.1 Seminar in Urban Geography & Regional Development (3 Credit Units)

This is a course of directed reading and assignments. The object is to familiarize students with literature on urban geography and regional development. The assignments that would be given would be directed towards the application of models and theories to developing countries in general and Nigeria in particular. Deviations from conceptual expectations must be explained in terms of peculiar economic, political and cultural characteristics.

GEM 903.1 Seminar in Rural Resource Management (3 Credit Units)

This seminar provides a forum for those interested in rural, agricultural and related branches of

geography. Central themes include the nature of rural resources supply and demand, the role of institutions in the rural resource management, planning for rural environmental resources and land use assessment, policy and planning. Research methodologies for resource management will be examined.

GEM 904.2 Seminar in Transport Geography (3 Credit Units)

This is an exploratory course for doctoral students. Seminar topics in all the branches of transportation geography will be given to students as assignment to students for discussion. Emphasis will be placed on originality and the ability of students to identify research problems and solution to such problems.

GEM 905.2 Seminar in Geomorphology (3 Credit Units)

Seminar will cover geomorphic thought, tropical geomorphology, process geomorphology, process-form studies, fluvial geomorphology, coastal geomorphology, slope studies, geomorphic impact assessment and geomorphic research techniques.

GEM 906.2 Seminar in Hydrology & Water Resource Management (3 Credit Units)

Seminar explores pattern of thought in hydrology. It focuses particular attention on models and trends in the fields. A review of the field as a whole will be followed by case studies and in-depth illustrations of water resources management and challenges.

GEM 907.2 Seminar in Climatology (3 Credit Units)

The seminar explores patterns of thought in modern climatological studies. The seminar will focus particular attention on the following areas: climate and agriculture, urban climatology, econoclimatology, bioclimatology, climate change, synoptic and dynamic climatology and regional climate.

GEM 908.2 Seminar in Environmental Management (3 Credit Units)

The seminar programme will focus on philosophical and methodological issues in environmental management. It will address cognitive approaches, environmental assessment, the management of local and global environmental problems

GEM 909.2 Seminar in Geographic information System (3 Credit Units)

Each Ph.D candidate is required to attend course seminars and write term papers on themes assigned

by the course lecturer. Students are also expected to present seminar papers to the Department reflecting the area of concentration of the student.

GEM 910.2 Seminar in Biogeography (3 Credit Units)

The seminar will explore various aspects of soil and vegetation studies including ecological resources, soil- vegetation mapping, soil degradation, soil resources and management.

GEM 910.2 Seminar in Disaster Risk Management (3 Credit Units)

This is a course of directed reading and assignments. The course will explore all aspects of Disaster Risk Management and applications including disaster risk management cycle, post

disaster need assessment, business continuity management, vulnerability and capacity assessment, integrated disaster risk management, risk and cost-benefit analysis, crisis communication, supply chain and critical infrastructure management, and analysis and simulation of extreme events.

GEM 913. Ph.D Thesis (12 Credit Units)

The thesis shall be based on an approved topic by the Post Graduate Committee of the Department in accordance with the regulation of the School of Graduate Studies. Viva voice examinations shall be arranged after submission of draft copy of thesis by the student.

ACADEMIC STAFF LIST

S/N	Name of staff	Rank/ Designation	Qualification	Area of specialisation
1.	O.S. Akpoghomeh	Professor	Ph.D, M.Sc., B.Sc (Ibadan), CMILT	Transport Geography, Tourism Development, Env. Mgt. & EIA
2.	S.B. Arokoyu	Professor	Ph.D, M.Sc., B.Sc. (UPH), REM (USA)	Regional/Rural Development, Disaster & Environmental Management
3.	J.E. Umeuduji	Professor	Ph.D, M.Sc (Nigeria), B.Sc (Calabar)	Geomorphology, Land Resource Evaluation, Hydrology
4.	C.F. Igwe	Professor	Ph.D (UPH), M.Sc. (UI), M.Sc (GIS), B.Sc (UPH), PD Surveying (Uyo), FNIS, REM (USA)	Land surveying/GIS, Regional Development Planning, Env. Mgt. Techniques/Application
5.	P.C. Mmom	Professor	Ph.D (Calabar), M.Sc. (UPH), B.Sc. (Ibadan), REM (USA)	Urban Planning/Resource Management, EIA
6.	A.A. Obafemi	Professor	Ph.D, M.Sc. (UPH), M.Sc. (Lagos), B.Sc. (Ilorin), REM (USA)	Cartography, Env. Mgt., Urban Geography, Techniques/Application
7.	G.C. Emenike	Professor	Ph.D (UPH), M.Sc. (Benin), B.Sc. (Jos)	Transport Geography and Geography of Nigeria
8.	V.E. Weli	Professor	Ph.D (Ibadan), M.Sc., B.Sc. (UPH)	Climatology
9.	C.H. Wizer	Professor	Ph.D (UPH), M.Sc., B.Sc. (UPH)	Urban Geography
10.	E. Elenwo	Professor	Ph.D (RUST), M.Sc. Phil, B.Tech	Environmental Management
11.	Dr. O.M. Nwagbara	Senior Lecturer (Adjunct)	Ph.D (ABSU), M.Sc. (UPH), B.Sc. (Nigeria)	Climatology
12.	Dr. C.I. Ezekwe	Senior Lecturer	Ph.D (ABSU), M.Sc. (NAU), B.Sc. (UPH)	Hydrology and Water Resource Mgt.
13.	Dr. L. Lawal	Reader	Ph.D, PGC, (East London), M.Sc (Hohenheim), B.Sc (UI)	Geo-Informatics System (GIS)
14.	Dr. O.S. Eludoyin	Senior Lecturer	Ph.D, M.Sc. (UI), B.Sc. (ED) (Ife)	GIS/Biogeography, Techniques/ Application
15.	Dr. T.N. Deekor	Lecturer I	M.Sc. (UPH), B.Sc. (Calabar) Ph.D. UI	Biogeography
16.	Dr. M.D. Mbee	Lecturer I	M.Sc. (UPH), M.Sc. (UI), B.Sc (Uyo) Ph.D. UPH,	Geo-Informatics System (GIS)
17.	Dr. V.O. Wekpe	Lecturer I	Ph.D.(UPH)M.Sc. (Manchester), M.Sc. B.Sc. (UPH)	Geo-Informatics System (GIS)
18.	Dr. G.O. Chukwu-Okeah	Senior Lecturer	Ph.D M.Sc., B.Sc. (UPH)	Geomorphology
19.	Dr. V. A. Olerum	Lecturer	PhD, MSc.(UPH), BSc. (UNN)	Environmental Management
21.	Dr. F.U. Ochege	Lecturer 1	Ph.D (China UCAS) MSc.(UNN), MSc.(Edinburg), BSc.(UNN)	Remote Sensing and GIS
22.	Dr. D.S. Iwuoha	Lecturer 11	Ph.D., M.Sc B.Sc. (UPH)	Regional Development Planning

FACULTY OF EDUCATION

DEPARTMENT OF EDUCATIONAL MANAGEMENT

The Department offers professional and research programmes leading to the award of M.Ed and Ph.D. Degrees in Educational Management in the following areas of specialization:

- a) Educational Administration
- b) Educational Planning
- c) Administration of Higher Education
- d) Economics of Education

1. COURSE REQUIREMENTS

a) M.Ed. Programme

Students are required to take a minimum of 31 Credit hours that is, taught courses and a research seminar. This is made up of eight (8) core courses in the first semester and one core course (research seminar) in the second semester. In addition to the research seminar, students shall take two courses from their areas of specialization, one of which is a compulsory elective. The rest of the period shall be spent on the M.Ed. Dissertation.

b) Ph.D. Programme

- i) Ph.D. students are required to take a minimum of 15 credit hours. This is made up of 3 taught courses plus a seminar in the area of specialization. Of the three courses in the first semester, two shall be in the candidate's area of specialization, while the other shall be a course in Advanced Statistical and Research Methods in Educational Management. The rest of the period shall be spent on research and writing of the Ph.D. Dissertation.
- ii) Candidates deficient in related M.Ed. courses shall be required to remedy them as may be determined by the Departmental Graduate committee.

2. COURSE ASSESSMENT:

a) M.Ed. Programme:

i) Course Work

1. Each course/Seminar shall be assessed on the basis of a written examination or research paper(s) or both.
2. A candidate for the M.Ed programme shall obtain a minimum of C in each of the prescribed courses/seminar to be allowed to write the MEd dissertation.

ii) Dissertation

1. For the examination of the M.Ed. dissertation, the Graduate School Board, on the recommendation of the Faculty Graduate Committee, shall appoint a board of examiners comprising the Head of Department, the chairman Department graduate board, the Supervisor(s), the External Examiner and the Dean who shall be the Chairman and any other as shall be appointed by the Board of the School of Graduate Studies.
2. The examiners shall thereafter submit a joint report duly signed by all members to the Dean, School of Graduate Studies.
3. Oral examination of the M.Ed. dissertation shall be as prescribed by the University.
4. In case of difference of opinion, the examiners shall submit separate reports to the Faculty Graduate Committee, which shall make an appropriate recommendation to the Board, School of Graduate Studies.

a) Ph.D. Programme

i) Course Work

1. Each course/seminar shall be assessed on the basis of written examination or research paper(s) or both.
2. A candidate for the Ph. D programme shall obtain a minimum average grade of C in all the prescribed courses/seminars.

iii) Ph.D. Thesis:

1. **Submission of Title:** In consultation with his/her supervisors, the candidate, shall within the second semester of the first year, notify the Dean of the School of Graduate Studies in writing of the full title of his/her dissertation.
2. **Ph.D. Thesis Examination:** For the final defense of the Ph.D thesis, the Board of the School of Graduate Studies Committee shall appoint at least four examiners, comprising the Head of Department, the Supervisor, the External Examiners and a Chairman, etc.
3. The examination shall be oral and shall include the subject of the thesis in the related area of study.

4. The examiners shall submit a joint report on the candidate to the Dean of the Graduate School. The report shall contain:
- A clear and detailed evaluation of the research as contained in the thesis, including an assessment of its originality and its contribution to the advancement of knowledge;
 - A clear assessment of the candidate's knowledge and understanding of his/her subjects as shown in the thesis and oral examination;
 - An unequivocal declaration as to the acceptability, or otherwise of the thesis in fulfilment on the requirements of the degree;
 - In case of difference of opinion, the examiners shall submit separate reports to the Faculty Graduate Studies Committee, which shall make an appropriate recommendation to the Board of the School of Graduate Studies.

5. COURSE SCHEDULE:

a) M.Ed Programme

i) Core Courses:

S/N	Course Code	Course Title
1	EDM 801.1	Theory of Educational Administration
2	EDM 802.1	Educational Planning
3	EDM 803.2	Research Seminar
4	EDM 804.1	Statistical and Research Methods in Educational Management
5	EDM 805.1	Management of Change and Innovations in Education
6	EDM 823.2	Dissertation
7	SGS 801.1	ICT & Research Method
8	SGS 801.2	Management and Entrepreneurship

ii. Core Courses

Educational Administration

S/N	Course Code	Course Title
1	EDM 806.2	Supervision and Inspection
2	EDM 823.2	Dissertation
3		Anyone (1) of the following:

Elective Courses

a.	EDM 807.2	Education Law and the Administration of Nigerian Schools
b.	EDM 808.2	Theory of Administration and Organization in Higher Education
c.	EDM 810.2	Politics of Education

EDUCATIONAL PLANNING

S/N	Course Code	Course Title
1	EDM 811.2	School Plant Planning
2	EDM 823.2	Dissertation
3		Anyone (1) of the courses not in your area of specialization:
a.	EDM 812.2	Case Studies in Educational Planning
b.	EDM 813.2	Educational Policy Analysis
c.	EDM 814.2	Theory of Educational Finance
	EDM 815.2	Economics of Education
	EDM 810.2	Politics of Education

Administration of Higher Education:

S/N	Course Code	Course Title
1	EDM 816.2	Resource Allocation and Utilization in Higher Education
2	EDM 823.2	Dissertation
3		Anyone (1) of the courses not in your area of specialization:
a.	EDM 817.2	The Development of Higher Education in Nigeria
b.	EDM 818.2	The Politics of Higher Education
c.	EDM 808.2	Theory of Administration and Organization in Higher Education

Economics of Education

S/N	Course Code	Course Title
1	EDM 815.	Economics of Education
2	EDM 823.2	Thesis
3		Anyone (1) of the courses not in your area of specialization:
a.	EDM 819.2	Labour Relations in Education
b.	EDM 820.2	Fiscal Accountability and Management in Education
c.	EDM 821.2	Task Analysis and Productivity in Education
d.	EDM 809.2	Social context in education
e.	EDM 810.2	Politics of Education
f.	EDM 811.2	School Plant Planning

h) Ph.D Programme:

i) Core Courses

1. EDM 900.1 Advanced Statistical and Research Methods in Educational Management

i. Electives Educational Administration;

S/N	Course Code	Course Title
1		Any two (2) of the following
a.	EDM 901.1	Human Resources Management
b.	EDM 902.1	Leadership Theories in Educational Organizations

- c. EDM 903.1 Administration of Nigerian Secondary Schools
- d. EDM 904.2 Business management of educational System

2. EDM 905.2 Seminar in Educational Administration

- 1. Anyone (1) elective from Educational Planning, Administration of Higher Education or Economics of Education.

Educational Planning

1. Any two (2) of the following:

S/N	Course Code	Course Title
a.	EDM 906.1	Social context of Educational Planning
b.	EDM 907.1	Planning and Policy in Nigeria higher Education
c.	EDM 908.1	Planning of Non-Formal and Vocational Education
d.	EDM 909.2	Educational Planning in International Perspective

2. EDM 910.2 Seminar in Educational Planning

- 3. Anyone (I) elective from any areas of Educational Administration, Administration of Higher Education or Economics of Education

Administration of Higher Education

1. Any two (2) of the following:

S/N	Course Code	Course Title
a.	EDM 911.1	Administration of Educational Research and Development
b.	EDM 912.1	College and University Administration
c.	EDM 913.1	Case Studies in Administration of Higher Education
d.	EDM 914.2	Social Context of Higher Education

2. EDM 915.2 Seminar in Administration of Higher Education

- 3. Anyone (1) elective from. Administration, Educational Administration, Educational Planning or Economics of Education:

1. Any two (2) of the following:

S/N	Course Code	Course Title
a.	EDM 916.1	The Political Economy of Education
b.	EDM 917.1	Education and Economic Development
c.	EDM 918.1	Educational Finance in Nigeria
d.	EDM 919.2	Resource Management in Education

2. EDM 920.2 Seminar in Economics of Education

- 3. Anyone (1) elective from- Educational Administrative, Educational Planning or Administration of Higher Education

a) M.Ed. Courses:

EDM 801.1 Theory of Educational Administration

Review of historical and contemporary developments in administration and organizational theories and researches. A thorough multi-disciplinary exploration of literature on leadership, organizational behavior and effectiveness. Students are encouraged to broaden their repertoire of administrative behaviours as well as refine perceptions of instructional interaction.

EDM 802.1 Educational Planning

This course embraces a careful examination of the basic theories of educational planning with emphasis on approaches to educational planning, the political economy of education, school plant planning, planning techniques in education and selected appraisal strategies. Specifically, attention is focused on techniques such as MBO, PPBS, work study, PERT and budgetary approaches in education.

EDM 803.2 Research Seminar

This course is designed to test students' research skill in educational management in general and in their area of specialization in particular. Students are required to present seminar papers. Such seminar exercises must therefore explore students' ability in applying statistical and researches, presenting research reports or evaluating existing research reports.

EDM 804.1 Statistical and Research Methods in Educational: Management

Principles of research in educational administration and planning statistical methods and empirical studies design and implementation; proposal design and definition of problems in educational management; theory of sampling; design of research instrument; validation and application of relevant statistics to data from the field; approaches to write-up; presentation and defence; of thesis.

EDM 805.1 Management of Change and Innovation in Education

Analysis of the change process in education. The need for innovation and the climate of innovation. Factors favourable to change and innovation in the school system to be carefully examined, including the problems of assimilation, adaptation, change and renewal. Major obstacles and problems.

EDM 806.1 Supervision and Inspection

The course is intended for prospective and in-service supervisors of primary, secondary and tertiary institutions. The purposes, principles and techniques of supervision will be appraised, analytically. Critical examination of prominent supervisory strategies in the major divisions of secondary and higher education will be emphasized.

EDM 807.2 Education Law and the Administration of Nigerian Schools

Study of laws affecting education in Nigeria. Study of students' institutional relationship, instructional, judicial systems, students' rights, records and campus processes and issues. Attempt will also be made to review legal cases, which have implications for education. Internal administrative structures of secondary schools in Nigeria in the context of the law, government control and supervision.

EDM 808.2 Theory of Administration and Organization in Higher Education

The course focuses on assisting higher education administrators in acquiring knowledge and skills involved in the governance of tertiary institutions. This is achieved through consideration of the structure and modes of organization of higher education. Theory of administration in the context of higher education will also be given considerable coverage.

EDM 809.2 Social Context of Educational Administration

Examination of the relationship between school and society, positive influences of the community and associations on school activities will be treated in the context of society's goals for education. Further emphasis will be laid on interpersonal relationships among staff and between staff and students. Attention will also be focused on a comprehensive evaluation of the school climate, and the school as a vital part of the community.

EDM 810.2 Politics of Education

Attempts will be made in this course to define the politics of Nigerian education, examine the political forces in policy formulation in education and the role of pressure groups in the overall framework. Specifically, case examination will be centered on such issues as democracy in education, the question of geopolitical balancing, and quota system in Nigerian education, the concept of positive discrimination and equal opportunity in educational development. Case analyses will emphasize locational patterns of Nigeria's educational facilities in addition to the distribution of resources among different parts of the country.

EDM 811.2 School Planting

The design of the school plant in terms of education requirements in addition to principles and regulation of plant layout, operation maintenance and insurance. The considerations of educational expenditures and the issue of accountability. This also revolves around financial auditing in education and the need for efficiency and effectiveness in the utilization of fiscal allocations.

EDM 821.2 Task Analysis and Productivity in Education

The course centers on task and responsibility analysis, simulation of output determination, productivity and evaluation of instructional programmes for effectiveness. Considerable attention will also be on productivity measurement in education, factors related to task achievement and productivity in educational establishments, the role of incentives, delegation of power and authority among employed staff.

EUM 823.2 Thesis

Students are required to carry out a research work and submit a thesis report under the guidance of a supervisor. The thesis must be in the student's area of specialization and must be presented in conformity with the Departmental format and graduate school requirements.

b) Ph.D COURSES

EDM 900.1 Advanced Statistical and research Methods in Educational Management

The course is designed to develop students' skills in advance statistical and research techniques in educational management. It will, therefore, focus on research design, problem articulation, development of proposals, carrying out research and research report writing. More importantly, a functional knowledge of statistical data processing techniques and computer application in analysis of research data will be given emphasis.

EDM 901.1 Human Resources Management

Areas of concentration are the principles of personnel management, major personnel processes and techniques involved in human resources administration in educational organizations. In addition, the course deals with recruitment, staff development, selection and the training of educational personnel. Assessment of school personnel functions will include job analysis, job evaluation, job enrichment and differentiated staffing including the place of motivation and satisfaction in relation to personnel functions.

EDM 902.1 Leadership Theory in Educational Organizations

The course focuses on the study of the theories of contemporary organizations and the school as an organization. The relationship between structural concepts such as authority, hierarchy, centralization and human behavior, will be emphasized. In addition, the concept of leadership theory and the role of the leader in organizations staffed with professionals will also be examined.

EDM 903.1 Administration of Nigerian Secondary Schools

Influences, controls and tasks, which condition the organization and operation of Nigerian Secondary schools, will be considered. Apart from external organs of control, thorough examination of the principalship- purposes of this office-are paramount. In dealing with the evolution of the school principalship, development of competencies deemed desirable in a secondary school principal will be given prominence.

EDM 904.2 Business Management of Educational System

Major efforts here will be directed at the organization of the business management function in educational organizations - computer systems and business management, salary schedules, indebtedness, audit, operation of internal structure, office management, purchasing, control of food services, legal relationships. Insurance and safety. Also of central concern is the management of school business enterprises.

EDM 905.2 Seminar in Educational Administration

Students are required to present a well-articulated theoretical or research paper addressing a well-identified problem in any area of educational administration. Such papers must make significant contributions to knowledge in the field by way of either challenging existing theories, providing new ideas or evolving new approaches on the application of techniques to solve the identified educational administrative problems.

EDM 906.1 Social Context of Educational Planning

Contemporary issues and trends in educational planning, are here, considered from the historical and sociological perspectives-changes in schools in relation to changes in the society. Community or society determinants of structures and programmes in educational planning. Demand for education will be considered in the context of the realization of societal requirements.

EDM 907.1 Planning and Policy in Nigerian Higher Education

Issues and problems involved in designing and implementing higher education as a social policy will be examined in the context of the Nigerian situation. Also crucial is the problem of policy continuity, renewal or recycle in higher education-the change process in the development of educational policy.

EDM 908.1 Planning of Non-Formal and Vocational Education

The course covers research theory and principles of planning the development of non-formal and vocational education for the needs of society. Emphasis will be on creating in educational planners the competencies required in meeting the increasing demands of our workforce for continuing education and at the same time making these people employable. Examination of research experiences appropriate for planners of vocational and technical education will also be covered.

EDM 909.2 Educational Planning in International Perspective

Analysis of international influences on the planning of education will be examined. The role of international or multinational organizations such as UNESCO, REPP, ILO, UNO in the development of appropriate educational plans for different countries, to be considered. In this context, issues and problems of foreign aid in educational development are also important and will be examined.

EDM 910.2 Seminar in Educational Planning

Students are required to present a well-articulated theoretical or research paper addressing a well-identified problem or issues in any area of educational planning. Such papers must make significant contributions to knowledge in the field by way of either challenging existing theories, providing new ideas or evolving new approaches on the application of techniques to solve the identified educational planning programmes.

EDM 971.1 Administration of Educational Research and Development

The major areas of emphasis for this course are the role of research in educational development, the planning and administration of research institutions, objectives of research organization and the development of programmes. Organization of research for the attainment of objectives of educational research will also be examined. Normative and exploratory forecasting and the investigation of alternative educational futures especially in the realm of higher education, will be explored.

EDM 912.1 College and University Administration

The focus here is on the modalities and systems of organization of colleges and Universities and the

roles of the administrator and the professionals in the achievement of college on the part of students, staff, the clientele and the government is to be examined within the framework of institutional objectives and programmes.

EDM 913.1 Case Studies in Administration of Higher Education

Analysis and examination of types of higher educational institutions will be brought into focus. Models, types and structures of organization and administration, from different parts of the world, will be carried out to find out relevant implications for the Nigerian system.

EDM 914.2 Social Context of Higher Education

In this course, the sociological parameters that shape the organization and operation of higher education institutions will be given prominence. In addition, the role of education lobbies, interest and associations, will be considered. An examination of sociological theories with implications for the effectiveness of higher education will also be undertaken.

EDM 915.2 Seminar in Administration of Higher Education

Students are required to present a well-articulated theoretical or research paper addressing a well-identified problem or issues in any area of Administration of Higher Education. Such papers must make significant contributions to knowledge in the field by way of either challenging existing theories, providing new ideas or evolving new approaches for the application of techniques to solve the identified problems in the area.

EDM 916.1 The Political Economy of Nigerian Education

Issues in this course will center on the welfare cost of education, the consumption criteria in education and the benefits of educational development from both the individual and societal perspectives. Influences of normative, welfare and allocation

economics on the scope and provision of educational facilities in Nigeria will also be examined.

EDM 917.1 Education and Economic Development

A conscious overview of the overall relationship between education, social and economic development with reference to Nigeria will be assessed. Specifically, the connection between education and political awareness, education and political awareness, education and literacy, education and unemployment, education and technological development, education and population growth and educational change and innovation will be examined.

EDM 919.3 Resources Management in Education

This course examines the relevance and application of the theory and principles of resource management in educational organization with special emphasis on the Nigerian system. Focus will also center on management strategies and techniques for the operation of both human and physical resources in time of economic recession.

EDM 920.2 Seminar in Economics of Education

Students are required to present a well-articulated theoretical or research paper addressing a well-identified problem or issues in any area of economics of education. Such papers must make significant contributions to knowledge in the field by way of either challenging existing theories, providing new ideas or evolving new approaches on the application of techniques to solve identified problems in this area of specialization.

EDM 921.2 Thesis

Students are required to carry out research work and submit a dissertation under the guidance of a supervisor. The dissertation must be in the student's area of specialization and must be presented in conformity with the Departmental format and Graduate School requirements.

ACADEMIC STAFF LIST

S/N	NAMES	QUALIFICATIONS	RANK	AREA OF SPECIALIZATION
1.	Prof. Victoria C. Onyeike	Ph.D (UPH), M.Ed, UPH, B.Ed (Ib), NCE (ABU) UPH	Professor	Educational Administration
2.	Prof. Samuel O. Nwafor	Ph.D., M.Ed., B.BA (Texas)	Professor	Higher Educational Administration
3.	Prof. Samuel O. Oluwuo	Ph.D, M.Ed, B.A. Ed (UNN)	Professor	Educational Administration
4.	Prof. Nathaniel M. Abraham	Ph.D, M.Ed (UPH), B.Ed (UI)	Professor	Educational Administration
5.	Prof. Chineze M. Uche	Ph.D (UPH), M.Ed, B.Ed, MIS (UI), B.Ed (UI)	Professor	Administration of Higher Education
6.	Prof. Gospel G. Kpee	Ph.D (UPH), M.Ed, NCE, B.Sc (Ed)	Professor	Educational Administration
7.	Prof. Jonah U. Nwogu	Ph.D (UPH), M.Ed, B.Ed, (UPH), NCE (Jos)	Professor	Educational Administration
8.	Prof. Chinyere Amini-Philips	Ph.D, M.Ed, B.Ed (UPH), NCE (UI)	Professor	Administration of Higher Edu.
9.	Prof. Joseph N.D. Meenyinikor	Ph.D (RSUST), M.Ed., HND, ICMA, Part 3, PGDE	Professor	Higher Educational Mgt.
10.	Dr. Sunday T. Afangideh	Ph.D, M.Ed, NCE (Uyo)	Reader	Educational Administration
11.	Dr. Kenneth K. Obasi	Ph.D, M.Ed (UPH), MBA (UPH), B.Phil (Rome), PGDE (IMSU)	Reader	Educational Planning
12.	Dr. Patricia C. Ukaigwe	Ph.D, M.Ed (UPH), B.Ed (AUS)	Reader	Educational Administration
13.	Dr. Adanna Ngozi Ohia	Ph.D, M.Ed, B.Ed (UPH), NCE (Jos)	Reader	Educational Planning
14.	Dr. Elizabeth L.S. Kaegon	Ph.D, M.Ed (UPH), B.Ed, NCE	Reader	Educational Administration
15.	Dr. Joy C. Nzokurum	Ph.D (UPH), M.Ed & B.Ed (UNN), NCE (UNICAL)	Reader	Educational Administration
	Dr. Dinah Sunday Osaat	Ph.D, M.Ed (UPH), B.Ed (UI), NCE (OAU)	Reader	Educational Administration
16.	Dr. Ogar G. Agabi	Ph.D, M.Ed, B.Ed (UI)	Senior Lecturer	Educational Planning
17.	Dr. Ihechi F. Jack	Ph.D, M.Ed., B.Ed, (UPH)	Senior Lecturer	Administration of Higher Edu.
18.	Dr. Lawrence Ojule	Ph.D (Unical), M.Ed (UI), B.Sc. (Ed) (UPH)	Senior Lecturer	Administration of Higher Edu.
19.	Dr. Calistus Mba	Ph.D, M.Ed, (UPH), M.Ed (UI)	Senior Lecturer	Educational Planning
20.	Dr. Samuel E. Ebete	Ph.D, M.Ed, BA.Ed (UPH), NCE (UI)	Senior Lecturer	Educational Planning
21.	Dr. IfeanyiChukwu E. Nwabueze	Ph.D, M.Ed (UPH), B.Ed (UI)	Senior Lecturer	Administration/Bus. Edu.
22.	Dr. Friday S.N. Ledogo	Ph.D, M.Ed, B.Ed (UPH)	Lecturer II	Educational Management
23.	Dr. C.D. Wagbara	B.A. (UPH), PGDE, M.Ed (IMSU), Ph.D (UPH)	Lecturer II	Educational Management
24.	Gr. Gertrude Oliobi	NCE, B.Ed, M.Ed, Ph.D (Nigeria)	Lecturer II	Educational Administration

25.	Dr. Agbo, E.N.	NCE, B.Ed (Economics Maths) (IAUE), M.Ed (RSU), Ph.D (EBSU)	Lecturer II	Educational Management/ Statistics
26.	Dr. F.O. Asagba	B.Sc., PGDE, M.Ed, Ph.D (UPH)	Lecturer II	Admin/Economics of Edu.
27.	Dr. Mfon Ezekiel Usip	B.Ed., M.Ed., Ph.D (UNIUYO)	Lecturer II	Business Education
28.	Mr. Goodluck A. Wordu	B.Ed, M.Ed. (UPH), Ph.D (RSU)	Asst. Lecturer	Economics of Education
29.	Mr. Sambo U. Adiola	NCE	Asst. Lecturer	Administration/Bus. Edu.
30.	Mrs. Patricia E. Oshebor	B.Sc, PGDM, M.Ed	Asst. Lecturer	Educational Planning
31.	Dr. Justice-Amadi Sandra	B.Sc (Ed) (RSUST), MSc (IAUOE), Ph.D (UPH)	Asst. Lecturer	Business Edu. & Mgt.

SGS 801.1: ICT and Research Methodology (2 Credit Units)

This course should cover essentials of spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Scientific Research, Concepts of hypothesis, formulation and Testing, Organization of Research and Report Writing.

EDF 803.1 History of Educational Ideas (2 Credit Units)

The course will examine the contributions of the great educators to the development of educational theory. Key figures from ancient, medieval and modern times will be chosen for detailed study and discussion.

EDF 820.1 Sociology of Education (2 Credit Units)

Meaning, nature and scope of sociology of education; Interrelationship between sociology and education, conceptualizing education: Culture, socialization and education; Education as a social institution; its historical evolution and contemporary forms; social structure and education; education and social stratification; culture identity and inequality in educational opportunity and social change.

EDF 800.1: Philosophy of Education (2 Credit Units)

The meaning of philosophy, different conceptions of philosophy of education, analysis of key educational concepts such as teaching, training, instruction, indoctrination, learning, etc. The aim of education, epistemology and education, ethics and education, different conceptions of life and society, and philosophical foundations of the curriculum shall be critically discussed.

EDF 804.1 Philosophical Concepts of Teaching & Learning (2 Credit Units)

This will examine critically the concepts of teaching and learning. The course will also examine other methods/means of transmission of knowledge such as training, indoctrination, conditioning, drill/drilling, instruction, etc. The concepts/methods related to effective teaching and learning such as democracy, democratic classroom, dialectic method, demonstration as a method, inquiry, discovery, teacher, learner, etc. will be explored. Questions such as can teaching and learning be effective will be discussed.

EDF 805.1 Contemporary Philosophies and Education (2 Credit Units)

A critical examination of the philosophical orientations underlying the educational aims and values sought by some schools of educational philosophy such as idealism, pragmatism, existentialism, etc. should be done

EDF 810.1 Foundations of Nigerian Education (2 Credit Units)

A survey of the traditional, historical, political and social foundations of Nigerian Education will be undertaken. A critical assessment of the contributions of various educational traditions and agencies to educational development in colonial and post independent Nigeria will be made.

SGS 801.2: Management and Entrepreneurship (2 Credit Units)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

EDF 806.2: Ethics and Education (2 Credit Units)

The purpose of this course is to examine the moral assumption of the system(s) of the education in Nigeria and to ascertain to what extent our schools are responsive to basic moral issues. A special study will be made of the value of the Nigerian society and their impact on socioeconomic development.

EDF 808.2: Statistical Methods in Educational Research (2 Credit Units)

This course will examine basic concepts and terms in Descriptive and inferential statistics. Testing of Hypothesis includes t-test, z-test, analysis of variance (ANOVA) and analysis of covariance (ANCOVA). Correlational statistics including Pearson product moment, spearman rho, point-B serial, Phi-coefficient, etc., test of significance for different correlational statistics should be taught. Non parametric statistics including Chi-square runs test, Mann-Whitney, etc. and application of various statistical concepts in Education.

EDF 809.2: Educational Measurement and Test Construc-Tion (2 Credit Units)

Measurement scale and scaling models, theory of measurement error, test construction procedures; item writing analysis and assembly in achievement, aptitude and non-cognitive tests; reliability and validity of tests; practical work in test construction.

EDF 811.2 Epistemology and Education (2 Credit Units)

The course should provide a critical examination of the logical and psychological aspects of learning and theories of knowledge and the implications of such theories for education in general. The epistemological foundations of the curriculum will be highlighted.

EDF 812.2: Education and Development Of Mind (2 Credit Units)

The course will examine the concepts of rational mind, Reason and feeling. The concept of development, Moral and aesthetic development of societies, past and present will be examined. And examination of various conceptions of human nature, System of thoughts and system of education will be undertaken.

EDF 818.2: Graduate Seminar in Education (2 Credit Units)

Each seminar will provide an opportunity for the in-depth study of substantive issue in educational theory and research. In addition, each student will be expected to lead a discussion on a selected research topic, preferably based on the topic of his/her dissertation/thesis or research paper.

EDF 850.2 Research Project/Dissertation (6 Credit Units)

Students should be expected to produce a comprehensive research work in their field of specialization.

Ph.D COURSE DESCRIPTIONS:

EDF 900.1 Social Philosophy and Education (3 Credit Units)

The inter-relationships between socio-political concepts as power, authority, coercion, discipline, the state, power relations, social justice, economic justice, human right, freedom, distributive justice and their practical workings for educational theory and institutional practices are studied. The concepts of equality, elitism, educational opportunity, and educational policy issues between the federal government, the state government and local school boards will be examined. The rights and responsibilities of students and access to public education are fully examined

EDF 901.1: Advanced Research Methods in Education II (3 Credit Units)

The concept and nature of research; scientific processes in research; problem definition, variable identification; sources of research topics; theory construction and hypotheses formulation; techniques for literature review; principles of design, instrumentation, data collection, techniques for data analysis and presentation of result. Candidates are guided to prepare tentative research proposal they must present and defend individually in class; techniques of research reporting, and research proposal writing.

EDF 925.1: Education Systems and Policies in Africa (3 Credit Units)

This course describes education in third world countries and will identify the reasons behind the problems in the educational system and how they could be tackled to bring development and transformation

EDF 904.1: Philosophical Analysis and Education (3 Credit Units)

This is the deliberate induction of the student into the methodology of philosophical study. The analytical movement in education is thoroughly examined. Philosophical analysis and philosophy of education are studied. Analytical philosophy is also critiqued and its worth for educational practice and theory is examined. Ultimately analysis is exposed as the "most modern" approach to the study of

educational philosophy as its contributions to the philosophy and theory of education are laid bare.

EDF 902.2: Advanced Educational Statistics II (3 Credit Units)

Concepts of educational statistics; the role of statistics in education; descriptive statistics and the various areas of application in education; classroom data, school records, school demography, social relation in school; school administration and finances; inferential statistics; population and sampling theory; non-parametric statistics in education, hypotheses, assumptions, types, applications and limitation. The nature of parametric statistics in education, statistical model in education, application and limitations (correlation, univariate and multi-variate analysis of educational data), the nature of significant tests, problems of inferences. Candidates must be taught to utilize computer in various phases of this courses and to be familiar with various analytical software. Emphasis must be placed on educational and practical application of basic statistical concept in various educational disciplines.

EDF 905.2: Education Classics

The course involves a (survey) study of the writings of educational legends such as Socrates, Plato, Aristotle, St Augustine, John Locke, .1.3 Rousseau, William James, John Dewey, Paulo Freire, Nel Noddings, Jane Roland Martins, R.S. Peters and Otonti Nduka. Also Marxists writers such as T.O. Oizennan and Karl Marx's 'The Poverty of Philosophy are discussed. Sample classic texts are:

1. Plato, *The Republic*
2. Aristotle, *The Nichomaclean Ethics*
3. Augustine, *Concerning the Teacher*
4. Locke, *Some thoughts concerning education*
5. Rousseau, *Emile*
6. William James, *Pragmatism*
7. John Dewey, *Experience and education*
8. Friere, *Pedagogy of the Oppressed*
9. Nduka, *Western Education and the Nigerian Cultural Background*. Excerpts and extracts will be studied where full texts are unavailable.

EDF 906.2 Moral Concepts in Education (3 Credit Units)

The place of morality in all educational endeavours is discussed in this course. Ethical theories and the psychology of moral judgment, Greek ethics, medieval ethics and modern ethics and their interrelationships are examined. The nature of moral judgment, standards of morality, rights and duties, virtue, justice, justice as fairness and the theories of Robert Nozick, John Rawls, R.S. Peters, Otonti Nduka, J.D. Okoh and the pedagogic models of moral education developed by Aminigo are

examined for their worth as practical sessions of moral ideas in the educational settings.

EDF 907.2 Philosophical Perspectives of Early Childhood and Primary Education

Historical perspective of Early Childhood and Primary Education, Philosophical perspective of primary education, Contribution of some philosophers to the development of Early childhood and primary education, Need for proper curriculum of childhood education in Nigeria- A new approach; the child and the curriculum: the role of learning activities; the child and curriculum: teaching Methods; Some philosophical issues of Early childhood and primary education. To discuss what philosophy is for children or childhood. Philosophical approach and play as methods. The role of philosophy in school curriculum design will be examined.

EDF 908.1 Advanced Seminar in Philosophy of Education (3 Credit Units)

In this course students are made to examine all philosophical topics in education and relate them to practice, theory or policy making in Nigerian education. By so doing they would be studying the philosophical treatment or analysis of specific issues in education by which they would develop and internalize a philosophical perspective which in turn becomes part of their mode of professional behavior and outlook on life.

EDF 909.1 Logic and Teaching

The course will examine the structure of arguments and student will learn how to analyze and evaluate them. This will be done in the context of educational problems and in the process, consideration will be given to how students can be taught to reason more clearly. Clear or critically thinking will be considered. Simple logical statements and set theories could be used in illustrations for effective teaching and learning.

EDF 910.1 Political Education (3 Credit Units)

The course explores the nexus between politics and education by studying the ways in which governance institutions, political ideologies and practices and competing interests within and outside the educational institutions influence the content, form and functioning of schooling. The course will explain political reality and equip citizens with competences to enable them understand the political sphere. Topics such as history, political institutions, social structures, social justice, democracy as a system of government, marriage as an institution, radical movements, racism and ethnicity, unemployment or social exclusion will be explored. The students will be taught human and social rights and how to take responsibility for their communities. They should learn how to influence decision making

processes for the common good. Analytical articles and didactic materials would be examined during the courses.

EDF 911.1 Feminism and Education (3 Credit Units)

The philosophy of feminism which locates ideas in the realm of equalitarianism between the genders in all sectors of life is transposed to educational theory and practice. The ideas of feminist consciousness as espoused by Nell Noddings, Kieran Egan, Jane Roland Martin, Mary Field Bellamy etc are all examined for their liberatory theories in favour of the female gender in all sectors of social life. Issues such as female stereotyping, job discrimination, sexism, sexual harassment, stereotyping, job discrimination, sexism, sexual harassment, women's right, gender neutrality, and equal pay for women, reproductive right, work place right and all forms of discrimination against women are discussed. All forms of social, cultural and political inequalities against women are discussed. The role of education in bringing about this utopia is the centerpiece of this course.

EDF 821.2	Educational system and social change	C	2
EDF 850.2	Research project dissertation		

Keys: C = Compulsory O = Optional

EDF 800.1 Philosophy of Education (2 credit)

The meaning of philosophy, different conceptions of philosophy of Education; analysis of key educational concepts such as teaching, training, instruction, indoctrination, learning etc. the aims of education Epistemology and Education; ethics and education, different conceptions of life and society and philosophical foundations of the curriculum shall be critically discussed.

EDF 801.1 ICT in Research Methods in Education (2 credit units)

This course should cover essentials of spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Scientific Research, Concept of hypothesis, formulation and Testing, Organization of Research and Report Writing.

EDF 807.1 Research Method in Education (2 Credit Units)

Types of research, methods and data, types of instruments, types of procedures for data collection, methods of data analysis; application of computer in data analysis, presentation of result and conclusion.

EDF 810.1 Foundations of Nigerian Education (2 Credit units)

A survey of the traditional, historical, political and social foundations of Nigerian education will be undertaken. A critical assessment of the contributions of various educational traditions and agencies to educational development in colonial and post independent Nigeria will be made.

EDF 820.1 Sociology of Education (2 Credit Units)

Meaning, nature and scope of sociology of education; Interrelationship between sociology and education, conceptualizing education: Culture, socialization and education; Education as a social institution; its historical evolution and contemporary forums; social structure and education; education and social stratification; culture identity and inequality in educational opportunity and social change.

EDF 822.1 Education and Social Development (2 Credit Units)

An examination of theoretical approaches to social development and education as a social institution; Critical analysis of the role of education in social development; relationship between education and other social institutions

EDF 823.1 Educational Opportunity & Social Stratification (2 Credit Units)

Related concepts such as educational and social stratification, with regard to age of school entry, Joice/access, continuity and the likes will be variously examined. Inequality of educational opportunity is equally critically discussed in relation to status, power, mobility and social differentiation, student's educational and occupational aspirations; influence of social stratification and behaviour. The consequences and challenges of the outcome of the foregoing as well as the way forward towards achieving equal educational opportunity will be equally discussed. In all, the focus will be on Nigeria for local examples

SGS 892.2: Management and Entrepreneurship (2 Credit Units)

The course will cover business environment, general management financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

EDF 808.2: Advanced Statistical Methods in Educational Research (2 Credit Units)

Review of basic statistics concepts; descriptive, parametric, inferential and non-parametric statistics; tstatistics, ANOVA, ANCOVA, Regression Analysis, Chi-Square and Statistical techniques for post-hoc analysis; application of computer in statistical analysis; meaning and results in statistical analysis.

EDF 809.2: Educational Measurement and Test Construction (2 Credit Units)

Measurement, scale and scaling models, theory of measurement error test construction procedures; item writing analysis and assembly in achievement, aptitude and non-cognitive tests; reliability and validity of tests; practical work in test construction.

EDF 818.2 Graduate Seminar in Educational Foundations (2 Credit Units)

Each seminar will provide an opportunity for the in-depth study of a substantive issue in educational theory and research, in addition, each student will be expected to lead a discussion on a selected research topic preferably based on the topic of his/her dissertation/ thesis or research paper.

EDE 824.2 Current Social Problems (2 Credit Units)

Application of sociology of education perspectives in the study of social problems e.g Indiscipline and deviance in the school system and control, challenges to control of social problems in contemporary period and the way forward.

EDF 832.2 School and Society (2 Credit Units)

Concepts of school and society; relationship between the school and society; the social functions of education; role of education in nation building; school as a social and bureaucratic organization; the school environment and classroom interactions; planned and unplanned curriculum; critical analysis of educational life chance of males and females in society.

EDF 821.2 Educational System and Social Change (2 Credit Units)

The focus is on the following: concept and theories of social change; relationship between societal ideology and educational systems; role of the school as a social institutions for cultural transmission and change; relationship between education and other social attitude to education in Nigeria; educational implications of contemporary social problems.

EDF 850.2 Research Project/Dissertation (6 Credit Units)

Students are expected to transfer/ apply the knowledge, skills and competencies learnt in the research methods to write on topical issues in education. This serves as a field of experience as they review the existing literature, collect and analyse data and write research reports.

EDF 915.1	Education, Class Structure, Social Stratification	3
EDF 921.1	Development of Sociology of Education in Nigeria	3
EDF 918.2	Sociology of Adult Education	3

Year Two Second Semester

Course Code	Course Title	Units
EDF 999.2	Ph.D Thesis	12

EDF 901.1: Advanced Research Method in Education 1 (3 Credit Units)

The concept and nature of research, scientific processes in research problem definition, variable identification source of research topic; theory construction and hypotheses formulation; techniques for literature review; principle of design, instrumentation, data collection, technique for data analysis and presentation of results. Candidates must be introduced to computers and data analytical software and techniques in education. The orientation must be practical throughout as candidates are guided to prepare tentative research proposals they must present and defend individually in class; technique of research reporting and research proposal writing.

EDF 902.1: Advanced Educational Statistics II (3credit Units)

Concept of educational statistics; the role of statistics in education; descriptive statistics and the various areas of application in education; classroom data, school records, school demography, social theory; non-parametric statistic in education; hypothesis assumption, types, application in education; statistical models in education, application and limitations (correlation, univariate and multivariate analysis of education data), the nature of significant tests, problem of inferences. Candidate must be taught to utilize computer in various analytical software. Emphasis must be

placed on education and practical application of basic statistic concept in various educational disciplines.

EDF 999.2: Ph.D Thesis (10 Credit Units)

Candidate is required to demonstrate research competence by selecting a thesis topic in their relevant areas of specialization. The research is carried out by the individual student under the guidance of a competent supervisor according to graduate school requirements. The candidate is expected to make some significant contributions to knowledge. The thesis is defended before an external examiner.

EDF 913: Sociological Perspectives of Education (3 Credit Units)

The course focuses on the foundations and outcome of education from the sociological point of view, bearing in mind all the stake-holder in education: teachers, parents, pupils/students, administrators and other educational establishment/organizations. Major sociological (such as stratification, discrimination ethnicity, social mobility, equal opportunity, school violence, bureaucracy and feminism) will be examined in relation to educational practices and outcomes. The relationships between the school and societal institution will equally be examined. Specific example will be drawn from different educational establishments as the class progresses students will be made to gather information and provide report on case studies on specific educational practices and their consequences.

EDF 914.1: Sociology of Development (3 Credit Units)

Concept and theories of development and underdevelopment poverty/inequality in social economic and political spheres from historical point of view in developed and developing countries; problems, causes and consequences of poverty, violence war etc. Case study of Nigeria; the way forward

EDF 915.1: Education, Class Structure Social Stratification (3 Credit Units)

Overview of the concept of stratification, structural and power conflict; role of education; study of educational inequality within and between different social classes; study of poverty, educational opportunity and the family/societal culture.

EDF 916.2: Ideology, National Policies and Educational Development (3 Credit Units)

Concept and nature of ideology and educational policies, implications of societal ideology to educational ideology and educational policies/activities in selected African countries including Nigeria.

EDF 921.1 Development of Sociology of Education in Nigeria (3 Credit Units)

Origin, growth and pattern of sociology of education in Nigeria and factors responsible for the development, challenges and the way forward. In all, consult relevant educational institutions for reliable information and proper documentation.

EDF 917.2 Education and Social Movement in Nigeria: Power, Resistance and Identity (3 Credit Units)

Concepts of power, resistance and identity and historical analysis of the role of education in different social movements in both pre- and post independent Nigeria, emerging patterns and consequences; educational implications

EDF 918.2: Sociology of Adult Education (3 Credit Units)

Concept of adult education, need theories, social factors including age, gender occupation, social environment are examined in relation to relevant adult education programme for community development, types and importance of adult education evaluated programmes.

EDF 919.2 Gender and Education (3 Credit Units)

This course is designed to provide a general overview of gender issues in education from early childhood through secondary and tertiary education. Feminism theories and perspectives (sociological psychological and philosophical) of gender inequality and the debate on sexual inequality are applied to examine both historical and contemporary issues of gender and socialization. This is discussed in relationship with gender as regard societal concerns including social justice. Such areas like social class structure, race and their related social orientations in the family, school, media and political and social institutions are considered hence such information on sexuality and changing understanding of the male and female gender are critically examined.

EDF 920.2: Political Education (3 Credit Units)

Concept of and the need for political education; political issues in education in relation to power relations in school establishment, admission, curriculum and the rule of law; socio-economic environment and the role of pressure groups in educational activities.

EDF 800.1: Philosophy of Education (2 Credit Units)

The meaning of philosophy. Different conceptions of philosophy of education; analysis of key educational concepts such as teaching, training, instruction, indoctrination, learning etc, the aims of education, epistemology and education; ethics and education. Different conceptions of life and society and philosophical foundations of the curriculum.

EDF 801.1 ICT in Research Methods in Education (2 Credit Units)

This course should cover essentials of spreadsheets Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Scientific Research, Concept of hypothesis, formulation and Testing, Organization of Research and Report Writing.

EDF 807.1 Research Methods in Education (3 Credit Units)

Types of research methods and data, types of instruments, types of procedures for data collection, methods of data analysis, application of computer in data analysis, presentation of result and conclusion.

EDF 810.1: Foundations of Nigerian Education (3 Credit Units)

A survey of the traditional, historical, political and social foundations of Nigerian education will be undertaken. A critical assessment of the contributions of various educational traditions and agencies to educational development in colonial and post independent Nigeria will be made.

EDF 820.1 Sociology of Education (2 Credit Units)

Meaning, nature and scope of sociology of education; Interrelationship between sociology and education, conceptualizing education: Culture, socialization and education; Education as a social institution; its historical evolution and contemporary forms; social structure and education; education and social stratification; culture identity and inequality in educational opportunity and social change.

EDF 819.1 Systems and Policies of Education in Nigeria (2 Credit Units)

The course provides an in-depth analysis of the various system and policies of education in Nigeria and theft contributions to educational development. Special emphasis will be given up to colonial and post- independence educational policies and implementation up to date. Problems and prospects will be examined while an intensive study of a special period providing opportunity for training in the use of contemporary documents for the study of education systems will be undertaken by the students.

EDF 817.1 History of Western Education Upto 1800 (2 Credit Units)

A study of the development of the western system of education from the earliest time to the 18th century with emphasis on its spread to other parts of the world will be the focus of this course.

EDF 821.1 Educationand Development in Modern Times (2 Credit Units)

This cause is designed to capture the impact of education on development, particularly in temporary times. The course will include the economics of education for moderm time. The course will provide analyses to understanding the connection or nexus between education and issues of development. It is meant to establish that education is imperative to moderm development.

EDF 822.1 (H) Contemporary Educational Development & Policies Africa (2 Credit Units)

This course has to do with analysis of colonial education policies in Africa & identification of problems of public education in Africa inherited at the time of independence. It alao looks at the contemporary attempts made by the independent African governments as a group and various African governments to adapt education to theft particular environments. An in-dept study of the orientation, relevance and authentic African approach to education and educational policies will be explored. Countries with varied colonial experiences British, French & Portuguese and their attempts to Af-icanize their education systems to suit their developmental needs will be highlighted. The impact of organization and planning of education for the future should be highlighted.

EDF 826.1: Evolution of Educational Development and Policy in Colonial & Ex-Colonial Territories (2 Credit Units)

This course will focus on a comparative historical study of the educational policies of the various imperial powers with particular reference to Africa, and post- colonial development.

SGS 802.2: Management and Entrepreneurship (2 Credit Units)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

EDF 808.2: Statistical Methods in Educationalresearch

Basic concepts and terms in inferential statistics, hypotheses formulation, testing and inference, application of various statistical concepts in education, ANOVA, ANCOVA, regression analysis, Chi-square will be focused on.

EDF 809.2 Educational Measurement and Test Construction (3 Credit Units)

Concepts, definitions and nature of tests, measurement, evaluations assessment, etc. psychometric properties of tests validity, reliability, usability, etc. types of tests, guidelines for construction of tests of different types; standardized tests; teacher made tests, non- cognitive tests, etc. differences between different types of test; test administration, scoring, grading and interpretation of grades, statistics in education e.g. concepts, descriptive and differential statistics; examination bodies in Nigeria and their roles.

EDF 818.2: Graduate Seminars in Educational Foundations (2 Credit Units)

Individual research projects on approved topics to be undertaken by students with the cooperation of their supervisor.

EDF 827.2 Contemporary Systems of Education in Europe, North and South America, Asia and the Caribbean (2 Credit Units)

A comparative analysis of twentieth century educational spreads in Western Europe, North and South America, Asia and the Caribbean with case studies of some specific countries will be carried out. The fall of comission and its in-pact on educational development of Eastern Europe will be highlighted.

EDF 850.2 Research Project/Dissertation (6 Credit Units)

Students are expected to transfer/apply the knowledge, skills and competencies learnt in the research methods to write on topical issues in education. This serves as a field of experience as they review the existing literature, collects and analyze data and write research reports.

EDF 918.2	History of Modern Education 1800-present	3
EDF 919.2	Issues in Comparative Education	3

EDF 919.2 Advanced Studies in Comparative Education II (3 Credit Units)

The course will build on the knowledge of introduction to Comparative Education, specifically examining the indepth knowledge of Comparative Education; starting with the critical assessment of its origin to the current status as an academic discipline. Attention shall also be directed at discussions on the emerging issues and how they affect education systems Discussion shall equally be centred on the various determinants/influencing factors of the education character of identified countries. Also, an exposition on the various methods for studying and researching Comparative Education shall be made.

Year Two First Semester

Course Code	Course Title	Units
EDF 921.1	Seminars in History of Education	3
EDF 922.2	Contemporary System of Education in Europe, North and South America, Asia and the Caribbean	3

EDF 9223 Contemporary System of Education in Europe, South and North America, Asia and the Caribbean (3 Credit Units)

A comparative analysis of twentieth century educational system in Western Europe, North and South America, Asia and the Caribbean with case studies of fall of communism and its impact on educational development in Eastern Europe will be highlighted.

Year Two Second Semester

Course Code	Course Title	Units
EDF 999.2	Ph.D Thesis	12

EDF 999.2 Ph.D Thesis (12 Credit Units)

Candidates are required to demonstrate research competencies by selecting a thesis topic in their relevant areas of specialization. The research is carried out by the individual student under the guidance of a competent supervisor according to Graduate School requirements. The candidate is expected to make some contributions to knowledge. The thesis is defended before an appropriately constituted examining committee chaired by the Head of the Department. The External Examiner's verdict shall override all other decisions.

EDF 916.1 History of Education in Africa (3 Credit Units)

This course focuses on a detailed analysis of the literature of the history of education in African primary, secondary and tertiary institutions.

EDF 917.1 History of Education as a Field of Study; Its Emergence & Development (3 Credit Units)

The course x-rays the emergence and development of history education as a field of study. Attention will focus on the study and writing of history of education in relation to development of general history and theories of history.

EDF 901.1 Advanced Research Methods II (3 Credit Units)

An in-depth study of basic research method appropriate for teachers and other students of education and general consideration will be given to technical problems with emphasis on the underlying research process and its practical implications for schools. There will also be a review of the

EDE 820.1 Sociology of Education (2 Credit Units)

Meaning, nature and scope of sociology of education; Interrelationship between sociology and education, conceptualizing education: Culture, socialization and education; Education as a social institution; its historical evolution and contemporary forms; social structure and education; education and social stratification; culture, identity and inequality in educational opportunity and social change.

EDF 832.1 Advanced Studies in Comparative Education (2credit Units)

The course will examine in-depth knowledge of comparative education dealing with various methods and countries.

EDF 833.1 Issues in Comparative Education (2 Credit Units)

This course will initially examine and elucidate the major concept and theories in comparative education. The methods and alternative approach to comparative education will also be identified and discussed. Special attention will be given to the issue of globalization and education in comparative times.

Keys: C = Compulsory O = Optional

EDF 800.1: Philosophy of Education (2 Credit Units)

The meaning of philosophy, different conceptions of philosophy of education, analysis of key educational

EDF 834.1 Cross Cultural View of the Three Levels of Education (2 credit units)

This course will focus on the Cross-Cultural view of various levels of education, the pre-primary, primary, secondary and the higher education.

EDU 835.1 Education in Developing Countries (2 Credit Units)

This course will initially examine and elucidate the major concept and theories in comparative education. The methods and alternative approaches to comparative education will be identified and discussed. Special attention will be given to the issues of globalization and education in comparative times.

EDF 836.1 Comparative Studies of Higher Education in Africa (2 Credit Units)

The course will look at the growth and development of higher education in various African countries from colonial period to past colonial era. It will emphasize the impact of higher education on development in selected African countries.

SGS 801.2: Management and Entrepreneurship (2 Credit Units)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

EDU 808.2: Statistical Methods in Educational Research (3 credit units)

This course will examine basic concept and terms in Descriptive and inferential statistics. Testing of Hypothesis and drawing of inference. Parametric statistics includes t- test, z-test, analysis of variance (ANOVA) and analysis of covariance (ANCOVA). Correlational statistics including Pearson product moment, spearman rho, point-Biserial, Phi-coefficient, etc. test of significance for different correlational, statistics should be taught. Non parametric statistics including chi-square runs test, Mann- Whitney, etc. and application of various statistical concepts in education.

EDF 809.2 Educational Measurement and Test Construction (3 credit units)

Measurement scale and scaling models, theory of measurement error, test construction procedures, items writing, analysis and assembly in achievement, aptitude, and non-cognitive tests, reliability and validity of tests and practical work in test construction.

EDF 818.2 Graduate Seminar in Education (2 Credit Units)

Each seminar will provide an opportunity for the in-depth study of a substantive issue in educational theory and research. In addition, each student will be expected to lead a discussion on a selected research

topic, preferably based on the topic of his/her dissertation/thesis or research paper.

EDF 827.2 Contemporary Systems of Education in Europe, South and North America, Asia and the Caribbean (2 Credit Units)

A comparative analysis of twentieth century educational systems in Western Europe, North and South America, Asia and the Caribbean with case studies of fall of communism and its impact on educational development in Eastern Europe will be highlighted.

EDF 828.2 Development Trends (Globalization, Internationalization) In Modern Education (2 Credit Units)

This course will look at issues, impact and challenges of globalization on African Education system and the place of African nations in the global picture and it will highlight the need for education practitioners not only to think globally but demonstrate global trends in a developing country such as Nigeria.

EDF 850.2 Research Project/Dissertation (6 Credit Units)

Students are expected to transfer/apply the knowledge, skills and competencies learnt in the research methods to write on topical issues in education. This serves as a field of experiences as they review the existing literature, collect and analyze data and write research reports.

Ph.D IN COMPARATIVE EDUCATION

Year One First Semester

Course Code	Course Title	Units
EDF 901.1	Advanced Research Method II	3
EDF 925.1	Education Systems and Policies in Africa	3
EDF 919.1	Advanced Studies in Comparative Education II	3
EDF 922.1	National Systems of Education (Candidates to choose 2 out of 3) <i>Education Systems in Europe</i> <i>Education Systems in Canada and USA</i> <i>Education Systems in Asia</i>	3

Year One Second Semester

Course Code	Course Title	Units
EDF 902.2	Advanced Educational statistic II	3
EDF 919.2	Gender, Education and Globalisation	3

EDF 923.2	International Approaches to Higher Education	3
EDF 920.2	Politics and Education from an International Perspective	3

Year Two First Semester

Course Code	Course Title	Units
EDF 913.1	Sociological Perspectives of Education	3
EDF 924.1	Seminar in Comparative Education	3

Year Two Second Semester

Course Code	Course Title	Units
EDF 999.2	Ph.D Thesis	12

EDE 901.1 Advanced Research Methods II (3 Credit Units)

An in-depth study of basic research method appropriate for teachers and other students of education and general consideration will be given to technical problems with emphasis on the underlying research process and its practical implications for schools. There will also be a review of the implications of relevant contemporary theories for studies.

EDU 925.1 Education Systems and Policies in Africa (3 Credit Units)

The course will discuss the introduction of Western education into Africa; and the circumstances surrounding such introduction in different sub-regions of Africa. It will go further to examine the colonial policies of respective colonizing European countries and their impact on educational development in their respective areas of influence. Pan-continental and individual country's approach at redressing the real and perceived problems of colonial education at independence will also be treated. Finally, students will be expected to present seminar papers on individual national education systems representing the major colonisers (French, British and Portuguese) areas of influence.

EDF 919.1 Advanced Studies in Comparative Education II (3 Credit Units)

The course will build on the knowledge of introduction to Comparative Education, specifically examining the indepth knowledge of Comparative Education; starting with the critical assessment of its origin to the current status as an academic discipline. Attention shall also be directed at discussions on the emerging issues and how they affect education systems. Discussion shall equally be centred on the various determinants/influencing factors of the education character of identified countries. Also, an

exposition on the various methods for studying and researching Comparative Education shall be made.

EDF 922.1 National Systems of Education (Candidates to choose 2 out of 3) (3 Credit Units)

a. Education Systems in Europe

This course will do a comparative study of twentieth and twenty-first century's education systems in some selected national education systems in Europe. Emphasis will be placed on case studies of some specific countries in Europe such as United Kingdom, France, Germany, Italy, Portugal, Belgium, Finland and Spain.

b. Education Systems in Canada and USA

The course will focus on the analysis of education in the two North American countries, examining their peculiar educational characteristics in policy formulation, implementation and effectiveness for their growth and development, while presenting lessons for other countries, particularly the third world countries, to learn and apply for their prosperity.

c. Education Systems in Asia

This course will look at the educational systems of some selected Asian countries with special reference to key issues, challenges and opportunities in relation to the educational innovations of 21st century that have brought the continent to limelight.

EDF 919.2 Gender, Education and Globalisation (3 Credit Units)

The course introduces gender issues in education and development, particularly with reference to developing areas where poverty, high illiteracy rate, unemployment, underdevelopment and related issues are quite common, yet the effort is to achieve partnership in development among and between nations. Specifically, this is expected to provide comparative insights from different socio-cultural backgrounds and help in resolving gender related issues in education.

EDF 923.2 International Approaches to Higher Education (3 Credit Units)

The course will dwell on the impact of globalisation, issues in internationalisation, cross border in Higher Education, Distance Learning, Virtual Learning with reference to importance of student mobility, approaches to research, quality assurance and innovative pedagogical approaches for higher education.

EDF 920.2 Politics and Education from an International Perspective (3 credit units)

This course will examine the interplay and inter relationships between politics and education across the globe. Consideration will centre on how political

forces that help to contribute to or undermine the efficiency and effectiveness of education from global concerns. Emphasis will be placed on how international politics affect decision-making in education at various areas which include early childhood, primary, secondary and higher education, financial agencies, partnerships, administration, quality assurance and policy formulation and implementation.

EDF 913.1 Sociological Perspectives of Education (3 Credit Units)

The course focuses on the foundations and outcomes of education from the sociological point of view, bearing in mind all the stakeholders in education — teachers, parents, pupils/students, administrators and other educational establishments/organisations. Major sociological theories as well as related sociological concepts (such as stratification, discrimination, ethnicity, social mobility, equal opportunity, school violence, bureaucracy and feminism) will be examined in relation to educational practices and outcomes. The relationship between the school and societal institutions will equally be examined. Specific examples will be drawn from different educational establishments as the class progresses. Students will

be made to gather information and provide report on case studies on specific educational practices and their consequences.

EDF 924.1 Seminar in Comparative Education (3 Credit Units)

This requires the candidate to attempt an in-depth study on substantive comparative educational issue. The candidate shall lead a discussion on the selected research topic for presentation. The topic may be the one chosen for the thesis.

EDF 999.2 Thesis (12 Credit Units)

Candidates are required to show evidence and manifest the skills of research competencies through a carefully selected and researchable topic in the area of Comparative Education, for their theses. This shall be an individual research under the guidance of qualified and specialist supervisor(s) in the field. The research work is expected to meet the standard and contribute to existing body of knowledge. The thesis is to be defended before a constituted examining committee, to be chaired by the Head of Department or Chairman of the Departmental Post Graduate Board. In all cases, External Examiner's verdicts shall override all other decisions.

DEPARTMENT OF ADULT AND NON-FORMAL EDUCATION POST GRADUATE DEGREE PROGRAMMES

A. The Master of Education (M.Ed) Programme

Departmental Philosophy for the M.ED Programme

Post-graduate programmes for the award of M.ED in the Department of Adult and Non-formal Education are designed to provide highly skilled manpower to plan, administer and conduct research in the areas of literacy, distance education, community development and environmental adult education in the Private and Public Sectors of our socio-economic system.

Aim and Objectives

I. Aim: The Department of Adult and Non-formal Education offers Postgraduate Programmes leading to the award of Master of Education (M.ED) Degree in Adult Education in the following areas of specialization:

- i) Literacy Education
- ii) Distance Education
- iii) Community Development
- iv) Environmental Adult Education.

II. Objectives: The M.ED programme in Adult and Non-formal Education is designed to:

- a. Provide training for top-level manpower required for teaching and research in Adult and Non-formal Education at the University level and at any other level where Adult Education features.
- b. Develop intellectual and professional competencies required to serve in leadership positions in adult literacy, distance education, community development and environmental education.
- c. Provide useful research skills and methods of application of these skills to achieve meaningful solutions to related problems.
- d. Inculcate in students the love for originality and critical thinking through writing and defence of the M.ED Thesis.

B. Admission Requirements

The following categories of candidates may be admitted on application into the M.ED Programme.

- a. Graduates of the University of Port Harcourt or any other approved Universities who have

obtained an approved degree of Bachelor's degree with at least second class honours lower division in Adult Education.

- b. Candidates with at least second class honours degree in professional field of education.
- c. Graduates in related fields with 2nd class honours degree or above and with at least a merit level pass in the postgraduate diploma in Education. Such candidates and those in (i) above may be required, where necessary, to do some remedial courses as provided below.

C. Duration of the M.ED Programme

The minimum and maximum durations for the M.ED programme shall be as follows:

- i. Full-Time: The programme will last for a minimum of 12 calendar months and a maximum of 36 months.
- ii. Part-Time: The programme will last a minimum of 18 calendar months and a maximum of 48 months.

Mode of Study for M.ED Programme

The Master of Education (M.ED) programme shall be pursued as follows:

- i. Candidates shall be required to take course /work to be examined in written papers together with research work which has to be presented and defended as a thesis.
- ii. The total course work shall be 24 credit hours made up of 12 units/credit hours of core/compulsory courses and 12 credits from the candidate's area of specialization. A maximum of 30 units/credit hours of course/work shall be allowed by selecting other Departmental course based on the advice of students' supervisor.
- iii. Candidates who fail to successfully complete the required number of units may be allowed to repeat the course(s) and/or examinations at the next available opportunity.

E. Fields of Specialization:

The areas of specialization in the M.ED programme are:

- i) Literacy Education
- ii) Distance Education
- iii) Community Development
- iv) Environmental Adult Education.

Remedial Courses

M.ED candidates who have deficiencies in their areas of specialization may be required to take all or some of the following remedial courses selected from the first degree programmes.

Course Code	Course Title
DAE 100.1	Introduction to Adult and Non-formal Education
DAE 101.1	Introduction to Literacy Education
DAE 202.1	Fundamentals of Distance Education
DAE 300.1	Adult Education and Community Development
DAE 303.1	Introduction to Environmental Adults Education
DAE 403.2	Adult Education and Socio-Economic Development in Nigeria

Core/Compulsory Courses for all M.ED Students:

All the under listed` core courses and project must be taken by all students.

First Semester

Course Code	Course Title	Units
ADE 801.1	Theoretical Perspectives in Adult Education	3
ADE 839.1	Research in Adult Education	3

Second Semester

Course Code	Course Title	Units
ADE 802.2	Advanced Seminar 1	3
ADE 803.2	Statistical Methods & Research Techniques in Adult Education	3
ADE 890.2	Project Report/Thesis	6

Masters Courses in Areas of Specialization

A. Adult Literacy Education

First Semester

Course Code	Course Title	Units
ADE 811.1	Principles and Practices of Literacy Education	3
ADE 812.1	Administrative and Policy of Literacy Education	2
ADE 813.1	Curriculum/Programme Planning in Literacy Education	2

Second Semester

Course Code	Course Title	Units
ADE 814.2	Instructional Material in Literacy Education	3
ADE 815.2	Comparative Studies in Literacy Education	2

B. Distance Education Programme

First Semester

Course Code	Course Title	Units
ADE 821.1	Current Issues in Distance Education	3
ADE 822.1	Planning and Administration of Distance Education	3
ADE 823.2	Theory and Practices of Distance Education	2

Second Semester

Course Code	Course Title	Units
ADE 824.2	Mass Media in Distance Education	3
ADE 825.2	Comparative Studies in Distance Education	2

C. Community Development Programme

First Semester

Course Code	Course Title	Units
ADE 831.1	Organization and Management of Community Development	3
ADE 832.1	Sociology of Adult Education and Community Dev.	2
ADE 833.1	Comparative Community Development	2

Second Semester

Course Code	Course Title	Units
ADE 835.2	Mobilization and Human Resources Development in Community Development	3
ADE 834.2	Community Development Programmes in Africa	2

D. Environmental Adult Education

First Semester

Course Code	Course Title	Units
ADE 836.1	Principles and Practices of Environmental Adult Education	3
ADE 837.1	Programme Planning and Implementation of Environmental Adult Education	2
ADE 838.1	Approaches to Environmental Adult Education	2

Second Semester

Course Code	Course Title	Units
ADE 840.2	Methods and Materials for Environmental Adult Education	3
ADE 841.2	Networking in Environmental Adult Education	2

COURSE DESCRIPTION

Core/Compulsory Courses for all M.Ed Students

ADE 801: Theoretical Perspective in Adult Education

The course exposes students to the Philosophical, Psychological and Sociological trends and orientation in Adult Education. Modern trends and approaches in these areas are emphasized as they affect adults in the society. The implications of life-long education in the field of adult education shall be treated. (3units).

ADE 802: Advanced Seminar I

Students will be required to make presentation(s) from selected topics in their fields of specialization in Adult Education. (3units).

ADE 803: Statistical Methods and Research Techniques in Adult Education

The scope of this course covers the use of descriptive and inferential statistics in the analysis of data and in testing research hypotheses. (3units).

ADE 839: Research in Adult Education

Students in this course shall be properly grounded in the methods and techniques in various aspects of research in Adult Education. Emphases shall be placed in students' areas of specialization. (3units).

ADE 890: Research Thesis Writing

A candidate is expected, under a Departmental supervisor, to undertake an in-depth study of research problem(s), in his field of specialization in adult education that is of interest to him. (6units).

II. Courses in Areas of Specialization

A. Literacy Education

ADE 811: Principles and Practices of Literacy Education

The course examines the origin, growth and development of Adult Literacy in developed and developing countries. A study of various literacy education methods and techniques and the role of governmental and Non-governmental Organizations/agencies in Literacy will also be examined. (3units).

ADE 812: Administration and Policy on Literacy Education

This course focuses on the policy and administration of literacy activities at the state and Federal levels as well as the provision of human and material resources for literacy education (2 units).

ADE 813: Curriculum/Programme Planning in Literacy Education

This emphasizes the basic curriculum/programme planning and design in adult literacy education. Curriculum design models by Houle, Maslow, Knowles, etc for programming in Adult Education will be stressed (2 units).

ADE 814: Instructional Materials in Literacy Education

In this course emphasis is laid on the need, production and use of basic literacy and post-literacy instructional materials including practical project work in primer writing by students (3 units).

ADE 815: Comparative Studies in Literacy Education

The emphasis in this course is on comparative studies in literacy education programmes in developed and developing countries. Emphasis shall be placed on literacy policy, content, funding, man-power and the delivery system (2 units).

B. Distance Education

ADE 821: Current Issues in Distance Education

This course focuses on the analysis and review of specific case studies and major issues in distance education. Computer education course designs and packaging, teaching and learning strategies and other current issues in distance education, etc will be

emphasized. Contemporary trends in programming, funding, evaluation and problem-solving techniques will also be discussed (3 units).

ADE 822: Administration and Planning of Distance Education

The principles of management and planning of distance education will be the main focus on this course. The dynamics in planning, coordinating, monitoring, directing and evaluating distance education will also be emphasized.

ADE 823: Theory and Practice of Distance Education

This is an advanced course designed to expose students to the general theory and practices of distance education. It will examine the principles, practice and problems underlying distance education (2 units).

ADE 824: Mass Media in Distance Education

This course emphasizes the importance of the mass media in distance education. It exposes students to the innovative ideas in communication technologies such as the radio, TV, computer, Internet, etc which have turned the world into a global village.

ADE 825: Comparative Studies in Distance Education

This course examines the different forms of distance education in developed and developing countries with a view to improving our own. It will also examine the cross-cultural settings of distance education with particular reference to developing countries.

C. Community Development

ADE 831: Management and Organization of Community Development

This course emphasizes the study of the classical and current theories in the management and organization of Community Development. In all, the principles and practice of Management of Community Development Programme in advance and developing countries will be highlighted (3 units).

ADE 832: The Social-Psychology of Community Development

This course will highlight the advanced theories of Developmental Psychology as they relate to community development. Cultural antecedents creating problems in Community Development, especially in Nigeria, shall be discussed. Candidates will require doing some fieldwork to relate theory to practice (2 units).

ADE 833: Comparative Community Development

This involves a study of various forms of planned change programmes and how they are associated with human groups in some selected countries. The philosophy, ideology and objectives associated with the planned change programmes and problems encountered will be highlighted to facilitate the evolution of alternative approaches (2 units).

ADE 834: Community Development Programmes in West Africa

This course emphasizes the current strategies in community development programmes in selected West African countries. The participation of governmental, non-governmental and inter-governmental organizations both locally and externally (e.g. NNCAE, UNDP, UNICEF, etc) in the structuring of community development programmes shall be brought into focus (2 units).

ADE 835: Mobilization and Human Resources Development in Adult Education and Community Development

Innovative techniques and strategies in mobilization and human resource development in adult education and community development shall be the main focus of this course. Emphasis will be laid however on the complementarity of adult education and community development in the promotion and sustenance of human welfare (3 units).

D. Environmental Adult Education

ADE 836: Principles and Practice of Environmental Adult Education

This is an advanced general course designed to expose students to the global objectives of Environmental Education. Emphasis is placed on the socio-cultural context of environmental education. Again, the provisions of agenda of the Rio 92 conference and International Treaty on Environmental Education for sustainable societies and global responsibilities will constitute the pivot of the discussion (3 units).

ADE 837: Programme Planning and Implementation In Environmental Adult Education

In this course the importance of Needs assessment and Awareness Programme is brought into focus for effective planning and implementation of situation-specific environmental adult education programmes. Factors that may impede the development of this necessary agenda will be discussed with a view to providing appropriate solutions that will lead to

selection of priorities and creation of the necessary learning environment (2 units).

ADE 838: Approaches to Environmental Adult Education

Various approaches to environmental Adult Education are discussed here with a view to exposing the student not only to existing theories but also to the need for relevance in adopting planning and implementation strategies for environmental adult education. Personnel recruitment and training for Adult Education and Community Development shall be exposed to students (3 units).

ADE 840: Methods and Materials for Environmental Adult Education

The methodologies for effecting environmental adult education will be discussed in this course. In all, the importance of group problem-solving methods which highlight the issue-oriented and problematic nature of the content of environmental adult education will be stressed. The course will also consider identification of resource materials needed for environmental adult education (3 units).

ADE 841: Networking in Environmental Adult Education

The importance of exchange of Experience between environmental specialists in Adult Education and their counterparts in this field will be highlighted. The course also will examine the necessity for cooperation between adult education and environmental organizations both in the public and private sectors with a view to developing joint initiatives with external agencies and multinationals (2 units).

DOCTORAL (Ph.D) DEGREE PROGRAMME

Departmental Philosophy for the Ph.D Programme

Postgraduate programmes for the award of Ph.D. in the Department of Adult and Non-formal Education are designed to provide highly skilled manpower to plan, administer and conduct advance research into Nigerian mass literacy efforts, distance education, community development and private and public sectors in our advancing society.

Aim and Objectives

A. AIM: The Department of Adult and Non-formal Education offers Postgraduate Programmes leading to the award of Doctor of Philosophy in Education (Ph.D.) Degree in

Adult Education in the following areas of specialization:

- i. Literacy Education
- ii. Distance Education
- iii. Community Development
- iv. Environmental Adult Education.

B. Objectives: The Ph.D. programme in Adult and Non-formal Education is designed to :

- i. Provide training for top-level manpower required for teaching and research in Adult and Non-formal Education at the University level and at any other level where Adult Education features.
- ii. Develop intellectual and professional competencies required to serve in leadership positions in adult literacy, distance education, community development and environment education.
- iii. Provide useful research skills and methods of application of these skills to achieve meaningful solutions to related problems.
- iv. Inculcate in students the love for originality and critical thinking through writing and defence of the Ph.D. Thesis.

Admission Requirements for the Degree of Doctor of Philosophy (Ph.D.)

The following categories of candidates may be admitted on application:

- i) Graduates of the University of Port Harcourt or those from other approved Universities who have obtained an approved degree of Master of Education appropriate for their proposed areas/fields of specialization with a minimum of 3.50 CGPA, on a five point scale. In addition, a candidate must have gone through satisfactory research work which must have formed part of his/her Masters Degree programme.
- ii) Candidates who hold qualifications other than the above but which may be considered acceptable by the Graduate Studies Board of the Faculty of Education on recommendation of the Department of Adult and Non-formal Education.

A. Duration of the Ph.D. Programme

- i) **Full-time:** A Full-Time student would be required to spend a minimum of 24 months and a maximum of 60 months

ii) **Part-Time/Sandwich:** A part-time Sandwich student would be required to spend a minimum of 60 months and a maximum of 84 months.

B. Mode of Study: Award of a Ph.D. Degree in Adult and Non-formal Education shall be partly based on the presentation and defence of a comprehensive research work embodied in a Dissertation. Candidates will also be required to offer a minimum of 15 units of course work (9 units in their areas of specialization and 6 units of core/compulsory courses). However, candidates may register up to a maximum of 21 credit hour course work by selecting other Departmental courses on the advice of their supervisors. Part-time/Sandwich students would be required to register in one year not more than 60% of the minimum course work required for the award of the degree.

Fields of Specialization

The areas of specialization in the Ph.D. programme are:

- A. Literacy Education
- B. Distance Education
- C. Community Development
- D. Environmental Adult Education.

C. Core/Compulsory Courses for all Ph.D. Students:

Course Code	Course Title	Units
ADE 901	Advanced Seminar II	3
ADE 902	Advanced Statistical Methods & Research Techniques in Adult Education	3
ADE 990	Dissertation Writing	6

D. Ph.D. Courses in Fields of Specialization:

The following Ph.D. level courses shall be offered in the Department of Adult and Non-formal Education:

A. Ph.D. in Literacy Education

Course Code	Course Title	Units
ADE 911	Advanced Course in Administration of Adult Literacy Education	3
ADE 912	Literacy Education & Socio-Political Development	3
ADE 913	Advanced Literacy Education Programming	3

B. Ph.D. in Distance Education

C. First Semester

Course Code	Course Title	Units
ADE 921	Advanced Extension Education	3
ADE 922	Emerging Trends in Distance Education	3
ADE 923	Advanced Comparative Studies in Distance Education	3

D. Ph.D. in Community Development

Course Code	Course Title	Units
ADE 931	Community Development Process	3
ADE 932	Integrated Community Development	3
ADE 933	Community Development, Social Change and Adult Education	3

E. Ph.D. in Environmental Adult Education

Course Code	Course Title	Units
ADE 934	Community-Based Environmental Education	3
ADE 935	Monitoring and Evaluation of Environmental Adult Education Programme	3
ADE 936	Environmental Adult Education and Socio-Economic Development in Africa	3

Course Description

Core/Compulsory Courses for all Ph.D. Students:

ADE 901: Advanced Seminar II:

Students will be exposed to current issues in adult education administration, especially in their areas of specialization. Special attention will be paid to the implications of life long learning for socio-economic changes. The course is also intended to broaden the students' knowledge base about component disciplines within adult education through provision of opportunity for the students to present and discuss issues and problems that emerge from their chosen areas of specialization. Students shall be expected to present a seminar paper each in their fields of study (3 units).

ADE 902: Advanced Statistical Methods and Research Techniques in Adult Education

Students shall be oriented to advanced scientific research techniques, concepts and approaches, including advanced correlation-statistics; interrelationships, predicting and estimating in regression analysis; and inferential statistics for testing hypotheses (3 units).

ADE 990: Dissertation

Students should be expected to produce a comprehensive research work in their fields of specialization (6 units).

A. Ph.D. in Literacy Education

ADE 911: Advanced Course in Administration of Adult Literacy Education

The principles and practices of administration of adult literacy education will form the main focus of this course. Effectiveness in the use of non-traditional means in planning, designing, programming, communicating and other aspects of management functions will be highlighted (3 units).

ADE 912: Literacy Education and Socio-Political Development

Students shall be exposed to adult education and social theories of development including sociological analysis of the relationship between adult education and socio-political and economic institutions of literacy education in the light of Nigerian development. Adult literacy education as a factor of socio-political change and vice versa shall be treated (3 units).

ADE 913: Advanced Literacy Education Programming

Various perspectives of adult literacy programming with special reference to the role of international organizations will be examined. The policy, contemporary issues and problems of development shall also be highlighted with reference to history of education (3 units).

B. Ph.D. in Distance Education

ADE 921: Advanced Extension Education

Training of professionals as extension personnel and as change agents of group and organizational behaviour shall be stressed. Application of diffusion theory and other innovative theories as a practical project model shall be treated using participatory research approach (3 units).

ADE 922: Emerging Trends in Distance Education

Identification of new directions and emerging trends in Distance Education, computer-programming, communication skills and techniques would be the main focus (3 units).

ADE 923: Advanced Comparative Studies in Distance Education

The purpose, significance, process and evaluation of distance education programmes in selected developed and developing countries will be highlighted and compared with the situation in Nigeria. The essence will be to adopt the most salient approaches to improve Distance Education in the country (3 units).

C. Ph.D. in Community Development

ADE 931: Community Development Process

Community development will be examined as an educational process and as an instrument of social policy. The importance of good leadership in community development shall also be stressed (3 units).

ADE 932: Integrated Community Development

Students shall be exposed to the meaning and purpose of the integrated approach to community development. The disadvantages of compartmentalization will also be highlighted (3 units).

ADE 933: Community Development, Social Change and Adult Education

Analysis of methods and approaches in community learning; adult education as a community development process, the dynamics of community changes, the dynamics and the elements of development as well as the difference between change, progress and development shall be the major components of this course (3 units).

D. Ph.D. in Environmental Adult Education

ADE 934: Community-Based Environmental Adult Education

The principles of CAMPFIRE (Communal Areas Management Programme for Indigenous Resources) will be x-rayed in this course. Experience of some countries, particularly in Africa, will serve as case studies, (especially in the areas of women education, mass literacy and health programmes) (3 units).

ADE 935: Monitoring and Evaluation of Environmental Adult Education Programme

The importance of monitoring and evaluation of environmental adult education programmes will be explained. The students should be exposed to the techniques for monitoring and methods of evaluation of environmental adult education programmes (3 units).

ADE 936: Environmental Adult Education and Socio-Economic Development in Africa

This course examines in great details the link between environmental adult education and sustainable socio-economic development in Africa. Here special attention will be drawn to current energy crisis experienced virtually in all continents, but particularly in drought-stricken Africa. The course will highlight the need for adults in the fast changing African communities to manage their own educational, cultural, scientific and technological resources and to direct them towards a form of development of which they will decide the content and priorities in accordance with their experience and particular ways of life (3 units).

Notice for all Post Graduating Students

Before any presentation of completed work is done by post graduating students either at the Faculty or Post Graduate School, the Departmental Graduate Board must have met and looked at what is to be presented by the students a week before presentation. The students who are to present must bring the copies of their work to be presented to the Graduate Board precisely the Thursday preceding the one scheduled for presentation at the Faculty or Post Graduate School. The decision was arrived at for quality control and therefore must be complied with. The Graduate Board also agreed that whenever we have proposed defence, all academic staff and Post Graduate students of the Department should be invited to be present.

That once students are admitted for Masters Degree, those to offer remedial courses must take and pass the courses first before registering for their Master Programme.

DEPARTMENT OF EDUCATIONAL PSYCHOLOGY, GUIDANCE AND COUNSELLING

1. Programmes Available

The Department of Educational Psychology, Guidance and Counselling offers professional programmes leading to the award of M.Ed degree in Educational Psychology, Guidance and Counselling with specialization in the following areas:

- i. Educational Psychology
- ii. Guidance and Counselling
- iii. Educational Measurement and Evaluation

2. Objectives

The graduate programmes of the Department are designed:

- a. To develop in students the sense of originality as well as analytical and critical thinking
- b. To produce high caliber specialists in the specified areas of specialization.

3. Admission Requirements

Admission to the programme shall be in accordance with the general regulations of the School of Graduate studies.

4. Duration of programmes

Full-time and Part-time programmes as provided in the general regulations.

5. Course Requirements

Course requirements are as provided in the general regulations.

6. Course Assessment

As in the general regulation

7. M.Ed Thesis

As in the general regulation

8. General University Regulations

All the foregoing regulations are subject to the general University regulations governing higher degree programmes.

Courses for the M.Ed,

(i) Core Courses

All M.Ed candidates must take all the following seven Core Courses

Course Code	Course Title	Credit Unit
EDP 801.1	Human Learning	3
EDP 804.1	Research Methods	3
EDP 809.1	Theories of Counselling and Psychotherapy	3
EDP 815.1	Intelligence, Aptitude and Personality Testing	3

SGS 801.1	ICT and Research Method	2
SGS 801.2	Management and Entrepreneurship	2
EDP 820.3	Dissertation	6

(ii) Courses in Areas of Specialization

All M.Ed candidates are to do the four courses and one seminar from any of the following areas of specialization.

(a) Educational Psychology

Course Code	Course Title	Credit Unit
EDP 802.2	Human Growth and Development	3
EDF 803.2	Psychology and Teaching	3
EDP 805.2	Problems of Adolescent Development	3
EDP 806.2	Seminar	3
EDP 807.2	Principles and Techniques of Behaviour Modification	3

(b) Guidance and Counselling

Course Code	Course Title	Credit Unit
EDP 807.2	Principles and Techniques of Behaviour Modification	3
EDP 808.2	Principles and Techniques of Guidance and Counselling	3
EDP 810.2	Career Development and Occupational Information	3
EDP 811.2	Seminar	3
EDP 819.2	Advance Practicum in Guidance and Counselling	3

(c) Educational Measurement and Evaluation

Course Code	Course Title	Credit Unit
EDP 812.2	Advance Educational Statistics	3
EDP 813.2	Educational Evaluation	3
EDP 814.2	Advanced Educational Measurement and Evaluation	3
EDP 816.2	Seminar	3
EDP 817.2	Data Processing with Computer	3

(iii) Seminars

Compulsory for all students, but candidates should take seminar topics from their respective areas of specialization.

COURSE DESCRIPTIONS

EDP 801.1 Human Learning

Ways of studying learning process. Determining and building readiness. Individual differences motivation basic elements in human arousal and direction of energies; applying principles of motivation in teaching. Teaching of permanent and meaningful learning- providing meaningfulness; reducing interference for better retention; conceptual learning; problem-solving; creative thinking. Transfer of learning-teaching for transfer.

EDP 802.2: Human Growth and Development

The biological and social bases of behaviour, physical, mental, emotional, social and moral development from birth to maturity. Selected personality theories with reference to personality development. Current controversial issues in child development, intensive study of the African child.

EDP 803.2: Psychology and Teaching

Educational Psychology and decision making, educational psychology and the aims of the school. Educational casualties and the need for talent. Victims of inadequate learning situations. Attitudinal failures, making educational psychology functional.

EDP 804.1: Research Methods

The course is designed to acquaint students with the methodology of conducting educational research. Topics to be discussed will include the formulation of research problems, literature review, hypothesis testing, sampling methods, techniques of gathering data, analysis and interpretation.

EDP 805.2: Problems of Adolescent Development

Adolescence as both biological and social in nature. Adolescence as transition period. Developmental tasks of adolescents. Physical and personality needs of adolescents. Intellectual, social and heterosexual development, current problems of adolescents; delinquency, alcohol and drugs, teenage pregnancy, school dropout.

EDP 806.2: Seminar

Focuses on individual studies, presentation of papers on projects, research plan or research results in selected aspects of:

- a) Human learning
- b) Human growth and development

EDP 807.2: Principles and Techniques of Behaviour Modification

Principles and techniques for behaviour modification, including systematic application of the techniques to specific common behaviour problems in the Nigerian society.

EDP 808.2: Principles and Practice of Guidance and Counselling (including practicum)

Principles, techniques, procedures and appraisal in educational vocational and personal counselling various forms of assessment tools, including achievement tests, aptitude tests, inventories, observation, will be discussed. The course will also review typical illustrative cases from research. The practicum is designed to give students practice in guidance and counselling skills in diagnosis, assessment and identification of needs. Counselling interviews recorded on audio-tapes will be analysed in terms of counselor behaviour and responses to the client.

EDP 809.1: Theories of Counselling and Psychotherapy

An overview of the various approaches to counselling and psychotherapy. An examination of selected theories from these approaches, e.g. Ellis, Bollard and Miller, Alexander, Roders. Their implications for counseling in Nigerian society.

EDP 810.2: Career Development and Occupational Information

An overview of the basic objective of vocational education. The role of theory in vocational guidance. A critical look at selected theories of vocational development, relationship between vocational education and manpower needs in Nigeria. An examination of decision making process, occupational information preparation for jobs and the need for vocational counseling.

EDP 811.2: Seminar

Individual research projects on approved topics to be undertaken by students with the cooperation of their supervisors.

EDP 819.2: Advance Practicum in Guidance and Counselling

Advanced practicum in guidance and counseling students are exposed to advanced skills in conducting practicum. Students are expected to go on field work for practicum or organize working groups for practicum purposes. In each case, the students are thoroughly supervised by their lecturers based on the extent of delivering of skills.

EDP 812.2: Advance Educational Statistics

Basic concepts and terms in inferential statistics. Hypotheses formulation. Testing and inference. Testing difference between means and proportions/ percentages. Parametric statistics including t-test, z-test, analysis of variance (ANOVA), analysis of covariance (ANCOVA), simple linear, multiple

linear, and curvilinear regression analyses, factor analysis, path analysis. Discriminant analysis, time series, etc. correlational statistics including Pearson, Spearman rho, point biserial, Phi-coefficient, Kendal's coefficient of concordance, partial correlation, multiple' correlation, biserial correlation, etc. Tests of significance for difference correlational statistics. Non-parametric statistics including chi-square, Kolmogorov/Siminov test, z-test of proportion, Vileoxon test, sign test, runs test, median test, Mann Whitney test, Kruskal-Wallis test, Friedman test, etc. The power of a test, post hoc tests. Application of various statistical concepts in education.

EDP 813.2: Educational Evaluation

Strategies of evaluation of educational programmes. Procedures for assessment of needs. Development of behavioural objectives, process monitoring, and interpretation of outcomes. Experimental designs and statistical procedures particularly applicable to evaluation.

EDP 814.2: Advanced Educational Measurement and Evaluation

Meaning of measurement and evaluation. Tests and their types/classification, importance and criticisms of tests, social and ethical implications of testing. Test bias, item bias, qualities of measurement and evaluation instruments. Development and validation of the norm-referenced tests. Development and validation of criterion-referenced tests. Administration of tests, test score profiles and profile analysis. Analysis and interpretation of test scores using basic descriptive statistics and standard scores. Continuous assessment. Scaling techniques, construction and standardization of affective and psychomotor measure/instruments. Contemporary issues in the assessment of affective and psychomotor behaviours, accountability and evaluation, test theories.

EDP 815.1: Intelligence, Aptitude and Personality Testing

Theories of intelligence and aptitude testing, group and two-factor theory of intelligence. Construction and validation of intelligence and aptitude tests, factors related o measurement of these tests. Theories of personality testing, personality interest inventories; construction and validation of personality tests; attitude-scaling; etc problems involved in personality testing.

EDP 816.2: Seminar

Topics to be selected from the area of specialization.

EDP817.2: Data Processing with Computer

This course deals with the use of computers in test development and data analyses. Areas to be covered

include introduction to computers and operating systems; computing with the aid of statistical package for the social sciences (SPSS) and other soft wares; and data processing considering various statistical analysis. Emphasis should be placed on data collection from the field, programming and interpretation. Use of computers in test development, item analysis and scoring should be treated.

EDP 820.2: Dissertation

Candidates are required to carry out a research in their various areas of specialization which will be supervised as required by the school of graduate studies. Thereafter the students will defend the finished dissertation at different stages vis-a-vis Departmental Board and External Oral Examination, which will take place before an appropriately constituted Board of Examiners Chaired by the Dean of graduate studies.

Higher Degree Programmes

1. Programmes Available

The department of Educational psychology, guidance and counseling offers professional programmes leading to the award of the Ph.D degree in the following areas of specialization:

- i) Educational psychology
- ii) Guidance and counselling
- iii) Educational measurement and evaluation

2. Objectives

The graduate programmes of the department are designed:

- a) To produce higher-caliber specialists in the areas of specialization, for higher educational institutions, commissions, boards, ministries and other appropriate bodies;
- b) To develop in students the sense of originality as well as analytical and critical thinking through the writing of a doctoral dissertation.

3. Admission Requirements

- i) Admission into the Ph.D programme is open to graduates with M.Ed the appropriate areas of specialization from the University of Port Harcourt or any other recognized universalities, and who must have an average of 60% or its equivalent grade in the University of Port Harcourt.

ii) Each applicant must:

- (a) Complete the prescribed application form which is obtainable from the school of graduate studies.
- (b) Provide two letters of recommendation, one of which must be from his/her employer (if employed), and the other from the university where his/her bachelor's degree was awarded;
- (c) Submit a two-page-A-4 typed (double-spaced) essay on his/her objectives and goals in seeking

- admission to the higher degree; and
 (d) Be found suitable for admission after an interview by the higher degrees committee of the Faculty of Education.

4. Duration of Programmes

(a) Full-Time

The Ph.D programme will extend over a minimum of 2 years (4 semesters), but will normally not exceed 3 years (6 semesters), except by special permission of the Faculty Graduate Studies Committee.

(b) Part-Time

The duration of the part-time programme will normally be twice the length of the relevant full-time programme.

5. Course Requirements

Candidates will be required to complete a minimum of 12 credit hours. This will be made up of 3 taught courses in the first semester, and 1 seminar in the second semester. The rest of the period will be spent on research and the writing of the Ph.D Thesis.

6. Courses Assessment

- (a) Each course will be assessed on the basis of written examinations, and continuous assessment.
 (b) Candidates will be required to obtain a minimum pass grade of C in each prescribed course and a pass grade in the dissertation.

7. Ph.D Examination

- a) During the first semester of the second year, the candidate, in consultation with the supervisor, will choose a thesis topic to be approved by the Faculty Graduate Studies Committee and registered with the school of graduate studies board.
 b) The thesis shall be defended orally before aboard of School of Graduate Studies examiners in accordance with the regulations.

8. General University Regulations

All the foregoing regulations are subject to the general university regulations governing Ph.D degree programmes.

9. Course for the Ph.D Degree

A. Educational Psychology

i. Any two of the following:

Course Code	Course Title	Credit Unit
EDP 901.1	Theories of personality	3
EDP 902.1	Learning theories and their educational implications	3
EDP 903.1	Abnormal psychology	3

EDP 904.1	Psychology of exception children	3
-----------	----------------------------------	---

ii. Compulsory courses

Course Code	Course Title	Credit Unit
EDP 905.1	Advanced Research Methods in Education	3
EDP 906.2	Seminars in Educational Psychology	3
EDP 920.2	Thesis	12

B. Guidance and Counselling

i. Any two of the following:

Course Code	Course Title	Credit Unit
EDP 907.1	Appraisal techniques in guidance and counseling	3
EDP 908.1	Organization and admin, of Guidance services in schools	3
EDP 910.1	Vocational development and career information	3

ii. Compulsory Courses

Course Code	Course Title	Credit Unit
EDP 905.1	Advanced Research in Education	3
EDP 909.1	Advanced supervised practicum in guidance and counseling (Audited)	3
EDP 911.2	Seminar in Guidance and counseling	3

C. Educational Measurement and Evaluation

i. Any two of the following:

Course Code	Course Title	Credit Unit
EDP 912.1	Test design construction, administration processing	3
EDP 913.1	Measurement theory	3
EDP 914.1	Microcomputers in test development and analysis	3
EDP 915.1	Application of tests to education	3

ii. Compulsory Course

Course Code	Course Title	Credit Unit
EDP 905.1	Advanced Research methods in Education	3

EDP 916.2	Seminar in Educational Measurement and Evaluation	3
-----------	---------------------------------------------------	---

10. Descriptions

EDP 901.1 Theories of Personality

This course delves into the major theories of personality. The course is arranged in four parts, based on historical traditions in the field of personality. These are

1. The psychoanalytic school as represented by Sigmund Freud;
2. The humanistic school as represented by Abraham Maslow;
3. The behaviouristic school as represented by B.F. Skinner;
4. The cognitive school as represented by B.J. Piaget. Each approach will be examined in relation to its educational implications.

EDP 902.1 Learning Theories and their Educational Implications

This course will critically examine the various theories of learning:

- a) Behavioural learning theories
- b) Humanistic learning theories
- c) Social learning theories
- d) Cognitive learning theories, etc.

Each theory will be looked at with its educational implications or its practical applicability.

EDP 903.1 Abnormal Psychology

Students will be made to analyse the various categories of abnormal behaviour, the concept of, and approaches to: the study of abnormal behaviour; the clinical picture of each of type of psychopathology mentioned, its etiological factors and treatment procedures. Emphasis will be placed on developmental, neurotic or anxiety, psychotic, psycho-sexual, delinquent, personality, organic and mental disorders and so on.

EDP 904.1 Psychology of Exception Children

This course will critically look into the issues involved in the psychology of exceptional children. The course will cover concepts as they relate to exceptional children in education; the gifted, the handicapped, and the disabled. An overview of the various exceptionalities; giftedness, mental retardation, learning disabilities, behaviour disorders, visual and auditory impairments, speech disorders will be treated. The characteristics of each exceptionality, problems associated with exceptional conditions, problems of labeling, and psychosocial implications of the various forms of educational placement will be examined.

EDP 905.1 Advanced Research Methods in Education

This course deals with advanced methods used in Educational research. Topics that will be covered include: types of research designs with emphasis on statistical analysis and knowledge of the use of microcomputers, educational data analysis. A critical look at the issue of validity in experimental research will also be treated.

EDP 906.2 Seminar in Educational Psychology

Each student would be required to select a topic from educational psychology (subject to the approval of the student's supervisor) for presentation and discussion at the departmental level.

EDP 907.1 Appraisal Techniques in Guidance and Counseling

This course will cover principles of test development and construction, planning, conduct, and use of the group and individual test in counseling and guidance. Selection, administration, scoring, interpretation, reporting, and preparation of intellectual, vocational, and personality tests. Non-test appraisal techniques will also be covered.

EDP 908.1 Organization and admin, of Guidance Services in Schools

This course will critically analyses the rationale for guidance services in educational and non-educational settings in Nigerian society. It will focus on the general components of administration and on the components of a guidance programme. The course will also examine the types and qualifications of personnel in the programme administration. It will discuss the relevant organizational and administrative models and strategies. Problems of organization and administration of guidance programmes and services in Nigeria will also be examined.

EDP 909.1 Advanced Supervised Practicum in Guidance and Counseling

This is a course designed to enable students to match theory with practice. Students will practice at the various levels of our educational system and in other relevant social settings. Practice in case studies and reporting will be part of the course.

EDP 910.1 Vocational Development and Career Information

A study of theories of vocational development, occupational choice, vocational behaviour and adjustment, emphasizing the place of career information and awareness. Integration of the various vocational theories, bringing into focus the multidimensional nature of vocational choice will be examined.

EDP 911.2 Seminar in Guidance and Counseling

Each student would be required to select a topic from educational guidance and counselling (subject to the approval of the student's supervisor) for presentation and discussion at the departmental level.

EDP 912.1 Test Design Construction, Administration Processing

This course deals with the critical steps involved in test construction. The course covers defining and assessing educational objectives; planning the objective test; writing the test items; gathering analyzing and using data on test items; of producing the test and test administration. Using computers in that scoring reporting and analysis will also be treated.

EDP 913.1 Measurement Theory

This course covers the theoretical details of educational measurement of traits. The course will encompass the nature of measurement in education, the concepts of reliability, including methods of estimating reliability, the concepts of validity and types of validity (content, construct and predictive validity), using validity information and factors affecting reliability and validity. Item response theory, including Research measurement models and scaling methods (Likert and Thurnstone scales) will also be treated.

EDP 914.1 Microcomputers in Test Development and Analysis

This course deals with the use of microcomputers in test development and analysis. Areas to be covered include: Introduction to microcomputers, operating systems (MS DOS and Windows) environment, and

computer statistical applications including SPSS & SAS. The use of computers in test development, item analysis, scoring etc. will be treated. Using microcomputer for data analysis, computing and monitoring of test results will also form part of the course.

EDP 915.1 Application of Tests to Education

This course will critically look at the applications tests to education. Topics to be covered include: Use of tests instruction; Use of measurement in selection and placement, and evaluation of educational outcomes.

EDP 916.2 Seminar in Educational Measurement and Evaluation

Each student will be required to select a topic from educational measurement and evaluation (subject to the approval of the student's supervisor) for presentation and discussion at the departmental level.

EDP 920.2 Thesis

Candidates are required to carry out a research in their various areas of specialization which will be supervised by two lecturers as required by the school of graduate studies. Thereafter the students will defend the finished thesis at different stages vis-a-vis Departmental Board, Faculty Board, Graduate School and External Oral examination, before an appropriately constituted Board of Examiners chaired by the Dean of Graduate Studies.

ACADEMIC STAFF

DEPARTMENT OF HEALTH PROMOTION, ENVIRONMENTAL AND SAFETY EDUCATION

MASTERS DEGREE PROGRAMMES IN HEALTH EDUCATION

The Department offers professional programmes leading to the award of M.Sc. (Ed) Degree in Health Education and Promotion

Areas of Specialization:

- 1) Community Health Education
- 2) Occupational Health and Safety Education
- 3) Environmental Health and Safety Education
- 4) School Health Education

Objectives

The objectives of the Masters Degree Programme in Health Education and Promotion include:

1. To offer students an in-depth academic foundation and professional skills for the understanding and practice of Health Education and Promotion;
2. To develop competence and expertise in the teaching of Health Education in Secondary Schools, and Schools of Health Technology, University and Research related institutes;
3. To be better equipped to identify, analyse and initiate appropriate actions to improve public / community health in developing countries;
4. To provide managerial and administrative leadership in Health Education and Promotion as components of Primary Health Care, health agencies (National and International), industrial/occupational health and Environmental Health and Safety;
5. To serve as professional health educators in public and private co-operations such as WHO, UNICEF and other related local and global organizations.

1) Admission Requirements

For the degree of M.Sc. (Ed) in Health Education and Promotion, the following categories of candidates may be admitted:

- a) Second Class Honours Degree, lower division from a recognized University in Health Education or Health and Human Kinetics (Integrated major).
- b) A degree in Medicine or appropriate medical sciences; Nursing or Advanced Graduate Diploma in Health Education (AGDHE).
- c) Candidates with Second class Honours Degree in Biological Sciences, or Science Education, Pharmacy, Sociology or related disciplines after having obtained the Nigerian Certificate in Education (NCE) in Health Education or Human Kinetics and Health Education (Integrated major)-such candidates may be required to take additional courses in Health

Education as may be prescribed by the Department.

2) Duration of Programme

i) Full-time

The M.Sc. (Ed). Programme in Health Education and Promotion shall extend for a minimum of 12 calendar months and a maximum period of 18 calendar months.

ii) Part-Time (Sandwich)

The duration of the part-time M.Sc. (Ed) programme shall normally be twice the length of the relevant full-time study.

3) Programme Requirement

The programme requirements shall be as prescribed by the University, which also includes the following:

- i) The M.Sc. (Ed) programme shall comprise
 - a) Basic core courses
 - b) Areas of Specialization Core Courses
 - c) Elective Courses
- ii) The programme, requires a minimum of 30 Credit units comprising course in the Core and Specialization areas and shall be for a Research Seminar, 6 units, (The Thesis, and 3 units for practicum/Field experience where applicable).
- iii) The students shall also select a minimum of two graduate level courses in related programme course from other Faculties or Departments. The grades from these courses will not be used in computing the students' Cumulative Grade Point Average (CGPA). However, students are required to pass the courses with at least a grade of C.

Grading Scale: The grading for M.Sc. (Ed) and Ph.D. programmes shall be as follows:

70 and above	–	A – 5.00 points
60 – 69	–	B – 4.00 points
50 – 59	–	C – 3.00 points
0 – 49	–	F – 0 points

Course Assessment

- i) Each course/seminar shall be assessed on the basis of written examination or research (Papers) or both,
- ii) To qualify to write the Thesis, a minimum of 3.0 (C) Grade Point Average is required for graduation,
- iii) A final oral examination shall be taken by a candidate over the thesis on completion of the course work. The senate on the recommendation of the Faculty Graduate Committee shall appoint four (4) examiners, who shall be the Head of the Department, the

- Candidates the External Examiner and a chairman who shall be appointed by the Board of College of Graduate Studies. There shall also be a CGS Representative in attendance in every oral defence examination.
- iv) The examiners shall thereafter submit to the Dean, School of Graduate Students, joint report duly signed by all members.
 - v) In case of difference of opinion, the examiners shall submit separate reports to the Faculty Graduate Committee which shall make an appropriate recommendation to the Board, College of Graduate Studies.
 - vi) A minimum of C (50%) in the thesis defence is required to be successful in the programme.

B: M.SC (ED) HEALTH EDUCATION AND PROMOTION PROGRAMMES

Core courses for all Students

SGS 801.1	ICT and Research Methods	2
HEP 801.1	Statistical Method	3
HEP 802.1	Advanced Research Methods	3
HEP 803.2	Graduate Seminar	3
SGS 801.2	Management and Entrepreneurship	2
HEP 855.2	Dissertation	6

OPTION A: COMMUNITY HEALTH EDUCATION

Course Code	Core Courses	Credits
HEP 811.1	Fundamentals of Health Education and Promotion	2
HEP 812.1	Control of Communicable & Degenerative Diseases	2
HEP 817.2	Applied Epidemiology	2
HEP 819.2	Programme Development & Evaluation in Health Education & Promotion	2

Elective Courses (Choose any one from each Semester)

HEP 813.1	Organization & Administration of Health Service	2
HEP 814.1	Trends in Consumer Health Informatics	2
HEP 816.2	Global Environmental Health	2
HEP 818.2	Human Sexuality and Reproductive Health	2

OPTION B: OCCUPATIONAL HEALTH AND SAFETY EDUCATION

Course Code	Core Courses	Credits
HEP 822.1	Principles & Practice of Occupational Health and Safety	2
HEP 823.1	Workplace Health Promotion	2
HEP 844.2	Industrial Health and Safety Education	2
HEP 816.2	Design and Evaluation of Workplace Health Programmes	2

Elective Courses (Choose any one from each Semester)

HEP 812.1	Prevention and Control of Communicable and Degenerative Disease	2
HEP 832.1	Mental Health and Drug Education	2
HEP 826.2	Issues in Health Education and Promotion	2
HEP 827.2	Health Psychology and Counselling	2

OPTION C: SCHOOL HEALTH EDUCATION

Course Code	Core Courses	Credits
HEP 811.1	Fundamentals of Health Education and Promotion	2
HEP 812.1	Prevention and Control of Communicable and Degenerative Disease	2
HEP 815.2	Human Growth and Nutrition	2
HEP 828.2	Curriculum Planning and Evaluation of School Health Education	2

Elective Courses (Choose any one from each Semester)

HEP 811.1	Principles & Practice of Health Education	2
HEP 832.1	Mental Health and Drug Education	2
HEP 827.2	Health Psychology and Counselling	2
HEP 816.2	Global Environmental Health Issues	2

OPTION D: ENVIRONMENTAL HEALTH AND SAFETY EDUCATION

Course Code	Core Courses	Credit units
HEP 838.1	Fundamentals of Environmental Health and Safety Education	2
HEP 839.1	Management of Wastes and Environmental Disasters	2
HEP 844.2	Principles and Practice of Safety Education, Accident Prevention and First Aid	2
HEP 845.2	Planning, Administration and Evaluation of Environmental Health and Safety Programmes	2

Elective Courses (Choose any one from each Semester)

HEP 841.1	Epidemiology of Environment Related Diseases	2
HEP 842.1	Environmental Health Impact Assessment	2
HEP 846.2	Environmental Health Hazards and Sanitation	2
HEP 848.2	Urban Aesthetic Planning, Beautification And Basic principles of housing for safe health	2

COURSES DESCRIPTION

CORE COURSES

HEP 801.1: Statistical Methods (3 Units)

Application of statistics to research in Health Education and Health Promotion. Basic concepts of statistical techniques. Relationships among variables. Differences among groups. Understanding Multivariate techniques and non-parametric techniques. Measurements-validity and reliability. Measurements movement using Computer in Measuring Movement. Measurement of behaviour. Questionnaire.

HEP 802.1 Advanced: Research Methods (3 Units)

This covers basic principles of evidence-based research in health education and promotion; it elaborates on planning and execution of various research designs, tools in research (library utilization, internet data search, and gathering of empirical data / measurements); data analysis and presentation with special focus on conducting systematic reviews/meta-analysis in health education and promotion research.

SGS 801.1B ICT Research Method See College of Graduate school brochure.

HEP 803.2 Graduate Seminar (3 Units)

Students shall select topics approved by the course lecturer(s) from their area of specialization. They are expected to demonstrate ability to prepare logical and in-depth papers on the approved topics and make formal presentation of the papers to their peers.

HEP 855.2 Master’s Dissertation (6 Units)

The thesis is a written report of original research completed, under the supervision of the thesis supervisor.

SGS 801.2 Management & Entrepreneurship (2 Units)

See College of Graduate School Brochure.

COMMUNITY HEALTH EDUCATION COURSE DESCRIPTION

HEP 811.1 Principles and Practice of Health Education (2 Units)

An overview of the legal, scientific, educational psycho-behavioural and anthropological foundations of health education. Examination of conceptual framework. Dimensions of health education. Innovation, Approaches and models in the dissemination of health education. Consideration of programming and evaluation in health education.

HEP 812.1 Control of Communicable and Degenerative Disease (2 Units)

Principles of communicable disease transmission, causes of transmission, and epidemiology of communicable disease in developing countries. Methods of detecting and reporting of observed disease to the appropriate authorities. Host parasite relationships, the body’s immune defense, types of immunity and methods of immunization. Poverty and disease, prevention and, control of common infectious disease. Nature of non-communicable diseases. Risk factors for non-communicable diseases. Role of lifestyle in the prevention and control of major degenerative diseases.

HEP 817.2 Fundamentals of Health Education and Promotion (2 Units)

The course guides the students to understand the concept of health promotion, the emergence and development of health promotion internationally and locally; the key principles, action areas and strategies in health promotion; health promotion core competencies and a review of the National Health Promotion Policy contents and implementation.

HEP 819.2 Programme Development and Evaluation in Health Education & Promotion (3 Units)

Covers the various aspects of programme development and evaluation in community health education. Students are exposed to various health programme planning models, and behaviour change theories applied in health education in promotion. The components of comprehensive health education programmes. Curriculum design and implementation in health education at various settings (school, community and Health – Care Delivery centres). Evaluation mechanics – process and summation.

ELECTIVE COURSES (CHOOSE ANY ONE FROM EACH SEMESTER)

HEP 813.1 Organization and Administration of Health Services Education (3 Units)

Organizational and administrative concepts and theories applied to health programmes (primary, secondary and tertiary), Leadership roles, Sources of finance, budgeting and human relationships as they affect administration and supervision of health programmes.

HEP 814.1 Consumer Health Education (3 Units)

Overview of consumer concepts, consumer statutory rights, privileges and protection. A study of roles of quacks and quackery, various fraudulent practices-medical, food fads and fallacies including beauty misconceptions etc. products, Health Information and education of consumers, Functions of consumer protection organizations in Nigeria.

HEP 818.2 Maternal and Child Health Education (3 Units)

A review of health: socio-pathological health problems of mothers, child rearing practices in cross-cultural context and associated health problems. Childhood ailments, prevention and control. Women and disease, contraception and family planning. Working class mothers and maternity welfare. Single parenthood- socio-psychological health problems. Role of mothers in family budgeting and implementation.

HEP 816.2 Environmental Health Education (3 Units)

The definition and scope of environmental health, sources and effects of environmental pollution. A study of the biological, social and cultural relationship to our environmental health problems, sources effects and control on air, water, land. Housing and health wastes, and noise pollution management, water provision and treatment. A review of Public health bye- laws in Nigeria.

M.Sc. (Ed.) OCCUPATIONAL HEALTH AND SAFETY EDUCATION

HEP 811.1 Principles and Practice of Occupational Health Education (2 Units)

The meaning, objectives and scope of occupational health. An overview of the various health problems associated with various occupation-manufacturing, processing and packaging. Identification and classifications of occupational hazards. Diseases peculiar to various occupations, their prevention and control.

HEP 822.1 Industrial Health and Safety Education (2 Units)

The course is designed to acquaint students with a broad understanding of the history, objective and development of industrial health and safety education. Components of work environments, principles of hazard control and disease prevention. Examination of existing labour codes and industrial legislations organized visits to selected industries culminating in group reports will be encouraged.

HEP 823.1: Corporate Health Promotion (2 units)

The course exposes the students to the historical perspective of health promotion in the workplace; discusses the components of corporate health promotion including stress management, smoking cessation, exercise and fitness, weight management, diet and nutrition, alcohol and drug education, travel health etc.; provides knowledge on how to design, implement and evaluate corporate health promotion programmes.

HEP 823.2 Mental Health Education (2 Units)

The definition of mental health and mental illness, Types of mental illness and mental retardation. A study of the relationships among physical, emotional, social and mental health problems. Psycho-somatic concepts of ill-health. Theories of mental illness causation, theories of behaviour/personality development, prevention of mental illness. Students will be provided with a diversity of theoretical views from which they can advance their own understanding and appreciation of the intricacies of mental health. A study of personality development and individual psychological disposition.

ELECTIVE COURSES (CHOOSE ONE FROM EACH SEMESTER)

HEP 812.1 Control of Communicable and Degenerative Disease (2 Units)

(Description as in Community Health Education above)

HEP 832.1 Drugs and substance Abuse Education (2 Units)

Desired to facilitate students' understanding of drugs and facts of abuse and misuse, dependence, processes-physical, cultural and socio-psychological. Classification of psychotropic substances, ergogenic substances alcohol and narcotics. Health education programmes for drugs and substance abuse. Review of existing laws for control of drugs, Group visit to the Nigerian Drugs Law Enforcement Agency (NDLEA) to be carried out under the guidance of course lecturer.

HEP 826.2 Issues in Health Education (2 Units)

The course deals with the scientific socio-cultural and attitudinal spectra of public health. Discussion of selected current public community health problems, analysis and evaluation of health information-roles of the mass media. Role of National and International Health Agencies. Disaster and refugees problems as they affect health. Current health issues

HEP 827.2 Health Psychology (2 Units)

The course examines the behavioural and sociological aspects of health and the relationships between certain practices and health status. Health roles and health related behaviours, predisposing, enabling and reinforcing factors as well as social norms and -sanctions that influence health behaviour will be covered. Learning theories and application of behavioural model including. Health belief and precise models communication strategies and resources for effective health behaviour change.

M.Sc. (Ed.) SCHOOL HEALTH EDUCATION

HEP 831.1 School Health Promotion (2 Units)

The course starts with an understanding of the concept of health promotion, key principles, action areas and strategies. Explains the objectives of the school health programme, its components including healthful school environment, skill-based health education, school health services, school feeding services and school home and community relationship; and how best it can be promoted to improve health of students and staff for optimum academic achievement. The roles of different stakeholders and mechanisms for sustainable school health programme.

HEP 815.1 Food And Nutritional Diseases Education (2 Units)

This course is aimed at providing knowledge and understanding of the basic principles of human nutrition and the applications in life. Improvement of nutritional and health status of individuals and community. It covers the relationship between food and health; terminologies in food and nutrition, sources and importance of nutrients, metabolism and energy balance, food groups and dietary guidelines,

malnutrition and deficiency diseases and therapeutic nutrition.

ELECTIVE COURSES (CHOOSE ONE FROM EACH SEMESTER)

HEP 811.1: Principles and Practice of Health Education (2 Units)

(Description as already done above)

HEP 832.1: Drug and Substance Abuse Education (2 Units)

(Description as already done above)

HEP 827.2: Health Psychology (2 Units)

(Description as already done above)

HEP 816.2: Environmental Health Education (2 Units)

(Description as already done above)

M.Sc. (Ed.) ENVIRONMENTAL HEALTH AND SAFETY EDUCATION

COURSE DESCRIPTION

HEP 838.1: Fundamental Issues in Environment Health and Safety Education (2 Units)

The course centres on detailed exploration and exploitation of the current issues in the environment and safe interaction with it, critical insight and evaluation of the issues. Practical approach measures and recommendations are vital.

HEP 839.1: Wastes Generation and Safe Management in a Contemporary Society (2 Units)

The course provides general overview of the concept of wastes, types, how wastes are originated safe handling and maintenance of wastes (both orthodox and modern approaches), stakeholders and their roles. Global references should be made; however more emphasis should be placed on local occurrences –national, states, local and at community levels. All aspects discussed, should be accompanied with explanation of the health risks and necessary safety precautions. Wastes management parastatals should be encouraged to be visited for field experience such as FEPA and state ministries.

HEP 840.1. Organization and Administration of Environmental Health and Safety Services (2 Units)

Give a detailed conceptual framework of the theories and guiding principles of Organization and Administration of Environmental Health and Safety. Make a general illustration of an organogram in an existing organization including assigned roles, funding, financial management capabilities and

accountability, supplies of facilities, materials and equipment (their relevance, adequacy and current standards) including the effective utilization. Indicate public awareness, technical problems and evaluation. Make practicable suggestions and recommendations based on empirical research findings. Interact with relevant administrators.

HEP 841.1 Food, Water Supplies and Related Diseases (2 Units)

Make a professional evaluation and critical overview of water, identification of sources of water, technical explanation of water treatment and the utilization based on scientific analysis. Uses of water and classification based on pathogenic pathways water related diseases and roles of stakeholders. Describe food and nutritional diseases, analysis of food ingredients, requirements, food fads and fallacies, the role of proficient agencies –both local and international. Recommend field trips to relevant organizations.

HEP 814.1 Consumer Health Education (2 Units)

Concepts of Consumer Health, Health Education and consumerism, quacks, quackery and nostrums classification of consumer health products, utilities and services and environmental impacts. Provide awareness on the right choice to make and the right product to consume in the environment; consumer markets, products and service delivery system, rights and responsibilities of consumers. Explain the significance of consumer health education and the roles of stakeholders at sanitizing the environment. Also treat consumer health agencies – local, national and global. Visit relevant agencies.

HEP 842.1 Environmental Health Impact Assessment (2 Units)

Explain the concept of impact assessment; the importance, how conducive is the environment for location of industries, schools, companies, water, housing markets. Analyse the advantage and risks, state experts' roles (qualities control) community participation etc. disaster prevention control and management. Expose learners to previous and present occurrences. Visit site such as oil spillage and affected environments.

HEP 843.1 Environmental Disaster and Safe Management: Pollution, Flood Control and Eruptions (2 Units)

Provide analytical concept of the environment, disasters (natural or artificial) and eruptions, comprehensive classifications of environmental induced disasters. Classify pollution – origin/source, documented disaster records on health, social and physical activities and modern approach control. Treat other factors such as earthquake, volcano, land tremors, flood, whirl wind architectural defects and mishaps. Provide the background, causes,

prevalence, case fatality, mortality and morbidity health consequences. Propose control and preventions based on scientific and social findings. Clarify the role of Health Education and awareness Strategies. visit sit of certain disasters.

HEP 844.2 Principle and Practice of Safety Education, Accident Prevention and First Aid (2 Units)

Make a sound explanation of the concept of Safety. State the types, relate Safety with occupations where safety is necessary. Classify occupational sectors into such areas as civil, industrial, commercial, transport and social into their components. Identify the various risks or hazards peculiar to each occupation including the appropriate and systematic safety precautions such as the use of guards (e.g personal protective gadgets in industries and construction companies). Expose learners to practical observations and experience in industries, constructions sites, and health sector including First Aid skills relevant to each potential hazards. Empirical reports to be made, assess and evaluated. Project Health Education and awareness as tools for better safety precautions. Expose learners to practical demonstration in First Aid skill, fire safety, water disaster etc.

HEP 845.2 Programme Planning and Evaluation in Environmental Health and Safety 2 Units

Advance the concepts of curriculum, planning and evaluation. Analyse the curriculum segments and targets at various stages and cadres, such as institutions, workplaces or the community. Explain the systemic documentation of the implementation of the various aspects of planning, development and evaluation of environmental health and safety. Advance community awareness, appreciation, involvement and participation. Link the role of Health Education and awareness.

HEP 846.2 Gas Flaring, Oil Spillage and Environmental Health (2 Units)

The justification is based on its uniqueness and peculiarity especially in the Niger Delta region of Nigeria. State the genesis of gas flaring, oil exploration and exploitation, the concepts, categories, health, social, and political implications, role of stakeholders vis-à-vis, search for wealth and economic gains, environmental impacts, relationship between oil and gas prospecting companies, government and host communities. Conflicts, crises and resolutions-the practicable way out through Health Education and Promotion. Assign learners to visit companies sites, point of occurrences and report personal observations and recommendations in line with global standards.

HEP 847.2 Sanitation: Personal, Domestic and Public Hygiene (2 Units)

This should be treated holistically and comprehensively with special reference to the individual, domestic (at home) and public within their remote and immediate environments directed towards health promotion. Indicate the health implications and control measures at all levels. What is the role of Health Education. Field experience to relevant organizations and agencies such as FEPA.

HEP 848.2 Urban Aesthetic Planning, Beautification and Basic Principles of Housing (2 Units)

Explain the concepts, implications of poor housing, consideration for good shelter, land, potable water, space, beautification and planning. Compare the types of existing houses, available locally vis-à-vis the developed world. State the roles of stakeholders especially government at various level. Collaborate with relevant departments and disciplines for enrichment of knowledge and skill in this area.

Ph.D. DEGREE PROGRAMMES

Objectives

The Ph.D. degree programme in Health Education and Promotion provides specialized academic knowledge and practical training opportunities for doctoral degree candidates which will result in providing Nigeria with essential and needed manpower related to Health Education and Promotion.

Regulations

1) The programme for the degree of Doctor of Philosophy (Ph.D.) shall consist of an approved course of study and research.

2) Admission Requirements

Candidates for admission into the programme shall normally be:

- (i) Candidates who have obtained M.Sc. (Ed) degree in Health Education of the University of Port Harcourt or other relevant discipline from any other approved University and must have an average of not less than a CGPA of 3.50 on a 5 point scale or 2.8 on a 4 point scale.
- (ii) Each applicant must submit a proposal on area of research interest and pass an interview by the Departmental Graduate Studies Committee.

3) Requirements for course and examination

- (i) The Ph.D. degree programme of the Department follows the normal general regulations of the Graduate School, University of Port Harcourt.
- (ii) The programme consists of course work and a thesis.

(iii) Courses shall be evaluated in terms of course units, with a minimum of 3 and maximum of 6 credit units.

(iv) All candidates shall be required to register for not less than 15 credit units per semester of approved taught courses per semester.

4) Areas of Specialization

Each doctoral student is expected to specialize in one of the following fields:

- (i) Community Health Education
- (ii) Occupational Health and Safety Education
- (iii) Environmental Health and Safety Education

5) Compulsory Courses

All doctoral students are expected to take and pass the following courses:

HED: 901.1, HED:902.1, HED:903.2, HED:950.2.

6) Courses in Individual Area of Specialization

Students are expected to take a minimum of three courses (9 units) from courses listed in their area of specialization.

7) Course Requirements

- i) Ph.D. students are required to take a minimum of 15 credit units per semester, comprising 8 taught courses and a seminar in a session. Student shall take Advanced Research Methods, Advanced Statistics and 3 courses from their respective areas of specialization in the first semester; 3 courses from area of specialization and a seminar in the second semester. The rest of the period shall be spent on research writing and Ph.D. thesis.

8) Duration of Programme

a) Full-Time

The Ph.D. programme candidates will be required to spend a minimum of 24 calendar months (2 Years) and a maximum of 60 calendar months (5 years).

b) Part-Time/Sandwich

Candidates will be required spend a minimum of 36 calendar months (3 years) and maximum of 84 calendar months (7 years).

9) Course Assessment

- a) Each course will be assessed on the basis of written examinations and continues assessment.
- b) Candidates will be required to obtain a minimum pass grade of C in each prescribed course and a pass in the thesis.

10) Ph.D. Examination

- a) There will be examinations at the end of each semester of the first year of the programme.

- b) The examinations must be passed with a minimum of C grade.
- c) The candidate, in consultation with the supervisor, will choose a thesis topic to be approved by the Departmental Graduate Studies Committee.
- d) There will be three seminar presentations, one in the Department and another in the Faculty. The final seminar should be presented before the Board of School of Graduate studies examiners in accordance with the regulations.

11) Thesis

Candidates shall be required to carry out their research under Supervisor(s) appointed by the Department of Health Education and Promotion.

Examination of Thesis

- a) For the examination of the candidate's thesis, the Board of the School of Graduate Studies on the recommendation of the appropriate Committee shall comprise of five examiners who shall consists of Dean of Faculty as Chairman of Panel, an External Examiners, Representative of Dean, School of Graduate Studies, the Supervisor(s), Head of Department and Chairman, Department Graduate Studies Committee. The examination shall be oral with questions asked on the candidate's research work within the context of the candidate's field of specialization. The examiners shall submit joint reports on the candidates.

Additional Regulations Governing Presentation of Theses

i) Signatories of Theses

All members of the Board of Examiners shall be signatories to each thesis, e.g

- a) Supervisor(s)
 - b) Head of Department
 - c) Chairman of Examination Board (Dean of Faculty)
 - d) External Examiner
- ii) All the foregoing regulations are subject to the general University regulations governing higher degree programmes.

GENERAL CORE COURSES

Course Descriptions

HEP 901.1	Advanced Research Methods	- 3 units
HEP 902.1	Advanced Statistics	- 3 units
HEP 903.2	Doctoral Seminar	- 3 units
HEP 950.2	Doctoral Thesis	- 6 units

SECTION B: Ph.D. HEALTH EDUCATION & PROMOTION PROGRAMMES

Core courses

1	HEP 901.1	Advanced Research Methods	3
2	HEP 902.1	Advanced Statistics	3
3	HEP 903.2	Doctoral Seminar	6
4	HEP 950.2	Doctoral Thesis	12

OPTION A: COMMUNITY HEALTH EDUCATION

Course Code	Core Courses	Credits
HEP 932.1	Partnership, Advocacy and Community Mobilization in Health Education	2
HEP 934.1	Communication Skills in Health Education & Public Health	2
HEP 937.2	Current Issues in Health Promotion and Public Health	2
HEP 938.2	Field Experience in Community Health	2

Elective Courses (Choose any one from each Semester)

HEP 951.1	Emergencies and Disaster Management	2
HEP 951.1	Safety Education and Accident Prevention.	2
HEP 936.2	Human Sexuality and Reproductive Health	2
HEP 952.2	Grant Writing in Health Education and Promotion	2

OPTION B: OCCUPATIONAL HEALTH & SAFETY EDUCATION

Course Code	Core Courses	Credit Units
HEP 951.1	Industrial Safety and Accident Prevention	2
HEP 941.1	Industrial Hygiene and Hazard Control	2
HEP 931.2	Current Issues in Health Promotion and Public Health	2
HEP 942.2	Field Experience in Occupational and Industrial Health	2

Elective Courses (Choose any one from each semester)

HEP 951.1	Emergencies and Disaster Management	2
-----------	-------------------------------------	---

HEP 948.1	Environmental Health Impact Assessment	2
HEP 955.2	Stress Management and Relaxation Techniques	2
HEP 932.2	Epidemiology of Occupational and Work-related Diseases	2

descriptive and inferential statistical tools - compulsory.

HEP 903.2 Doctoral Seminar (6 Units)

Deals with vital issues in Health Education. Critical analysis of recent research studies related to these issues. Problems involved in conducting and publishing research are discussed, Preparation of thesis proposals under the guidance of major supervisor and presentation at Departmental seminar-compulsory.

HEP 950.2 Doctoral Thesis (12 Units)

The doctoral thesis is to present results of an original research topic. Credit is given for originality, the contribution of work to knowledge, presentation and use of previous literature in the area of student's specialization.

OPTION C: ENVIRONMENTAL HEALTH AND SAFETY EDUCATION

Course Code	Core Courses	Credit Units
HEP 948.1	Environmental Health Impact Assessment	2
HEP 951.1	Emergencies and Disaster Management	2
HEP 952.2	Field Experience in Environmental Health Education and Safety Services	2
HEP 954.2	Sanitation – food, water supplies and related Diseases	2

Ph.D. COMMUNITY HEALTH EDUCATION

HEP 933.1 Principles and Practice of Community Health (2 Units)

The course covers the concept and meaning of community health and factors that affect the health of a community and health status indicators. It also focuses on the history of community and public health in earliest civilizations and modern time, describes the role of governmental agencies and nongovernmental organizations in health promotion, community organizing and needs assessment. Examines the health of specific populations viz: maternal and child health, adolescent and adult health, community mental health, environmental health, management of school health programme, structure and functions of Health Care Delivery System.

Elective Courses (Choose any one from each semester)

HEP 949.1	Wastes Generation and Safe Management	2
HEP 951.1	Safety Education and Accident Prevention	2
HEP 931.2	Current Issues in Health Promotion and Public Health	2
HEP 932.2	Epidemiology of Occupational and Work-related Diseases	2

HEPP 932.1 Partnership, Advocacy and Community Mobilization in Health Education (2 Units)

The course covers: The concept, scope, principles of partnership, advocacy and community mobilization for health promotion in community settings; how to conduct stakeholder analysis, engage stakeholders in deliberations and actions on health issues and potential solutions; develop and maintain sustainable community and professional partnerships; collaborate with partners and other health programmes; advocate for public health policies and services that promote the health and wellbeing of individuals and communities; key steps in community mobilisation, community mobilization techniques/strategies and ways of facilitating community participation in health programmes.

Ph.D. COURSE DESCRIPTION

GENERAL CORE COURSES

HEP 901.1 Advanced Research Methods (3 Units)

This course reviews the various methods used in research in Health Education and Health Promotion. There shall be coverage of observation techniques in field and laboratory settings, sampling methods etc. Emphasis is placed on historical, Survey, experimental, epidemiological, Philosophical research, systematic review/meta analysis and other basic and applied research methods - compulsory.

HEP 902.1 Advanced Statistics (3 Units)

The course covers characteristics of the basic research and analysis of factorial research designs including factorial analysis of variance and co-variance General regressions, path analysis, canonical analysis of variance and discriminate analysis etc. Compressive analysis of both

HEP 934.1 Communication Skills in Health Education and Public Health (2 Units)

Examines basic principles of communication and health education, communication models, health education theories and behaviour change models, barriers to communication, and communication skills, benefits of health communication, factors in message design, roles of mass media and information technology, methods and resources in health education and public health, consumer health, advertising and social marketing

HEP 938.2 Field Experience in Community Health (2 Units)

Students are expected to acquire practical experience in the organization and administration of community health programmes by monitoring the design or development and implementation of health promotion and disease prevention programmes of selected health related agencies. A comprehensive report on the programmes of the related agencies should be submitted at the completion of the project

ELECTIVE COURSES (CHOOSE ANY ONE FROM EACH SEMESTER)

HEP 951.1 Safety Education and Accident Prevention (2 Units)

The course examines the principles of safety education, epidemiology of accident causation, injury prevention and control measures, first aid and management of emergency at home, work and school, road and industrial safety. Safety in relation to environment health factors and disease causation.

HEP 952.1: Introduction to Grant Writing (2 Units)

The grant seeking enterprise is studied and applied to community and public health organizations, in areas of perceived community need. Content includes locating and communicating with funding agencies, writing and reviewing grant proposals, analyzing requests for proposals, using technology in grant seeking, and implementing and evaluating grant funded projects.

HEP 936.2 Human Sexuality and Reproductive Health (2 Units)

Covers the goals and objectives of sex education and human sexuality education, sex roles, human reproductive organs and functions, biology of sex and adolescent sexuality, conception and reproduction, sexual problems of men and women, sexually transmissible infections/reproductive tract infections, family planning and infertility, maternal and child health and other gender-related issues.

HEP 937.2 Current issues in Health Promotion and Public Health (2 Units)

The course discusses the current issues, problems and trends in health promotion and public health in both developed and developing countries, the course

shall include critical analysis of professional literature in various areas of community health Environmental Health and Safety Education as well as Occupational health and safety education. Students are expected to develop publishable research papers in his/her area of interest at the end of the course.

Ph.D. OCCUPATIONAL HEALTH AND SAFETY EDUCATION

HEP 939.1: Safety Education and Accident Prevention in Industry (2 units)

Examines the principles of safety education, types and causes of industrial accidents, Host-Agent Environment Interaction. Industrial accidents, prevention and control measures; role of safety manager, safety committee and labour union in industrial legislation, first aid and management of emergency as well as transportation accidents.

HEP 948.1: Environmental Health Impact Assessment (2 units)

A comprehensive discussion of environmental health impact assessment of health provisions. Provide the justification for assessment in various environments such as institutions, industries, workplaces, markets, urban and rural housing developments. Identify the risks and benefits, including positive suggestions. Make a practical report on a named establishment based on the course of study under the approval of the course lecturer.

HEP 941.2: Industrial Hygiene and Hazard Control (2 units)

The course consists of various occupational and environmental hazards, detection and control measures, chemical hazards and industrial poisoning, disposal of industrial waste, job hazard analysis, risk assessment and management.

HEP 942.2: Field Experience in Occupational and Industrial Health (2 units)

The course involves individual and group visit to factories, industries and corporate organizations for the purpose of observing, participating in and evaluating occupational health services of the organizations visited. A comprehensive report is written by students and submitted to the department at the end of the exercise.

ELECTIVE COURSES (CHOOSE ONE FROM EACH SEMESTER)

HEP 932.1: Health Programme Development Implementation and Evaluation (3 Units)

Covers the various aspects of programme development and evaluation in community health education. Students are exposed to various health programme planning models, and behaviour change theories applied in health education in promotion.

The components of comprehensive health education programmes. Curriculum design and implementation in health education at various settings (school, community and Health – Care Delivery centres). Evaluation mechanics – process and summation.

HEP 952.1: Introduction to Grant Writing (2 Units)

(Description as in Community Health Education above)

HEP 955.2: Stress Management and Relaxation Techniques (2)

The course focuses on the detrimental effects of stress on an individual and the corresponding benefits of regular relaxation and other stress coping strategies. This course will emphasize the basic skills of relaxation and will provide an experience that focuses on the practical application of these skills in one's life.

HEP 937.2 Current issues in Health Promotion and Public Health (2 Units)

(Description as in Community Health Education above)

ENVIRONMENTAL HEALTH AND SAFETY EDUCATION

HEP 948.1: Environmental Health Impact Assessment (2 units)

A comprehensive discussion of environmental health impact assessment of health provisions. Provide the justification for assessment in various environments such as institutions, industries, workplaces, markets, urban and rural housing developments. Identify the risks and benefits, including positive suggestions. Make a practical report on a named establishment based on the course of study under the approval of the course lecturer.

HEP 949.1: Waste Generation and Management (2 units)

Make an in-dept overview of the concept of wastes classification, generation, management and other related adjuncts. Provide a practical approach to better management devoid of greater health risks. Conduct a case study among common places with waste generation and report adequately.

HEP 950.1: Curriculum Planning and Evaluation in Environmental Health and Safety Education (2 units)

A study of advanced principles guiding the planning, execution and evaluation of basic curriculum in Environment, Health and Safety and their applications in education. Identify specific and general segments applicable to various stages and cadres among children, youths, adults and elders at

homes, institutions, workplace and the larger society. Advance workable approaches, progress assessment, evaluation and review. Indicate all stakeholders and their roles for full appreciation. Make a practical presentation for a named health education programme.

HEP 951.1: Safety Education, Accident Prevention and First Aid (2 units)

The course involves advances approach to the concepts and general principles of safety. Provide justification for safety education in all human activities. Categorize safety along the line of existing occupations and their peculiar risks and hazards including the precautions. Categorize prevention techniques according to occurrence at various environments. Provide forum for practical experience in industries, work sites and institutions and make empirical report. Explain first aid as a necessity. Organize practical experiences.

HEP 952.1: Field Experience in Environmental Health Education and Safety (2 units)

The course centres more on practical approach experiences, whereby reserachers have direct experience with on the spot occurrence or interaction with direct/actural victims and the causative agents or mechanisms for such accident. Such field experience should cover fire, chemical, auto crashes, plane crashes, ship wrecks, companies/industrial and civil job oriented hazards. Compare the control and preventive measures in existing establishments locally and among advances nations. Make conduct empirical researches and report appropriately on at least two highly hazard prone professions.

HEP 953.1: Environmental Disasters and Safe Management (2 units)

Advance both theoretical and empirical analysis of environmental disasters in line with their nature. Provide opportunity to visit (and document) sites of pollution, flood and some natural eruptions such as earthquake, volcano, land tremor and other disasters induced by man's inadequate activities. Make practical and empirical research findings and report appropriately.

HEP 952.2: Sanitation: Food, Water Supplies, Shelter and Related Diseases (2 units)

Provide general overview of all the variables for the total hygiene especially food, water shelter and drugs. There is the need for visitation to food processors and markets, water production plants and nature of sanitation in private and public buildings, institutions and the like. There is the need for meticulous exposure of related diseases and the risks constituted to people. Provide a practical experience and report adequately.

HEP 941.1: Industrial Hygiene and Hazard Control (2 units)

See course description under Occupational Health and Safety Education.

LIST OF ACADEMIC STAFF

S/n	Surname	Other names	Rank	Area of specialization
1.	Ekenedo	Golda O.	Professor and Head of Department	Health Education & Promotion
2.	Achalu	Ernest I.	Professor	Health and Safety Education
3.	Okpako	Johnson Egodotaire F.	Professor	Health Education (Environmental Health and Safety Education)
4.	Asogwa	Emmanuel Ugwu	Reader	Community Health Education
5.	Onyeaso	Adedamola Oluwatoyin	Reader	Community Health Education
6.	Obiechina	Georgy O.	Reader	Community Health Education
7.	Onyezere	John O.	Senior Lecturer	Health Education

DEPARTMENT OF SPORT AND EXERCISE SCIENCE

MASTERS DEGREE PROGRAMME

The Department offers professional programme leading to the award of M.Sc (Ed) Degree in Sport and Exercise Science

Area Specialization:

- ii) Sport Management and Marketing
- iii) Exercise Physiology
- iv) Sport psychology
- v) Sport Sociology
- vi) Rehabilitation Therapy

Objectives

The objectives of the Masters Degree Programme in Sport and Exercise Science include:

1. To develop the broad foundational specialization of Sport and Exercise Science towards careers in research, University teaching, recreation, sports and fitness industry.
2. To produce better teachers of Sport and Exercise Science in Secondary Schools, Colleges of Education, Sports Institutes and Universities.
3. To produce better managers of Sport and Exercise Science Programmes in higher educational institutions and sport organizations in the wider society.

1) Admission Requirements

For the degree of M.Sc (Ed) in Sport and Exercise Science, the following categories of candidates may be admitted:

- a) Candidates with Bachelor's degree in Sport and Exercise Science or Human Kinetics and Health Education (Integrated major) preferably, holders of Second Class Honours Degrees, lower division from a recognized University.
- b) Candidates with Bachelors Degree in Science or Science Education after having obtained the Nigerian Certificate in Education (NCE) in Sport and Exercise Science or Human Kinetics and Health Education (this category of candidates may be required to take some additional courses in Sport and Exercise Science or related courses as prescribed by the Department).
- c) A Pass at Credit level in Post Graduate Diploma in Education (PGDE).

2) Duration of Programme

iii) Full-time

The M.Sc (Ed). Programme in Sport and Exercise Science is for a minimum of 12 calendar months and a maximum period of 24 calendar months.

iv) Part-Time

The Part-time M.Sc (Ed). Programme in Sport and Exercise Science is for a minimum of 24 calendar months and a maximum period of 36 calendar months.

v) Sandwich

The duration of the Sandwich M.Sc (Ed) programme in Sport and Exercise Science shall be a minimum of three long vacations and maximum of five long vacations.

3) Programme Requirements

The programme requirements shall be as prescribed by the University, which also includes the following:

- iv) The M.Sc (Ed) programme shall comprise
 - d) Basic core courses
 - e) Areas of Specialization Courses
 - f) Elective Courses
- v) The programme, requires a minimum of 30 Credit units comprising course in the Core and Specialization areas and shall be for a Research Seminar, 6 units, (The Thesis, and 3 units for practicum/Field experience where applicable).

Grading Scale: The grading for M.Sc (Ed) and Ph.D programmes shall be as follows:

70 and above	–	A – 5.00 points
60 – 69	–	B – 4.00 points
50 – 59	–	C – 3.00 points
0 – 49	–	F – 0 points

Course Assessment

- i. Each course/seminar shall be assessed on the basis of written examination or research (Papers) or both,
- ii. To qualify to write the Thesis, a minimum of 3.0 (C) Grade Point Average is required for graduation,
- iii. A final oral examination shall be taken by a candidate over the thesis on completion of the course work. The senate on the recommendation of the Faculty Graduate Committee shall appoint four (4) examiners, who shall be the Head of the Department, the Candidates' supervisors, the External Examiner and a chairman who shall be appointed by the Board of School of Graduate Studies. There shall also be a SGS Representative in attendance in every oral defence examination.
- iv. The examiners shall thereafter submit to the Dean, School of Graduate Studies, joint report duly signed by all members.
- v. In case of difference of opinion, the examiners shall submit separate reports to the Faculty Graduate Committee which shall

- make an appropriate recommendation to the Board, School of Graduate Studies.
- vi. A minimum of C (50%) in the thesis defence is required to be successful in the programme.

B: Sport and Exercise Science M.SC (ED)

SPORT MANAGEMENT AND MARKETING

FIRST SEMESTER

Course Code	Core Courses	Credits
SES 801.1	Statistical Methods	3
SES 802.1	Research Methods	3
SGS 801.1	ICT and Research Methods	2
SES 809.1	Principles and Practice of Sport Management	2
SES 810.1	Administration of Sports and Human Kinetics Programme	2

Elective Courses (Choose any One)

SES 813.1	Sport Facility Management	3
SES 814.1	Financing, Budgeting and Purchasing in Sports and Athletics	3

SECOND SEMESTER

SES 803.2	Graduate Seminar	3
SES 855.2	Dissertation	3
SGS 801.2	Management and Entrepreneurship	2
SES 811.2	Sport Marketing Principles and Practice	3
SES 812.2	Practicum in Supervision of Human Kinetics and Sports Programme.	2

Elective Courses (Choose any One)

SES 814.2	Administrative Problems in School, Colleges Universities and Clubs	3
SES 813.2	Sports Consumer Behaviour and Satisfaction Management	3

OPTION B: EXERCISE PHYSIOLOGY

FIRST SEMESTER

Course Code	Core Courses	Credits
SES 801.1	Statistical Method	3
SES 802.1	Research Methods	3
SGS 801.1	ICT and Research Methods	2
SES 804.1	Advanced Exercise Physiology	3
SES 805.1	Cardiovascular Physiology and Exercise	2
SES 806.1	Human Anatomy	2

Elective Courses (Choose any One)

SES 831.1	Sport Medicine	2
SES 833.1	Exercise Stress testing and exercise prescription	2

SECOND SEMESTER

SES 803.2	Graduate Seminar	3
SES 855.2	Dissertation	6
SGS 801.2	Management and Entrepreneurship	2
SES 808.2	Laboratory Technique and Fitness Appraisal	2

SES 807.2 Rehabilitation therapy Internship 6

CORE COURSES FOR ALL MASTERS STUDENTS (SPORT AND EXERCISE SCIENCE)

COURSE DESCRIPTION

SES 801.1 Statistical Methods (3 Units)

Application of statistics to research in Sport and Exercise Science, Recreation and Sports. Basic concepts of statistical techniques. Relationships among variables. Differences among groups. Understanding Multivariate techniques and non-parametric techniques. Measurements-validity and reliability. Measurements movement using Computer in Measuring Movement. Measurement of behaviour. Questionnaire.

SES 802.1 Research Methods (3 Units)

This is an introductory course, it covers such areas as planning and designing of research, tools in research (library utilization, statistics, presentation, measurements, computers, etc types of research/historical)

SGS 801.1B ICT Research Method. See College of Graduate school brochure.

SES 803.2 Graduate Seminar (3 Units)

Students shall select topics approved by the course lecturer(s) from their area of specialization. They are expected to demonstrate ability to prepare logical and in-depth papers on the approved topics and make formal presentation of the papers to their peers.

SES 855.2 Master's Dissertation (6 Units)

The thesis is a written report of original research completed, under the supervision of the dissertation supervisor. (See relevant Department Brochure)

SGS 802.2 Entrepreneurship Management (2 Units)

See College of Graduate School Brochure.

SPORT MANAGEMENT AND MARKETING

SES 809.1 Principles and Practice of Sport Management (2 Units)

Basic principles of management applied to Sport: An overview of the philosophical, psychological and sociological foundations of Sport Management. The integration of the theoretical principles of sports and Management Theory.

SES 810.1 Administration of Sports and Human Kinetics Programme (2 Units)

Administrative Theories applied to Sports, Human Kinetics, and Recreation programmes. Study of organizational structures for sports, physical and recreational programmes, administration programmes, administration programmes development in sport.

SES 811.2 Sports Marketing Principles and Practice (3 Units)

General principles of marketing. Application of marketing principles to sport management. Marketing techniques in amateur and professional sports. Sporting good the consumer and the producer. Marketing information and sport sociology.

SES 812.2 Practicum in Supervision of Human Kinetics and Sports Programmes (2 Units)

Practicum work on supervision of sport and human kinetics programmes. Principles of supervision and inspection techniques and analytical appraisal. Marketing information in sports and human kinetics programmes.

ELECTIVE COURSES (CHOOSE ONE FROM EACH SEMESTER)

SES 813.1 Sports Facility Management and Planning (3 Units).

General consideration for planning recreation faculties. Review of the nature of modern recreation and sport facilities. Management of recreation and sports faculties. Innovations in the planning and management of recreation and sports facilities.

SES 814.2 Administrative Problems in School, Colleges, Universities Sport and Sports Clubs (3 Units)

Issues to be studied here will mostly, be by study techniques based on administrative theories, legal liabilities. Management, finance, facilities, public relations, technical problems and evaluation.

SES 814.1 Financing, Budgeting and Purchasing in Sports and Athletics (3 units)

The course will expose the students to different source of fund for sports as well as budget and budgeting processes. The course will cover the principles guiding purchasing of sports equipment and supplies.

SES 813.2 Sports Consumer Behaviour and Satisfaction Management (3Units)

This course emphasizes categories of sports consumers and on each of the sports consumer with their different characteristic behaviours and personalities within and outside sports setting. The expectations and satisfaction of sports consumers should be addressed. The negative behaviours of sports consumers should be discouraged. Application of different management strategies to sports consumers behaviours and satisfaction should be emphasized.

EXERCISE PHYSIOLOGY

SES 804.1 Advanced Exercise Physiology (3 Units)

The course consists of such, topics as; the Limits of Human Performance: Energy Production of Movement and Exercise; Ventilation as a Limiting Factor in Performance, and Environmental factors affecting performance.

SES 805.1 Cardiovascular Physiology and Exercise (3 Units)

Physiology of the heart and the Cardio-vascular system. The major Determinants of Cardiac performance during Exercise, with training and Homodynamic Measurement.

SES 806.1 Human Anatomy (3 Units)

The course deals with the Study of the structures and functions of the various systems of the body i.e Musculoskeletal, cardio respiratory and central nervous system. Terminologies and concepts such as cells and tissues and application of Anatomy and Physiology to all games and sports would also be taught.

SES 808.2 Laboratory Techniques and Fitness Appraisal (2 Units)

Development of skills in the use of exercise machines and measuring equipment treadmill, bicycle ergometer, multigym,-dynamometers, sphygmomanometer, gas analyse, spirometer, ECG, EM Monitor etc, simple test of enzymes in the human body at rest and during exercise. Evaluation of physical fitness of athletes and individual research work in the laboratory.

ELECTIVE COURSES (CHOOSE ONE IN EACH SEMESTER)

SES 807.1: Advanced Sports Nutrition (2 Units)

Study of nutrients and caloric needs of the athlete, includes pre game meals, fluid replacement during long duration events, foods after performance, nutritional engogenic aids like carbohydrate loading for specific events.

SES 833.1: Exercise stress testing and exercise prescription (2Units)

Development of concepts and competencies required for work in Adult and Industrial fitness cardio respiratory and rehabilitation programmes, competencies include exercise stress testing and exercise prescription rest and stress ECG, counselling in nutrition, stress and exercise compliances.

SES 832.2: Exercise in disease prevention and rehabilitation (2Units)

Role of exercise in the development of physiological fitness through the life cycle. Deviations from the norm. Application of appropriate exercise programmes for individuals with specific rehabilitation needs. Coverage includes testing and evaluation indications and contraindications to exercise and wheelchair management, use of adaptive equipment.

SES 831.2 Sports Medicine (3 Units)

A study of development and maintenance of fitness for sports, prevention and management of sports injuries as well as rehabilitation.

SPORT PSYCHOLOGY

SES 816.1 Psychological Bases of Sports and Physical Activity (2 Units)

A study of development and maintenance of fitness for sports; prevention and management of sports injuries as well as rehabilitation of the injured athlete.

SES 817.1 Applied Psycho-Physiological Dimensions of Sports Behaviour (2 Units)

A critical study of the psycho-physiological model of sports behaviour-a combination of physiological data with psychological data (e.g personality in the explanation of behavioural variance in sport).

SES 818.2 Motivational Variables in Human Motor Performance (2 Units)

Presentation of current thinking on motivational determinants of sport behaviour. Research foundation. Characteristics and limitation of attributes in sport. Role of perceived ability (a new theory of Motivation sport). Group motivation in team sport.

SES 819.2 Practicum/Field Experience in Sport Psychology (3 Units)

Practice of behaviour therapy in sport situation, under the direction of course lecturer.

SES 820.2 Stress Management in Sport Performance (3 Units)

Nature and Sources of competitive stress. Stress Management technique (Biofeedback, ISMA,

Hypnotism), principles of coping strategies, Mental preparation strategies (psyching-up strategies).

ELECTIVE COURSES (CHOOSE ANY ONE FROM THE FOLLOWING IN EACH SEMESTER)

SES 821.1 Applied Research in Sport Psychology (3 Units)

Examination of innovative research on exercise and psychological well being. Topics include motivation and exercise adherence. Exercise as a therapeutic adjunct. Qualities of peak experience in sport etc.

SES 822.1 Socio-Psychological Aspects of Sport psychology (3 Units)

A critical study of socio-psychological aspects of sport, such issues as aggression, group dynamic, leadership and the socialization process in competition.

SES 823.2 Behavioural Disorders in Sports (3Units)

The course should emphasize different disorders associated with human behaviours. The impact of those disorders to sports participants and also to sports performance should be emphasized.

SES 824.2 Personality and Sports Performance (3Units)

The course addresses different personality traits of individuals and athletes. Notable classification of personality traits such as the Big five personality traits should be emphasized. It should examine the relationship between the personality traits and sports performance.

SPORT SOCIOLOGY

SES 823.1 Sociological Foundations of Sport (2 Units)

Analysis of the cultural phenomenon of sport, applying the basic concepts of sociology. The concepts include: nature and types of systems. Interaction of the institution of sport with type of social system processes. The course should provide an overview of sport sociology.

SES 824.1 Social Dimension of Sports and Sports Consumers (3 Units)

A general overview of the sociological aspects of sport, social institutions, game occurrence, and culture. Socialization process, interpersonal competences, aggression and group dynamics.

SES 825.2 Socio- Psychological Issues in Sport (2 Units)

Introduction to the application of the concepts and methodologies of sociology to the professional concerns of human kinetics, and sports, and

recreation, sociology to the professional concerns of human kinetics. Sport and recreation; sport management, sport marketing and drug counselling etc.

SES 826.2 Applied Social Theories of Sports (2 UNITS)

The course will expose students to social and management theories and how they can be applied to understand and address sports issues.

ELECTIVE COURSES (CHOOSE ANY ONE FROM EACH SEMESTER)

SES 826.1 Sports in Society (3 Units)

A critical study of the social significance of sport. The institution of sport and relationship with other social institutions. Study of sport as a cultural phenomenon.

SES 827.2 Sports, Politics and Social Institutions (3 Units)

An examination of sport as an instrument of national and international politics. Emphasis will be centered on such issues as function and non-function of sport in diplomacy. Sports and discrimination (racial, ethnic and gender). Case analysis will emphasize politics in Nigeria sports.

SES 828.2 Social Problems in Sports (3 Units)

The central concern in this course is the critical examination of the social problems associated with sports. These include drug in sports, deviant behaviour in sports (Violence, cheating Hustling), discrimination in sport (Racial, Ethnic Gender and Age). Extensive literature search will be the method of approach.

SES 829.1 Sociology of Sports, Leisure Culture and Subcultures (3Units)

The course should examine the interrelatedness of sports as an institution with other social institutions such as politics, media, education, economy, among other. The cultures and subculture of these institutions should be examined alongside with that of sports and leisure.

REHABILITATION THERAPY

SES 801.1 Applied Anatomy and Rehabilitation Therapy (2 units)

An introduction to physical therapy and its relationship to the health care system. Topics include introduction to PT literature, medical terminologies, medical records, communication, ethics and professional issues in physical therapy and anatomy of the neuro musculoskeletal system and body cavities in relation to movement and function.

SES 802.1 Movement system examination and evaluation (2 units) Procedures for musculoskeletal examinations and evaluation including tissue injury, strength and joint play assessment. Procedures for musculoskeletal examination and evaluation using human performance equipment (dynamometers, goniometers, anthropometers etc), postural assessment, application of analytical, biomechanical skills and principles of human movement.

SES 803.1 Applied Exercise Physiology (2 units)

Application of exercise physiology principles and methods to rehabilitation therapy (training considerations, assessment of adaptation to training and detraining, nutrition and weight control etc). The course will also consider rehabilitation exercises for special populations e.g. artistic patients, diabetics, hypertensive's etc

SES 804.1 Applied Psychology of Illness and Disability (2 units)

Psychological response to illness and disability to include patient motivation, patient/professional interaction ethics, psychology of adherence to treatment regime.

SES 805.2 Biomechanics and Fundamental Skills Intervention (2 units)

Biomechanical principles of movement and their application to rehabilitation therapy and basic skills of transfers, bed mobility, use of gait assistive and soft tissue mobilization devices and application of physical agents .

SES 806.2 Cardiopulmonary Rehabilitation Therapy (2 units)

Assessment of cardiopulmonary fitness using laboratory and field methods. Restoration of functions, using appropriate exercise modalities.

SES 807.2: Rehabilitation Therapy Internship (6 units)

Seven weeks of full-time hands on-experience with emphasis on patients handling ethics, treatment skills with various therapeutic exercises and modalities and management of rehabilitation environment.

Ph.D DEGREE PROGRAMME

Objectives

The Ph.D degree programme in Sport and Exercise Science provides specialized academic knowledge and practical training opportunities for doctoral degree candidates who will result in providing Nigeria with essential and needed manpower related to Sport and Exercise Science.

Regulations

1. The programme for the degree of Doctor of Philosophy (Ph.D.) shall consist of an approved course of study and research.

2. Admission Requirements

Candidates for admission to the programme shall normally be:

- i) Candidates who have obtained M.Sc. (Ed) degree in Sport and Exercise Science of the University of Port Harcourt or other relevant discipline from any other approved University and must have an average of not less than a CGPA of 3.50 on a 5-point scale or 2.8 on a 4-point scale.
- ii) Each applicant must pass an interview by the Departmental Graduate Studies Committee.

3. Requirements governing course and examination

- i) The Ph.D. degree programme of the Department follows the normal general regulations of the School of Graduate Studies, University of Port Harcourt.
- ii) The programme consists of course work and a dissertation.
- iii) Courses shall be evaluated in terms of course units, with a minimum of 3 and maximum of 6 credit units.
- iv) All candidates shall be required to register for not less than 15 credit units per semester of approved taught courses per semester.

4. Areas of Specialization

Each doctoral student is expected to specialize in one of the following fields:

- i) Sport Management
- ii) Sport Psychology
- iii) Sport Sociology
- iv) Sport Marketing
- v) Exercise Physiology

5. Compulsory Courses

All doctoral students are expected to take and pass the following courses:

SES 901, SES902, SES 903, SES 950.

6. Courses in Individual Area of Specialization

Students are expected to take a minimum of three courses (9 units) from courses listed in their area of specialization.

7. Courses Requirements

- i) Ph.D students are required to take a minimum of 15 credit units per semester, comprising 8 taught courses and a seminar in a session Student shall take Advanced Research Methods, Advanced Statistics and 3 courses from their respective areas of specialization in the first semester; 3 courses from

area of specialization and a seminar in the second semester. The rest of the period shall be spent on research writing and Ph.D thesis.

8. Duration of Programme

a) Full-Time

The Ph.D programme candidates will be required to spend a minimum of 24 calendar months (2 Years) and a maximum of 60 calendar months (5 years).

b) Part-Time

Candidates will be required to spend a minimum of 36 calendar months (3 years) and maximum of 84 calendar months (7 years).

c) Sandwich

The duration of the Sandwich PhD programme in Sport and Exercise Science shall be a minimum of five long vacations and maximum of seven long vacations.

9. Course Assessment

- i) Each course will be assessed on the basis of written examinations and continuous assessment.
- ii) Candidates will be required to obtain a minimum pass grade of C in each prescribed course and a pass in the thesis.

10. Ph.D Examination

- a) There will be examinations at the end of each semester of the first year of the programme.
- b) The examinations must be passed with minimum grade of C.
- c) The candidate, in consultation with the supervisor, will choose a thesis topic to be approved by the Departmental Graduate Studies Committee.
- d) There will be three seminar presentations, one in the Department and another in the Faculty. The final seminar should be presented before the Board of School of Graduate Studies examiners in accordance with the regulations.

11. Thesis

Candidates shall be required to carry out their research under Supervisor(s) appointed by the Department of Sport and Exercise Science.

Examination of Thesis

- (a) For the examination of the candidate's thesis, the Board of the School of Graduate Studies on the recommendation of the appropriate Committee shall comprise of five examiners who shall consists of Dean of Faculty as Chairman of Panel, an External Examiners, Representative of Dean, School of Graduate Studies, the Supervisor(s), Head of

Department and Chairman, Department Graduate Studies Committee. The examination shall be oral with questions asked on the candidate's research work within the context of the candidate's field of specialization. The examiners shall submit joint reports on the candidates.

Additional Regulations Governing Presentation of Thesis

(i) Signatories of Thesis

All members of the Board of Examiners shall be signatories to each thesis, e.g

- e) Supervisor(s)
- f) Head of Department
- g) Chairman of Examination Board (Dean of Faculty)
- h) External Examiner

(ii) All the foregoing regulations are subject to the general University regulations governing higher degree programmes.

GENERAL CORE COURSES

Course Descriptions

SES 901.1	Advanced Research Methods	-3 units
SES 902.1	Advanced Statistics	-3 units
SES 903.2	Doctoral Seminar	-3 units
SES 950.2	Doctoral Dissertation	-6 units

SPORT AND EXERCISE SCIENCE Ph.D PROGRAMMES

OPTION A: SPORT MANAGEMENT FIRST SEMESTER

Course Code	Course Title	Credits Units
SES 901.1	Advanced Research Methods	3
SES 902.1	Advanced Statistics	3
SES 905.1	Legal Liability and insurance Management in Sports	2
SES 906.1	Issues and Current Administrative Trends in Sport and Exercise Science	2
SES 907.1	Independent Study in Sports Management	2
(Choose any one)		
SES 912.1	Principles of Sports Management	2
SES 913.1	Independent Study in Sports Admin.	2

SECOND SEMESTER

SES 903.2	Doctoral Seminar	6
-----------	------------------	---

SES 950.2	Doctoral Thesis	12
SES 908.2	Administration and Supervision in Sports Management	2
SES 909.2	Sports Insurance Policy and legal Liability for sports	2

Elective Courses (Choose any one)

SES 910.2	Financing Budgeting and Purchasing in Human Kinetics and Athletics	2
SES 911.2	Sports in Cultural Perspective	2

OPTION B: SPORT PSYCHOLOGY FIRST SEMESTER

Course Code	Course Title	Credits Units
SES901.1	Advanced Research Methods	3
SES 901.1	Advanced Statistics	3
SES 912.1	Psychological Skills before, during, and after performance	2
SES 913.1	Motivation and goal setting as a strategy	2
SES 914.1	Applied psychological analysis of problems in competitive sports	2
(Choose any one)		
SES 919.1	Coping with changing athlete status	2
SES 920.1	Psychology of Sports consumers	2

SECOND SEMESTER

SES 903.2	Doctoral Seminar	6
SES 950.2	Doctoral Thesis	12
SES 915.2	Socio-psychological aspect of sports psychology	2
SES 916.2	Applied psycho-physiological problems in Competitive Sports	2
Elective Courses (Choose any one)		
SES 917.2	Practicum/Field experience in sports psychology (internship)	2
SES 918.2	Independent study in sports psychology	2

OPTION C: SPORT SOCIOLOGY

Course Code	Course Title	Credits Units
SES 901.1	Advanced Research Methods	3
SES 902.1	Advanced Statistics	3
SES 903.2	Doctoral Seminar	6

SES 950.2	Doctoral Thesis	12
SES 921.1	Social Stratification and Sports	2
SES 922.1	Group Dynamics in Game Situation	2
SES 923.1	Deviant behaviour Control and Sports	2
SES 924.2	Race, Sex and Sports	2
SES 925.2	Socialization into Sports Participation	2

Elective Courses (Choose any one from each Semester)

SES 926.2	Independent Study in Sociology of Sport	2
SES 927.2	Contemporary Issues and Problems in Sports	2
SES 928.1	Sociology of Adapted Sports	2
SES 929.1	Comparative Study of Sports across Societies	2

OPTION D: SPORT MARKETING

Course Code	Course Title	Credits Units
SES 901.1	Advanced Research Methods	3
SES 902.1	Advanced Statistics	3
SES 930.1	Marketing Management in Sports and Exercise Science	2
SES 931.1	The Special Nature of Sports, Marketing	2
SES 932.1	Marketing Segmentation and the Sport Product	2
(Choose any one)		
SES 937.1	Financial Planning and Marketing Control in sports industry	2
SES 938.1	Theory of Sports Finance	2

SECOND SEMESTER

SES 903.2	Doctoral Seminar	6
SES 950.2	Doctoral Thesis	12
SES 933.2	Co-ordinating and Controlling the Market Product	2
SES 934.2	The perspective in Sports Consumer behaviour	2

Elective Courses (Choose any one)

SES 935.2	The Role of public Relations in Sports Marketing	2
SES 936.2	Research in Sports Marketing	2

EXERCISE PHYSIOLOGY

Course Code	Course Title	Credits Units
-------------	--------------	---------------

SES 901.1	Advanced Research Method	3
SES 902.1	Advanced Statistics	3
SES 943.1	Nutrition, obesity and body weight regulation	2
SES 940.1	Advanced systemic exercise physiology	2
SES 941.1	Advanced concepts in Exercise stress Testing and training	2

Elective Courses (Choose any one)

SES 946.1	Biochemistry of Exercise	2
SES 948.1	Environmental Physiology and Exercise	2

SECOND SEMESTER

SES 903.2	Doctoral Seminar	3
SES 950.2	Doctoral Thesis	12
SES 942.2	Prevention and treatment of chronic diseases	2
SES 944.2	Development and laboratory management of physical fitness centres	2
SES 945.2	Physical activity programming for health and fitness for various groups	2

Elective Courses (Choose any one)

SES 947.2	Advance Biochemistry of Exercise 2	2
SES 949.2	Independent Study in Exercise Physiology	2

**Ph.D COURSE DESCRIPTION
GENERAL CORE COURSES**

SES 901.1 Advanced Research Methods (3 Units)

This course reviews the various methods used in research in Sport and Exercise Science. There shall be coverage of observation techniques in field and laboratory settings, sampling methods etc. Emphasis is placed on historical, Survey, experimental, epidemiological, Philosophical research and other basic and applied research methods - compulsory.

SES 902.1 Advanced Statistics (3 Units)

The course covers characteristics of the basic research and analysis of factorial research designs including factorial analysis of variance and co-variance General regressions, path analysis, canonical analysis of variance and discriminate analysis etc. Compressive analysis of both descriptive and inferential statistical tools - compulsory.

SES 903.2 Doctoral Seminar (6 Units)

Deals with both, vital issues of Sport and Exercise Science. Critical analysis of recent research studies related to these issues. Problems involved in conducting and publishing research are discussed, Preparation of thesis proposals under the guidance of major supervisor and presentation at Departmental seminar-compulsory.

SES 950.2 Doctoral Thesis (12 Units)

The doctoral thesis is to present results of an original research topic. Credit is given for originality, the contribution of work to knowledge, presentation and use of previous literature in the area of student's specialization.

SPORT MANAGEMENT COURSE DESCRIPTION

SES 905.1 Legal Liability and Insurance Management in Sports (2 Units)

An analysis and study of legal basis for physical education, sport participation and allied areas. The implication of various sports courses on the discipline, and relevant legal liability as negligence, tort, nuisance, malfeasance etc. A study of liability of the school teachers, sports master and other agencies.

SES 906.1 Issues and Current Administrative Trends in Sport and Exercise Science (2 Units)

Identification, discussion and analysis of current trends and issues which confront the human kinetics administrators at various levels. The present day issues which confront sport administrators in various areas of discharge of their duties.

SES 907.1 Independent Study in Sports Managements (2 Units)

Students are to embark on the study of selected professional problems in sports administration, with approval of their supervisors

SES 908.2 Administration and Supervision in Sports Management (2 Units)

Prepares students into principles affecting process of recruitment, selection and orientation studies, and basic principles guiding effective supervisory process.

SES 909.2 Sports Insurance Policy and Legal Liability in Sports (2 Units)

An analysis and study of legal basis for sports participation and allied areas, and the importance and process of taking insurance against sport injuries. The administrative responsibility towards legal actions in sport, buildings, grounds, facilities and equipment.

ELECTIVE COURSES (CHOOSE ANY ONE)

SES 910.2 Financing, Budgeting and Purchasing in Human Kinetics and Athletics (2 Units)

The course is designed to explore budgeting and financing in sports: methods and procedures in the administration of human kinetics and athletic development. Emphasis shall be placed on the planning, programming budgeting system and other cost accounting processes, purchasing and maintaining equipment.

SES 911.2 Sports in Cultural Perspective (2 Units)

A critical study of sports in context of culture with references to social systems, educational, political, mass media and process changes

SPORT PSYCHOLOGY

SES 912.1 Psychological Skills before, during and after Performance (2 units)

Evaluating the relative importance of interdependent psychological skills of anxiety management, mental practice, concentration, motivation and self confidence.

SES 913.1 Motivation and Goal Setting as a Strategy (1 units)

The relationship between extrinsic and intrinsic motivation in sports. Goals setting as a motivational techniques for peak performance in sports. Common problems in setting goals and guidelines for goal setting. Individuals and group motivation in team sport

SES 914.1 Applied psychological Analysis of problems in Competitive Sports (2 Units)

A critical study of applied psychological problems in competitive sports (personality dynamics in sport, drugs, etc)

SES 915.2 Socio-Psychological Aspect of Sports psychology (2 units)

A critical review of socio-psychological aspect of sports such as race, sex, social system and an in-depth analysis of available studies in the field.

SES 916.2 Applied psycho-physiological Problems in Competitive Sports (2 Units)

A critical review of psycho-physiological problems of sports behaviour in competitive situations and prevalent management techniques

ELECTIVE COURSES (CHOOSE ANY ONE)

SES 917.2 Practicum/Field Experience in Sports Psychology (2 Units)

A field practice of behaviour therapeutic situation, under direction of the course lecturer.

SES 918.2 Independent Study in Sports Psychology (2 Units)

A critical focus on curiosity arousing issues and problems in sports psychology. These issues are discussed in terms of recent research and theory in sports psychology.

SES 919.1 – Coping with changing athlete status

The various status of an athlete should be emphasized. The psychological effects of an athlete changing his or her status will be emphasized. The course must expose students on how an athlete copes with a change in status.

SES 920.1 – Psychology of Sports Consumers

The course exposes students to the dynamics of sports consumers. It exposes the various behavioural tendencies of sports consumers before, during and after sports competition. It focuses on how to understand and manages the reactions of sports consumers to winning and losing situations in sports competition.

SPORT SOCIOLOGY

SES 921.1 Social Stratification and sports (2 Units)

An analysis of social strata and their implications on Sports participation. Race and gender discrimination in sports and physical activity mobility through participation Rags to riches.

SES 922.1 Group Dynamics in Games Situation: (2 Units)

Structural analysis of sport group, its dynamics, relationship, leadership, cohesion, group motives and group stress in sports

SES 923.1 Deviant Behaviour Control and Sports (2 Units)

Analysis of theories of deviant behaviour to understand its social causes and implications, sports as a correctional tool and its use in reforming delinquents.

SES 924.2 Race, Sex and Sports (2 Units)

Racial discrimination in sports, Socio-political action against discrimination, male domination in sports women entry in sports and women's emancipation through sport participation.

SES 925.2 Socialization into Sports Participation (2 Units)

Critical review of different theories of socialization, social system approach to socialization, and an in-depth analysis of available studies in the field.

ELECTIVE COURSES (CHOOSE ANY ONE)

SES 926.2 Independent Study in Sports Psychology (2 Units)

An Independent investigation of selected professional problems in sports sociology with the permission of the course lecturer.

OR

SES 927.2 – Sociology of Adapted Sports (2 Units)

The course exposes the students to the special need persons and their world of sports as well as special competitions for them. The course emphasizes the social problems of special need persons in sports and how to manage them. Mainstreaming should be emphasized and encouraged. The social roles of special needs persons in sports competitions should be highlighted.

SES 928.1 Contemporary Issues and Problems in Sports (2 Units)

A critical focus on curiosity arousing issues and problems in sports sociology. These issues are discussed in terms of recent research and theory in sports psychology.

OR

SES 929.1 Comparative Study of Sports across Societies

The course exposes students to how sports is played and performed in diverse sports with emphasis on the sporting culture and subcultures in those societies with a target of drawing the strengths and weaknesses in those societies. It encourages cross-cultural examination of sports.

SPORT MARKETING

SES 930.1 Marketing Management in Human Kinetics and Sports (2 Units)

The course aims mainly at providing guidance to postgraduate students, to recognize the interacting components of the marketing management process, to appreciate the core elements of market analysis, product concept and product position. The course assume a good knowledge of the understanding of the distinction between the 5 “Ps” (product, price, place, promotion, and public relation) of sports marketing

SES 931.1: The Special Nature of Sports Marketing (2 Units)

This is an advanced course focusing on the major movement in contemporary market forces causing the need for enlightened marketing strategies in the sports industry. The students are exposed to the obstacles to clear marketing strategy in sports, recognize the components of the sports product and sports industry, and also factors that make sport marketing a unique enterprise.

SES 932.1 Marketing segmentation and the Sports Product (2 Units)

The course examines the central role of segmentation in the marketing process. It also recognizes the four bases of market segmentation in sports. It aims to differentiate sport products from market place product in terms of its uniqueness and limitations in the world of mainstream marketing and the understanding of the elements of the sport product. The course also seeks to establish and explore the relationship between the product positioning and product image, their interaction, and their ultimate effect on the marketing process, and to learn the steps involved in product development and the product life cycle.

SES 933.2: Co-ordinating and Controlling the Market Mix (2 Units)

The aim of this course is to consolidate the graduate student's knowledge to compare and contrast the interaction and impact of the 5 Ps upon each other. And how organizational structure and job descriptions impact organizational control of the marketing function. It also educates the students on the need for control in achieving marketing effectiveness and to become aware of the philosophical elements that may be related to the marketing function, but which may not be consistent with organizational structure.

SES 934.2: The Perspectives in Sports Consumer behaviour (2 Units)

This course is meant to acquaint the students with significant differences between socialization involvement, and commitment for sport consumers. Attempts will be made to show and discuss various individuals and environmental factors that shape consumer involvement and commitment in sport. And the decision process for sport consumers.

ELECTIVE COURSES (CHOOSE ANY ONE)

SES 935.2: The Role of Public Relations in Sports Marketing (2 Units)

The purpose of this course is to train graduate students to master Public Relations and its role in positioning and in the formulation of the marketing mix. The major role and functions of public relations professionals to sports events should be emphasized. To recognize the importance of effective community relations and employee relations programming in product positioning and effective marketing effect. Attention is also paid to specialized issues such as; the role and scope of the media and the subsequent impact the media has on the public relations function to sport marketing.

OR

SES 936.2: Research in Sports Marketing (Current issues in Sport Marketing) (2 Units)

The course will deal with the efficient handling of internal data sources available to any sport organization. Various research methods available

for gathering external information on sports marketing. Apart from being given practical assignments to trace information in the libraries and in the field, the student will be taught how to organize data and present them in a scholarly form and also to appreciate the components and the importance of a marketing information system.

SES 937.1 - Financial Planning and Marketing Control in Sports Industry (2 Units)

The course is expected to expose students to the principles of financial planning and expenditure as well as market control mechanisms. The students are expected to understand the marketing forces in sports setting and industry.

SES 938.1 - Theory of Sports Finance

The various sources of sports finance should be discussed. The course should hinge on maximizing the sports and non-sports products and services to generate adequate finance for managing sports in a contemporary society.

EXERCISE PHYSIOLOGY

SES 940.1: Advanced systemic exercise physiology.

An in-depth study of the physiological effects of acute and chronic training on homeostatic function, musculoskeletal system, energy system, cardiovascular and pulmonary systems (2units).

SES 941.1: Advanced concepts in Exercise stress testing and trainings:

The focus is on cardiovascular health, review of physical fitness testing and training, monitoring exercise, graded exercise tests protocols and skill in interpreting test results (2units).

SES 941.2: Prevention and treatment of chronic diseases (2units)

Identification of some cardiovascular diseases (coronary artery disease, Hypertension, stroke. Congestive heart failure), prevention and treatment, also disorders of skeletal and muscular systems, causes and therapeutic steps to remedy joint and muscular injury and or diseases.

SES 943.1: Nutrition, obesity and body weight regulation

The course covers all aspects of weight regulation including diet and nutrition, pathophysiology of obesity. Body weight regulation involves many organic systems. The course therefore also covers systemic physiology, cellular and molecular biology.

SES 944.2: Development and laboratory management of physical fitness centers

This course is designed to equip candidates with technical and management of laboratory expertise required to set up and run an efficient and effective physical fitness centre. This will include space, equipment for various tests and training, organisational skills and maintenance of resources (2 units).

SES 945.2: Physical activity programming for health and fitness for various groups (2Units)

The course focuses on the role of exercise in the development and maintenance of physiological fitness throughout the life cycle. Application of concepts to schools, hospitals and adult fitness programmes and special populations (the obese, diabetics, coronary heart diseases and stroke patients) (2units).

SES 946.1: Biochemistry of Exercise 1 (2Units)

The course emphasizes basic elements of carbohydrate, fat and protein metabolism and brief molecular biology concept of transcription regulation.

SES 947.2: Advance Biochemistry of Exercise II (2Units)

The course focused on the biochemistry of human in relation to physical activity and nutrition, exercise and sport with emphasis on Biochemical energetic, glycolysis, oxidative phosphorylation, gluconeogenesis and glycogen metabolism.

SES 948.1 Environmental Physiology and exercise (2Units)

Fundamental concept of environmental physiology and its application to exercise physiology, effect of cold, heat, humidity, altitude and atmospheric pressure on various physiological parameters during exercise and sports.

SES 949.2 Independent Study in Exercise Physiology

Students do an independent study which may serve as a pilot study in a given topic (usually in their area of interest).

LIST OF LECTURERS FOR POSTGRADUATE PROGRAMME

S/N	NAME OF ACADEMIC STAFF	AREA OF SPECIALIZATION	DISCIPLINE	QUALIFICATION	RANK
1	Prof. P. C. E. Iro	Exercise Physiology	Sport and Exercise Science	BSc, MEd., Ph.D	Professor
2	Prof. T. T. Orunaboka	Sport Administration and Marketing	Sport and Exercise Science	BSc, MEd., Ph.D	Professor
3	Prof. A. N. Amasiatu	Sport Psychology	Sport and Exercise Science	BSc, MEd., Ph.D	Professor
4	Prof. I. C. Elendu	Sport Management and Sociology	Sport and Exercise Science	Diploma, BSc, MEd., Ph.D, Ph.D	Professor
5	Dr. G. A. Deemua	Sport Management	Sport and Exercise Science	BSc, MEd., Ph.D	Reader
6	Dr. G. O. Nwankwo	Sport Management	Sport and Exercise Science	BSc, MEd., Ph.D	Reader
7	Dr. A. V. Ogunleye	Exercise Physiology	Sport and Exercise Science	BSc, MEd., Ph.D	Reader
8	Dr. F. C. Akalazu	Sport Management	Sport and Exercise Science	BSc, MEd., Ph.D	Senior Lecturer

DEPARTMENT OF CURRICULUM STUDIES AND EDUCATIONAL TECHNOLOGY

POST GRADUATE PROGRAMMES

BRIEF HISTORY OF POST GRADUATE PROGRAMME

Postgraduate studies started in the Department in 1987/88 session in six areas of specialization namely:

- i) Language Education
- ii) Social Studies Education
- iii) Educational Technology
- iv) Mathematics Education
- v) Science Education
- vi) Curriculum and Instruction

THE AIMS OF THE PROGRAMME ARE TO PRODUCE:

- (a) Curriculum Development and teaching specialists who will provide leadership for both primary and post primary schools, tertiary institutions and the Ministries of Education in the areas of Language Education, Social Studies Education, Mathematics Education and Science Education.
- (b) Educational media specialists, designers of training programmes, evaluators of educational programmes/products in the schools, higher education, Ministry of Education, business, industries, health services and government agencies. With the present benchmark forwarded by National University Commission (NUC) of Nigeria, the programme is undergoing modification to meet the changing needs of education.

1. Programmes Available

The programmes in the Department are still as they were at inception. However, the Department is reviewing the curriculum of each unit in view of the recent National University Commission (NUC) Benchmark Minimum Academic Standards for Postgraduate.

2. Objectives

The graduate programmes in the Department of Curriculum Studies and Educational Technology are designed to produce:

- (a) Curriculum Development and teaching specialists who will provide leadership for both primary and post primary schools,

tertiary institutions and the Ministries of Education in the areas of Language Education, Social Studies Education, Mathematics Education and Science Education.

- (b) Educational media specialists, designers of training programmes and evaluators of educational programmes/products in the schools, higher education, Ministries of Education, business, industries, health services and government agencies.

1. Duration of Programme

- (a) Masters of Education (M.Ed)

(i) Full Time

- (a) M.Ed Degree programme shall extend over 12 calendar months.
- (b) **Doctor of Philosophy (Ph.D):** The Ph.D degree programme shall extend over 2 years (4 semesters), but normally not to exceed 3 years (Six semesters) except by special permission of the Higher Degree Committee.

(ii) Part—Time

The duration of the part-time Ph.D programme shall normally be twice the length of the relevant Full-Time programme. However, part-time students for the Ph.D programme may be allowed a longer period of 8 semesters but not more than 10 semesters.

2. M.Ed Degree Requirements

M.Ed students shall be required to take a minimum of 30 credit units, of which 6 credit units must be for thesis.

- (i) The remaining will be distributed from among core courses and elective courses of the student's choice among the prescribed courses under the area of specialization.
- (ii) The students shall also audit at least two (2) graduate level courses in other faculties or departments related to their field or area of specialization. The grades from these courses will not be used in computing the students CCIPA. However, the students are required to pass them (i.e. at least a grade of C).

(iii) Course Assessment:

1. Each course/seminar shall be assessed on the basis of a written examination or research paper(s) or both.
2. M.Ed Candidates must maintain an overall C grade point average. However a student must not have more than two Ds in all the courses taken.

(iv) M.Ed Thesis

1. The Senate on the recommendation of the Faculty Board shall appoint three examiners, one of whom shall be an external examiner, and one of the remaining two shall be candidates supervisor, while the last one shall be graduate schools representative for the examination of the M.Ed thesis.
2. The examiners shall individually award a grade.
3. The candidate will be required to present himself for an oral examination.
4. All final (oral) Masters defence will be held in the department. The Dean of Graduate School of Arts, Education & Social Science shall serve as chairman.

**CORE COURSES FOR ALL STUDENTS IN DIFFERENT AREAS OF SPECIALIZATION
M.ED PROGRAMME**

17.0: LANGUAGE EDUCATION:

General Core Courses for All Students

Course Code	Course Title	Credit Unit
EDU 801.1	Research Methods in Education	2
EDU 802.2	Statistical Methods in Education	2
EDU 803.1	Information and Communication Technology (ICT)	3
EDU 899.2	Research Project	6
EDU 804.1	Principles of Learning and Instruction	2
EDU 805.2	Graduate Seminar	2
EDU 806.2	Open and Distance Learning (ODL)	2
EDU 807.1	Media Production I	2
SGS 801.1	ICT and Research Methods	2
Total		24

Core Courses for Area of Specialization

Course Code	Course Title	Credit Unit
EDC 808.1	Bi-lingual and Bi-cultural Education	2
EDC 809.2	Language and Literature Methods	2
EDC 810.2	Trends in Language and Literature	2
EDC 811.1	Curriculum Development in Language Arts Education	2
EDC 812.1	Integrating ICT into Language Education	2
SGS 802.2	Entrepreneurship & Management	2
Total		24

Two Elective for Area of Specialization

Course Code	Course Title	Credit Unit
EDC 813.2	Language Testing and Assessment in ELT	2
EDC 814.1	Reading & Literacy	2
EDC 815.1	Language Arts in Elementary/Secondary Schools	2
Total		4

Any two graduate level courses from Faculty of Humanities in any of the options (English Studies; Nigeria Languages; and French Language) to be audited and must be passed.

Session Total: 24+12+4 = 30

SOCIAL STUDIES EDUCATION

General Core Courses for All Students

Course Code	Course Title	Credit Unit
EDU 801.1	Research Methods in Education	2
EDU 802.2	Statistical Methods in Education	2
EDU 803.1	Information and Communication Technology (ICT)	3
EDU 899.2	Research Project	6
EDU 804.1	Principles of Learning and Instruction	2
EDU 805.2	Graduate Seminar	2
EDU 806.2	Open and Distance Learning (ODL)	2
EDU 807.1	Media Production	2

SGS 801.1	ICT and Research Methods	2
Total		24

SGS 801.1	ICT and Research Methods	2
Total		24

Core Courses in Area of Specialization

Course Code	Course Title	Credit Unit
EDC 816.2	Curriculum and Instruction in Social Studies Education	2
EDC 817.2	Contemporary Issues in the Society	2
EDC 818.2	Foundations of Social Studies	2
EDC 819.1	Sociology of Education	2
SGS 802.2	Entrepreneurship & Management	2
Total		10

Core Courses in Area of Specialization

Course Code	Course Title	Credit Unit
EDC 823.2	Media Production II	3
EDC 824.1	Educational Technology: Field and Profession	2
EDC 825.1	Instructional System Design (ISD)	2
EDC 826.2	Evaluation of Educational Products/Processes	2
SGS 802.2	Entrepreneurship & Management	2
Total		10

Two Elective for Area of Specialization

Course Code	Course Title	Credit Unit
EDC 820.1	Trends and Issues in Social Studies Education	2
EDC 821.2	Social Studies and Socialization	2
EDC 822.1	Social Studies in Elementary and Junior Secondary Schools	2
Total		10

Electives:

EUC 830.2: Practicum in Educational Technology (This is an audited course) and must be passed at credit level.

Two Elective for Area of Specialization

Course Code	Course Title	Credit Unit
EDC 827.2	Developing and Managing Learning Resource Centre	2
EDC 828.1	Educational Radio and Television	2
EDC 829.2	Human Resource Development (HRD) in Business and Industry	2
EDC 830.2	Innovation and Change Models in Education	2
EDC 831.1	Futuristic in Learning Environment (Proacting instead of Reacting)	2
Total		4

Any two graduate level comses in Faculty of Social Sciences to be audited and must be passed at credit level.

Session Total: 22+8+4 = 38

EDUCATIONAL TECHNOLOGY

General Core Courses for All Students

Course Code	Course Title	Credit Unit
EDU 801.1	Research Methods in Education	2
EDU 802.2	Statistical Methods in Education	2
EDU 803.1	Information and Communication Technology (ICT)	3
EDU 899.2	Research Project	6
EDU 804.1	Principles of Learning and Instruction	2
EDU 805.2	Graduate Seminar	2
EDU 806.2	Open and Distance Learning (ODL)	2
EDU 807.1	Media Production I	2

Session Total: 24+11+4 = 39

MATHEMATICS EDUCATION

General Core Courses for All Students

Course Code	Course Title	Credit Unit

18.0: COURSE DESCRIPTIONS

EDU 801.1: Research Methods in Education (2 units)

This is an introductory course in research methods. It covers such areas as planning and design of research: tools of research (library, statistics, measurements, computers, etc), different types of research (historical, descriptive, experimental, ex-post facto); proposal writing, writing a research report, types of instrument, types of procedure for data collection and methods of data analysis

EDU 802.2: Statistical Methods in Education (2 units)

Review of basic statistical concepts; descriptive, parametric, inferential and non-parametric statistics, tstatistics, ANOVA, ANCOVA, Regression Analysis, Chi-Square and statistical techniques for Post-hoc analysis, application of computer in statistical analysis, meaning and result of statistical analysis.

EDU 803.1: Information and Communication Technology (ICT) Integration in Education (2 units)

This course will critically look into the issues involved in the use of Information and Communication technology (ICT) in Social Studies instructional delivery. The course will cover topics like, computer Assisted Instruction(CAI) in Social Studies, levels of CAI, objectives of computer in Social Studies class, pitfalls of CAI in Social Studies, challenges of CAI in Nigeria, computer Assisted Testing (CAI) Computer Managed Instruction (CMI), use of power point in Social Studies seminar

presentations, Research in Social Studies Education and electronic education.

EDU 899.2: Master's Thesis (Research Project)

The thesis shall be based on research into a significant problem in science education related to the candidates' area of specialization.

EDU 804.1: Principles of Learning and Instruction (2 units)

This course will critically examine the various theories of learning: Behavioural Learning Theories, Humanistic Learning Theories Social Learning Theories, Cognitive Learning theories, Constructivism; It will also discuss modern approaches to teaching/learning: Problem Based learning; situated learning; cognitive apprenticeship, Blended learning, etc. Each theory will be looked at with its educational implications or principles derived from each and its practical applicability.

EDU 805.2: Graduate Seminar (2 units)

The course is designed to give students the opportunity to engage in an in-depth analysis of the following topics: Inter-language, Inter and Intra-lingual errors in English as a second language, Constructivism in the teaching and learning of English, current status and prospects of communicative language teaching, English for specific purposes problems of language decay in Nigeria, National curriculum changes and the effects on English in Nigeria, extensive reading and the analysis of genres in Literature.

EDU 806.2: Open and Distance Learning (ODL) (2 units)

Introduction to general proactiveness of open and distance learning investigation of current practices and techniques in educational planning and management of open and distance learning in Nigeria. Specific designs include basic network analysis (PERT CRM) in the preparation of open and distance learning materials; evaluation technique for open and distance learning.

EDU 807.1: Media Production (2 units)

Survey of old and modern educational media with the focus on educational video production, photography in education, interactive radio instruction and producing radio drama. In addition, it will introduce students to management principles and personnel theory. Techniques of administering media centres, language laboratories, libraries, support services in media production, budget, purchasing facilities. Cataloguing print and non-

print materials, basic electronic and equipment storage and maintenance. This course will also focus on web-based media design, PowerPoint, Computer graphics and animation. Producing interactive Television.

EDC 808.1: Bilingual and Bicultural Education (2 units)

The course examines patterns of bilingual and bicultural behaviour among individuals and groups. It presents a range of definitions and distinctions for the purpose of grinding students to have a deeper understanding of the concepts and constructs related to bilingual people and situation. Examples are: minimal and maximal bilingualism, additive and subtractive bilingualism, balanced bilingualism, and semi-lingualism, Topic examined in the course includes language planning, language shift, language vitality, language maintenance, language decay, language extinction, and language revival and language reversal. The course presents an analysis of cognitive theories of bilingualism, biculturalism, cultural competence and multiculturalism. Implications for classroom practices are examined.

EDC 809.2: Language and Literature Methods (2 units)

The course examines major trends in language and literature teaching. It describes a large number of language methods (the Grammar Translation method, the direct method, the Audio-lingual method, etc.) which teachers can apply for different purpose. A description of new methods (The Total Physical Response, Cooperative Language Learning, Content-Based Instruction, Task-Based Language Teaching, etc). Alongside older ones will help students to apply the methods in more flexible manners. Similarly, with respect to Literature methods, well- devised learner-centred literatures activities will be analyzed to help students develop emotional response to fiction, drama and poetry.

EDC 810.2: Trends in Languages and Literature (2 units)

The course is an examination of theory and research in English language and Literature teaching. It highlights areas of consensus and controversy in language and literature education, enabling students to acquire profound understanding of the issues involved. Some of the topics in Language include the principles of teaching English as a second language, new directions in the conceptualization and teaching of

granular, defective use of Reading, Writing and Academic Language, and Language.

Across the Curriculum, the Literature component of the course involves such goals as developing Independent Readers, Promoting Discourse knowledge, gaining syntactic knowledge, Developing vocabulary knowledge and Children's Literature.

EDC 811.1: Curriculum Development in Language Arts Education (2 units)

The course is intended to examine the Trends in Linguistic Theory, Social linguistic, Psycholinguistics, Semantics, Language Teaching methods and Literature. It seeks to identify the areas of difficulties for students in language and literature education and attempts will be made to find solutions to such problems encountered by students in pronunciation, grammar and reading through effective teaching and monitoring.

EDC 812.1: Integrating ICT into Language Education (2 units)

This course will look at the Knowledge-Based Economy and its features; the major factor that shapes this economy to produce rapid change in society. It will examine the leadership role of teacher education in transforming education through the use of ICTs for teaching/learning. It will also focus on modern devices for teaching/learning in ICT and reviewing best practices.

EDC 813.2: Language Testing and Assessment in ELT (2 units)

The course examines test instruments for language achievement purposes. It discusses the paradigm shift from test to achievement involving a wider set of parameters than the term "testing". The central element will be communication standards in all the language skills. Emphasis will be placed on various forms of integrated classroom assessment involving teachers in all stages of the assessment cycle; planning the assessment programme, identifying and developing appropriate assessment tasks, and making the final judgment.

EDC 814.1: Reading and Literacy (2 units)

The first part of this course presents an analysis of theories of reading involving, among others, the traditional view (the bottom-up model) and the metacognitive views. There will be a discussion on the teaching of different types of reading: skimming, scanning, preview, receptive reading and responsive reading. The second part of the

course discusses the question of raising linguistic attainment for all children particularly underachievers. It analyzes the complex ways in which families, communities, schools and the larger society interact to make the curriculum accessible to all pupils and to combat exclusion.

EDC 815.1: Language Arts in Elementary/Secondary Schools (2 units)

The course presents critical examination of the techniques and methods employed in teaching at the primary and post primary levels. It lays emphasis on areas of difficulty for students whose mother tongues are not English Language. Emphases will be placed on the four language skills of listening, speaking, reading and writing, together with their inter-relationship with the aim of achieving national goals in second Language Learning.

EUC 816.1: Curriculum and Instruction in Social Studies (2 units)

This course is designed to acquaint students with Social Studies curriculum and instruction. Topics to be discussed include: Sources of Social Studies curriculum, Social Studies curriculum planning, Social Studies curriculum development, Social Studies curriculum implementation, Social Studies curriculum evaluation, Social Studies instructional evaluation, Social Studies curriculum revision, and an overview of the problems of teaching Social Studies in Nigeria.

EDC 817.2: Contemporary Issues in the Society (2 units)

The principal concern of this course is to make a capsule presentation of the content of each of the selected contemporary issues so that they can serve or be viewed, as guide to meaningful curriculum design. Topics to be covered include; environmental abuse education, child abuse and neglect education, aesthetic education, human relations education, retirement education, death education, girl-child education, civic education, social security education etc. Others include religious crises, political violence, sectionalism, poverty, kidnapping/bombing, H.I.V/Aids.

EDC 818.2: Foundation of Social Studies (2 units)

Social studies curriculum in historical and pedagogical content, Education and changes in Social Studies, Examination of the difference between Social Studies and the disciplines in the social sciences curriculum; integration, interdisciplinary inquiry, problems of transfer at

the senior secondary school level shall be the focus of this course.

EDU 819.1: Sociology of Education (2 units)

The aim of this course is to expose the graduate students to more advanced studies of the relationship between school and society. Areas to be covered will include an analysis of the social, political, and economic determinants of educational achievement and the form and content of educational systems. Emerging concepts and new perspectives in the sociology of education will also be reviewed.

EDC 820.1: Trends and Issues in Social Studies Education (2 units)

This course will focus on the Nature and scope of Social Studies, the origin and history of Social Studies, trends in Social Studies curriculum, elements of Social Studies, social issues and problems, issues of population and environmental education in Social Studies, issues of social change, issues of citizenship education and issues of National development.

EDC 821.2: Social Studies and Socialization (2 units)

Man's actual humanization and capacity to effectively function within a given social context is dependent on one's socialization orientation perpetrated through school and non-school agents, all within a society. Topics to be covered include: The concepts, school, society and socialization, functions/theories of socialization, socialization in society and school, community life and socialization.

EDC 822.1: Social Studies in Elementary and Junior Secondary Schools (2 units)

This course will focus on the methods of teaching Social Studies at the elementary and junior secondary school levels. Topics to be covered include: Factors determining the selection of teaching methods, various methods of teaching Social Studies, instructional materials and resources, importance of community resources in Social Studies teaching and learning, principles, guidelines, criteria for selecting instructional materials and resources for Social Studies classrooms, sources of social studies instructional materials and factors inhibiting the utilization of instructional materials and resources in Social Studies teaching-learning process.

EDC 823.2: Media Production II (2 units)

The course will involve web-design, use of multimedia, incorporating animation, graphics, video, etc in course design. Storyboard development (students plan a project from start to finish). They will be taught various film techniques including transition and sequencing in video and multimedia production.

EDC 824.1: Educational Technology: Field and Profession (2 units)

The course will expose students to the true meaning of Educational Technology its definition with emphasis on tasks of facilitating learning and improving performance. It will also address evolutionary trends and associative hallmarks of each trend, covering reputable associations and job prospects that the field parades. The course will also cover motivation in the teaching-learning process, and related motivational theories. Finally, the course will cover cognitive multimedia and associated principles.

EDC 825.1: Instructional System Design (ISD) (2 units)

The course will examine the principles of instructional design, front-end analysis, needs analysis, audience analysis instructional task analysis, specification of objectives and instructional strategies, content structuring technique, sequencing, criterion testing and evaluation. Students develop and field test prototypes instructional product.

EDC 826.2: Evaluation of Educational Products/Processes (2 units)

Introduction to the techniques and criteria for educational product development through study of hardware components, evaluation criteria and production requirements are the focus of the course. These include evaluation of commercial products, large-scale curriculum evaluation needs analysis, formative and summative evaluation of instructional design.

EDC 827.2: Developing and Managing Learning Resource Centers (LRC) (2 units)

This is concerned with the examination of supportive elements of LRC. Definition and goals of learning resource centers programme, with implementation and evaluation plan to achieve the goals. Center activities and plan on how to amalgamate them with school educational programmes. Self-learning and group-learning auditorium; Organization and personnel management as they apply to LRC; identification

of primary functions performed by LRC personnel are all considered.

EDC 828.1: Educational Radio and Television (2 units)

The course will cover the impact of mass media on instruction; design of educational radio/TV programme; editing films; production of radio/TV programme; animation and video coverage. Communication theory and practice social media and its implications for education.

EDC 829.2: Human Resource Development in Business and Industry (2 units)

Principles of behavioural science, theories of motivation and their application to the work environment; improving productivity through human resource development, overview of problem-solving procedures, training needs assessment, students visit business/industrial setting to identify problems that needs to be solved are all treated in this course.

EDC 830.2: Innovation and Change Models in Education (2 units)

The course will examine the nature of innovation and change; key stakeholders in managing change; Educational Change models: strategies for adoption of innovation, necessary conditions for successful change, a guide for planning change, keeping track of change and change models in perspective. In addition, it will cover the role of the organization's leader in managing change, and leading and managing change.

EDC 831.1: Futuristics in Learning Environment (Proacting Instead of Reacting) (2 units)

This course will look at the future of Educational Technology in terms of online courses of distance education. Students will be encouraged to brainstorm on issues that might emanate from ICT in education, corporate academic partnership; interweaving technology into the fabrics of academic life; putting education within the reach of more individuals around the world with greater specialization in curriculum and pedagogy.

EDC 832.1: Curriculum & Instruction in School Mathematics (2 units)

Current trends and development in Nigeria school Mathematics curriculum, Evaluating Mathematics programmes with respect to (a) Instructional procedures, (b) Methods, (c) Strategies. Review of Mathematics curriculum at different levels of

Education, Relevance of learning theories in the instruction of Mathematics will be focused.

EDC 833.1: Diagnostic and Remedial Teaching of Mathematics (2 units)

Characteristics of Mathematics ability in students, Learning disability, Mathematics disability, Study of causes and effects of Mathematics disability, useful diagnostic techniques and instruments useful in diagnosis and remediation, Survey of Mathematics topics and methods appropriate for remediation in specific handicap areas, Mathematical errors in Mathematics processes, Innovative Strategies for combating errors, Mathematics disability in students, Defects in present the teaching of Mathematics in schools and their possible remedies are the concerns of this course.

EDC 834.2: Elementary and Secondary Mathematics Instruction (2 units)

This course covers trends in the elementary and secondary school Mathematics programmes. Developmental theories of learning Mathematics. Curricular Issues in elementary and secondary school Mathematic; methods used in teaching elementary and secondary Mathematics are to be examined and concluded by looking at supervision in elementary and secondary school Mathematics instruction and literature review of research studies on post-primary Mathematics programmes.

EDC 835.2: Materials and Resources for Teaching School Mathematics (2 units)

Examination of the materials and resources essential for Mathematics teaching at different levels of education; role of manipulate equipment in the teaching and learning of school Mathematics; management of Personnel in resources Mathematics teaching are to be treated, This also includes consideration of materials for individual differences in Mathematics teaching; and developing a Mathematics laboratory. Improvisation of materials for instruction in Mathematics

EDC 836.1: Curriculum Development in Science Education (2 units)

Different views on curriculum and their implications for science curriculum development; examination of the major curriculum efforts in Nigeria, in the USA, in the UK and in a selected Eastern block country; practical experiences in the development of a science curriculum in a chosen field; New approaches in science curriculum

development; challenges in science curriculum development and the way forward are all contents of this course.

EDC 837.2: Foundations of Science Education (2 units)

Nature of science, Ancient and modern development of science; Philosophical issues relating to scientific concepts, Nature of scientific concepts, Types and levels of concepts, Psychological theories and their implications in science teaching to include Gagne, Ausubel, Piaget and Bruner, Constructivists theories all form the components of this course.

EDC 838.1: Special Topics in Science Education/Integrated Science (2 units)

A critical study of the philosophy and methodology of Integrated Science, A detail study of the Nigerian Integrated Science Project materials, Concepts in Science will be discussed in an integrated manner. In addition, the knowledge of modern ideas in science that affect man and his environment shall be discussed. Also, Energy resources and utilization, fossil fuels, petroleum and natural gas formation, renewable energy, nuclear power, solar energy (solar heating, active solar heating), Geothermal power, Hydropower, Tidal power, Wind energy, Biomass, alcohol as fuel, Biogas, energy conversion, prospect for future resources in Nigeria. Exploitation and conservation of natural resources to include water resources, wildlife, mineral, forestry and soil resources. Food processing and preservation, Genetically modified food (GM food), Erosion, waste management and pesticides, Environmental pollution to include water, land (soil or terrestrial) air and noise pollution, Ecosystem Genetic cloning and HIV/AIDS all form the nucleus of this course,

EDC 839.2: Science in Elementary! Secondary Schools (2 units)

The course shall focus on analysis of methods and programmes for teaching science in Upper basic and Senior Secondary Schools and development of teaching skills. The course includes element of both theory and practice which serve as a foundation for additional professional development. Field experiences in which students observe others teach and implement their own teaching strategies are an important component of the course. Other issues shall be demonstrations and laboratory work models, planning, science activities and the teaching of some difficult concepts in the science curriculum.

EDC 840.2: Advanced Science Laboratory Development (2 units)

This course will consist of demonstration equipments, longitudinal investigations in growth and development that engage students in scientific research. Field trip/fieldwork ideas and discrepant events focusing on Physics, Chemistry, Biology, Geosciences and environmental science shall be discussed. Others are science kits activities, microscopy and instrumentation as well as science laboratory instruction statement (NSTA position statement) shall be points of focus.

EDC 841.1: Science, Technology and Society (2 units)

This course emphasizes the teaching of scientific and technological development in their cultural, economic, social and political contexts. Its design is to encourage students' engagement in issues pertaining to the impact of science and technology on the society. It is intended to make students take responsible decisions about how- to address such issues like climate change, global warming, genetic engineering, animal testing, deforestation, nuclear testing and environment legislation such as EU waste legislation and Kyoto protocol.

EDC 242.2: Materials and Resources for Science Teaching (2 units)

The course will focus on the exploration of various materials for science teaching, It will include facts about standardized and improvised materials. It will also explore materials for teaching difficult concepts in science; laboratory resources and materials; utilization and management of teaching materials and resource personnel in science teaching.

EDC 843.1: Curriculum and National Development (2 units)

Study of component of curriculum, a review of significant questions about curriculum planning and responsive curriculum for national issues, Analysis of curriculum programmes and content for transformation, relevance and methodology options are the focus of this course.

EDC 844.1: Principles of Curriculum Development (2 units)

A review of theory of curriculum and curriculum change. A thorough consideration of the approaches to curriculum construction, organization and institutionalization, a consideration of primary, secondary and tertiary Curriculum offerings in Nigeria and their relevance, Principles and processes of innovation,

adaptation and adoption shall be analyzed. Research trends in the diffusion of innovation both social and psychological shall be analyzed.

EDC 845.2: Curriculum Innovation and Change 2 units)

The course will include issues for curriculum renewal and innovation, social and philosophical principles of change, strategies of curriculum innovation and change and models of educational change including the process of innovation.

EDC 846.1: Psychological Theories in Curriculum Development (2 units)

Relevance of psychological theories to curriculum development, Bloom's taxonomy and curriculum development, Piaget, Ausubel and Constructivists, etc on modern curriculum thought and sequencing are the components of the course.

EDC 847.2: Evolutionary trends in Curriculum (2 units)

Concept of curriculum during the progressive era, curriculum of the progressive movement, modern concepts of curriculum, the school curriculum in a contemporary world of science and technology are the concerns of this course.

EDC 848.1: Foundation of Nigeria Education (2 units)

A study of western educational practices, indigenous education, formal education in Nigeria under colonial governance; different educational ordinances during colonial government; Post-independence educational policies and practices; The 9-3-4 educational system; Universal Basic Education; The global Education For All (EFA) initiative and its influence on Nigerian Education; The role of international organizations in Nigerian education; The National Policy on Education and educational practice are the focus of this course.

EDC 849.1: Contemporary Issues in Curriculum Designs and Development (2 units)

This course will survey the criteria for inclusion of content in the curriculum, issues of the determination of curriculum effectiveness and the goals of a curriculum will be discussed. The nature of curriculum evolution in Nigeria and the several issues raised by it shall be analyzed.

EDC 850.2: Supervision and Instruction (2 units)

Concept of supervision and techniques for supervision will be discussed. Clinical supervision and stages in clinical supervision plus skills and instrument involved for effective clinical supervision shall be discussed.

COURSE DESCRIPTIONS FOR Ph.D PROGRAMME

EDU 901.1: Advanced Research Methods in Education: II (3 units)

The concept and nature of research; scientific processes in research; problem definition, variable identification; sources of research topics; theory construction and hypotheses formulation; techniques for literature review; principles of design, instrumentation, data collection, techniques for data analysis and presentation of results. Candidates must be introduced to computers and data analysis; analytical software and techniques in education. The orientation must be practical throughout as candidates are guided to prepare tentative research proposals they must present and defend individually in class; techniques of research reporting, and research proposal writing are the concerns of this course.

EDU 902.2: Advanced Educational Statistics II (3 units)

This course deals with concept of educational statistics; the role of statistics in education; descriptive statistics and the various areas of application in education; classroom data, school records, school demography, social relations in school; school administration and finances; Inferential statistics; population and sampling theory; non-parametric statistics in education; hypothesis assumptions, types, applications and limitation, The nature of parametric statistics, types and applications in education; statistical models in education, application and limitation (correlation, univariate and multivariate analysis of education data), the nature of significant tests, problems of inferences. Candidates must be taught to utilize computer in various phases of this course and to be familiar with various analytical software. Emphasis must be placed on educational and practical application of basic statistical concepts in various educational disciplines.

EDU 903.1: Information and Communication Technology II (3 units)

In-depth knowledge of skills and techniques of data processing in education, overview of sources, storage, retrieval and dissemination of data/information, programme design and management of data; management of data bank, general problem solving with the use of information technology. Hands-on experiences are emphasized in this course.

EDU 999.3: Dissertation (12 units)

Candidates are required to demonstrate research competencies by selecting dissertation topics in their relevant areas of specialization. The research is carried out by the individual student under the guidance of competent supervisors according to graduate school requirements. The candidate is expected to make some significant contributions to knowledge. The dissertation is defended before an appropriately constituted examining committee chaired by the Head of the Department. The External Examiner's verdict shall override all other decisions.

EDC 904.1: Special Topics in Language and Literature Education (3 units)

The course focuses on such topics as Language and parole, Communicative competence, interconnected dimensions of grammar in language education involving morphosyntax (form), semantics (meaning) and pragmatics (use). It examines constructivism in language teaching and learning, discourse analysis and the language learner (motivation, styles and strategies). The course also examines aspects of fiction, poetry and drama, reading interest and attitudes.

EDC 925.3: Seminar in Language and Literature (3 units)

The course examines Second Language learning, literacy & multilingualism. It focuses on interlanguage, language varieties and Academic Language. Issues in the teaching of Fiction, Drama and Poetry together with sub-genres such as Tragedy, Comedy, Irony, Satire and the sonnet are discussed.

EDC 929.2: Contemporary Issues in Language Education (3 units)

The course is an in-depth study of English as a Second Language in Nigeria. It examines Standards in Native English and Nigerian English contexts, and changing approaches to the conceptualization and Teaching of Grammar. It focuses on Oral English and advances in the teaching of Reading and English Composition, the teaching of English for specific purposes (ESP), Teacher Language Awareness (TLA), Subject-matter Knowledge and Professional Standards.

EDC 920.1: Contemporary Issues in Literature (3 units)

The course will address children's Literature (plot, character, theme, mood, etc). It will examine

Fiction, Drama and Poetry, with special attention to poetry written by Anglophone and francophone writers. Oral literature (praise songs, myths, legends, folktales, proverb, etc) in Education and Socio-Cultural and political influences will be described.

EDC 926.2: Theory and Research in Language and Literature (3 units)

The course examines Metacommunication, recent methods in language Teaching, notion of World Englishes and new directions in English Language Testing. Strategies for literature teaching will be examined with respect to Fiction, Poetry and Drama.

EDC 922.1: Studies in Sociolinguistics and Psycholinguistics (3 units)

Sociolinguistics is the study of language and social network relations. It focuses on language variation, Standard and non-standard forms and Codification, Prestige, Language loyalty and Language Planning. Psycholinguistics is the study of cognitive processes that support the acquisition and use of language. It investigates aspects of language retention and attrition.

EDC 905.3: Advanced Syntax and Semantics in Language Teaching and Learning (3 units)

This course is a study of current trends in syntax and semantics. It explores such features as competence and performance, the creative character of language and implications for contrastive analysis. It focuses on meanings, synonymy and antonyms. Students are encouraged to explore how lexical and syntactic ambiguities are resolved.

EDC 914.1: Contemporary Issues in Social Studies (3 units)

The principal concern of this course is to make a capsule presentation of the content of each of the selected contemporary issues so that they can serve, or be viewed as guide to meaningful curriculum design. Topics to be covered include: Poverty Alleviation education, conflict resolution education, entrepreneurial education, social education, cultural education, Human rights education, Global (International education, values education, consumer education, community education, and law related education.

EDC 930.2: Theory and Research in Teaching Social Studies Education (3 units)

This course is designed acquaint students with theory and research in social studies teaching.

Topics to be discussed include: Meaning of research, principal stages in social studies research process, functions of research in social studies education, problems of research in social studies education, significance of titles, variables and hypotheses in writing a social studies research thesis, guidelines for selecting a topic of research in social studies and areas of focus in oral presentation of completed thesis in social studies education.

EDC 928.1: Special Topics in Social Studies (3 units)

Special topics cover the interest areas of evaluation process in social studies. Focus will be on social studies Instructional/Curriculum evaluation, social studies performance evaluation: Competencies to be appraised or evaluated, social studies teacher self evaluation, students involvement in social studies teachers performance evaluation, processes and issues of modernization.

EDC 931.3: Seminar in Social Studies (3 units)

Students shall be expected to select some seminar topics from New frontier areas in social studies in Nigeria and develop/present the papers orally and in written form to the academic staff of the department.

EDC 932.2: Teaching Social Studies at the Basic and Secondary School (3 units)

This course will focus on the methods of teaching social studies education at the basic and junior secondary school levels. Topics to be discussed include: The concept, Teaching methods, Strategies and Techniques, Methods of teaching social studies such as Presentation method, Construction method, Creative Activity method, Inquiry method, Discussion method, Problem solving method, Dramatization method, Simulation method and Questioning method. Teaching large classes in social studies. Teaching of social studies to children with special needs and teaching social studies in multigrade classes.

EDC 937.1: Peace and Conflict Issues in Social Studies Education (3 units)

Concepts of peace, peace-building and conflict resolution, sources and effects of conflict attitude and value, relevance to peace-building and processes of conflict resolution in a multi-racial or ethnic society, patterns of peace-building and conflict resolution in traditional and modern African Societies, Teaching peace, peace-building process and conflict resolution/conflict management strategies/skills through reformed

Social Studies curricula are the components of this course.

EDC 938.3: Social Studies Education for Youth and National Development (3 units)

Critical analysis of developmental trends in Social Studies education will emphasize major contributions of the discipline to nation-building efforts in Nigeria since independence. The interdisciplinary perspective of the field as a major impetus for democratic and citizenship/civic training for Nigerian youths, emerging issues and challenges in social studies affecting its disciplinary and intellectual efforts towards nation- building and development are the contents of this course.

EDC 933.1: Ergonomics in the Design of Educational System (3 units)

The course will survey human capabilities, limitations, characteristics, behaviour and motivation to workplace design, environmental conditions, information input and human output and control. The focus will be on human beings and their interaction with products, equipment, facilities, procedures; how design and products influence people.

EDC 924.1: Advanced Instructional Design (ISD) (3 units)

Review of the historical and contemporary developments of instructional systems, theories of learning as it relates to instructional system design: behaviourism and instructional system design, cognitivism and instructional system design; constructivism and instructional system design, analysis of instructional design models will be carried out, and then finally introduction to multi-media instructional design.

EDC 923.2: Trends and Issues in Educational Technology (3 units)

The purpose of this course is to examine the past, current and future trends in educational technology. The course will cover the roots of instructional design, media and educational computing. An in-depth analysis of the "Apple's Classroom of Tomorrow (ACOT), teacher Development Center Project of thorough analysis of the move from learning about the technology to; adopting technology to support traditional teaching/learning (Blended Learning), adopting it to classroom practices, appropriating it to project-based and co-operative student work and inventing new uses for it shall be considered.

EDC 934.3: Seminar in Educational Technology (3 units)

The seminar will provide an opportunity for the in-depth study of substantive issues in educational technology. Each student will be expected to present a paper that will lead to a discussion on selected contemporary issues in the field of educational technology.

EDC 939.1: Historical Evolution of Educational Technology (3 units)

Conceptual frameworks and historical development of Educational Technology. Early development, systems approach, consolidation, development and criticism of the early frameworks mass communication access and control, interactionist concepts of Educational Technology and Information Technology and the information society, AECT'S definitions of educational technology over the years, contributions of selected media men in the development of educational technology are the focus of this course.

EDC 940.2: Psychology and Media (3 units)

Learning theories and their proponents, factors affecting human learning, investigations of established learning principles and their relationship to the design and the use of instructional media, applicability of research on motivation, attention, cueing, responding, reinforcement, types of learning characteristic, explored script writing for Textbooks and Media Materials, Techniques and Procedures of script writing of textbooks, mediated instructional materials and independence, correspondence learning materials, modular curricula for distance learning are the contents of the course.

EDC 941.3: Script Writing for Textbooks and Media Materials (3 units)

Techniques and procedures of script writing of textbooks for instructional purposes, mediated instructional materials and independence, correspondence learning materials. Producing modular curricula for distance and open learning make up the strength of the course.

EDC 907.1: Mathematics Teaching & Learning (3 units)

The theories and methods of mathematical problem solving with application to classroom instruction, cognitive development and learning theories, constructivism and mathematics teaching, Ethnomathematics and other socio-cultural issues affecting mathematics, the use of instructional materials in research results and methods of

teaching primary/secondary school Mathematics will be critically analyzed.

EDC 908.2: Special Topics in Mathematics (3 units)

Special topics cover the interest areas of the nation's educational objectives, Special Educational Needs (SEN) and teaching Mathematics, Mathematics for exceptional children; Relationship between Mathematics and Science in secondary schools; using mother tongue to teach Mathematics at basic levels; strategies for teaching special topics in Mathematics, application of computers in Mathematics instruction it may also involve field work and laboratory work.

EDC 909.1: History of Mathematics (3 units)

Nature and Structure of Mathematics in Schools, Historical development of major ideas in Mathematics; contributions of noteworthy mathematicians (including Nigeria), analysis of mathematical classics; Historical/comparative study of Mathematics education programmes in Nigeria, Africa and the rest of the world, trends and Developments in computer from Mathematics and the structure of modern computers characterize the course.

EDC 910.3: Seminar in the Teaching of Mathematics (3 units)

Emerging trends, issues and problems confronting the teaching and learning of Mathematics, current research in Mathematics methods and in structural process: integrating computer in teaching and learning of Mathematics, comparative study of the teaching of Mathematics in Nigeria and other nations form the nucleus of the course.

EDC 942.3: Nature, Philosophy & Structure of Mathematics (3 units)

Meaning and origin of mathematical concepts, education: schools of Philosophical thought, Cultural & ethnomathematical context of Mathematics Philosophy & Purpose of Mathematics education. Structure of Mathematics in schools. Current Issues in Mathematics education in Nigerian, Role of Mathematics teaching, natural issues are the focus of the course.

EDC 943.3: Problem Solving in Mathematics (3 units)

Mathematical problem-solving, Implication of teaching problem-solving in Mathematics theories & method of Mathematical problem-solving with application to class instruction, developing heuristic strategies in problem analysis.

Information processing, modeling of logical thinking, Methods and materials for problem solving strategies, with applications from school curriculum and Instructional settings are the features of the course.

EDC 944.1: Curriculum Mathematics Education! Critical Curriculum Issues in Mathematics Education (3 units)

Trends and Issues in Mathematics education at global level, curricular issues affecting Mathematics education in Nigeria, Pedagogical Issues affecting Mathematics education in Nigeria, Materials & Technological Issues in Mathematics education in Nigeria, Scientific graphical calculators, Computers and other devices in solving problems in Mathematics, software packages in teaching Mathematics, teachers' belief about learning and teaching Mathematics comprise the components of the course.

EDC 916.1: Issues in Science Education (3 units)

Science for citizenship: this explores the effective teaching and learning of issues relating to the society (that is socio-scientific issues) Positive and negative impacts of science on the society, who should be blamed? Scientists, technologists or the communities? Issues on integration of science rationale, essence and models of integration; Gender issues in science education: involvement of females in science education at all levels; the trend, hindrances and the prospects, science literacy: components and interference with African Cosmology. Entrepreneurship in Science curricula and entrepreneurship. Communication in Science Education: Objectivity and honesty, laboratory issues in Science Education; Laboratory skills and their inculcation, measurements in Science Education all form the elements of this course.

EDC 917.2: Theory and Research in Science Education (3 units)

A study of contemporary theory and research in Science Education, The relationship between research, theory and science education shall be critically examined. Students shall develop their research designs in the identified content of their areas of interest.

EDC 918.1: Advanced Process Skills in Science Education (3 units)

A review of science process skills as broadly transferable intellectual skills, appropriate to all scientific endeavours they include basic process skills (e.g., observing, inferring, measuring,

communicating, classifying, predicting, using time space relation, using numbers) and integrated process skills like controlling variables defining operationally and formulating models all make up the focus of the course.

EDC 919.1: Science Teaching in Higher Institutions (3 units)

The aim of the course is to develop an understanding of the main concept, themes, and laws developed within the domains of the biological, chemical and physical sciences. It is intended further to create an awareness of the interrelatedness of the physical, chemical and biological worlds. The development of an understanding of the nature of scientific inquiry, the scientific enterprise, scientists and how they work, the multiple methods of science and the role of imagination and creativity in science will be emphasized. Further areas shall include attitude toward science, critical-thinking, questioning, analysis, problem solving and decision-making skills involving natural phenomena.

EDC 935.3: Workshop and Laboratory practice in Science Education 3 units)

This course deals with a wide range of skills needed to deliver high quality technical support in a School, School or University's science laboratory. Contents will include fundamentals of science, using science in the workplace, perception of science, scientific investigation, scientific practical techniques, medical physics, industrial applications and biomedical techniques. Others are, complying with statutory regulations and organizational safety requirements; developing and maintaining working relationships; use of laboratory information systems/measurements and basic laboratory activities.

EDC 921.3: Seminar in Science Education

The course is designed to give students the opportunity to engage in an in-depth analysis of their post-field experience in the field of science education and related studies.

EDC 945.2: Contemporary Policy and Reform in Science Education (3 units)

This course will deepen students' study of the origin, nature and consequences of science education reform in Nigeria and the world over. It will present special focus on the movement towards increased development of national standards in Science Education and professional preparation. Emphasis will be given to exploring current reform efforts, trends and policies.

EDC 911.1: Contemporary Issues in the Curriculum Development (3 units)

This course will survey the criteria for inclusion of content in the curriculum, issues of the determination of curriculum effectiveness and the goals of a curriculum will be discussed. The nature of curriculum evolution in Nigeria and the several issues raised by it shall be analyzed.

EDC 912.1: Theory and Research In Teaching (3 units)

Critical study of contrasting approaches to the study and findings in research on the teaching process, the teaching process in relation to the purposes of education, human growth and personality, the nature of learning, the dynamics of groups, the nature of subject matter and evolution are the contents of the course.

EDC 913.2: Designing Curriculum and Instruction (3 units)

Curriculum design based on the rationale, empirical evidence, engagement and open models will be discussed. Students shall be required to develop specific segments of the Secondary School Curriculum based on these emergent models.

EDC 915.3: Seminar in Curriculum and Instruction (3 units)

This course considers examination and consideration of issues and problems in Nigerian School Curriculum. Discussion will also include research plans in Curriculum and Instruction, Language Education and Social Studies.

EDC 946.1: Curriculum and Instruction in Higher Education (3 units)

An examination of the developmental needs of the University, Colleges of Education, Colleges of Agriculture, Colleges of Theology, and Poly/Monotechnic students, and appropriate instructional means to meet the needs, considerable emphasis on social-psychological research relevant to curricular concern form the nucleus of the course.

EDC 927.2: Formative and Summative Evaluation of Curriculum (3 unit)

The concepts of formative and summative evaluation as applied to curriculum development, and cognitive, affective and psychomotor achievement of recipients of components of the developed curriculum, principles for construction of measuring instruments for these purposes are considered.

EDC 936.3: Observational Techniques and Curriculum and Instruction (3 units)

The use of various interaction analysis instruments for evaluating transactions in the classroom, coding systems for classroom observation will be analyzed.

GUIDELINES FOR THESIS/ DISSERTATION DEFENCE

(1) Abstract

This is an abbreviated summary, usually at the beginning but could come up at the end also. However for consistency, it should come at the beginning. It should not be more than a page. It should also contain purpose of study, brief research questions cum hypotheses, design of study, results, discussion, etc.

(2) Introduction

This should include the “background to the study”, theoretical framework, research questions, hypotheses, scope (delimitations) of study, definitions of special terms used in the study, and limitations of the study. This chapter must clearly spell out whether the research is quantitative or qualitative.

(1) Literature Review

The literature must be relevant and be related to the problem being investigated. The literature must be current. Except where relevant, literature below 10 years backwards should be discouraged. Care must be taken to distinguish between investigators interpretation of what is read in the literature and verbatim copies. Quotation rules must be followed according to the A.P.A. Style.

It is good practice to have a summary of the literature reviewed. Has the review been able to list past researches in the area being investigated? Has the review been able to throw “theoretical” light into the problem being investigated? Sources of literature should be noted:

Books, Journals and Computer databases. All sources of the literature should be acknowledged.

(2) Research Methodology

A Research Design: Experimental, Ex-post-factor, survey, qualitative?

(A) Variables of the investigation/ characteristics of investigation

Dependent and independent variables must be well spelt out and the levels of measurement. For example, are the variables nominal, ordinal, interval or ratio? What type of design is being

used? Prospective or Retrospective. The former deals with prediction of effects from known causes and the latter searches backwards for causes from known effects.

(B) Sample:

Type of sampling: Random, stratified, cluster or opportunistic? Sampling methods must be well spelt out because this will help control internal validity of the research (i.e. control of extraneous variables). Issues dealt with here also include size of sample (the larger the sample, the better).

(C) Measurement of variables (Instrumentation)

I. Types of Measures

How were the variables measured, attitude scales, use of tests, questionnaires, interviews, focus groups, observations and secondary or existing data.

II. Psychometric Properties of Instruments:

- (a) Validity how was this established, any evidence of it in the research.
- (b) Reliability how was this established, any evidence of it in the research
- (c) Easy use of instrument

(D) Analysis of data

Has appropriate statistics been used for data analysis? How were the data analysed? By hand,

calculators, or by computers? They must be well stated. Appropriate statistics must be used for how variables were measured. For example, non-parametric statistics for ordinal versus nominal data and parametric statistics for interval or ratio measures.

(3) Results

Results, usually in chapter 4, should be presented with Tables that are properly titled according to A.P.A. format. Results should be presented according to research questions or hypotheses. Results should be well described and should be explicit as to whether the hypotheses being tested have been retained or rejected.

(4) Discussion

The results from chapter 4 should be discussed according to research questions and hypotheses. Discussion must be related to findings and the literature reviewed.

(5) Conclusions, Implications and Suggestions

What are the conclusions to be drawn from the investigation? Are the results and subsequent discussion related to the problem investigated and to the results presented? Have new grounds been broken? Have issues of internal and external validity been appropriately addressed in relation to the problem investigated? Any suggestion for future research?

ACADEMIC STAFF

Name	Qualifications	Field of Specialisation	Designation
Awotua-Efebo E.B.	B.Sc. (Kent State), M.Ed, Ph.D (Wayne State)	Educational/ Information Technology	Professor
Obomanu, B.J.	B.Sc (RSUST), M.Ed, Ph.D (UPH)	Science Education	Professor

DEPARTMENT OF LIBRARY AND INFORMATION SCIENCE

Vision

The vision of the Library and Information Science degree programme at the postgraduate level is to equip scholars with more creative and sophisticated diverse expertise, such that, they would be independent in carrying out the responsibilities of quality service delivery in this digital information-driven economy.

Mission

The programmes will train information professional to carry out duties on library and information science related responsibilities, contribute, knowledge to the wellbeing of the economy, and add to distinguished knowledge managers.

Philosophy

In general, the philosophy of education of Library and Information Science is based on the national objectives contained in section-1, paragraph-1 of the national policy on education which harps on the realization of a free and democratic society, the attainment of an egalitarian society, the achievement of a united, strong and self-reliant nation and the realization of a dynamic economy. In pursuance of the national policy on education (section 5 and 9), the goals provided under Higher education (section 5) are as follows:

- (i) The acquisition, development, and inculcation of proper value-orientation for the survival of the individual society.
- (ii) The development of the intellectual capacities of the individual to enable him/her to understand and appreciate his/her environment,
- (iii) The acquisition of both physical and intellectual skills which will enable the individual to develop into a useful member of the community,
- (iv) The acquisition of an objective view of local and external environments.

Based on this, the department intends to run three levels of postgraduate studies namely: postgraduate Diploma in Library and information science (PGDLIS), Master's Degree in library and information science (MLIS), and Doctoral degree (Ph.D.).

POSTGRADUATE DIPLOMA IN LIBRARY AND INFORMATION SCIENCE (DipLIS)

Duration: The duration for DipLIS is for two semesters with 2 months of supervised compulsory library attachment in between the semesters.

The DipLIS is structured in such a manner that those who possess a first degree in Library and Information Science (BLIS Hons.) with a GPA of 2.5 and below and those who possess a first degree

in other disciplines who wish to pursue a Postgraduate Diploma programme in Library and Information Science are eligible for admission into DipLIS programme.

COURSES OFFERED FOR THE PROGRAMME

The courses offered for this programme are in two categories; the core, (compulsory courses), and the Elective (Optional courses). The compulsory (core) are the courses a candidate must choose and pass, while the optional courses are at the discretion of the candidate. Any optional course chosen by the candidate must be passed.

COURSE OUTLINE	Units
1st Semester	
DIPLIS 721.1-Organisation of Knowledge	3
DIPLIS 722.1-Reference Services and Resources	3
DIPLIS 723.1-Research Methods in Library and Information Science	2
DIPLIS 724.1-History of Nigerian Librarianship	2
DIPLIS 725.1-Information User	2
Total	12
2nd Semester:	
DIP LIS 735.2- Book trade and Publishing	2
DIP LIS 736.2 Organization of Technical Services	2
DIPLIS 737.2 Information and Communication Technologies in Libraries	2
DIP LIS 738.2 Project	6
Total	12

COURSE DESCRIPTION

DipLIS 721.1- Organization of Knowledge – 3 units

This course aims at introducing students to various areas of catalogue outlines- second and third levels; rules for cataloguing and entry of catalogue headings; use of Dewey and Library of Congress Classification Schemes; Subject analysis; determination of Subject headings and Classification; Call numbers and Cutter numbers.

DipLIS 722.1 - Reference Services and Resources -3 units

This course covers the definition of Reference services and Reference resources; types of reference services and resources; levels of reference services; how to provide reference services to different types of user groups; functions of reference services, such as encyclopedia; dictionaries; directories; almanacs and yearbooks, etc.; the future of reference services and resources in a globalized information and communication technology environment.

DipLIS 723.1 - Research Methods in Library and Information Science -2 units

Areas concerned are meaning of research in library and information science, characteristic functions, research phases; research designs, sampling, and sampling methods; an instrument for data collection; validation of instrument; valuables; hypothesis; literature review and data analysis; presentation of findings and tools for data analysis.

DipLIS 724.1 - History of Nigerian Libraries- 2 units

History of libraries in Nigeria; Personalities that brought librarianship in Nigeria; beginning of library and information science schools in Nigeria; Library Education in Nigeria- their functions, roles/activities in the growth of librarianship in Nigeria; the future of Library professionals and librarianship in Nigeria.

DipLIS 725.1 - Information User- 2 units

This covers the meaning and characteristics of information users; Information needs- types, characteristics, and methods of provision; types of users; information user profile; information flow charts; information packaging and repackaging; information-seeking behavior- methods, factors that affect information seeking.

**SECOND SEMESTER
COURSE DESCRIPTION**

DipLIS 735.2 - Publishing and Book Trade- 2 units

This covers the meaning of publishing; characteristics of publishing; types of publishing; factors for publishing; resources required for publishing; challenges of publishing in Nigeria; the meaning of book trade; characteristics of book trade; socio-economic forces that affect book trade; book trade and publishing in a Nigerian economy.

DipLIS 736.2 - Organization of Technical Services- 2units

This course covers the meaning of technical services; features of technical services; functions of technical services; collection development-practices, rules, and methods; Ranganathan’s five laws of librarianship in collection development, cataloguing practices, classification, Departments in

technical services; Guidelines in technical services (Rules and Regulations).

DipLIS 737.2 - Information and Communication Technologies in Libraries- 2 units

This covers automation in the library; affiliation of computers and other ICT tools/resources in library operations, services delivery; outline services, etc.

DipLIS 738.2- Projects- 6 units

Each student should be able to select a topic for research. A supervisor will be assigned to each student immediately as the programme commences. Duration - DipLIS is for two semesters with 2 months (6 WEEKS) of supervised compulsory library attachment (I.T.) in between the semesters. Postgraduate Diploma in Library and Information Science (DipLIS)

Master of Library and Information Science (MLIS)

The Master’s degree in Library and Information Science (MLIS) programme is structured to strengthen grandaunts who already have the background of LIS discipline, thereby exposing them to broader areas of interest or specialization. This would help them discharge responsibility in terms of knowledge and skills required for meeting diverse users’ information needs considering the training and education had in the areas of their specialization.

Duration of the Programme: FULL TIME (3 semesters)

The course is expected to run for 18months as its Minimal time and 24 months as the maximal time. For

PART-TIME PROGRAMME: the duration is 24 months minimum and 36 months maximum. Students are assigned supervisors immediately after they are admitted.

ADMISSION REQUIREMENTS

Students for master’s degrees may have had a First degree in Library and Information Science (BLIS) to qualify for admission with a class grade of first to second class lower division of 2.5 and above. If a student has a degree in other disciplines such a student is to offer a diploma in LIS (Dip LIS) first before enrolling for a master’s programme.

COURSES TO OFFER

First Semester

Core (compulsory)	Course Title	Units
-------------------	--------------	-------

courses) course code		
SGS 801.1	ICT and Research Methodology	2
.MLIS 821.1	Artificial Intelligence	2
MLIS 822.1	Knowledge Management in Libraries and Information Centres	2
MLIS 823.1	Advanced Studies of Cataloguing and classification	2
MLIS 824.1	Research Methodology	2
MLIS 825.1	Seminar in New Media in Libraries	2
Elective courses (one from the following)		
MLIS 826.1	Information Storage and Retrieval System	2
MLIS 827.1	Data Science	2
MLIS 828.1	Virtual Libraries and Human Library	2
Total		18

Second Semester

SGS 801.2	Management and Entrepreneurship	2
MLIS 830.2	Information Literacy	2
MLIS 831.2	Bibliometrics, Scientometrics, and Informetric	2
MLIS 832.2	Health Information Management	2
MLIS 833.2	Seminar on types of Libraries (National, Public, Academic, Special, and Schools' Libraries)	2
MLIS 834.2	Dissertation	6
Electives (one from the following)		
MLIS 835.2	Publishing Studies	2
MLIS 836.2	Records Management	2
MLIS 837.2	Entrepreneurship in Library and Information Science	2
Total		22

COURSE DESCRIPTION:

SGS: 801.1 ICT and Research Methodology (2 UNITS)

This course should cover essentials of spreadsheets, internet technology, statistical packages, precision and accuracy of estimates, principles of scientific research, concepts of hypothesis, formulation and testing, organization of research and report writing.

MLIS 821.1: Artificial Intelligence (2 UNITS)

This course will explore the meaning of Artificial Intelligence looking at its concepts, how it is used in the libraries, strategic plans for the use of AI, the primary goals of AI in the library. The course shall look at the relationship between AI and Maker space etc.

MLIS 822.1: Knowledge Management in Libraries (2 UNITS)

This course examines the organization of knowledge, the selection and use of suitable knowledge representation methods or tools, the access to stored knowledge through search and retrieval techniques. It further addresses contemporary issues in managing knowledge, intellectual capital, and other intangible assets. Beginning with a view that these intangibles are strategic assets, the course will introduce the fundamentals of managing knowledge and intellectual capital, understanding some of the measurement issues, processes, and cycles involved in their management. This course concludes with a review of specific applications to the public sector and current developments in the field.

MLIS 823.1: Advanced Study in Cataloguing and Classification - (2 UNITS)

This course combines the theory of knowledge and advanced studies in cataloguing and classification; and takes an exploratory, forward-thinking approach to cataloguing and classification systems in the libraries. Digging deep and deeper into access points to information resources in the 21st century; assess the cataloguing and classification skills of librarians (school, academic, public, special, corporate) generally in three broad areas, such as descriptive cataloguing, subject analysis, and classification as well as the elements of cataloguing of bibliographic description, subject analysis and classification. Students are expected to research into RDA, AACR, AACR2, AACR2R, card and XML and OPAC metadata, Genetic and Domain-specific metadata schema, metadata standards/schema-general purpose schema (e.g Dublin core, MODS); e-GMS; science schema- Darwin core, Ecological metadata language, NASA's standards; geospatial schema-federal geographic data commit (FGDC); social science community (OLAC) metadata; Humanities schema (VRA) core; and controlled vocabulary in a different discipline.

MLIS 824.1: Research Methodology - (2 UNITS)

The course aims at introducing the students to a wide range of techniques of investigation relevant to library and information science. As much as possible real examples from research utilizing the relevant techniques covered by the course are used to classify the exposition of theory and method.

MLIS: 825.1: Seminar in New Media in Libraries - (2 UNITS)

This course is aimed at examining the concept of multimedia, the rationale for using multimedia, competencies, and skills needed by multimedia librarians, types of multimedia systems, multimedia evaluation and challenges faced in multimedia applications, multimedia applications in information service delivery, multimedia presentation model, and designing of an effective multimedia presentation. It further aims at equipping students with knowledge and skills of multimedia that will enable them to know how to select suitable multimedia resources, software, and multimedia systems for the library.

This course will further explore the rapid progress and development of social media and its associated tools and how they are utilized towards making information accessible and equally make things easy for the users, library staff, and library professionals. The library professionals will get acquainted with social media and its related tools to apply in their respective libraries. The library and Information Science Students will be guided towards creating a virtual platform using social media platforms to interact with their users also explore how social media is helping to reach out to the targeted audiences and communities.

Involves the handling of television, video cassettes, films or filmstrips, computer tapes. Computer-based communication, which is competing with printed books. There is a need for librarians at the MLS level to learn the use of the new media and how to organize them in order that they can teach the user how to utilize them effectively. The new form of information packaging would create new artificial intelligence, robotics, the internet, web development in librarianship.

MLIS 826.1: Information Storage and Retrieval System - (2 UNITS)

The course will explore through lectures, seminars discussions, and practical sessions, the general theory of information retrieval systems, the techniques for the construction of index vocabulary for information retrieval system evaluation, and the development of new storage media and recording methods in this field.

MLIS 827.1- Data Science - (2 UNITS)

The amount of data today has grown tremendously from what it was years ago, which requires effective management for information professionals-librarians. The course, however, is designed for data librarians, data managers, data curators, and research data librarians. Data science for librarians uses statistical and programming methods to extract knowledge from a large amount of data; basically, to gain better insight into current trends as well as support effective decision-making. As an

interdisciplinary field, the course requires skills in subject-specific areas; such as system analysis, programming, statistics, etc. the skills-set places emphasis on big data analytics data/text mining, data visualization, machine learning, coding, and of course statistics.

This course takes into consideration the concept of research data management, ensuring the integrity of such data, usability, and searchability of students' projects years after graduation, encourages data sharing within and across discipline easy-peasy, including archiving and data preservation in both long and short term. Effectively managing research data can be quite challenging, knowing that it comes in different digital files format, e.g text numbers, videos, photographs, etc.

MLIS 828.1 - Virtual libraries and Human Library - (2 UNITS)

This course will expose students to the concept of virtual libraries. The students will explore how virtual libraries are indexed, developed, implemented, and used. In learning about Human Library, the concept, its purposes, uses, how it works, and Human Library questions are dissected.

SGS 801.2 Management and Entrepreneurship - (2UNITS)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

MLIS 830.2.: Information Literacy - (2 UNITS)

This will discuss the concept and characteristics of information, information search strategy, sources of information, knowledge of critical thinking, evaluation of web-based online resources and cyber security ethics, ethical issues in using information, research process, information synthesis, and academic writing. Plagiarism and reference techniques, APA, Chicago style, etc.

This course will also explore the concept of information users, x-ray the types of information needs, information needs satisfaction, the user seeking behaviour, characteristics of users, and information environment will also be discussed. The course will also explore the theories of information utilization.

MLIS 831.2: Bibliometrics, Scientometrics, and Informetric - (2 UNITS)

This course will be taught in a combination of lectures, seminars, and tutorials. Detailed study of types, forms, and patterns of bibliometric studies will provide students with an in-depth knowledge of bibliometrics, citation analysis, and bibliometric visualization. The course will expose the students to the role of bibliometrics in research evaluation and

development. In scientometrics, the students will explore this field of study which concerns itself with measuring and analysing scholarly literature also in informetric.

MLIS 832.2: Health Information Management - (2 UNITS)

This course will take the students through an overview of what the concept is all about. The four basic stages of health information management, its importance to information professionals and health care give, the skills health information management uses, and health care administration will be tutored.

MLIS 833.2: Seminar on Types of Libraries (National, Public, Academic, Special and Schools Libraries) - (2 UNITS)

This course will take the students through the types, functions, administration/establishment of the various libraries, and seminars on these libraries. Law librarianship and Medical librarianship as special kind of libraries will be explored under Special Libraries.

MLIS 834.2: Dissertation - (6 UNITS)

On assignment of an internal supervisor, every student will be expected to carry out research work on an approved topic under the supervision of academic staff of the department. The topic to be studied may be chosen from any of the following areas: Library/Information science, computer applications publishing, automation, archives, and other related areas.

ELECTIVE COURSES

MLIS 835.2: Publishing Studies - (2 UNITS)

Aims at developing Nigeria's publishing industry more fully to meet the demand of the UBE scheme and the needs of the various adult literacy classes. The course will include the History of publishing in

Nigeria; nature of publishing; books arts and book production; relationships between the publisher and the author; publisher and printer; publisher and the bookseller; manuscript collection and the role of the editor, royalty payments; contracts and agreements copyright and piracy; indigenous publishing; kinds of publications. It covers the history of printing and the book arts, illustration and designing of books; paper, and printing material. Stages of book production; machines and equipment used for printing. All activities which transfer ownership of the completed book from the publisher to the consumer; book distribution through bookshops and bookstalls; book promotion and advertising of materials. Displays and exhibitions, stocking the bookshops' bibliographical tools including publishers' catalogues, booklist. Development of a marketing technique. Librarians who are well educated in the art of bookselling may build up very successful bookshops which would create the impulse that brings people in the bookshop.

MLIS 836.2: Record Management - (2 UNITS)

This course also known as information management will take the students through the management of information in the library or in libraries from the time of creation or received to its eventual disposition. The functions, purposes, and types of record management will be explored. The general concept will be reviewed with a seminar presentation.

MLIS 837.2: Entrepreneurship in Library and Information Science - (2 UNITS)

The entrepreneurship course is aimed at teaching students how to think and act entrepreneurially in an information-based economy. Students learn how to start up and operate it will also take the students through inforpreneurial skills.

ACADEMIC STAFF LIST

S/N	NAME	QUALIFICATIONS	RANK
1	Prof Felicia U . Etim	B.Sc Biochemistry(UI), MLS, (UI) Ph.D (UI) Information literacy, Information Management.	Professor
2	Prof Helen U. Emasealu	B.A. (Russian Language), MLS, Ph.D. (LIS),	Professor
3	Prof. Uche, Chineze M.	B.Ed., MLS, M.Ed., Ph.D. Administration of Higher Education	Professor
4	Prof. Lois N. Abraham	B.A.Ed (English), M.Ed., Ph.D. (Curriculum and Educational Technology) (UPH)	Professor
8	Dr. Susan N. Umeozor	B.A. (Psychology), MLS, Ph.D. (LIS) UniUyo, Uyo	Reader
10	Dr. Juliet C. Alex-Nmecha	N.C.E. (Social Studies/Economics), B.Ed. Economics, MLS, (IMSU), M.Ed. (UPH), Ph.D. IMSU, Owerri	Senior Lecturer
11	Dr.Boma Torukwein David-West	B.A. (English), MLS (UNIUYO), Ph.D. LIS. (UNICAL), Calabar	Senior Lecturer

13	Dr. Comfort N. Owate	B.Sc Public Administration MLS, Ph.D. (LIS) IMSU, Owerri	Senior Lecturer
14	Dr. Hilda Eno Obi	B.Sc. (Banking and Finance), MLS, Ph.D. (LIS) UniUyo, Uyo	Senior Lecturer
15	Dr. Glory T. Edet	B.Sc. (Lib. Sci./Biology), MLS, Ph.D (LIS) UniUyo, Uyo	Senior Lecturer
16	Dr. Millie N. Horsfall	B.Sc. Pure & Industrial Chem. MLS, Ph.D. (LIS) Nsukka	Senior Lecturer

INSTITUTE OF EDUCATION CENTRE FOR HIGHER EDUCATION STUDIES (CHES)

UPDATED ACADEMIC PROGRAMME OF POSTGRADUATE DIPLOMA IN EDUCATION (PGDE)

INTRODUCTION

The academic programme leading to the award of Post-Graduate Diploma in Education (PGDE) of the Centre for Higher Education Studies (CHES) of the Institute of Education, Faculty of Education, University of Port Harcourt, is designed for education and non-education graduates who wish to professionalize in the field of education. The mode of study is full-time and part-time.

DURATION

The course work lasts for one academic year of two semesters for full-time students or two long vacations for eight weeks each (Sandwich

Programme) for part-time students. There is in addition, a six-week period of internship during which students will undertake supervised teaching practice. The period of internship for full time students is between March and April while internship for part-time students is between September and October of the first long vacation.

OBJECTIVES OF THE PROGRAMME

1. To provide the students with professional grounding in the theory and practice of education.
2. To enable students acquire the relevant methods and techniques in teaching of their special subjects.
3. To acquaint students with procedures and methods of research in the field of education.

- | | | |
|----------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|--------------------------|
| 4. To provide a training for the professional growth and personal improvement of serving teachers. | (3) 2.40 – 3.49 – Merit
(4) 1.50 – 2.39 – Pass
(5) 1.00 – 1.49 – Pass
(6) Below 1.00 – Fail | (C)
(D)
(E)
(F) |
|----------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|--------------------------|

ENTRY QUALIFICATIONS

- a) Candidates who graduated from Faculty of Education and other disciplines with at least a third class Degree and a minimum CGPA of 1.50 are eligible to apply.
- b) Higher National Diploma (HND) – Upper Credit.

STRUCTURE OF THE DIPLOMA PROGRAMME

To be eligible for the award of the post Graduate Diploma in Education (PGDE), the candidates must successfully complete all the prescribed courses in Education. The course (Programme) consists of four main area namely:

- (a) Studies in the theory and practice of Education
- (b) Specialized procedure in the teaching of a subject
- (c) Supervised practice in teaching
- (d) Supervised project

REGULATIONS

1. Each student is required to register for all proscribed courses in each semester or long vacation.
2. A student who fails to successfully complete a minimum of 21 units of course work at the end of the normal period of his programme shall be required to withdraw.
3. To qualify for the award of the Diploma, a student must have successfully completed all the prescribed courses including the teaching practice and must have scored at least a grade of “C” (50%) in each of the courses.
4. The University regulations in respect of the conduct of postgraduate examinations shall apply to the programme.
5. Evaluation of student performance shall be based on:
 - (a) Continuous assessment and final examination – in the taught courses.
 - (b) Assessment of supervised teaching practice.
 - (c) Assessment of supervised project.
6. Continuous assessment shall account for 40% of a student’s grade for each taught course.
7. The Diploma shall be awarded with a distinction, credit, merit or pass grade based on a candidate’s grade point average as follows:

(1) 4.50 – 5.00 – Distinction	(A)
(2) 3.50 – 4.49 – Credit	(B)

COURSE OUTLINE

IED 799.2	Supervised Project	3 credits

COURSE DESCRIPTION

IED 701.1 History of Education 3 credits

This course will focus on salient historical factors in the development of Western Education in general and the Nigerian formal educational system in particular. The various periods in the history of education will be highlighted.

IED 705.1 Philosophy of Education 3 credits

The course will expose the students to the general philosophy as well as the schools of thought of philosophy and their application to educational sector. General philosophical concepts and values

which determine educational aims, policies and practice will also be examined.

IED 707.1 Educational Psychology 3 credits

The course will include a study of the process and patterns of intellectual, emotional, social, moral and personality development of children and in particular the Nigerian child, from conception through adolescence, as well as sources of individual differences in development. It shall also examine different theories of learning and their implications; reward and punishment as incentives, emotions and learning.

IED 709.2 Education and Information Technology 3 credits

The course will emphasize the relevance of Information and Communication Technology (ICT) in the educational system. The various ways ICT can be used to facilitate teaching and learning will be emphasized. The various ICT tools for education will be covered.

IED 711.2 Method Course 3 credits

The course focuses on different methods and techniques of presenting learning experiences and criteria for selecting them. The importance of and conditions for effective classroom communication will be discussed. Students will be exposed to the methods of selecting and improvising instructional materials/aids. The course will equally provide opportunities for experience in the micro-teaching and instructional planning (including the planning of instructional units and teaching notes). Special methods of teaching different school subjects at the secondary school level shall be explored. Students will be grouped into classes according to their major teaching subjects. The nature, scope and content of each subject will be discussed together with the analysis of reasons for teaching/studying the subjects.

IED 703.1 Sociology of Education 3 credits

The main focus of this course will be on the need for and importance of maintaining cordial relationship between school and society and partners in the educational enterprises. The course will also provide a comparative analysis of the general social, political and economic factors and institutions that influence the form, content, acquisition and development of education in different countries. In all, students will be exposed to the basic theoretical concepts of the discipline and their application to the study of education system and environment.

IED 710.2 Educational Administration

3 credits

An analysis of the nature and scope of school and educational administration. Emphasis will be placed on elements of administrative behaviour, decision-making, planning, organizing, assembling of resources, supervising, controlling, evaluation etc. Approaches to educational planning, manpower, social demands, rate of return and the relationship between educational planning and economic planning will also be examined. Special attention will be paid to problems and issues in the management and planning of Nigerian education with particular attention to supervision of instruction, staff and students, personnel administration and budgeting.

IED 702.1 Curriculum Development and Evaluation 3 credits

An examination of the factors that determine the curriculum content of an educational system, determination of objectives; selection and organization; learning experiences; problems of curriculum planning; and principle and methods of curriculum evaluation. Students will be guided to attempt a social diagnosis of the Nigerian society and to examine the implications of any diagnosed attributes of the society for curriculum planning.

IED 704.1 Educational Research Methods

3 credits

Participants in this course will be exposed to the nature, designs, techniques and procedures of educational research. The course will equally highlight some of the statistical tools for educational research.

IED 706.1 Test and Measurement 3 credits

The fundamental principles and objectives of test, and other assessment procedures in relation to education will be examined. Basic statistical and psychometric test and measurement in education will be covered.

IED 700.2 Teaching Practice 3 credits

There is a supervised practical experience in teaching and classroom management in the candidate's special teaching subject. A student will be supervised by a lecturer during the period of practice that will last for a period of at least six weeks. Students who are not in-service training may be posted to schools around the University while those who are already on the job may be supervised in their places of work.

IED 799.2 Supervised Project 3 credits

A student shall be assigned to a lecturer as his or her supervisor on any contemporary topic that is of interest to the student. The supervised project shall be graded.

**IED 717.2 Physical Education and Sport
3 credits**

The course will expose the students to the historical development, nature of physical education and different sporting activities. The phases of physical education, concepts, terminologies and areas of specialization in physical education shall be discussed. The contribution of physical education to the general education of a child shall be discussed.

IED 714.2 Introduction to Adult and Non-formal Education 3 credits

The course will expose the students to the special field and andragogy of adult education. The characteristics of adult learners as well as lifelong education will be highlighted. Adult education

programmes and agencies/organizations for community development will be examined.

IED 708.2 Guidance and Counseling 3 credits

The course will expose the students to the principles and practice of guidance and counseling. The course will emphasize the processes and rules of counseling especially in educational system.

IED 712.1 Library Studies 3 credits

The course will expose the students to the various sections and services of the library. Library personnel, techniques and practices will be examined. Problems facing library operations will be examined.

IED 713.2 Comparative Education 3 credits

The course will expose the students to a comparative analysis of education across different periods, times, countries, regions and locations. The strengths and weakness of the education systems of countries will be highlighted.

STAFF LIST

S/no	Names	Qualification	Rank	Area of specialization
1.	Prof. T. T. Orunaboka	BSc. Ed., MSc Ed., Ph.D	Professor	Sport Management and Marketing
2	Prof. B. N. Iruloh	BEd., MEd., Ph.D	Professor	Guidance and Counseling
3	Prof. M. A. Oyebamiji	BEd., MEd., Ph.D	Professor	Adult and Non-formal Education
4	Prof. N. M. Abraham	BEd., MEd., Ph.D	Professor	Educational Administration

POST-GRADUATE DIPLOMA (PGD) IN GENDER STUDIES AND WOMEN DEVELOPMENT

(i) Qualification for Admission

To qualify for admission into the Post-Graduate Diploma programme, a candidate must possess a third class (3rd) degree or equivalent level with a CGPA of 1.5 points on 5-point scale of the University of Port Harcourt in any field. For HND background, lower credit pass shall be considered.

(ii) Duration

The Post-Graduate Diploma programme in Gender and Women Development Studies runs full time for twelve (12) calendar months minimum duration and 24 months maximum duration.

(iii) Requirements

A candidate is required to offer nine (9) taught courses which shall lay emphasis on gender and women development issues. In addition, one seminar paper is to be presented by every candidate before graduation. On successful completion of the programme, each candidate is awarded a PGD Certificate in Gender and Women Development Studies.

Course Code and Title

First Semester

Course Code	Course Title	Unit

GWDS 710.2	Research Seminar	3
	Total	15

COURSE DESCRIPTIONS

GWDS 701.1: Introduction to Gender and Women Development Studies

The course introduces Gender and Women Development Studies as a multidisciplinary and multicultural programme. It focuses on reviewing concepts and theories in the social sciences, Humanities, Natural and Behavioural Sciences that are related to inequalities between male and female population in different societies.

GWDS 702.1: Gender, Culture and Society

Gender as a socio-cultural construct is examined. It adopts an interdisciplinary approach to examine different societal cultures over time. Particularly, attention is given to norms, values, beliefs and customs as they provide a guide towards societal issues such as violence, punishment, role differentiation, sexualit3ç inequality, etc.

GWDS 703.1: Man and Masculinity versus Female and Femininity

With particular reference to Africa, the concepts of man/masculinity and female/femininity that brought about unequal conditions are explored. The role of sociocultural factors overtime and across different cultures is examined.

GWDS 704.1: Gender, Arts and Science

The course adopts a historical approach to explore the involvement of male and female in the arts and science. Different religious tenets on gender and development issues will be introduced as well as their relationship with the choice of career. Biological theories of gender will be compared with the religious tenets. On the other hand, gender and development issues in this era of science and technology are considered. The sociocultural influence on the choice of career for both male and female in these areas are equally examined.

GWDS 705.1: Gender and Religion

Different religious tenets on gender and development issues will be introduced as well as their relationships with the choice of career. Biological theories of gender will be compared with religious tenets.

GWDS 706.2: Gender, Education and Politics

The course examines feminist theories in relation to male and female participation in education and

politics. Critical analysis of both legal and legislative demands of women in both developed and developing countries will be considered.

GWDS 707.2: Gender Relations in Selected Organizations

This course focuses on a study of different social relationships among and between males and females in different organizations. Such areas include job position/responsibility, promotions, violence and the like. This provides an opportunity to observe and reflect on the already acquired knowledge.

GWDS 708.2: Women in Development

Women’s role expectations in traditional and modern periods are compared. Particularly, attention is given to role expectations of women in the globalizing world. Discussions include recent policies that focus on women development in the New Millennium. Responses from different developing countries, especially in Africa, are compared in order to identify possible obstacles and propose the way forward.

GWDS 709.2: Introduction to Research Methods

Areas to be covered include an introduction to the principles of research in gender and women development studies, bearing in mind the multidisciplinary nature; design of research instrument; empirical studies design as well as the qualitative and quantitative methods of analysis, bearing in mind the different approaches for project writing.

GWDS 710.2: Research Seminar

Independent topics in different areas of interest are to be researched and presented as seminar series. However, chosen topics shall be supervised to be in line with the area of specialization of each candidate.

MASTER OF ARTS (M.A) IN GENDER AND WOMEN DEVELOPMENT STUDIES

(1) Qualification for Admission

The qualification for admission into the Master of Arts programme will be considered as follows:

- a candidate must possess at least a Second Class Lower Division (2²), in Gender and Women Development Studies or a degree in social sciences/Humanities/Education from any recognized Tertiary Institution, with a

CGPA of 3.00 on 5-point scale of the University of Port Harcourt.

- a candidate must possess the University of Port Harcourt Post-Graduate Diploma in Gender and Women Development Studies, with a minimum grade of Merit.

(ii) Duration

The Master’s Degree Programme in Gender and Women Development Studies shall run full time for one year minimum duration and two years maximum. On the other hand, the Part-time will run for two years minimum duration and four years maximum duration.

(iii) Requirements

For the Masters Degree programme, a candidate is required to offer a minimum of ten (10) taught courses, including Seminar and Thesis, all of which shall focus on gender and women development issues. On successful completion, each candidate is awarded a Master of Arts Degree in Gender & Women Development Studies.

COURSE DESCRIPTIONS

SGS 802.1: ICT and Research Methodology (2 Credit Units)

This course should cover Essentials of Spreadsheets, Internet Technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Scientific Research, Concepts of Hypothesis, Formulation and Testing, Organization of Research and Report writing.

GWDS 801.1: Feminist Theories (3 Credit Units)

The course explores information on contemporary feminist debate as presented in Structuralism, Marxism and Socio.cultural studies, to mention a few. The main objective is to analyze unequal conditions of male and female population in society. It provides an opportunity to critical issues such as sexuality, values and identity. The Nigerian context of feminist theory is equally discussed.

SGS 801.2: Management and Entrepreneurship (2 Credit Units)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

GWDS 802.1: Gender and Theories of Development

Different perspectives of gender as an interdisciplinary concept and their applications in different fields are examined. Equally, the course examines critically both classical and contemporary theories of development in relation to gender in order to identify and discuss their implications for effective policy planning and implementation for achieving development in Nigeria.

GWDS 803.1: Race and Culture in Africa

Topics should concentrate on contemporary issues in different parts of Africa to be able to compare and contrast different experiences of gender and development issues with local experiences such as autonomy and control, equality of educational opportunity, stratification and employment opportunity, gender and occupational choice, etc.

GWDS 804.1: Gender and Globalization

The concept of globalization is examined. The course introduces gender issues in development,

particularly with reference to developing areas where poverty, high illiteracy rate, unemployment, underemployment and early retirement appear to be common, yet the effort is to achieve partnership between and among nations. In addition, both feminist and queer theories are considered as issues of nationality, ethnicity, race and sexuality are discussed in the effort to identify a universal ground to effectively accommodate male and female population in the globalized world.

GWDS 805.1: The Role of NGOs and International Organizations in Gender and Development Issues

The course examines the contributions of International organizations such as UNDP, World Bank, UNESCO, UNICEF as well as NGOs in different parts of Africa and Nigeria in particular. Local examples include the Association of Female Lawyers, National Council for Women Society, Men's Christian Association, Women in Nigeria, etc.

GWDS 812.1: Research Methods

Areas to be covered include principles of research with particular reference to gender and women development studies, bearing in mind the multidisciplinary nature of the programme; design of research instrument; empirical studies design; qualitative and quantitative methods of analysis and different approaches for project writing.

Electives (Any Two)

GWDS 806.2: Gender Issues in Literature

GWDS 807.2: Gender Issues in Music and Dance

GWDS 808.2: Gender Issues in Films and Media

GWDS 809.2: Gender Issues in Education

GWDS 810.2: Gender and Health Issues

GWDS 811.2: Gender and Management

In each of the selected areas, different presentations of masculinity and femininity, with regard to mainstreaming, role expectations, expected code of conduct, language, dressing and sexuality in a changing socio-economic condition. Different avenues through which social change could be achieved in each area are equally examined.

GWDS 806.2: Gender Issues in Literature

Attempt will be made to explore the relationship between gender and literature, particularly with regard to historical and theoretical issues. Different image representations related to social, economic, cultural and political issues will be

explored in relation to male and female gender roles.

GWDS 807.2: Gender Issues in Music and Dance

Attempt is made to explore the ideological representations of male and female gender in music and dance, with regard to the creation/composition (including sound and tunes) and performance/movement of varieties of music and dance.

GWDS 808.2: Gender Issues in Films and Media

Attempt will be made to examine the social, cultural, economic and political contexts of gender representations in film and media writings and reproductions. Focus will be on Nigeria, with emphasis on the post-colonial period in relation to male and female film and media representations. Generally, texts and materials will be critically analyzed with specific examples.

GWDS 809.2: Gender Issues in Education

The focus is on critical examination of education theory and exploration of the relationship between gender and education, with regard to gender role and access to education, job placement/opportunity, gender and educational challenges. Strategies for achieving gender equality in education, including teaching methods and materials will equally be examined.

GWDS 810.2: Gender and Health Issues

This course will introduce students to gender as a theoretical concept and the way gender has contributed to differential structuring of women and men's experiences of health. The course aims to provide information on the influence of gender in construction of health behaviour in diverse societies, particularly Nigeria; how social frameworks and structures, such as gender, affect people's experiences and expectations of health. Equally, the course will cover a broad range of health issues for which gender has been of special importance. Topics to be covered include: reproductive health, violence; mental health, female genital mutilation, gender disparity in health. Issues relating to public health experiences and expectations, including health and gender policies will be addressed across sessions. Mode of delivery (teaching method) will include lecture method, class discussion and students' presentations.

GWDS 811.2: Gender and Management

There is the recognition of continued male dominance to explore gender roles in management and the extent of gender discrimination in different jobs and professions and their consequent power differences in favour of the males. Development challenges will be explored in different situations, along with the critical examination of adopting feminism as a way forward.

GWDS 815.2: Statistical Methods in Gender and Women Studies (3 Credit Units)

Review of basic statistical concepts; descriptive, parametric, inferential and non-parametric statistics; t-statistic, ANOVA, ANCOVA, Regression Analysis, Chi-Square and Statistical techniques for post-hoc analysis; application of computer in statistical analysis; meaning and results in statistical analysis.

GWDS 813.2: Research Seminar

Independent topics in different areas of interest are to be researched and presented as seminar series. However, chosen topics shall be supervised to be in line with the area of specialization of each candidate.

GWDS 814.2: Supervised Thesis

A candidate's choice of topic must be related to his area of specialization.

Expected Outcome

Certificates and Diplomas will be awarded to participants, on successful completion of the programme. Through the interdisciplinary approach, the academic programme is expected to contribute towards organized quality teaching as well as training for the knowledge spread in the study of gender and women development. Consequently, the graduates shall be growth points for the spread of knowledge and skills acquired.

PLANNING, RESEARCH AND STATISTICS UNIT

This unit sets out objectives on knowledge spread and researches aimed at promoting gender and women development studies. These objectives should be followed by identifying strategies on how to achieve the set goals of which implementation should embrace possible deployment of lectures, seminars, workshops, training and empowerment. In doing so, the right skills in form of consultancy, partnership, specialists and knowledgeable groups could be engaged to make contributions. Performance could be measured, based on pre-determined success factors and performance indicators. A review will

be carried out at the end of key activities, using, where applicable, statistical methods to measure performance. Results against intended performance are fed back into the system for corrective measures and improvements. In all, it is expected that this unit shall contribute towards providing a strong knowledge-base in gender, women development and related issues.

INFORMATION/OUTREACH UNIT

This unit liaises with relevant agencies such as governments at the Federal, State, and Local levels, Non-Governmental Organizations, nationally and internationally, as well as gender and women development establishments at all levels for partnership and sponsorship on gender and women-related projects and issues. Through available expertise co-operation of these affiliates and facilities, some approaches to be adopted include public lectures, seminars and focus group

discussions. The centre shall organize non-formal education as an outreach programme regularly to solve myriads of gender-related problems within the environment for improved development.

WOMEN'S HEALTH, EMPOWERMENT AND SJULLACQUISJTJON UNIT

All efforts in this unit are focused on identifying and developing women's health and potentials in all areas for them to become self-reliant at the end of their exposure and training. The programmes are mainly in non-formal style in which services should be extended to their localities. In some cases, their subsistence engagements are used for the take-off, for the women themselves to witness achieved improvement through the expert application of the knowledge achieved. The female recipients should equally participate in collaborative exercises.

FACULTY OF SCIENCE

DEPARTMENT OF ANIMAL AND ENVIRONMENTAL BIOLOGY

1.0 Approved programmes

Postgraduate programmes are approved at the postgraduate diploma (PGD), Master's (M.Sc), and Doctoral Degree levels (Ph.D) in the following fields;

- Animal Health and Physiology
- Entomology and Pest Management
- Environmental Parasitology
- Fisheries Biology and Hydrobiology

These programmes could be obtained presently in the following research areas;

1.1 PGD IN: Animal and Environmental Biology

1.2 M.Sc. and Ph.D. in:

- (a) Entomology and Pest management with options
 - i. Environmental Entomology and Pest Management
 - ii. Medical Entomology and Pest Management
- (b) Hydrobiology and Fisheries Biology
- (c) Environmental Parasitology
- (d) Animal Health and Physiology
- (e) Environmental and Conservation Biology

Admission into postgraduate programmes of the Department can be completed on Full-time or Part-time basis. Admission into the Master's Degree programmes requires at least a Second Class Honours Degree Lower Division of the University of Port Harcourt or any other recognized University in relevant subjects. Candidates for the Ph.D Programmes must have a Master's Degree and should normally have had an average of at least 60% or its equivalent grade in the relevant disciplines at the Master's level. For candidates who obtained their Master's exclusively by research assessment, admission will be based on the quality of their dissertation.

Candidates may be required to attend a pre-admission interview session. Final selection of a candidate is based on his/her interview performance. Candidates for the Part-time Postgraduate Degree programmes must in addition to the normal admission requirements;

- (a) Be engaged in approved employment
- (b) Submit evidence that they can devote a good proportion of their normal working hour to their studies,
- (c) Satisfy the Department that they will be available for attendance at courses and for regular consultation with their supervisors.

2.0 Admission Requirements

2.1 PGD

Applicants must have five credits which must include English, Mathematics and two other relevant science subjects at 'O' level; plus

Either, A degree from a recognized academic institution with a minimum of pass degree in relevant science discipline (such as Animal science, Microbiology, Plant science and Biotechnology, Physiology, Anatomy, Education Biology, etc.)

Or,

A Higher National Diploma (H.N.D) with a minimum of upper credit (in disciplines such as Public Health Technology, Laboratory science, Aquaculture, Fisheries Management, Environmental Conservation and Management etc.)

2.2 M.Sc Programmes:

Admission into Master's Degree programmes requires at least a second class Honour's degree of the university of Port Harcourt or any other recognized University, in relevant subjects (e.g. Zoology, Biology, Crop science, Environmental science, Biology Education, etc.)

2.3 Ph.D Programmes:

Candidates for the Ph.D programmes must have a Master's Degree and should normally have an average of at least 60% or its equivalent grade in the relevant discipline at the Master's level.

For candidates who obtained their master's exclusively by research assessment, admission will be based on the quality of their dissertation. Candidates may be required to attend a pre-admission interview session. Final selection of a candidate is based on his/her interview performance.

Candidates for the Part-Time Postgraduate degree programmes must in addition to the

normal admission requirements;

- a) Be engaged in approved employment.
- b) Submit evidence that they can devote a good proportion of their normal working hour to their studies.
- c) Satisfy the department that they will be available for attendance at courses and for regular consultation with their supervisors.

3.0 Programme Structure and Duration of Residential Requirements of Postgraduate Students

3.1 PGD

This is structured as a two-semester programme composed of taught courses, seminars and a short research project. After the taught courses students are expected to go on to complete a short research project equivalent to an 8-week investigative research on any aspect of Animal and Environmental Biology.

3.2 M.Sc

The programme scheme involves taught courses, seminars and preparation of a research dissertation. Students admitted in the programme do register for alt courses to be taken once every session, at the beginning of each academic year.

Part-time students register for a maximum of four (4) taught courses in the first year of the programme, i.e. two (2) per semester and are required to spend a minimum of 24 calendar months and a maximum of 48 calendar months. Full-time students register for a maximum of four (4) coinses per semester. They are required to spend a minimum of 12 calendar months and a maximum of 24 calendar months.

3.3 Ph.D Programme:

The Doctor of Philosophy programme includes taught courses and research. The product of the research is expected to be original and independent with major contribution to knowledge and presented as a thesis. There is provision for both Part-time and Full-time registration.

Full-time Ph.D. candidates are required to spend a minimum of 24 calendar months and a maximum of 60 calendar months. Part-time Ph.D. candidates on the other hand, are required

to spend a minimum of 36 calendar months and a maximum of 84 calendar months. Graduate students are required to undergo registration procedure at beginning of each academic year during the course of their programme. This is done within the first week of resumption except otherwise stated.

3.4 Application Forms and Registration:

Application forms for all postgraduate programmes are obtained, completed and deposited at the School of Graduate Studies of the University of Port Harcourt. Admitted graduate student is expected to collect registration forms from the School of Graduate Studies, complete and return same after discussion with the Supervisor and the Head of Department. Every student is expected at first registration to sign the University Register of Graduate Students at the School of Graduate Studies.

The details of requirements for the graduate registration are given in the Handbook General Regulations for Graduate Programmes issued by the University's School of Graduate Studies.

4.0 Curricula and Course Description of Postgraduate Programmes.

COURSE DESCRIPTION

AEB 701.1 Environmental Animal Physiology

Water, ions, and osmotic physiology; Animal water balance, osmoregulation and excretion; Metabolism and energy supply; Respiration and Circulation; Temperature and its effects; Coping with the environment; marine, estuaries, freshwater, terrestrial life; Extremes in terrestrial habitats; Parasitic habitats.

AEB 702.1 Fish Biology

The gross external and internal anatomy of a typical cartilaginous fish. The different types of anatomical systems and basic functions of each system of organs in the fish, embryology important fish e.g. Tilapia, Clarias and mullet. Ecology of fishes with special reference to distribution and natural history and application of this knowledge for fisheries management and obtaining maximum returns from fishery resources. Characteristics of the aquatic environment, organic production in aquatic fauna and flora-algal blooms and entrophical planktons and benthos, biomass assessment, food and feeding habits of fishes, feed and habitat selection, population, niche concept, food chains. Reproductive behavior and life cycles of some selected species.

AEB 703.1 Environmental Entomology

Arthropod indicators of pollution in terrestrial and aquatic ecosystems. Identification and management of breeding sites. Environmental control of insect pests of humans and animals. Patent, Distribution and use of pesticides, landscape modifications by ant hills, termites mounds, bee hives, breeding sites of other insects, Ecological consequences associated with environmental control of arthropods.

AEB 704.1 General Parasitology

The History and scope of Parasitology; Basic

principles and concepts of parasitology; The ecological nature of Parasitology; types of parasites; protozoa, Platyhelminthes, Nematodes, other parasites; the transmission of parasites; the physiology of parasite transmission; The metabolism and physiology of the parasitic stages; Host-parasite interactions; host susceptibility; effects of parasites on their hosts, Reaction of the host to patasites, immunity to specific parasites.

SECOND SEMESTER

AEB 705.2 Animal Nutrition

Animal dietary requirements; protein, carbohydrates, fats, oils, and minerals; species difference in nutrition; Nutritional requirements at different physiological states: growth, reproduction; Sex differences; Physiology of digestion; Feed formulation.

AEB 706.2 Hydrobiology

Physical and chemical properties of both inland and seawater; hydrobiology and water cycle; properties of natural and manmade lakes, thermal properties and stratification; hydrobiological cycles; Physico-chemical and morphometric variable of inland waters; biogeochemical cycling of essential nutrients.

AEB 707.2 Arthropods of Field Crops

Arthropod pests of vegetable crops, legumes, cereals, tuber crops and cash crops with reference to the nature of damage, life history, distribution, pest stage and control. Different control measures in the management of these pests.

AEB 708.2 Applied Parasitology

Diagnosis, and control of parasitic infections Diagnosis, control, treatment and MGT of parasitic infections of man, domestic and farm animals and crops; List of a few of them. Basic histology; Histological techniques; Isolation and maintenance of parasites in vivo and in vitro; Maintenance and cultivation of snails and other vectors of parasites. Identification characterization of major parasite groups viz. Protozoa, helminthes and nematodes; Some culture techniques used in Parasitology; Faecal, urine, blood and other tissue examinations techniques. Measurement and qualification of intensity of parasitic infections.

AEB 709.2 Seminar

Candidates must extensively review a current topic in a discipline complementary to their area of training to broaden their knowledge of Entomology.

AEB 710.2

An innovative research project to be carried out by the candidate following stringent scientific procedures and that will yield results acceptable by experts worldwide. Each project must contribute to knowledge in Animal and Environmental Biology.

DURATION OF THE PROGRAMME

M.Sc Programme

The Maximum length of time that a Full-time M.Sc. Degree candidate is permitted to spend on a 12-month M.Sc Degree programme is three years and a part-time candidate five years. A student who fails to meet this deadline is asked to withdraw from the programme.

Ph.D Programme

The Maximum length of time that a full-time Ph.D. student is permitted to spend on a 3-year Ph.D Degree programme is five years, and a Part-time student seven years. A student who fails to meet this deadline is asked to withdraw from the programme,

DEGREE CLASSIFICATION

Masters and Doctorate Degree Programmes The Masters and Doctorate Degree Programmes of the department lead to the award of Masters of Science (M.Sc) and Doctor of Philosophy in the following areas;

1. Environmental Parasitology
2. Entomology and Pest Management
3. Environmental Physiology of Animals
4. Hydrobiology/Fisheries

COURSE DESCRIPTIONS FOR M.Sc ENVIRONMENTAL PARASITOLOGY

First Semester

AEB 855. 1 Principles of Community Health Parasitology

The concepts and practice of community health. Some community health milestones. Community Health significance and techniques. Concepts of community diagnosis. Diagnosis in

Planning health interventions. Types of community action. Community participation. Evaluation of community health action programmes. Use of community diagnosis for Training programmes.

Community health services. Primary Health Care and Parasitology. Use of health services in parasite control (3 Credits)

AEB 856.1 Epidemiology and Diagnosis

Epidemiology; Concepts, tools and methods. Basic principles of demography. Health statistics vital rates, disease counting, morbidity. General principles of diagnosis of Parasites, laboratory and field techniques in major parasitic infections. Epidemiological surveys. Feedback and report writing statistical methods in epidemiology, Epidemiology of vector and water-borne, water washed and water based parasitic infections. (3 Credits).

AEB 857.1 Immunology of Parasitic Infections

General principles of Immunology. Immunodiagnosis of parasitic infections. Immunology of tissue. Blood and gastrointestinal parasites. Immunity of Parasitic infections. Immune evasion mechanisms. Parasite antigens and development of vaccines. Principles of immune pathology of parasitic diseases. (3 Credits).

AEB 858.2 Agro-Nematology

Nematode parasites of plants. Extraction from soil and plant tissues. Preservation, staining and counting of nematodes. Life cycles of nematodes of Nigeria food crops. Interaction of nematodes with insects, fungi, bacteria and viruses in disease complexes. Pathology of nematode infections on food crops. Control of plants and soil nematodes. Nematicides. Nematode and food production in Nigeria. (3 Credits).

Second Semester

AEB 859.2 Vector Biology, Control and Management

Breeding biology and ecology of arthropod vectors- insects, crabs. Snail vectors of Schistosomiasis, identification of species.

Impacts of human and industrial activities on vector biology/population. Vector dynamics and

infection, biting rates. Infection rates transmission potentials, vector capacity, vector control. Insecticides, molluscides, biological control, vector management. (3 Credits)

AEB 860.2 Environmental Health Parasitology

Principles of environmental health. Environmental components of parasitology, sanitation, water supply, waste disposal, housing, occupational hazards, food borne parasitic diseases, nutritional status, health education. Parasites as indicators of environmental degradation. Impacts of industrial activities on parasite dynamics, environmental manipulation in parasitic disease control. (3 Credits)

AEB 861.2 Control and Management of Parasitic Diseases

Chemotherapy in disease. Problems of drug resistance drug combinations, resistance in Nematode infections. Techniques in management of selected parasitic diseases- protozoa, platyhelminthes and nematode diseases. Local management techniques. KAP of common parasitic infections- schistosomiasis, filariasis, onchocerciasis. Review of activities of parasitic disease control and evaluation programmes in Nigeria, Africa and global. (3 Credits)

Electives:

AEB 862.2 Socio-Economic Parasitology

Socio-economic status, and social stratification within communities. Investigating the culture of community. Social impacts of parasitic diseases onchocerciasis, filariasis, schistosomiasis. Economic impacts of parasitic diseases. Health economic, cost effectiveness assessment.

AEB 863.2 Seminar

Seminar based on extensive review of a topic in parasitology. The seminar is written up, delivered by the student and submitted for examination.

AEB 864.0 Research Project

COURSE DESCRIPTIONS FOR M.Sc. FISHERIES AND

HYDROBIOLOGY

AEB 801.1 Estuarine Ecology

Primary producers: Macroalgae, higher plants, consumers: study of local taxonomic groups and communities. Tidal levels, substrate types, salinity zones, river types. Strates: sedimentation physicochemical and biological processes within soft substrates. Physiological problems of estuarine organisms. Estuarine food chain and productivity.

AEB 802.1 Fisheries Biology

Classification of fishes: characters used in species level taxonomy, internal features and basic physiology (sensory, respiratory, osmoregulation, etc) Food and feeding habits; method of diet analysis. Age and growth in fish, methods of marking and growth-ring analysis, mortality. Reproductive biology: sex determination and ratio; gonad development and staging; breeding behavior and cycles; embryonic development and larval stages. Food abundance, distribution and migration.

AEB 803.1 Fisheries Management

Fisheries of the major African lakes. Niger and Cross River and the Niger Delta. Inland fisheries development in Africa. Fish populations: methods of determining population size, recruitment, growth and yield survival and mortality. The inter-relationship of fishing effort, catch, recruitment and stock size equilibrium, yield. Basic statistics, collection and tabulation of data. Presentation of data; measures of dispersion; correlation and regression.

AEB 804.2 Freshwater Ecology

The freshwater biota of West Africa, especially. Plankton, macrophytes and benthic invertebrates; identification, ecological adaptations, indicator species and species important to man (nuisance and economic species, disease vectors). Zoogeography of the African freshwater fauna. Ecological characteristics of the main freshwater habitats rivers, flood plains, manmade lakes swamps and ponds.

AEB 805.2 Aquaculture

Pond constructions sizes; soil conditions;

construction methods and types of ponds. Useful species, native and exotic general characters, breeding, seed/fingerling supply, stocking and harvesting programs. Fertilization and supplementary feeding; needs, types, regimes; productivity Health of stock: water quality pollution, disease, parasites and predators. General care of ponds; maintenance, public health aspects. Fish marketing and economics of management.

AEB 806.2 Hydrobiology Techniques

Physical and chemical factors and primary production in aquatic environmental their measurement, their influence on the distribution and adaptation and their influence on the functioning of particular ecosystems.

AEB 807.3 Seminar

AEB 808.3 Research

COURSE DESCRIPTIONS FOR M.Sc PROGRAMME IN ENVIRONMENTAL ENTOMOLOGY AND PEST MANAGEMENT

AEB 865.1 Insect Ecology and Conservation (3 Units)

Population growth - growth curves, age distribution (pyramids), survivorship curves Life tables etc. reproduction strategies r and k selections reproductive effort, etc. Searching behaviour patterns in insects. Pollination biology. Social Systems and behavior dominance, hierarchies, territoriality. Cannibalism Niche concept, might packing, habitat, biotope, adaptive radiation. Ecological genetics natural selection, population variation, meta-populations, poly oiphism, industrial melanism. Population interactions Competition, Predation, Parasitism, Host Predator Interactions, Roles of parasitoids in regulation of natural populations, applications in pest management.

Population dynamics natural regulation. The Argents for density dependence and the response of the density independent school, first line of resolution (contributions from Mathematical theoretical Ecologists Chesson, May, etc. Insects Conservation-Historical Perspective (past and present events leading to

insect conservation concerns, emergence of insect conservation biology) Insects and fragmented/disturbed landscapes. Individual insects and their conservation. The entomologists' Dilemma, Insect conservation Ethics.

AEB 866.1 Pesticides (3 Units)

Historical perspective, main classes of pesticides e.g. insecticides e.g. insecticides, herbicides, fungicides, etc Modes of action. Efficiency and Principal routes of entry into target pests, arsenicals, Botanicals and bio-pesticides, chlorinated hydrocarbons, Organophosphates, Chlorinated hydrocarbons, Organophosphates, Carbamates, Insect growth regulator. Fumigants, chemosterilants; Development and production of pesticides. Benefits and limitations of pesticides. Effect on environment and non-target organisms. Types of formulation solution concentrate, wettable powders, Emulsifiable concentrate. Dusts, Granules, Baits, Miscible liquids. Microencapsulation, Fumigants, Smokes, Ultra-low-volume formulation. Application of pesticides-Methods of application, application to water, seed, crop, weeds, etc. Equipment for pesticide application. Commonly available sprayers and nozzles. Bioassays-Methods of dosing targets and measurement of toxicity, median lethal concentrations/doses. Pesticide toxicology and poisoning.

AEB 867.1 Arthropods in Human and Animal Health (3 Credit Units)

Arthropods as direct agent disease or discomfort Entomophobia, Envenomization, Dermatitis. Myiasis, Allergy, Toxicosis, etc. Arthropods as intermediaries in parasitic transmission Mechanical carriers, obligate Vectors, - intermediate hosts. Connection between a specific arthropod with transmission of disease. Types of transmission Vertical and horizontal transmission, Types of biological transmission Cyclopropagative, cyclodevelopmental. Propagative, Definitions Vector effectiveness (Efficiency), Vector Competence, Vector Potential factors affecting vector competence Extrinsic (Arthropod-host interactions reservoir hosts, environmental factors, etc). Inherited traits. Internal barriers, behavioural

traits, etc) Epidemiology of arthropod-borne disease (Malaria, Onchocerciasis, Human Sleeping Sickness, etc) in human health-Epizootiology of arthropod-borne disease (Animal trypanosomiasis, Heartwater, East Coast Fever, etc) in Animal Health Emerging and Resurging arthropod-borne diseases.

AEB 868.1 Biostatistics (3 Units)

Definition; Types of Biology Data; Frequency Distribution: Cumulative Frequency Distributions. Populations and Samples-Random Sampling; Parameters and Statistics. Measures of Central Tendency. The Arithmetic Mean; Measures of Dispersion and Variability the Range; The Mean. Deviation; The Variance; The Standard Deviation; Standard Error. The Coefficient of Variation. Introduction of Statistical Hypothesis Testing-One Sample Hypothesis. Two-tailed Hypothesis Concerning the Mean: Students test; One-tailed Hypotheses Concerning the Mean; Confidence limits for the Population Mean. Two Sample Hypotheses Testing for Difference between Two Means; Confidence Limits for Population Means: Non-parametric statistical Methods. The Mann-Whitney Test. Multi-sample Hypotheses: The Analysis of Variance Single Factor Analysis of Variance; Multiple Comparisons. The Turkey test; The Newman-Kuls test. Two-Factor Analysis of Variance (with Equal and unequal Replication), Two-Factor Analysis of Variance without Replication. The Randomized Block Experimental Design, Data Transformations. The Logarithmic Transformation; The Square Root Transformation; The Arcsine Transformation Sample Linear Regression. Simple Linear Correlation Chi-Square Goodness of Fit and Analysis.

- *To be taken by all M.Sc students in all the programmes in AEB Department.*

AEB 869.1 Cultural and Forensic Entomology (3 Units)

Overview- The three domains in the pursuit of human intellectual activities. Historical emphasis of Entomology. Scope of cultural entomology. Relationship to entomology. Insects in Literature and language. Music and Performing Arts, Graphic

and Plastic Arts, Interpretive History, Philosophy, Religion and Folklore, Recreation and Curiosities. Species of special Cultural significance Definition of forensic entomology Categories (Urban, Stored Products, Medicolegal), History-Perspectives and Overview. Rationale for the use of insects in medico-legal investigations. Estimating in Post-Mortem Interval (PMI).

Carrion-associated arthropods (necrophages, parasitoids, cryptozoic, etc) Dipteran biology (species identification, age determination of maggots, puparia and adults, species invasion, patchy distribution and biological invasion, delayed corpseinvasion) Corpse decomposition. Applications of dipteran biology and corpse decomposition data to forensic problems, application of forensic entomology to conservation of natural resources. Case studies. Current perceptions of forensic entomology.

AEB 870.2 Management of Arthropod and other pests (3 Units)

Arthropod pests of vegetable crops. Legumes. Cereals, tuber crops, and cash crops with reference to the nature of damage, life history, distribution, pest stage, and control, Arthropod pests of Stored cereals, legumes, oil seeds, timber, clothes, hides, skins kola, and, fish with reference to their biology, bionomics, behavior, population dynamics, and adaptations to the storage ecosystem. Impact of type of storage system on pest populations, growth rates and role of pheromones in pest biology, Non-arthropod pests of field and stored products: vertebrates such as rodents, large mammals both wild and domesticated, birds and reptiles their seasonal activity cycles, damage, control/management. Fungi. Bacteria and Weeds.

AEB 871.2 Aquatic Entomology and Environmental Assessment (3 Units)

General morphology of aquatic insects-Head, Thorax and Abdomen Methods of Collecting, sampling, and rearing of insects Respiration in aquatic insects Habitat, life history, and behavioural adaptations in aquatic insects Ecology and distribution of aquatic insects. Genem 1 classification and key to the order of

aquatic insect; Collembola, Ephemeroptera, Odonata, Plecoptera. Hemiptera, Trichoptera, Coleoptera, Diptera, and Lepidoptera. Definitions: Biological Monitoring and Environmental Assessment Entomofauna as an important biological component of aquatic and wetland ecosystems. Effects of street (pollution) at various levels of entomofauna organization organism, population, community. Use of insects as indicators in environmental assessment. Use of insects as monitor and sentinel species in biological monitoring. Preferred characteristics of insects used in biological monitoring.

AEB 872.2 Seminar

AEB 873.0 M.Sc Thesis

CURRICULUM COURSE DESCRIPTIONS FOR M.SC ENVIRONMENTAL ANIMAL PHYSIOLOGY

AEB 810.1 Advanced Environmental Animal Physiology

Fundamental Mechanisms of Adaptation including physiological regulation of gene expression, Homeostasis; environmental stress and animal response; Critical factors and tolerance limits; Osmotic stress; Low oxygen environment and organismal response (Aerobiosis and Anaerobiosis); responses to temperature changes; Environmental toxicity; Acid rain and its effects; Bioaccumulation and Biomagnification of contaminants and their effects; Elimination of toxic materials; Energy flow in the environment.

AEB811.1 Advanced Pathophysiology

Abnormalities in the physiology of Animals (humans). Alterations in cellular growth, the Neurologic system, the Endocrine System the Hematologic System, cardiovascular system, pulmonary System, renal and urologic system. Digestive System, Reproductive System, the musculoskeletal and the integumentary systems.

AEB 812.1 Drug Actions on the Physiology of Animals

Principles of Drug Absorption, Disposition and Action Drugs affecting: Peripheral

Neurohumoral Transmission, Autacoids and their Antagonists. Anesthetics. Drug acting on the Cardiovascular system, the CNS and the Gastrointestinal tract. Diuretics, Endocrine Pharmacology, Nonnarcotic Analgesics and Nonsteroidal Anti-inflammatory Drugs. Antimicrobial drugs. Antineoplastic drugs, Antiparasitic Agents, Drug Interactions Treatment of Poisoning.

AEB 813.1 Environmental Contaminants and Animal Reproduction

Effects of environmental pollutants on spermatogenesis, ovulation, folliculogenesis, fetal viability, embryonic mortality, the neonate. Teratogenic effects of heavy metals; Abortion; endocrine levels, cyclicity and fecundity; discussions on current publications

AEB 814.2 Environmental Pollution Effects on the Physiology of Animals

Types of Environmental pollutants; Toxic chemicals; Natural and synthetic toxins; Air, Soil and Water pollution; Natural human-based pollution; Primary and Secondary pollutants; Effects of climate, topography and atmospheric processes on air pollution (human health, PH and Acidity; aquatic effects; forest damage and feed availability; Visibility; animal health etc); Environmental pollution control Effect of oil spillages. Effect of different types of wastes.

AEB 815.2 Toxins and Therapeutic Agents from Animals

Different types of Animals toxins. Natural History of Venomous Animals Mammals, Reptiles, Amphibians, Fish, Arachnids, Insects, Echinoderms, Coelenterates, Molluscs. Effect of toxins on other animals and on humans. Useful and Therapeutic agents found in animals. Their extraction, purification, identification, conversion of natural to synthetic active form for remedy of ailments.

AEB 825.2 Biostatistics

Definition; types of Biological Data; Frequency Distributions; Cumulative Frequency Distributions. Populations and Samples- Random Sampling; parameters and Statistics. Measures of Central Tendency- The Arithmetic Mean; Measures of Dispersion and Variability- The Range; The Mean Deviation;

The Variance; The standard Deviation; Standard Error. The Coefficient of Variation. Introduction to statistical Hypothesis Testing; Onetailed Hypothesis, two tailed Hypothesis Concerning the mean; student's test; One-tailed Hypothesis Concerning the mean; Confidence limits for the population Mean. Two tailed Hypothesis Testing for difference between Two Means; Confidence Limits for Population Means; Non-parametric statistical Methods. The Mann-Whitney Test. Multi-sample Hypothesis: The Analysis of Variance Single-Factor Analysis of Variance; Multiple Comparisons, The Tukey Tests; The Newman-Keuls test. Two- Factor Analysis of Variance (with Equal and unequal Replication); Two-Factor Analysis of Variance without Replication; The Randomized Block Experimental Design, Data Transformations. The Logarithmic Transformation; The Arcsine Transformation. Simple Linear Regression. Simple Linear Correlation. Chi-Square Goodness of Fit and Analysis.

M.Sc. PROGRAMME IN ENVIRONMENTAL AND CONSERVATION BIOLOGY.

Admission Requirements

Admission into Master's Degree programmes requires at least a Second Class Honours Degree of the University of Port Harcourt or any other recognized University, in relevant subjects (e.g. Zoology, Biology, Crop Science, Environmental Science, Biology Education e.t.c)

Programme Structure, Duration and Residential Requirements for Postgraduate Students

The programme scheme involves taught courses, seminars and preparation of a research Thesis. Students admitted in the programme do register for all courses to be taken once every session, at the beginning of each academic year. Part-time students register for a maximum of four (4) taught courses in the first year of the programme, i.e, two (2) per semester and are required to spend a minimum of 24 calendar months and a maximum of 48 calendar months.

Duration of the Programme

Full time candidates are required to spend a

minimum of 12 calendar months and a maximum of 24 calendar months. Part time candidates would be required to spend a minimum of 24 calendar months and a maximum of 72 calendar months. (Also, see overstay policy)

Requirements for a Master of Science Degree in the Department

To obtain a Master of Science Degree in any field covered by the M.Sc. programmes of the department, a student must be registered in the department for not less than 12 calendar months (for full-time students) and twenty four calendar months (for part time students), complete the academic programme, pass all the courses in the programme, and successfully defended a research Thesis.

11.0 M.Sc COURSE CONTENTS

FIRST SEMESTER

Course No.	Course Title	Units
AEB 830.1	Advanced Environmental Assessment, Monitoring and Evaluation	3
AEB 831.1	Advanced Ecotoxicology and Toxinology	3
AEB 837.1	Biodiversity Conservation and climate change	2
AEB 833.1	Ecosystem Management	2
CGS 801.1	ICT and Research Methodology	2
AEB 834.1	Environmental Laws and Policies	2

Determination and Quantification of Pollutants.

12.0 COURSE DESCRIPTION

FIRST SEMESTER

AEB 830.1 Advanced Environmental Assessment, Monitoring and Evaluation (3units)

Risk assessment and management, risk assessment matrix, environmental sensitivity index mapping, Biological amplification of pollutants, bioaccumulation and bioavailability modeling. Biological Monitoring using indicator species. Environmental Impact Assessment (EIA); **EIA** Phases in Environmental Assessment Predictive Monitoring; Interpretation of Environmental Effects during and after Development Activity; Impact Assessment Network Simple Models in Environmental Assessment Phases in Ecological Risk Assessment, Limitations, Case studies of EIAs in Marine, Coastal/Brackish (Wetland) Ecosystems, Forest Ecosystems, Agro-Ecosystems Freshwater Ecosystem, And Ecosystem. Environmental management programmes, ISO standardization, IMM, EISEnvironmental Audits; types of audits; compliance audit, issues audit, health and safety audit, site audit, corporate audit, due diligence audit, activity or operational audit, product or life cycle audit, environmental legislation and company policy, evaluation of compliance with environmental legislation and corporate policies; measure performance against the requirements of an environmental management system standard, IS014001 Certification process.

AEB 831.1 Advanced Ecotoxicology and Toxinology (2 Units)

Types and Sources of Pollutants; Transport and Fate of Environmental Pollutants; Application of Bioassays in the Study of Effects of Environmental Pollutants on Biological Systems; Effects of Emerging Contaminants; Endocrine Disrupters, Environmental Mutagen, Xenobiotics, Acute and Chronic toxicity tests; Range finding test. Dose Response Assessment, Exposure Assessment, Risk Characterization, Dose-Response Curves and Determination of LC, EC50, LD, etc., Plant and Animal Toxins,

AEB 832.1 Sustainable Waste Management (2 units)

Biological and non-biological wastes, strategies of waste management, municipal waste stream characterization, control and treatment of degradable wastes. Urban and rural waste management strategies, application of environmental biotechnology in waste management, bioremediation of contaminated sites, enzymes in sewage treatment, .renewable energy and waste management-biogas and organic manure production, management of e-waste, radioactive waste and abattoir waste, waste-to-wealth.

AEB 833.1 Ecosystem Management (2 units)

Characteristics of Major ecosystems in Nigeria; Biology and Ecology of Marine Ecosystem; Coastal Ecosystems- Biology and Ecology; Marine Biogeochemistry, Seabed Assessment, Sources of Marine Pollution-Industrial Discharges, Domestic, Agricultural, Oil and Gas Industry; Monitoring Marine Pollution-Monitoring and Survey Programme Design; Methodology Interpretation and Presentation of Results-Hazardous Waste, Nutrients; Marine Litters and Pesticide; Biological MONITORING, Marine Ecosystems Services-Carbon- Dioxide Sequestration; Integrated Management of Coastal Watersheds-Role of Wetlands and Coastal Marshes, Role of National and International Organization(Marine Protected Areas),Marine and Coastal Resources of Nigeria, Impact of Anthropogenic Activities on Salt Marshes, Mudflats, Rocky and Cobble Shore, Sandy Shore, Mangrove forest, Inters transference of materials between Contaminated Shelves and the Marine Environment, Restoration Ecology.

SGS 801.1 Management and Entrepreneurship (2 Units)

This course covers business environment. General management, financial management, entrepreneurship development, feasibility studies. Marketing and' managerial problem solving

AEB 834.1 Environmental Policies and Laws/Biosafety (2 units)

National and International environmental policies and laws, Environmental litigation, Green house index as (lobalecological indicator, ecological forecasting, duisance, negligence, Transbaudary policies and laws, [(institutional framework for environmental regulation in Nigeria, sources of environmental laws. Environmental Impact Assessment Act, 1992, Fundamental principles of EIA, Nigeria natural tnvironmental problems. Policy on legal response to environmental pollution and degradation, Sources of environmental pollution/degradation in Nigeria, Rule in Rylands and Fletcher, Biosafety.

AEB 835.1 Molecular Environmental Biology/ Modified Organisms (2 units)

Molecular Biology, Advanced genetic Engineering, DNA replication and DNA repair mechanism, mutagens and mutation, carcinogens and cancer, modified organisms and Biosafety, genetic pool and human impact.

AEB836.1 Biostatistics and Bioinformatics (2 units)

Definitions; types of Biological Data; molecular biology data, genome sequence, gene characterization, protein sequence, geometry; Frequency Distributions; Cumulative Frequency Distributions. Populations and Samples- Random Sampling; parameters and Statistics. The Mean Deviation; The Variance; The standard Deviation; Standard Error. The Coefficient of Variation. Introduction to statistical Hypothesis Testing; student's test; Confidence limits. Non-parametric statistical Methods the Mann-Whitney Test. Multi-sample Hypothesis: Single-Factor Analysis of Variance; Multiple Comparisons, The Tukey Tests; The Randomized Block Experimental Design, Data Transformations. The Logarithmic Transformation; The Arcsine Transformation. Simple Linear Regression. Simple Linear Correction. Chi-Square Goodness of Fit and Analysis, Biostatistics

SECOND SEMESTER

AEB 837.2 Seminar (3 units)

Selected current topics in Environment and

Conservation Biology

AEB 838.2 Biodiversity Conservation and Climate Change/Biogeography (2 units)

Biological diversity; biodiversity differences in terrestrial and aquatic ecosystem; numeric diversity measures; reasons for preserving diversity evaluation; principles of conservation; sustainable conservation; translocation; re-introduction; re-establishment; succession, Ozone layer depletion, global warming/ greenhouse effects, carbon dioxide sequestration and carbon trading, Climate change, effects on agriculture, human and ecologic health, climate change coalitions and conventions, meteorology and atmospheric pollution; Landscape concept, Minimum viable population, biogeography.

AEB 839.2 Environmental Health (2 units)

Environmental contaminants, Environmental mutagens. Organic and Inorganic contaminants, Sources, pathways and fate of environmental contaminants; Effects of environmental contaminants on humans and Animals. Ecological Stress, Threshold effects, environmental carrying capacity. Acute and Chronic toxicities, Risk Assessment; Habitat Restoration and Recovery, Habitat Protection and Conservation Areas; Waste Management and Environmental Biotechnology-Solid Waste and Effluent; Wastewaters-Process and Procedure; Renewable Energy Sources-Biogas, Wind Energy; National Environmental Legislative Framework; NESREA.NOSDRA, FMEnv etc; State Legislation. Occupational Health and Safety Policies, Programmes, Legislation and Compliance; Health, Safety and Environmental Awareness; Responsibilities and Roles of Management, Employees and Third Party. Emergency Preparedness and Response; HSE Training and Evaluation

AEB 840.2 Research Project (6 units)

Research on current topics in Environment and Conservation Biology

CURRICULUM AND COURSE DESCRIPTIONS OF Ph.D DEGREE

PROGRAMMES IN THE DEPARTMENT

CORE COURSES

For Ph.D Environmental Animal Physiology

Advanced Environmental Assessment and Monitoring

For Ph.D Environmental Entomology and Pest Management

Advanced Genetics/Molecular Biology

For Ph.D Environmental Parasitology

Advanced Genetics/Molecular Biology

For Ph.D Hydrobiology and Fisheries Biology

Advanced Environmental Assessment and Monitoring

Note that all core courses must be passed at C (5(1%) level

COURSES DESCRIPTION

AEB 942.1 Advanced Environment Assessments and monitoring Regulatory policies and laws Evolution of Environmental impact Assessment, Project screening scoping and baseline data collection: impact prediction a id Evaluation: management/mitigation monitoring p Ian, environmental auditing social impact and Health/assessment stakeholder consultation; Strategic Environmental; Assessment (SEA) Uncertainly in EIA. Risk management Application of EIA. Bio-indicators, Bio-monitors.

COURSE DESCRIPTION

AEB 921.1 Advanced Genetics/Molecular Biology

Concepts of molecular biology, signal transduction and molecular arrays cell cycle and cellular regulation micro molecular structures and functions advanced techniques ii molecular biology, gene expression and control, genetic diseases and gene therapy, population genetics, molecular genetics and evolution, bio-ethics and genetically modified organisms, informatics and genomic.

COURSES DESCRIPTION

AEB 921.1 Advanced Genetic/molecular biology

Concepts of molecular biology, signal transduction and molecular arrays cell cycle and cellular regulation, micro molecular structures and functions, advanced techniques in molecular biology, gene expression and control, genetics diseases and gene therapy, population genetics, molecular genetics and evolution, bio-ethics aid genetically modified organisms, informatics and genomic.

COURSE DESCRIPTION

AEB 942.1 Advanced Environmental Assessment and Monitoring Regulatory policies and laws Evolution of Environmental impact assessment.

Project screening, scoping and baseline data collection; impact management/mitigation monitoring plan, environmental auditing, social impact and Health assessment stakeholder consultation in EIA. Risk management. Application of EIA. Bio-indicators, Bio- monitors.

Ph.D. PROGRAMME IN ENVIRONMENTAL A VD CONSERVATION BIOLOGY

1.0 BACKGROUND

Environmental biology is a multi-faceted science borne of interdisciplinary hybridization. It welcomes students from diverse backgrounds Zoology, Botany, M exobiology, Biochemistry, Medical and Biomedical sciences e.t.c. It instills competence essential for the promotion and protection of sustainable healthy living environments for plants and animals as well as o living organisms.

2.0 JUSTIFICATION/ RATIONALE

Achievements in reducing human sufferings occasional by ecological disasters can be traced to environmental initiatives. Improving environmental outcomes is t major challenge for environmentalists the world ova. There is a dearth of environmental professionals in-Nigeria to teach, practice and do research to improve tie general health and well-being of plants, animals and human communities in

this country. Environmental biologists are also needed to effectively formulate programmes and policies needed to improve the quality of our living environment.

Few states in this country have appropriately trained and qualified environmental scientists; there is therefore obvious need and demand for training in Environmental Biology and Conservation in Nigeria. The proposed Ph.D programme in Environmental Biology and conservation will help to fill the human resource gaps in the field in his country. It is intended that at the end of the programme, successful students would have acquired approval knowledge, skills and competences to enable them apply; environmental biology principles in the planning, implementation and evaluation of environmental programmes. They will also be expected to be able to critically assess environmental factors and intervention and their potential impacts on both human and ecosystem health.

3.0 OBJECTIVES OF THE PROGRAMME

- To provide training in Environmental Biology for qualified candidates;
- Develop research capacity for environmental management; and
- Produce Environmental managers for the Nation.

4.0 ADMISSION REQUIREMENTS

Candidates for the Ph.D programme must have a Master Degree and should normally have an average of at least; 60% or CGPA of 3.50 in the relevant discipline at the Masters level.

For candidates who obtained their Masters exclusively by research assessment, admission will be based on the quality of their thesis. Candidates may be required to attend a pre-admission interview session. Final selection of a candidate shall be based on his/her interview- performance and other criteria.

If a candidate is deficient in some fundamental knowledge, the candidate would be required to take requisite courses recommended in the department to enhance his/her knowledge.

5.0 PROGRAMME STRUCTURE, DURATION AND RESIDENTIAL REQUIREMENTS FOR POSTGRADUATE STUDENTS

The Doctor of Philosophy programme is by coursework and research and a presentation of a Thesis based on the product of independent original research. There is a provision for both part-time and full-time registration. Graduate students are required to undergo registration procedure at the beginning of each academic year during the course of the programme. This is done within the first week of resumption except otherwise stated.

5.1 DURATION OF THE PROGRAMME

Full-time Ph.D candidates are required to spend a minimum of 24 calendar months and a maximum of 60 calendar months. Part-time Ph.D candidates on the other hand, are required to spend a minimum of 36 calendar months and a maximum of 48 calendar months. A student who fails to meet this deadline maybe asked to withdraw from the programme, (see overstay policy)

5.2 GRADUATION REQUIREMENTS FOR A DOCTOR OF PHILOSOPHY DEGREE IN THE DEPARTMENT

To obtain a Doctor of Philosophy Degree from the Department of Animal and Environmental Biology, a student must be registered in the department for not less than 24 calendar months (for full-time students) and 48 calendar months (for part-time students) and present a Thesis based on original research conducted in his/her chosen field of study.

6.0 GUIDELINES ON THE SUPERVISION OF GRADUATE STUDENTS

Academic staff below the rank of Reader/ Professor shall not supervise more than one Ph.D candidate in any annual intake. A Reader/Professor may supervise two Ph.D candidates in annual intake. Academic staff supervising Ph.D students should not normally be below the rank of Senior Lecturer.

7.0 COURSE ASSESSMENT

A Ph.D student is expected to pass all taught courses with a minimum pass score of 50% (Grade "C"). Students are also assessed through continuous assessment which

constitutes 30% of the examination score of each course. A student who fails a course shall register for it at the next available opportunity. A graduate student may not register for a course more than twice. Students may be required to undertake courses in the department necessary for the programme if such a student has no such background.

At the end of the first-year course work, the student should have a **cumulative** grade point average (CGPA) of not less than 3.00. Any student whose CGPA falls below at the end of the first year shall be asked to withdraw from the programme. No student is allowed to proceed to thesis production without a CGPA of at least 3.00. A student who has exhausted both opportunities for all required courses without attaining a CGPA of 3.00 shall be asked to withdraw. The comment "W" (withdraw) shall be used for the record of the student who withdraws from their programme.

8.0 COURSE WORK GRADING

MARK	LETTER GRADE	GRADE POINTS
70 and above	5	A
60-69	4	B
50-59	3	C
0-49	0	F

EXAMINATION

A qualifying Ph.D examination shall be taken and passed at the end of the first year, which can be resat in the event of failure (less than C grade) only once.

To obtain a Ph.D degree in any of the fields covered by the Ph.D programme of the department, a student must be registered in the department for not less than 24 calendar months(for full time students) and 48 calendar months (for part-time students), complete the academic programme, present and successfully defend a research thesis.

THESIS/ RESEARCH PROJECT

a) *Examination of Thesis*

In addition to being successful in the coursework and the qualifying examination, candidate's thesis shall be orally assessed by a

panel of examiners.

b) *Additional regulation governing presentation of Thesis*

The research project must be supervised by a senior academic staff and write-up must conform to the format of the university.

9.0 ACADEMIC AD VISERS

Every student in the department is attached to an academic adviser who is a member of academic staff assigned to each student on post graduate programme at the beginning of each academic session.

Academic advisers are expected to follow their student's academic progress and provide counseling to them on academic affair as well as on personal matter.

10.0 SCHOLARSHIPS, ACADEMIC AWARDS AND PRIZES

The School of Graduate Studies has a scholarship scheme aimed at supporting indigent Ph.D students who have financial problems, and is driven by the University of Port Harcourt Alumni Association.

11.0 TEACHING AND RESEARCH ASSISTANTSHIP

In addition to scholarship the CGS provides for the award of Research and Teaching Assistantships to carefully- selected number of students who will, in addition to being registered for a specified higher degree, be required to assist in practical and tutorials and act as research/teaching assistants to Academic Staff subject to or reserved exclusively for candidates registered for Ph.D programmes. Holders of the award are not allowed to hold any other paid employment.

12.0 COURSE CONTENT

FIRST SEMESTER YEAR ONE

Course No.	Course Title	Units
AEB 931.1	Seminar I (selected topics in Environment and Conservation Biology)	3
AEB 931.1	Advanced Environmental Assessment, Monitoring and Evaluation	3

Sub-total		6
SECOND SEMESTER YEAR ONE		
Course No.	Course Title	Units
AEB 934 .2	Seminar II (selected topics in Environment and Conservation Biology) Qualifying Exam	3
Sub-total		3

Note:

- (i) Student who have no background in environmental biology may be required to take some courses at the Masters level to update the relevant knowledge
- (ii) Any student that has not done CGS 801.1 and CGS 802.2 will have to take these courses with the M.Sc class

13.0 COURSE DESCRIPTION

FIRST SEMESTER

AEB 933.1 Advanced Environmental Assessments, Monitoring and Evaluation (Units3)

Risk assessment and management, risk

assessment matrix, environmental sensitivity index mapping, Biological amplification of pollutants, bioaccumulation and bioavailability modeling. Biological Monitoring using indicator species. Environmental Impact Assessment (EIA) Phases in Environmental Assessment Predictive Monitoring; Interpretation of Environmental Effects during and after Development Activity; Impact Assessment Network Simple Models in Environmental Assessment Phases in Ecological Risk Assessment, Limitations, Case studies of EIAs in Marine, Coastal/Brackish(Wetland) Ecosystems, Forest Ecosystems, Agro-Ecosystems Freshwater Ecosystem, Arid Ecosystem. Environmental management programmes, ISO standardization, IMM, EIS; Environmental Audits; types of audits; compliance audit, issues audit, health and safety audit, site audit, corporate audit, due diligence audit, activity or operational audit, product or life cycle audit, environmental legislation and company policy, evaluation of compliance with environmental legislation and corporate policies; measure performance against the requirements of an environmental management system standard.

ACADEMIC STAFF WITH AREAS OF SPECIALIZATION

Name	Qualifications	Area of Specialization	Rank
Sikoki, F.D.	B.Sc (Ibadan), M.Sc (Mich), Ph.D (Jos)	Fisheries and Hydrobiology	Professor
Nduka, F.O. (Mrs)	B.Sc., M.Sc., Ph.D (Nig)	Parasitology	Professor
Hart, A.I. (Mrs)	B.Sc (Ibadan), M.Sc., Ph.D (UPH)	Fisheries and Hydrobiology	Professor
Awi-Waadu, G.D.B. (Mrs)	B.Sc (Ibadan), M.Sc., Ph.D (Aberdeen)	Parasitology, Vector Biology/ Ecology	Professor
Imafidor, H.O. (Mrs)	B.Sc., M.Sc., Ph.D	Nematology/ Parasitology	Professor

	(UPH)		
Noutcha, M.A.E,	B.Sc (Maiduguri), M.Sc., Ph.D (Ibadan)	Entomology/Molecular Biology and Immunology	Professor
Vincent-Akpu, I.F. (Mrs)	B.Sc. (Lag), M.Sc., Ph.D (UPH)	Fisheries and Hydrobiology	Professor
Abah,A.E.	M.Sc., Ph.D (UPH)	Parasitology	Reader
Woke, G.N.	B.Sc., M.Sc., Ph.D (UPH)	Fisheries and Hydrobiology	Senior Lecturer
Nzeako, S.O.	B.Sc(UNN), M.Sc., Ph.D (UPH)	Nematology/Environmental Parasitology	Senior Lecturer
Gbarakoro, T.N.	B.Sc., MPhil (RSUST), Ph.D (UPH)	Environmental Entomology/Arachnology	Senior Lecturer
Eze, N.C. (Mrs)	B.Sc (Nsukka), M.Sc., Ph.D	Environmental Parasitology	Senior Lecturer
Babatunde, B.B.	B.Sc., M.Sc (Ibadan). Ph.D (UPH)	Ecotoxicology/Environmenta l Radioactivity	Senior Lecturer
Oriakpono, O.E.	B.Sc (Unical), M.Sc., Ph.D (UPH)	Genetic Toxicology/Ecotoxicology	Senior Lecturer
Komi Gentle W.	B.Sc, M.Sc., Ph.D (UPH)	Fisheries and Hydrobiology	Lecturer I
Dr. Abajue, M.C	B.Sc, Ph.D (NAU, Awka)	Forensic Entomology	Lecturer I
Dr. Wogu, M. N.	B.S.C. (Benin) M.Sc. Ph.D (UPH)	Parasitology	Lecturer I
Dr. Obinna, V.C.	DVM (UNN), M.Sc., Ph.D (UPH)	Reproductive Physiology and Toxicology (Animal Health & Physiology Unit)	Lecturer I
Mrs. E. P. Kika	B.Sc (UPH) M.Sc	Environmental Biology	Lecturer II
Dr. Ojimekwe	B.Sc (UPH), MSc (London), PhD (UPH)	Epidemiology and Ecology	Lecturer II

DEPARTMENT OF PLANT SCIENCE AND BIOTECHNOLOGY

INTRODUCTION

The Department of Plant Science and Biotechnology started as the Botany discipline in the School of Biological Sciences of the University of Port Harcourt in 1999. On the 1st of October 1983, the School system was changed to the faculty system with the creation of the Faculty of Science. The former Schools of Chemical, Biological and Physical Sciences formed the component parts of the Faculty. In 1998, the name of the programme was changed from 'Botany' to 'Plant Science and Biotechnology'. The Faculty of Science was transformed into the Collegiate system with the name 'College of Natural and Applied Science' headed by a Provost in 2012 – a reflection of the growth recorded in over 25 years of her existence. However, in 2015 the collegiate system was reverted back to the faculty system.

From inception the Department was located at the University of Port Harcourt temporary site at Choba Park but later in 1994, it was relocated to the multipurpose Complex (Ofirima Hall) at the University Park. The Departmental general office is on the first (1st) floor of the south wing of Ofirima Complex. The staff offices, Herbarium, Library and Laboratories are located on the East and North wings (on the 2nd floor) while the lecture rooms are located at the west wing (on the 2nd floor).

THE PHILOSOPHY AND OBJECTIVES OF THE DEPARTMENT

Philosophy

The philosophy of the programme is to endow our graduates with the lucid knowledge and sound understanding of the concepts and techniques of Plant Science and Biotechnology to meet critical societal needs pertaining to plant life. All aspects of human existence including food security, shelter, medicines and environmental regeneration are touched on by the sustenance of plant biodiversity therefore the student of the programme is exposed to the body of knowledge to meet these needs.

This is in keeping with the National Universities Commission (NUC) statement on Minimum Academic Standards (MAS). In the formation of

the curriculum, care has been taken to ensure that the appropriate courses are taught at any given level of exposure. The students are provided with a broad-based exposure to knowledge that produces a well-rounded individual fit to take up responsibilities at the higher-level labour needs of the nation.

The undergraduate programme leads to award of Bachelor of Science (Honours) degrees in Plant Science and Biotechnology

THE OBJECTIVES OF THE DEPARTMENT ARE:

The objectives of the programme are:

- (a) To advance knowledge in Plant Science and Biotechnology in order to enhance the skills and expertise required for self-reliance and gainful employment;
- (b) To provide a good academic environment as a necessity in preparing the students for scholarship and service;
- (c) To educate the students on the importance of "Research and Development" using the concepts and techniques of Plant Science and Biotechnology for the development of our immediate community and the nation; and,
- (d) To enable the students acquire knowledge through the broad-based training in relation to the BMAS as required by the National Universities Commission (NUC), thereby making our graduates competitive in various challenges and ventures.

Generally, the overarching objective of the programme is to groom graduates with sound understanding of the basic and applied aspects of Plant Science, Plant Biotechnology and Environmental Plant Science. These are expected to come out with high prospects of fulfilled careers in relevant aspects of our national economy.

THE JOB PROSPECTS OF THE PROGRAMME

There exists a plethora of career/job opportunities for graduates of the programme including the Oil and Gas Industry (from exploration to prevention of pollution), Pharmaceutical Industries and

Laboratories, Chemical and Agrochemical establishments, Police Departments, Conservation, Teaching and Research Institutes (e.g. University, NIFOR, IITA, NIHORT, and FIIRO etc). Others are Government Ministries and Agencies - NABDA, Customs & Excise, Environmental Protection Agencies (NESREA, NOSDRA), Agricultural and Natural Resources Management Concerns, Banks, Agriculture/Insurance Companies, Agricultural Estates, Consultancy Services, Tissue Culture and Micro propagation. The department has produced many prominent personalities both in Government and in the organized private sector.

The Department is well endowed with highly qualified scientists as lecturers, kind and friendly administrative and technical staff who are ever willing to help students build a future. This is reflected in the high number of our staff engaged in numerous extra curricula activities in and outside the University of Port Harcourt.

We have adequately equipped laboratories and highly trained technical members of staff that are happy to assist students in the safe and proper use of equipment. The department provides a platform hands-on training alongside peer interaction and review for our students and those in similar courses of other universities through field trips and excursions. Moreover, students are encouraged to belong to the approved professional association (National Association of Plant Science and Biotechnology Students).

We hold sacrosanct the six-month Industrial exposure period for our students to benefit from the Students Industrial Work Experience (SIWES). This is a worthwhile avenue for our students to identify, meet and interact with prospective employers and acquire requisite experiences and work ethics outside the classroom.

The department also participates in the Basic Studies programme, Post ACE/NCE Sandwich programmes, School of Science Laboratory Technology (SSLT) Programmes other certificate courses.

Approval has been obtained to expand our departmental Botanic Garden which we expect to be provided with state-of-the art facilities equipped

with standard Herbarium, Green/Screen houses, arboretum, etc for outdoor/field experiments.

The department also offers graduate programmes leading to award of Postgraduate Diploma. Other graduate degree programmes are: Master of Science (MSc) and Doctor of Philosophy (PhD) in Plant Ecology; Plant Taxonomy, Cytogenetics and Biosystematics, Plant Physiology, Plant Biotechnology, Mycology and Plant Pathology. On behalf of the Department of Plant Science and Biotechnology, I welcome everyone to a rewarding stay with us.

GRADUATE PROGRAMME

General:

The Postgraduate programmes in the department include

1. Postgraduate Diploma 'PGD' in Plant Science and Biotechnology,
2. Master of Science "MSc" in Plant Science and Biotechnology with options in
 - a. Plant Physiology
 - b. Plant Ecology
 - c. Plant Pathology/ Mycology and
 - d. Plant Taxonomy/Biosystematics.
3. Doctor of Philosophy "PhD" degrees in Plant Science and Biotechnology with options in:
 - a. Plant Physiology
 - b. Plant Ecology
 - c. Plant Pathology/Mycology and
 - d. Plant Taxonomy/Biosystematics.

POST GRADUATE DIPLOMA PROGRAMME (PGD)

Duration and mode of study

1. The Full time PGD programme will run for a minimum of two semesters (2) and a maximum of four (4) semesters in line with both NUC BMAS for graduate programmes and the academic calendar of the College of Graduate Studies of the University of Port Harcourt.
2. The second mode of study is a Part time programme which runs for a minimum of four semesters (4) and maximum of six (6) semesters; however, start up for this mode is subject to approval by the departmental graduate board.

Admission Requirements

Admission into the Post-Graduate Diploma Programme of the department requires that:

1. All candidates must have five credit passes including English, Mathematics and two other relevant science subjects at 'O' Level.
2. Candidates with Bachelors degree from an approved university who have obtained a minimum of pass degree in the relevant science discipline.
3. Holders of HND in relevant programmes from approved institutions with a minimum of Upper Credit may be considered for admission. Relevant disciplines include but not restricted to Botany / Plant Science, Microbiology, Agriculture, Crop Science, Biochemistry, Genetics, Biotechnology or related fields depending on the preferred PGD option.

Graduation Requirements

A candidate must fulfill the following conditions to be awarded the Postgraduate Diploma.

A candidate must take a minimum of 30 credit units made up of 15 credit units in core courses, 9 credit units in electives and 4 compulsory credit units of Research Project. An enlisted student in this programme should obtain minimum CGPA of 3.5 (Lower credit on a 5 point scale) to be qualified to pursue a Master of Science degree in the applicable option in the department.

Academic Regulations

1. The programme shall be run on modular basis with courses spread out for two 15-week semesters ending with two weeks of examination.
2. A student shall duly complete registration of courses for the semester in not later than two weeks of the start of the semester. Once registered, a student may not withdraw from the course after 5 weeks of lectures except with a written permission from the Dean, School of Graduate Studies.
3. Where a student violates the requirements in 2 above, he/she is deemed to have failed the course.
4. If a student fails to sit for more than 2 courses at the end of a semester without approval, such student is deemed to have voluntarily withdrawn from the programme.

5. A student is in good standing when his/her CGPA for each semester is not less than 3.00/5.00; if for two consecutive semesters a student's CGPA is less than 3.00/5.00 the student shall be withdrawn from the programme.
The pass mark in any course shall be 50%.

The Course content of the Programme

PGD IN PLANT SCIENCE AND BIOTECHNOLOGY

FIRST SEMESTER

COURSE CODE	COURSE TITLE	CREDIT UNITS
PSB 700.1	Plant Morphology and Anatomy	3
PSB 701.1	Plant Taxonomy	3
PSB 702.1	Mycology	3
PSB 703.1	Plant Physiology	3
PSB 704.1	Plant Ecology	3
PSB 705.1	Plant Genetics and Breeding	3

Total		19

SYNOPSIS OF COURSES FOR PGD PROGRAMME

PSB 700.1: Plant Morphology and Anatomy

Plant life cycles and Alternation of generations; Vegetative structures of lower plants; Reproductive structures of lower plants; Structures and structural variations of parts of angiosperms: The leaf, the stem, the root, the flower; the fruit, the seed; Structural response to changes in the environment; Modifications in reproductive structures; Modifications in vegetative structure; specialized morphological structures such as

thorns, tendrils, carnivorous structures etc. Cells, tissues and organs; Internal structures of lower plants; fungi, algae, lichens, bryophytes, pteridophytes, Ferns; Anatomy of leaves, stems, roots, flowers, fruits, seeds. Anatomical variations due to modifications of the environment; specialized anatomical structures: trichomes, stomata, periderm, hydathodes etc. Anatomy of the embryo. (3 Units)

PSB 701.1: Plant Taxonomy

Origin of classification; The renowned early days of classification; the taxonomic hierarchy, Systems of classification; Nomenclature classification and identification; Construction of taxonomic keys; Rules of the International Code of Botanical Nomenclature (ICBN); Collection, storage, and retrieval of taxonomic evidence. Character and character states; The sources of taxonomic evidence: Cytogenetics and molecular genetics as sources of taxonomic evidence; Application of structural information to classification (vegetative, and reproductive structural information including palynology); application of information on plant biochemistry, occurrence and distribution of chemical compounds in plants as sources of taxonomic evidence; phytogeography and effect of the environment on sources of taxonomic evidence; Procedure for collection, identification and preservation of biological specimens. Wax embedding techniques. Photometry. Colorimetry (3 Units)

PSB 702.1: Mycology:

Morphology, taxonomy, physiology, reproduction and ecological characteristics of various groups of fungi (3 Units)

PSB 703.1: Plant Physiology

Water absorption, Transpiration, Stomatal movement, Mineral nutrition, Active uptake of ions, Photosynthesis, Respiration, Transport systems in Plants, Dormancy, Germination, Juvenility, maturation, senescence and Death, Tropisms, Flowering; Growth physiology. Dynamics of growth and development. Patterns of growth. Factors affecting growth morphogenesis, morphogenetic phenomenon and morphogenetic factors. Physiological effects of hormonal action, auxins, gibberellins, cytokinins ethylene, inhibitors. Physiology of some special organisms,

tree physiology and physiology of angiosperm parasites. (3 Units)

PSB 704.1: Plant Ecology

Ecological concepts. Ecosystem structure, organization and functions. Succession and climax; a survey of the structure and functions of the major vegetation types of Nigeria and the world. Qualitative and quantitative analysis of plant communities. Pattern, ordination and classification. Analysis of vegetation and environmental factor relationships. Analysis of competition in plant communities. The concept of population. Characteristics of populations. Growth, dispersal and dynamics of plant populations. Plant production processes. Thermodynamics and factors of production in the communities. Gross and net primary productions. Measurements of production (below/above ground and litter) in various communities aquatic, rangelands and forests. (3 Units)

PSB 705.1: Plant Genetics and breeding

Definition and historical development of plant breeding; its significance and scope; genetic basis of breeding. Review of Mendelian principles of inheritance, linkage, heritability; sources of variation/mutation including genic and chromosomal; Deviation from Mendelism; Heritable and non-heritable characteristics. Mendelian genetics. Gene interactions, quantitative genetics. Extrachromosomal inheritance. Sex determinations, linkage and recombination in eukaryotes. Introduction to recombination in prokaryotes. Chromosome morphology; variations in ploidy level and chromosome behavior; organization of chromatin and chromosomes; Mutation. Recombination in prokaryotes and viruses. Sex-linked inheritance introductory cytogenetics. Genetic engineering; cloning and recombinant DNA technology. Introduction to population genetics. Molecular genetics; DNA methylation and gene manipulation; *In situ* hybridization and its application in genetic studies (3 Units)

PSB 706.2: Plant Biotechnology

Cell and organism transformations, rapid micropropagation of plant materials; germplasm conservation and exchange, *in vitro* production of plant secondary metabolites, modern techniques in

plant biotechnology RFLP, PCR, RAPD, ELISA, MBA, AFLP, SSR etc., biohazards and biosafety, Intellectual property rights (IPR) and patents; Bioethics and Biosafety; Bioremediation; Local materials and techniques used in plant biotechnology. (3 Units).

PSB 707.2: Biometrics

Use of statistical methods in biology and agriculture. Frequency distributions. Laws of probability. The binomial, Poisson and normal probability distributions. Estimations and tests of hypothesis. The binomial design of simple agricultural and biological experiments. Analysis of variance and covariance, simple regression and correlation, contingency tables. Some non-parametric tests. (3 Units)

PSB 708.2 Biodiversity Conservation and Development of Natural Resources

Introduction to diversity in the plant kingdom ranging from bacteria, algae, fungi, bryophytes, pteridophytes, gymnosperms and angiosperms, concepts important to conservation, history of conservation. Classification of natural resources: Abiotic and biotic resources; stock and flow resources: and rationale for conservation. International problems of conservation.. Inventory techniques for bio-natural resources. Conservation approaches for abiotic and biotic resources. Development and management of bio-natural resources, human communities, grassland, forests, fisheries and wildlife. Conservation of our biophysical environments urban and rural. (3 Units)

PSB 709.2: Plant Pathology:

Definitions to concept of Disease, History of Plant pathology, Diagnosis of Diseases and Disease symptoms. Characteristics of disease causing agents. Development of plant Disease. Loss assessment. Role of Enzymes toxins and Growth Regulators. Host plant response to pathogenic attack. General principles of Disease Control. (3 Units)

PSB 710.2: Seminar

The seminar is to be presented on a topic outside the students' research work agreed with the supervisor and assessed based on requirements

being defined by the academic board of the department. (3 Units)

PSB 799.2. Research Project

An independent study and investigation of a problem in Plant Science and Biotechnology with well defined objectives utilizing laboratory analysis, data interpretation and the preparation of a report. It is to be examined by a panel of examiners (4 units)

M.SC. PROGRAMME IN PLANT SCIENCE AND BIOTECHNOLOGY

The broad areas of specialization include Plant Physiology; Mycology and Plant Pathology; Plant Taxonomy and Biosystematics; and Plant Ecology.

1. Admission requirements - All Masters Programmes in the department shall be Academic Master's and not professional Master's programmes. To qualify for admission into the programme, eligible candidates must have obtained:

- a. Five credit passes with English and Mathematics in addition to any two relevant subjects at 'O' Level.
- b. A Bachelor's degree from an approved university with a minimum of Second Class Lower Division for an academic programme.
- c. Candidates with at least third class degree or HND and University PGD with CGPA of 3.50/5.0 may be considered for admission into the MSc programme.

2. Duration of Programme

A full time MSc programme shall run for a minimum of 3 semesters and a maximum of 5 semesters whereas a part time programme shall run for a minimum of 5 semesters and a maximum of 8 semesters. Any extension of programme for any reason must be with approval from Senate.

3. Graduation requirements

To be awarded the Master of Science degree, a candidate must fulfil the following conditions:

- a. Pass a minimum of 30 credit units; 24 of which shall include general courses,

- research projects and seminars and 6 elective credit units.
- b. Present at least one seminar, submit and defend a dissertation proposal
 - c. Carry out research project in a relevant area of specialization, submit an acceptable dissertation as well as undergo a *viva voce* before a panel of internal and external examiners.

4. Academic Regulations

1. The programme shall be on modular system with courses spread out for two 15-week semesters ending with two weeks of examination.
2. A student shall duly complete registration of courses for the semester not later than two weeks of the start of the semester. Once registered, a student may not withdraw from the course after 5 weeks of lectures except with a written permission from the Provost College of Graduate Studies.
3. Where a student violates the requirements in 2 above, he/she is deemed to have failed the course.
4. If a student fails to sit for more than 2 courses at the end of a semester without approval, such student is deemed to have voluntarily withdrawn from the programme.
5. A student is in good standing when his/her CGPA for each semester is not less than 3.00/5.00; if for two consecutive semesters a student's CGPA is less than 3.00/5.00 the student shall be withdrawn from the programme.

The pass mark in any course shall be 50%.

In compliance with NUC Post graduate studies BMAS the core courses for the award of Master of Science degree in the discipline shall be as follows:

FIRST SEMESTER

Compulsory Courses for all Options

COURSE CODE	COURSE TITLE	CREDIT UNITS
SGS 801.1	ICT and Research Methodology	2

PSB 801.1	Advanced Plant Biotechnology	3
PSB 802.1	Environmental Audit and Impact Assessment	3
PSB 803.1	Field Studies of Nigeria Flora	3
PSB 804.1	Advanced and current techniques in Plant Breeding	3
PSB 805.1	Science, Environment and Innovations	3
PSB 806.1	Evolution and Diversity of major Plant Groups	3
Total		20

SECOND SEMESTER

Compulsory Courses for all Options

COURSE CODE	COURSE TITLE	CREDIT UNITS
PSB 800.2	Seminar	3
PSB 899.2	M.Sc Dissertation	6
SGS 801.2	Entrepreneurship and Management	2
Sub-Total		11

M. Sc PLANT ECOLOGY (ANY THREE COURSES)

COURSE CODE	COURSE TITLE	CREDIT UNITS
PSB 807.2	Techniques in Plant Ecology	3
PSB 808.2	Ecosystem Pollution/Landscape Restoration Ecology	3
PSB 809.2	Production Ecology	3
PSB 810.2	Biogeography	3
PSB 811.2	Ecology of Aquatic Macrophytes	3
Total CU for 2nd Semester		9
Total CU for 2nd Semester		20

Note: * Means the course is compulsory for the option

M.Sc PLANT PHYSIOLOGY OPTION (ANY THREE COURSES)

COURSE CODE	COURSE TITLE	CREDIT UNITS
PSB 812.2	Plant Growth Regulatory Substances	3

domestication and utilization in medicine. (3 Credit Units)

PSB 805.1: Science, Environment and Innovations

Element of global warming, environmental protection issues, biodiversity, pollution, species at risk, social and ethical implications of science, enterprise and productivity, intellectual property rights, private public partnership and investment will be covered in this course. (3 Credit Units).

PSB 806.1: Evolution and Diversity of Major Plant Groups

Origin of plants: Green algae multicellular and mosses as aquatic ancestors. Movement of land: mosses and liverworts. Characteristics of first terrestrial plants. Origin of seeds. Evolution of higher plants and their diversity. Importance of plant diversity. Relationship between families of flowering plants. Diversity and evolution of gymnosperms. Reticulate evolution of higher plants. Evolution of flower. Ecological importance of species diversity. (3 Credit Units).

SGS 801.2. Management and Entrepreneurship

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving. (2 Credit Units)

PSB 807.2: Techniques in Plant Ecology

Plant sampling techniques in aquatic, forest and savanna ecosystems. Elements of forest mensuration; data collation, cleaning, coding, information retrieval, significance testing, multiple and partial correlation and regression. Classification, clustering, ordination and principal component analysis. Analysis of abiotic and biotic components of ecosystems. Soil analysis. Diversity and similarity indices. Competition in plant communities. Ecosystem modeling and systems approach to ecological problem. (3 Credit Units).

PSB 808.2: Ecosystem pollution and Restoration Ecology

The study of major pollutants: oil and petrochemical, heavy metals, solid wastes of aerial, terrestrial and aquatic environment and their effects on other components of ecosystems.

Causes and effects of land degradation; deforestation, overgrazing, over cultivation, fire/bush burning, soil erosion, contamination by oil, pesticides and other polyaromatic hydrocarbons (PAHs). Forest decline and soil acidification. Land restoration and reclamation. Plant species selection and planting materials. Nursery and field practices for reforestation/re-vegetation. Watershed management. Ecological succession. Energy and nutrient dynamics of climax communities. Landscape horticulture. (3 Credit Units).

PSB 809.2 Production Ecology

The characteristics of freshwater brackish, marine, wetland and habitats and their effects on ecosystem production. Primary and secondary production processes. Basis of ecosystem production. Nutrient status factors. The structure and architecture of ecosystems. Diversity and production relationships. Ecological energetic. Laws governing energy transformation in nature. Energy budgets. The trophic dynamic aspect of ecology. Food chains and food webs etc. Wetland conservation (Government policies governing wetland conservation). (3 Credit Units)

PSB 810.2: Biogeography

Importance of biogeography; distribution of species, genera and families: Endemic species and genera. Pan tropical species and genera. Discontinuous species and genera; Factors of distribution (climatic, edaphic, geographic and dispersal effects). Theory of tolerance. Floristic regions of the world. Vegetation mapping. (3 Credit Units).

PSB 811.2 Ecology of Aquatic Macrophytes

Diversity of aquatic habitats and their vegetation; Growth form and life form classifications; Distribution and growth of aquatic macrophytes; Reproductive strategies of aquatic macrophytes. Structural and dynamic characteristics of aquatic plant communities: Primary production and energetics; Nutrient uptake and release. Problems and control of noxious weeds: conservation of aquatic macrophytes. (3 Credit Units).

PSB 812.2: Plant Growth Regulatory Substances

The auxins, chemical nature and roles of auxin translocation. Gibberellins: chemical nature and

roles of Gibberelins, translocation of Gibberellins. The cytokinins: roles of the cytokinins, synthesis of cytokinins. Abscisic acid: roles of abscisic acid. Vitamins. Ethylene: effects of ethylene. Other hormone like substances in plants. Mechanism of hormone action. Interactions among hormones. Ecological importance of hormonal actions. (3 Credit Units).

PSB 813.2 Growth and Developmental Physiology in Plants

Plant growth: Effects of irradiance, light quality, temperature, duration of light on reproductive growth. Seasonal and geographic aspects of photoperiodism. Long-day, and short-day plants as the basic categories. Photoperiodic induction, mechanism of photoperiodism. Rhythmic behavior of plant processes. Growth and vernalization and apical dominance cyclical periodicity abscission and mechanism of abscission. Dynamics of primary vegetative growth. Tootipotency. Measures of indices of growth and rates of growth. Alternative ways of plant growth of their products for world market. Hormones in horticulture and agriculture. (3 Credit Units).

PSB 814.2: Advanced Biological Techniques

Phytochemical Methods: Electrophoresis, chromatography, anatomical and histological techniques. To demonstrate chemical processes involved in variety of biologically important processes e.g., photosynthesis, mitochondrial respiration, nitrogen fixation, and carbon transfer etc. (3 Credit Units).

PSB 815.2 Nutrient Metabolism in Plants

Plant soil and water relationships. Nutrient uptake; Mechanisms and theories of nutrient uptake; Roles of major and minor plant nutrients in plant metabolism. Nutrient interactions and deficiency symptoms. Biofortification and Genetic improvement of plants for enhanced micronutrient content. Analytical techniques in plant nutrition studies hydroponics. Techniques in radio labeling/tracer studies. (3 Credit Units).

PSB 816.2: Advanced Physiology and Metabolism

Energy metabolism, electron donors and acceptors and their electron potentials. Enzymes, coenzymes and mechanisms of action. Catabolism and

anabolism pathways for proteins, lipids and carbohydrates. Nitrogen fixation and its function in plant development. Types and distribution of proteins, lipids and carbohydrates. (3 Credit Units).

PSB 817.2: Taxonomic Data Processing and Presentation

Collection of plants; preparation of herbarium specimens; preparation of microscope slides. Geographical and morphological methods in presentation of data, literature mapping, tabulation, symbolic and graphical methods. Identification: keys, comparison with named materials, nomenclature. Use of methods of numerical taxonomy in construction of taxonomic groups. Relevance of taxonomy in plant identification and usage. (3 Credit Units).

PSB 818.2: Principles and Procedures of Plant Taxonomy

Historical background: the natural system and the value of character. Phonetic and phylogenetic concept in taxonomy including rules and nomenclature, the categories in taxonomy. Evolution, identification of flowering plants. Recent trends in plant taxonomy. (3 Credit Units).

PSB 819.2: Cytogenetics, Evolution and Phylogeny

Chromosomal organization in relation to gene environment, genetic recombination in population the use of genetic system in evolution, the origin of species of hybridization its origin and its significance polyploidy occurrence, distribution and its importance. (3 Credit Units).

PSB 820.2 Palynology

Pollen diagrams and their interpretation. Fossil vegetation maps. Palynology and mineral oil exploitation. Pollen load of the atmosphere. Pollen grains and allergy. (3 Credit Units).

PSB 821.2: Physiology of Plant Diseases

Degradation of host plant tissue by pathogens, breakdown of cellulose; unienzyme theory, two enzyme theory and multi-enzyme theory. Pectic substances, mechanisms of wilting physiological wilting and pathological wilting; production of toxins blocking of vascular elements by substances tyloses. Production of enzymes by parasites. Production of substances with growth regulating

activity. Respiration of diseased plant. Plant vigor and protection. (3 Credit Units).

PSB 822.2: Advanced Phytopathology

Advances in mechanisms of disease development and control. Methods and materials used in plant disease control and the problems involved in their application. Survey of principles of hand and mechanically operated machinery for applying pesticides. Biological control. The physiological and biochemical of plant parasitic diseases. Pre and post penetration, interactions of the host and pathogen. Assaying of phytotoxins, phytoalexins, cell wall-degrading enzymes and growth substances produced during pathogenesis. (3 Credit Units).

PSB 823.2: Viral and Mycoplasma Diseases

A review of plant diseases including distinction between bacterial diseases, fungal disease and viral diseases should be highlighted. Transmission of plant viruses: through insects, animals, mechanical transmission, vegetative propagation, seeds, dodder, fungi, etc. Physical and chemical properties of viruses, virus structure and chemistry; diseases swollen shoot, cassava mosaic, pepper mosaic. Applications in plant breeding. (3 Credit Units).

PSB 824.2: Control of Plant Diseases

The chemical structure and mode of action of fungicides. Factors influencing fungicides. The evaluation of fungicides in the laboratory. Methods of application of fungicides. Different treatments of lumber with fungicides. Application of nematicides. Current trends in the control of plant diseases. (3 Credit Units).

PSB 825.2: Advanced Mycology/ Mushroom science

Evolutionary patterns of fungi and the criteria used in fungal taxonomy. Fungal ecology in relation to both man and plants. Aeromycology with emphasis on spore liberation and dispersal. Fungal differentiation and biotechnology. The history, basic principles and cultural practices of Mushroom production, including a survey of locally occurring edible species. Various methods of growing mushrooms. Factors affecting growth and basidiocarp formation *in vivo* and *in vitro*. Mushroom abnormalities; their pests and control. Mushroom chemistry, including nutritive value,

poisons and treatment. Growth habits of selected local species of edible mushrooms. (3 Credit Units).

PSB 800.2: Seminar

A candidate for the M.Sc degree will be required to present a seminar on a topic selected from within the study area before the Departmental Graduate Committee. The performance of a candidate shall be evaluated for the award of marks by a panel selected by the Departmental Graduate Committee.

Apart from the oral presentation, the seminar shall be typewritten, soft-bound and submitted to earn credit. (3 Credit Units)

PSB 899.0: Project Work

A candidate for the M.Sc degree shall undertake an independent research in the particular field of specialization under the guidance of a supervisor appointed by the Department Graduate Committee and approved by the Graduate School and the University Senate. A report on the research project shall be submitted to the Department. The candidate shall be examined orally by a panel of external and internal examiners. (6 Credit Units).

Ph.D PROGRAMME IN PLANT SCIENCE AND BIOTECHNOLOGY

The broad areas of specialization are Plant Taxonomy and Biosystematics; Plant Ecology; Mycology and Plant Pathology, Plant Physiology and Plant Biotechnology.

These programmes are aimed at training graduate students to become mature, independent scholars and researchers with the capacity and capability to generate research questions, carry out analyze results and apply findings to solve problems relating to sustenance of life on planet earth. Doctor of Philosophy degree holders from the department are expected to provide leadership in the academia, research institutes and industrial establishments.

Acceptance by an eligible staff to supervise a candidate is a pre-requisite to being recommended for admission by the Departmental Graduate Studies Committee. Prospective candidates

are therefore advised to make contacts with staff of the department before applying for a place.

A series of three seminars is to be delivered by each student. The first and second shall involve and center on data obtained from student's

research project. The third is the University-wide Seminar presented at the School of Graduate studies and though evaluated for content and accuracy by various academic staff, these seminars are not graded. The last seminar is usually delivered before the student is presented for Oral Defence of his/her PhD Thesis.

In consultation with a student's project supervisor, a candidate may be advised to audit courses relevant to the area of specialization, if found deficient after enrolment. (For more information, consult the general Prospectus of the School of Graduate Studies).

1. Admission requirements

Prospective candidates for admission into the PhD programmes are expected to meet the following entry requirements:

- i) MSc degree of the University of Port Harcourt or any approved University. The candidate must have a minimum CGPA of 3.5 in a 5.00-point scale or 2.80 in a 4.00-point scale.
- ii) Students deficient in any area in the MSc programme (Appendix 1) will be required to remedy the deficiency.
- iii) Shortlisted applicants are expected to submit a proposal on their intended research interest to the Departmental Graduate Studies Committee. The candidate will be interviewed by the committee and only candidates that pass the interview with scores of **50 % (C)** and above will be admitted into the programmes.

2. Requirements Governing Course and Examination

- i) The PhD degree programmes of the department are in line with the framework of the College of Graduate Studies Regulations.
- ii) The programmes comprise course work, seminars and dissertation.
- iv) The courses shall have a maximum credit unit of 3 and the dissertation shall have a credit unit of 12.

3. Fields of Specialization

Students are expected to specialize in any one of the following fields of Plant Science and Biotechnology:

- i) Plant Physiology

- ii) Plant Pathology / Mycology
- iii) Plant Ecology / Plant Taxonomy / Biosystematics
- iv) Plant Biotechnology

6. Course Requirements

The PhD students are required to take 9 credit units in the first year. This consists of one (1) taught course and two (2) seminars (involving one seminar per semester). Where a student admitted into the programme holds a degree other than that of University of Port Harcourt, the student shall take all compulsory courses as defined in the MSc Programme in addition to the regular PhD courses. The subsequent years shall be allotted to research work and writing of the Doctoral thesis.

7. Duration of the Programmes

- a) **Full Time:** The candidates offering the Full Time programme are required to complete their work in a minimum of 24 calendar months (i.e. 2 years) and a maximum of 80 calendar months (i.e. 5 years).
- b) **Part Time:** The candidates offering the Part Time programme are required to complete their work in a minimum of 38 calendar months (i.e. 3 years) and a maximum of 84 calendar months (i.e. 9 years).

9. Continuation Requirement

- i) Courses will be assessed based on written examination and continuous assessment
- ii) All courses must be completed with a grade not less than a 'C'.

10. Qualifying Examination

- i) There will be a qualifying examination at the end of the second semester of the first year of each programme.
- ii) The student is expected to have a minimum pass grade 'C' in the qualifying examination. If the student fails, the student shall be given one more chance to repeat and pass the examination.
- iii) In the first semester of the second year, the candidate and the supervisor will choose a thesis topic, which has to be approved by the Departmental Graduate Studies Committee, the Faculty Graduate Studies Committee and the Board of the School of Graduate Studies. The student is expected to meet the seminar requirement of the school of Graduate

Studies, i.e. a) Proposal seminar to the Department, b) Result Seminar to the Faculty and c) Final Seminar to the School of Graduate Studies.

11. Thesis

The research will be carried out under the supervision of supervisors, appointed for the student by the Departmental Graduate Studies Committee and approved by the Board of the Graduate School of Studies.

12. Examination of Thesis

Based on the performance of the student at the School of Graduate Studies seminar, the Department will be authorized to proceed with arrangements for external examination of the student's thesis. The panel for the defence of the student's Thesis is as recommended by the School of Graduate Studies.

The examination shall be oral, based on the student's research work, field of specialization and any other related area chosen by the examiners. The examiners shall submit their report jointly signed as follows:

- i) Chairman of Examination Panel (Dean, School of Graduate Studies)
- ii) External Examiner
- iii) Dean of Faculty.
- iv) Head of Department
- v) Supervisors.

All the above are subject to the general University regulations governing higher degree programmes.

Ph.D IN PLANT PHYSIOLOGY OPTION

COURSE CODE	COURSE TITLE	CREDIT UNITS
PSB 900.1	Applied Plant Physiology	3
PSB 901.1	Seminar I: Physiological Toxicology	3
PSB 902.2	Seminar II: Plant Physiological Processes	3
PSB 912.2	Ph.D Thesis	12
	Total	21

Ph.D IN PLANT PATHOLOGY/ MYCOLOGY

COURSE CODE	COURSE TITLE	CREDIT UNITS
PSB 903.1	Advances in Crop Protection, Disease Control, Field and Storage Disease of Crops	3
PSB 904.1	Seminar I: Applied Plant Pathology and Mycology (e.g. Mycotoxins)	3
PSB 905.2	Seminar II: Molecular Tools for the study of Systematics, Evolution and Ecology of Plant Pathogens	3
PSB 912.2	PhD Thesis	12
	Total	21

Ph.D IN PLANT TAXONOMY/ BIOSYSTEMATICS

COURSE CODE	COURSE TITLE	CREDIT UNITS
PSB 906.1	Principles and Procedures of Plant Molecular Systematics	3
PSB 907.1	Seminar I: Advances in Taxonomic Data Processing and Presentation	3
PSB 908.2	Seminar II: Principles and Applications of Bioinformatics	3
PSB 912.0	Ph.D Thesis	12
	Total	21

Ph.D IN PLANT ECOLOGY

COURSE CODE	COURSE TITLE	CREDIT UNITS
PSB 909.1	Measuring, Monitoring and Conservation of Plant Populations	3
PSB 910.1	Seminar I: Molecular Techniques used in Ecological Studies	3
PSB 911.2	Seminar II: Applied Plant Ecology	3
PSB 912.0	Ph.D Thesis	12

Total 21

Ph.D IN PLANT BIOTECHNOLOGY

COURSE CODE	COURSE TITLE	CREDIT UNITS
PSB 913.1	Applications of Plant Biotechnology in Biodiversity and Conservation of Natural Resources	3
PSB 914.1	Seminar 1: Advanced Cell Biology	3
PSB 915.2	Seminar 11: Genomics and Bioinformatics	3
PSB 912.0	Ph.D Thesis	12
	Total	21

SYNOPSIS OF COURSES FOR THE Ph.D PROGRAMME

PSB 900.1. Applied Plant Physiology

Source and sink controls. Yield components and maximization. Bionics. Hydroponics. Nutrient film techniques of selected crops, differential root/shoot development and application to spaceships and submarines. Regulants in agriculture. Plant growth modeling (modeling predicting yields) and CAD (Computer aided design) analysis. **(3 credit units).**

PSB 901.1 Seminar I: Physiological Toxicology (3 credit units)

PSB 902.2: Seminar II: Plant Physiological Processes (3 credit units)

PSB 903.1: Advances in Crop Protection, Disease Control, Field and Storage Diseases of Crops

Advances in weed control, Advances in pest control techniques; advances in seed and post-harvest storage technology; Application of crop protection in food processing; the principles and application of silo technology in plant products protection; The latest technologies applied in plant quarantine. **(3 credit units).**

PSB 904.1: Seminar I: Applied Plant Pathology and Mycology (mycotoxins) (3 credit units)

PSB 905.2. Seminar II: Molecular Tools for the study of Systematics, Evolution, and ecology of Plant Pathogens. (3 credit units)

PSB 906.1: Principles and Procedures of Plant Molecular Systematics

Manual DNA separation systems; automated DNA separation systems; DNA labelling systems and kits; nucleic acid markers; fluorescent proteins and their application in plants systematic; DNA and protei- based Bar-coding and their application to biosystematics; and germplasm conservation. **(3 credit units).**

PSB 907.1. Seminar I: Advances in Taxonomic Data processing and Presentation (3 credit units)

PSB 908.2. Seminar II: Principles and Applications of Bioinformatics (3 credit units).

PSB 909.1: Measuring, Monitoring and Conservation of Plant Population.

Monitoring overview, sampling principles objectives, and designs. Field techniques for measuring vegetations. Data management and reporting; conservation of rare and endangered plant species. **(3 credit units).**

PSB 910.1. Seminar I: Molecular Techniques used in Ecological Studies (3 credit units)

PSB 911.2. Seminar II: Applied Plant Ecology (3 Credit units)

PSB 912.2. Ph.D Thesis

This will take the form of a research project report of an investigation carried out on a topic chosen in an area of interest and proven academic competence under the supervision of not less than 2 Lecturers not below the rank of Senior Lecturer appointed by the Department Graduate Committee and approved by the Graduate School and the University Senate. A report on the research project shall be submitted to the Department. The candidate shall be examined orally by a panel of external and internal examiners. **(12 Credit units).**

Ph.D. IN PLANT BIOTECHNOLOGY

PSB 913.1 Applications of Plant Biotechnology in Biodiversity and Conservation of Natural Resources

Applications of DNA amplification and molecular markers in biotechnology. Plant tissue culture, methods and applications. Chemicals and plants interactions. Phytoremediation, methods, processes and types, merits and demerits. Phytoaccumulation and biomagnification of harmful chemicals. Modelling and Ecoevolutionary dynamics, Functional and Ecological Genomics, Molecular Ecology (3 Credit Units).

PSB 914.2. Advanced Cell Biology

Selected topics in Cell Biology – Emerging trends
Seminars and term papers (3 Credit Units)

PSB 915.1: Genomics and Bioinformatics

Selected topics in Genomics and Bioinformatics – Emerging trends
Seminars and term papers (3 Credit Units)

PSB 912.2. Thesis (6 credit units)

CURRENT STAFF LIST

The department has twenty nine academic staff, nineteen technical staff and six administrative staff as listed below.

ACADEMIC STAFF

S/N	NAME OF STAFF	QUALIFICATION	RANK	SPECIALISATION
1.	NYANANYO, B.L.	BSc (Lagos); Ph.D (Reading)	Professor	Plant Taxonomy/Biosystematics
2.	ATAGA, A.E.	BSc, MSc (JOS), PhD (MANCHESTER)	Professor	Physiology, Molecular & Environmental Plant Pathology,
3.	AKONYE, LOVE A.	BSc., MSc, PhD(UPH)	Professor	Plant /Environmental/ Stress /Physiological Toxicology
4.	NWACHUKW, E. O.	B.Sc (IMO), MSc, PhD PGDE (UPH), PGD (FUTO), REM (NREP)	Professor	Mycology/Plant Pathology & Environmental Technology
5.	OSUJI, J. O.	BSc, MSc, PhD (UPH)	Professor	Molecular Genetics & Cytotaxonomy
6.	OBUTE, G.C.	BSc (IMO), PhD (LAGOS)	Professor	Biosystematics & Cytogenetics
7.	AGBAGWA, I.O.	BSc, MSc, PhD (UPH).	Professor	Plant Taxonomy & Bioinformatics
8.	MENSAH, S.I.	BSc (ZARIA), MSc, PhD (GLASGOW)	Professor	Environmental Plant Physiology
9.	TANEE, F.B.G	B.Sc., M.Sc, PhD (UPH)	Professor	Plant Ecology
10.	AGOGBUA, J. U.	BSc (UPH) MSc (IBADAN); PhD (UPH)	Senior Lecturer / Ag. HOD	Genetics & Plant Breeding
11.	OCHEKWU, E.. B.	BSc (JOS) MSc (IBADAN), PhD (UPH)	Senior Lecturer	Ecology / Biocontrol/ Biometrics
12.	EDWIN-WOSU, N, L.	BSc, MSc (UPH), Ph.D. (Calabar)	Senior Lecturer	Ecology / Phytoremediation
13	WAHUA, C	BSc (UPH) MSc (RSUST); PhD (UPH)	Senior Lecturer	Plant Taxonomy / Biosystematics
14.	EREMRENA, P.O.	BSc (UPH) MSc (LAGOS); PhD (UPH)	Senior Lecturer	Plant Physiology
15.	ALBERT, E.	BSc, MSc, Ph.D (UPH)	Senior Lecturer	Plant Ecology
16.	OKONWU, K.	BSc, MSc, Ph.D (UPH)	Senior Lecturer	Plant Physiology
17.	IKECHI-NWOGU, C.G..	BSc, MSc, Ph.D (UPH)	Senior Lecturer	Plant Pathology/Mycology

DEPARTMENT OF BIOCHEMISTRY

POST GRADUATE DIPLOMA IN BIOCHEMISTRY

The following taught courses must be passed:

FIRST SEMESTER

COURSE CODE	COURSE TITLE	CREDIT UNIT
PGDB 700.1	Biochemical Design and Data Analysis	3
PGDB 701.1	General Metabolism and Regulation	3
PGDB 702.1	Enzyme and Protein Biochemistry	3
PGDB 703.1	Instrumentation and Techniques in Biochemistry	3
PGDB 704.1	Nutrition Biochemistry and Toxicology	3
PGDB 705.1	Biochemistry of Tissues & Organs	3
PGDB 706.1	Medical Biochemistry & Immunochemistry	3
Total		21

SECOND SEMESTER

COURSE CODE	COURSE TITLE	CREDIT UNIT
PGDB 708.2	Cell & Molecular Biology	2
PGDB 709.2	Plant & Soil Biochemistry	2
PGDB 710.2	Environmental Biochemistry	2
PGDB 711.2	Industrial Biochemistry	2
PGDB 712.2	Genetic Engineering & Biotechnology	2
PGDB 713.2	Seminar in Biochemistry	3
PGDB 714.2	Research Project	4
Total		13

NOTE: For PGDB 714.2, the candidates are required to present their findings to the Departmental Board for assessment of scope and quality before external defense and completion formalities are applied.

COURSE DESCRIPTION:

PGDB 700.1 BIOCHEMICAL DESIGN AND DATA ANALYSIS (3 Units)

What research is; scientific methods and research; comprehensive research plan. Types of research. Biochemical/experimental research. Concepts and variables. Solution of research problems using statistical methods such as variance, regression etc. choosing from a list of research topics.

PGDB 701.1 GENERAL METABOLISM AND REGULATIONS (3 Units)

General biochemistry of carbohydrates intermediary metabolism, glycogen metabolism and control, hexose monophosphate shunt, etc. general biochemistry of amino acid and proteins. Lipids, phospholipids and steroids. Biosynthesis and degradation of lipids. Comparative studies of the different pathways modifications of various pathways in different organisms. Interrelationship between the various metabolic pathways and their coordinate pathways.

PGDB 702.1 ENZYME AND PROTEIN BIOCHEMISTRY (3 Units)

Protein sequencing. Protein ligand interaction. Mechanisms and kinetics of single and bi-substrate enzyme catalyzed reaction. Transient kinetics. Concept of allosterism and cooperativity. Mechanisms for enzymes action, active site of enzymes and catalysis. Detailed study of enzymes e.g. Chyrotrypsin, ribonuclease, daspartate transcarbomylase, etc. Oligomeric proteins and multi-enzyme complexes. Roles of coenzymes and prosthetic groups. Proteins in tissue structures e.g. glycoproteins.

PGDB 703.1 INSTRUMENTATION AND TECHNIQUES IN BIOCHEMISTRY (3 Units)

Functional components of major instruments e.g. spectrophotometer, fluorimeter, centrifuges, chromatographic and electrophoretic equipments, radioactive counter, e.g. physical demonstration/introduction to these equipments. Techniques to include radio-immunoassay systems, radioisotope handling and quantification. Immunological techniques (e.g. antibody production). General principles of NMR in the laboratory.

PGDB 704.1 NUTRITIONAL BIOCHEMISTRY AND TOXICOLOGY (3 Units)

Principles of food science and technology. Processing and preservation of local food stuffs.

Formulation and practice of food standards. Significance of vitamins. Mineral salts, food additives and colourants in nutrition. Significance of fertilizers and pesticides in food production. Principles of drug metabolism; Detoxification of toxic materials in the body. Effects of environmental pollutants on food. Role of gut bacteria, bile and nutritional status in drug metabolism.

PGDB 705.1 BIOCHEMISTRY OF TISSUES AND ORGANS (3 Units)

Biochemistry of muscle, kidney, liver, brain, vision, adipose tissue and endocrine system. Reproduction and morphogenesis. Constitution and function of body fluids, pathological disorders affecting tissues and organs (Briefly treated).

PGDB 706.1 PLANT AND SOIL BIOCHEMISTRY (3 Units)

Structure and function of plant cell and organelles including algae and higher plants. Significance of lignification. General Plant metabolism including plant hormones. Photosynthesis, seed development and fruit ripening. Some important constituents of plants (e.g. steroids, alkaloids, etc) and their economic values Toxic substances in plants (e.g. mushroom toxins, etc).

PGDB 707.2 -MEDICAL BIOCHEMISTRY AND IMMUNOCHEMISTRY (3 Units)

Biochemistry in health and disease. Genetic diseases (e.g. sickle cell anaemia, diabetes, gout, etc) and intermediary metabolism. Hormones, reproduction and evaluation of sterility and other hormonally-induced disorders (e.g. gigantism, dwarfism, etc) role of microorganism in natural immunity. Immunology- theory and practice. Antibody-antigen reaction. Use of immunological techniques in diagnosis. Blood clotting factors and haemophilia. Clinical diagnosis of body fluids. Nutrition and health.

PGDB 708.2 - CELL AND MOLECULAR BIOLOGY (3 Units)

Cell structure and functions of organelles (prokaryotes and eukaryotes). Characteristics and functions of DNA and RNA (including replication and transcription processes). The organization of the chromosomes. Protein, biosynthesis. Mutation (agents and modes, significance, etc) recombinant DNA studies (use of plasmids, enzymology, applications of protein design and modification, medicine, etc) control of gene expression and cell differentiation. Genetic recombination mechanisms. Cloning techniques and consequences of cloning.

PGDB 709.2 ENVIRONMENTAL BIOCHEMISTRY (3 Units)

Pollutants of air, land, water and foods (e.g. fishes etc). Effects of pollutants on environment. Effect of refrigerants, automobile exhaust and industrial discharges (untreated) in streams, rivers and lakes. Role of governmental organizations in environmental pollution. Policies, rules and regulations on drug. Food and environmental management. Use of chemicals and biological agents in fishing industry. Indiscriminate use of fertilizers and effects on environment. Biochemical consequences of pollution and oil spillage.

PGDB 710.2 INDUSTRIAL BIOCHEMISTRY (3 Units)

Introduction to industrial processes (e.g. raw material sourcing, machinery). Quality control. Food industry production of carbohydrate-based materials e.g. starches, alcohols, explosives, confectioneries). Preservation of foods. Packaging (canning /bottling of foods). Industrial biochemistry and medicinal products (e.g. production of steroids, etc). Use of enzymes in industry and medical diagnosis. Production of diagnostic kits. Extraction of aroma and pigments. Byproducts from coal industry, fat (e.g. candles, soaps etc) commercialization of biochemical information genetic nutritional and general health (e.g. marriage counseling with respect to sickle cell disease, etc). Disposal of biochemical wastes. Biodegradation of industrial wastes.

PGDB 711.2 - GENETIC ENGINEERING AND BIOTECHNOLOGY (2 Units)

Applications of genetic science in area of food and livestock production. Improved nutritional state and yields of plants and animals. Use of genetic engineering in the improvement of seeds and plants yields (e.g. B. Coli in insulin and drug production). Manipulation of resistant genes for drug industry. Production of increased milk product's on animal etc. Applications of genetically-engineered microorganisms in oil spillage control. Application of genetically-engineered plants that are resistant to disease. Ethics of cloning.

PGDB 712.2 -SEMINAR IN BIOCHEMISTRY (3 Units)

Candidates shall be expected to select some seminar topics and present them orally and in written form.

PGDB 713.2 RESEARCH PROJECT (3 Units)

The programme involves a practical-oriented project for which a seminar is expected to be presented in addition to a thesis being written up in bound form.

General Courses

All postgraduate students (irrespective of the programme) must take Management and Entrepreneurship as well as ICT & Research Methods as compulsory courses. However any student who has taken them at a particular postgraduate level is exempted at higher levels.

The taught courses in the department consist of three compulsory first semester courses, and any three from any of these specialized second semester courses as follows:

FIRST SEMESTER

COURSE CODE	COURSE TITLE	CREDIT UNIT
BCH 810.1	Enzymology	2
BCH 811.1	Advanced General Biotechnolgy	2
BCH 815.1	Research Techniques in Biochemistry	2
BCH 817.1	Bio Statics	2
BCH 820.1	Molecular Biology & Biotechnology	2
SGS 801.1	ICT & Research Method	2
TOTAL		12

SECOND SEMESTER COURSES:

ENZYMOLGY, MEDICAL BIOCHEMISTRY/ IMMUNOCHEMISTRY AND PHARMACOLOGICAL BIOCHEMISTRY.

COURSE CODE	COURSE TITLE	CREDIT UNIT
BCH 813.2	Medical Biochemistry 2	2
BCH 816.2	Biochemical Pharmacology 2	2
BCH 814.2	Advanced Protein Chemistry 2	2
BCH 821.2	Xenobiochemistry & Toxicology 2	2
BCH 818.2	Seminar 2	2

COURSE DESCRIPTION

BCH 810.1 ENZYMOLOGY

Catalysis and general nature of enzymes. Kinetic parameters and their determination. Kinetics if multiple binding sites. Regulatory enzymes. Nature of enzymes active site. Enzyme reaction mechanism e.g. Ribonuclease, carboxy peptidase A. Kinetic mechanisms of multisubstrate enzyme catalyzed, reactions. Probes of enzyme structure using NMR, Xray crystallography etc. Analysis of enzymic reactions.

BCH 811.1 ADVANCED GENERAL BIOCHEMISTRY

Carbohydrate, amino acid, lipid, nucleic acid and nucleotide metabolism and their regulation. Interrelationship of metabolic pathways. Biosynthesis of porphyrines, photosynthesis. The Regeneration of ATP. Oxidative phosphorylation and the election transport system. Genetic aspects of metabolism. Hereditary disorders of metabolism. Vitamins and coelizymes.

BCH 815.1 RESEARCH TECHNIQUES IN BIOCHEMISTRY

Properties of electromagnetic radiation. Application of ultraviolet and visible absorption measurements. Infra red absorption spectroscopy. Use of electrophoresis, application of nuclear magnetic reasonance spectroscopy. Mass spectroscopy, potentrometric methods. Chromatographic and other fractionation methods, animal house maintenance and use, microbiological methods.

BCH 817.1 BIOSTATISTICS

Biostatistics: Definition, scope and applications. Presentation of data. Overview of measures of central tendency. Chi square test. Scientific writing I (a) Biostatistics; Population and sample size. Sampling distribution. Research design. Study of some classical papers for experimental design and presentation of data. Normal, Binomial and Poisson distributions. Tests of significance. Students test. Analysis of variance (ANOVA). One way and two way ANOVA. Regression Analysis. Simple and multiple regression. Overview of non parametric tests. Statistical packages; Graphpad Instat, Minigtab, SAS, Epi Info, and SPSS.

BCH 820.1 MOLECULAR BIOLOGY AND BIOTECHNOLOGY

Bacterial and viral chromosomes, Bacterial plasmids. Replication, transcription and translation of prokaryotic genomes. Regulation of protein biosynthesis. Transposons as mobile genetic elements. Eukaryotic chromosome and its ultrastructural organization. DNA synthesis in eukaryotes.

Biochemical aspect of cell division, cell cloning and cell fusion. Biochemistry of growth and differentiation in eukaryotes. Principle of PCR techniques. Isolation and purification of RNA and DNA. Hybridization techniques.

Recombinant DNA technology and proteomics applications (e.g. production of insulin, drugs etc.) Microarray, Genetic engineering and its social implications.

SCI801.1 MANAGEMENT & ENTREPRENEURSHIP

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

BCH 813.2 MEDICAL BIOCHEMISTRY

Biochemical concept of clinical state, metabolic derangement in diseased state e.g. gout, cholera, cancer, anaemia, kwashiorkor. Biochemical basis of and lesion in genetic diseases e.g. sickle cell anaemia etc. Case studies on metabolic defects e.g. human haemoglobin and molecular diseases, e.g. sickle cell anaemia. Glucose-6-phosphate dehydrogenase deficiency. Disorders of carbohydrate and lipid metabolisms (Diabetes, plasma lipid and coronary heart disease, cholesterol partition in plasma lipoprotein). Inborn errors in metabolisms.

Molecular parasitology: Isolation, fractionation and culture of parasites. Comparative metabolic reactions of malarial parasite, trypanosome, and other parasites.

Chemotherapy and resistance.

Plasma isoenzyme profile in disease state.

Plasma protein and A/G ratio.

Liver function test

Case studies on metabolic defects; phenylketonuria, orotic aciduria and pseudohyperparathyroidism.

BCH 816.2 BIOCHEMICAL PHARMACOLOGY

Chemistry of Medicinal Compounds: Monocyclic, alicyclic, aromatic polycyclic, steroids, heterocyclic compounds. Quinines, coumarins, lactams. Antibiotics Amines, sulfonamides. Biological properties of these compounds: their pathways, their metabolic activities in the body. Regulation of the body function e.g. Blood pressure, pathways of interference with normal body functions. Clinical bases of these compounds. Relationship between structure and function. Alkaloids, antibiotics Biosynthesis: Pyrrolidine, Piperidine, Alkaloids: alkaloids, pyrrolizidine alkaloids. Indolizidine alkaloids, quinolizidine alkaloids. Quinoline and Ageridone alkaloids: BPhenylethylamines and the isoquinoline alkaloids. Orphenoid alkaloids, Amaryllidaceae alkaloids. Erythrae and related alkaloids, Indole alkaloids. Diterpenoid alkaloids. Ceroidal alkaloids. Miscellaneous alkaloids. Macrolide compounds Chemical and biological properties of their various classes of alkaloids structure elucidation synthesis, physiology, taxonomy, spectroscopy and x-ray crystallography of these compounds. Immunochemical techniques for the screening of infective diseases.

BCH 814.2 ADVANCED PROTEIN CHEMISTRY

Protein structure and function. Experimental methods to determine amino acid sequence. Amino acid analysis. Polypeptide chains, fragmentation and degradation. Separation methods. Structure and function of hemoglobin, myoglobin, immunoglobulin. X-ray analysis, Quaternary structure of hemoglobin. Bohr effect. Effect of molecular disease viz. Sickle cell anaemia. Enzymes as proteins e.g. Lysozymes, carboxypeptidase etc.

BCH 821.2 XENOBIOCHEMISTRY AND TOXICOLOGY

Natural and environmental toxicants. Food toxicology and carcinogens. Detoxification of toxicants. Drug and selective toxicity. Microbial and insects metabolism of xenobiotics. Resistance to drugs and pesticides. Metabolism as a determinant of toxicity. Assessment of toxicity.

BCH 818.2 SEMINAR

Each candidate is expected to deliver two seminars. The first seminar will be on a topic outside the candidate's area of specialization while the second will be on the candidate's research project.

BCH 819.2 RESEARCH PROJECT

Independent project research demonstrating professional maturity at the graduate level and knowledge to undertake and complete research shall be undertaken.

The research project will be carried out under the supervision of not less than two senior staff (who should normally be vast in the candidate's area of specialization), duly appointed for the student by Departmental Graduate Studies Committee and approved by the Board of the School of Graduate Studies.

The Thesis for academic Masters shall be defended orally before a panel of internal and external examiners. All these would be graded.

SGS 801.1 ICT AND RESEARCH METHODOLOGY

This course should cover essentials of Spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Scientific Research, Concepts of Hypotheses Formulation and Testing, Organization of Research and Report Writing.

BCH 812.2 ADVANCED NUTRITION AND FOOD SCIENCE

Newer findings in nutrition. Nutritional disorders, obesity, kwashiorkor etc. Nutritional problems in Nigeria. Nutrient requirements. Toxicants in food, food preservation and storage, new sources of food. Quality control. Food law, methods in Nutritional Biochemistry including basic statistical methods etc. The body fluids and their components in health and disease; enzyme metabolism in health and disease; normal and abnormal proteins (other than enzymes): cell membranes in health and disease; vitamin deficiencies, inborn errors of metabolism.

BCH 821.2 XENOBIOCHEMISTRY AND TOXICOLOGY

Natural and environmental toxicants. Food toxicology and carcinogens. Detoxification of toxicants. Drug and selective toxicity. Microbial and insects metabolism of xenobiotics. Resistance to drugs and pesticides. Metabolism as a determinant of toxicity. Assessment of toxicity.

BCH 814.2 ADVANCED PROTEIN CHEMISTRY

Protein structure and function. Experimental methods to determine amino acid sequence. Amino acid analysis. Polypeptide chains, fragmentation and degradation. Separation methods. Structure and function of hemoglobin, myoglobin, immunoglobulin. X-ray analysis, Quaternary structure of hemoglobin. Bohr effect. Effect of molecular disease viz. Sickle cell anaemia. Enzymes as proteins e.g. Lysozymes, carboxypeptidase etc.

BCH 816.2 BIOCHEMICAL PHARMACOLOGY

Chemistry of Medicinal Compounds: Monocyclic, alicyclic, aromatic polycyclic, steroids, heterocyclic compounds. Quinines, coumarins, lactams. Antibiotics Amines, sulfonamides. Biological properties of these compounds: their pathways, their metabolic activities in the body. Regulation of the body function e.g. Blood pressure, pathways of interference with normal body functions. Clinical bases of these compounds. Relationship between structure and function. Alkaloids, antibiotics Biosynthesis Pyrolidine, Piperidine, Alkaloids: alkaloids, pyrrolizidine alkaloids. Indolizidine alkaloids, quinolizidine alkaloids. Quinoline and Aeridone alkaloids: B-Phenylethylamines and the isoquinoline alkaloids. Orphenoid alkaloids, Amaryllidaceae alkaloids. Erythrae and related alkaloids, Indole alkaloids. Diterpenoid alkaloids. Ceroidal alkaloids. Miscellaneous alkaloids. Macrolide compounds Chemical and biological properties of their various classe of alkaloids structure elucidation synthesis, physiology, taxonomy, spectroscopy and x-ray crystallography of these compounds. Immunochemical techniques for the screening of infective diseases.

BCH 818.2 SEMINAR

Each candidate is expected to deliver two seminars. The first seminar will be on a topic outside the candidate's area of specialization while the second will be on the candidate's research project.

BCH 819.2 RESEARCH PROJECT

Independent project research demonstrating professional maturity at the graduate level and knowledge to undertake and complete research shall be undertaken.

The research project will be carried out under the supervision of not less than two senior staff (who should normally be vast in the candidate's area of specialization), duly appointed for the student by

Departmental Graduate Studies Committee and approved by the Board of the School of Graduate Studies.

The Thesis for academic Masters shall be defended orally before a panel of internal and external examiners. All these would be graded.

SGS 801.1 ICT AND RESEARCH METHODOLOGY

This course should cover essentials of Spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Scientific Research, Concepts of Hypotheses Formulation and Testing, Organization of Research and Report Writing.

DOCTOR OF PHILOSOPHY DEGREE IN THE DEPARTMENT OF BIOCHEMISTRY

Objectives:

The Ph.D programme in Biochemistry is aimed at producing high caliber research-oriented and problem-solving graduates specialized in different areas of Biochemistry. These graduates so prepared will then be repertoire of manpower both nationally and internationally.

Regulations:

The PhD programme in Biochemistry consist of an approved courses work, seminars and research projects.

Admission Requirements:

Candidates seeking for admission into the PhD programme in Biochemistry will be required to have the following entry qualifications:

- (i) M.Sc. degree in Biochemistry of the University of Port Harcourt or any approved University. Candidates must have a minimum CGPA of 3.50 on a 500 point scale or 2.80 on a 4.00 point scale.
- (ii) Students that are deficient in any area, will be required to remedy the deficiency in the M.Sc. Progrfamme.
- (iii) Short listed candidates will be required to submit a well written proposal on their intended research interest to the Department's Graduate Studies Committee. This proposal would of course be defended orally at an interview and only candidates who score 60% and above will be admitted into the programme.

Duration of Programme

(a) FULLTIME:

Full-Time candidates are required to spend a minimum of 24 calendar months (2 years) or a maximum of 60 calendar months (5 years).

(b) PART-TIME:

Part-Time candidates are required to spend a minimum of 36v calendar months (3 years) or a maximum of 84 calendar months (7 years).

Requirements Governing Courses and Examination:

- (i) The Ph.D degree programme of the Department is in conformity with the regulations of the NUC and the University of Port Harcourt School of Graduate Studies.
- (ii) The Ph.D programme consists of course work, seminars and a dissertation. The course work and seminars shall each have a minimum credit unit of 3 while the dissertation shall have 12 credit units.

Course Requirements:

Ph.D candidates shall be required to take a total of 9 credit units in the first year comprising of one (1) taught course and two (2) seminars. The other years shall be devoted to research work, writing and defense of the Ph.D dissertation. All Ph.D candidates must take and pass the recommended course in their proposed areas of specialization with a minimum pass grade of 'C' (50%).

Continuation Requirements:

At the end of the first year, the student must pass a qualifying examination and must pass with a minimum score of (50%) to continue. Students who fail will be given one more chance to repeat and pass the examination.

Fields of Specialization:

Candidates are expected to specialize in one of the following areas of Biochemistry:

- (i) Enzymology
- (ii) Nutrition and Toxicology
- (iii) Medical Biochemistry! Immunochemistry
- (iv) Environmental Biochemistry
- (v) Pharmacological Biochemistry

Courses and Area of Specialization:

Candidates are expected to take the courses listed below in their area of specialization.

PHD IN BIOCHEMISTRY (NUTRITION AND TOXICOLOGYIENVIRONMENTAL BIOCHEMISTRY OPTION)

COURSE CODE	COURSE TITLE	CREDIT UNIT
BCH 910.1	Recent Advances in Biochemistry	3
Either		
BCH 911.1		
or		
BCH 913.1	General Seminar I	3
BCH 914.2	Genêtal Seminar II	3
BCH 919.0	PhD Dissertation	12
TOTAL		21

PHD IN BIOCHEMISTRY (NUTRITION AND TOXICOLOGY/ENVIRONMENTAL BIOCHEMISTRY OPTION)

COURSE CODE	COURSE TITLE	CREDIT UNIT
BCH 910.1	Recent Advances in Biochemistry	3
Either		
BCH 912.1		
or		
BCH 913.1	General Seminar I	3
BCH 914.2	General Seminar II	3
BCH 919.0	PhD Dissertation	12
TOTAL		21

COURSE DESCRIPTION

BCH 910.1 Recent Advances in Biochemistry

Current world food crisis/problems and solutions to world food hunger. Micro and macro nutrient changes in foods during processing and storage. Enzymatic browning in foods and prevention. Microbiological, environmental /chemical and emerging food contaminants and food habits and their effects. Advances in dietary/fibre research. Calorie restriction and longevity. Review of general properties and kinetics of enzymes. V-series and K-series enzymes. KNE and MWC models of allostery. Kinetics of fast reactions. Mechanism of action of selected enzymes. Application of enzymes in medicine and industry. Enzymes immobilization. Enzymes in Laundry detergents. Biochemistry of free radicals and antioxidants in health and diseases. Advances in stem cell research. Problems and prospects. Current trends in bioinformatics. Genomics, proteomics and applications in medicine and agriculture. Biotechnology of cellular and molecular cloning. Gene expression. Ethics in biochemical research methods and publications. Use of humans/animals in research. Annual Rights. Principles, instrumentation and application of high performance liquid chromatography (HPLC), gas chromatography (GC) and

chromatofocusing in Biochemistry. Environmental monitoring and assessment Pollution studies, monitoring of air, land and water quality parameters. Environmental impact assessment. Current techniques of phyto-and bioremediation. Organic pump (a phytoremediation technology). Remediation of crude oil polluted soils by enhanced natural attenuated (RENA) techniques.

BCH 911.1 Seminar in Advanced Enzymology

Candidates will be required to review and present recent and challenging topics in the field of Enzymology.

BCH 912.1 Seminars in Nutrition and Toxicology

Candidates will be required to review and present topics on recent advances in Nutritional and Toxicological Biochemistry.

BCH 913.1 Seminars in Medical Biochemistry and Immunochemistry

In this course, it is expected that candidates review and present topics on recent advanced in Medical Biochemistry.

BCH 914.2 Seminars in Environmental, Industrial and Membrane Biochemistry

In this course, candidates would be expected to review and present topics on recent advances in Environmental. Industrial and Membrane Biochemistry.

BCH 919.2 Ph.D Research Project/Dissertation

The research project will be carried out under the supervision of supervisors duly appointed for the student by Departmental Graduate Studies Committee and approved by the Board of the School of Graduate Studies.

Dissertation Seminars:

During the period of the Ph.D research project, the candidate shall be required to present his findings in the following seminars:

- (a) Seminar in the Department
- (b) Seminar to the Faculty
- (c) Seminar to School of Graduate Studies.

26	Okonkwo, C.J.	B.Sc., M.Sc, Ph.D	Environmental Biochemistry	Lecturer II

DEPARTMENT OF PHYSICS

GENERAL INTRODUCTION

The postgraduate programmes in the department of physics are by course and research works leading to the award of Masters and doctoral degrees in Applied Geophysics, Materials Science, Radiation and Environmental Physics, Solid State Electronics Devices and Theoretical Physics (Plasma and Nuclear Physics). However, the directives from National University Commission (NUC BENCHMARK) necessitated the current review, consequently, a post graduate diploma in Industrial Physics (PGDIP) is proposed as an additional programme. In order for us to be in tandem with the minimum Bench Mark.

Consequently, the PGDIP and M.Sc. graduate programmes in Department of Physics at the University of Port Harcourt, apart from laying a strong foundation for further studies in Engineering and other scientific principles, shall equally prepare students for specialization in the areas of Applied Geophysics, Electronics, Solid State Physics, Materials Science, Radiations and Environmental Physics and theoretical physics. The content of each programme encourages both theoretical and practical approaches with added advantages of industrial exposure. Students are encouraged by these programmes to enhance their acquisition of detailed knowledge of the courses, through regular but intelligent application of the laws of Physics coupled with balanced competence in problem solving of societal challenges.

The PhD programmes are available in all the branches of physics as well as for the M.Sc. These higher level programmes have been initiated for the purposes of producing high level manpower required for research, teaching, consultancies and above all to service both the oil and non-oil industrial sectors. Some of these sectors form the mainstay of the nations economy and most of their operations are located within the city of Port Harcourt, Warr, Eket and its environs.

The research strategy of the department of physics is focused on five basic research groups (TEAMS) under which a number of research interests stated below are addressed.

1. Theoretical physics Research group
2. Applied Geophysics Research group
3. Solid State Electronics Physics group
4. Materials Science group
5. Environmental Physics and Radiation protection

APPROVED POST GRADUATE DIPLOMA IN INDUSTRIAL PHYSICS

PREAMBLE:

The objective of the department at undergraduate and post-graduate levels is to encourage scholarly and practical application of physics to national development, self-enlightenment and sustainability. In an attempt to achieve the above objective, the department has set up a broader pattern (both theoretical and practical applications) of the global concept of physics. Physics at the University of Port Harcourt therefore aims at applying thinking and reasoning based on natural laws, observation of natural-phenomena and results of designed experiments to providing solutions to problems.

Over the past decade, the department has witnessed the desire by non-graduates of physics enrolling for specialized graduate programmes in Physics. A few that were allowed for such programmes could not succeed and had to withdraw out of frustration due to lack of proper foundation. This has motivated are-think that has been buttressed by the content of the NUC minimum Bench Mark for post graduate studies. The department of Physics is proposing a post graduate diploma in Physics (PGDP).

Aims and Objectives

The programme aims at providing the equivalent of a physics content of the typical four-year undergraduate programme in twelve calendar months. The programme is suitable for Science education graduates, technicians/technologists (with HND), science and Engineering graduates and health sciences. The programme aims at producing graduates who will be adequately equipped for relevance in the global knowledge economy and would be capable of applying appropriate scientific principles for solving human developmental problems.

QUALIFICATIONS FOR ADMISSION

To be eligible for admission into the programme, a candidate should have;

- i. A minimum of 3rd class degree in the related field of science and Engineering
- ii. Minimum of upper credit at Higher National Diploma from any recognized Institution.
- iii. All candidates must have five credits passes including English, Mathematics, Physics,

and any other relevant science subjects at '0' level.

DURATION OF PROGRAMME

The programme is designed for one academic session made up of two (2) semesters. A student is to register for a minimum of 18 credit units per semester and pass them with a grade of at least C. If a candidate fails to meet the requirements for graduation; he/she will be allowed an extra one academic session only to repeat the courses failed. Thereafter he/she fails out.

FIRST SEMESTER

COURSE CODE	TITLE	UNITS
PHY 700.1	Vibration and waves	3
PHY 701.1	Mathematical physics	3
PHY 702.1	Thermodynamics and statistical physics	3
PHY 703.1	Geometric and physical optics	3
PHY 704.1	Atomic, Nuclear and Modern Physics	2
PHY 705.1	Advanced Laboratory Practice	2
Total		18

SECOND SEMESTER

COURSE CODE	TITLE	UNITS
PHY 706.2	Electromagnetism (Electricity and magnetism)	3
PHY 707.2	Solid State Physics	2
PHY 718.2	Seminar	2
PHY 719.2	Research Project	4
Total		13

Students are required to choose a minimum 9 Credit units as elective in area of specialization

ELECTIVES

COURSE CODE	TITLE	UNITS
PHY 708.2	Quantum Mechanics	3
PHY 709.2	Theoretical and fluid mechanics	2
PHY 710.2	Materials Science	3
PHY 717.2	Thin film technology and solar materials	3
PHY 711.2	Introduction to Geophysics	3
PHY 712.2	Geophysical prospecting methods	2
PHY 713.2	Introduction to Environmental Technology	3

PHY 714.2	Non-Ionizing Radiations	2
PHY 715.2	Electronics Instrumentation	3
PHY 716.2	Physics of Semiconductor Devices	3
Total		26

M.Sc IN THEORETICAL PHYSICS (PLASMA AND NUCLEAR PHYSICS)

FIRST SEMESTER

COURSE CODE	TITLE	UNITS
SGS 801.1	ICT and research methodology	2
PHY 801.1	Mathematical Physics	3
PHY 802.1	Advanced quantum mechanics & Applied Group Theory	3
PHY 803.1	Electromagnetic theory	3
PHY 804.1	Applied Electronic workshop	3
PHY 805.1	Fluid dynamics and transport theory	3
PHY 806.1	Thermodynamics and Statistical mechanics	2
Total		18

SECOND SEMESTER

COURSE CODE	TITLE	UNITS
SGS 802.2	Management and entrepreneurship	2
PHY 807.2	Nuclear Physics and Instrumentation	2
PHY 808.2	Basic Plasma Physics and Space science	3
PHY 809.2	Seminar in Advances in Theoretical Physics	3
PHY 819.2	Research Project	6
Total		16

Electives (Students are required to choose any two courses from the electives)

COURSE CODE	TITLE	UNITS
PHY 810.2	Numerical Methods and Computational Physics	2
PHY 811.2	Quantum Field Theories	2
PHY 861.1	Atmospheric physics and meteorology	3

M.Sc. PHYSICS (SOLID STATE ELECTRONICS)

FIRST SEMESTER

COURSE CODE	TITLE	UNITS
SGS 801.1	ICT and Research Methodology	2
PHY 801.1	Mathematical physics	3
PHY 802.1	Advanced Quantum Mechanics & Applied Group Theory	3
PHY 812.1	Semi-conductor Physics	3
PHY 813.1	Electronic instrumentation	3
PHY 814.1	Applied electronics and Workshop practice	3
Total		17

SECOND SEMESTER

COURSE CODE	TITLE	UNITS
SGS 802.2	Management and Entrepreneurship	2
PHY 815.2	Advanced solid state devices	3
PHY 816.2	Physics of semi-conductor Devices	3
PHY 817.2	Basic model concepts and manifest properties of solid	3
PHY 818.2	Seminars	3
PHY 819.2	Research project	6
Total		20

N/B: ELECTIVES. Students are required to choose a minimum of 2 courses from any other option

M.Sc. PHYSICS (MATERIALS SCIENCE)

FIRST SEMESTER

COURSE CODE	TITLE	UNITS
SGS 801.1	ICT and Research Methodology	2
PHY 801.1	Mathematical Physics	3
PHY 840.1	Mechanical properties of materials	2
PHY 841.1	Special engineering materials	3
PHY 842.1	Thermodynamics of materials	3
PHY 843.1	Electrometallurgy and materials degradation	2

PHY 844.1	Powder Metallurgy and Processing	2
-----------	----------------------------------	---

Total 17

SECOND SEMESTER

COURSE CODE	TITLE	UNITS
SGS 802.2	Management and entrepreneurship	2
PHY 845.2	Thin film technology and solarmaterials	2
PHY 846.2	Nano-materials and Nanotechnology	2
PHY 847.2	Introduction to ceramics and polymer materials	2
PHY 848.2	Seminar in Advances in new Materials	2
PHY 849.2	Research project	6
Total		16

ELECTIVES. Students are required to choose a minimum of 2 courses from any other

M.Sc. PHYSICS (ENVIRONMENTAL PHYSICS AND RADIATION PROTECTION)

FIRST SEMESTER

COURSE CODE	TITLE	UNITS
CSC 801.1	ICT Research methodology	2
PHY 801.1	Mathematical Physics	2
PHY 860.1	Radiation Protection guides	3
PHY 862.1	Fundamentals of Nuclear physics	3
PHY 863.1	Radiation, Detection, Dosimetry	3
PHY 864.1	Environmental Sciences and Modeling	3
Total		16

SECOND SEMESTER

COURSE CODE	TITLE	UNITS
SCS 801.2	Management and Entrepreneurship	2
PHY 866.2	Ionizing Radiation	3
PHY 867.2	Nuclear application in medicine Industries & Research	3
PHY 868.2	Seminar in Environmental innovations and Nuclear Series	2
PHY 870.2	Dissertation	6

Total **16**

Students are required to choose a minimum of 2 courses from the electives

ELECTIVES		
COURSE CODE	TITLE	UNITS
CSC 865.1	Non-Ionizing Radiation	2
PHY 813.1	Electronics Instrumentation	3
PHY 867.2	Introduction to Environmental Technology	2
PHY 869.2	Radiation Biology	3

COURSE CODE	TITLE	UNITS
SGS 801.1	ICT and Research Methodology	2
PHY 801.1	Mathematical Physics	3
PHY 820.1	Physics of the Earth's Interior	3
PHY 821.1	Potential field theory	2
PHY 822.1	Electrical and electromagnetic method	2
PHY 823.1	Seismology Method (Reflection and Refraction)	3
PHY 824.1	Borehole Geophysics and Radiometrics	2
Total		16

COURSES FOR PhD PROGRAMMES IN PHYSICS

Compulsory Courses		
COURSE CODE	TITLE	UNITS
PHY 900.1	Mathematical Physics & Modeling	2
PHY 901.1	Research Methods/ Technical Writing	3
PHY 902.1	Research Project (Dissertation)	12
Total		18

N/b: Students are required to choose a minimum of 2 courses from the electives as related to their areas of specialisation.

FIRST SEMESTER		
COURSE CODE	TITLE	UNITS
SGS 801.2	Management and Entrepreneurship	2
PHY 825.2	Time series Analysis, Digital Filter theory and data processing	3
PHY 826.2	Research seminar in Geophysics	2
PHY 827.2	Geophysical field work	1
PHY 828.2	Research project in Geophysics	6
PHY 829.2	Gravity and magnetic methods in Geophysics	2
Total		16

ELECTIVES		
COURSE CODE	TITLE	UNITS
PHY 903.2	Global Geophysics	3
PHY 904.2	Current Advances in Applied Geophysics	3
PHY 905.2	Geophysical Exploration	3
PHY 906.2	Special Physics (microwave, fibre optics, telecom)	3
PHY 907.2	Current Trends in Semiconductor Electronics	3
PHY 908.2	Recent Advances in Material Science	3

PHY 909.2	Corrosion Science and Materials Degradation	3
PHY 910.2	Current Advances in Theoretical Physics	3
PHY 911.2	Advances in Solid State Physics	3
PHY 912.2	Current Trends in Environmental Physics	3
PHY 913.2	Environmental Policies & Standards	
PHY 914.2	Environmental Technology & Climate Change	33

Topics include quantum states, entropy, temperature, pressure, chemical potential, thermodynamics potential, grand sum and partition functions; distribution function, relationship of statistical variables of thermodynamic variables, applications, transport processes and fluctuation phenomenon. Maxwell-Boltzmann velocity distribution law.

PHY 703.1: Geometric and Physical Optics

Geometrical optics which discuss emission and absorption spectra and optical instruments.

Wave equation in rectangular and polar coordinates, superposition of waves; production of coherent sources by division of wave fronts and of amplitude; applications. Michelson and Jamin Interferometers with wave front Fabry-Perot etalon, Fresnel and Fraunhofer diffraction patterns, polarization of lights.

COURSE DESCRIPTION FOR POST GRADUATE DIPLOMA PROGRAMME (PGDP)

PHY 750.1: ICT and Research Methodology

This course should cover essential of spreadsheets, internet Technology, statistical packages, precision and Accuracy of Estimates, principles of scientific Research, concepts of Hypotheses formation and Testing, Organization of Research and Report Writing.

PHY 700.1: Vibrations and Waves

This course is an introduction to oscillations and waves phenomena. Topics covered will include vibrations and waves, electromagnetism waves, vibrating systems, types of waves, sound waves and wave optics.

PHY 701.1: Mathematical Physics.

This is an introductory mathematical methods course which is of particular interest to theoretical physics. Topics to be treated include introductory vector analysis; coordinate systems and their transformations. Motion in the various coordinate systems. Differential equations in two and three dimensions. Application of differential equations (partial and whole) in mechanics, electric circuits, atomic and nuclear physics, and boundary value problems.

Complex variables and application; Fourier series and transforms; matrices and determinants; special functions like Bessel functions, Laguerre functions and polynomials; Hermite functions and polynomials; Legendre equations and polynomials.

PHY 702.1: Thermodynamics and Statistical Physics

This course aims at presenting thermodynamics and statistical mechanics in a unified manner.

PHY 704.1: Atomic, Nuclear and Modern Physics

This is an introductory course on modern physics. Topics in atomic structure, photoelectric effect, black-body radiation, relativity, radioactivity, nuclear structure, mass spectrometers.

Nuclear structure and properties; Nuclear models and nuclear reactions; vector model of the atom. Nuclear spectroscopy; X-ray spectra; alkali spectra. Zeeman and Stark effect. Fundamental particles, strong and weak electromagnetic interactions. Resonance. The hydrogen atom; spin effect and relativistic effects. The diatomic molecule; the Frank-Condon principle. Identical particles and symmetry. Many electron atoms; coupling schemes and vector models. Zeeman effect and hyperfine structure. Resonance phenomena; ESR, NMR and optical pumping, Mossbauer Scattering; X-ray diffraction, microwave methods.

PHY 705.1 Advanced laboratory Practice

In the course, laboratory experiments are chosen from electronics, material science, atomic and nuclear, solid - state physics and the workshop course is intended to prepare the students for their research projects (PHY 449.0) by way of introducing them to the use of simple machine tools. Welding, soldering glass blowing, engineering drawing and design are also included. Problem solving and Technical writing.

The aim of this course is to introduce students to an important aspect of any research finding Reporting, presenting your results in an attractive way. Also, it is important that an undergraduate student should be able to define, analyze and

possibly attempt to find solution to the problem. The course will cover: Introduction to problem formulation, identification, analysis and solutions. The main scientific approach to different types of problem. Examples could be drawn from the natural world, engineering and the prevailing, environmental problems. At the end of this section, the student should be able to formulate, analyze and suggest solutions to societal problems in a scientific manner.

General introduction to technical writing (Hints on planning, content, present presentation and conclusions). Different types of writing and how they relate to the audience. Specific presentation of thesis with special reference to layout, abstract, introduction, conclusion and referencing other materials. Writing a dissertation, journal paper, technical reports. Presenting seminars, special projects and research reports. Project proposals and how to apply for research grants. Writing the first draft, editing and rewriting your own writing. Writing the submittal letters. Responding to corrections suggested by reviewers and correcting proofs. The importance of units and their abbreviations and standard symbols. Figures and how to caption your figures. Expression to avoid and apply in your writings.

PHY 706.2: Electromagnetism (Electricity and Magnetism)

This course deals with the topics of electricity and magnetism seen in PHY 112.2 at a more advanced level. Topics include electrostatics, solutions of Laplace's Equations, dielectric, static magnetic fields, magnetic materials, electromagnetic induction and Maxwell's Equation. Topics include Polarization, dispersion, reflection and refraction of E.M. waves, guided waves, radiating systems, resonance cavities, transmission lines, diffraction and electrodynamics.

PHY 707.2: Solid State Physics

Crystal structure and X-ray crystallography and its experimental methods. Theory of solid classical free electron theory, quantum theory of electron gas and the band theory of solids. Electrical and thermal properties of solids. Bond theory of insulators and semiconductors; dielectrics and fenelectrics, magnetism in solids, magnetic resonance; super-conductivity; imperfections in solids; amorphous solids.

PHY 718 Seminar

Topics on current advancement in physics and other related field shall be considered.

PHY 719 Research Project

Topics for research projects will be assigned near the end of the student's 1st Semester. The projects may be on topics of current interest in all areas of physics and Applied Physics.

ELECTIVES

PHY 708.2 Quantum Mechanics

Inadequacies of classical mechanics, differences between classical I and quantum mechanics: wave-particle properties, Heisenberg's uncertainty principles, wave and state functions; principles of Quantum mechanics; Schrodinger's wave mechanics formulation, postulates of quantum mechanics, matrix representation of Quantum mechanics, time-independent Schrodinger's wave equation; wave mechanics for some simple system: wave mechanics of atoms. Degenerate and non degenerate steady state permutation theory, identical particles, the matrix formulation of quantum mechanics. Time-dependent perturbation theory, the relativistic wave equation, origin of the electron spin.

PHY 709.2 Theoretical and Fluid Mechanics

Newtonian Mechanics. Motion of a particle in one, two and three dimension, system of particles and collision theory, Newtonian gravitation, conservative forces and potentials, oscillations, central force problems, accelerated frames of reference, rigid body dynamics, generated motions; mechanics of continuum media. Fluid statics and dynamics.

PHY 710.2 Materials Science

Introduction to material based on properties of solids, microstructure forming and shaping. This should illustrate the importance of the range of currently available engineering materials and to show that technology development depends on (1) introducing new materials and new processes (2) awareness of limitations of existing materials and processes. Topics include:

Atomic and atomic coordination, atomic order in solids and molecular disorder, single-phase materials and molecular phases, ceramic polymer materials, conducting materials, magnetic and electrical materials, phase diagrams, processing and development of microstructure/ composites. Performance materials and devices. Designing with different materials, performance criteria and standards. Selected case studies of material selection.

PHY 711.2 Introduction to Geophysics

This course introduces the students to the art of Geophysical exploration using seismic methods.

At the end of the course, the student should have mastered theoretical aspects of seismic methods, including characteristics of elastic waves and their propagation. Reflection, Refraction, Generation of seismic waves, Instruments, Digital recording and Field Instrumentation. Data acquisition principles and Data processing Basics. Basic interpretation

PHY 712.2 Geophysical Prospecting Methods

Gravity and magnetic methods, Electrical methods, seismic method, Electromagnetic method and Radiometrics shall be treated

PHY 713.2 Introduction to Environmental Technology

Environmental technology and Environmental Science. Measurement and Evaluation of environmental pollution in air, water and land: legal and technical requirements in the preparation, interpretation of environmental impacts. The procedure and interdisciplinary nature of environmental analysis.

Impact Evaluation, Qualification of Impacts, Fields, Mitigation, Understanding the sources and projects that cause Environmental degradation Remediation of gaseous pollutants.

Removal of gaseous oxides of nitrogen, Carbon and sulphur. Removal of particulates from moving and stationary sources. Removal of fluorides complex oxidants and mercury vapour. The principles of reactions and physical measurements applied for variety of analytical equipment employed in air quality studies.

Practical examples and case studies will be used. These may include evaluation and analysis of Social and industrial Noise, Vibration hazards, toxic and radioactive materials Statistical analysis and modeling of environmental systems. In-situ and online measurement of environmental pollution. Types of environmental studies, EIA. EAR. Environmental Monitoring

PHY 714.2 Non-Ionizing Radiation

Ultraviolet radiation, micro wave radiation, electromagnetic radiation x-rays, Bleared Gamma radiation. Radiometric Units Lasers. Laser operations. Lasing actions, TEM modes, biological effects: eye damage, skin damage Protection guides and standards, maximum permissible Exposure (MPE). Safety Measurements, power and energy. Beam divergence Radiofrequency (RF) and Microwave:

Communications, antennas and antenna gain. G. penetration depth GSM hand-sets and base stations. Biological Effects. Thermal and Non-Thermal Effects, temperature-humidity index microwave measurement, survey meters. Protection Guides and standard Maximum permissible exposure (MPE) Safety.

PHY 715.2 Electronic Instrumentation

Brief review; passive devices, active devices, two-port network feedback circuits, transistor oscillator. Circuit models of transistors, FET Applications. Differential amplifier, small signal analysis, trigger circuits. Operational amplifier band width, different Integrated circuit; fabrication and testing and thin film and thick film circuits, passive and active elements. Logic devices and combinational circuits; DL, DTL, TTL, CMOS, etc. digital integrated circuits, synthesis of combinational Logic Circuits, FLOP and DE multiplexers. ROM, Sequential Logic Circuits, FLOP Circuits RAM. Introduction to microprocessors and Logic applications. Network theory. Discrete electronic systems; Analog and Digital meters, transducers, rate meters (frequency domain CR0).

PHY 716.2 Physics of Semi-Conductor Devices

Semi-conducting materials. Materials used in solid-state devices and in basic research preparation and measurement of semi-conducting materials, silicon and germanium, other elemental semiconductors. Ternary and Quaternary compounds, etc. P-N junction Devices, moderate field P N junction, tunnel diodes, I M-PATT diode, etc. interface and thin film devices, Schottky effect, Metal-semi-conductor, RMPATT diode, metal Insulator Semi-conductor (MIS); or metal-oxide semiconductor (MOS), surface states charges and space charges. Optoelectronic devices, electroluminescent devices, solar cell, photo detectors, junction lasers, laser materials etc.

PHY 717.2 Thin Film Technology and Solar Materials

Preparation, structure, evaluation and properties of thin films; metallic, semiconductor and dielectric film techniques. Nucleation and growth consideration, epitaxy and metastable configuration. Solar materials characteristics and their applications. Visible and infrared light sources, black body radiations, radiation by atoms, stimulated emission of radiation, coherent light sources and electro-optics effects/application.

M.Sc./PhD PROGRAMMES

The programme is geared towards (a) the production of high caliber specialists in the various options for services in higher institutions and the industry (b) the introduction of high level of research experiences and (c) the development of originality, interdisciplinary and cooperative research, analytical and critical mind.

1. Regulations

The programmes for M.Sc. degrees shall consist of a minimum of 30 credit units and a maximum of 48 credit units. The other 4 credit units will come from approved compulsory/elective courses for graduate programmes. However compulsory courses may not be repeated at higher levels if already passed at post graduate diploma or Masters Levels

2. Duration of Programme

The M.Sc. candidates will be required to spend a minimum of 12 calendar months (1 year) and a maximum of 24 calendar months (2 years) for Full-Time. Part-Time candidates will be required to spend a minimum of 24 calendar months (2 years) and a maximum of 36 calendar months (3 years).

3. Admission Requirements for M.Sc./PhD Programmes

Admission into the Post-Graduate programme of the Department requires a Bachelor's degree in Physics or related programmes from the University of Port Harcourt or any other recognized University approved by the senate of the University of Port Harcourt. Note that five credits 0/level in Mathematics, English Language, Physics, Chemistry and Biology is required. A minimum of second-class lower degree with or PGDP holders with upper credit (CGPA 3.5 points on a Scale of 5) level pass is required for the M.Sc. admission. For those intending to pursue a PhD programme of the department, candidate must have M.Sc. Degree in relevant field with a minimum CGPA of 3.50. All prospective PhD candidates are mandatorily required to attend a pre-admission oral interview, at which he/she is expected to present and defend a well written proposal and score a minimum of 60 %. Prospective Ph.D candidates are encouraged to visit the department and interact with prospective supervisor(s) with a view to establishing area(s) of interest and vacancy.

PHY 801.1 Mathematical Physics

Difference; ordinary and partial differential equations; integral equations, green functions, the Approximation Methods (WKB, perturbation applications to solution in quantum mechanics),

Cauchy -Riemann problems, Fundamental solutions of Laplace; Wave and Heat equations; Transforms and Asymptotic methods; the calculus of variation and Non-linear problems in Physics (Special Functions).

Variational principles. Lagrange's and Hamilton's formulations. Poisson brackets. Canonical and non-canonical transformations. Hamilton-Jacobi theory. Rotation of rigid bodies. Theory of small oscillations. Symmetry and conservation laws. Introduction to relativistic dynamics.

PHY 802.1 Advanced quantum Mechanics & Applied Group Theory

Classical variables and quantum mechanical operators, commutations, eigen-functions, normalization procedures, expectation value. Stationary State, Solutions of simple problems. Orbital angular momentum operators. Slater's treatment of complex atoms: Hartree-Fock method, Thomas-Fermi model. Matrix Mechanics, Mathematical framework. Vector space, Dirac notation; operator algebra and matrices. Description of physical phenomena. Perturbation theory and approximation methods.

Applied Group Theory

Definition and theorem, theory of group representations. Symmetry in the solid state; point groups and space groups. The 3-dimensional rotation group, continuous group, single and double valued representations; physical applications; crystal field splitting, symmetry adapted functions; normal modes of vibrations, symmetry properties of wave functions in crystals; factorization of secular determinants symmetry and the magnetic state.

PHY 803.1 Electromagnetic Theory

Electrostatic potentials. Poisson and Laplace's equations. Method of images, Green's theorem, multipole expansions. Electromagnetic field stone's theorem, Gauss's theorem. Scalar and vector potentials. Maxwell's equations. Propagation of electromagnetic waves in different media conductive and non-conductive media, ionized and non-ionized media. Phase velocity, group velocity and pulse propagation, attenuation, refraction, energy propagation and transfer, polarization and dispersion. Green's function method, diffraction theory, simple radiating systems, Lagrangian derivation of Maxwell's equations and the covariant structure of electromagnetism.

PHY 804.1 Applied Electronics Workshop

Workshop safety precautions. Basic hand tools and bench work practice. Plain and cylindrical generation of smooth surface using power operated machines. Selection and properties of materials used for construction metallic and non-metallic. Metal joining devices and adhesives and common use. Soldering techniques and wrap joints. Multi-meters and oscilloscopes. Auto-ranging in measuring instruments. A survey of the use of electronics circuit devices e.g., diodes, transistors including FET, integrated circuits, photocells. Selection, use and care of test instruments. Survey of pick-ups and transducer devices. Basic circuit synthesis and analysis. Pulse circuits. Instrumentation and measuring techniques: impedance matching. Probes active and input and output impedance using the scope.

PHY 805.1 Fluid Dynamics and Transport Theory

Differentiation following the motion of fluid particles. Equations of motion and continuity for incompressible inviscid fluids. Velocity potentials and Stokes stream function. Bernoulli's equation with application to flow along curved paths. Kinetic energy, sources, sinks, doublets in 2 and 3 dimensions. Limiting stream lines.

Physics of continuum mechanics, and equations of transport; Applications to flow in various media.

PHY 806.2 Thermodynamics and Statistical mechanics

Basic postulates of thermodynamics of simple, homogeneous systems. Thermodynamic potentials and stability of thermodynamic systems. Gibbs's theory of thermodynamics with interaction effects. Partition functions of different ensembles. Fundamental equilibrium theory; Liouville's theorem and the Ergodic hypothesis. Distribution functions, entropy and connections with thermodynamics. Microcanonical, canonical and grand canonical ensembles. The density matrix. Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac distribution. Functions and statistics. Phase equilibria, first and second order transitions. Applications to classical and quantum systems. Boltzmann equation. Brownian motion and applications.

PHY 807.2 Nuclear Physics and Instrumentation

Nuclear properties. Nuclear force, single particle potentials and the two-body nuclear interactions. The deuteron. Scattering process: n-p, n-n, p-p scattering. Nuclear structure and nuclear models including vibrational modes and rotational states of the nucleus. Fission and fusion reactions,

aspects of nuclear reactions and energy generation. Relativistic description of nuclear particle states. Nuclear Instrumentations

PHY 808.2 Basic Plasma Physics and Space science

Concept of plasma Physics; Equation of Gas dynamics (the conservation laws); Basic plasma parameters; Neutrality condition plasma frequency and the Debye length; Plasma Transport and Dynamics (the Maxwell equations); MHD Equations; instabilities in Plasmas; Examples of Natural Plasmas; the earth's ionosphere; the ionosphere of other planets; magnetosphere; reactions in the sun; solar wind and solar flux, Space Science and Applications

Earth's atmosphere; Ionospheric layers and processes; Ionospheric Dynamics/changes; Ionospheric current; Basic Astrophysics, solar environment; solar wind, solar terrestrial interactions

PHY 809.2 Seminar in Advances in Theoretical Physics

Students will be required to give seminars on topics of current research interest in solid state Physics including those of their project(s) and/or other branches of Physics.

PHY 819.2 Research Project in Theoretical Physics This will be in the form of a project report of an investigation carried out on a research topic (theoretical or experimental) of interest in Physics Electives (Students are required to choose any two courses from these electives)

PHY 810.2 Numerical Methods and computation of Physics

Modeling the art of transforming real life situation into mathematical statements. Applications to problems in Physics and dynamical system, programming languages; and use of packages; Solutions of algebraic Equations; Finite difference method; interpolation techniques; Numerical differentiation and integrations; Numerical solutions of differential equations; the Finite Element and Runge-Kutta Methods; Curve fitting. Applications to the problems in fluid dynamics; heat and mass transfer and transport systems.

PHY 811.2 Quantum Field Theories

Interactions of a point particle. Symmetries and conservation laws, fundamental invariants, energy-momentum tensor. Noether's theorem. Green's functions. Radiations. Relativistic Wave equations; the Klein-Gordon equation. Dirac

equation and the Weyl equation. Dirac propagator. Quantization of fields: scalar field, quantized radiation field, massive vector fields. Interaction with external fields: emission probabilities. Compton effect, Pair creation and annihilation, Bremsstrahlung etc. perturbation theory. Feynmann rules. Feynmann diagrams. Radiative corrections and renormalization: vacuum corrections, electron propagator, vertex functions, the Lamb shift, the anomalous magnetic moment. Functional methods. Introduction to Gauge Field theories.

PHY 861.1: Atmospheric Physics and Meteorology

The Solar-Earth atmospheric processes. The parameters for climate and meteorology. Hydrological cycle, precipitation, evaporation, atmospheric circulation, Energy budget, Ozone layer, Green House effects, Global warming. Structure of the Atmosphere and its constituents. Atmospheric-Environmental Model, Land and sea Breeze. Wind flow and its dynamics, Radiation, Temperature, Humidity, Atmospheric particulates emission and control and General circulation models.

Surface and groundwater dynamics. Types of aquifers. Introduction to the theory of diffusion of pollutants and methods for estimation of dispersion in the atmosphere. Nature of turbulent motion in various environment. Dispersion of pollutants in water bodies. Air Pollution chemistry. Effects of atmospheric pollution on various forms of life including direct and secondary effects. Corrosion, contamination of inert matter by pollution, Ultraviolet Radiation, microwave Radiation, Laser Radiation, X-rays. Beta and Gamma radiation, Introduction of fuels, combustion. Pollutants, carbon dioxide, carbon monoxide. Nitrogen oxides, Sulphur dioxides. Monitoring equipment, vehicles, homogenate compound, photochemical pollution and acid rain.

COURSE DESCRIPTION

PHY 801.1 Mathematical Physics

Vector differentiation operations. Complex variables and applications, Integral transforms and applications, special functions of mathematical physics and partial differential equations and applications, integral equations, calculus of variations. Lagrange's and Hamiltonian equations. Rotation of rigid bodies (review). Tensor algebra, Inertia and stress tensors, Theory of small vibration, relativistic dynamics.

Review of basic principles of electromagnetic theory, Maxwell's equations, vector and scalar potentials, conservation laws, methods in electrostatics and magneto statics, propagation of F.M. waves in various media (conductive, dispersive, etc.). Dispersion theory, scattering and diffraction of E.M. waves. Motion of charged particles in uniform and non-uniform electric and magnetic field, collision and energy loss, Radiation by moving charge

PHY 802.1 Advanced quantum mechanics & Applied Group Theory

Classical variables and quantum mechanical operators, commutations, eigen-functions, normalization procedures, expectation value. Stationary State, Solutions of simple problems. Orbital angular momentum operators. S later's treatment of complex atoms: Hartree-Fock method, Thomas-Fermi model. Matrix Mechanics, Mathematical framework. Vector space, Dirac notation; operator algebra and matrices. Description of physical phenomena. Perturbation theory and approximation methods.

Applied Group Theory

Definition and theorem, theory of group representations. Symmetry in the solid state; point groups and space groups. The 3-dimensional rotation group, continuous group, single and double valued representations; physical applications; crystal field splitting, symmetry adapted functions; normal modes of vibrations, symmetry properties of wave functions in crystals; factorization of secular determinants symmetry and the magnetic state.

PHY 812.1 Semi-conductor Physics

The elementary properties of semi-conductors; control of carrier density, impurities and imperfections in crystal and carrier concentration in thermal equilibrium electron transport phenomena; collisions with crystalline imperfections, constant relaxation time. Relaxation time as a function of E, etc. Thermal effects in semiconductors, thermal conductivity, thermo-electric power, thermo-magnetic effects, etc. diffusion and conduction in extrinsic materials, drift mobility of electrons and holes, etc. scattering of electrons and holes, change holes; recombination mechanisms; radioactive recombination, recombination through traps, etc. optical and high frequency effects in semiconductors, free carrier absorption, plasma resonance, emission of radiation from semi-conductors.

PHY 813.1 Electronic Instrumentation.

Brief review; passive devices, active devices, two-port network feedback circuits, transistor oscillator. Circuit models of transistors, FET Applications. Differential amplifier, small signal analysis, trigger circuits. Operational amplifier band width, different Integrated circuit; fabrication and testing and thin film and thick film circuits, passive and active elements. Logic devices and combinational circuits; DL, DTL, TTL, CMOS, etc. digital integrated circuits, synthesis of combinational Logic Circuits, FLOP and DE multiplexers. ROM, Sequential Logic Circuits, FLOP Circuits RAM. Introduction to microprocessors and Logic applications. Network theory. Discrete electronic systems; Analog and Digital meters, transducers, rate meters (frequency domain CRO).

PHY 814.1 Applied Electronics and Workshop Practice

Workshop safety precautions. Basic hand tools and bench work practice. Plain and cylindrical generation of smooth surface using power operated machines. Selection and properties of materials used for construction metallic and non-metallic, Metal joining devices and adhesives and common use. Soldering techniques and wrap joints. Multi-meters and oscilloscopes. Auto-ranging in measuring instruments. A survey of the use of electronics circuit devices e.g., diodes, transistors including FET, integrated circuits, photocells. Selection, use and care of test instruments. Survey of pick-ups and transducer devices. Basic circuit synthesis and analysis. Pulse circuits. Instrumentation and measuring techniques: impedance matching. Probes active and input and output impedance using the scope.

SGS 801.2 Management and Entrepreneurship

The course will cover business environment general management, financial management entrepreneurship developments, feasibility studies marketing and managerial problem solving.

PHY 815.2 Advanced Solid State Physics

Quick review of Crystal structures and crystallographic symmetry. Theory of solids, Brillouin zones, concept of electrons and holes, Thermal properties: Phonons and Phonon spectra Optical properties, optical spectra and excitons. Magnetic properties spin waves and magnetic spectra, Para magnetic resonance. The many body problems in solid.

PHY 816.2 Physics of Semi-Conductor

Semi-conducting materials. Materials used in solid-state devices and in basic research preparation and measurement of semi-conducting materials, silicon and germanium, other elemental semiconductors. Ternary and Quaternary compounds, etc. P-N junction Devices, moderate field P N junction, tunnel diodes, IM-PATT diode, etc. interface and thin film devices, Schottky effect, Metal-semi-conductor, RMPATT diode, metal Insulator Semi-conductor (MIS); or metal-oxide semiconductor (MOS), surface states charges and space charges. Optoelectronic devices, electroluminescent devices, solar cell, photo detectors, junction lasers, laser materials etc.

PHY 817.2 Basic Model Concepts and Manifest Properties of Solids

Properties of Energy bands in solids. Wave function for an electron in a periodic potential, energy bands in a perturbed nearly free electron systems. Energy band calculations, density of states in energy bands. Introduction to energy bands in solids. Optical processes in solids. Absorption and reflection phenomena. Carrier recombination and luminescence, direct and indirect transitions. Excitations, colour and lasers. Photoelectric phenomena

PHY 818.2 Seminars in Advances in Solid State Electronics.

Students will be required to give seminars on topics of current research interest in solid state electronics including those of their project(s) and/or other branches of Physics.

PHY 819.2 Research Project

This will be in the form of a project report of an investigation carried out on a research topic (theoretical or experimental) of interest in Solid State Electronics

COURSE DESCRIPTION

PHY 820.1 Physics of the Earth's Interior

Structure of the earth's interior, continental and oceanic crust and the mantle. Isocracy; structure of the core, terrestrial heat flow, ocean ridges, mountain ranges, rift valleys and ocean trenches, continental drift and seafloor spreading. Use of geophysics techniques in the study of the earth's interior. The earth's magnetic field, its description and origin, magnetization of rocks, reversal of the earth's magnetic field, radioactive age dating isotope geology; statistical analysis of paleomagnetic data, polar wandering and continental drift. Response of geological material to applied stress. Brittle failure, plastic

deformation and creep in rocks. Applications of these principles to large scale geologic structures (principally lithospheric plates). Mechanics of lithospheric plates and mechanism of plate tectonics.

PHY 821.1 Potential Field Theory.

The concept of potential will be introduced in this course as a preparation for the more specialized discussion of potentials field methods of Applied Geophysics. Gravity, magnetic, Poisson's relationship between gravity and magnetic potential, Gauss's and Green's theorems, Laplace's equation, upward and downward continuation, Clairaut's theorem. Use of matrices in Applied Geophysics.

PHY 822.1 Electrical and Electromagnetic Method

Constitution of the atmosphere. Formation and structure of D-, E-, and F-layers of ionosphere. Vertical and Oblique propagation of radio waves in the ionosphere. Ionospheric absorption and fading, magneto-ionic theory. Ionospheric disturbances. Special features of the equatorial ionosphere.

PHY 823.1 Seismology Methods (Reflection and Refraction)

The theory of elastic waves, body and surface waves, curved wave front theory; principles of refraction prospecting; the inversion of body and surface waves data, resolution problems, modern techniques of refraction prospecting and applications. Recording methods in seismology; and introduction to earthquake seismology, seismically and seismic risk; earthquake prediction and risk reduction; African earthquakes. Principles of seismic reflection surveying; seismic sources and source array design, hydrophones and geophones, digital acquisition systems; vibroseis techniques; transmission of seismic energy, field techniques, digital processing of seismograms, migration and interpretation procedure. Introduction to seismic stratigraphy.

PHY 824.1 Borehole Geophysics and Radiometric

The theories and methods of boreholes geophysics will be introduced. Well logging techniques and interpretation principles in log interpretation will be treated. Principles of radioactivity, radioactivity of rocks and minerals, ionization chamber, Geiger Muller counter, scintillation meter, miscellaneous instrument and calibration. Field techniques. Spectrometric surveys. Aero-spectrometric methods. Interpretation techniques/procedures.

SGS 801.2 Management and Entrepreneurship

The course will cover business environment general management, financial management entrepreneurship developments, feasibility studies marketing and managerial problem solving.\

PHY 825.2 Time series Analysis, Digital filter theory and Data Processing

Signal theory. Continuous and discrete Fourier series. Convolution integral. Correlation integral. Filtering techniques-linear filter, convolution, auto-correlation, cross-correlation and power spectral analysis. Deconvolution, matched filters and application of these filters to both synthetic and real data.

PHY 826.2 Research Seminars in Geophysics

Literature study, writing up and oral presentation of a topic on an aspect of the area of specialization.

PHY 827.2 Geophysical Field work

This course is designed to introduce the students to specialization in the techniques of data collection, analysis, and interpretation through geophysical field work. Field Techniques in Applied Geophysics with emphasis on practical field work will be carried out. Improvements on existing and new techniques will also be introduced when they arise.

Geophysical Field work Each student

PHY 828.2 Gravity and magnetic methods in Geophysics

The earth's field, measurement of gravity on land and at sea, reduction of gravity observations, rock density, regional and residual anomalies separation; gravity effect of simple shapes, interpretation of gravity effect of simple shapes, interpretation of gravity anomalies in terms of two and three dimensional structures; second derivative methods, limiting depths, field examples from Nigeria and elsewhere. The earth's magnetic field; magnetometers and measurements of magnetic field on land and air, reduction of magnetic observation; magnetic properties of rocks, two and three dimensional interpretation of magnetic anomalies in terms of such models as the dyke model, field example from Nigeria and elsewhere. Magnetic reduction to pole, frequency domain analysis.

PHY 829.2 Research Project in Geophysics

Special geophysical investigation with the report including results and interpretation being presented in dissertation format.

ELECTIVE COURSES

PHY 810.1 Numerical and Computational Methods

Interpretation Scheme, the lagrangian representation, Arkin algorithm least square. Interactive process. Solution of linear equations, Gaussian elimination, inversion of matrices. Fourier series and harmonic analysis. Difference equation. Numerical integration and differentiation trapezium, Simpson's limitation of the size of grid. Solution of ordinary differential equation, step by step methods partial differential equation, simple wave propagation forward difference, backward difference, central difference in time, the implicit scheme, conditions for stability; e.g. diffusion equation, hyperbolic equation method of relaxation and other interactive schemes applied to simultaneous equations; ill-conditioned method. Functional representation, minimization and telescoping computer solutions of equations.

PHY 830.2 Instrumentation

The development and modification of Geophysical instruments will be treated.

PHY 831.1 Geophysical Prospecting

Gravity and magnetic methods, Electrical methods, seismic method, Electromagnetic method and Radiometrics shall be treated

PHY 832.2 Modeling in Geophysical Prospecting

Modeling conditions, modeling parameters. The resistivity model tank, magnetic response modeling. Electromagnetic scale modeling. Applications of modeling to geophysical interpretation.

PHY 833.2 Principles ofPaleo magnetism

Detrital magnetization, thermo-remnant magnetization, collection and treatment of Data, magnetic cleaning, measurement of natural remnant magnetization, investigation of other magnetic properties or rocks temperature effects, stereographic projection. Application of results ofpaleomagnetism.

PHY 834.1 Geology for Non-Geologist

Introduction to the basic principles of stratigraphy applied physical stratigraphy. Introduction to structural Geology and Interpretation for potential

mineral resources. Simple geological structures, interpretation of folds, faults and fractures. Basic map reading, photo- geology and interpretation, introduction to petrology: igneous, metamorphic and sedimentary. Mineral deposits, their geology and uses. Identification of various rock types and their composition, economic geology. Geology of petroleum, oil accumulation and nature, origin of oil, migration and accumulation of oil. Discussion of various traps, Basic concepts of Hydro/Engineering Geology and marine Geology option.

COURSE DESCRIPTION FOR M.Sc. MATERIALS SCIENCE

PHY 840.1 Mechanical Properties of Materials

Behavior of Materials under stress, Mechanical properties in tension, compression, direct shear, tension, flexures, true stress-strain, cold work, hardness, impact, fatigue properties. Effect of temperature on mechanical behavior of metals creep, stress and rapture. Toughness and crack production theories. Mechanical of slop, slip systems, critical resolved shear stress. Deformation in single polycrystalline materials. Impurity effects and yield point phenomena. Elements of dislocation theory. Effects of temperature and deformation of rate ofplastic flow and strain hardening.

PHY 841. 1 Special Engineering Materials

Microstructure, properties and uses of ceramics, polymers and metals as engineering materials. Dielectric and magnetic characteristics of materials. Manufacturing and processing of polymers. Mechanical behavior of polymers and their thermal and electrical properties. Valmes engineering approach and organization for materials selection. Quality standard and quality control.

PHY 842.1 Thermodynamics of Materials

Law of thermodynamics. Free energy of heterogeneous reactions. Phase rule solutions. Classical and statistical; thermodynamics with emphasis on solid state phenomenology of metallic surface, phase equilibra in multicomponent systems, calculations of phase diagrams, thermodynamics of lattice defects and substructure. Simultaneous development of concepts of mass, energy and momentum. Introduction to irreversible thermodynamics and its application to solid diffusion.

PHY 843.1 Electrometallurgy, corrosion and Materials Degradation

Electrode potential and over voltage. Electrode kinetics, corrosion types, corrosion mechanism, corrosion protection, electroplating, vacuum disposition, Galvanostatic Cathode, Anodic and potentiostatic protection methods Effects of temperature, environmental and metallurgical factors on corrosion of materials. High temperature corrosion.

PHY 844.1 Powder Metallurgy and Processing

Introduction to properties of metal and ceramic powders. Basic principles of compacting porous and dense products, Microstructure factors affecting Physical and mechanical properties of powder blending; compacting, consolidation, sintering. Production of metal parts from powder and review of commercial applications. Important patents and commercial processes. Metallurgy of iron, steel and principal nonferrous materials. Gasses in steel, materials and energy balance. Slag-metal reaction

Introduction to Physical metallurgy: Relation of properties to microstructure in materials recovery, recrystallization and grain growth. Introduction to atomic, microscopic structure of engineering materials. Effects of grain size and boundaries, work hardening and heat treatment on behavior of solids. Phase diagrams. Solidification. Iron-carbon system. Ferrous and nonferrous materials. Diffusion-controlled phase transformations, distortion-controlled phase transformation, Elementary alloy theory.

PHY 845.2 Thin Film Material Technology

Preparation, structure, evaluation and properties of thin films; metallic, semiconductor and dielectric film techniques. Nucleation and growth consideration, epitaxy and metastable configuration. Solar materials characteristics and their applications.

Visible and infrared light sources, black body radiations, radiation by atoms, stimulated emission of radiation, coherent light sources and electro-optics effects/application.

PHY 846.2 Nanomaterials and Nanotechnology

Nanotechnology bottom-up approach versus to p-down approach in materials production, carbon nanomaterials, carbon nanotubes, nanorods, nanowires, graphenes, semiconductor and nano metallic materials. Application of nanomaterials, Energy production, storage, transmission and use. Other applications of nanomaterials (Agriculture, medicine, drugs delivery, production, environmental remediation). Nano biotechnology and chemical technology.

PHY 847.2 Introduction to Ceramic Materials

Introduction to Ceramics-Minerals, Raw materials. Forming and thermal treatment obtain ceramic products. Glasses, glazes, ceramic and enamels on metals. Physical ceramics. Equilibrium and reactions between ceramic recrystallization, grain growth and microstructure of ceramics. Spatial characteristics of engineering ceramics plastic and viscous deformation in ceramics. Physical and dielectric properties.

PHY 848.2 Seminars in Advances in new Materials

Metallurgical materials, Bio-engineering materials, Computer applications in solving materials problems and advances in Materials Sciences. Students will be required to prepare and present seminars in chosen topics in which they have critically reviewed technical papers.

PHY 849.2 Project Research

Independent project research demonstrating professional maturity at graduate level and knowledge to undertaken and complete research under guidance of a department senior member who should normally be vast in the field will be undertaken. The report will include among other things critical and analytical analysis and interpretation of pertinent literature. This should in addition represent worthwhile contribution to the field. Oral and final examination of project report (thesis) is required for the award of the M.Sc degree in Material Science.

COURSE DESCRIPTION FOR M.Sc. ENVIRONMENTAL AND RADIATION PHYSICS

PHY 861.1 Atmospheric Physics and Meteorology

The Solar-Earth atmospheric processes. The parameters for climate and meteorology. Element cloud physics, Hydrological cycle, precipitation, evaporation, atmospheric circulation, Energy budget, Ozone layer, Green House effects, Global warming. Structure of the Atmosphere and its constituents. Atmospheric- Environment Model, Land and see Breeze. Wind flow and its dynamics, Radiation, Temperature, Humidity, Atmospheric particulates emission and control and General circulation models. Nature of turbulent motion in various environment.

PHY 862.1 Fundamentals of Nuclear Physics

Introduction and basic concepts: Definitions, Nuclear properties, Nuclear potential and energy levels. Radioactivity and transformation kinematics. Nuclear collisions. Nuclear instability: decay, electron capture (EC), decay and semi classical theory of decay, gamma decay and yield selection rules, internal conversion, (IC,) Auger, electron emission. Interaction of Radiation with matter: specific ionization, linear energy transfer (LET): Mechanisms and energy transfer of Heavy charged particles (Bethe-Bloch formula, Bragg curve, energy requirements etc), fast elements, gamma-rays, neutrons including attenuation and moderation. Nuclear reactions: general features of nuclear reactions, elastic scattering, direct reaction, compound nucleus reaction. Heavy ions reaction. Brief view of concepts and principles of reactors and criticality.

PHY 863.1 Radiation Detection, Dosimetry and Radiation Protection

Radiation quantities: Definitions and Units
Radiation detection methods: ionization in gases; Ionization in semiconductors. Scintillation Gamman spectrometry. Neutron detection. Thermo luminescence. Film Dosiimetry, Chemical dosimeter (Fricke). Particle Track detection, calorimetry, etc. counting statistics dosimetry: External dosimetry (gamma). Internal dosimetry. Reference Man Patient Dosimetry in radiographic external dosimetry (gamma). Internal dosimetry, Reference man patient Dosimetry in radiographic examination, mammography, fluoroscopy and computed tomography.

The external Radiation Hazard and Protection. Time distance and shielding, monitoring for external radiations (areas and personal). The internal Radiation Hazard and Protection: Sources and type of airborne contaminants, control of the internal radiation hazard, exposure reduction, internal dosimetry. Waste Management of Contamination, protection against contamination (protective clothing, decontamination of waste disposal, packaging and safe transport of radioactive materials. Principles to Radiation protection Justification, optimization, dose limit, international safety standards ICRP, BSs, NNRA, Elements of Radiation protection programmed in Medicine and dosimetry: Monitoring, Emergency preparedness planning and response. QA and QC instrument. Training, Audit, Safety of equipment.

PHY 864.1 Environmental Sciences and Modelling

The concept of Environmental Science. The interdisciplinary nature of environmental science.

Biodiversity, Man's activities, ecosystems and limitations, sources of Environmental Pollution. Environmental impacts on Air, Land and Water. Environmental control and management. The physics, chemistry, biochemistry, bacteria, etc, concepts of pollution. Environmental standard and sustainable development. Radioactive and toxic pollutants. Gaseous pollutants; carbon dioxide, carbon monoxide, sulphur dioxide, nitrogen oxides, photo chemical pollutants, acid rain, homogenate compounds. Sound and noise pollution. Sound propagation measurement and Analysis. Physics of Noise and Sound. Effect of sound. Basic sources of Noise: Character and treatment. Noise scales and indices. Noise control methods. Environmental acoustics. Sound reduction. Practical and reduction methods. Criteria and recommendation and Noise legislation.

Introduction of general concepts of mathematical modeling. Continuous and discrete techniques in mathematical modeling. Application of modeling techniques in solving measured environmental data. Testing of Hypothesis, decision theory and multivariate analysis. Numerical methods of linear equations and approximations. Sampling methods and Quality control measures/precision. The finite difference scheme. Applications in fluid dynamics and Diffusion mechanism

PHY 865.2 Physics of Fluids and Water Resources Management

General principles of Fluid Dynamics. Transport mechanism (Air, Water and Soil) capillarity, permeability. Absorption and Adsorption processes and fluid Tension. Flow network and seepage phenomenon. Surface water runoff process, linear and non-linear hydrological model, Stream flow routing, and boundary layer flow. Ground water pollution. Modeling natural waters and treatment of systems. Introduction to principles of surface and groundwater hydrology. Sources of water. Water as a renewable resource. Aquifer analysis. Groundwater quality, its chemistry, migration and relation to geologic environment. Steady and unsteady flow of water. Groundwater pollution. Hydraulic conductivity, transmission, yield and storage. Quality analysis of water. Water profile, properties and characteristics of water. Hydrologic cycle. Meteorological consideration. Analysis of precipitation, runoff, flood routing and reservoir storage. Water resources investigation. Waste water treatment comparison of alternatives, screening and formulation of management projects. System

models of water transportation to rivers and streams.

PHY 866.2 Nuclear Application in Medicine, Industry and Research (3 Credit Units)

Physics and Principles of diagnostic imaging equipment: radiographic unit, computed tomography, mammographic units. Principles of radiation therapy (teletherapy and brachytherapy). Physics of radiotherapy equipment; CO-60 unit and Linear accelerator. Physics and operational principles of Gamma camera. Physics of positron emission Tomography (PET). Physics and operational principles of Magnetic Resonance Imaging (MRI). Industrial Uses: Industrial radiography, tracing, Gauging, Material Modification, Sterilization food preservation and others. Research Uses. Neutron Activation Analysis. Particle- induced N-ray Emission PIXE and others.

PHY 868.2 Seminar in Environmental Innovations and Nuclear Issues

Students will be required to prepare and present seminars in chosen topics in which they have critically reviewed. The technical papers should cover current issue and innovations on the environment and nuclear applications.

PHY 869.2 Project work

Post-graduate project will be tailored towards proffering solution to environmental problems in a chosen area. An analytical design or empirical study in applied physics with a blend in environmental concepts will be highly encouraged. The choice of project topic shall be in consultation with the Head of Department and an academic adviser. Written thesis shall be presented to the Department in consultation with the supervisor.

ELECTIVES

PHY 852.1 Non-Ionizing Radiation

Ultraviolet radiation, micro wave radiation, electromagnetic radiation x-rays, Bleared Gamma radiation. Radiometric Units Lasers. Laser operations. Lasing actions, TEM modes, biological effects: eye damage, skin damage Protection guides and standards, maximum permissible Exposure (MPE). Safety Measurements, power and energy. Beam divergence Radio frequency (RF) and Microwave: Communications, antennas and antenna gain. G. penetration depth GSM land-sets and base stations. Biological Effects. Thermal and Non- Thermal Effects, temperature-humidity index microwave measurement, survey meters. Protection Guides and standard Maximum permissible exposure (MPE) Safety.

PHY 853.2 Soil Mechanics and Properties

General theory of soil composition and classification. Characteristic of soil properties and Dynamics. Stress distribution in homogenous and layered elastic soil. Soil consolidation theory. Settlement of structure on soils. Bearing capacity and lateral earth pressure on soil. Stability and landslide phenomena. Soil and ground water pollution. Physical concepts of soil-soil improvement, particle size analysis, laterites, site investigation. Critical evaluation and review of standard testing procedures for soil identification. Treatment of shear strength static triaxial compression test and its several variation.

PHY 867.2 Introduction to Environmental Technology

Environmental technology and Environmental Science. Measurement and Evaluation of environmental pollution in air, water and land: legal and technical requirements in the preparation, interpretation of environmental impacts. The procedure and interdisciplinary nature of environmental analysis.

Impact Evaluation

Qualification of Impacts Fields

Mitigation

Understanding the sources and projects that cause Environmental degradation

Rernediation of gaseous pollutants.

Removal of gaseous oxides of nitrogen, Carbon and sulphur. Removal of particulates from moving and stationary sources. Removal of fluorides complex oxidants and mercury vapour. The principles of reactions and physical measurements applied for variety of analytical equipment employed in air quality studies.

Practical examples and case studies will be used. These may include evaluation and analysis of Social and industrial Noise

Vibration hazards, toxic and radioactive materials Statistical analysis and modeling of environmental systems. In-situ and online measurement of environmental pollution. Types of environmental studies, EIA. EAR. Environmental Monitoring

PHY 860.1: Radiation Protection guides

The external Radiation Hazard and Protection. Time distance and shielding, monitoring for external radiations (areas and personal). The internal Radiation Hazard and Protection: Sources and types of airborne contaminants, control of the internal radiation hazards exposure reduction, internal dosimetry. Waste Management of Contamination, protection against contamination (protective clothing, decontamination of waste

disposal, packaging and safe transport of radioactive materials. Principles to Radiation protection Justification, optimization, dose limit international safety standards ICRP, BSs, NNRA. Elements of Radiation protection programmed in Medicine and dosimetry: Monitoring, Emergency preparedness planning and response. QA and QC instrument. Training, Audit, Safety of equipment.

PHY 866.2 Ionizing Radiation

The main element of the course are effects of ionizing radiation on the human body, units of measurement of ionizing radiation and doses, basic of dosimetry for the use in radiotherapy and risk assessment of radiation exposure of humans. The Physics of ionizing radiation. An overview of radioactive and non-radioactive radiation sources.

PHY 869.2 Radiation Biology

Properties of ionizing radiation, radiation field, interactions of radiation with matter, Direct and indirect effects of radiation. Radiobiological effectiveness (RBE) of different radiations. Some factors that modify the biological effect of radiation. Basic principles of radioisotope imaging. Generations and principles of acoustic waves. Detection of ultrasound. Safety of ultrasound. Imaging with ultrasound.

Ph.D. PROGRAMME

The PhD programme is geared towards (a) the production of high caliber specialists in the various options for services in higher institutions and the industry (b) the introduction of high level of research experiences and (c) the development of originality, interdisciplinary and cooperative research, analytical and a critical mind.

1) Regulations

The programmes for degree of Doctor of philosophy (PhD) shall consist of a minimum of 48 credit units out of which 30 credit units is expected from masters work. The other 18 credit units shall come from approved courses of study, Seminars and Research project.

2) Duration of Programme

The PhD candidates will be required to spend a minimum of 24 calendar months (2 years) and a maximum of 60 calendar months (5 years) for Full-Time. Part-Time candidates will be required to spend a minimum of 36 calendar months (3 years) and a maximum of 84 calendar months (7 years).

3) Course Assessment

The PhD programme is in accordance with the existing regulations of the University of Port Harcourt. To be qualified for the award of the PhD. degree in any of the options, the following requirements must be met:

The candidate will be required to take a minimum of 18 credit units courses (3 compulsory and 2 elective courses)

The candidate will be required to deliver five seminars in his/her area of specialization before graduation (3 Seminars in Department, 1 at Faculty, 1 at graduate School)

The candidate shall attend at least two professional conferences.

A thesis must be submitted after completion and defended orally before an officially appointed External Examiner in accordance with University of Port Harcourt regulations.

COURSE DESCRIPTION FOR PhD PROGRAMMES IN PHYSICS

PHY 901.1: Research Methods and Technical Writing

The concepts of research proposals, principles of scientific research presentations and the essential sound bites, essentials of spreadsheets, internet technology and power point presentations, concepts of hypotheses formulations and testing, relevant statistical models and packages, precisions and accuracy estimations. Organization of research, planning, publications and writing of different types of reports. Importance of referencing, abstracts and conclusion.

PHY 902.1: Research Project (Dissertation)

PhD research project will be tailored towards proffering solution to Physics related societal problems in a student's area of speciality. An analytical design or empirical study in applied physics with a blend in environmental concepts will be highly encouraged.

The choice of project topic shall be in consultation with the Head of Department and an academic adviser. Written thesis shall be presented to the Department in consultation with the supervisor.

PHY 903.2: Global Geophysics

This course aims at introducing the concepts, methods and results of Solid Earth Geophysics. It examines the theory, application and limitation of geophysical methods and reviews their contributions to our knowledge of the surface and interior of the Earth. It covers the following topics: Introduction to the structure and evolution of the Earth as unified by geophysical methods seismology, gravity and magnetic

Stress and Strain in Solids
Elasticity and Flexural Theory
Plate Tectonics as related to the unified theories of:
Seafloor spreading
Continental drifting Transform Faults
Heat Transfer and Heat Flow

PHY 904.2: Current Advances in Applied Geophysicss

Discussion of selected current literature and active geophysical research in Niger Delta and West African sub region. The current research efforts in Seismology, Electrical, Gravity and Magnetic methods as applied to the region

PHY 905.2: Geophysical Exploration

This course reviews and summarizes the geophysical methods used in the exploration of minerals in Nigeria. They will include techniques used in oil and gas industry, solid minerals and water resources. Environmental geophysics will also be introduced and discussed

Seismology methods

Potential Theory and methods

Electrical methods Resistivity, GPR, Radiometrics, Nuclear, etc

PHY 908.2: RecentAdvances in Materials Science

This course shall treat recent findings in the area of: (i) Metals and alloys (ii) Semiconductors (iii) Superconductors (iv) Composite Materials (v) Ceramics and polymers.

Topics shall include: Non- destructive surface analysis of composite and polymers by handheld FTIR, A new frontier in coatings analysis, AFM-IR: Nanoscale IR spectroscopy for materials and life sciences, modeling electrons and atoms for materials science, grapheme based materials: past, present and future, CuO nanostructures: synthesis, characterization, growth mechanisms, fundamental properties and applications, recent progress in antireflection and self-cleaning technology- from surface engineering to functional surfaces, 3D vascular system, Carbon nanotube super capacitors for portable electronics, phase change materials for thermal energy storage, A review of numerical analysis of friction stir welding, Grapheme oxide-based transparent conductive films, Ti based biomaterials, the

ultimate choice for orthopedic implants, grapheme based materials: past, present and future and plasticity in small sized metallic systems: intrinsic versus extrinsic size effect.

PHY 909.2: Advanced Corrosion and Degradation of Materials

This course aims at selected current special topics with interest in technology applications. Examples include; probing microbiologically induced corrosion, metal sensitivity in patients with orthopedic implants, current concepts and review of corrosion of metallic materials implants, corrosion and destructive electrochemical attack of materials, corrosion, cracking, microbiological degradation in highly corrosive marine environment, environmental degradation of materials and cathodic and anodic protection control of materials.

PHY 912.2: Current Trends in Environmental Physics

Nano Tech Application in Env. Physics; Radiation Protection in Hospitals; Occupational Exposure to Radiation & Noise Hazards; Applications of Radiation Technology to Imaging & Environmental Monitoring; Modem Methods and Equipment for Monitoring Environmental Radiation and Noise Pollution.

PHY 913.2: Environmental Policies and Standards

Env. Regulation & Standards in Nigeria (Noise & Radiation); Noise Measurements & Dose Calculations; Radiation Measurements & Dose Calculations; Radioactive Wastes' Management:- Nigerian Policies & Regulations, International Policies & Regulations; FME, NESREA & NNRA Acts; International/Regional & Regulations on Radiation Safety/Guide

PHY 914.2: Environmental Technology and Climate Change

Climate change and Dynamics of Climate change; Global Warming, Causes & Consequences; Physics of Climate Change; Environmental Standards and Sustainable Development; Instrumentation in Env. Physics; industrialization and Env. Pollution.

ACADEMIC STAFF

Name	Qualification	Designation	Field Specialisation
Avwiri, G.O.	BSc, MSc (Uniport),.PhD (RSUST), FNIP	Professor	Solid State Electronics/Environmental and Radiation Physics
Abbey, T.M.	BSc(RSUST), MSc(Ibadan). PhD(Uniport)	Professor	Applied Mathematical/Theoretical Physics (Plasma)
Chukwuocha, E.O.	BSc, MSc, PhD (Uniport)	Professor	Theoretical Physics
Osarolube, E.	BSc(FUTO), MSc(Ibadan), PhD(Uniport)	Professor	Material Science
Chad-Umoren, Y.E.	BSc (RSUST), MSc (Unilag), PhD (RSUST)	Professor	Nuclear Physics
Ehirim, C.N.	BSc (ABSU), MSc (FUTO), PhD(Uniport)	Professor	Geophysics
Nte, F.U.	BSc (Uniport), PGD (ABU). M. Phil, PhD (RSUST)	Professor	Environmental Physics
Nwankwo, C.N.	BSc (Ibadan), MSc,.PhD (Uniport)	Professor	Applied Geophysics
Ononugbo, P.	BSc (UNN), MSc (RSUST). PhD (Uniport)	Professor	Environmental/ Radiation Physics
Alalibo, T.N.	BSc , MSc, PhD (RSUST)	Professor	Theoretical Physics
Emujakporue, G.	B.Tech (FUTA), M.Sc, PhD (Uniport)	Professor	Applied Geophysics
Sofolabo, A.O.	BSc, MSc (Uniport)	Reader	Applied Geophysics
Onyeaju, M.C.	BSc(Ekpoma), MSc (Ibadan)	Reader	Theoretical Physics (condensed Matter)
Amusan, J.A.	B.Tech.,M.Tech	Reader	Electronics & Renewable Energy
Nwosu, L.	BSc, MSc, PhD (Uniport)	Reader	Applied Geophysics
Ikot, A.N.	BSc, MSc, PhD (Unical)	Senior Lecturer	Theoretical Physics
Obong, H.P.	BSc (Unical), MSc (Uniport)	Senior Lecturer	Solid State/Theoretical Physics
Onwuneme, S.E.	B.Sc, M.Sc (UNN)	Lecturer I	Theoretical physics
Otokunefor, E.B.	BSc, MSc (Uniport)	Lecturer I	Solid State Physics

DEPARTMENT OF PURE & INDUSTRIAL CHEMISTRY

PROGRAMMES

1. Programme Areas

The Department of Pure and Industrial Chemistry runs programmes leading to the award of M. Sc. and Ph. D. degrees in the following fields:

Pure Chemistry	Industrial Chemistry
i. Analytical Chemistry	i. Petroleum Chemistry and Petrochemicals
ii. Inorganic Chemistry	ii. Mineral Processing and Chemical Metallurgy
iii. Physical Chemistry	iii. Polymer Science/Technology
iv. Organic Chemistry	iv. Powder Technology/Chemical Products Processing
v. Environmental Chemistry	
vi. Pharmaceuticals/Medicinal Chemistry	

1. Registration

- There is provision for both full-time and part-time registration.
- Full-time candidates must register for all the prescribed courses/seminar/research project in their respective programmes (see item 4) at the beginning of the session.
- Part-time candidates must register for a minimum number of prescribed courses/seminar/research projects in their respective programmes (see item 4) at the beginning of the session.
- Part-time candidates must fulfill all the conditions laid down by the School governing their candidature.

2. Duration of Programmes

M. Sc. Programmes

- Full-time candidates will be required to spend a minimum of 1 calendar year and a maximum of 2 calendar years.
- Part-time candidates will be required to spend a minimum of 2 calendar years and a maximum of 4 calendar years.

Ph.D. Programme

Students admitted into the Ph.D. programme will require a minimum of 2 years to complete the programme.

3. Academic Work/Courses

M. Sc. Programme

Full-time students will take four taught courses and a seminar course in the first semester and three taught courses and a research project in the second semester.

Part-time students will take five taught courses in their first year of registration, i.e. three for 1st semester and two for 2nd semester. In the second year of registration, two taught courses and a seminar course will be taken in the first semester. A taught course and a research project will be taken in the second semester.

Each of the taught courses and seminar carries three (3) units while Research Project carries six (6) units

Ph.D. Programme

This programme consists of:

- Research Project
- Presentation of two Departmental seminars, one Faculty seminar and one School of Graduate Studies (SGS) University Wide Seminar
- Course work on Laboratory Management and Chemical Safety
- Supervision of undergraduate practical classes
- Preparation of thesis.

The prescribed courses in the various areas of specialization in the Department are outlined below.

(i) ANALYTICAL CHEMISTRY

S/N	First Semester	Second Semester
1.	CHM 835.1 Advanced Analytical Chemistry	CHM 836.2 Advanced Environmental Chemistry
2.	CHM 851.1 Advanced Inorganic Chemistry	CHM 837.2 Spectroscopic Methods for Analytical Chemistry
3.	CHM 841.1 Advanced Physical Chemistry	CHM 838.2 Advanced Analytical Instrumentation
4.	CHM 861.1 Advanced Organic Chemistry	CHM 890.2. Research Project SGS 802.2 Entrepreneurship & Management
5.	SGS 801.1 ICT & Research Method	CHM 830.2. Seminar

(ii) INORGANIC CHEMISTRY

S/N	First Semester	Second Semester
1.	CHM 835.1 Advanced Analytical Chemistry	CHM 836.2 Advanced Environmental Chemistry

2.	CHM 851.1 Advanced Inorganic Chemistry I	CHM 852.2 Advanced Inorganic Chemistry II	4.	CHM 861.1. Advanced Organic Chemistry	CHM 890.2. Research Project SGS 802.2 Entrepreneurship & Management
3.	CHM 841.1 Advanced Physical Chemistry	ICH 876.2 md. Applications of Electrochemistry & Corrosion	5.	SGS 801.1 ICT & Research Method	CHM 830.2. Seminar
4.	CHM 861.1. Advanced Organic Chemistry	CHM 890.2. Research Project SGS 802.2 Entrepreneurship & Management	(v) ENVIRONMENTAL CHEMISTRY		
5.	SGS 801.1 ICT & Research Method	CHM 830.2. Seminar	S/N	First Semester	Second Semester
(iii) PHYSICAL CHEMISTRY			1.	CHM 835.1 Advanced Analytical Chemistry	CHM 836.2 Advanced Environmental Chemistry
S/N	First Semester	Second Semester	2.	CHM 851.1 Advanced Inorganic Chemistry I	CHM 839.2. Chemical Toxicology
1.	CHM 835.1 Advanced Analytical Chemistry	CHM 845.2 Advanced Theoretical Chemistry	3.	CHM 841.1 Advanced Physical Chemistry	CHM 833.2 Waste Management
2.	CHM 851.1 Advanced Inorganic Chemistry I	CHM 847.2 Advanced Statistical Thermodynamics	4.	CHM 861.1. Advanced Organic Chemistry	CHM 590.2. Research Project SGS 802.2 Entrepreneurship & Management
3.	CHM 841.1 Advanced Physical Chemistry	CHM 849.2 Molecular Photophysics and Photochemistry	5.	SGS 801.1 ICT & Research Method	CHM 830.2. Seminar
4.	CHM 861.1. Advanced Organic Chemistry	CHM 890.2. Research Project SGS 802.1 Entrepreneurship & Management	(vi) PETROLEUM CHEMISTRY/ PETROCHEMICALS		
5.	SGS 801.1 ICT & Research Method	CHM 830.2. Seminar	S/N	First Semester	Second Semester
(iv) ORGANIC CHEMISTRY			1.	CHM 835.1 Advanced Analytical Chemistry	CHM 836.2 Advanced Environmental Chemistry
S/N	First Semester	Second Semester	2.	CHM 851.1 Advanced Inorganic Chemistry I	CHM 883.2 Petroleum Chemistry
1.	CHM 835.1 Advanced Analytical Chemistry	CHM 862.2 Applied Spectroscopy in Organic Chemistry	3.	CHM 841.1 Advanced Physical Chemistry	CHM 884.2 Petrochemicals
2.	CHM 851.1 Advanced Inorganic Chemistry I	CHM 867.2 Natural Product Chemistry	4.	CHM 861.1 Advanced	CHM 890.2 Research Project
3.	CHM 841.1 Advanced Physical Chemistry	CHM 863.2 Organic Synthesis			

	Organic Chemistry	SGS 802.2 Entrepreneurship & Management
5.	SGS 80.1 ICT & Research Method	CHM 830.2 Seminar

6. CHM 830.2 Seminar
* Choose one course from these Electives

(ix) POWDER TECHNOLOGY AND PRODUCT PROCESSING

(vi) MINERAL PROCESSING/ CHEMICAL METALLURGY

S/N	First Semester	Second Semester
1.	CHM 835.1 Advanced Analytical Chemistry	ICH 874.2 Advanced Mineral Processing and Chemical Metallurgy
2.	CHM 851.1 Advanced Inorganic Chemistry I	ICH 876.2 Ind. Applications of Electrochemistry & Corrosion
3.	CHM 841.1 Advanced Physical Chemistry	CHM 882.2 Introduction of Chemical Metallurgy
4.	CHM 861.1 Advanced Organic Chemistry	CHM 890.2 Research Project
5.	SGS 80.1 ICT & Research Method	SGS 802.2 Entrepreneurship & Management CHM 830.2 Seminar

S/N	First Semester	Second Semester
1.	CHM 835.1 Advanced Analytical Chemistry	ICH 871.2 Advanced Industrial Chemical Processes and Techniques
2.	CHM 851.1 Advanced Inorganic Chemistry I	ICH 873.2 Industrial Powder Technology
3.	CHM 841.1 Advanced Physical Chemistry	ICH 881.2 Surface Coatings
	CHM 861.1 Advanced Organic Chemistry	ICH 879.2 Wood, Pulp and Paper Chemistry
4.		ICH 877.2 Surface Reaction and Catalysis CHM 890.2 Research Project CHM 830.2 Seminar SGS 802.2 Entrepreneurship & Management

(vi) POLYMER SCIENCE/ TECHNOLOGY

S/N	First Semester	Second Semester
1.	CHM 835.1 Advanced Analytical Chemistry	ICH 871.2 Advanced Industrial Chemical Processes and Techniques
2.	CHM 851.1 Advanced Inorganic Chemistry I	ICH 875.2 Polymer Science

Method

**COURSE CONTENT/OUTLINE FOR
RECOMMENDED M. Sc. COURSES**

CHM 835. 1 Advanced Analytical Chemistry

Course Objective: Theoretical principles and the application of analytical methods to the study of chemical system with emphasis on separation and radio chemical methods.

Chromatography, HPLC, Other Separation Methods, Radiochemical Methods, Electrophoretic Methods

Polarographic Methods, Absorption Spectroscopy, AAS, X-Ray Methods, Mass Spectrometry, NMR Spectroscopy, Thermal Analysis.

CHM 851.1 Advanced Inorganic Chemistry I

Outline: This course covers such topics as symmetry and structures, structures and energetics of ionic solids, reactions in non-aqueous solvents and physical methods in Inorganic Chemistry. The aim is to provide more fundamental principles that may be necessary for a research work.

Part A Symmetry and Structures, Ionic solids and other extended arrays, Reactions in non-aqueous solvents, Physical methods in Inorganic Chemistry.

Part B. Spectra, Uranium chemistry and chemistry of the trans-uranium elements, Structure of ionic solids.

CHM 861.1 Advanced Organic Chemistry

Optical activity and chirality; methods of determining configuration; cis/trans isomerism in alkenes, monocyclic compounds and fused rings; conformational analysis. Reaction mechanisms: types of mechanisms; Thermodynamic and kinetic requirements for reactions; methods of determination of the presence of intermediates, isotopic labelling and isotope effects, stereochemical and kinetic evidence for mechanisms. Reactive intermediates such as carbocations, carbanions, free radicals, carbenes, nitrenes and arynes.

CHM 841.1 Advanced Physical Chemistry

PART A Molecular Dynamics-The kinetic theory of gases, Ion transport and molecular diffusion, Macromolecules.

PART B Chemical Kinetics- Complex reaction system (reversible, concurrent, and chain reactions). Unimolecular gas phase reactions (the Lindemann mechanism, PRK theory, Absolute

Rate theory, RRKM theory). Bimolecular gas phase reactions (hard elastic sphere model, Absolute Rate theory). Solution phase reactions (Transition State theory, effects of pressure, ionic strength and dielectric constant on relative rates of reaction, diffusion-controlled reactions).

PART C Electrochemistry- Processes at electrodes. Electrochemical processes. Power generation and storage. Corrosion.

CHM 836.2 Advanced Environmental Chemistry

The objective of the course is to expose candidates to advances in the scientific study of the chemical phenomenon occurring in nature. More fundamentally, the course is rooted in the fate, of chemical species and the impact of anthropogenic activities on air, water and soil environments. Mechanisms and fate of pollutants and their transfer between environmental compartments. Atmospheric Chemistry and Pollution chemistry, Air Nature of our atmosphere, structure and properties, Water Chemistry and Pollution. Water: Nature of our aquatic environment, Soil Environment, Standard remedial techniques, Introduction to Environmental Forensics

CHM 837. 2 Spectroscopic Methods for Chemical Analysis

Course Objective: The study of the interaction of electromagnetic and other forms of radiation with matter and the application of the great variety of spectroscopic methods to the study of chemical systems.

Absorption Spectroscopy, AAS, X-Ray Methods, Mass Spectrometry: NMR Spectroscopy:

CHM 838. 2 Advanced Analytical Instrumentation

Course Objective: The study of instrumentation of modern analytical methods.

IR, UV/V is Spectrometry, X-ray Methods, Mass Spectrometry, NMR Spectroscopy, NMR spectrometer, Chromatographic Methods.

CHM 639.2. Chemical Toxicology

This course introduces candidates to the basic concepts of toxicology and the principles and procedures of environmental impact assessment (ETA).

Systematic toxicology, ecotoxicology, Toxicological evaluation. Pesticide pollution, Pollution by heavy metals and intoxication, biotransformation, bioaccumulation, biodeterioration, biocorrosion, ecological magnification

Origin and development of ETA, Nature & purpose, ETA decree, General ETA process, Impact assessment methodologies

CHM 833.2. Waste Management

Solid wastes: Sources of solid waste generation: waste water treatment, industrial, municipal. General solid waste management: reduction, reclamation, recycling, reuse and recovery. Solid waste disposal methods specific to plastics, petroleum, chemical, pulp and paper, textile, food industries. Incinerations and its environmental effects.

Liquid wastes: Classification, types and sources, Generation of waste water, domestic, industrial, etc. Waste water treatment 10, 20, and 30 treatments.

Gaseous Wastes: Classification, types and sources, Particulate pollutants, analysis and methods of control and air purification.

Advanced adsorption processes as waste remediation technique and heavy metal removal from liquid wastes. Thermal air pollution

CHM 845.2 Advanced Theoretical Chemistry

PART A Molecular Structure- The hydrogen atom (development of the Hamiltonian operator, separation of variables, determination of the relation between the quantum numbers n , l , and m , determination of ionization potential for the hydrogen atom). The H_2 molecule. The H_2 molecule. Homonuclear diatomics. Heteronuclear diatomics. The variation method. LCAOMO methods applied to planar, unsaturated and aromatic molecules (Butadiene. Benzene).

PART B Chemical Application of Group Theory - Fundamentals of group theory. Molecular orbital theory. Electronic spectroscopy. Vibrational spectroscopy. Nuclear magnetic resonance spectroscopy.

CHM 847. 2 Advanced Statistical Thermodynamics

Mathematical prelude (Green's theorem, Legendre transformations and Maxwell's relations, Lagrange's method of undetermined multipliers, permutations and combinations). Gibbs ensembles (microcanonical, canonical, and grand canonical ensembles). Thermodynamic properties in terms of Gibbs ensembles. Statistics of an ideal monatomic gas. Statistics of an ideal diatomic gas. Application of statistical mechanics to chemical equilibria. Fermi-Dirac and Bose-Einstein statistics.

CHM 849.2 Molecular Photophysics and Photochemistry

Theory of electronic transitions (Einstein transition probability, Born-Oppenheimer separation, Franck-Condon factors, selection rules). Kinetics of fluorescence and phosphorescence (detailed consideration of Jablonski diagram, efficiencies of singlet-triplet intersystem crossing, quenchers). Kinetics of other luminescence processes (singlet excimer formation and decay, E-type and P-type delayed fluorescence, triplet excimers, excimers in polymer systems). Electronic energy migration and transfer. Photophysical processes in polymers. Chemical reactions of electronically excited molecules. Selected photochemical reactions.

CHM 862.2 Phytochemistry

The course will deal with isolation characterization and synthesis of selected natural products of medicinal value.

CHM 863.2 Organic Synthesis

This course is concerned with synthetic strategy; its design and planning; bond formations, functionalization and functional group interconversion as well as functional group protection; asymmetric and multistep synthesis.

CHM 864.2 Applied Spectroscopy in Organic Chemistry

Advanced theories and practical applications of IR, UV, MS and NMR in elucidation of complex structures. Its application in organic transformations.

CHM 865. 2 Medicinal Chemistry

Physicochemical properties in relation to biological action. Rational drug design. Introduction to pharmacokinetics, chemotherapeutic agents; psychotropic drugs; antibiotics, antimalarial drugs; structure-reactivity relationship.

CHM 866.2 Advanced Pharmaceutical Chemistry

Advances in pharmaceutical analysis and quality control, drug production, dispensing and control.

ICH 871.2 Advanced Industrial Chemical Processes

Scale-up from pilot plants (Chemical Similitude Method): Dimensionless groups for homogeneous reaction systems. Dimensionless groups for heterogeneous reaction systems. Fluid and particle dynamics: Fluid rheology. Flow of fluids in conduits. Flow of fluids around obstacles. Flow through beds of solid particles. Residence time distribution (RTD) - mixing in pipelines. Reaction

vessels: Types of reaction vessels and performance equations. Conversion in terms of rate and temperature profile. Equilibrium constant from thermodynamic relationship. Reaction path for the optimum size of a reaction (vessel adiabatic operation). Reaction path for the optimum size of a reaction vessel (non-adiabatic operation). Analysis of approximate methods for solving transient (or unsteady-state) heat transfer: Problems in chemical processing operations. Use of the energy (or heat-balance) integral method for solving the boundary value problems of one-dimensional transient heat conduction. Numerical integral of unsteady state heat transfer problems. Application of finite difference techniques to one-dimensional time-dependent heat conduction. Graphical analysis of transient heat conduction problems.

ICR 873.2 Industrial Powder Technology

Transportation or circulation of powdered solids in suspensions: Flow of high bulk density mixtures. Pneumatic transport or flow of low bulk density mixtures.

Separation, classification of solid particles: Filtration in solid liquid separation. Settling and sedimentation in particle fluid separation. Fluidized bed (Hydraulic) classifiers. Centrifugal separation processes. Mixing of fine industrial powders: The countercurrent back mixing model. The dense phase diffusion model. The slug flow (or bubbling bed) model.

ICR 874.2 Advanced Mineral Processing and Chemical Metallurgy

Part A. Mineral Processing

Outline: The basic principles involved in the various processes for the production of some metals are discussed. The emphasis is not on how the various processes are performed, but on what is actually happening and why the processes are carried out in certain ways.

The topics include phase separation, fuel and ore preparation, reduction of metal oxides, malte smelting, metallothermic reductions halide metallurgy and hydrometallurgy. The basic tools of metallography will be discussed, namely reflected-light microscope, X-ray metallography and electron microscopy; types and properties of slags and refractories. Metallography:

Specimen preparation, the reflected light microscope, defects of lenses. X-ray metallography, white and characteristic radiation, the Bragg law, the structure factor power method and the accurate measurement of lattice parameters, diffraction. Electron microscopy.,

Electron wavelength, the electron microscope., Specimen assembly, resolution and preparation of specimens. Metallography at the atomic level metallography held microscope, neutron diffraction.

PART B. Principles of Chemical Metallurgy

Outline: This course is intended to introduce the student to some basic principles of chemical metallurgy. The topics include alloy thermodynamics, phase equilibria, phase diagrams and heat-treatment of selected industrial alloys. The theories of microstructural stability will be treated also.

ICR 876.2 Industrial Application of Electrochemistry! Corrosion

Electrolytic conduction, applications of conductivity measurements, the determination of pH, other electrochemical detectors. Electrode processes, polarography and voltammetry, electrocatalysis and eletrosynthesis, further applications of electrode processes. Basic corrosion theory. Corrosion types and methods of minimizing them. Corrosion kinetics activation and concentration overpotentials, mixed potentials and pourbaix diagrams, corrosion rates, atmospheric corrosion and microbiological influenced corrosion (MIC). Corrosion monitoring techniques and laboratory corrosion tests, corrosion control methods.

ICR 877.2 Surface Chemistry and Catalysis

Preparation of catalysts. Deactivation of catalyst modelling equation. Kinetics of catalytic reactions determination of kinetic constants. The measurement of catalytic reaction rate. Analysis of kinetic results. Principle of adsorption

ICR 878.2 Colour Chemistry

Colour chemistry A historical background. Raw materials for the manufacture of dyes and dye intermediates: Major reaction types in the production of dye-intermediates, viz nitration, reduction, sulphurisation, halogenation, oxidation, condensation, etc. Manufacture of dyes: Azo dyes Triphenylethane dyes, xanthene dyes, simple anthraquinone and related dyes, indigoid and thioindigoid dyes. Phthalosyanines and fluorescent brightening agents. Textile fibres: Their chemistry as background to the understanding of the chemistry of dyes. Major classes of substrates hydrophilic and hydrophobic cross-dyeing. Classification of dyes: Classification according to application method and according to chemistry type or the colour index. Properties and applications of dyes:

Application and end-use properties; fibre prep., dye-bath prep., dye application and finishing. Dyeing machinery or equipment: A descriptive outline. Pigment dyeing and printing: direct, dyed, discharge and resist printing. Dyestuffs as pigments applications in paints and plastics. Non-textile uses of dyes. Future trends in dyestuffs: An overview.

ICR 879.2 Wood, Pulp and Paper Chemistry

Chemical composition of wood: cellulose, lignin, etc. Raw materials for paper, plywood and particle board manufacture such as bagasse, timber, etc. Preservation methods for wood: Wood treatment, painting, etc. Pulping methods: Mechanical, chemical and semi-chemical methods with emphasis on bagasse pulping methods (Celdesor, Cusi's and Sivola processes). Bleaching of wood pulp: Alkaline extraction, hypochlorite, chlorine and peroxide bleaching. Pigmentation of pulp for paper manufacturing and dyeing: types and preparation of fillers. Effects of fillers on the properties of paper. Retention of filler and factors that affect retention of fillers colouring materials and classification of dyes. Effect of additives on dyeing of paper. Methods of dyeing paper. Sizing of paper: Effect of sizing on the properties of paper. Sizing processes. Factors affecting sizing. Sizing materials. Properties of paper: Physical, chemical, mechanical (strength), optical and resistance properties of cellulose based products. Quality control and paper defects.

ICR 881.2 Surface Coatings

Paints, Varnishes and Lacquers: Components of coating systems binder, pigment, solvent and other additives. Flow behaviour of polymer systems (viscosity). Effect of binder, concentration, solvent and molecular weight on viscosity. Effect of evaporation rate of solvent on coatings. Pigmentation of coatings. Pigment/binder geometry, pigment volume concentration (PVC) and pigment packing factor, porosity. Critical pigment volume concentration (CPVC): Determination of CPVC optical properties that undergo abrupt to gradual changes at CPVC. Reduced pigment volume concentration: a key formulating parameter. Oil absorption values: Methods of determination, significance and interpretation of oil absorption value. Relationship between CPVC and oil absorption value (OA). Formulating principle; paint manufacture; pigment dispersion and processing operations. Varnish and lacquer manufacture. The substrate and its preparation and surface coating defects. Testing and quality control. Adhesion and Adhesives, Phase changes. Theories of adhesion. Survey of

adhesive types. Formulation principles choice of components. Testing of adhesive bondlines.

ICR 883.2 Petroleum Chemistry II

A brief introduction to the Nigerian oil industry. Origin of crude oil chemical aspects. Chemicals in oil production. Chemical nature of crude oil and natural gas crude analysis. Classification of crude oils. Characterization of crude oils. A review of basic hydrocarbon reactions. Carbonation reactions. Free radical reactions. Refinery processes: Separation process distillation and crude oil treatments, e.g. absorption, adsorption and solvent extraction. Conversion processes (Chemistry and Technology). Catalytic reforming, Isomerisation, Catalytic cracking, Hydrocracking, Visbreaking, Delayed coking, Alkylation reactions, Dehydroisulphurisation, Dimerisation, Finishing, Hydrotreating and finishing, Gasoline blending and some aspects of gasoline quality. Lubricating oils chemistry and technology. Basic test for petroleum products and quality control. Fuels, Lubricants. Economics of the fuel industry.

ICR 884.2 Petrochemicals

Introduction to the petrochemical industry: Relationship with the refinery. Growth and economics. Production of olefins, Gas feedstock, Liquid feedstocks, Processes: Steam cracking (chemistry and technologies). Other sources of olefins. Petrochemicals from methane chemistry of reactions. Petrochemicals from paraffins chemistry of reactions. Chemistry and technology of petrochemicals from ethylene. Chemistry and technology of chemicals from propylene and higher olefins, Chemistry and technology of petrochemicals from benzene, toluene and xylene.

Introduction to polymer chemistry:

Classification, Polymerisation reactions, Polymerisation techniques, Physical properties, Thermoplastics, Thermosetting and engineering resins, Synthetic fibres, Synthetic rubbers.

Seminar

Seminar topics will be selected from courses which relate to the student's area of specialization.

Continuation Requirements

A student in the M.Sc. Programme must score an average of C at the end of the first semester examinations to continue in the programme.

5. Research Projects and Supervision

Project supervisor(s) will be allocated to students during course registration at the beginning of their programme. Project supervisor, in consultation

with project students, assign research project to students.

6. Examinations

Course examinations will be conducted as stipulated by the School of Studies! Faculty of Science. Oral examinations can only be conducted for candidates who have met all the prescribed regulations by both the School and the Faculty of Science.

POST-GRADUATE DIPLOMA IN CHEMISTRY (PGDC)

A. Objective of the Programme

The PostDiploma Programme in Chemistry is intended to cater for the high manpower need of the economy.

B. Mode of Study

The PGDC programme shall be an evening programme. The mode of study shall be by course work with practicals in all relevant courses. Students shall be required to write term papers and deliver seminars. Project work shall be in form of laboratory research work.

C. Admission Requirements

Candidates wishing to be admitted into the PGDC programme are expected to have any of the following qualifications: A Bachelor's degree in Chemistry, Applied/Industrial Chemistry, Biochemistry, Geology, Chemical Engineering, Gas Engineering, Environmental Engineering, Microbiology, Pharmacy, Pharmaceutical Chemistry, Pharmacology, Education and related areas from the University of Port Harcourt or any other approved university.

D. Courses for the Programme

Students admitted into the programme must register and pass the following courses:

1st Semester

Course Code	Course Title	Unit
CHM 702.1	Physical Chemistry	3
CHM 703.1	Inorganic Chemistry	3
CHM 704.1	Organic Chemistry	3
CHM 700.1	Seminar	3
	Total	12

2nd Semester

Course Code	Course Title	Unit
CHM 701.2	Analytical Chemistry	3

CHM 700.2	Project	3
Any other Electives	two courses from the	6
	Total	12

Elective Courses for Second Semester

Course Code	Course Title	Unit
CHM 702.1	Electrochemistry	3
ICH 703.2	Mineral Processing/Metallurgy	3
CHM 704.2	Organic Synthesis	3
ICH 705.2	Process Chemistry & Technology	3
ICH 706.2	Polymer Science	3
ICH 707.2	Petroleum Chemistry	3
CHM 708.2	Environmental Chemistry	3
CHM 709.2	Natural Products Chemistry	3

COURSE CONTENT/OUTLINE FOR RECOMMENDED PDGC COURSES

CHM 701.2 Analytical Chemistry

Course Objective: The emphasis is based on theoretical principles and practical applications of analytical methods to the study of chemical systems.

Introduction: Types of Analysis. Steps in an Analytical Process. Statistical Evaluation of Analytical Results. Electrogravimetry and Coulometry: The Faraday's Laws. Electrogravimetry. Conditions for good electrogravimetry. Polarization effects. Controlled currentl Controlled-potential coulometry. Coulometric titration. Electrolytic stripping. Applications.

Voltammetry: Dropping mercury electrode. Polarographic currents. Stripping voltammetry. Anodic stripping analysis. Chronopotentiometry. Amperometry. Amperometric titration. Applications.

Complexometry: Classification of ligands. Masking and demasking. Complexometric titration. Metal ion indicators. Applications. Absorption Spectroscopy: IR absorption and molecular structure, quantitative application. UV-Visible absorption, photometric titration, quantitative application. Atomic absorption spectroscopy, emission and absorption in flames, atomization and ionization, quantitative analysis. Separation Techniques: Thermodynamics of partition between two phases. Thermodynamics of separation: batch and continuous extraction. Solvent extraction, chelate extraction, masking and pH effects. Chromatographic methods: GC,

GSC, LLG, IEL, Gel chromatography, HPLC, Paper and thin layer chromatography. Quantitative applications. NMR Spectroscopy: Principles, Proton NMR, spectra and molecular structure elucidation, quantitative analysis, NMR spectrometer.

Mass Spectrometry: Principles, resolution, use of stable isotopes, the mass spectrum, analysis of mixtures, analytical applications Thermal Analysis: Principles, types, instrumentation and analytical applications X-ray Methods: Production of X-ray and X-ray spectra, X-ray methods, Direct absorption, emission fluorescence and diffraction, electron microprobe analysis.

Radiochemistry: Nuclear reactions and radiations, measurement of radioactivity, applications of radionuclides, analytical applications.

CHM 702.1 Physical Chemistry

Equation of State for Real Gases: Van der Waals Equation, Redlich Kwong Equation, Virial Equation of State. Physical Equilibrium: The Relation between Fugacity Co-efficient. Calculating Fugacity. Estimating the Fugacity of a Gas.

Chemical Equilibrium: Properties of Reaction. Perfect Gas Equilibrium. Effect of Temperature on Equilibrium Constant. The Kinetic Molecular Theory of Gases: The Most Probable Speed, the Mean Speed, and the Root-Mean-Square Speed, of Gases. Diffusion of a Gas. Thermal Conductivity of a Gas.

Viscosity of a Gas. Physical Transformations of Simple Mixtures: Partial Molar Quantities. The Thermodynamics of Mixing. Ideal Solutions. Colligative Properties.

Chemical Kinetics: Rate Laws and Rate Equations. Reaction Order and Molecularity of Reaction. Determination of Order and Rate Constant. The Arrhenius Equation. The Mechanism of a Reaction. Catalysis. Basic Laws of Thermodynamic.

CHM 702.2 Electrochemistry

Introduction: Faraday's Laws of Electrolysis. Electrochemical Series. Ionic Activities. Mean Activity Coefficients. The Debye-Huckel Limiting Law. Electrochemical Cells: Galvanic Cells and Electrolysis Cells. Half-cells and Standard Electrode Potentials. Classification of Electrodes. Representation of Electrochemical Cells. The Nernst Equation. Applications of reduction potentials: Equilibrium Constants. Solubility Product Constants. The Measurement of pH and pKa. Thermodynamic Functions from EMF Data. Conductivity of Electrolyte Solutions: Specific Conductivity and Molar Conductivity. Ostwald's Dilution Law. Kohlrausch Law of Independent

Migration of ions. Kohlrausch Equation. Ionic Mobilities. Transport Numbers.

CHM 703.1 Inorganic Chemistry

Characteristics of transition metals, theories of bonding (valence bond theory, Crystalfield theory, Molecular-Orbital theory), Carbonyl. The chemistry of the transition metal groups (Sc, Ti, V, Cr, Mn, Fe, Co, Ni, Zn groups). General Chemistry of the Lanthanides and Actinides, Coordination Chemistry.

ICH 703.2 Mineral Processing and Metallurgy

Ore Dressing/Mineral Processing (Combination Processing crushing and grinding)

Classification processes, separation or concentration processes, agglomeration techniques. Extraction Processes: Roasting of metal oxides, smelting matte converting, Reduction of metaloxides, fire refining. Extraction of iron-Blast furnace (BF) and Direct Reduction (DR) methods, Extraction of CU, Pd Zn, Al and Mg Steel making. Metal melting: Types of melting furnaces, casting methods and casting defects. Metal working techniques - rolling, forging, extrusion, wire drawing, etc.

CHM 704.1 Organic Chemistry

Reactants and Reactions. Types of reactants; Types of reactions, S_NI, S_N2, E1 and E2. Reaction mechanisms - product studies, kinetic and non-kinetic methods. Structure and Reactivity. Electronic and field effects: interpretation of physical properties of organic molecules using inductive, mesomeric and hyperconjugative effects. The Hammett's Equation: stereochemical principles in organic reactions; conformation of organic molecules. Chemistry of di- and polyfunctional compounds: General survey of di- and polyfunctional compounds. General reactions of sugars and amino-acids as polyfunctional compounds.

CHM 704.2 Natural Products Chemistry

Advances in Natural Products Chemistry: Identification, isolation, structural determination and uses of essential oils, alkaloids saponins. Naturally occurring compounds of pharmaceutical importance. Review on recent trends in Natural Products Chemistry.

CHM 705.2 Process Chemistry and Technology

Fundamental concepts and equations in heat, mass, and momentum processes. Mass transfer with and chemical reaction. Single and multiple isothermal chemical reactors. Non-isothermal chemical reactors. Selected topics in heat conduction and in

mass and modal concentration diffusion processes. Ideal-stage and non-ideal stage separation techniques in chemical process operations. Ideal (or equilibrium) - Stage calculations of trayed and packed columns (or towers). Studies of process techniques for separating mixtures of chemical species in the petroleum/ petrochemical, natural gas liquid and chemical industries. Real (or non-ideal) - Stage approach of separation techniques, Non-equilibrium stage approach to the determination of the performance of distillation columns, hydrocarbons absorbers, trayed and packed absorbers and strippers for the removal of acidic components like CO₂, H₂S and CO from gas streams.

ICH 706.2 Polymer Chemistry/Technology

Basic concepts: Polymer, structural unit, macromolecule, resin, monomer, etc. Different types of polymers. Sources of monomers. Monomer functionality. Polymer Utilization - Thermoplasticity and Thermosetting resins. Polymer sation - Addition and Condensation (simple treatment. Polymerization conditions - Bulk, Solution, Suspension and Emulsion Techniques (Introductory principles). Crystallinity in polymers. Characterization of Polymer molecular weights. Polymer solubility and solutions. Transitions in polymers.

ICR 707.2 Petroleum Chemistry

Introduction: Brief chronological history of oil and gas. Origin of petroleum. Nature of Oil and Gas:

Definition of crude oil. Composition of crude oil. Analysis and properties of crude oil. Classification of crude oil. Gaseous Petroleum (natural gas). Composition of natural gas. Chemicals used for oil production and chemistry of oil drilling. Environmental Implications of oil and gas production. Oil Refinery Processes. Separation processes: crude oil distillation. Review of basic hydrocarbon reactions: Carbocation reaction. Free radical reactions. Conversion Processes:

Catalytic reforming. Catalytic. Isomerization. Hydrocracking. Dehydroisulphurization. Lubricating Oils Chemistry Technology. Basic tests for petroleum products and quality control.

CHM 508.2 Environmental Chemistry

The objective of this course is to introduce students to chemistry of the environment and environmental pollution control methods in various industries.

Basic definition of environmental terms, Regulatory policies and programs, Soil ecosystems, Differences between pollution and contamination, Oil spill/hydrocarbon identification, Bioremediation /pollution abatement, Soil sampling.

Air pollution: Sources, Effects. Control and abatement

Water pollution: Sources, Effects. Control and abatement

Thermal Pollution: Effects. Use of waste heat. Radiation and its effects on life. Introduction to waste management and Adsorption process.

CHM 509.2 Organic Synthesis

Synthetic Design: Planning synthesis, Disconnection and connection. Carbon-Carbon single bonds (CC). Carbon-Carbon double bonds (C=C). Carbon-Carbon triple bonds (C≡C). Functional group interconversion. Transformation of Organic molecules. Oxidation. Reduction. Applications of Infrared spectroscopy, Mass spectrum, ultra-violet, and nuclear magnetic resonance spectroscopies in synthesis.

E. REQUIREMENT FOR THE AWARD OF THE DIPLOMA

Students must register and pass all courses. Each student's performance shall be based on:

- (i) Continuous assessment and final examination in the taught courses
- (ii) Assessment of seminars
- (iii) Assessment of Project work by supervisors

DEPARTMENT OF PURE AND INDUSTRIAL CHEMISTRY

S/N	Name	Qualifications	Field of Specialisation	Status
1.	Ngochindo, R.I.	BSc, PhD (Liverpool), CChem, FRSC, FCSN, FICCON	Organic Chemistry	Professor
2.	Akaranta, O.	BSc (Nigeria), MSc (ABU), PhD (UPH)	Polymer Science & Technology	Professor
3.	Abayeh, O.J.	B.Sc (Benin), MSc (UMIST)	Polymer Chemistry	Professor
4.	Ogali, R.E.	BSc (Nigeria), M.Phil, PhD (London)	Organic/Pharmaceutical Chemistry	Professor
5.	Horsfall, M. (Jnr)	B.Sc, M.Sc, Ph.D (UPH)	Analytical/Environmental Chemistry	Professor
6.	Osuji, L.C.	BSc (UPH), PGD, Pet. Engr., MSc, PhD (Ibadan)	Petroleum/Environmental Chemistry	Professor
7.	Okoye, I.P.	B.Sc (Benin), M.Sc., Ph.D (UMIST)	Petroleum Chemistry	Professor
8.	Monago, K.O.	B.Sc (Nigeria) DIP Chem. Eng (aston), M.Sc, Ph.D (London)	Process Development/ Applied Thermodynamics	Professor
9.	Obuzor, G.U. (Mrs.)	BSc (Washington, DC), MSc (UPH), PhD (UMIST), FCSN	Organic/Organometallics	Professor
10.	James, A.O. (Mrs.)	B.Sc (OSU), MSc (Ibadan), PhD (UPH)	Corrosion Chemistry	Professor
11.	Orubite-Okorosaye, K. (Mrs.)	BSc (UNIBEN), M.Sc, PhD (UPH)	Inorganic Chemistry	Professor
12.	Ibezim-Ezeani, M.U. (Mrs.)	B.Sc, MSc, PhD (UPH)	Physical Chemistry	Professor
13.	Osu, C.I.	BSc (ABSU), MSc, PhD (MOUA)	Environmental Chemistry	Reader
14.	Chukwu, U.J.	BSc (NAU), MSc, PhD (UPH)	Analytical/Inorganic Chemistry	Reader
15.	Obi, C.	BSc (IMSU), MSc, PhD (UPH)	Physical Chemistry	Reader
16.	Onojake, M.C.	BSc (DELSU), MSc (UPH), PhD (UPH)	Petroleum/Environmental Chemistry	Reader
17.	Achugasim, O.	B.Sc (Calabar), MSc, Ph.D (UPH)	Organic/Petroleum Chemistry	Senior Lecturer
18.	Iwuoha, G.	BSc (IMSU), MSc (FUTO), PhD(UPH)	Environmental/Analytical Chemistry	Senior Lecturer
19.	Onyema, O.M.	BSc (IMSU), MSc, PhD (UPH)	Petroleum Chemistry	Senior Lecturer
20.	Ngobiri, N.	BSc (ABSU), MSc (FUTO)	Material Chemistry	Senior Lecturer
21.	Oriji, O.G.	BTech (FUTY), MSc (UPH)	Polymer Chemistry	Senior Lecturer
22.	Pereware, A.	B.Sc. Delsu; PGDC, MSc. Ph.D. (UPH)	Environmental Chemistry	Lecturer 1
23.	Chikwe, T.N.	B.Sc., MSc. Ph.D. (UPH)	Petroleum Chemistry	Lecturer 1
24.	Duru, R. U.	B.Sc., MSc. Ph.D. (UPH)	Organic/Oilfield Chemistry	Lecturer 1
25.	Ekpo, I.E.	B.Sc.(Cal), PGDM, MSc. Ph.D.(UPH)	Industrial Chemistry	Lecturer 1

26	Victor-Orji, C.	B.Sc., MSc. Ph.D. (UPH)	Industrial/Process Chemistry	Lecturer 11
27	Tamunosaki, G. D.	B.Sc., MSc. Ph.D. (Physical Chemistry	Lecturer 11
28	Eke, W.I.	B.Sc., MSc. Ph.D. (UPH)	Polymer/Organic Chemistry	Lecturer 11
30	Anuchi, S.	B.Sc.,(UPH) MSc. (Aberdeen)	Analytical Chemistry	Lecturer 11

DEPARTMENT OF GEOLOGY

Introduction

The Department of Geology commenced academic activities in 1976 at the undergraduate level. However, postgraduate studies did not begin until 1986 with the M.Sc programme followed by the Ph.D programme in 1996 while the Postgraduate Diploma in Geology commenced in 2004. The department provides specialized Postgraduate programmes to meet the needs in oil and solid mineral industries and other public sectors. The programmes are, at the M.Sc and Ph.D levels, organized in Biostratigraphy, Engineering Geology, Environmental Geology, Exploration Geophysics, Hydrogeology, Petroleum Geology, and Sedimentology and Reservoir Geology, Exploration and Mining Geology, Petrology and Applied Geochemistry, and Structural Geology. There is strong emphasis on research in all programs of the department. The training programme is based on the concept of research apprenticeship in which each student's training is, through consultation with the supervisor, adapted to the interest and objectives of the student. The courses offered in the different programmes are the key to a challenging and satisfying career in the profession both in Nigeria and Overseas. However, since academic programming is not static, the department has seen the need to provide training and re-training opportunities for graduates in line with current developments in the profession. Therefore necessary changes in course contents and expansion in areas of specialization have been introduced. Presently, the Department runs three separate postgraduate programmes, namely: Postgraduate Diploma (PGD), Master of Science (M.Sc.) and Doctor of Philosophy (Ph.D.).

Philosophy

The philosophy of postgraduate programmes is anchored on the unbiased and systematic observation, accurate documentation and interpretation of facts and phenomena with a view to generating a body of knowledge.

POSTGRADUATE DIPLOMA IN GEOLOGY (PGDG)

Aim and Objectives

The aims and objectives of the PGDG programme are:

1. To train and re-train graduates in the private and public sectors engaged in exploration and exploitation of petroleum, solid minerals, ground and surface water resources, and environmental neolo ev.
2. To re-train geologists and other professionals/ scientists wishing to improve their academic records in order to satisfy the prerequisites for admission into professional post graduate degree programmes.

ADMISSION REQUIREMENTS

The criteria for admission are:

- i) All candidates must have five credit passes including English and Mathematics and three other relevant science subjects at O'Level
- ii) Candidates with Bachelors degree from approved university must obtain a Third Class degree in the relevant science discipline as determined by the Department.
- iii) Holders of HND in relevant programmes from approved institutions with a minimum of Upper Credit may also be considered for admission.

Options in the Programme/Areas of Specialization

There is no option of specialization in the PGDG programme. Students undertake research work based on supervisor's area of interest.

Mode of Study/Duration of Study

Full Time:

The PGDG programme candidate will be required to spend a minimum of 12 calendar months (1 year) and a maximum of 24 calendar months (2 years).

Graduation Requirements

The PGDG degree is awarded after candidates have satisfied their research supervisors that their dissertation based on research is a substantial original contribution to knowledge and have also demonstrated a higher degree of competence in passing of all qualifying examinations based on their course work, and submitting a dissertation

embodying the results of their own original research on an approved topic by their supervisor.

PGDG Course Outline

First Semester CU

PGDG 750.1	The Earths Resources	2
PGDG 751.1	Principles of Stratigraphy	2
PGDG 752.1	Biostratigraphy	2
PGDG 753.1	Geotectonics	2
PGDG 754.1	Principles of Geochemistry	2
PGDG 755.1	Introduction to Geophysics	2
PGDG 756.1	Laboratory Methods in Geology	2

Second Semester CU

PGDG 757.2	Igneous and Metamorphic Petrology	2
PGDG 758.2	Geology of fossil fuels	2
PGDG 759.2	Water Resources and Engineering Geology	2
PGDG 760.2	Environmental Geology	2
PGDG 761.2	Field Geology	2
PGDG 762.2	Seminar	2
PGDG 763.2	Project	4

M.Sc Geology: Biostratigraphy Option

Course Code	Course Title	Credit Units
SGS 801.1	ICT and Research Methods	2
GLY 800.1	Advanced Structural Geology & Geotectonics	2
GLY 801.1	Remote Sensing and Geo-Information	2
GLY 802.1	Field School	2
GLY 803.1	Applied Micropaleontology and Palynology	2
GLY 804.1	History of Vegetation	2
GLY 805.1	Cretaceous-Neogene Mineral Walled Fauna and Flora	2
GLY 806.2	Biostratigraphic Applications	2
GLY 830.2	Sequence Stratigraphy	2

GLY 833.2	Advanced Sedimentology & Basin Analysis	2
SGS 802.2	Management and Entrepreneurship	2
GLY 808.2	Seminar in Geology	2
GLY 809.2	M.Sc Thesis	6

M. Sc Geology: Exploration Geophysics Option

Course Code	Course Title	Credit Units
SGS 801.1	ICT and Research Methods	2
GLY 800.1	Advanced Structural Geology & Geotectonics	2
GLY 801.1	Remote Sensing and Geo-Information	2
GLY 802.1	Field School	2
GLY 821.1	Magnetic and Gravity Methods (Potential Field Methods)	2
GLY 822.1	Seismic Method of Exploration	2
GLY 823.1	Mineral deposits and Electrical Methods	2
GLY 824.2	Filter Theory and Signal Processing	2
GLY 825.2	Wireline Log Interpretation	2
GLY 826.1	Petroleum Resources	2
GLY 828.2	Sequence Stratigraphy	2
SGS 801.2	Management and Entrepreneurship	2
GLY 860.2	Seminar in Geology	2
GLY 870.2	M.Sc Thesis	2
	Total	32

M. Sc Geology: Petroleum Geology Option

Course Code	Course Title	Credit Units
SGS 801.1	ICT and Research Methods	2
GLY 800.1	Advanced Structural Geology & Geotectonics	2
GLY 801.1	Remote Sensing and Geo-Information	2
GLY 802.1	Field School	2
GLY 803.1	Applied Micropaleontology and Palynology	2
GLY 822.1	Seismic Method of Exploration	2
GLY 826.1	Petroleum Resources	2

GLY 827.1	Advanced Sedimentology & Basin Analysis	2
GLY 828.2	Sequence Stratigraphy	2
GLY 829.2	Reservoir Characterization and Modelling	2
GLY 836.2	Petroleum Geochemistry of Nigeria Basins	2
SGS 801.2	Management and Entrepreneurship	2
GLY 860.2	Seminar in Geology	2
GLY 870.2	M.Sc Thesis	2
	Total	32

M. Sc Geology: Sedimentology and Reservoir Geology Option

Course Code	Course Title	Credit Units
SGS 801.1	ICT and Research Methods	2
GLY 800.1	Advanced Structural Geology & Geotectonics	2
GLY 801.1	Remote Sensing and Geo-Information	2
GLY 802.1	Field School	2
GLY 803.1	Applied Micropaleontology and Palynology	2
GLY 822.1	Seismic Method of Exploration	2
GLY 826.1	Petroleum Hydrocarbons	2
GLY 827.1	Advanced Sedimentology & Basin Analysis	2
GLY 828.2	Sequence Stratigraphy	2
GLY 829.2	Reservoir Characterization and Modelling	2
GLY 830.2	Carbonate and Siliciclastic Deposits	2
SGS 801.2	Management and Entrepreneurship	2
GLY 860.2	Seminar in Geology	2
GLY 870.2	M.Sc Thesis	2
	Total	32

M.Sc Organic Geochemistry Option

Course Code	Course Title	Credit Units
SGS 801.1	ICT and Research Methods	2
GLY 800.1	Advanced Structural Geology & Geotectonics	2
GLY 801.1	Remote Sensing and Geo-Information	2
GLY 802.1	Field School	2
GLY 831.1	Source Beds & Reservoir Geochemistry	2
GLY 832.1	Biomarker Geochemistry	2
GLY 833.1	Coal Deposits	2
GLY 834.2	Oil Spills and Remediation	2
GLY 835.2	Geochemical Methods	2
GLY 836.2	Petroleum Geochemistry of Nigeria Basins	2
SGS 801.2	Management and Entrepreneurship	2
GLY 860.2	Seminar in Geology	2
GLY 870.2	M.Sc Thesis	2
	Total	30

M.Sc Exploration and Mining Geology

Course Code	Course Title	Credit Units
SGS 801.1	ICT and Research Methods	2
GLY 800.1	Advanced Structural Geology & Geotectonics	2
GLY 801.1	Remote Sensing and Geo-Information	2
GLY 802.1	Field School	2
GLY 837.1	Ore Deposits, Non-Metallic and Industrial Minerals	2
GLY 838.1	Economic Mineral Deposits of Nigeria	2
GLY 839.1	Mineral Exploration Geochemistry & Geophysics	2
GLY 840.2	Geologic Exploration, Mining and Mineral Processing	2

GLY 841.2	Mineral property Evaluation and Economics	2
GLY 847.2	Advanced Sampling, Rock and Mineral Analysis	2
SGS 801.2	Management and Entrepreneurship	2
GLY 860.2	Seminar in Geology	2
GLY 870.2	M.Sc Thesis	2
	Total	30

M.Sc Petrology and Applied Geochemistry Option

Course Code	Course Title	Credit Units
SGS 801.1	ICT and Research Methods	2
GLY 800.1	Advanced Structural Geology & Geotectonics	2
GLY 801.1	Remote Sensing and Geo-Information	2
GLY 802.1	Field School	2
GLY 8421	Advanced Mineralogy and Crystal Chemistry of Silicate Minerals	2
GLY 843.1	Advanced Optical Mineralogy and Ore Microscopy	2
GLY 844.2	Advanced Techniques in rock crystallization-deformation analysis	2
GLY 845.2	Advanced Igneous and Metamorphic Geochemistry	2
GLY846.2	Advanced Igneous and Metamorphic Petrology	2
GLY 847.2	Advanced Sampling, Rock and Mineral Analysis	2
SGS 801.2	Management and Entrepreneurship	2
GLY 860.2	Seminar in Geology	2
GLY 870.2	M.Sc Thesis	2
	Total	30

M. Sc Geology: Structural Geology

PGDG Course Description

PGDG 750.1: The Earth's Resources

The composition and structure of the Earth, rocks, minerals and mineral resources. The geology cycle and geologic time scale, surface processes and products.

PGDG 751.1: Principles of Stratigraphy

Concepts and principles of historical geology, sea level changes in time and space. Stratigraphic relations, stratigraphic classification and nomenclatural procedure, sequence stratigraphy.

PGDG 752.1: Biostratigraphy

Concepts and principles of biostratigraphy, biostratigraphic classification and nomenclatural procedure. Bathymetry paleoenvironment, high-resolution biostratigraphy, forams, pollens and spores.

PGDG 753.1: Geotectonics

Continental drift, sea-floor spreading, plate tectonics. Plate tectonics and origin of basins and structure. Plate tectonics and mineral deposits.

PGDG 754.1: Principles of Geochemistry

Geochemistry of atmosphere, hydrosphere, biosphere and lithosphere, primary geochemical environment, halos, dispersion, pathfinder and indicator elements, geochemical associations, secondary geochemical environments. The major, minor and trace element geo-chemistry of some common sedimentary, igneous and metamorphic rocks.

PGDG 755.1: Introduction to Geophysics

Electrical conduction and EM induction in rocks, seismic wave propagation, SP, Resistivity, IP and EM surveying techniques, seismic refraction shooting, Geologic interpretation of electrical and EM anomalies and time distance curves. Density, magnetic and gravity surveying.

PGDG 756.1: Field and Laboratory Methods in Geology

Granulometric analysis, Geochemical Methods, Geophysical/hydrogeologic methods, Biostratigraphic methods, Geotechnical methods with emphasis on site investigations for foundations

PGDG 757.2: Introduction to Igneous and Metamorphic Petrology

Igneous and metamorphic rock types and their origins. Their distribution in time and space. Tectonics, economic and mineral affinities.

PGDG 758.2: Geology of Fossil Fuel

Coal genesis, composition and classification, coal distribution in time and space. Nigerian coal origin of petroleum, migration, extraction and production, exploration and exploitation techniques. The Niger Delta.

PGDG 759.2: Water Resources and Engineering Geology

Principles and concepts of hydrogeology/hydrology. Water well drilling and construction, strata log, aquifer and pump test, water cycle and analysis of hydrographs. Physical and chemical properties of water. Water sampling and analytical techniques. Data presentation and

analysis. Groundwater pollution. Engineering properties of soils and rocks, geologic hazards in engineering geology, foundations, site investigations.

PGDG 760.2: Environmental! Economic Geology

Concepts of Environmental geology, geodynamics. Environmental Impact Assessment. Waste disposal and effects on soils and ground water. Geological hazards. Metallic and non-metallic mineral resources; their composition, distribution and uses. Mineral resources of Nigeria, Exploration and exploitation of minerals.

PGDG 761.2: Field Geology

Mapping of sedimentary, igneous and metamorphic terrains. Field note taking and geological report writing. The different sedimentary basins and basement complexes of Nigeria. Stratigraphic evolution of the basins in Nigeria.

PGDG 762.2: Project

Data collection, analysis, interpretation and report presentation of original projects.

PGDG 763.2: Seminar

Seminar report/presentation.

MASTER'S DEGREE (M.Sc) PROGRAMME

The Masters of Science (M.Sc) programme of the Department of Geology commenced in 1986.

AIMS AND OBJECTIVES

The objectives of the programme include the following:

- i. To upgrade the knowledge and skills of candidates, and increase their competence as professional geologists to provide manpower in areas of geology in the academia, research institutions, public service and the private sector of the economy
- ii. To enable prospective candidates have the opportunity to specialize in an area of geologic interest.
- iii. To provide specialized academic knowledge oriented towards research.

Options/Areas of Specialization in the Programme

1. Biostratigraphy

2. Engineering Geology,
3. Environmental Geology
4. Exploration Geophysics
5. Hydrogeology
6. Petroleum Geochemistry
7. Petroleum Geology
8. Sedimentology and Reservoir Geology.
9. Structural Geology
10. Sequence Stratigraphy, Utilizing Palynology, Paleontology and Sedimentology
11. Remote Sensing
12. Exploration and Mining Geology
13. Petrology and Applied Geochemistry

Mode of Study/Duration of Study

Full Time:

The M.Sc programme candidate will be required to spend a minimum of 24 calendar months (2 years) and a maximum of 36 calendar months (3 years).

Graduation Requirements

The M.Sc degree is awarded after candidates have satisfied the Board of Examiners that their thesis based on research is a substantial original contribution to knowledge and have also demonstrated a higher degree of competence in areas of knowledge related to their specialization. The first requirement is satisfied when candidates have demonstrated a broad knowledge of their field to the satisfaction of the department, normally by completion of all and passing of all qualifying examination for assigned programme of courses with a minimum score of "C". The second requirement is satisfied when candidates have presented and defended a thesis embodying the results of their own original research on an approved topic

M.SC PROGRAMME COURSE OUTLINE

M.Sc Course Description

SGS 801.1 ICT and Research Methods 2 units

Essentials of spreadsheets, internet technology, statistical packages, Precision and Accuracy of Estimates, Principles of Scientific Research. Concepts of hypotheses formulation and testing. Organisation of Research. Technical writing/Research report writing (resumes, abstracts, proposals).

Oral and written communication skills in geosciences. Presentation skills using PowerPoint.

SGS 801.2 Management and Entrepreneurship 2 units

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving

Scientific research conceptual framework including empirical methods, innovative techniques and improvisation. Earth science technology life cycle and emerging research techniques. Internet research and search tools including web directories and external linkages. Modern field methods in earth science research. Geologic workstation and field data analysis, evaluation and interpretation. Advanced laboratory techniques including bench-scale, tools kits and modern methods.

Research instrumentation types in the earth sciences. Instrumentation methods, calibration, measurement and validation of data. Geologic data processing and quantitative analysis including geostatistical analysis, mathematical modeling and operations research. Application of geologic softwares in advanced modeling methods. Application and interpretation of phase diagrams and geologic data plots.

Research project costing and value of experimentation. Advanced research project reporting format and synthesis. Participatory approach to external linkage support for advanced geologic field and laboratory research. Development, demonstration and deployment of earth science research data. Research data security, privacy policy, patents and disclaimers.

GLY 800.1 Advanced Structural Geology

Structures and fabrics of rocks, stress, strain, deformation Mechanism. Various terrain mapping techniques, stereo plots, structures, boreholes / subsurface problems. Terrain analysis. Application of structural geology and aero geology in various areas of applied geology.

GLY801.1: Geo-Information, Remote Sensing

Principles of remote sensing in determination of natural resources. Fuel, metallic and non-metals. Geoinformatics technology. Relationship between remote sensing and Geo-informatics.

GLY 802.1: Field School

One week devoted to mapping of sedimentary, igneous or metamorphic terrains with emphasis on problems relating to area of specialization of the student. Detailed field mapping of area of interest in any of the different sedimentary basins and Basement Complexes of Nigeria. Students must demonstrate clear understanding of field geology, including measurements, field documentation, report writing, production and submission of a comprehensive geologic map of the area under investigation.

GLY 803.1: Applied Micropaleontology and Palynology

Qualitative and quantitative data and their importance. Statistical and other mathematical based faunal and floral species distribution. Stratigraphic climatic studies based on cooling direction and fauna morphological variations. Relative sedimentation rates. Absolute sedimentation rates. Changes in sea level. Paleobathymetry. Foraminifera number and planktonic test porosity. Trace elements and palaeosalinity. Displaced faunas. Biologic and hydrologic indicators. Stratigraphy and correlation pollution.

GLY 804.1 History of Vegetation.

Quaternary paleontology and palynology. Organisms and plants and their environment.

GLY 805.1: Cretaceous to Neogene Mineral-walled Fauna and Flora

Morphology, classification, distribution history from Cretaceous to Neogene of foraminifera, ostracods, diatoms, radiolaria, coccoliths, etc. Morphology, classification, distribution history from cretaceous to neogene of pollen spores, Dinoflagellates, acritarchs, chitinozoa, miscellaneous algae.

GLY 806.1: Biostratigraphic Applications

Lithostratigraphy, biostratigraphy, correlation, zonation, paleontological; and palaeobathmetric reconstructions. Assessment of environment quality; forensic art and history studies. Techniques of sample (coal, limestone, sandstone and shale) preparation and in microscopy. The examination and description of typical assemblages of pollens, spores dinoflagellates, foraminifera, etc; from selected horizons;

classification of mixed assemblages into species; statistical analysis involving polynofacies analysis and abundance and classification of micro fossils. Preparation of single mounts and sections and the study of bibliographies, indexes and other relevant literature.

GLY 807.1: Engineering Geological Properties of Soils

Particulate nature of soils, stresses and deformation, geotechnical Index properties Mechanical properties, floor resistance, compressibility and permeability laterites and wetland soils. Engineering description and classification of rocks. Elasticity and strength properties. Weathering and discontinuities, laboratory testing

GLY 808.1: Engineering Geological Properties of Rocks.

In this module, students are introduced to issues in engineering geology that they are likely to encounter working within the applied geoenvironment sector. This includes rock description, site investigation and geotechnical assessment, design of ground models, slope design and underground openings, and the impact of groundwater on rock mass strength and slope stability

GLY 809.1: Foundation Geology! Engineering

Foundation principles and practices. Bearing capacity of shallow and pile foundations. Settlement and stability calculations. Foundation improvements. Site investigation techniques. Foundation geology of dams, bridges and large buildings.

GLY 810.2: Geomechanics and Slope stability

Mass movement. Mechanics of slope failure. Classification of slope failures. Cuts and tunneling. Methods of slope stability analysis

GLY 811.2: Engineering and Environmental Geophysics

Use of applied geophysical techniques for environmental, geotechnical and groundwater investigation. Common geophysical methods; electrical resistivity, electromagnetic, seismic down-hole geophysical logging case histories. (These should include, but not limited to Shallow seismic refraction methods and application to dam

sites, highways, depth of weathering and material quality). Electrical methods and application to determination of depth to bedrock, location of water table and salt water intrusion. Magnetic, electromagnetic and gravity methods as applied to engineering problems. Geophysical well logging. Aero-geological mapping/studies and application to Engineering Geology and Hydrogeology).

GLY 812.2 Special Topics in Engineering Geology

This is a selection of topics to deal with those not normally covered in specified courses. Topics also to cover emerging issues in the application of geology in civil engineering practice. e.g. Geological Models and Ground Investigation where students are introduced to issues in engineering geology that they are likely to encounter working within the applied geo-environment sector. This includes rock and soil description, site investigation and geotechnical assessment, design of ground models, slope design and underground openings, and the impact of groundwater on rock and soil mass strength and slope stability

GLY 813.1 Water Resources Exploitation and Management

Analysis of aquifer tests. Behaviour of aquifer-aquitard systems. Aquifer exploration. Recharge and discharge equilibrium. Safe yield estimation of water resources. Regional planning, development and management of water resources for domestic, industrial and agricultural uses. Conjunctive use of surface and groundwater. Effects of excessive groundwater withdrawals.

GLY 814.2 Waste Disposal And Water Pollution

Types of waste and disposal management methods. Waste reduction; landfill management methods. Geological and geotechnical factors affecting selection of disposal sites for domestic, industrial hazardous radioactive waste. Measures to prevent pollution.

GLY 815 Groundwater Flow, Hydrogeochemistry and Modelling

Physical and mathematical principles of porous media flow with emphasis on groundwater. The continuum concept. Equations of motion and

continuity. Confined and unconfined flow. Principles of regional groundwater flows. Hydrogeochemistry and groundwater quality. Sources and transportation of contaminant. Application of modelling in groundwater studies

GLY 816.2 Contaminant Hydrogeology

Characterization of aquifers. Mineral and hydrodynamic properties influencing flow of contaminant in earth materials. Dispersion theory and modeling of pollutants in aquifers. Water quality and protection.

GLY 817.1 Advanced Geomorphology and Geologic Hazards

The course focuses on Geomorphological process and the effects of landform alterations by human activities. Erosion, landslides, flooding and allied processes. Coastal and river processes and management of these processes. Plate Tectonics. Geologic hazards to include Earthquakes, Volcanism, Erosion, Mass movement, Flooding etc

GLY 818.1 Climate Change, Green Energy and Water Resources Sustainability

Carbon Cycle. Green house Effect and Global warming. Climate Change: Natural and anthropogenic causes. Effects. United Nations Protocols and Conventions on Climate Change. Green Energy sources. Climate change and water resources.

GLY 819.2 Characterisation and remediation of Contaminated Sites

Conceptual site model and characterisation. Contaminated land legislation, risk assessment Evaluation of the occurrence, nature and magnitude of contamination at a site; Evaluation of transport mechanisms and migration pathways of contaminants. (diffuse contamination, NAPLs,) site investigation, and monitoring; groundwater protection by barriers and land use planning; groundwater remediation methods. Remediation Technologies.

GLY 820.2 Environmental Impact Assessment

Definition and rationale for Impact Assessment. Components of International Standard Impact Assessments. Biophysical, Health, and Social Impact Assessments. Impact prediction, Impact

Management and Monitoring Plans. Stakeholder involvement.

GLY 821.1: Magnetic and Gravity Methods

Inverse square law. Terrestrial gravity and magnetic fields. Gravimeters and magnetometers. Planning and operation of field surveys. Data reduction. Interpretation- Resolution, Limiting formula, Ambient, mass estimation, Fields and depth rules for geometric models. Computation of anomalies, reduction to pole and remanent magnetism. Aeromagnetic surveys. Element of potential field theory- conversion field scalar potential. Laplace Equation. Magnetic Scalar potential. Poisson's formula relating magnetic and gravitational fields, inversion, Planning and execution of gravity surveys. Reduction of results. Interpretation and modeling. Case histories for petroleum and mineral exploration.

GLY 822.1: Seismic Methods

Propagation of seismic pulse, refraction and reflection. Pulse generation. Seismic recording instruments. Planning and operation of field surveys. Data acquisition, reduction and processing. Velocity determination. Refraction and reflection surveys. Preparation of time and geological sections. Bright spots.

Theory and practice of seismic refraction method. Seismic wave propagation through earth materials. Acquisition of seismic data, field procedures and instrumentation and total system performance. Refraction interpretation methods: simple 2D refraction interpretation from shallow seismogram. Refraction interpretation for horizontal, dipping and irregular surfaces. Blind and hidden layer problems. Refraction interpretation methods; static and dynamic corrections, velocity determinations from profiles and well shots, reflection coefficients, dipping reflections. Computation exercises and stratigraphy; seismic mapping techniques. Case histories.

GLY 823.1 Mineral deposits and Electrical Methods

Electrical Properties Associated with Rocks. Direct-Current Resistivity Methods Varying Current Methods, Resistivity Method: Resistivity Profiling, Resistivity Depth Sounding. Electro-

Magnetic Methods. Very low Frequency (VLF) Radiation, VLF Instruments and Presentation of VLF Results. Natural and Controlled-Source Audio-magnetotelluric

GLY 824.2 Filter Theories and Signal Processing

Wave forms and spectra; Fourier and Fast Fourier transform, digital signals, linear filters; convolution, autocorrelation and cross correlation and power spectrum analysis. De-convolution. Wiener matched filters and application of these filters to both synthetic and real data.

GLY 825.2: Wire Line Log Interpretation

Well logs. Different types of log. Log patterns for different rock types. Interpretation of environment by means of well logs.

GLY 826.1 Petroleum Resources

Course is designed to cover both conventional and unconventional hydrocarbons with emphasis on recent advances in the genesis of petroleum hydrocarbons and their application to petroleum exploration and exploitation. Composition, Origin. Migration. Maturation and Geochemistry of Petroleum generation and depths of burials, time, temperature and composition of sedimentary organic matter. Clay and carbonate diagenesis and roles in Petroleum Generation. Abnormal formation pressures. Reservoir rocks and traps. Petroleum hydrogeology. Other hydrocarbon resources including oil shales, bitumen, asphalt, tar sand and coal. Concept of Reserves and Resources and their classification.

GLY 827.2 Advanced Sedimentology and Basin Analysis

Carbonate and Clastic Sedimentology. Origin, growth and classification of basins. Analysis of Sedimentary facies and environments (continental margin, shallow and deep marine) of petroleum. Facies control on hydrocarbon distribution. Trap classification. Paleogeographic principles and exploration and exploitation of petroleum. Porosity and Permeability and exploitation of petroleum. Porosity and Permeability and inter-relationship. Borehole geophysical logging. Geology of some of the world's giant oil/ gas field and basins. Regional patterns of petroleum distribution.

Time span involving stratigraphic range and possible worldwide megasequence; geometry and basin type including shape, area, volume, and maximum thickness; sedimentology including kinds, proportions, distribution and composition of lithic fill and paleocurrents for interpreting integrated depositional systems; structure style (pre-depositional, syndepositional and post-depositional). Tectonic setting; paleoclimate; thermal burial history; economic interest

GLY 828.2: Sequence Stratigraphy

Basic concepts of sequence stratigraphy. Definition of key terms, Basin fill model, Strata patterns and strata termination patterns. Their geological interpretation and their relation to relative changes of sea level (base level). Interpreting sequences and system tracts from strata discontinuity and their relation to relative changes of sea level (base level).

GLY 829.2: Reservoir Characterization and Modeling

Subsurface faces analysis, subsurface diagnosis of sedimentary environments from cores, ditch cuttings and wire line logs and the use of this knowledge in the prediction of the distribution, geometry and orientation of reservoir rocks. Petrography of reservoir rocks, morphology and genesis of porosity and its relationship to rock composition. Texture and Diagenesis. Description and analysis of reservoir rocks from cores and ditch cuttings.

GLY 830.2 Carbonate and Siliciclastic Deposits

Origin and classification of Carbonates, Siliciclastics and Evaporites.

GLY 831.1 Source Bed and Reservoir Geochemistry

Origin, Discovery and Geochemistry of Crude Oil. Organic matter evolution, Diagenesis, catagenesis, metagenesis and metamorphism. 1-low oil forms, natural hydrocarbons. Hydrocarbon migration. Biomarker chemistry and technology. Geochemical markers in crude oil. Application of biomarkers, pristane, phytane, terpenoids, etc. Chemistry of crude oil: Classification and characterization, Base oil, ternary diagrams etc. Chemical oil production. Drilling fluids completion and workover fluids, drill-in fluids,

etc. Gaseous hydrocarbons: Development of natural Gas, Types of natural gas accumulation.

GLY 832.1 Biomarker Geochemistry

Introduction to biomarkers, classes of biomarker, isoprenoids, steroids, hopanoids, aromatic hydrocarbons, non-hydrocarbon biomarkers. Biomarkers in sediments. Application of biomarkers in petroleum geochemistry: biological sources, maturity.

GLY 833.1 Coal Deposits

Types of dispersed organic detritus. Distribution of particular organic matter in the sedimentary basins and degree of metamorphism. Basic notions of organic matter petrography. Transmitted and reflected white light microscopy, fluorescence, microscopy, organic matter origins, kerogen and maceral classifications, organic facies, Rock-Eval pyrolysis, ternary diagrams, fluorescence preservation scale, TOC and grain size. Kerogen - Maturity and Type How do we analyse kerogen? Principal kerogen types and evolution paths of kerogen, Kerogen composition and relationship to petroleum potential, Overview of diagenesis, catagenesis and metagenesis. Catagenesis- from kerogen to petroleum, Geothermal gradient - what are the factors that control it? Principal zone of oil generation. Effects of temperature and pressure on kerogen stability and petroleum generation. Metagenesis and gas generation.. What do we mean by thermal history? Relationship between thermal history and petroleum generation. Vitrinite reflectance, Vitrinite reflectance and maturity, Vitrinite reflectance interpretation, Palynomorph colour.

GLY 834.2 Oil Spills and Remediation

Composition of crude oil and some petroleum products and naturally occurring hydrocarbons. Sources of hydrocarbon spillage in the environment. Polycyclic aromatic hydrocarbons their origins, properties and effects. Oil spill remediation and minimization of their impact. Hydrocarbon toxicity, determination and the effects of hydrocarbon pollution in the environment. Case studies of actual oil spills, including the effects of public perception on actions for the treatment of petroleum pollution. Atmospheric pollutants arising from the use of petroleum products as fossil fuels, their effects and their minimization

GLY 835.2 Geochemical Methods

Sampling design and sample preparation (clean and crush), Extraction of rocks, introduction to fractionation of bitumen, Liquid column chromatography-Thin layer chromatography, Principles, nomenclature and types of Chromatography, Frontal analysis, displacement method, elution development.

GLY 836.2 Petroleum Geochemistry of the Niger Delta Basins

Location of Niger Delta Basin, structural evolution & geology, stratigraphy and geological history, facies and environments, source rocks, reservoir rocks, cap rocks, concept of petroleum systems, exploration history. Calculating the volumetric oil yield of a given body of source rock. Source rock heterogeneity and varying maturation. Producing a source rock report.

GLY 837.1 Ore Deposits, Non-Metallic Minerals and Industrial Materials

Identification of fluid inclusions; theoretical basis for studying fluid inclusions; Fluid inclusion population types; Ore bearing fluids (magmatic, metamorphic and meteoric fluids, thermal springs); determination of homogenization of freezing temperatures of fluid inclusions; use of fluid inclusion studies to determine the role of fluids in geological processes; use of fluid inclusion studies in geothermometry; origin of ore deposition; provinces of metallogeny; types of ore deposits and ore deposition in geochemical cycle; structural environment of ore deposition. Geological criteria for occurrence of ores in Nigeria. Case histories of selected metallic mineral deposits.

Classification; processes of formation and geological environment of the non-metallic minerals and building materials (crushed rocks, sand, gravels, etc; carbonates, evaporites, asbestos, clays, etc); methods of prospecting, processing and use in the industry; Occurrences in Nigeria.

GLY 838.1: Economic Mineral Deposits of Nigeria

Geochemical and geophysical methods of mineral exploration. General geology of Nigeria. Mineral exploration projects and methods of exploration in Nigeria; metallogenic provinces -in Nigeria.

Geology of non-metallic and metallic mineral deposits of Nigeria. Mining methods, production and marketing of minerals in Nigeria.

GLY 839.1: Mineral Exploration Geochemistry and Geophysics

Dispersion patterns of elements; elemental associations; pathfinders; background; anomaly; geochemical province; exploration geochemistry sequence; geochemical survey, mapping, sampling, analyses of samples; trace element analysis; geochemical drainage survey; heavy mineral prospecting; geochemical soil surveys; vegetation surveys (biogeochemical and geobotanical methods); lithogeochemical surveys; geochemical surveys in Nigeria; environmental geochemistry; Field and Laboratory analytical methods; Statistics in Exploration Geochemistry. Principles and application of magnetic, gravity, electrical, electromagnetic, seismic and radioactive methods of exploration for economic mineral deposits.

GLY 840.2 Geologic Exploration, Mining and Mineral Processing

The idea of mineral prospecting and exploration. Exploration indicators. Stages in exploration process. Exploration philosophy and management. Grid setting, borehole drilling and prospect generation. Ore reserve estimation. Environmental and legal issues in mineral prospecting and exploration. Cut-off grade estimation and its relation to reserve estimation. Planning of exploration programmes.

The meaning of mining engineering; branches of mining; mining methods and systems. Mining equipment selection and mine parameter estimation; environmental and legal issues in mining operations; elements of mine planning and design; mineral processing basics; mine unit operations.

GLY 841.2 Mineral Property Evaluation and Economics

The subject matter of mineral evaluation. Production rate estimation and scheduling; cash flow development; capital cost estimation. The time value of money. Discounted cash method and its application in mineral evaluation. Estimation of net present value and internal rate of return.

Sensitivity analysis in mineral evaluation. Hoskold's formula and its inadequacies. Break-even analysis. Internationally traded minerals. The demand function in mineral economics.

GLY 842.2: Advanced Mineralogy and Crystal Chemistry of Silicate Minerals

Silicate structures; chemistry, and optical and other properties of silicate minerals as well as their assemblages in common igneous rocks.

GLY 843.2: Advanced Optical Mineralogy and Ore Microscopy

Optical determinations of minerals under transmitted and reflected light; four-axis U-stage techniques; use of U-stage in petrofabrics; determination of composition of some silicate minerals by optical methods. Microscopic determinations of ore minerals; Etch reactions; micro-chemical testing of polished sections; ore petrology; introduction and practice of fluid inclusion studies.

GLY 844.2: Advanced Techniques in rock crystallization-deformation analysis

Structural control of a dyke's intrusion; relationships of flowing structures; deformation (differences, associations); structural analysis of a synkinematic intrusion and its relations with the surrounding rocks; "Syncooling" deformation of a granite and associated structures; C axis analysis using a universal stage as biotite-quartz-amphiboles; "Post-cooling" deformation of a granite and associated structures related tension gashes and crystallization (micro pull apart structures); structural control of volcanism. Concept of ante-synpost kinematic crystallization; analysis of ante-syn-post crystallization; rotational criteria of non-coaxial deformation; study of the plastic deformation of quartz; statistical analysis of C axis fabric of quartz under cross Nichols; statistical analysis of C axis fabric of quartz using a universal stage; relation of C axis fabric of quartz; conditions of crystallization using C axis fabric of quartz as a rational criterion of non-coaxial deformation.

GLY845.2: Advanced Igneous and Metamorphic Geochemistry

Advanced treatment on Phase Equilibria and the practical use of phase Equilibria; eutectics and solid solutions; theoretical crystallization curves;

mafic and intermediate magmas; felsic magmas; effect of pressure on differentiation; origin of basaltic and granitic magmas; problem of trace element distribution in igneous rocks. Rules of distribution; examples of minor-element distribution; regularities of distribution in igneous rocks; rare earth elements; Geochemistry of some selected rock suits in various parts of the world and in Nigeria. Metamorphism as a geochemical process; phase Equilibria in metamorphism; distribution of trace elements in metamorphic rocks; behaviour of trace elements during metamorphic recrystallization. Rare earth elements.

GLY 846.2 Advanced Igneous and Metamorphic Petrology

Igneous fractionation process and compositional variation of magmas; petrography of volcanic rocks; experimental works on natural basaltic and allied rocks; water-bearing basic rock systems; compositionally zoned magma bodies and their bearing on crystal settling; petrography of plutonic rocks; interpretation of data for plutonic rocks; trace elements in igneous processes and use of isotope in petrology; petrography aspects of lunar rocks and meteorites. Advanced study of pyroclastics rocks, carbonatites, alkaline and peralkaline rocks, spillites, lamprophyres and kimberlites; igneous processes and metallogenesis; petrographic provinces of the world.

Evolution of metamorphic rocks with emphasis on phase Equilibria; fundamental metamorphic changes in rocks; thermal, dynamothermal, dynamic and regional metamorphism; metasomatism, metamorphic fabrics macro- and micro-fabrics); geometric and thermodynamic treatment of metamorphic mineral assemblages; metamorphism and metallogenesis; metamorphic belts of the world and metamorphic processes; trace element behaviour during metamorphic; metamorphism in West Africa with emphasis in Nigeria

GLY 847.2 Advanced sampling, Rock and Mineral Analysis

Selection of sampling locations, sampling methods, patterns and density. Sample preparation for analysis by XRF, XRD, gravimetric and spectrographic methods; presentation of data and statistical representation; principles and

application of electron probe, electron microscopy and other analytical methods; density determination and analyses by transmitted and reflected microscopy; mineral separation techniques; recalculation of analyses and representation of chemical data in diagrammatic forms. Mathematical treatment and application of geostatistics in sampling error analysis.

GLY 848.1 Applied Structural Models

Concepts of structural deformation in outcrop and subsurface data. Structural models, fault growth and interactions of faulting and folding. Integration of class based teaching with field examples of both compressional and extensional systems.

GLY 849.1 Geotectonics and Basin Evaluation

Large scale tectonics and geodynamic processes in both extensional and compressional systems. Lithospheric extension, models of continental extension, influence of stretching factors and implications on heat flow. Field component on the influence of lithospheric compression on basin evolutions to address large scale processes.

GLY 850.2 Fabrics and Structural Analysis

Geometric, kinematic and dynamic analysis of structures produced by deformation. Stress and the origin of faults, brittle and ductile strain in rocks. Extensional strike slip and compressional structural associations. Regional structure, orogens and crustal tectonics. Laboratory exercises include structural interpretation for mineral exploration, stereographic techniques for structural analysis and the study of rock fabrics.

GLY 851.2 Geomechanics and Fault Modelling

The impact of stress, deformation and brittle failure of rocks in the upper crust, along with how these impact fracture systems, rock strength and failure, and microscale fault deformation using the Scanning Electron Microscope. Use of Petrel in 3D modelling.

GLY 852.2: 3-D Structure: Techniques and Visualization

Analysis of stereographic data, reducing of geological maps and construction of accurate cross sections. Exercises on how to develop 3D and 4D thinking of complex geological setting through

paper based exercises to work station based exercises.

GLY 853.2 Nigeria Sedimentary Basins and their Structures

GLY 860.1 Seminar in Geology

The student is required to present a seminar based either on his/her research project or any chosen subject in geology after an in depth study through either extensive literature survey and/ or data analysis and data interpretation.

GLY 870.2 M.Sc Thesis

An independent study of a geological problem in the student's area of interest, utilizing laboratory analysis, data interpretation and the preparation of a geologic report.

DOCTOR OF PHILOSOPHY (Ph.D) PROGRAMME

AIMS AND OBJECTIVES:

The primary objective of the Ph.D programme is the accomplishment of independent and original research work which is reported in the form of a dissertation. Complementary to this is the completion of a suitable course work programme, passing a qualifying examination and receiving a satisfactory review on the recommendation of a supervisor.

The Ph.D degree programme in Geology is designed to provide specialized academic knowledge oriented research. At the end of the training successful candidates would have been able to upgrade their knowledge and skills, and increase their competence as Professionals Geologist to provide manpower in areas of geology in the academia, research Institutions, Public Service and the Private Sector of the Economy.

Regulation

The Ph.D programme shall consist of course work, seminars and research as approved by the Senate of the University of Port Harcourt.

Admission Requirement

In order to be admitted to Ph.D candidacy, applicants must have demonstrated research capabilities. They must satisfy the Department that they are able to carry out independent research. Since the Department cannot admit all candidates

who apply for admission even with high standing, the Departmental Graduate Studies Committee pays close attention to samples of applicants' written proposals, transcripts and past records as a whole, and to letters of reference written on their behalf by former lecturers.

Candidates for admission to the programme shall normally be persons who have

- i. Obtained an M.Sc. degree in Geology or any relevant discipline of the University of Port Harcourt or any approved University and have a CGPA of not less than 3.50 on a 5 point scale or equivalently computed for scales other than 5.
- ii. Scored a minimum of 70% in a Ph.D admission interview organized by the Departmental Graduate Studies Committee.
- iii. Students deficient in any area in the M.Sc programme will be required to remedy the deficiency from M.Sc Courses.

Students in the Ph.D programme will not be accepted as candidates for the Ph.D degree until they have presented and successfully defended to the department a proposal for research and during that presentation have demonstrated a comprehensive knowledge of the particular major field of study and thereafter, presented two seminars and satisfied the department in the course work aspect by presenting two seminars and passing the course work examinations.

Options in the Programme / Specialization Fields of Specialization

Students are expected to specialize in any one of the following fields of specialization.

- Biostratigraphy,
- Engineering Geology,
- Environmental Geology
- Exploration Geophysics
- Hydrogeology,
- Petroleum Geology
- Sedimentology and Reservoir Geology
- Exploration Geology (Mineral Exploration Option)
- Petrology and Applied Geochemistry
- Structural Geology

Mode of Study / Duration of Study

Full Time:

The Ph.D programme candidate will be required to spend a minimum of 24 calendar months (2 years) and a maximum of 80 calendar months (5 years).

Part Time:

Candidates requiring a part time programme will be required to spend a minimum of 38 calendar months (3 years) and a maximum of 84 calendar months (7 years.) Requirements governing course work and examination.

The course work designed for the Ph.D programme in the Department of Geology is intended to provide a foundation for advanced learning in the chosen field of research.

1. The Ph.D degree programme in Geology shall follow the general regulations of the School of Graduate Studies, University of Port Harcourt as spelt out in the prospectus
2. The programme consists of course work, seminars and research for the doctoral dissertation,
3. The courses shall be evaluated in terms of course units, with a minimum of three (3) and maximum of six (8). The dissertation shall have a credit unit of 12.
4. All candidates shall be required to register for not less than fifty (50) credit unit courses in the programme. Out of this, a maximum of thirty (30) credit units may be earned from relevant courses at the M.Sc programme. However, students with deficiency will be required to audit some courses at M.Sc level.

COURSE CONTENT

Compulsory Courses:

With effect from 2011, all PhD programmes shall be completed by course work and research. Thus beginning from 2011/2012 academic session, all new PhD candidates are expected to take and pass each of the following courses in their area of specialization with a minimum of C (50%) grade of the University of Port Harcourt.

S/N	Specialization Course	Course Code				
		Course Work	General Seminar I	General Seminar II	Qualifying Examination	Doctoral Dissertation

	Credit Units	3	3	3	Based on course work	12
1	Biostratigraphy	GLY 901	GLY 902	GLY 903		GLY 904
2	Engineering Geology	GLY 901	GLY 902	GLY 903		GLY 904
3	Environmental Geology	GLY 901	GLY 902	GLY 903		GLY 904
4	Exploration Geophysics	GLY 901	GLY 902	GLY 903		GLY 904
5	Hydrogeology	GLY 901	GLY 902	GLY 903		GLY 904
6	Petroleum Geology	GLY 901	GLY 902	GLY 903		GLY 904
7	Sedimentology and Reservoir Geology	GLY 901	GLY 902	GLY 903		GLY 904
8	Exploration Geology (Mineral Exploration Option)	GLY 901	GLY 902	GLY 903		GLY 904
9	Petrology and Applied Geochemistry	GLY 901	GLY 902	GLY 903		GLY 904
10	Structural Geology	GLY 901	GLY 902	GLY 903		GLY 904

In addition, according to Benchmark minimum academic standards for postgraduate programmes in sciences in Nigerian Universities, all postgraduate students (irrespective of the programmes) must take management and Entrepreneurship as well as ICT and Research Method as compulsory courses.

An outline of the courses in the various areas of specialization is given in part Appendix D.

Course Assessment

The courses will be assessed on the basis of written examinations and continuous assessment. Candidates will be required to obtain a minimum pass grade of C (50%) in the course work

Qualifying Examination

There will be a qualifying examination at the end of the second semester of the first year of the programme. The qualifying examination must be passed with a minimum grade of C (50%) before proceeding for the dissertation writing stage.

SEMINARS

General Seminar

These two seminars, each consisting of three credit units shall be held in the first and second semester of the first year to cover major topics excluded from other available courses. Students shall be required to present for the discussion short colloquia based on their reading of the assigned topics. Participation in the discussions as well as actual presentation of papers will be an integral part of the course.

Dissertation

Candidates shall be required to carry out their research under supervisor(s) appointed/assigned

by the Departmental Graduate Studies Committee. During the first semester of the second year, the candidate in consultation with the supervisor will choose a Ph.D dissertation topic to be approved by the Departmental Graduate Studies Committee.

Seminar based on research

This shall consist of three non-credit unit seminar presentations. The first two shall be presented in the department. The third seminar shall be presented before the Board of School of Graduate Studies examiners at the conclusion of the Ph.D dissertation in accordance with the graduate studies regulations of the University of Port Harcourt.

GLY 901.1 COURSE DESCRIPTION

PETROLEUM GEOLOGY OPTION

GLY901.1 Advanced Fossil Fuel Geology

Reservoir depositional models; Diagenetic developments; Reservoir Geological models; Petroleum Source rock evaluation Paleotemperatures; Paleopressures and Geothermal analyses; Trap analysis; Reserve estimation methods; Coal and Uranium geology; Exploitation Trends analyses; Sequence and Seismic stratigraphy; Geostatistical analyses of geologic data; Geologic Resources. Project management; Petroleum exploration and risk analyses techniques; Petrophysics.

EXPLORATION GEOPHYSICS

GLY 901.1 Applied Subsurface Geology

Advance seismology reflection and refraction of elastic waves, amplitudes of surface motion due to seismic waves in a spherically stratified earth model, seismology and earth's interior. 3D, seismic exploration and interpretation, Seismic

tomography and seismic stratigraphy. Gravity and magnetism, instrumentation and measuring techniques, data reduction and interpretation, Stokes theorem. Laplacian equation, boundary value problems, continuation of potential fields. Electrical and electromagnetic, conduction process, current flow in layered media, application of various electrode configurations, polarization, primitivity and dielectric losses, induced polarizations, electromagnetic induction theory, transmitter-receiver configurations in EM prospecting magnetotellurics. Computation of apparent resistivity model curves from other electrode configurations. Hankel transformation, Maxwell's equation for electromagnetic field and the physical interpretations.

Pretrophysical analysis, plate tectonics and materials of the earth, rheology of the earth and Basin analysis.

BIOSTRATIGRAPHY OPTION

GLY 901.1 Biofacies Analyses

Cretaceous Tertiary quantitative palynology and Micropaleontology; Palynostratigraphic and Biostratigraphic zonation; Biostratigraphy and West African Geologic boundaries; Palynofacies events and geochronology; Palynocycles and sequences stratigraphy; Paleovegetation and Paleosalinity analyses; Biogenic/ichnnofacies/Biolithic deposits.

ENVIRONMENTAL GEOLOGY OPTION

GLY 901.1 Advanced Environmental Geology

Migration of contaminants in porous media; environmental Impact Assessment and sustainable environmental management, Organic and inorganic contaminants; Strategies for monitoring contamination of soils and ground water. Site characterization for subsurface remediation.

HYDROGEOLOGY OPTION

GLY 901.1 Applied Hydrogeology

Groundwater resources evaluation and development. Unsaturated and multiphase Flow; well hydraulics; fractured aquifers; finite differential method; linear saturated steady-state flow in porous media; confined aquifers; salt water encroachment; groundwater contamination; Hydrogeochemistry, pump and aquifer tests and groundwater survey techniques.

SEMINARS

GLY 902.1 General Seminar 1 GLY 903.2 General Seminar II

Biostratigraphy Option

Advances in Biostratigraphic Analysis

This involves interdisciplinary research on the history of the earth and its biota and their interaction through time. Research programme in paleontology encompass the systematics of specific animals and plant groups, the evolutionary processes underlying phylogenetic patterns, palaeology, the response of ecosystems to abiotic and biotic change, and the relationship of ecological patterns to evolving lineages. Studies of environmental history emphasize the responses of shallow water depositional systems to changing climates and rates of subsidence. Reef dynamics and the history of ocean basins. The course is subdivided into 3 sections;

Principles: Systematics, paleontological techniques, processing and microscopy, protozoans (animal and plants; megafossils).

Application: Introduction top biostratigraphy and time scales; Mesozoic-Tertiary palynormorphs, Mesozoic- Tertiary planktic and benthic foraminifera etc. potential for zonation, intercontinental correlation, palaeology, palaeoclimatology, palaeoceanography and palaeoprovincialism; aquatic and non aquatic Quaternary; climate and vegetation reconstruction.

New directions. Other applications and floral history: Archaeological palynology; underwater pollen analysis; prehistoric diet reconstruction; melissopalynology; Entomopalynology; medical palynology; forensic studies in palynology; computer analysis; analytical biostratigraphy and correlation; palynofacies; fecal pellets; palynology in ores and petroleum exploration and exploitation; vegetational history, economic application of palynology and foraminiferal studies.

Engineering Geology and Hydrogeology options

ADVANCED TOPICS IN ENGINEERING GEOLOGY AND HYDROGEOLOGY

1. Advanced Geomechanics (rocks & soil mechanics) and mechanical property testing and analysis.
2. Advanced geotechnical site investigation for major civil engineering structures and dams.
3. In-situ field testing and analysis and use of latest computerized techniques.
4. Advanced slope stability analysis of gully erosion problems.

5. Analysis of aquifer pumping test results and sustainable water resources exploitation.
6. Water resources modeling and evaluation.

Environmental Geology Option

ADVANCED TOPICS IN ENVIRONMENTAL GEOLOGY

1. Reconciling various approaches to concept of sustainable development.
2. Advanced framework for environmental sustainability.

3. Advanced tools for environmental management systems including ETA, SIA, risk assessment, EMP, IMM and environmental audit.
4. Holistic approach to mitigation of gully erosion and flood geo-hazards.
5. Contaminant fate, movement and mitigation and effects of geology.
6. Site investigation for remediation of contaminated sites.

ACADEMIC STAFF

S/N	Name	Qualification	Designation	Specialization
1.	K. O. Okengwu	B.Sc(Calabar), M.Sc, Ph.D (UPH)	Professor/HoD	Petroleum Geology, Sedimentology
2.	V.U. Ukaegbu	B.Sc (UPH), M.Sc (Jos), Ph.D (UPH)	Professor	Mineralogy, Petrology& Geochemistry
3.	G.J. Udom	B.Sc, M.Sc, Ph.D (Calabar)	Professor	Hydrogeology, Environmental Geology
4.	A.C. Tse	B.Sc (ABU), M.Sc, PhD (UPH)	Professor	Engineering Geology & Environmental Geology
5.	J.I. Nwosu	B.Sc, Ph.D, (St.Petersburg, Russia)	Professor	Mining Geology, Economic Geology
6.	S.A Ugwu	B.Sc, M.Sc, Ph.D (UNN)	Professor	Geophysics
7.	N. Egesi	B.Sc, M.Sc, (Jos), Ph.D (UPH)	Professor	Minerology, Petrology
8.	S. Abrakasa	B.Sc (Calabar), M.Sc, Ph.D (Newcastle)	Reader	Geochemistry
9.	G.C. Soronnadi-Ononiwu	B.Sc, M.Sc , Ph.D (UPH)	Reader	Biostratigraphy
10.	R. U. Ideozu	B.Sc, M.Sc, Ph.D (UPH)	Reader	Sedimentology, Petroleum Geology
11.	K. N. Onwualu	B.Sc (Awka), M.Phil (RSUST), P.h.D (UPH)	Senior lecturer	Petrology
12.	A. E. Jones	M.Sc (B.Sc, M.Sc, UPH)	Senior Lecturer	Sedimentology, Petrology
13.	C. U. Ugwueze	B.Sc, (ESUT), M.Sc, Ph.D (UPH)	Senior Lecturer	Petroleum Geology
14.	D. O.. Okujagu	B.Sc, M.Sc, Ph.D (UPH)	Senior Lecturer	Structural Geology/ Remote Sensing/ GIS
15.	F. I. Chiazor	B.Sc, M.Sc, Ph.D (UPH)	Senior Lecturer	Petroleum Geology
16.	F.D. Giadom	B.Sc. (UPH), M.Phil (RSUST), Ph.D (UPH).	Lecturer I	Environmental Geology
17.	R. Oghonyon	B.Sc, M.Sc, Ph.D (UPH)	Lecturer 11	Exploration Geophysics
18.	E. U. Nnurum	B.Sc, M.Sc, Ph.D (UPH)	Lecturer 11	Engineering Geology
19.	M. M. Kekwaru	B.Sc, PGD, M.Sc (UPH)	Asst. Lecturer	Hydrology

DEPARTMENT OF MATHEMATICS/STATISTICS

DEPARTMENTAL POST-GRADUATE PROGRAMMES

PREAMBLE: To provide broadened academic knowledge that will produce self-oriented research.

The Department of Mathematics and Statistics offers Postgraduate Programmes in the Mathematical Sciences. The programmes are designed to provide broadened academic knowledge that will produce self-oriented research. It is hoped that at the end of the training, successful students would be able to advance academic pursuit and provide the much needed manpower in our institutions of higher learning, public service and the private sectors of our economy. The Department's postgraduate programmes lead to the award of:

- 1) Postgraduate Diploma in Mathematics (PGDM)
- 2) Postgraduate Diploma in Statistics (PGDST)
- 3) M.Sc. degree in Pure Mathematics with specialization in any of the areas in Pure Mathematics
- 4) M. Sc. Degree in Applied Mathematics with specialization in any of the areas in Applied Mathematics
- 5) M. Sc. in Statistics
- 6) Ph.D. in Pure Mathematics
- 7) Ph.D. in Applied Mathematics
- 8) Ph.D. in Statistics

ADMISSION REQUIREMENTS:

Candidates seeking admission into the PGD Statistics programme must be holders of the Bachelor of Science degree in the sciences or related disciplines obtained from the University of Port Harcourt or any other recognized University or its equivalent. Admission to the Master's degree programmes shall be as contained in the general postgraduate School requirement for admission into the degree of M.Sc.

REGISTRATION:

- 1) There are provisions for full-time and part-time registration.
- 2) Students are allowed to register for any of the options provided by the Department.
- 3) Registration is done once every year.
- 4) Part-time students shall register for a maximum of Six (6) taught courses in the first year, i.e. Three (3) per semester.

- 5) Full-time students shall register for a maximum of Six (6) courses per semester.

DURATION:

Fulltime students will be required to spend a minimum of 12 calendar months and a maximum of 24 calendar months for the PGD and M.Sc. Programmes. Part-time students will be required to spend a minimum of 24 calendar months and a maximum of 48 calendar months for the PGD and M.Sc. Programmes. For the Ph. D programmes, full-time students will be required to spend a minimum of 24 calendar months and a maximum of 60 calendar months. Part-time students will be required to spend a minimum of 36 calendar months and a maximum of 84 calendar months.

SCHEME OF STUDIES:

The Examination Requirements include all the following:

- 1) A candidate must pass with a minimum grade of C in all the courses taught.
- 2) No student can proceed to the thesis without having achieved the appropriate Grades in the second semester examination;
- 3) An important and integral part of the M.Sc. and Ph.D programmes will be the research seminar in which attendance is compulsory. Such seminar will be organized at least once in a quarter. The seminar is a place where research projects and their results, including those of the students are presented and critically assessed. An M.Sc student is expected to present at least one departmental seminar, a Ph.D candidate is expected to present at least two departmental seminars. These Seminars are integral part of the student's theses or dissertation. Candidates would not be presented for external examination without presentation of these seminars.
- 4) An M.Sc student upon submission often copies of his/her thesis in paper binding shall be examined by a board of Examiners.
- 5) A Ph.D student upon submission often copies of his/her thesis in paper binding shall be examined by a board of Examiners.

PGD MATHEMATICS

LIST OF COURSES

CORE COURSES

- The generic core courses may be better taken at the M.Sc level.

Programme Core Courses / Elective Courses

There are five Programme Core Courses and an elective courses to be chosen from the list of elective courses for each semester which are as follows:

1ST SEMESTER

Course Code	Course Title	Credit Unit
MTH 711.1	Real Analysis	3
MTH 712.1	Algebra	3
MTH 713.1	Differential Equation I	3
MTH 714.1	Mathematical Methods	3
MTH 715.1	Analytical Dynamics	3
One	Elective course from	
MTH 716.1	Fluid Mechanics	3
STA 741.1	Operations Research	3
CSC 501.1	Structured Programming	3
	Total	18

2ND SEMESTER

Course Code	Course Title	Credit Unit
MTH 721.2	Functional Analysis	3
MTH 722.2	Algebra II	3
MTH 723.2	Differential Equation II	3
MTH 724.2	Complex Analysis	3
MTH 725.2	Topology	3
MTH 700.2	Research Project	3
One	Elective course from	3
MTH 726.2	Computational Mathematics (Modeling)	3
MTH 727.2	Measure and Integration	3
MTH 728.2	Quantum Mechanics	3
MTH 729.2	Introduction to Semi-group Theory	3
CSC 508.2	C/C++ Language Programming	3
	Total	22

PGD STATISTICS

1ST SEMESTER

Course Code	Course Title	Credit Unit
STA 741.1	Operations Research	3
STA 742.1	Regression Analysis and Model Building	3
STA 762.1	Design and Analysis of Experiments	3
STA 763.1	Distribution Theory	3
STA 746.1	Statistical Inference	3
	Total	18

2ND SEMESTER

Course Code	Course Title	Credit Unit
STA 747.2	Time Series Analysis	3
STA768.2	Probability Theory	3
STA 748.2	Analysis of Categorical Data	3
STA 767.2	Econometric Methods	3
STA 764.2	Multivariate Analysis	3
STA 700.2	Research Project	4
	Total	22

M.Sc. MATHEMATICS (PURE MATHEMATICS) FIRST SEMESTER

1ST SEMESTER

Course Code	Course Title	Credit Unit
MTH 801.1	Semigroup Theory I	3
MTH 802.1	Functional Analysis	3
MTH 803.1	Ordinary Differential Equations	3
MTH 805.1	Advanced Algebra	3
MTH 804.1	Algebraic Topology	3
SGS 801.1	ICT and Research Methodology	2
	Total	17

M.Sc. MATHEMATICS (APPLIED MATHEMATICS)

Course Code	Course Title	Credit Unit
MTH 823.1	Fluid Mechanics I	3
MTH 802.1	Functional Analysis 3	3
MTH 803.1	Ordinary Differential Equations	3
MTH 805.1	Advanced Algebra	3
MTH 824.1	Quantum Mechanics	3
SGS 801.1	ICT and Research Methodology	2
	Total	17

M.Sc. MATHEMATICS (PURE MATHEMATICS)

SECOND SEMESTER

Course Code	Course Title	Credit Unit
MTH 812.2	Complex Analysis	3
MTH 816.2	Representation Theory	3
MTH 809.2	Semigroup Theory II	3
MTH 810.2	Lie Group And Lie Algebra	3
MTH 822.2	Seminar	2
MTH 800.2	Research Project	6
SGS 801.2	Management and Entrepreneurship	2

Course Code	Course Title	Credit Unit
	Total	22
MTH 812.2	Complex Analysis	3
MTH 827.2	Fluid Mechanics II	3
MTH 825.2	Partial Differential Equations	3
MTH 822.2	Seminar	2
MTH 800.2	Research Project	6
One	Elective Course From	6
MTH 826.2	Finite Element Methods	2
MTH 829.2	Advanced Operations Research	3
	Total	22

STA 817.2	Probability Theory II	3
STA 818.2	Bayesian Inference	3
STA 819.2	Statistical Computing/ Consulting	3
	Total	19/22

*Two or three or three courses shall be allocated upon availability of man-power.

COURSE DESCRIPTION

MTH 711.1 Real Analysis (3 Credit Units)

Integration: The Riemann-Stieljes Integrals. Improper Riemann- Stieljes integral. Function of bounded variation. Sequences and series functions. Uniform convergence of sequences and series of function. Uniformly convergent series. Power series. Wieiestrass approximation theorem. Infinite products.

Function of several variables: The n-dimensional Euclidean space. Partial and total derivative, directional derivatives. Higher partial derivatives. The mean value theorem. The Taylor series. Maxima and minima of functions of several variables. Necessary conditions for free and constrained cases. Lagrange multipliers. Integration of functions of several variables. Multiple integrals.

MTH 712.1 Algebra I (3 Credit Units)

Groups and subgroups. Cosets in groups Lagrange's theorem and applications, cyclic subgroups and cyclic groups. Normal subgroups Quotient groups. Group Homomorphism. Rings, integral domains, division rings, field rings of polynomials, and matrices, quaternion rings. Quotient rings. Ideals, polynomials, rings and factorization- Euclidean algorithm and gcd for rings. Rings Homomorphism Fundamental theorem of algebra.

MTFI 713i Differential Equations I (3 Credit Units)

Higher order differential Linear equations: with constant coefficients. Finding the general solution. Existence and uniqueness theory. To ronskian. Laplace transform method. Linear with variable coefficients. The Legendre and Euler linear equation. Exact equations, variation of parameters. Homogeneous system of ordinary differential equations with constant coefficients. Phase plane. Critical points. Sturmloiuville problems. Orthogonal functions. Applications series solutions of second order linear equations Bessel,

	Any two of	
STA 812.2	Multivariate Analysis	3
STA 814.2	Advanced Operations Research	3
STA 815.2	Advanced Statistical Theory	3
STA 816.2	Econometrics	3

Legendre and hypergeometric equations and functions.

MTH 714.1 Mathematical Methods (3 Credit Units)

Calculus of variation. Lagrange's functional. Weak relative extremum. Hamilton's principles. Lagrange's equations and geodesic problems. The Du BoisRaymond equation and corner equation. Variable and points and related theorems. Sufficient condition for a minimum. Isopermetric problems. Variational integral transforms. Laplace Jouner and Hankel transforms. Application to solution of differential equations.

MTH 715. 1 Analytical Dynamics (3 Credit Units)

Degrees of freedom. Holonomic constraints. Generalized coordinates. Lagrange's generalized coordinates. Lagrange's equations for holonomic system impulsive force.

MTH 716.1 Fluid Mechanics (3 Credit Units)

Cartesian tensors. Eulerian and Lagrangian coordinates. Continuity equation. The substantive derivative. The Navier-Stokes equation. Dynamical similarity. Reynolds number and other non-dimensional parameter. Low and high Reynolds number. Some solution of the viscous flow equations.

Inviscid flow: The Euler equation velocity potential and stream functions. Circulation and vorticity. Conformal transformation. Boundary layer flow: The incompressible boundary layer flow similar exact solutions. Approximate solutions.

STA 741.1 Operations Research (3 Credit Units)

Definition and scope of operations research; elementary inventory models; replacement; maintenance and reliability problems; linear programming formulation, simplex, simplex method; allocation problems (simplex, assignment and transportation algorithms) and their application to routing problems. Queuing theory; game theory; sequencing problems.

CSC 501.1 Structured Programming (3 Credit Units)

Principles of programming style; structured programming concepts, modularity; stepwise refinement; language for structured programming; test construction; program verification.

MTH 721.2 Functional Analysis (3 Credit Units)

Metric spaces. Contraction mapping principle. ArzelaAscoli lemma. Stone-weierstrass theorem. Normed linear spaces:-Banach spaces. Hahn-Banach theorem. Uniform boundedness principle. Duality theory in Banach space. Dual of LP spaces. Riesz representation theorem. Compact operators. Hubert Spaces: projection theorem. Riesz representation theorem.

MTH 722.2 Algebra II (3 Credit Units)

Abelian group. Structure of finitely generated abelian groups. Permutation of group actions. Burnside lemma; sylow theorems. Derived groups. Series of sub-groups. Nilpotent and soluble groups. Free groups. Groups of order 8 to 15. Fields, Homomorphism of fields. Finite fields prime fields. Irreducibility. flistein criterion. Introduction to Galois Theory.

MTH 723.2 Differential Equations II (3 Credit Units)

Introduction to Partial Differential equations. Linear partial differential equations of the first and second order. Non-linear pde's of the first order and second order characteristics. Existence and uniqueness of solution. Second order linear and quasi-linear pde's in two independent variables. Elliptic, hyperbolic and parabolic equations. Applications to equation of mathematical physics.

MTH 724.2 Complex Analysis (3 Credit Units)

Analytic function. The canchy-Riemann Equations. Bilinear transformations, conformal mapping. Complex integrals. Cauchys theorem. Cauchy's integral formula. Taylor and Laurent series isolated singularities and residues. Calculus of residue, and application to evaluation of integrals and to summation of series. Maximum modulus principle. Argument principle. Rouche's theorem. The fundamental theorem of algebra. Principle of analytic continuation.

MTH 726.2 Computational Maths (modeling) (3 Credit Units)

Modeling with differential and integral equations. The logistic curve. Problems of growth and decay. Solution of problem of growth of two conflicting population. Physical models starring rocket and flow problem. Differentive models chemical models. Mathematical modeling of intramuscular MTH 728 .2 injection. The problem of pendulum and introduction to elliptic integrals. Solution of integral equations. Stochastic modules and applications to games theory.

MTR7 28.2 Quantum Mechanics (3credit Units)

Dirac formulation of quantum mechanics: Linear spaces and operators, kets and bras. Hermitian operators: Observables, eigen-function, eigen values, expectation values, probability amplitudes. Quantization condition, Poisson brackets and commutators, Schrodinger representation in Cartesian coordinates. Unitary operators, spatial translations and their infinitesimal generators, conservation of momentum. Schrodinger and Heisenberg pictures. Heisenberg equation of motion: Angular momentum. Operation as infinitesimal rotation generation.

MTH 727.2 Measure And Integration (3 Credit Units)

Countability of sets and cardinal numbers. Outer measure, measurable set and Lebesgue measure. Measurable function, the Lebesgue integral, convergence of sequence of measurable function. General Lebesgue integral. LP spaces. Riesz-Fischer theorem.

MTH 729.2 Introduction to Semigroup Theory (3 Credit Units)

Basic notion of semigroup. Monogenic semigroups. Ordered sets. Semi-lattices and lattices. Congruences. Three semigroups. Green's relations. The structure of D-classes. Regular D-classes. Regular semigroup. 0-simple and simple semigroups. Rees's theorem. Primitive idempotents. Semilattice of groups. Inverse semigroups.

MTH 725.2 Topology (3 Credit Units)

Review of metric spaces. Dense subsets of metric space. Compactness connectedness of metric space. Topological spaces, definition open and closed sets, neighbourhoods, coarser, and finer topologies. Basis and sub-bases. Separation axioms. Compactness, local compactness, connectedness. Construction of new topological spaces from given ones; subspaces, quotient spaces. Continuous functions, homeomorphism, topological invariance, spaces of continuous functions: point-wise and uniform convergence. Pre-requisite.

CSC 508.2: C/e++ Language Programming (3 Credit Units)

Modular programming; Object-oriented programming; C union structures; classes; object; messages; methods; Encapsulation; operator overloading; applying object-oriented programming techniques.

PGD STATISTICS

Programme Core Courses/Electives

There are Programme Core Courses and elective courses for each semester which are as follows:

COURSE DESCRIPTION

STA 741.1 Operations Research (3 Credit Units)

Definition and scope of operations research; elementary inventory models; replacement; maintenance and reliability problems; linear programming formulation, simplex, simplex method; allocation problems (simplex, assignment and transportation algorithms) and their application to routing problems. Queuing theory; game theory; sequencing problems.

STA 742.1 Regression Analysis And Model Building (3 Credit Units)

Simple/Multiple linear regression models, polynomial regression: Test of independence and goodness-of fit; use of dummy variables; non-linearity in parameters requiring simple transformation; simple correlation, partial and conditional regression and correlation; Test of independence of regression coefficient; Multicollinearity and other problems associated with "Best regression models".

STA 762.1 Design and Analysis Of Experiments (3 Credit Units)

Basic design; completely random; randomized block and Latin square designs; use of models for estimating effects; missing data and confidence limits; Graeco Latin square and split plot designs; analysis of variance and hypotheses tests; factorial experiments; the 22 and 23 experiments; standard error for factorial effects; confounding factorials in block; fractional factorials; factors at 2 levels and 3 levels; incomplete block designs; same examples of balanced incomplete blocks (BIB); design estimation of model parameters; analysis of variance for BIB experiments (with symmetrical BIB arrangements).

STA 763.1 Distribution Theory (3 Credit Units)

Bivariate normal distribution; the gamma distribution; chi-squared distribution; Beta distribution; (two types), distribution; distributions of functions of random variables: cumulative distribution function; moment generating function; transformation (change of variable) techniques; distribution order statistics.

STA 746.1 Statistical Inference (3 Credit Units)

Estimation: Normal, least squares and maximum-likelihood methods; interval estimates; Test of hypothesis-one and two tail tests; likelihood ratio test; Nyman-Pearson theorem; Bayesian estimates; goodness-of-fit test; fitting a straight line; linear models; parameter estimates; test of significance and confidence intervals; residual plot and test of fit.

STA 764.2: Multivariate Analysis (3 Credit Units)

The multivariate normal distribution; estimation of mean vector and covariance matrix; the distribution and uses of sample correlation coefficient; the generalized T²-statistics; classification of observations; procedures of classification into one of two or three specified multivariate normal populations; discriminant function when populations are unknown; principal components and factor analysis.

STA 747.2: Time Series Analysis (3 Credit Units)

Components of time series, measurement of trend, the seasonal index, the cyclical component and random fluctuations, serial correlation, correlogram, stationary time series, estimation of mean and their covariance function; linear prediction in time series; autoregressive.

STA 748.2: Analysis of Categorical Data (3 Credit Units)

Analysis of simple, double and multiple classification of balanced data in crossed and nested arrangement; Analysis of two-way, three-way contingency tables for tests of homogeneity; independence and interactions: Analysis involving incomplete tables; missing values, etc: Analysis of variance involving unbalance data; Multivariate analysis of variance; Analysis of multi- factor, multi-response of variance such as missing observations; Non-normality; heterogeneity of variance, etc.

STA 767.2: Econometrics Methods (3 Credit Units)

Nature and quality of econometrics data and use of econometrics models; problems of regression analysis; multicollinearity; heteroscedasticity; autocorrelation; errors in variables and their effects time as a variable; dummy variable; grouped data; lagged variables and distributed lag models; application to cross-section and time series data; demand studies; measurement of production;

consumption and investment functions; simultaneous equations and identification; bias in reduced form; estimation; indirect least squares and twostage least squares; ideas of model specification and specification error; maximum likelihood error applied to econometrics.

STA 768.2: Probability Theory (3 Credit Units)

Probability spaces; measures and distribution; distribution of random variables as measurable functions; product spaces: product of measurable spaces; product probabilities; independence and expectation of random variables: weak, convergence, convergence almost everywhere, convergence in nth mean; central limit theory; laws of large number; characteristic function and Laplace transforms.

M.Sc MATHEMATICS

PROGRAMME CORE COURSES

There are list of Programme Core Courses and elective courses for each semester. These shall be allocated upon availability of manpower. The selection of programme core courses and elective shall be in line with the Benchmark minimum academic standards of the NU

COURSE DESCRIPTION

MTH 801.1 Semigroup Theory 1 (3 Credit Units)

Semigroups: Types of semigroup including regular, inverse etc (emphasizing in each the concept of cancellative, commutative, semilattice, idempotents etc). Ideals, Green's Relation and their generalization. Rees Semigroups. Simple and Completely Simple Semigroups, Semilattices. The structure theorems of regular semigroups. Unions of groups, Inverse semigroups. Moon's Semigroup. Bisimple and Simple inverse semigroups. Fundamental inverse semigroup.

MTH 802.1 Functional Analysis (3 Credit Units)

Revision of Banach and Hilbert spaces with emphasis on properties of the norm, properties of L_p-spaces and C-spaces, dual spaces, basic theorems in functional analysis

Linear bounded operators: Norm of operators, continuity of linear operators, Fredholm's operators, adjoint operators, operator algebra, Gelfand theorem, compact operators and application to classical analysis. Measurable set and measurable functions, Lebesgue integration,

convergence theorem, decomposition and differentiation of measures.

MTH 803.1 Ordinary Differential Equations (3 Credit Units)

Existence and uniqueness of solutions of initial value problems: The Cauchy-Peano existence theorem, the Picard-Lindelof theorem, Continuation theorems, Continuous dependence of solutions on initial conditions and parameters, Boundary value problem and Sturm-Liouville theory, Comparison theorem for second order equations.

Reduction of system of first order scalar equation to a first order equation in \mathbb{R}^n , Linear equations in \mathbb{R}^n , Homogeneous and non-homogeneous equations, the Fundamental matrix, the method of variation of parameters.

Asymptotic behavior of non-linear equations: Stability, uniform stability, asymptotic stability and uniform asymptotic stability. Autonomous system: Stability of linear and perturbed linear systems, Phase space, Orbits and limit sets, two dimensional autonomous systems: Linear systems: Modes, spiral points, centres and saddle points. Perturbation theorem and Poincare-Bendixon theorem.

MTH 805.1 Advanced Algebra (3 Credit Units)

Commutative rings; Prime Ideals, Maximal Ideals, Radical Noetherian and Artinian rings, Dimension theory, Modules over commutative rings, The module of homomorphisms from the module to another. Exact sequences projective and injective modules, Tensor products, flat modules. Sylow theorems, direct products, fundamental theorem of finite abelian groups, field of quotients, Euclidean rings, Polynomial rings over commutative rings, inner product spaces, field's extension, field's elements of Galois theory, solvability radicals.

MTH 804.1 Algebraic Topology (3 Credit Units)

Homotopy, Homotopy equivalence, the fundamental group, Simplexes, simplicial complexes, simplicial maps, Simplicial approximation theorem. The edge path group, its homomorphism with the fundamental group, calculations of π_1 especially for closed surfaces. Brouwer fixed point theorem in the plane. Simplicial homology theory (integer co-efficient), oriented simplexes, chain, boundary and cycle groups, The induced homomorphism. Calculation of $H_n(S^m)$ generalized Brouwer fixed point theorem, Mayer-Vietoris sequence, calculation of

homology group. Review of categories and functions, covering transformation, Singular homology, Universal coefficient theorem for homology and cohomology. Spectral sequence.

MTH 823.1 Fluid Mechanics I (3 Credit Units)

Fundamental Equations of fluid Mechanics and Exact Equation, Viscosity, real and ideal fluid, Reynolds number and other non-dimensional parameters, General features of laminar, turbulent and transitional flows, The differential equation of motion: the Navier-Stokes equation, Limiting cases for small and large Reynolds number, Thermodynamic relations and the differential form of energy equations, Some exact solutions of Navier-Stokes equation (i) flow through a straight channel bounded by two, parallel plates, (ii) Hagen-Poiseuille flow (iii) Couette flow, (iv) flow between two concentric rotating Cylinders (v) Stokes' first and second problems, (vi) flow due to a rotating disc. Boundary Layer Theory: Boundary-layer concept, Prandtl's boundary-layer flow along a flat plate. Boundary-layer thickness, displacement thickness, and momentum thickness, Dependence of boundary layer on Reynolds number, Thermodynamics Compressible flow; waves, shocks, supersonic flow, stability; Turbulence.

MTH 824.1 Quantum Mechanics 1(3 Credit Units)

Fundamental principles of Quantum mechanics; review of classical mechanics, axiomatic basis, Interpretative postulates, Simultaneous measurability of observable, uncertainty principles, different representative postulates simultaneous measurability of observable, uncertainty principles, different representations of state vectors, and observable. Introduction to group theoretical ideas, groups of transformation, rotation operations, invariant representation of groups.

Background of the axiomatic approach to Quantum mechanics, axioms of continuum and Basic Concepts. Constitutive Relations. Equations of Motion and other Equations. Equations of Motions and other Equations of Balance. The place of the Classical Theories.

MTH 812.2: Complex Analysis (3 Credit Units)

Elementary properties of holomorphic functions, Algebraic functions, Harmonic functions, the mean value property, Poisson's formula, the reflection principle, Conformal mapping, Dirichlet's problem, Harnack's principle, Periodic functions, Weierstrass functions, elliptic curves.

Modular forms, Riemann surfaces. Covering surfaces, covering transformations. Discontinuous groups of linear transforms, automorphic forms, Elliptic functions, Several complex variables; Weierstrass theorems. Riemann extension theorem, Analytic varieties complex manifolds.

MTH 809.2 Semigroup Theory Ii (3 Credit Units)

Representations of Inverse Semigroups, Type A Adequate and Abundant Semigroups, Congruencies, Idempotent separating congruence, cancellative congruencies, Other types of semigroups unipotent, separative idempotent, adequate and Type A semigroups and their relationship to inverse semigroups.

MTH 816.2 Representation Theory (3 Credit Units)

Representations of groups by linear transformations, group algebras, character theory and modular representations, Representation theory of algebraic groups, representation of finite groups, representation of compact and locally compact groups, representation of Lie groups, Unitary representation theory.

MTH 810.2: Lie Group and Lie Algebra (3 Credit Units)

Lie groups, Local lie groups and examples, subgroups, Local transformation groups with examples, Matrix group, one-parameter groups, exponential map, Campbell-hausdorff formula, Generalized lie derivatives, Representation and realizations of lie algebras, Lie algebras, Lie algebra of a matrix group, integration on matrix groups, Abstract Lie groups.

MTH 827.2: Fluid Mechanics Ii (3 Credit Units)

Flow in pipes, Channels and Ducts: Steady and unsteady fully developed flow. Pulsate flow. Flow in an elastic tube. Flow in curved pipe. Flow in slowly varying channel. Applications. Flow through porous media: Scope. Permeability, Darcys law, Beavers and Joseph boundary conditions at a naturally permeable wall, Some boundary and initial value problems. Flow of immiscible and miscible fluids. Applications, Diffusion process and basic hypothesis of mathematical theory, Diffusion equations, Methods of solution when the diffusion coefficient is constant and variable. General equations of diffusion and reaction. Diffusion in single and multi-component systems. Diffusion in porous media. Applications. Non Newtonian Fluids: Description of various type of non-Newtonian

fluids including polar and Casson fluids. Steady and unsteady flow in pipes and channel and some miscellaneous flow problems. Applications.

MTH 825.2: Partial Differential Equation (3 Credit Units)

First order quasi-linear PDE. Classification of 2nd order PDE. Sobolev spaces. Green Formulae, Principles of Elliptic equations, Existence Theorems for Elliptic and parabolic equations, Fredaolius theorem, Frontier expansion of solutions of homogeneous boundary value problems. Trace theorems, Elements of potential theory. Basic examples of linear partial differential equations and their fundamental equations and fundamental solutions, Existence and regularity of solutions (Local or Global) of the Cauchy problems, boundary value problems and mixed boundary value problems. The fundamental solution of their partial differential equations.

MTH 826.2: Finite Element Method (3 Credit Units)

Introduction to the Finite Element Method: Formulation of the Finite Element Method using the Principle and Virtual Displacement. General Isoparametric Formulation, and Variational Techniques, Generalization of the theory, Application of the Finite Element Method to the Solution of Engineering Problems. E.g. in Solid Mechanics. Heat Transfer, Fluid Dynamics and Mass Transfer, Development of appropriate Computer Programme, Case Studies. Solution of self-adjoint elliptic boundary value problems by finite element method. Numerical solution of integral equation. Reformulation of Elliptic boundary value problems in terms of boundary integral Equations Applications.

MTH 829.2 Operations Research (3 Credit Units)

Network definition, minimal spanning tree algorithm, shortest route problems, examples of the shortest route application and shortest route algorithm, maximal flow model, enumeration of cuts, maximal flow algorithm, minimum cost capacitated flow problem, network representation and linear programming formulation, critical path computation and construction of time schedule, branch and bound algorithm, zero-in implicit enumeration algorithm and cutting plane algorithm, recursive nature of computations in DP, forward and backward recursive cargo loading model, work force size model, equipment replacement model, inventory model, static EOQ models, classic EOQ model, EOQ with price

breaks and multi-item EOQ with storage limitations, Monte Carlo simulation, types of simulation, elements of discrete event simulation, generation of random numbers, mechanics of discrete simulation and methods for gathering statistical observations, unconstrained problems, necessary and sufficient conditions, and Newton Raphson method, constrained problems, equality constraint and inequality constraint.

COURSE DESCRIPTION

STA 801.1 Statistical Inference (3 Credit Units)

Sample theory; Bayesian and decision theoretic approach to estimation and test of hypothesis; minimum variance; unbiased and maximum likelihood and their optimal properties Efficiency of estimation under quadratic loss; Admissibility of estimators: U.M.P.; locally powerful tests; invariance; large sample criteria for comparison of tests; sequential tests of hypotheses. Conditioning, distribution theory, approximation to distributions, modes of convergence, limit theorems, statistical models, parameter estimation, properties of estimators.

STA 802.1 Probability Theory (3 Credit Units)

Probability measures and space. Probability distribution and stochastic process in R^1 and R^n ; Limit theorems; Characteristics functions and infinitely divisible and stable distribution; Renewal theory and random walks; Hartingel's theory. Introduction to measure theoretic probability; derivation and transformation of probability distributions; generating functions and characteristic functions; conditional expectation, sufficiency and unbiased estimation; methods of large sample theory including laws of large numbers and central limit theorems; order statistics.

STA 803.1 Sample Survey Techniques (3 Credit Units)

Construction and choice of strata, and various equal and unequal probability sampling schemes with properties. Estimation of means, proportion and their variances. Successive sampling scheme. Problems of non-sampling error and non-response: application to some selected specialized survey.

STA 804.1 Stochastic Processes (3 Credit Units)

Simple, compound and generalized poisson processes; Markov chains; renewal processes, queuing theory and associated waiting time

problems; inventory theory, applications; Ho-Doob calculus; Stochastic integrals.

Classification of stochastic processes. Random walk models, markov chains, inventory model, branching processes. Poisson, birth-and death processes. Waiting time models, Estimation problems.

STA 805.1 Linear Statistical Models (3 Credit Units)

Matrices and quadratic forms; multivariate normal distribution; Linear model-Classification and analysis; general linear hypothesis of full ranks; computing methods; Polynomial and curvilinear models; Regression models; Experimental design models; incomplete block models; Mixed models-two way classification models with interaction and with fixed and random effects; balanced incomplete block design models; linear arrays.

STA 806.1 Time Series Analysis (3 Credit Units)

Discrete time series; The classical model AP MA, APMA, and ARAMA. ARIMA stationary processes; Harmonic analysis and estimation linear stochastic models; Time series specified for continuous time; periodogram analysis.

Theory of stochastic models and their forecasting. Model building: identification, estimation. Diagnostic checking. Analysis of stationary Data Co-integration and error correction techniques.

STA 807.1 Quality Control and Practice (3 Credit Units)

Analysis and control of variations in a production process OC of a control chart. Control charts for attributes and variables. Cumulative sum control charts. Other control charts. Methods of controlling several related characteristics; process capability analysis. Design of control charts. Specification and Tolerance.

STA 808.1 Biostatistics (3 Credit Units)

Advance Regression, Bio-assays, Probit and Logit models, Growth Curves; Logistics Regression. Potency/efficacy determination. Theory of clinical trials, Ethical Issues in Medical Data Collection.

STA 809.1 Non-parametric & Sequential Methods (3 Credit Units)

Distribution-free methods. Distribution of order statistics and quintiles. One and two simple tests. Confidence intervals. Transformation of statistics and their asymptotic properties. OC and ASN functions of SPRT. SPRT for composite hypotheses elements of sequential estimation

stein's two stage sampling methods for point and interval estimate.

STA 811.2 Design And Analysis of Experiment (3 Credit Units)

General Linear Models, Generalized inverse of a Matrix, Factorial experiments; Symmetric and Asymmetric. Balanced and Partially Balanced Incomplete Block Designs, lattice experiments; Resolvable designs, Row- Column designs. Response Surface Methodology, Construction of Designs. Applications of statistical methods to efficient design of scientific experiments. Determination of optimum conditions. Transformable data and analysis of experiments involving singular matrices and incomplete data.

STA 813.2 Categorical Data Analysis (3 Credit Units)

Probability mass function for 2x2 tables measures of association for 2x2 tables and general cxc tables. Probability mass functions for rxc tables. Goodness of fit tests. Square tables and their applications structural models for two and higher dimension: Log-linear models and estimate of parameters. Logistic regression and bio-assays.

STA 812.2 Multivariate Analysis (3 Credit Units)

Multivariate normal distribution, estimation of mean and covariance matrix; Wishart distribution; distribution of partial and multiple correlation coefficients; Hotelling's T², Principal components. Multivariate normal distribution and associated multiple and partial correlation. Regression theory, Estimation of parameters; Hotellings T² and Mahalanobi's d; Wishart distribution; Test concerning variables and associated confidence bounds; some other multivariate distributions.

STA 814.2 Advanced Operations Research (3 Credit Units)

Network definition, minimal spanning tree algorithm, shortest route problems, examples of the shortest route application and shortest route algorithm, maximal flow model, enumeration of cuts, maximal flow algorithm, minimum cost capacitated flow problem, network representation and linear programming formulation, critical path computation and construction of time schedule, branch and bound algorithm, zero-in implicit enumeration algorithm and cutting plane algorithm, recursive nature of computations in DP, forward and backward recursive cargo loading model, work force size model, equipment

replacement model, inventory model, static EOQ models, classic EOQ model, EOQ with price breaks and multi-item EOQ with storage limitations, Monte Carlo simulation, types of simulation, elements of discrete event simulation, generation of random numbers, mechanics of discrete simulation and methods for gathering statistical observations, unconstrained problems, necessary and sufficient conditions, and Newton Raphson method, constrained problems, equality constraint and inequality constraint.

STA 819.2 Statistical Computing/consulting (3 Credit Units)

The design and use of existing statistical software: methods of simulation of random processes; numerical methods of fitting linear models, multivariate analysis; methods for nonlinear modeling. Introduction of key aspects of statistical consulting and data analysis activities, report writing and presentation.

STA 815.2 Advanced Statistical Theory (3 Credit Units)

Limiting theorems. Convergence of sequence of variables and some probability functions limiting distribution. Generating functions and inversion theorems. Special parametric univariate and muhivariate distributions and large sample theory. Further theory of statistical inference.

STA 816.2 Econometrics (3 Credit Units)

OLS, Gauss-Markov Theorem. MLE. Specification and misspecification test. Predictive and non-predictive tests, Test of hypothesis of r linear model. The likelihood ratio, wald and language multiplier Test; Multicollinearity. Specification bias. GLS. Dummy variables and seasonal variations. Inferences based on asymptotic Distribution Theory.

STA 818.2 Bayesian Inference (3 Credit Units)

Sampling theory and its critique, subjective probability, likelihood principles, Bayes theorem, Bayesian analysis of Normal theory inference problems, the BehrensFisher problem, assessment of model assumptions, robustness of inference, analysis of variance, estimation of variance components, empirical Bayes, some aspects of multivariate problems, sequential nature of Bayesian inference, prior and posterior distribution of parameters in binomial, poisson, exponential and normal populations, comparison of two normal distributions, predictive distributions, decision theory, utility, risk aversion, extensive form of analysis, two-action problems, point

estimation, best population problems, economics of sampling.

PH.D COURSE WORK IN PURE AND APPLIED MATHEMATICS

Objectives

The Ph.D degree programme in Mathematics is designed to provide specialized academic knowledge that will produce self-oriented research. At the end of the training, successful students would be able to provide the much needed manpower in our institution of higher learning, public service and the private sector of our economy.

Regulations

The Ph.D programme shall consist of approved courses of study and research.

Admission Requirements

Candidates for admission to the programme shall be candidates who have:

- i. Obtained and M.Sc degree in Mathematics of the University of Port Harcourt or any approved University and have a CGPA of not less than 3.50 on a 5 point scale or 2.8 on a four point scale.
- ii. Scored a minimum of 70% in a Ph.D admission interview organized by the Departmental Graduate Studies Committee.

Requirements governing Course and Examination:

1. The Ph.D degree programme in Mathematics follows the general regulations of the School of Graduate Studies, University of Port Harcourt.
2. The programme consists of course work, seminars and a dissertation.
3. The courses shall be evaluated in terms of course units, with a minimum of three (3) and a maximum of six (6).
- 4a. All candidates shall be required to register for not less than twenty-one (21) credit unit courses in the programme.
- b. A maximum of thirty (30) credit units may be earned from relevant courses at the M.Sc programme. However, students with deficiency will be required to register and pass the required courses at M.Sc level.

(c) Compulsory Courses:

All candidates are expected to take and pass each of the following courses in the first year of the programme with a minimum of C (50%) grade of the University of Port Harcourt.

Course Code	Course Title	Credit Unit
MTH 901.1	Analytical and Computation Mathematics	3
MTH 902.1	Research Seminar I	3
MTH 903.2	Research Seminar II	3
MTH 910	Dissertation	12
	Total	21

5. Course Outlines/Description

STA 901.1 Analytical and Computational Statistics

Recent trend in analytical and computation Statistics shall be explored. E.g analytical and computational evaluations using statistics softwares such as SIMULA, SAS etc.

STA 902.1 Research Seminar I

Seminars on research trends shall be explored. The exploration shall be summarized by each student in a seminar paper presented and scored by the Departmental Graduate Studies Committee.

STA 903.2: Research Seminar II

Advanced research seminars on statistical theory and applications in specialized areas of interest to the students and supervisors, enough to expose the students to well defined research interest. It shall be summarized in a seminar paper presented by the student and scored by the Departmental Graduate Studies Committee.

6. Duration of Programme:

- a. Full Time:
The Ph.D programme candidate will be required to spend a minimum of 24 calendar months (2 years) and a maximum of 60 calendar months (5 years).
- b. Part Time
Candidates requiring a part time programme will be required to spend a minimum of 36 calendar months (3 years) and a maximum of 84 calendar months (7 years).

Ph.D COURSE WORK IN STATISTICS

Objectives

The Ph.D degree programme in Statistics is designed to provide specialized academic knowledge that will produce self-oriented research. At the end of the training, successful students would be able to provide the much needed

manpower in our institutions of higher learning, public service and the private sector of our economy.

Regulations

The Ph.D programme shall consist of approved courses of study and research.

Admission Requirements

Candidates for admission to the programme shall be candidates who have

- i. Obtained an M.Sc degree in Statistics of the University of Port Harcourt or any approved University and have a CGPA of not less than 3.50 on a five point scale or 2.8 on a four point scale.
- ii. Scored a minimum of 70% in a Ph.D admission interview organized by the Departmental Graduate Studies Committee.

Requirements governing Course and Examination

- 1. The Ph.D degree programme in Mathematics follows the general regulations of the School of Graduate Studies, University of Port Harcourt.
- 2. The programme consists of course work, seminars and a dissertation.

- 3. The courses shall be evaluated in terms of course units, with a minimum of three (3) and a maximum of six (6).
- 4a. All candidates shall be required to register for not less than twentyone (21) credit unit courses in the programme.
- b. A maximum of thirty (30) credit units may be earned from relevant courses at the M.Sc programme. However, students with deficiency will be required to register and pass the required courses at M.Sc level.

(c) Compulsory Courses:

All candidates are expected to take and pass each of the following courses in the first year of the programme with a minimum of C (50%) grade of the University of Port Harcourt.

ACADEMIC STAFF

S/N	Name	Qualification	Area of Specialization	Designation
1	Bazuaye, F. E.	B.Sc., M.Sc., UNIBEN, Ph.D EBSU	Applied Maths/ Numerical Analysis	Reader / HOD
2	Nduka, E.C.	B.Sc., M.Sc., UNN, Ph.D. Ibadan	Applied Statistics/ Biometrics	Professor
3	Iwundu, M .P.	B.Sc., UYO, M.Sc., Ph.D. UNN	Experimental Design	Professor
			Applied Maths/	

4	Jackreece, P.C.	B.Sc. UST, M.Sc., FUTO, MBA IMSU., Ph.D. UST	Functional Differential Equation	Professor
5	Iwok, I. A.	B.Sc. UNICAL, M.Sc. IBADAN, Ph.D. UST	Time Series Analysis	Professor
6	Ijomah, M.A.	B.Sc. IMSU, M.Sc., Ph.D. UPH, Ph.D. NAU	Applied Statistics/ Econometrics	Professor
7	Ezeora, J. N.	B.Sc. EBSU; DICTP, M.Sc. EBSU; PhD AUST	Functional Analysis	Professor
8	Akpan, N. P.	B.Sc. UYO; M.Sc. UNN; Ph.D. RSUS	Operations Research	Reader
9	Nzerem, F.E.	B.Sc. UNN, M.Sc., FUTO, Ph.D. UNN	Applied Mathematics/ Fluid Mech.	Senior Lecturer
10	Orumie, U.C.	B.Sc. UNN; M.Sc. UNN; Ph.D. UPH.	Operations Research	Senior Lecturer
11	Nwakuya, M.T.	B.Sc. IMSU; M.Sc. IMSU; Ph.D. MOUA.	Econometrics	Senior Lecturer
12	Udo-Akpan, I.U.	B.Sc. SOKOTO; M.Sc. Ibadan; Ph.D, UPH.	Applied Mathematics	Senior Lecturer
13	Musa, A.	B.Sc. ABRAKA; M.Sc. UPH; Ph.D, UPH.	Applied Mathematics/ Fluid Mech.	Senior Lecturer
14	Ogoke, U. P.	B.Ed. – UNN, M.Sc. UPH; Ph.D-UPH.	Biostatistics	Senior Lecturer
15	Udoaka, O. G.	B.Sc., UYO, M.Sc. UPH; Ph.D. UPH.	Algebra	Senior Lecturer (Part-Time)
16	Biu, O. E.	B.Sc., M.Sc., Ph.D. UPH	Time Series Analysis	Senior Lecturer
17	Alimi, A.	B.Sc., ABRAKA, M.Sc., IBADAN	Mathematics	Lecturer I
18	Ugorji, H.C.	B. Sc., UPH, M.Sc. FUTO	Mathematics	Lecturer I
19	Nwachukwu, E.C.	B.Sc. NAU, PGD CAPE TOWN, M.Sc. UPH, Ph.D. UPH.	Applied Mathematics/ Mathematical Modeling	Lecturer I

DEPARTMENT OF MICROBIOLOGY

1.0 ADMISSION REQUIREMENTS

1.1 Post-graduate Diploma in Microbiology (PGDM)

This is designed for different categories of candidates.

(a) Non-Microbiology graduates. B.Sc. in related disciplines (PSB, AEB,

Biochemistry, Anatomy, Physiology, Nursing, etc.).

(b) B.Sc. in Microbiology graduates with third class.

(c) HND graduates (in Science Laboratory Technology- Bacteriology/Microbiology/ Virology and any other approved by the Department) of Nigerian Polytechnics or

other approved comparable institution with distinction or upper credit.

1.2 M.Sc. Degree in Microbiology

(i) M.Sc. in Food Microbiology

- a) B.Sc. in Microbiology or closely related disciplines not below Second class lower division (minimum CGPA of 2.40 on a 5-point scale).
- b) B.Sc. in related discipline, not below second class lower division (CGPA of 2.40) or HND (Upper credit) PLUS a minimum of credit pass (B grade/4.00 CGPA in PGDM from University of Port Harcourt or any other approved University and in addition.
- c) A minimum grade of C in at least three of these courses: Food Microbiology; Biotechnology/Food processing/Preservation; General Microbiology and Analytical Microbiology & Quality control.

(ii) M.Sc. in Industrial Microbiology

Same as for Food Microbiology (2 above) except that the course “Industrial Microbiology” is substituted for Food Microbiology as one of the four courses indicated in 2 (c) above.

(iii) M.Sc. in Environmental Microbiology and Bioremediation

Same as for Food Microbiology 2(a) and (b) above but (c) is as follows: a minimum grade of C in at least three of these courses: Environmental Microbiology; Soil Microbiology; Microbial Physiology and Microbial Ecology.

(iv) M.Sc. in Pathogenic Microbiology and Biotechnology

Same as for Food Microbiology (2(a) and (b) above but (c) is as follows: a minimum grade of C in at least three of these courses: General Microbiology; Pathogenic Microbiology; Pharmaceutical Microbiology.

1.3 Ph.D in Microbiology (with different specializations)

- a) M.Sc. in Microbiology or related discipline with a minimum CGPA of 3.50 on a 5-point scale).
- b) A minimum grade of C is required in certain courses depending on the choice of specialization (see 2 above).

- c) In addition to the above criteria, interview performance by the candidate is a major aspect of the admission process into the Ph.D. programme. Candidates are required to bring to the interview a proposal of their intended work.

1.4 PART-TIME CANDIDATES

Part-time candidates must:

- (i) Be engaged in approved employment
- (ii) Submit evidence that they can devote a substantial proportion of their normal time to their studies; and
- (iii) Satisfy the Departmental Graduate Studies Committee that they will be available for attendance at courses and for regular consultation with their Supervisors.

2.0 DURATION AND RESIDENTIAL REQUIREMENTS

(i) PDG IN MICROBIOLOGY

A minimum of 12 calendar months and a maximum of 24 calendar months are required for full-time studies.

(ii) M.Sc. IN FOOD MICROBIOLOGY, INDUSTRIAL MICROBIOLOGY, ENVIRONMENTAL MICROBIOLOGY & BIOREMEDIATION, AND PATHOGENIC MICROBIOLOGY & BIOTECHNOLOGY

Full-time students are required to spend a minimum of 12 calendar months and a maximum of 24 calendar months. Part-time students are required to spend a minimum of 24 calendar months and a maximum of 48 calendar months.

(iii) Ph.D. IN MICROBIOLOGY

Full-time candidates are required to spend a minimum of 24 calendar months and a maximum of 60 calendar months. In contrast, part-time candidates are required to spend a minimum of 36 calendar months and a maximum of 84 calendar months.

3.0 POST-GRADUATE PROGRAMMES AND THEIR COURSES

3.1 POST-GRADUATE DIPLOMA IN MICROBIOLOGY (PGDM)

The programme is designed to assist HND holders, non-Microbiology graduates and other graduates

including those with 3rd class degree in Microbiology who would normally not qualify to undertake further studies in Microbiology. It is therefore a window of opportunity for those who successfully completed the PGD programme with outstanding overall results (CGPA 3.50/5.00) to pursue higher degree programmes in the department and elsewhere. Three options are offered in the programme viz: Medical Microbiology, Food and Industrial Microbiology, and Medical Microbiology.

COURSES

PGDM 700.1	Biology of Fungi
PGDM 701.2	Industrial Application of Microbiology
PGDM 702.1	Medical Microbiology
PGDM 703.1	General Microbiology
PGDM 704.1	Immunology and Disease
PGDM 705.1	Genetics of Microorganisms
PGDM 706.1	Microbiology of Foods
PGDM 707.1	Microbiological Techniques
PGDM 708.1	Biochemistry and Physiology of Microorganisms
PGDM 709.1	Ecology of Microorganisms
PGDM 710.1	Microbiology of the Environment
MCB 706.2	Graduate Seminar in Microbiology & Biotechnology
MCB 707.0	Research Project

OPTIONS

Environmental Microbiology	Food & Industrial Microbiology	Medical Microbiology
PGDM 700.1	PGDM 700.1	PGDM 700.1
PGDM 703.1	PGDM 703.1	PGDM 703.1
PGDM 705.1	PGDM 705.1	PGDM 705.1
	PGDM 701.1	PGDM 702.1
	PGDM 706.1	PGDM 704.1
PGDM 707.2	PGDM 707.2	PGDM 707.2
PGDM 708.1	PGDM 708.1	MCB 708.1
PGDM 709.2		
PGDM 710.1		
MCB 706.2	MCB 706.2	MCB 706.2
MCB 707.0	MCB 707.0	MCB 707.0

PGDM COURSES DESCRIPTIONS

PGDM 700.1 - Biology of Fungi

Microbiology, taxonomy, physiology, reproduction of various groups of fungi. Ecology of fungi. Relevance of fungi in the ecosystems.

PGDM 701.2 - Industrial Application of Microbiology

Concept in Applied Microbiology/Biotechnology Fundamental of fermentation technology (history and principles). Fermentation and extraction of fermentation products. Fermentation device. Primary and secondary metabolites (selected examples). Role of yeast in fermentation industry, classification and production of alcoholic beverages. Microbial extracellular enzymes techniques. Composing, biogas production. Quality control in Microbiology.

PGDM 702.2 - Medical Microbiology

Pathogens, microorganisms and disease. Virulence, system of isolation of pathogens. Bacterial and fungi infections. Principles of epidemiological survey and control of outbreaks.

PGDM 703.1 - General Microbiology

General characteristics of microorganisms of medical, agricultural and industrial importance. Isolation, purification, classification, structure, function of bacteria, viruses, fungi and Protozoa. Microbial multiplication at cellular level.

PGDM 704.1 - Immunology and Disease

Immunity and immune responses. Antigen-antibody reaction, antigens, antibody structure and formation. Blood groups complement; hypersensitivity; allergic, prophylactic and therapeutic application of immunology.

PGDM 705.1 - Genetics of Microorganisms

A Statutory of the current status of microbiology genetics including discussion of methods and findings in the areas mutagenetics, induction, isolation and biochemical characteristics of mutants, adaptation, transformation, transduction, conversion and conjugation.

PGDM 706.1 - Food Microbiology

Food-mediated disease. Microbial spoilage of foods. Mechanisms of microbial spoilage/food ecosystems. Intrinsic, extrinsic factors influencing spoilage in food borne diseases. Microbiology quality of foods, indices of sanitary quality. Quality assurance, hazard assessment. Control of

contamination, inhibition of growth of microorganisms. Food Spoilage and processing/fermentation; food biotechnology. Microbiological reference value for foods. Disease of animals transmissible to man via animal food products.

PGDM 707.2 - Microbiological Techniques

Survey of basic laboratory equipment. Preparation of buffers and culture media. Staining techniques for identification of microorganisms. Sterilization techniques. Antimicrobial agents and sensitive tests. Microbiology of air, food, milk and water. Immunological methods for the study of microbial infections. Introduction to quality control in microbiology.

PGDM 708.1 - Biochemistry and Physiology of Microorganisms

Macromolecules, biosynthesis and bioenergetics in microorganisms. Regulation of metabolism. Spore formation, composition and germination. Growth and survival of microorganisms. Electron transport systems.

PGDM 709.2 - Ecology of Microorganisms

Influence of environmental factors or activities on microorganisms. Microbiology of the soil, air, water and sewage. Microbial association.

PGDM 710.1 - Microbiology of the Environment

Microorganisms and other important organisms in aquatic systems. Freshwater microbial ecology. Pollution and water purification, transmission of water. Microbiology of waste disposal. Biological and chemical oxygen demand (BOD, COD). Characteristics of the soil environment. Soil organisms and their activities. Nitrogen, Carbon, Sulphur and phosphorous cycles; mineral transformation by microorganisms, Biodegradation and Biofuels generation.

MCB 706.2 - Graduate Seminar in Microbiology and Biotechnology

A series of two seminars is to be delivered by each student. The first shall involve a literature review on topics of current research interest. The second shall center on data obtained from student's research project. Seminars are graded.

MCB 707.0 - Research Project

Students are required to undertake approved research projects on relevant microbiological problems.

3.2 M.Sc. DEGREE PROGRAMME

(i) M.Sc. IN FOOD MICROBIOLOGY

The main objective of this programme is to train specialized graduates to meet the local and national manpower needs of Agro-food and research establishments particularly in the areas of food processing, preservation and food safety.

The programme also emphasizes:

- (a) The role of the Food Microbiologist in control of food bio-deterioration, processes and quality control of food and beverage industries and bio-technological applications;
- (b) Contamination of food by environmental pollutants and microbial standards of foods in National and International Trade. Thus, the Food Microbiology Programme contributes immensely to the public health and economy of the Niger Delta region, the nation and the world.

COURSES

Six taught courses, a seminar course and a research project are approved for the M.Sc. in Food Microbiology programme and they are:

MCB 803.1	Research Techniques in Microbiology
MCB 808.1	Biodeterioration of Foods
MCB 810.1	Food Processing and Preservation
MCB 811.1	Fermentation Microbiology
MCB 809.2	Biochemical Aspects of Food Quality
MCB 812.2	Food Sanitation, Toxicology and Quality Control
MCB 806.2	Graduate seminar in Microbiology and Biotechnology
MCB 807.2	Research Project

COURSE DESCRIPTIONS

MCB 803.1 – RESEARCH TECHNIQUES IN FOOD MICROBIOLOGY

Media design and culture collection. Safety techniques and laboratory precautions. Separation procedures for biological components. Disintegration of Microbial cells. Methods of

recovery of fermentation products. Isolation of protein. Microbial enzyme extraction, purification and assays. Estimation of microbial populations and interpretation of data. Methods of anaerobic bacteriology. Bio-deterioration test techniques. Preparation of microbial materials for microscopy. Photo-micrography. Finger-printing, typing and taxonomic aspects of microbiology.

MCB 808.1 – BIODETERIORATION OF FOODS

Physiological aspects of microbial deterioration of foods. Types of deterioration. Defects caused by microorganisms. Mechanisms of deterioration. Cell wall structure and texture of perishable and their products. Microbial deterioration of carbohydrates, proteins and liquid products. Microbial deterioration of carbohydrates, proteins and liquid foods (meat and meat products, fish and sea food products, poultry and poultry products, milk and dairy products). Economics of bio-deterioration. Ecology and taxonomy of major groups of spoilers (*Aspergillus*, *Penicillium*, *Rhizopus*, *yeast*, etc). Control of microbial spoilage.

MCB 809.1 – BIOCHEMICAL ASPECTS OF FOOD QUALITY

Food components. Quality and indices of quality. Methods of obtaining sensory information. Consumer tests. Biochemical and physiological changes in food plants. Bio-chemical reactions underlying quality change / organoleptic proportion of food. Colour changes, flavour production. Changes in carbohydrates and lipids during storage. Browning reactions in foods and the microbial implications.

MCB 810.1 – FOOD PROCESSING AND PRESERVATION

Raw materials and process suitability. Principles and methods of preservation. Thermal processing. Thermal destruction of spoilage/other microorganisms. Drying, freezing, chemical preservation and radiation methods. Microbial stress. Quality control. Behaviour of food components and micro flora during processing. Food packaging and microbial dynamics. Chemical preservative/additive. Legislation and control. Plant sanitation.

MCB 811.1 – FERMENTATION MICROBIOLOGY

General consideration of solid state fermentations. Tropical and oriental fermented foods and beverages. Ecology and physiology, genetics of industrial microorganisms. Trends in genetic engineering, Microbial proteins (SCP process, nutritional aspects toxicity testing; utilization of hydrocarbons). Food enzymology.

MCB 812.2 – FOOD SANITATION, TOXICOLOGY AND QUALITY CONTROL

Microbial contamination of raw food materials of plant and non-plant origins (vegetables, fruits, and fruit juices, protein foods, dried foods, sea foods). Microflora or public health significance. Food poisoning mechanisms of survival of organism in foods. Microorganisms in preserved foods. Microbial contamination during and after processing. Indices of sanitary quality of food specification and standards. Methods for detection and estimation of bacteria and toxins in foods (effect of bacteria and endotoxins). Microbial toxemia. Mycotoxins, fruits and fruit products. Residual analysis.

MCB 806.2 – GRADUATE SEMINAR IN MICROBIOLOGY AND BIOTECHNOLOGY

A series of two seminars is to be delivered by each student. The first shall involve a literature review on topics of current research interest. The second shall center on data obtained from student's research project. Seminars are graded.

MCB 807.0 – RESEARCH PROJECT

Students will undertake approved projects on microbiological problems relating to the Agro-food industries in consultation with their supervisors.

(ii) M.Sc. IN INDUSTRIAL MICROBIOLOGY

The programme aims to focus attention on the industrial aspect of Microbiology. Recently, the exploitation of microorganisms to enhance establishment of new industries and modification of obsolete ones has resulted in expansion of different industries especially in developed countries. Similar opportunities can be created in Nigeria by the Microbiologist working in collaboration with those from other disciplines

such as Chemical Engineering. This programme therefore endeavours to reproduce:

- (a) Graduates for research and development purposes who will be involved in the production of microbial products.
- (b) Graduates who will be of great help to fermentation and petro-chemical industries; and
- (c) Microbiologist who are capable of utilizing microbial resources to ameliorate industrial and ecological problems.

COURSES

MCB 803.1	Research Techniques in Microbiology
MCB 811.1	Fermentation Microbiology
MCB 813.1	Biodeterioration of Industrial Materials
MCB 814.1	Principles of Genetics Engineering
MCB 815.2	Fermentation Technology
MCB 806.2	Graduate Seminar in Microbiology and Biotechnology
MCB 807.0	Research Project

COURSE DESCRIPTIONS

MCB 803.1 - RESEARCH TECHNIQUES IN MICROBIOLOGY

Media design and culture collection. Safety techniques and laboratory precautions. Separation procedures for biological components. Disintegration of microbial cells. Methods of recovery of fermentation products. Isolation of protein. Microbial enzymes extraction, purification and assays. Estimation of assessing quality of foods. Methods of anaerobic bacteriology. Bio-deterioration test techniques preparation of microbial materials for micrography. Finger-printing, typing and taxonomic aspects of microbiology.

MCB 811.1 - FERMENTATION MICROBIOLOGY

General consideration of solid state fermentations. Tropical and oriental fermented foods and beverages. Ecology and physiology, genetics of industrial microorganisms. Trends in genetic engineering, Microbial proteins (SCP process, nutritional aspects toxicity testing; utilization of hydrocarbons). Food enzymology.

MCB 813.1 - BIODETERIORATION OF INDUSTRIAL MATERIALS

Introduction and Terminology. Recognition and costing of bio-deterioration problems. Range of deteriogens. Biodeterioration of natural materials (cellulosic, wood, stored products and good, natural products of animal origin. Biodeterioration of refined and processed materials (fuels and lubricants, plastics and rubber, glass, paints, pharmaceuticals and cosmetics, metals adhesives and sealants). Structures, systems and vehicles. Control of bio-deterioration and test techniques.

MCB 814.1 - PRINCIPLES OF GENETIC ENGINEERING

This course emphasizes the technique of molecular genetics/genetic engineering and their industrial applications. Applications of genetic engineering to diagnostic medicine pharmaceutical industry, e.t.c. Gene cloning in different organisms. DNA cloning vectors and re-arrangement of genetic material. Control of gene expression. Protoplast fusion. Methodology, types and applications cell cultures.

MCB 815.1 - FERMENTATION MICROBIOLOGY

Methods for transformation of organic compounds. Microbial enzymes. Cell enzymes immobilization. Application of immobilized cells. Transport phenomena in biotechnological systems (mass transfer, serratation and agitation; mixing and theology). Kinetics of biochemical reactions. Scale up of fermentation processes and computer control downstream processing. Storage of fermented materials (drying, evaporation and dehydration, freezing and irradiation). Case studies of microbiological and biochemical industries (Antibiotics, amino acids, methane production from waste, alcohol, polysaccharides, pesticides).

MCB 806.2 – GRADUATE SEMINAR IN MICROBIOLOGY AND BIOTECHNOLOGY

A series of two seminars is to be delivered by each student. The first shall involve a literature review on topics of current research interest. The second shall center on data obtained from student's research project. Seminars are graded.

MCB 807.0 – RESEARCH PROJECT

Students will undertake approved projects on microbiological problems relating to various industries in consultation with their supervisors.

(iii) M.Sc. IN ENVIRONMENTAL MICROBIOLOGY AND BIOREMEDIATION

The increasing demand by students over the years has made it imperative to design this programme. Additionally, the emphasis placed by industry on use of natural processes in environmental restoration activities has accentuated the demand for experts in this area to be engaged in numerous environmental rehabilitation projects.

COURSES

MCB 803.1	Research Techniques in Microbiology
MCB 813.1	Biodeterioration of Industrial Materials
MCB 814.1	Application of Genetics Engineering
MCB 820.1	Environmental Microbiology and Biotechnology
MCB 821.2	Environmental Bioremediation
MCB 823.2	Petroleum Microbiology
MCB 806.2	Graduate Seminar in Microbiology and Biotechnology
MCB 807.0	RESEARCH PROJECT

MCB 803.1 – RESEARCH TECHNIQUES IN FOOD MICROBIOLOGY

Media design and culture collection. Safety techniques and laboratory precautions. Separation procedures for biological components. Disintegration of Microbial cells. Methods of recovery of fermentation products. Isolation of protein. Microbial enzyme extraction, purification and assays. Estimation of microbial populations and interpretation of data. Methods of anaerobic bacteriology. Bio-deterioration test techniques. Preparation of microbial materials for microscopy. Photo-micrography. Finger-printing, typing and taxonomic aspects of microbiology.

MCB 813.1 - BIODETERIORATION OF INDUSTRIAL MATERIALS

Introduction and Terminology. Recognition and costing of bio-deterioration problems. Range of deteriorogens. Biodeterioration of natural materials

(cellulosic, wood, stored products and good, natural products of animal origin. Biodeterioration of refined and processed materials (fuels and lubricants, plastics and rubber, glass, paints, pharmaceuticals and cosmetics, metals adhesives and sealants). Structures, systems and vehicles. Control of bio-deterioration and test techniques.

MCB 814.1 - APPLICATION OF GENETIC ENGINEERING

(Modified version of an existing course in M.Sc. Industrial Microbiology Programme). Concepts, ethnics and applications of genetic engineering with emphasis on microbial strain development and improvement. Application of genetic engineering in petrochemical, pharmaceutical, medical and multi-purpose industries. New techniques and use of plasmids for enhanced industrial processes. Ecological problems and application of biological control (*e.g. Bacillus thuringiensis*).

MCB 820.1 - ENVIRONMENTAL MICROBIOLOGY AND BIOTECHNOLOGY

Environmental pollution and industrial development. Pollution phenomena. Roles of microorganisms in the pollution and depollution of environmental media. Nitrogen and sulphur cycles. Biodegradation and cometabolism of pollutants/xenobiotic compounds. Microorganisms as bio-monitors of environmental pollution. Microbial indicators of water quality. Pathogenic contamination of water, soil and air. Use of microbial mats in agro-forestry. Solid waste treatment and disposal. The roles of microorganisms in sewage and waste management. Microbiological principles in modern aqua-culture. Properties of marine bacteria (bioluminescence).

MCB 821.2 - ENVIRONMENTAL BIOREMEDIATION

Introduction to bioremediation. Laboratory treatability studies, Microbiological protocols and analytical methodologies. Microbiological site characterization. Bioengineering of soils and groundwater. Remediation design. Monitoring requirements. Bioremediation of surface and subsurface soils. Bioremediation of heavy metals. Use of microbial mat in bioremediation. Bioremediation in fresh and marine systems. Aerobic and anoxic /anaerobic bioremediation.

Application of anoxic/anaerobic processes to environmental problems. Anaerobic digestion of municipal solid wastes and biogas generation. Composting. Bioremediation case studies. Regulatory consideration in environmental bioremediation.

MCB 823.2 - PETROLEUM MICROBIOLOGY

Petroleum and its origin. Microbial production of methane. Microbial metabolism of gaseous hydrocarbons. Microbial metabolism of straight-chain, branched and cyclic alkanes. Microbial transformation of aromatic hydrocarbons; Pathways for hydrocarbon degradation. Biosynthesis of surface-active agents and their role in bioemulsification of hydrophobic molecules. Genetics of hydrocarbon utilizing microorganisms. Genetics engineering of hydrocarbons biodegradation. Fates of petroleum pollutants in marine, freshwater and soil ecosystem. Effects of hydrocarbons in microorganism and their communities. Growth dynamics of microorganisms on hydrocarbons substrates. Microbiology of heavy crude's and oil shales. Microbially enhanced oil recovery (MEOR). Biotreatment and disposal of petroleum refinery wastes. Sulphate reducing bacteria (SRB) in the petroleum industry. Hydrocarbons as substrates in industrial fermentations. Bioprocessing of coal.

MCB 806.2 – GRADUATE SEMINAR IN MICROBIOLOGY AND BIOTECHNOLOGY

A series of two seminars is to be delivered by each student. The first shall involve a literature review on topics of current research interest. The second shall center on data obtained from student's research project. Seminars are graded.

MCB 807.0 – RESEARCH PROJECT

This will take the form of supervised research work on relevant environmental microbiological related problems culminating in a written thesis to be examined by a board of external and internal examiners.

(iv) M.Sc. IN PATHOGENIC MICROBIOLOGY AND BIOTECHNOLOGY

A master's degree programme in Pathogenic Microbiology and Biotechnology is expected to

cater for the high volume of highly qualified graduates of the Bachelor of Science degree in Microbiology who have combined interest in the Medical fields of Microbiology, and Biotechnology. The programme, is hoped, will provide the highly needed manpower in Medical Microbiology and Biotechnology Research and Development, investigations, and reliable diagnosis of infectious diseases. The programme shall consist of taught courses, seminar presentations, workshops, as well as field or laboratory based Research project.

Admission Requirement

Admission into the M.Sc. programme in Pathogenic Microbiology and Biotechnology shall be open to the following category of applicants

- B.Sc. degree in Microbiology from any reputable university with not less than second class lower division.
- B.Sc. in a related discipline including biotechnology, pharmacy, and medicine with a CGPA not less than 2.40 where applicable
- HND (upper credit) with a post graduate diploma in microbiology (PGDM) from the University of Port Harcourt with a CGPA not less than 3.50

In addition to the general qualifications above, all applicants are expected to obtain a minimum grade not less than "C" in of the following subjects namely, Pathogenic Microbiology, Immunology and Biotechnology, Pharmaceutical Microbiology, or Virology.

Mode of Study/Duration of Programme

The programme would be available to both full-time and part-time candidates. Full-time students would be required to spend a minimum of 12 calendar months and a maximum of 24 calendar months. Part-time students on the other hand may spend a minimum of 24 calendar months and a maximum of 48 calendar months. The programme shall consist of taught causes, practical classes, seminars and a supervised research project on topics of local, national and regional interest.

Conditions for the award of degree

The award of the Masters of Science (M.Sc.) degree in Pathogenic Microbiology and biotechnology will be subject to

- a. Passing all approved courses with a grade point of net less than 3.0 within the duration of the programme; for the avoidance of doubt, these shall include not less than 75% attendance at lectures.
- b. Satisfactory presentation of required seminars during the duration of the programme
- c. Satisfactory completion of an approved laboratory based research project on relevant topics in Pathogenic Microbiology and biotechnology, including the production of a standard thesis.
- d. Satisfactory performance in an oral examination of the subject of the thesis and related subjects.

Course Outline

MCB 831.1	Microbes Of Medical Importance
MCB 832.1	Diagnostic Microbiology And Biotechnology
MCB 833.1	Epidemiology
MCB 814.1	Applications Of Genetic Engineering In Biotechnology
MCB 803.1	Research Techniques In Microbiology And Biotechnology
MCB 834.2	Biopharmaceutical Technology
MCB 835.2	Vaccine Technology And Production
MCB 806.2	Graduate Seminars In Microbiology And Biotechnology
MCB 807.0	Research Project In Medical Microbiology And Biotechnology

Course Description

MCB 831.1 - Microbes of Medical Importance

Host parasite relationships – detailed considerations. Commensalism, Parasitism and the symbiotic relationships. Community versus Nosocomial infections and their associated pathogens. Different categories of Microbes of Medical importance – the Universal/ traditional pathogens, the opportunistic pathogens and the normal flora.. Pathogens unique to different systems of human and animal including the major systems of the human host. Essays on New and Emerging pathogens, including the HIV, SARS,

EBOLA, LASA fever etc. Epidemiology of selected infectious diseases.

MCB 832.1 - Diagnostic Microbiology and Biotechnology

General considerations in Diagnostic Microbiology and biotechnology. Various diagnostic tools. Discussions on the sensitivity, specificity, rapidity and simplicity of diagnostics methods. Considerations in the selection of diagnostic techniques in the diagnosis of common infectious diseases. Interpretation of results of diagnostic experiments. Application of diagnostic tools in the diagnosis of infectious and non infectious diseases. Preparation of simple diagnostic kits, principles and practice. Quality control in laboratory diagnosis and diagnostic products.

MCB 833.1 - Epidemiology

Terminology; Sporadic, Endemic Epidemic, Pandemic, Morbidity, Mortality and Prevalence rate. **Features of Epidemics;** Common-source epidemic, Propagated epidemic, Herd immunity, Attenuated virulence and Epidemic cycles. **Propagation of Diseases;** Reservoirs, inanimate and animate reservoirs, and carriers. **Transmission Routes and Infectious Doses;** Air borne, Water borne, Urogenital transmissions, Arthropod borne, Direct Contact, Nosocomial or Iatrogenic Diseases and Zoonoses. **Controlling Epidemics;** Reducing or eliminating reservoirs, breaking transmission routes, Reducing number of susceptible individuals, Quarantine. **Origin of new diseases. Epidemiological investigations and Surveillance.**

MCB 814.1 - Applications of Genetic Engineering in Biotechnology

Concepts, ethics, and applications of genetic engineering with emphasis on microbial strain development and improvement. Application of genetic engineering in pharmaceutical, medical; and multipurpose industries. New techniques and use of plasmids for enhanced production of biological diagnostic tools. Ecological problems and application of biological control.

MCB 803.1 - Research Techniques in Microbiology and Biotechnology

Media design and culture collections. Safety techniques and laboratory precautions. Separation

procedures for biological components. Disintegration of microbial cells and application in biotechnology. Methods of recovery of fermentation products including antibiotics and other biologically active components. Microbial enzyme extraction, purification and assays. Estimation of microbial populations and interpretation of data. Methods in anaerobic bacteriology. Microscopy and Photomicrography. Current trends in microbial identification including phage typing and DNA finger printing.

MCB 834.2 - Biopharmaceutical Technology

Historical perspectives of Pharmaceuticals of Biological origin. Antibiotics and non antibiotic pharmaceutical products. Sources and chemical nature of antibiotics and related substances. Isolations, Purification and Production of antibiotics. Sourcing for new antibiotics and other Pharmaceutical products. Antibiotic resistance, Mechanisms, Impacts, and the race for new pharmaceuticals. Microbes as surrogate sources of Biopharmaceuticals, the case study of insulin. Essays on selected Biopharmaceuticals. Field trips to pharmaceutical industries.

MCB 835.2 - Vaccine Technology and Production

Definitions and Historical aspects of vaccines. Microbial infections and range of available vaccines in the control of infectious diseases. Types, efficiency and Potency of vaccines. Theoretical considerations in the development of vaccines. The immune systems and response to infectious diseases. Host parasite factors in the development of effective and ineffective responses to infective entities. Practical considerations in the production of vaccines, including personnel, equipment, general infrastructure, safety and quality control. Vaccine efficacy monitoring, including survival of vaccines strains in vaccinated populations and the development and maintenance of protective immunity. Field trips to vaccine production industries.

MCB 806.2 - Graduate Seminars in Microbiology and Biotechnology

Students will be required to present seminars in areas specialized areas of medical microbiology including current trends in diagnostic microbiological methods, vaccine production,

current search for novel antimicrobial agents and their mechanisms of action, current trends in antibiotic resistance among microbes of medical importance, new and emerging pathogenic microorganisms and other areas that may gain prominence with time.

MCB 807.0 - Research Project in Pathogenic Microbiology and Biotechnology

Students are required to undertake a research project in relevant fields of medical microbiology and biotechnology as approved by the project supervisor in order to fulfill the requirements for the award of the Master of Science degree in Pathogenic microbiology and biotechnology.

3.3 Ph.D. IN MICROBIOLOGY

This programme is aimed at training the students to become mature and independent scholars who will be capable of solving academic and industrially- related problems. They are therefore expected to provide leadership in academia, research and industrial establishments

Acceptance by an eligible staff to supervise a candidate is a pre-requisite to being recommended for admission by the Department Graduate Studies Committee. The areas of research are indicated below.

A series of three seminars (at least) are to be delivered by each student. The first shall involve a literature review on topics of current research interest. The second and third shall center on data obtained from student's project. The last seminar presented by each Ph.D. students will be organized by School of Graduate Studies. It is mandatory for students to register for and passed courses approved for the Ph.D. programme.

Ph.D Courses

Ph.D MICROBIOLOGY (OPTION: ENVIRONMENTAL MICROBIOLOGY)

Course Code	Course Title	Credit Units
MCB 909.1	Current Advances in Environmental Microbiology	3
MCB 902.1	General Seminar I	3
MCB 903.2	General Seminar II	3

	Qualifying Examination	
MCB 904.0	Doctoral Dissertation	12
	Total	21

Ph.D MICROBIOLOGY (OPTION: FOOD MICROBIOLOGY)

Course Code	Course Title	Credit Units
MCB 901.1	Current Advances in Food Microbiology	3
MCB 902.1	General Seminar I	3
MCB 903.2	General Seminar II	3
	Qualifying Examination	
MCB 904.0	Doctoral Dissertation	12
	Total	21

Ph.D MICROBIOLOGY (OPTION: INDUSTRIAL MICROBIOLOGY)

Course Code	Course Title	Credit Units
MCB 905.1	Current Advances in Industrial Microbiology	3
MCB 902.1	General Seminar I	3
MCB 903.2	General Seminar II	3
	Qualifying Examination	
MCB 904.0	Doctoral Dissertation	12
	Total	21

Ph.D MICROBIOLOGY (OPTION: PATHOGENIC MICROBIOLOGY)

Course Code	Course Title	Credit Units
MCB 906.1	Current Advances in Pathogenic Microbiology and Biotechnology	3
MCB 902.1	General Seminar I	3
MCB 903.2	General Seminar II	3
	Qualifying Examination	
MCB 904.0	Doctoral Dissertation	12
	Total	21

COURSE DESCRIPTIONS

Ph.D MICROBIOLOGY (OPTION:

ENVIRONMENTAL MICROBIOLOGY)

MCB 909.1: Current Advances in Environmental Microbiology

Biosensors in Microbiology. Microtox bioluminescence assay. Radiorespirometry. Quantitative and Qualitative microscopy (epifluorescence, scanning electron and brightfield microscopy). Molecular techniques in environmental microbiology: Polymerase chain reaction (PCR), gel electrophoresis e.g., Denaturing gradient gel electrophoresis (DGGE)/ Temperature gradient gel electrophoresis (TGGE); DNA microarray technologies. Plasmid profiling: DNA restriction analysis. Florescence in situ hybridization____(FISH). Sequencing and phylogenetic analysis. Community-level physiological profiling (CLPP). Compound separation techniques. Laboratory safety consideration. Scientific report writing and presentation.

Ph.D MICROBIOLOGY (OPTION: FOOD MICROBIOLOGY)

MCB 901.1: Current Advances in Food Microbiology

Quantitative aspects of bacteriology and their application to food processing. Mathematical consideration of thermal destruction. Advanced methods of detecting bacteria causing food-borne, diseases. Techniques of biology assay and immunological methods of detecting Microbial toxins in foods.

Ph.D MICROBIOLOGY (OPTION: INDUSTRIAL MICROBIOLOGY)

MCB 905.1: Current Advances in Industrial Microbiology

Pathways of biosynthesis and catabolites. Hypothesis for the occurrence of secondary metabolites. Advanced metabolic pathway of energy generation. Polysaccharases of industrial importance. Bioinformatics of relevance in Industrial Microbiology (PCR, DNA sequencing, microarrays and metagenomics). Recent techniques in search for microbial active compounds. Patent and intellectual properties laws. Microbial teaching.

Ph.D MICROBIOLOGY (OPTION: PATHOGENIC MICROBIOLOGY)

MCB 906.1: Current Advances in Pathogenic and Biotechnology

Safety consideration in pathogenic microbiology lab. Changing trends in host parasites relationship.

Understanding host-parasite interactions in the gastrointestinal tract infections. Relationship between *Helicobacter pylori* and allergies. Evolving challenges in infection control'. Impact of new diagnostic methods in control of infectious diseases.

New and emerging infections –General considerations/bacterial infections.

The multiplicity of virulence factors in *Escherichia coli* infections associated with the gastroenteritis.

New and emerging viral infections:

1. HIV-1 evolution, diversity and drug resistance.
2. Multi factorial approach to control of the malarial plague.
3. New and emerging fungal and parasitic infections.
4. The genetic basis of multi drug resistant (MDR) bacteria-A special group of emerging infections.
5. Multi drug resistant *Mycobacterium tuberculosis*.
6. Problems and prospect of vaccine development in parasitic infections.
7. Problems and prospect in vaccine development- Influenza and HIV
8. Updates on modern approaches to the development of therapeutic agents and vaccines for the prevention of microbial diseases.

3.4 Ph.D IN MICROBIOLOGY AT CENTRE FOR OIL FIELD CHEMICALS RESEARCH (CEFOR)

Admission Requirements

1. Students that have successfully completed the relevant M.Sc. degree of the University of Port Harcourt with a minimum CGPA of 3.50 as well as minimum of CGPA of 2.40 in their first degree

2. Candidates with equivalent qualifications from other Universities.
3. Qualified industry staff with relevant M.Sc. degree can apply.
4. Shortlisted candidates will be invited for interview/ presentation of research proposals. Limited sponsorship opportunity is available for students, however, candidates are encouraged to seek for sponsorship from other sponsoring agencies and employers.

Duration of Programme

Full-Time: Minimum, 24 months of intensive modular taught courses and research project.

Part-Time: Minimum, 36 months of intensive modular taught courses and research project.

Graduation Requirement

The CEFOR Ph.D programmes require a total of thirty-three (33) credit units for graduation. The courses include six taught courses, research seminar and research project as follows:

Course Code	Course Title	Credit Units
ACE 901	Research Methods and Statistics for Data Analysis	3
ACE 902	ICT, Technical Report Writing and Presentation Skills.	3
ACE 903	Entrepreneurship	3
ACE 904	Oil and Gas Industry Overview	3
ACE 905	Environmental Management and Pollution Control	3
ACE 906	Drilling Fluid Technology and Oilfield Chemistry	3
ACE 907	Seminar/Advances in Areas of specialization	3
ACE 908	Research Project	12
TOTAL		33

ACADEMIC STAFF

S/N	NAME	RANK	AREAS OF SPECIALIZATION	QUALIFICATIONS
1	Odokuma, L.O.	Professor	Environmental Toxicology. Water Management. Bioremediation. Development of Bioindicators of Aquatic Toxicity.	B.Sc., M.Sc., Ph.D (UPH)
2	Abu, G.O.	Professor	Environmental Microbiology and Biotechnology. Natural attenuation and Ecophysiology. Bioremediation and Bioenergetics. Biopolymers. Microalgal Biotechnology	B.Sc. (ABU), Ph.D (Maryland)
	Frank-Peterside, N.	Professor	Antimicrobial activities of Plant Extracts. Uses and Microbiological Assessment of African Yam Bean Products. Virology	B.Sc., M.Sc. (Ibadan), Ph.D. (Belfast)
	Okerentugba P.O.	Professor	Applied Microbiology, Yeast genetics, Protoplast fusion and cloning techniques. Fermentation Technology and Industrial Strain Development. Bioremediation. Virology	B.Sc. (Lagos), Ph.D. (Strathclyde).
	Ogugbue, C.J.	Professor	Biotransformation and biodegradation of organic pollutants, Ecotoxicology, biotechnology of biofertilizers and aeromicrobiology	B.Sc. (ABSU), M.Sc., Ph.D (UPH)
	Stanley, H.O	Professor	Environmental Microbiology and Bioremediation	B.Sc. (UPH) , M.Sc. (AAU), Ph.D (RSUST)
	Chikere, C.E.	Professor	Environmental and Pollution Microbiology, Microbial Ecology of Petroleum Hydrocarbon Polluted Matrices	B.Sc., (ABSU), M.Sc., (FUTO), Ph.D (UPH)
8	Ibiene, A.A.	Reader	Microbially enhanced oil recovery. Environmental toxicology of pollutants and bioremediation.	B.Sc., M.Sc., Ph.D. (UPH).
9	Ariole, C.N.	Professor	Environmental Microbiology; Microbial Ecology of Fish and Shellfish Aquaculture; Endophytes of Aquatic and Terrestrial Plants and their potentials in pollutants degradation, waste management and remediation of contaminated environment; Rhizoremediation	HND, FISLT, PGDM, M.Sc., Ph.D (UPH)
10	Ire, F.S.	Professor	Industrial Microbiology	B.Sc., M.Sc., Ph.D. (UNN)
11	Agwa, O.K.	Professor	Industrial Microbiology	B.Sc., M.Sc. (Awka), Ph.D (UPH)
12	Agbagwa, O.E.	Reader	Medical Microbiology	B.Sc., M.Sc., Ph.D (UPH)

13	Otokunefor, K.	Reader	Medical/Molecular Microbiology	B.Sc. (UPH), M.Sc. (Manchester), Ph.D (Nottingham)
14	Eruteya, O.C.	Reader	Food/Industrial Microbiology	B.Sc. (Abraka), M.Sc., Ph.D. (Ibadan)
15	Okonko, I.O.	Senior Lecturer	Medical Virology. Immunology. Molecular Epidemiology. Bioethics. New, Emerging & Re-emerging Infections. Viral Diversity, Evolution, and Immunogenicity. Coinfections, ART Drug Resistance Mutations and Tropisms. HIV-1 P24	B.Sc. (FUNAAB), M.Sc., FD. (Ibadan); PhD (EBSU), Cert. Ethics (WABT/Florida), Cert. Immunology (Ibadan/Luxembourg), Cert. Advanced Immunology (Boston), C-14 Certified (New York)
16	Ahaotu, I.	Senior Lecturer	Food/ Industrial Microbiology	B.Sc. (Umudike), M.Sc. (Benin), Ph.D (UPH)
17	Omorodion, N.J.P.N.	Senior Lecturer	Food Microbiology	B.Sc., M.Sc., Ph.D (UPH)
18	Wokem, V.C	Lecturer I	Environmental Microbiology and Bioremediation	B.Sc., M.Sc., Ph.D (UPH)
19	Osadebe, A.U.	Lecturer I	Environmental Microbiology, Biotechnology and Public Health Microbiology	B.Sc. (Bowen); M.Sc. (Nottingham), M.Sc. (UPH)
20	Cookey, T.I.	Lecturer I	Medical Microbiology. Virology and Immunology. Molecular Epidemiology of HIV-1 Coreceptor and Usage	B.Sc., M.Sc. (UPH)
21	Ogbodo, E.N.	Lecturer II	Medical Microbiology	B.Sc. (UPH); MSc. (Nottingham)
22	Innocent-Adiele, H.C.	Lecturer II	Virology. Molecular Epidemiology of HIV	B.Sc. (Uyo), M.Sc. (UPH), Ph.D (EBSU)
23	Ughala, E.	Lecturer II	Environmental Microbiology and Bioremediation	B.Sc., M.Sc. Ph.D (UPH)
24	Adim, C.C.	Assistant Lecturer	Public Health Microbiology, Virology. Molecular Epidemiology of Rubella Virus.	B.Sc. (Jos), M.Sc. (RSU)

FACULTY OF COMPUTING

DEPARTMENT OF COMPUTER SCIENCE

POST-GRADUATE PROGRAMME

1.1 Preamble

The Department of Computer Science offers Postgraduate Programmes in Computer Science. The programmes are organized in such a way that the students are thoroughly groomed in self-oriented research. It is hoped that at the end of the training, successful students would be able to provide the much needed manpower in our institutions of higher learning, public service and the private sector of our economy. The Department's postgraduate programmes lead to the award of:

- 1) Postgraduate diploma in Computer Science (PGD)
- 2) M.Sc in Computer Science
- 3) PhD in Computer Science.

Post-Graduate Diploma in Computer Science (PGD) Programme

1.2 Basic Admission Requirements

The criteria for admission into the PGD programme will be as follows:

- i) All candidates must have credit passes including English, Mathematics and three other relevant science subjects at 'O' Level.
- ii) Candidates with Bachelor's degree from an approved university must obtain a minimum of Pass degree in the relevant science discipline.
- iii) Holders of HND in relevant programmes from approved institutions with at least Upper Credit in the sciences or related disciplines may also be considered for admission.

1.3 Duration of Programme

- i) Full-time Postgraduate Diploma Programme shall run for a minimum of twelve calendar months and a maximum of twenty-four calendar months.
- ii) Part-time Postgraduate Diploma Programme shall run for a minimum of twenty-four calendar months and a maximum of thirty-six calendar months.

1.4 Requirements for Graduation

A candidate must have fulfilled the following conditions to be awarded the Postgraduate Diploma:

A candidate must pass a minimum of 28 credit units, made up as follows:

- ✓ 15 credit units in core courses.
- ✓ 9 credit units in elective courses.
- ✓ 4 Compulsory credit units of Research Projects.

1.5 Academic regulations

- i) **Academic Session:** An Academic Session consists of two semesters. Each semester normally comprises 15 weeks of teaching and two weeks of examination.
- ii) **Modular System:** All Postgraduate Diploma programmes shall be run on a modularized system, commonly referred to as Course Unit System. All courses should therefore be subdivided into more or less self-sufficient and logically consistent packages that are taught within a semester and examined within that particular semester. Credit units should be attached to each course.
- iii) **Definition of Credit or Unit:** Credit Units are weights attached to a course. One credit unit is equivalent to one hour per week per semester of 15 weeks of lectures or tutorials.

1.6 Programme Requirements:

1.6.1 Registration Procedure

Students shall normally complete registration for courses for the semester not later than two weeks after the start of the semester. A student may not withdraw from a course after five weeks of lectures in a given semester without permission from the Dean of Postgraduate School.

A student who withdraws after this time or who fails to seek for permission from the Dean shall be deemed to have failed that course.

A student who fails to sit for more than two courses at the end of a given semester shall be deemed to have withdrawn voluntarily from the programme.

1.7 Good standing

To be in good standing, a student must in each semester have a Cumulative Grade Point Average (CGPA) of not less than 3.00

1.8 Withdrawal

Candidates with less than 3.00 CGPA shall remain in the programme for the 1st semester but shall be withdrawn if he/she fails to attain 3.00 CGPA at the end of the second semester.

1.9 Attendance

In order to be eligible for examination in a particular course, a student shall have attended a minimum of 75% of the total periods of formal instructions delivered for the course.

1.10 Examinations, Grading Procedure & Results

10.1 Examinations

In addition to continuous assessment, final examination shall be given for every course at the end of every semester.

The total scores obtainable for every course which include continuous assessment, final Examination shall be given for every course at the end of every semester.

1.11 Pass Mark

The minimum pass mark in any course shall be 50%.

1.12 External Examiner System

The external examiner system shall be used at the end of the Postgraduate Diploma programme to assess the courses and projects.

The project shall be subject to oral examination where the student is required to show evidence that the candidate carried out the work and had pertinent knowledge of the subject matter.

1.13 Postgraduate Diploma Classification

The determination of the Postgraduate Diploma shall be based on the Cumulative Grade Point Average (CGPA) earned at the end of the programme.

CUMULATIVE GRADE	CLASS OF DIPLOMA
4.50 – 5.00	Distinction
3.50 – 4.49	Upper Credit
3.00 – 3.49	Merit
Below 3.00	Fail

1.14 Comprehensive knowledge of areas of specialization.

- i) Graduate should have comprehensive knowledge of their areas of specialization.

Encompassing an understanding of the theoretical foundations and quantitative tools of the areas of specialization, as well as the ability to apply this knowledge to solving problems.

- ii) Graduates should be able to demonstrate problem solving capacity using multidisciplinary approaches in an innovative and creative way.
- iii) Graduates should display comprehensive knowledge of areas of specialization and should have acquired entrepreneurial skills for self-sufficiency and also to meet the needs of the public and private sectors in Nigeria and beyond.

1.15 Problem solving capacity

Graduates should be able to demonstrate problem solving capacity through literal, critical, innovative and creative connections among diverse fields of study in analyzing problems using multidisciplinary approaches.

1.16 Behavioral Skills

Graduates should understand human behaviour in organizations. They should:

- ✓ have the ability to work and interact effectively in group situations;
- ✓ be disposed to mentoring and peer review;
- ✓ to be able to appreciate constructive criticism

2.1 MASTER OF SCIENCE (M.Sc) DEGREE PROGRAMME

Admission to the Master's degree programme shall be as contained in the general Postgraduate School requirement for admission into the degree of M.Sc. The department requires that courses offered at the first degree programme should meet the minimum of the University's own B.Sc. programmes. However, candidates whose first degree courses fail to meet the University's own B.Sc. programme, will be required to take and pass the relevant courses before proceeding to the M.Sc. work. Candidates with PGD in Computer Science may be considered for our M.Sc. programme provided such a candidate must have had at least an Upper Credit with a minimum CGPA of 4.0/5.0 at the PGD level. There shall be an MSc qualifying aptitude test, before admission. Any student that fails this test will not be considered for admission.

2.2 Basic Admission Requirements

The criteria for admission into the Master's degree programme will be as follows:

- i) All candidates must have credit passes including English, Mathematics and three other relevant science subjects at 'O' Level.
- ii) Candidates with Bachelors degree from an approved university must obtain a minimum of second class lower division for an academic programme. Also Candidates with third class degree from an approved university with a minimum CGPA of 3.5/5.0 may also be considered for admission.
- iii) Holders of HND in relevant programmes from approved institutions with at least Upper Credit in the sciences or related disciplines may also be considered for admission.

2.3 Registration

- 1) There are provisions for full-time and part-time registration.
- 2) Students are allowed to register for any of the options provided by the department.
- 3) Registration is done once every year.
- 4) For the Master's programme Part-time students shall register for a maximum of Eight (8) taught courses in the first year, i.e. Four (4) per semester. Full-time students shall register for a maximum of Seven (7) courses per semester.

2.4 Duration of Programme

- i) Full-time Academic Master's Programme shall run for a minimum of three (3) semesters and a maximum of five (5) semesters. While a full-time Professional Master's Programme shall also run for a minimum of three (3) semesters and a maximum of five (5) semesters.
- ii) Part-time Academic Master's Programme shall run for a minimum of five (5) semesters and a maximum of eight (8) semesters. While a part-time Professional Master's Programme shall also run for a minimum of five (5) semesters and a maximum of seven (7) semesters.

2.5 Programme Requirements:

2.5.1 Registration Procedure

Students shall normally complete registration for courses for the semester not later than two weeks after the start of the semester. A student may not withdraw from a course after five weeks of lectures in a given semester without permission from the Dean of Postgraduate School.

A student who withdraws after this time or who fails to seek for permission from the Dean shall be deemed to have failed that course.

A student who fails to sit for more than two courses at the end of a given semester shall be deemed to have withdrawn voluntarily from the programme.

2.6 Good standing

To be in good standing, a student must in each semester have a Cumulative Grade Point Average (CGPA) of not less than 3.00.

2.7 Requirements for Graduation

A candidate must have fulfilled the following conditions to be awarded the Master's degree:

A candidate must pass a minimum of 30 credit units, made up as follows:

- ✓ 24 credit units in core courses, including the general courses, projects and seminars.
- ✓ 6 credit units in elective courses.
- ✓ 6 Compulsory credit units of Research Projects.

2.71 Scheme of Studies

The Examination Requirements include all the following:

- i) A candidate must pass with a minimum grade of C in all the courses taught.
- ii) No student can proceed to the thesis without having achieved the appropriate Grades in the second semester examination;
- iii) An important and integral part of the M.Sc. programmes will be the research seminar in which attendance is compulsory. The seminar is a place where research projects and their results, including those of the students are presented and critically assessed.
An M.Sc candidate is expected to present at least two seminars. These seminars are integral part of the student's thesis assessment. Candidates would not be presented for external examination without presentation of these seminars.
- iv) An MS.c candidate upon submission of four copies of his/her thesis with paper binding shall be examined by a board of examiners made up of:
 - 1) His/her supervisor(s)
 - 2) The Head of Department
 - 3) The External Examiner
 - 4) The Dean of the Faculty (as the Chairman of the board of Examiners).

3.1 Ph.D. Programme

3.2 Basic Admission Requirements

Candidates for the Ph.D. programme should have a Master's degree in Computer Science or Information Technology, with a CGPA of at least 4.0/5.0 and thesis score not lower than 60% (B).

Candidates with PGD in Computer Science, with at least 4.0/5.0 CGPA in Master's degree and thesis score not lower than 60% (B) may be considered for our PhD programme. There shall be a Ph.D. qualifying examination, one year after registration. Any student that fails this examination will automatically be deemed to have withdrawn from the Ph.D. programme.

3.3 Registration

- 1) There are provisions for full-time and part-time registration.
- 2) Students are allowed to register for any of the options provided by the department.
- 3) Registration is done once every year.

3.4 Duration of Programme

For the Ph.D. programme, full-time students will be required to spend a minimum of 6 semesters and a maximum of 8 semesters. Part-time student will be required to spend a minimum of 8 semesters and a maximum of 10 semesters.

3.5 Requirements for Graduation

Doctorate (Ph.D) programme requires both course work and research. Courses of not more than 24 credit units will be taken by the candidates. Thesis of 12 credit unit must be defended before a panel of internal and external examiners.

3.6 Scheme of Studies

The Examination Requirements include all the following:

- ii) A candidate must pass with a minimum grade of C in all the courses taught.
- ii) No student can proceed to the dissertation without having achieved the appropriate Grades in the second semester examination;
- iv) An important and integral part of the Ph.D. programmes will be the research seminar in which attendance is compulsory. Such seminar will be organized at least once a month. The seminar is a place where research projects and their results, including those of the students are presented and critically assessed.

A Ph.D. candidate is expected to present at least four seminars, one of which must be outside his or her area of specialization. The last seminar is a University-wide presentation which is organized in conjunction with the Graduate School. These seminars are integral part of the student's dissertation assessment. Candidates would not be presented for external examination without presentation of these seminars.

- v) A. PhD candidate upon submission of six copies of his/her dissertation with paper binding shall be examined by a board of examiners made up of:
 - 1) His/her supervisor(s)
 - 2) The Head of Department
 - 3) The External Examiner
 - 4) The Dean of the Faculty (as the Chairman of the board of Examiners).

3.7 Comprehensive knowledge of areas of specialization.

- i) Graduate should have comprehensive knowledge of their areas of specialization. Encompassing an understanding of the theoretical foundations and quantitative tools of the areas of specialization, as well as the ability to apply this knowledge to solving problems.
- ii) Graduates should be able to demonstrate problem solving capacity using multidisciplinary approaches in an innovative and creative way.
- iii) Graduates should display comprehensive knowledge of areas of specialization and should have acquired entrepreneurial skills for self sufficiency and also to meet the needs of the public and private sectors in Nigeria and beyond.

3.8 Behavioral Skills

Graduates should understand human behaviour in organizations. They should:

- ✓ have the ability to work and interact effectively in group situations;
- ✓ be disposed to mentoring and peer review;
- ✓ to be able to appreciate constructive criticism

4.1 PGD in Computer Science

List of Courses

1st Semester

Course Code	Course Title	Credit Unit
CSC 701.1	Structured Programming	3
CSC 702.1	Computer Architecture	3
CSC 703.1	Data Structures	3
CSC 704.1	Database Management	
CSC 705.1	Systems Analysis & Design	3
CSC 711.1	Computer Laboratory I	3
	Total	18

2nd Semester

Course Code	Course Title	Credit Unit
CSC 706.2	Operating Systems Algorithms	3
CSC 707.2	C/C++ Language	3
CSC 708.2	Programming	3
CSC 709.2	Computer Networks	
CSC 710.2	Fourth Generation Languages	3
CSC 711.2	Computer Laboratory II	3
CSC 712.2	Programming Project	3
	Total	24

4.2 PGD COURSE DISCRIPTION

CSC 701.1: Structured Programming

Principles of good programming style, expression; structured programming concepts; control flow-invariant relation of a loop; stepwise refinement of both statement and data; program modularization (Bottom up approach, to-down approach, nested virtual machine approach); languages for structured programming debugging testing verifying code inspection; semantic analysis. Test construction. Program verification, test generation and running.

The use of PASCAL to illustrate these concepts. String processing, Record structures, file Processing, Dynamic data types for lists, etc. Recursion for tree search, sorting, etc. writing efficient programs. Turbo PASCAL project management facilities

CSC 702.1: Computer Architecture

Functional blocks of a computer system: CPU storage and peripheral devices; types of memory; memory addressing techniques; Bus organization; Addressing modes; Hardwired and micro-program controls; Illustration with a typical Von-Neuman architectural design.

CSC 703.1: Data Structures

Introduction to data structures; simple and complex data types; Arrays; string linear lists; Multi-linked structures; dequeues; stacks; graphs; trees; Application of data structures.

CSC 704.1: Database Management

Database concepts; Data integration; Data independence: Functions and architecture of a DBMS; Data models; Storage structure and access strategies; Relations and relation operators; Relational algebra and calculus; Normalization; SQL; Security and integrity issues; Entity-relationship modeling; E-R diagrams; Commercial DBMS's; DB/Z; Oracle, etc.

CSC 705.1: Systems Analysis and Design

Introduction to systems analysis and design and tools. The system's life cycle; Organizational structure; systems investigation; Feasibility studies; Determination and evaluation of alternatives; Designs of input; output and file structures; Documentation; choice of system characteristics (Hardware and software); Testing; conversion; parallel runs; Evaluation of system performance; Maintenance.

CSC 706.2: Operating Systems

Principles of operating systems; batch, multi-programming and multi-processing systems; Single-user, multi-user and network operating systems; inter-process communication; synchronization; deadlocks; Storage management and resource allocation; Illustration using popular operating systems such as DOS; windows; Unix, etc.

CSC 707.2: Algorithms

Design and specification of algorithms; Efficiency of algorithms; asymptotic time complexities; asymptotic notations; linear; logarithmic and polynomial time algorithms; Searching; Linear search trees; Fibenia search; Sorting; bubble sort; insertion sort; selection sort; quick sort heap sort algorithms; Experimental algorithms; Performance optimization.

CSC 708.2: C/C++ Language Programming

Modular programming; Object-oriented programming; C union structures; classes; object; messages; methods; Encapsulation; operator overloading; Applying object-oriented programming techniques.

CSC 709.2: Computer Networks

Objectives of computer networks; components of a network: nodes; modems; hubs; cables; Types of networks: LAN; WAN; Network topologies, Network software communication software operating systems; Illustration from common network operating systems.

CSC 710.2: Fourth Generation Languages

The concept of fourth generation programming; non-procedural code support; easy-to-use interface; Database languages; Relational data definition and manipulation; Database design; Table creation; Query formulation; fourth generation language programming; Moderately large case study; Use of an appropriate language.

CSC 711.1: Computer Laboratory I

This aim course is to familiarize the students with the most common programs on the market; MS office suite; CorelDraw; windows; SPSS etc. Students are also expected to demonstrate proficiency in at least two programming languages.

CSC 712.2: Computer Laboratory II

This aim course is to familiarize the students with the Object Oriented program such as C++, Java and other Fourth Generation Languages.

CSC 713.2: Project

The students will be expected to design and implement a medium-sized program using one of the current programming languages.

4.3 M.Sc in Computer Science

LIST OF COURSES

1st Semester

Course Code	Course Title	Credit Unit
CGS 802.1	ICT and Research Methodology	2
CSC 801.1	Operating Systems	3
CSC 802.1	Compiler Principles and Construction	3
CSC 803.1	Artificial Intelligence	3
CSC 804.1	Database Systems	3
	Total	14

2nd Semester

Course Code	Course Title	Credit Unit
CGS- 801.2	Management and Entrepreneurship	2
CSC 805.2	Computer Communications and Networks	3
CSC 806.2	Programming Languages	3
CSC 807.2	Software Methodology	3
CSC 808.2	Seminar	2
CSC 809.2	Research Project/ Thesis	6
	Total	19

4.4 MSc COURSE DISCRPTION

General Courses

All postgraduate students (irrespective of the programme) must take management and Entrepreneurship as well as ICT & Research Method as compulsory courses.

CGS- 801.2 Management and Entrepreneurship (2 Credit Units)

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, marketing and managerial problem solving.

CGS- 802.1 ICT and Research Methodology (2 Credit Units)

This course should cover essentials of spreadsheets, Internet technology, Statistical Packages, Precision and Accuracy of Estimates, Principles of Scientific Research, Concepts of Hypothesis, Formulation and Testing, Organization of Research and Report Writing.

CSC 801.1 Operating Systems (3 Credit Units)

Structured design aspect of an operating system: Process model, inter-process communication, synchronization mechanisms, resource management, and scheduling. Protection issues, Implementation issues of modern operating systems. Distributed operating systems. Deadlock detection, recovery and avoidance. Case studies. Project(s).

CSC 802.1 Compiler Principles and Construction

Definitions of formal grammatical arithmetic expressions and precedence grammars; context-free and finite-state grammars, compilers structure; lexical analysis and finite-state machines; syntactic analysis and parsing techniques; syntax-directed translation, algorithm for syntactic; recognisers, back-tracking, operator precedence techniques; semantics of grammatical constructs; reductive grammars, Floyd productions; simple syntactical compilation; static and run-time data representation and storage management; error detection and recovery; code generation and optimization.

CSC 803.1: Artificial Intelligence (3 Credit Units)

Introduction to search techniques. Introduction to programming techniques of artificial intelligence (AI). Domain analysis; representation of Knowledge and strategies: control of inference and search; development of interactive intelligence (CAI) programs; the role of analogical reasoning. The main contents are symbol manipulations and AI problem solving techniques. Topics include LISP primitives. LISP objects and evaluation, recursion and iteration and data abstraction (association lists, properties and DESTRUCT),

macros, object centred programming, symbolic pattern, match lug and basic solving methods.

CSC 804.1: Database Systems (3 Credit Units)

A brief introduction to database concepts: file systems and database, and the relational database model; design concepts and implementation; entity relationship (E,R) modeling: normalization of database tables and structured query language: database design and implementation. Transaction management and concurrency control and distributed database management systems; database privacy, security, failure and recovery. Object-oriented databases; client/server system; data warehouse; data mining; databases in electronic commerce; web database development and database administration.

CSC 805.2: Computer Communications and Networks (3 Credit Units)

Introduction to telecommunication. Channels and channel capacity; introduction to information theory; Network architecture and OSI model, circuit switching and packet switching; multiplexing; FDM, TDM, Statistical multiplexing; virtual circuits and datagrams; advantages and disadvantages; sharing the medium. Networking and the Internet: ISPs, physical media; LANs and bridging; WANs and point- to-point links; routing and addressing. Cyber Crime, Cyber Security and models of Cyber Solution.

CSC 806.2: Programming Languages (3 Credit Units)

Comparative study of the organization and implementation of a variety of programming languages and language features. Design principles arc explored and applied in a historical review of major languages. Procedural, functional, logic-based, object-oriented and parallel languages. Research issues such as polymorphism, formal semantics and verification explored in depth.

CSC 807.2 Software Methodology

Software lifecycle models, the development process, structured design, defect removal performance and verification models including software network modeling, correctness checking, functional transformations, theory of verification, theories of program invariance; application of performance and correctness checking methods to fundamental programs for searching, hashing, sorting and file structures; software maintenance, reliability and management

CSC 808.2 Seminar (2 Credit Unit)

The students will be expected to present a seminar to the department. The seminar topic will be approved by the department.

4.5 Ph.D. in Computer Science

LIST OF COURSES

1st Semester

Course Code	Course Title	Credit Unit
CSC 901.1	Computer Network	3
CSC 902.1	Database Management System	3
CSC 903.1	Compiler Principles and Construction	3
CSC 905.1	Fourth Generation Languages	3
Total =		12

2nd Semester

Course Code	Course Title	Credit Unit
CSC 906.2	Operating Systems	3
CSC 907.2	Advanced Artificial Intelligence	3
CSC 908.2	Programming Languages	3
CSC 909.2	Seminar	3
CSC 910.3	Dissertation	12
Total =		24

CSC 901.1: Computer Networks (3 Credit Units)

Network topologies, backbone design, performance and queering theory; datagrams and virtual circuits; technology issue; layered architecture; standard; survey of commercial Network, local area Network, and various communication protocols; encryption; security.

CSC 902.1: Database Management System (3 Credit Units)

Comparative study of hierarchical, CODASYL, and relational database models, with emphasis on the latter. Readings in theoretical database issues. Implementation of a practical database using one of the standard models. Introduction to implementation issues.

CSC 903.1 Compiler Principles and Construction (3 Credit Units)

Current issues in compilation process- operator hierarchies in Expression, maintain data type integrity, handling user defined types, data structures, implementing language scope rules,

implementing control structures, bootstrapping a compiler- T- diagram Notation for programs, T- diagram Notation for machines, T- diagram Notation for translators, T- diagram Notation for ruining programs, T- diagram Notation for ruining translators, full and half bootstrap, bootstrap to increase efficiency, Compiler Analysis and Optimization, Advances in compiler Construction for Adaptive Computers, Compiler designs issues for embedded processors, New Developments in Parsing Technology, Lex and Yacc.

CSC 905.1 Fourth Generation Languages (3 Credit Units)

Advanced concept of fourth generation programming non-procedural code support; easy-to-use interface; Database languages; Relational data definition and manipulation; Database languages; Advanced Relational data definition and manipulation; Advanced Database design; Table creation; Query formulation; fourth generation language programming; Moderately large case study; Use of an appropriate language.

CSC 906.2 Operating Systems (3 Credit Units)

Supervisory and control software for contemporary multiprogrammed computer

systems. Processes, synchronization, interprocess communication, scheduling, memory management, resource allocation, security, system performance evaluation, virtual machines, object-oriented systems, case studies

CSC 907.2 Advanced Artificial Intelligence (3 Credit Units)

In depth study of a few major areas historically considered to be part of artificial intelligence. In particular, detailed coverage will be given to the design considerations involved in the following applications: automatic theorem proving, natural language understanding and machine learning.

CSC 908.2 Programming Languages (3 Credit Units)

Comparative study of the organization and implementation of a variety of programming languages and language features. Design principles are explored and applied in a historical review of major languages. Procedural, functional, logic-based, object –oriented and parallel languages. Research issues such as polymorphism, formal semantics and verification explored in depth.

ACADEMIC STAFF IN THE DEPARTMENT OF COMPUTER SCIENCE

S/No	Name	Qualification	Specialty	Designation
1	Prof. P. O. Asagba,	B.Sc (UNN) M.Sc (Benin) PhD (UPH)	Network Security, Programming, Database Mgt.	Professor
2	Prof. C. Ugwu	B.Sc, MSc, PhD (UPH)	AI, Computer Modelling, Machine Learning	Professor
3	Prof. L. N. Onyejebu	B.Sc. (JOS) M.Sc. (NAU), PhD (UPH)	AI, Machine Learning, Data Analytics and Web Technology	Professor
4	Dr. B. O. Eke*	B.Sc, MSc, PhD (UPH)	Software Engineering, Programming	Reader
5	Dr. F. E. Onuodu *	B. TECH(MINNA) M.Sc. (UPH), PhD (UPH)	AI, Datamining and clustering	Reader
6	Dr E. E. Ogheneovo*	B. Sc. (UPH), M.Tech (FUTA) PhD. (UPH)	Natural Language Processing, AI	Senior Lecturer
7	Dr F. Egbono*	MSc (USSR), PhD (Ebony)	Computer Architecture and Control	Senior Lecturer
8	Dr B. B. Baridam*	B. Sc. (UPH), M.Sc. (UPH), PhD (SA)	Computational Intelligence, Database Systems and Bioinformatics	Senior Lecturer
9	Dr. U. A. Okengwu	B.Sc (UPH) MSc (UPH) PhD (UPH)	Artificial Intelligence, networking	Senior Lecturer
10	Dr L. C. Ochei	B. Sc. (Uyo), M.Sc. (Benin)	Programming and Software Applications	Senior Lecturer
11	Dr. M. O. Musa *	B.Sc (UPH) MSc (UPH)	Software Engineering	Senior Lecturer
12	Dr. L. U. Oghenekaro	B.Sc (UPH) MSc (UPH)	Software Engineering	Senior Lecturer
13	Dr. P. Enyindah	B.Sc (UPH) MSc (UPH)	Software Engineering	Senior Lecturer
14	Mr. A.O. Ugbari *	B.Sc (UPH) MSc (UPH)	Programming and Software Applications	Lecturer I
15	Mr. E. Wobidi *	B. Sc. (UPH), M.Sc. (Lagos)	AI, Software Engineering	Lecturer I
16	Mr R. S. Ogunsakin	B.Sc (UPH) MSc (UK)	Programming and Software Applications	Lecturer II

* Adjunct Lecturer

COLLEGE OF HEALTH SCIENCES

MASTERS PROGRAMME IN SPORTS MEDICINE

Preamble:

Sports Medicine is a relatively new branch of medicine concerned with the prevention, diagnosis and treatment of medical disorders or injuries that are related to sporting activities and improvement of fitness. Sports in itself has become a major source of national and International interaction and cohesion. More importantly, it has become a major source of income as noticed in football, tennis, boxing and golf. Consequently, sport holds an attraction for young men and women and this has led to the increased number of participants and spectators which has also led to an astronomical increase in sports related injuries with increased morbidity and mortality.

In Nigeria today, sports injuries are treated and managed by medical doctors not specifically trained for that purpose because only few specialists in sports medicine are available. The few available were even trained overseas at very high cost:

At present, no University in Nigeria offers a sports medicine programme, and so University of Port Harcourt with a strong medical curriculum and a very good sporting complex can seize the chance and run a good masters programme in sports medicine. Furthermore, the International Olympic Committee (IOC) has directed all its affiliate sports governing bodies to engage the services of sports medicine practitioners as a precondition for affiliation. This means that there is a market for the products of the programme.

Aim / Objectives:

The programme aims to train medical specialists who will manage sports related injuries, teach and conduct research in the area of sports medicine.

Knowledge and Skills to be Acquired:

The graduands of this Programme are expected:

- To know specific injuries in relation to specific sports and their signs and symptoms.
- To relate injuries to anatomical and physiological features of individuals.
- To know surgical procedures required in certain injuries.
- To have knowledge of banned drugs in sports.
- To be experts in exercise physiology.
- To know medical conditions that exclude an individual from participating in specific sports.

- To know how to handle emergencies in sports injuries.
- To know rehabilitation procedures after recovery
- To use scientific knowledge and equipment to conduct research in sports medicine.
- To be able to adopt current relevant methodologies to solve scientific problems, make reasonable deductions and adequate inference from data evidence available.

Degree Offered:

Duration of Study

The course will last for a minimum period of 18 months and maximum of 36 months. The course work will be taught in two semesters of 12 months. Students will spend the remaining 6 months in a training attachment to a sporting club in Nigeria and a thesis is expected to be concluded during this period.

COURSES OFFERED

1st Semester			
Code	Title		Credit Unit
SMD 800.1	Biochemistry of Exercise		3
SMD 801.1	Athletic Conditioning		3
SMD 802.1	Exercise Physiology		3
SMO 803.1	Nutrition and the Athlete		3
SMD 804.1	Methods of Treatment		3
SMD 805.1	Functional Anatomy of Man		3
SMD 806.1	Emergency Care and Athletic First Aid		3
SGS 801.1	ICT & Research Method		2
	Total		23
2nd Semester			
Code	Title		Credit Unit
SMD 807.2	Injuries in Running Athletes		3

COURSE OUTLINE

SMD 800.1 Biochemistry of Exercise

This course will dwell on biochemical and microscopic changes that may occur with training. Hormonal control of growth and normal development will be dealt with.

SMD 801.1 Athletic Conditioning Methods

This course will dwell on types of skeletal muscle and the biomechanical changes that may take place with, training and conditioning in various specified sports, it will emphasize muscular strength, power, endurance and flexibility. The course will also teach anaerobic conditioning, the warmup period and warm-up schedule as well as neuromuscular technique. In addition it will expose the student to protective and supportive equipment

SMD 802.1 Exercise Physiology

This course will concentrate on the response of respiratory system, cardiovascular central nervous system, hormonal system and musculoskeletal system to exercise.

SMD 803.1 Nutrition and Athletics

This course exposes the student to the attributes of a well balanced diet. The student will be taught pre-event nutrition, when to increase weight and decrease weight especially in weight categorized sports. The effects of dehydration and re-hydration will be taught while the merits and demerits of carbohydrate loading diet will be reviewed.

SMD 804.1 Methods of Treatment in Sports

The course will review current analgesics, non steroidal anti-inflammatory drugs (NSAID) banned drugs in sports. It will also expose students to the use of cold packs and spray. It will teach the

SMB 805.1 Functional Anatomy

This course will teach the functional anatomy and the mechanism of injury sustenance of different regions of the human body. The Biomechanics of running jumping and throwing will be considered.

SMD 806.1 Emergency Care of Athletes

This course will prepare the students to be grounded in the act of emergency intervention in case of injuries and life, threatening conditions involving fee cardiopulmonary, cardiovascular and central nervous system. Ice (cold) application, compression, crutch fitting, gait instruction and stretcher use will be taught.

SMD 807.2 Injuries in Running Athletes

This course will teach the common running induced injuries to the back, hip, thigh and knee, lower leg, and foot. The biomechanics of a normal running gait will be taught.

SMD 808.2 Joint and Musculoskeletal Injuries

This course is designed to teach the Anatomy/Physiology of musculoskeletal Injuries arising from specific sports. It will emphasize over-use injuries and Rehabilitation periods.

SMD 809.2 Head and Facial Injuries

This course will deal with simple anatomy of the scalp, skull and coverings of the central nervous system. Evaluation of head injuries will be taught. Lacerations, contusion, concussion fractures, haematoma of the head and face will be taught. Dental, eye, nasal and ear injuries will also be taught.

SMD 810.2 The Female Athlete

The course will teach the gynaecological problems of women athletes as related to menstruation, pregnancy, contraceptive steroids and anabolic steroids. It will also dwell on the psychological aspects of women participation in sports. The prepubertal, adolescent and post-adolescent woman will be dealt with.

SMD 811.2 Thermal and Cold Injuries

This course the physiology and prevention of heat and cold injuries will be taught. Specifically, heat cramp, heat fatigue (heat vasomotor asthenia), heat exhaustion, heat stroke and mixed heat injury syndromes will form major topics of the course.

SMD 812.2 Chest, Abdominal and Perineal Injuries

This section will deal with contusions of the testes, vulvae, solar plexus, kidney and heart (cardiac).

Ruptures of the spleen, kidney and liver will be dealt with. Rib Fractures, costochondral separations, hip disruptions and topics like Spontaneous pneumo thorax will be taught.

SMD 813.2 Injuries to Children and Adolescent
Special injuries in children, prepubertal, pubertal and adolescent subjects will be taught.

SMD 814.2 Seminar Course in Area of Specialization

This course the student is expected to present a seminar in area of interest or on the project work.

SMD 815.2 Project

The student will be expected to make a project proposal which will be approved by his supervisor.

The project will be in his area of interest such as sports, nutrition or sports of interest, for example football (soccer), swimming, boxing and wrestling etc. The thesis will be examined (orally) by an external examiner.

DEGREE REQUIREMENT

A candidate is supposed to pass all the courses in not more than 36 months. A student shall be deemed to have withdrawn if at the end of 36 months he/she fails to pass all the courses. To graduate, a candidate will also satisfy all other conditions stipulated in the regulations of the postgraduate school.

ACADEMIC STAFF LIST

S/NO	NAME	QUALIFICATION	FIELD OF SPECIALISATION
1.	Professor Ndu Eke	MB.Ch.B.Edinburgh, FRCS, England	Urology
2.	Professor B.C. Didia	MBBS, Benin MD, UPH, FASN	Anatomy
3.	Professor A. Nwafor	B.Sc London, Ph.D Wales	Biophysics/Membrane Phy
4.	Professor E.O. Ayalogu	B Sc., Ph D Ibadan	Nutritional Biochemistry/ Toxicology
5.	Professor N.D. Briggs	MBBS Lagos, MD FRCOG, FWAACS FICS	Obstetric & Gynaecology
6.	Professor A.W. Obiechina	BDS (1981), FMCDS (1988), FWALS (1995)	Dentistry
7.	Professor (Mrs) F. Eke	MBCh.S M.D Cork, MRCP.UK. EMCP. FMCP	Paed. Nephrology
8.	Prof. H.B. Fawehinmi	B Med Sc UPH, MBBS UPH, MSc	Anatomy
9.	Prof. D.V. Dapper	MBBS.UPH, B.Med,Sc UPH	Human Physiology
10.	Prof. Uwakwe, A.A.	B.Sc, MSc PhD UPH	Medical Biochemistry Enzymology
11.	Prof. (Mrs) J.O. Akaninwo	B.Sc, M.Sc., Benin, PhD UPH	Nutrition & Toxicology
12.	Prof. Siminialaye I.M.	B.Med.Sc (UPH), MBBS (UPH),	Pharmacology
13.	Prof. Dda Lilly-Tariah, O.B.	M.S (Lagos), MD (UPH) BM, B.Ch Jos FWACS	Pharmacology Otolaryngology
14.	Prof. A.U. Ekere	MBBS. Lagos FFMCS	Othopaedic Surgery
15.	Dr. R.S. Jamabo	MBBS Lagos, FRCS, FRCP, Ireland	General Surgery
16.	Dr. Bob-Yellowe, E.	MSc. Belgium, Specialist Cert. Orthopaedic	Orthopaedic Surgery
17.	Dr. (Mrs) A.I. Udoaka	B.SC (Intercalated) MB BCH, FWACS(2004)	Anatomy
18.	Prof. Chike, C.P.R.	MBBS UPH, B.Sc, M.Sc. UPH	Human Physiology
19.	Prof. P.C.E. Iro	B.Sc, Nigeria, MEd Ph.D. Lagos	Physical Education (Exercise Physiology) Physical and Health Education
20.	prof. K.C. Anugweje	MBBch,Nigeria, DSM, London, Ph.D(UPHI)	Medicine/Surgery
21.	Dr. C.E. Agi	B.Med Sc. (Pharm) MBBS UPH, FWACS (1991), FWACS (2003).	Radiology
22.	Dr. Akpa, M.R.	M.Sc (Sports Med),London (2001) MBBS Benin (1983) FWACP- (2001)	Radiology Medicine
23.	D.T.N.C. Nwankwo	MBBS Maiduguri FWACS	Radiology
24.	Dr. (Mrs) I.C. Anochie	MBBS, FWACP	Paediatrics

FACULTY OF BASIC CLINICAL SCIENCES

DEPARTMENT OF HAEMATOLOGY, BLOOD TRANSFUSION AND IMMUNOLOGY

MASTER OF SCIENCE (M.Sc) IMMUNOLOGY PROGRAMME

1. INTRODUCTION

Immunology is the scientific study of the immune system including allergies, resistance to disease, and acceptance or rejection of foreign tissue. The human immune system has undergone diverse extensive and intensive evolutionary changes due to specific and a wide diversity of antigenic challenges.

Following the discovery in 1796 of the small pox vaccine by the British Physician Edward Jenner, immunology as a discipline has evolved over the years into a recognized discipline of study. However, the study of immunology is mainly post graduate. Presently, there are few post graduate programs in immunology in Nigerian Universities; thus specialist immunologists are scarce. The present programme aims to bridge this gap.

2. PHILOSOPHY OF THE PROGRAMME

To help train high level manpower in immunology to facilitate research on various aspects of immunology, including the immuno-pathology of diseases.

3. OBJECTIVE

The course is designed to train biological science graduates as well as medical and dental graduates, who wish to broaden their knowledge in the subject and enhance their employment opportunities in both the academia and industry. For those who intend to remain in the academia, it will help them to acquire the research expertise required to undertake a PhD degree programme in immunology.

4. DEGREE OFFERED

Master of Science [M. Sc] in Immunology

5. ADMISSION REQUIREMENTS

The course is open to graduates of Medicine, Dentistry, Anatomy, Physiology, Pharmacy, Pharmacology, Nursing, Biochemistry, Molecular Biology, Microbiology, Animal Science, Veterinary Medicine, Zoology and other relevant courses.

Applicants who hold a minimum of Second Class Honors [Lower Division] degree [except for Medical, Dental and Pharmacy graduates whose degrees are unclassified] in any of the above mentioned subject, from the University of Port Harcourt or other Universities recognized by the Senate of the University of Port Harcourt shall be eligible for admission into the programme.

6. PROGRAMME DURATION AND TYPE

The course will be a taught course that will combine lectures, practical exercises and a laboratory based research project. It shall be both full time and part-time.

The full time program shall run for a minimum of 12 calendar months [1 year] and a maximum of 24 calendar months [2years]; while the part-time programme shall run for a minimum of 24 calendar months [2 years] and a maximum of 48 calendar months (4 years).

7. COURSE CONTENT

The following are the courses that constitute the course content for the proposed programme.

First Semester

Course Code	Course Title	Credit Unit
IMM. 801.1	Basic Immunology I (Immunophysiology)	3
IMM. 802.1	Basic immunology II (Immunochemistry)	3
IMM. 803.1	Clinical Immunology I (Immunopathology)	3
IMM. 804.1	Clinical Immunology II (Selected topics in Clinical Immunology)	3
IMM. 805.1	Immunology of Tropical Infections	3
SGS 801.1	ICT and Research Methodology	2
	Total	17

Second Semester

Course Code	Course Title	Credit Unit
-------------	--------------	-------------

IMM. 806.2	Research Methodologies and Biostatistics	3
IMM. 807.2	Research Seminars	3
IMM. 808.2	Group Study	3
IMM. 809.2	Experimental Work Laboratory-Based	3
SGS 801.2	Research Project	2
	Entrepreneurship and Management	2
	Total	17
	Total Credit Unit	30

1. DESCRIPTION OF COURSE

Below is a detailed description of each of all the courses that would be taught in the programme.

IMM. 801.1: BASIC IMMUNOLOGY I (IMMUNOPHYSIOLOGY)

This course will give an understanding of the structure and functioning of the immune system, as well as cellular interactions involved in host defense mechanisms. Course details are: introduction to immunology; the lymphoid system; cells involved in immune response their organization, diversity and specialized functions; antigen processing and presentation; B and T lymphocyte receptors/activation; immunogen and immune responses, immune responses and immune tolerance. Introduction to genes and genomes.

IMM 802.1: BASIC IMMUNOLOGY II (IMMUNOCHEMISTRY)

The course will deal with serum factors that are involved in immune response and those that amplify such responses. Details include the immunoglobulin: structure, functions, metabolism, classification, monoclonal antibodies, nature and consequences of antigen-antibody interaction; the complement system- components, reaction pathways, interactions with other body systems, regulatory proteins; the role of cytokines in body defense mechanisms. Recombinant DNA technology and genomics.

IMM 803.1: CLINICAL IMMUNOLOGY I (IMMUNOPATHOLOGY)

The course deals with the immunopathology and immunopathogenesis of certain disease conditions. It will give a detailed consideration and appreciation of the role of the immune system in disease states with immunological undertone: like allergies, autoimmune diseases, transplant rejection and others. It will also lead to a better understanding of the disease conditions arising from functional aberrations of the immune system.

The following are some of the conditions: hypersensitivity states, autoimmunity and autoimmune disorders; the human leukocyte antigen (HLA) system and immunology of transplantation. Immunomodulation: immunosuppression and immunosuppressive therapy, immunopotential, immunoglobulinopathies, tumor immunology; immunodeficiency states. Basic introduction to proteomics.

IMM. 804.1: CLINICAL IMMUNOLOGY II (SELECTED TOPICS IN CLINICAL IMMUNOLOGY)

The course will lead to an in-depth understanding of health and disease conditions in which the immune system is involved at the molecular/genetic levels. It will deal with: immunology of reproduction: immunology of infertility and pregnancy complications; immunogenetics; immuno-haematology; immunopharmacology; neonatal immunology; immunology of malnutrition.

IMM. 805.1: IMMUNOLOGY OF TROPICAL INFECTIONS

The course will focus on the immunology of microbial infections, especially those microbes of importance in the tropics. It will cover: immunology of parasitic infections: malaria; trypanosomiasis, onchocerciasis, helminth infections and other worm infestations; immunology of bacterial infections; immunology of viral infections (including HTV); immunology of fungal infections.

IMM.806.2: RESEARCH METHODOLOGIES AND BIostatISTICS

Candidates will be exposed to research methodologies that will include immunological methods of determining (i) humoral parameters (ii) cellular parameters and (iii) advanced immunological techniques. Candidates will also be taught relevant areas of biostatistics including data collection and analysis.

IMM. 807.2: RESEARCH SEMINARS

Candidates will be required to present seminars on various topics on immunology.

IMM. 808.2: GROUP STUDY EXPERIMENTAL WORK

Candidates will undertake group experimental work, write up the reports of such work and present at class discussion sessions.

IMM. 809.2: LABORATORY- BASED RESEARCH PROJECT

Candidates will carry out laboratory-based research projects which will be presented as dissertations for assessment at the end of the programme. The assessment will include a successful defense of the dissertation.

2. EXAMINATIONS

There shall be periodic continuous assessment for all courses except the Research Seminar and the Research project courses i.e. IMM. 807.2 and IMM. 809.2. Continuous assessment shall make

up 30% of the entire examination. Each written examination for each course shall consist of an objective and an essay paper. The pass mark shall be 50%.

3. STAFF LIST

Although the programme is in the Department of Haematology, Blood Transfusion and Immunology of the Faculty, lecturers come from several other Departments in the College of Health Sciences and the Faculty of Science, University of Port Harcourt. This is due to the multidisciplinary nature of the discipline, as it cuts across all branches of medicine.

ACADEMIC STAFF

S/NO	Names	Qualification	Designation	Department
1	Prof. C. A. Nwauche	B. Med. Sc. (Hons); MBBS, FWACP; M.Sc. Haem. (London).	Professor	Haematology, Blood Transfusion & Immunology
2	Prof. D. V. Dapper	MBBS, MD; FASAN.	Professor	Physiology
3	Prof. B. C. Didia	MBBS(Benin), MD(UPH)	Professor	Anatomy
4	Prof. A. W. Obianime	B.Sc (Ibadan; Ph.D(London).	Professor	Pharmacology
5	Prof. S. O. Nwosu	MBBS, MSc, DCP, FMCPPath, FWACP.	Professor	Anatomical Pathology
6	Prof. A. C. Ojule	MBBS, MSc, FMCPPath.	Professor	Chemical Pathology
7	Prof. C. G. Orluwene	B. Med Sc, MBBS, FMCPPath.	Professor	Chemical Pathology
8	Prof. O. N. Ekeke	MBBS, FWACP.	Professor	Surgery
9	Dr. O. K. Obunge	BSc, MD., FWACP.	Professor	Medical Microbiology
10	Prof. O. G. Omitola	BDS, MSc, FMCDs, FWACS, FICS.	Professor	Oral Pathology & Immunology
11	Prof. (Mrs) A. U. Eneh.	MBBS, FWACP.	Professor	Paediatrics
12	Prof. K. T. Wariso	MBBS, FMCPPath.	Professor	Medical Microbiology
13	Prof. O. B. Babatunde	MBBS, PgCert Epid, MPH, FWACP.	Professor	Preventive & Social Medicine
14	Prof. H. D. Kagbo	BSc, MSc, PhD.	Professor	Pharmacology
15	Dr. V. K. Orij	B.Med Anat, MBBS, FWACS, FICS.	Senior Lecturer	Obstetrics and Gynaecology
16	Dr. C. C Obiorah	MBBS (Nsukka), FMCPPath.	Senior Lecturer	Anatomical Pathology
17	Dr. M. K Sapira	MBBS, FWACS, FMCS, FICS.	Senior Lecturer	Surgery
18	Dr. E. P. Odums	MBBS, FMCPPath.	Senior Lecturer	Chemical Pathology
19	Dr. O. Otokunefor	MBBS, FMCPPath.	Senior Lecturer	Chemical Pathology
20	Dr. K. Otokunefor	BSc, MSc, PhD.	Senior Lecturer	Molecular Microbiology
21	Dr. I. F. Allison	MBBCH, FMCPPath.	Senior Lecturer	Chemical Pathology
22	Dr. N. Nkoyo	MBBS, FMCPPath.	Senior Lecturer	Chemical Pathology
23	Dr. O. J. Olorunfemi	BSc. MSc, PhD.	Senior Lecturer	Human Physiology
24	Dr. M. A. Alex-Wele	MBBS, FMCPPath.	Lecturer I	Medical Microbiology
25	Dr. I. S. Musa	MBBS, FMCPPath.	Lecturer I	Anatomical Pathology

DEPARTMENT OF PHARMACOLOGY

POST GRADUATE DIPLOMA (PGD) IN PHARMACOLOGY (12 months minimum)

Candidates applying for the Postgraduate Diploma in Pharmacology, should have a Bachelor's Degree with a minimum of 2nd Class lowers Honours in Biochemistry, Physiology, Anatomy, Biomedical Technology, nursing, physiotherapy, radiography, optometry, medical laboratory science and related Biological Science discipline or a third class in Pharmacology. The duration of this programme is a minimum of 12 calendar months and a maximum of 24 calendar months full time; a minimum of 24 calendar months and a maximum of 36 calendar months part time to complete. Candidates are expected to register for, and pass 3 Ounitsofc oursework with minimum score of (50%) (C). In addition, candidates will be required to present a seminar, and complete a project work. To qualify for the M. Sc. programme, each candidate must pass all 24 units of taught courses, 3 units of seminar and 3 units of project work and obtain a C.G.P.A of at least 3.5and above in the Diploma Programme.

MASTER OF SCIENCE (M.SC.) IN PHARMACOLOGY (18 MONTHS MINIMUM)

To qualify for the programme, candidates must possess a good Second Class degree lower division or its equivalent in Pharmacology, Pharmacy, Medicine, Dentistry or Veterinary Medicine. Such candidates, whose background in Pharmacology is considered satisfactory, will be required to register for the Advanced Pharmacology courses, start their research projects and spend a minimum of eighteen (18) months.

The following M.Sc. Pharmacology Options exist:

- a. Cardiovascular Pharmacology
- b. Biochemical Pharmacology
- c. Immunopharmacology
- d. Toxicology
- e. Ethnopharmacology
- f. Chemotherapy

Doctor of Philosophy (Ph.D) Degree in Pharmacology

Admission to the programme will be open to candidates who possess the M.Sc. with a minimum of 3.50 Cumulative Grade Point Average, or the M.Phil Degree or an equivalent degree, in Pharmacology. Candidates should normally have had a Masters Degree with an average score of 60% or its equivalent grade. For candidates who obtained their Masters exclusively by Research

Assessment, admission would be based on the quality of their Thesis.

Candidates with an outstanding performance during the M.Sc. Pharmacology Programme may be allowed to advance to Ph.D on the recommendation of the Departmental Graduate committee to the Graduate School Board after approval by Senate of the University. Candidates may be required to satisfy the Department in a selection process.

The Ph.D. is a Research Degree finally examined by Oral Defense of the Dissertation. The Departmental Graduates Studies Committee through the Faculty Graduates Studies Committee and upon approval by the Board of the School of Graduates Studies shall appoint a Supervisor and conduct the required examinations and other conditions that may specified for the Award of the Degrees.

M.Sc. PROGRAMME IN PHARMACOLOGY (MINIMUM OF 18 Months)

OBJECTIVES: The main function of universities is to teach, conduct research and give service to the community. One of the ways of stimulating academic research is by initiating postgraduate programme. The Programme commenced in 1997. These Programmes produce specialized manpower. Thus graduate studies in Pharmacology aims at training candidate to acquire advanced knowledge and skilful research techniques as to produce:

- a) Graduates with in depth knowledge of Pharmacology.
- b) Graduates with skills to teach Pharmacology.
- c) Graduates capable of designing and conducting experiments for undergraduate students.
- d) Graduates who are vast in rational choice of therapeutic agents to advice physicians and dentists in hospital.

THESIS/DISSERTATION

After approval of the research topic by the Senate of University of Port Harcourt, the student shall carry out his/her research with Supervision. He/she shall write up his/her dissertation in accordance with University of Port Harcourt Postgraduate Studies Regulations.

M.Sc. PHARMACOLOGY

First Semester

Course Code	Course Title	Credit Unit
SGS 801.1	ICT and Research Methodology	2

COURSE DESCRIPTION

PHA 830.1: Pharmacokinetics

The Course is designed to provide in-depth knowledge in:

1. Drug absorption, metabolism and elimination
2. Linear and non-Linear pharmacokinetic model

3. Dosage regimentation based on pharmacokinetic parameters
4. Kinetics of drug concentration with response
5. Bioavailability and pathophysiologic factors in Pharmacokinetics

PHA 831.1: Research Techniques and Instrumentation

The course aims at having the student design and carry out scientific research. He must be familiar with the variety of analytical methods and their application.

PHA 832.2 Neuropharmacology

The course is designed to give the candidate an up to date knowledge of Pharmacological basis of neurological diseases or disorders and therapeutics of current drugs used in disorders of the nervous system. Areas of interest include a Review of the following Neurohumoral transmission and the CNS, Neurotransmitters and neurological disorders. History and Principles of Anaesthesiology. General and Local Anaesthetics. The therapeutic gases: Oxygen Carbon dioxide. Helium and water vapour, Hypnotics and Sedatives: Ethanol, Drug and the treatment of Psychiatric disorder. Drugs effective in the therapy of the Epilepsies. Drugs for Parkinson's disease, Spasticity and Acute muscle spasms. Opioid Analgesics and Antagonists. Drug Addiction and Drug Abuse.

PHA 833.2: ADVANCED CARDIOVASCULAR PHARMACOLOGY

The course is designed to impart advanced Knowledge of the following Renin and Angiotensin, Antihypertensive agents, Antiarrhythmic agents, Antianginal agents, Positive Inotropic Agents, Vasodilators, Anti-hyperlipoproteinaemic Agents, Drug management of circulatory shock is also emphasized.

PHA 834.2: CHEMOTHERAPY

The course aims at imparting to the candidate a sound knowledge of pathophysiology of parasitic, neoplastic and microbial diseases, with emphasis on: Mechanism of Action, Pharmacokinetics, Adverse Effects, Therapeutics and Resistance and mechanism of resistance of these drugs used for therapy. Areas that will be covered are: Drugs used in the chemotherapy of Helminthiasis; Antiprotozoal agents: useful in malaria, amoebiasis giardiasis, Trichomoniasis; leishmaniasis, Trypanosomiasis; Antimicrobial agents: sulfonamiasis, Trimethoprim-Sulfamethoxazole, Quinolones and Agents for urinary tract infections; Penicillins, Cephalosporins, Aminoglycosides, Tetracycline,

Chloramphenicol and Erythromycin, Drugs used in the Chemotherapy of Tuberculosis and Leprosy; Antifungal Agents, Antiviral Agents, Anticancer Agents.

PHA 837.2: TOXICOLOGY

Emphasis will be laid on following Mechanisms of drug toxicity, Management of acute drug poisoning, Plant, bacterial and animal poisons, Heavy metals and Heavy metal antagonists, Air Pollutants, Solvent poisoning Vapours and Gases (Aliphatic halogenated hydrocarbon, chloroform, carbon tetrachloride, Benzene, Kerosene, Carbon Monoxide). Pesticides, Food Toxicology Cyanide Poisoning, Aflatoxin, Hycotoxins. Radiation and Radioactive Materials External Radiation Exposure, Internal Emitters, Radiation Protection Standards.

PHA 838.1: IMMUNE-PHARMACOLOGY AND AUTOCOID PHARMACOLOGY

The course is designed to give in-depth knowledge of pharmacology of autocooids and their therapeutic uses. Emphasis will be laid on the following: Immunosuppressive Agents: Histamine, 5 Hydroxytryptamine and their antagonists. Lipid derived autocooids: Eicosanoids and platelet activating factor, Kinins, Intracellular Signalling Agents: Cytokines etc. Drugs used in different Immunopathologies .Drugs used in the treatment of Asthma, The Methylxanthines, Cromolyn Sodium and other Agent. Drugs employed in the treatment of Rheumatoid Arthritis and Gout. Analgesics antiipyretic and anti-inflammatory agents. Drugs used in different skin and immunoreactive states or disorder.

PHA 839.1: BIOSTATISTICS

An advanced course covering the following, Organization and Summarization of Data, Descriptive Statistics Probability, Sampling Distribution: Association, Contingency and Goodness of fit: The Chi-Square Distribution, Hypothesis Testing, Choosing the Study Subject and Sampling, Estimation, NonParametrics, Design of Experiment and Analysis of Variance, Correlation and Regression, Research Methodology, Vital Statistics, Demography and Health Statistics Non- parametric methods.

Ph.D PROGRAMME IN PHARMACOLOGY INTRODUCTION:

The course will provide intensive training in various are of Pharmacology and are designed for graduates in Pharmacology, Medicine, Dentistry Pharmacy, Veterinary Medicine, Physiology and Biochemistry. The objective of the courses will be to produce competent Basic and Medical Pharmacologists in Teaching and Research Institutions, in Hospital and in Industries (especially in Pharmaceutical Drug Production and Quantity and Quality Control Laboratories).The Programme is to be undertaking for duration of three year full time and four years part time after M.Sc. of this Department. The Ph.D programme will be based on independent research work. To obtain a Ph.D in Pharmacology candidate shall submit an acceptable Ph.D dissertation, act as a Demonstrator to the Undergraduate student as part of their training, give 3 research seminars on the project work and satisfy all other requirements as stipulated in the Graduate School Prospectus for graduate Students.

PHA 923: RESEARCH SEMINARS IN CENTRAL NERVOUS SYSTEM PHARMACOLOGY

Students will be required to make presentation in the Special areas of the various modulating factors in the CNS.

PHA 924: RECENT ADVANCES IN PHARMACOLOGY RESEARCH SEMINARS

Seminar Presentations of Research Projects and Review of Current Literature Related to the Works.

PHA 925: PHARMACO – EPIDEMIOLOGY SEMINAR

This will involve Presentation of Seminars

PHA 951: DISSERTATION

For candidates to meet the requirements for the award of Ph.D Degree in Pharmacology, Candidates will be required to satisfy a Minimum of six and maximum of 12 units at 900 level courses.

**DEPARTMENT OF PHARMACOLOGY
ACADEMIC STAFF LIST**

S/N	NAME	DESIGNATION	QUALIFICATION	SPECIALIZATION
1	Prof. N. Brambaifa	Professor	Vor-Dip. Dr. Re Nat (Berling)	Biochemical Pharmacology
2	Prof. A.W. Obianime	Professor	B.Sc (Ibadan), Ph.D (London)	Immunopharmacology
3	Prof. O.A. Georgewill	Professor	B.MedSc, MBBS, M.Sc, MD (UPH)	Cardiovascular Pharmacology/ Neuropharmacology
4	Prof. I.M. Siminialayi	Professor	B.MedSc, MBBS (UPH), M.Sc (Lagos), MD (UPH)	Endocrine Pharmacology
5	Dr. H.D. Kagbo	Senior Lecturer	B.Sc, M.Sc (UPH), Ph.D (Uyo), MNISP	Toxicology/ Ethnopharmacology
6	Dr. (Mrs.) Udeme O. Georgewill	Senior Lecturer/Ag. HOD	MBBCh (Calabar), M.Sc, Ph.D (UPH)	Chemotherapy/ Toxicology
7	Dr. S.G. Eyaru	Lecturer I	MBBS (Benin), M.Sc (Lagos)	Pharmacology
8	Dr. J.O. Odigie	Lecturer I	MBBS, M.Sc (UPH)	Pharmacology
9	Dr. Ijeoma H. Ogbuehi	Lecturer I	B.Sc (IMSU), MSc, Ph.D (UPH)	Reproductive Toxicology
10	Mr. D.M. Ogan	Grad. Asst.	B.Med. Sci, PGD (UPH)	Pharmacology

FACULTY OF CLINICAL SCIENCES

DEPARTMENT OF PREVENTIVE AND SOCIAL MEDICINE

MASTER IN PUBLIC HEALTH (MPH) AND MASTER OF SCIENCE IN PUBLIC HEALTH

(MSe PUBLIC HEALTH) DEGREES

Introduction

Public health has been defined as 'the science and art of preventing disease, prolonging life and promoting physical health and efficiency through organised community efforts for the sanitation of the environment, the control of community infections, the education of the individual in the principles of personal hygiene, the organization of medical and nursing services for the early detection and preventive treatment of disease, and the development of the social machinery which will ensure to every individual in the community a standard of living adequate for the maintenance of health' (Winslow, 1920).

Public Health is a discipline which involves acquisition of skills and competences essential for the practice of health promotion, protection and prevention of diseases, Public Health is a multidisciplinary field comprising medical and other health-related disciplines. The MPH and MSc degrees prepare professionals for leadership positions in Public Health.

Justification/rationale

Achievements in reducing mortality and morbidity in the past can be traced to public health initiatives. Improving health outcomes towards achieving the Millennium Development Goals is a major challenge for public health in the 21st century. Hence to keep the public healthy in a world where health threats range from HIV/AIDS to epidemics of hypertension and diabetes mellitus, there is need to increase the number of public health practitioners and professionals. There is a dearth of Public Health Professionals in Nigeria to teach, practice and conduct research to improve the health of the populace. Public health practitioners are also needed to effectively shape the programmes and policies needed to improve population health.

There is therefore a growing need and demand for public health training in Nigeria. Few States in Nigeria have appropriately trained and qualified Epidemiologists, Biostatisticians, Health Managers, and Health Information Management Experts. The MPH and MSc programmes will fill the human resource gaps in public health practice in Nigeria especially in the Niger Delta Region. It

is intended that at the end of the programme, students would have acquired appropriate knowledge, skills and competences to enable them to apply public health principles in the planning, implementation and evaluation of health programmes. They will also be expected to be able to critically assess environmental factors as well as public health interventions and their potential impacts on health.

Programme Summary

Programme Titles:

1. Master of Public Health (MPH)
2. Master of Science in Public Health (MSc Public Health) (MSc PH)

Available option: Full time

The full-time admission is offered only to candidates who can satisfy the Department and the School of Graduate Studies that they are not in any employment, or that they have been relieved by their employers to undertake full-time studies. Candidates found to have made false declaration in this respect shall be withdrawn from the University

Duration - 18 months

The course work will run for two Semesters, while the third semester will be for the conclusion of the Seminar and Project work.

Total Credit Units:

MPH	43 credits
MSc PH	39 credits

Each candidate is expected to complete all the required courses under each programme and an elective

Domiciliation of the Programmes

Faculty: Clinical Sciences

Department: Preventive and Social Medicine

Objectives of the MPH and MSc Public health Programmes

- To provide training in public health to qualified health professionals and to other individuals whose prior training and experience prepares them to play a leadership role in public health;
- To adapt MPH and MSc Public Health training to the diverse backgrounds and anticipated future careers of the students;

- To award the degrees to individuals who have acquired a particular depth of knowledge in public health practice.

Intended Learning Outcomes

The major objective of the MASTER'S in public health programmes is to provide graduates with the necessary skills and background to make them well-grounded so that they can make an impact in a demanding workplace and in the community. These skills include:

Technical Skills

- Detailed technical knowledge of public health and healthcare
- Understanding of the applications of this knowledge in solving health problems in the society at large
- Technical, interpersonal and organizational competence in health

Generic Skills

- Acquire skills to become a highly effective manager and leaders
- Ability to work independently and in a team within an organisation
- Presentation skills and experience
- Social skill in dealing successfully with every individual in the workplace as public health practitioner and in the community

The intended learning outcomes on successful completion of the various trainings in Public Health are:

- a) Know the concept of Public Health and its relevance in Nigeria health care system;
- b) Describe the major ecological and social factors affecting human health.
- c) Carry out epidemiological studies to identify prevalent health problems in the community and determine the effective means of solving them;
- d) Know how to plan, organize and evaluate appropriate health programmes;
- e) Seek and mobilize resources for health care and programmes;
- f) Develop the spirit of teamwork among the members of the health team;
- g) Exhibit the highest principle of medical ethics in the promotion of health.
- h) Prevent and control major communicable diseases in the community and institutions.
- i) Describe the principles of dietetics and nutrition for all age and community.
- j) Describe the major public health laws that are applied by health authorities in the community
- k) Carry out a research project in any health-related area

In addition, the Primary Health Care training aims at enabling the health worker to possess the knowledge, attitude, and skills to:

- a) Diagnose the health problem of a community;
- b) Develop a Primary Health Care plan for the defined community
- c) Deliver the component services of Primary Health Care
- d) Provide essential curative care for common conditions at the level of Primary Health Care in a defined community
- e) Provide immunization services to a defined community
- f) Provide maternal health services and family planning to a defined community
- g) Provide health education to the individual and the community
- h) Identify and provide solutions to the problems of environmental sanitation;
- i) Describe the epidemiology of local endemic diseases and provide appropriate preventive and curative services for defined community
- j) Manage, monitor and evaluate the implementation of Primary Health Care services for a community
- k) Implement appropriate training programmes for health personnel and members of the community for delivery of Primary Health Care Services.

Admission Requirements

The two Programmes will be open to candidates who possess a first degree in medicine, basic medical sciences pharmacy, nursing and other courses allied to medicine. In addition, candidates must have at least three years post degree experience and must have completed the National Youth Service (NYSC) programme. Candidates for admission into the programme will undergo a selection process and only those who are successful will be admitted into the programme.

To serve the interest and needs of all medical, health and allied professions who desire to do the programme, there was a need to simultaneously mount two separate programmes - one for medically qualified graduates and another for non-medically qualified professionals who wish to practice Public Health.

Requirements for master's in public health (MPH)

1. MBBS/BDS or its equivalent
2. NYSC discharge certificate or an exemption from it
3. Candidates are also required to undergo an aptitude test and an interview.

Requirements for master’s in public health (MSc and MPH)

1. B.ScHonours in a Medical discipline with a minimum of Second Class Lower Division (22) Degree. Candidate who score an aggregate of 3.5 CGPA in the PGD programme would be eligible for admission into the master’s degree Programme
2. NYSC discharge certificate or an exemption from it
3. Candidates are also required to undergo an aptitude test and an interview.

Academic Regulations

Academic session - An academic session consists of two semesters. Each semester normally comprises of 17 weeks of teaching and examination

Block Modular System - The courses shall run on modular basis, commonly referred to as course unit system. All courses shall be sub-divided into self-sufficient and logically consistent packages that are taught within a semester and like most medical training, examination shall come any time after the completion of each course. Credit weights shall be attached to each course.

Definition of credit unit - Credits is weights attached to a course. One credit is equivalent to 15 hours class contacts (e.g. one hour per week per 15 weeks of lectures or tutorial). In addition to the class contact hours, all students are expected to invest on assigned minimum private study hour to make the best of every course.

Training Methods

- a) Didactic lectures
- b) Tutorials and Discussions
- c) Group activities
- d) Seminars
- e) Field visits to places of public health importance including health-related institutions and industries
- f) Clinical practice e.g. general medical practice at the primary health centres, ward rounds
- g) Community-based field training - Health surveys involving households, under-fives, primary school, and secondary school in both rural and urban communities; outbreak investigation (simulation)
- h) Research project
- i) Practical — both public health related and computer training
- j) Self-directed learning.

Attendance and Participation

A. Logbook and attendance

It is the responsibility of the student to obtain a logbook that would be used throughout their training and ensures that he/she:

- a. Attends all lectures, which must be signed by the respective instructor(s) in his/her logbook.
- b. Attends all clinical and field activities that are carried out and should be signed by the supervisors
- c. Attends and participates actively in all group activities including community service
- d. Completes a project approved by the department and duly certified by the project supervisor

Attendance at all training activities is mandatory and only students that make at least seventy-five percent (75%) attendance and participation in all activities including the urban and rural postings, duly certified by lecturer/supervisor shall be eligible to sit for the examination.

COURSE OUTLINE IN THE DIFFERENT PROGRAMMES

MPH PROGRAMME

Code	Course Title	Credit Unit
PUH 801.1	Introduction and History of medicine/ public health	1
	Virtual library	-
PUH 802.1	Ethics in Health Care	1
PUH 836.1	Social Medicine and Rehabilitation	2
PUH 832.1	Medical Sociology	2
PUH 809.1	Medical Statistics	3
PUH 805.1	Principles of Epidemiology	3
PUH 806.1	Health Promotion and Education	2
PUH 807.1	Health Systems	3
PUH 808.1	Environmental Health	3
SCI 801.1	Management and Entrepreneurships	2
PUH 811.2	Occupational Health	2
PUH 817.2	Demography	1
PUH 819.2	Public Health Nutrition and Dietetics	1
PUH 812.2	Reproductive and Family Health	2
PUH 813.2	Applied Epidemiology	2
SCI 802.2	ICT and Research Methodology	2
PUH 816.2	Public Health Laboratory Practice	1
PUH 821.2	Research project (Spread)	6
PUH 822.2	Seminar	1

PUH 823.2	Internship and MOH Attachment	1
PUH 818.2	Evidence-Based Public	1
PUH 824.2	Mental Public Health	1
PUH 825.2	Oral Health	1
PUH 826.2	Therapeutics	1

MSPH PROGRAMME

Code	Course Title	Credit Unit
PUH 801.1	Introduction and History of medicine/ public health	1
	Virtual Library	-
PUH 832.1	Medical Sociology	2
PUH 836.1	Social Medicine and Rehabilitation	2
PUH 802.1	Ethics in Health Care	1

PUH 826.2	Therapeutics	1

DETAILS OF THE VARIOUS COURSES

Principles and Practice of Epidemiology

This course will teach the basic concepts and principles of epidemiology and disease outbreak investigation, the application of epidemiologic principles in the control of diseases of public health importance. It will emphasize disease distribution, determinants and deterrents in communicable and non-communicable disease conditions.

Broad aspects covered include - Epidemiology: Definition. History, Distribution and Determinants of Diseases: Biological, Behavioural, Social, etc, Epidemiological approach, Infective Agents: Reservoir of Infection, Transmission of Communicable Diseases, Host Factors, Epidemiologic triad, Natural history of disease, spectrum of diseases, Risk Factors in the Epidemiology of Communicable and Non-Communicable Diseases, Epidemiological Methods: Epidemiological Tools - Rates (Crude and Specific), Ratios, Percentages, etc, epidemiological Methods: epidemiological Studies, Disease Surveillance and Notification, Screening and Screening Tests, Uses of Epidemiology, Principles of Disease Control, Levels of Prevention, Epidemiological Transition.

Applied Epidemiology

This is a continuation of principles of epidemiology and will involve the application of epidemiological principles to the control of communicable and non-communicable diseases as well as health-related events. The course will also teach basic concepts in the principles of transmission and control of communicable diseases. Broad areas covered include - Epidemiology and Control of Communicable Diseases According to their Routes of Transmission; Epidemiology and Control of Viral Infections (Poliomyelitis, HIV/AIDS, Viral Hepatitis A-G, Yellow Fever, Chickenpox, Lassa fever, Ebola, Exotic Diseases, Rabies, Measles, Rubella, Mumps, Viral RTI5,); Epidemiology and Control of Bacterial Infections (Tb, Leprosy, Enteric Fevers, Bacillary dysentery, Cholera, Bacterial Food Poisoning, Tetanus, Bacterial Pneumonia, Meningococcal Infections, Rheumatic Fever, Pertussis, Diphtheria, Plague, Anthrax, Chlamydial Infections); Epidemiology and Control of Protozoal Infections (Malaria, Amoebiasis, Giardiasis, Trichomoniasis, Trypanosomiasis; Epidemiology and Control of Fungal Infections (Superficial Fungal Infections, Candidiasis; Epidemiology and Control of Helminthic Infestations (Ascariasis, Trichuriasis, Enterobiasis, Visceral Larva Migrans, Cutaneous Larva Migrans, dracontiasis, Taeniasis, Hydatid Disease, Fascioliasis, Hookworm, Schistosomiasis, Strongyloidiasis, Bancroftian and Malaysian Filariasis, Loaiasis, Onchocerciasis,); Epidemiology and Control of Arthropod Infestations (Scabies, Lice, Ticks, Mites); Epidemiology and Control of Special Groups of Communicable Diseases - STIs, Zoonoses, Diarrhoeal Diseases, Emerging and Re-Emerging Infectious Diseases, Hospital Infections Control Programmes for Communicable Diseases in Nigeria; Epidemiology and Control of Genetic and Congenital Diseases - Sickle Cell Disease, Down's

syndrome; Epidemiology and Control of Juvenile Delinquency Accidents - RTA and Home Accidents; Epidemiology and Control of Asthma and Peptic Ulcer; Epidemiology and Control of Diabetes (DM, DI), Hypertension, Sickle Cell Disease, Coronary Heart Disease, G6PD Deficiency, Ca Breast, Ca Cervix, Ca Prostate; Control Programmes for Non-communicable Diseases in Nigeria.

Social and Rehabilitative Medicine

Introduction to Social Medicine; Health assessments eg HDI, QALY, DALY; Social Deviance; Alcoholism; Drug Abuse; Smoking; Domestic violence eg battered wife syndrome, rape; The Underprivileged in the Society Disability, Handicap, Impairment; Classification and Causes of Handicaps; Problems of the Aged. Social Welfare Services in Nigeria and Other Countries; Care of the Handicapped; Orphanage; Old People's Home; Remand Homes; Prisons; Care of the terminally ill and hospice care; Voluntary Agencies in health and social services; Emergency preparedness and Federal, State and Local Government Levels

Medical Statistics

This course will teach basic and inferential statistics as applied to clinical and epidemiological studies. This will include standard statistical concepts of data description, hypothesis testing including test statistics, correlation, p-values, significant levels, confidence intervals and linear regression. It will equip prospective students with basic and advanced skills in quantitative reasoning and application necessary for medical research.

Broad areas include - Introduction to statistics; Types of data, types of variables, Types of distribution; Sources of Data, Tools for Data Collection; Scales of Measurement; Diagrammatic Presentation of Data - Histograms, Pie charts, Bar Charts, Graphs, Pictogram etc; Numerical Presentation of Statistical Data - Measures of Central Tendency and Location; Measures of Dispersion; Tabular presentation — simple and cross table etc; Population, Samples and Sampling Techniques; Probability Theory; Estimating Population Values; Inferential Statistics; The Standard Normal Curve; Standard errors; Confidence Intervals; Tests of Significance - Z-Test, t-Test, Chi-Square Test; Association, Correlation and Regression; Uses of Statistics.

ICT and Research Methodology

This course should cover essentials of ICT especially the use of Microsoft Word, Spreadsheet, Powerpoint, Access and Project. It will also examine common statistical packages used in health research.

The course is an introduction to project design and planning and will teach the various methods in conducting scientific medical research. It will emphasize quantitative and qualitative designs including how to conduct clinical trials and documentation. It will also introduce the use of computer in data analysis and the use of operational research and functional analysis in project design and evaluation.

Other areas covered include - Planning a Research; Ethical Issues in Research; Study Designs in Medicine and Public Health; Choice of Topic; Introduction (Problem Definition, Objectives); Formulation of hypothesis, Testing of hypothesis; Literature Search/Literature Review; Materials & Methods; Sample Size determination/Calculation; Instrument for data collection; Data Collection/Management; Presentation of Results (Data Presentation, Analysis etc); Discussion, Conclusion and Recommendations; Referencing; Project Write-Up

Management and Entrepreneurship

This course is designed to equip participants with the necessary Policy and management skills applicable to the health care system. The course will also teach how to develop interpreter and institutionalize health policy issues and trusts for public benefit. Health care financing and economic evaluation of health care will be covered. Broad areas covered include —The policy process, analysis and health policy formulation; Concepts, Principles and Functions of Management; Health Services Management - Definition, History, Elements; Principles, Scope and Nature of Health Services (Levels of Health Care); Organisation of Health Services in Nigeria (Federal, State and LGAs); Comparative Analysis of Health Care Systems in Different Countries; Planning of Health Services (Cybernetic Cycle); Evaluation of Health Services.

Others are Management of Human, Material and Financial Resources; Management of hospitals and other health organization; National Health Policy; Health quality improvement; The Health Team; Principles of Health Economics — Basic and applied; Health care financing; Public private partnership in health; Health Management Information system; Leadership training

Environmental Health

This course will teach the impact of the environment on human health. It will emphasize those aspects of human health including quality of life that are determined by physical, chemical, biological, social and psychological factors in the environment. Specifically, it will dwell on the theory and practice of accessing, correcting, controlling and preventing those factors in the environment that can potentially affect adversely the health of the present and future generations.

Emphasis will be placed water sources and purification, waste management, housing and health, food and health, vector and pest control etc. Broad areas covered include - Components of the Environment - Biological, Physical and Social; Ecological Concepts; Man's Interaction with the Environment: Adaptation Process, Balance and Change; Socioeconomic Activities and the Human Environment - Deforestation, Irrigation, Dams, Industrialization, etc; Environment and health; Geography and health; Urbanization and health; Introduction to Environmental Health.

Environmental Sanitation and its Components Water and Health, Sources of Water; Uses of Water; Examination of Water, Purification of Water, Water Supply; WHO Water Programmes; Food Hygiene; Safeguarding of Food; Housing and Health; Disposal of Wastes - Sewage and Refuse, Disposal of the Dead. Control of Vectors, Other Pests and Animal Reservoirs of Infection; Insecticides of Public Health Importance; Air Hygiene and Prevention of Atmospheric Pollution; climate change; Legislation and Environmental Health - Public Health Laws; The Petroleum Industry and the Niger Delta; The Ozone Layer; Green House Gases.

Occupational Health

This course will teach effect of occupation on health and the effect on health on occupation. It will emphasize the various prevention and control practices applied in the industry to prevent adverse consequences to human health. Also the health hazards of various industrial sectors ranging from Agriculture, energy, oil and gas, manufacturing, health industry, transportation.

Broad areas covered include - Introduction to Occupational Health, Aims and Objectives; Occupational Health, Hazards and their Control; The Environment of Working Places; Occupational Health Services; Fate of Inhaled Aerosol; Pneumoconiosis; Hazards of Radiation; Hazards of Various Occupations - Petroleum, Butchers, Bottling, Executives, Agriculture; Occupational Cancers; Environmental & Biological Monitoring; Industrial Medical Examination; Industrial Health Notification, Industrial Notifiable Diseases; Industrial Legislation - Factory Act, Workman's Compensation Act; Industrial Rehabilitation; National and International Health Regulations Relating to Occupational Health.

Health Promotion and Education

This course will teach ways and methods that will make people value health as a worthwhile asset, with a desire to live long and feel well. The emphasis will be on what people can do as

individuals, families, communities to protect and improve their health. At the personal and family levels emphasis will be placed on such matter as exercise, deadliness in the home diet and discipline with regard to the use of tobacco and alcohol. At the community level and beyond, emphasize will be on environmental sanitation etc.

Broad areas covered include - Health Education - Principles, Methods and Strategies; Principles of learning and behavioural change; Assessment of learning needs (individual, community); Designing educational materials; Evaluation of health education programme; Health Education in the Control of Communicable and Non-Communicable Diseases; Health promotion.

Reproductive and Family Health

This course will teach the concepts of human needs and development throughout the life cycle though with emphasis on women and children's health issues. These will include; Gender Equity, Equality and Women Empowerment, Safe Motherhood, Family Planning - Information and services, Prevention and management of Infertility and sexual dysfunction in both men and women, Prevention and Management of Complications of abortion, Prevention and Management of reproductive tract infections and sexually transmitted infections including HIV/AIDS.

Broad areas covered include - Introduction to Family Health; Concept, Components and Objectives; Measurements in Family Health; Health Problems and Health Needs of Mothers and Children; Determinants of Health of Mothers and Children; Family Health Practice; birth preparedness; Maternal Health Care Services, Infant Welfare Clinic; Organisation and Evaluation of Family Health Programmes; Immunisation Programmes; Population Dynamics and Family Planning; The "At Risk" Concept in MCH; Safe Motherhood Initiative; Integrated Management of Neonatal and Childhood Illnesses; School Health - Aims and Objectives; The School Health Programme

History of Public Health and Medical Services

This course will teach the history of medicine in antiquity through the middle ages down to the scientific era and the history of medicine in Nigeria. It will also teach the birth and rise of public health preventive medicine social medicine and the dinging concepts in public health and medical revolution.

Broad areas covered include - History of Medicine; History of medicine in Nigeria; Health system - traditional and modern health systems; Formal and lay health care in Nigeria; Alternative medicine; Health professional groups; The Health Team; Definition and Sub- Specialties in Community

Medicine; The Role of the Community Health Physician; The Doctors Role in the society; Behavioural and Non-Behavioural Factors in Health and Disease.

Demography

This course will expose students to the meaning and nature of demography which include sources and types of demographic data; population structure and dynamics; presentation of demographic data and rates. Also, basic measures of fertility, rates of natural increase; population growth and estimates and migration and mortality rates will be taught.

Broad areas covered include - Demography Definition, Uses; Population Composition - Age, Sex, Occupation, Ethnicity etc; Population Dynamics (Fertility, Mortality, Migration, Population Structure, Growth and projection); Sources of Population Data; Sources of Health and Vital Statistics; Cancer Registration; Demographic Transition; Malthusian Theory of Population; Census - National and Local; World Population and Policy; the National Population Policy; Interaction between Medical Action, Population, Health and Population Growth; Measurements of Health and Disease; Different Rates and their Uses; Standardization of Vital Rates.

Medical Sociology

This course will teach the concepts of behavioural sciences, relevance and contributions of Sociology to Medicine, explore illness behaviour and patient-doctor relationships. Also, student will learn patient care management, hospital organizations, and use of health services in Nigeria.

Broad areas covered include - Introduction to Medical Sociology; Definition of Health, Disease, Sickness, Illness; Socialisation; Role Differentiation; Beliefs, Values, Norms, Superstitions, Taboos etc; Human organisations and Systems: Family Systems, Marriage Types and Stability; Type of Societies, Social Classification; Culture and Health-Beneficial, Harmful and Neutral Practices; Religion and Health; SocioEconomic Status and Health; Educational Status and Health; Traditional and Modern Health Systems in Nigeria. Recreation, Sleep; Behavioural concepts in Public Health; Change processes; Health Behaviour and Illness Behaviour; Working Population, Unemployment, Retirement, Ageing; Dependency; Social Security.

Health Systems

Learning outcomes: The purpose of the course is to familiarize the students with the key international and local principles of organizing,

funding and providing health services and public health activities.

This course will teach traditional and modern health systems globally and in Nigeria. It will also investigate issues of globalization and Health, and medical care and health services utilization with particular reference to Nigeria and dwell extensively on health care services with special emphasis on primary health care. The course uses examples from countries with interesting and important features in their health systems such as the United States, United Kingdom, Canada, Australia, Nigeria and Ghana. The principles of implementing health care in real life is explored. It will also map past and current enthusiasm in reforming the national health system and where it all led to; the ultimate goal is to health the student understands their national system and critically determine the contradictions and challenges. The seminars look at essential characteristics of primary health care, specialist level care and public health infrastructure. There would be robust debates and discussion on critical issues surrounding globalization and public health, Broad areas covered include - Health and international health: concepts, history and standing theories.

Globalisation and health; International Health Organisations/Agencies, e.g. WHO, UNICEF, UNFPA, Fill etc; Port Health; International Notification of Diseases; International Health Regulations; Travel medicine; Health in the Millennium Development Goals; Health systems: comparison and performance; Trade and health; The global health workforce: crisis, future and challenges; Definition, History and Elements of Primary Health Care (PHC); Strategies for the Implementation of PHC; Basic Health Services Scheme and PHC Institutions; The Medical Officer of Health; Vaccines, Types; the Cold Chain; The National Programme on Immunisation; Mass Immunisation Programmes; The Bamako Initiative; Referral System in Health Care Delivery; Principles of Primary Health Care (Equitable Distribution, Integration of Services, Appropriate Technology, Community Participation, inter-sectoral Collaboration); Community Diagnosis (The Structure and Functioning of Communities, Methods in Practical Epidemiology, The Conduct of Demographic and Morbidity Surveys in a Defined Community, Methods of Informal Data Collection, Health Care Alternatives at the Community Level); Health Management in PHC (Identifying and Describing the Health Needs and Problems of a Defined Community, Establishing Health Priorities for A Defined Community, Setting Goals, Objectives and Targets for PHC Services for a Defined Community, Formulating A PHC Plan, Drawing Up A PHC Budget; Budgeting and Accounts,

Organisational Structure of PHC, Integration of Services for PHC, Management of Staff, Transport, Drugs, Equipment and Supplies in PHC, Basic Operations Analysis Techniques for Monitoring PHC Staff and Service Performance, Work Sampling, Patient Follow-Up, Task Analysis, Treatment Audit, Assessment of PHC Service Coverage with Particular Reference to Availability, Accessibility and Acceptability, Effectiveness, Efficiency and Equity in PHC Service Delivery); Maternal Health and Family Planning (Organising Antenatal Care for Maximum Coverage of the Community); Health Education (Identification of Learning Needs, Planning Health Education for Individual Groups and Communities, The Principles of Communication, Selection and Production of Appropriate Audio visual Aids); Environmental Sanitation (identification of an Appropriate Water Supply for a Defined Community, Identification of an Appropriate Method of Sanitation for a Defined Community, Promoting Self-Help Projects at the Community Level); Locally Endemic Diseases (The Epidemiology of Locally Endemic Diseases, Appropriate Management and Prevention of Locally Endemic Diseases at the PHC Level); Essential Drugs (The Essential Drugs Approach, The Essential Drugs List for PHC in Nigeria, Estimating the Essential Drug Needs of a Defined Community); Administering an Essential Drugs Policy in PHC Services for a Defined Community; Evaluation of PHC; Research in PHC; PHC Reforms.

Public Health Nutrition

This course will teach the components of food, their functions in the body, utilization and effects on the body. The role of food in health and disease, as well as common nutritional problems and their management will be taught. The course will emphasize nutrition in vulnerable groups like children and pregnant women, the aged, in refugees, as well as in certain diseases like HIV/AIDS, Diabetes mellitus, cancers, hypertension etc.

Broad areas covered include - Nutrition and Health; Classification of Food; Nutritional Values of Common Nigerian Foodstuffs; Culture and Nutrition; Beliefs and Taboos; Infection and Nutrition; Breastfeeding Weaning Practices; Food Policy; The National Breast Feeding Policy; Food Hygiene and Toxicology Nutrition Education; Applied Dietetics I - Diet in the Aetiology and Management of Diseases (Kwashiorkor, Marasmus, Vitamin Deficiencies, Mineral Deficiencies, Obesity, Hypervitaminoses, etc); Applied Dietetics II — Diet in the Aetiology and Management of Diseases (Diabetes, Essential Hypertension, Coronary Heart Disease, Liver

Failure, Goitre, Myxoedema, Cretinism, Dental Caries, Anaemia); Assessment of the Nutritional Status of a Community.

Public Health Laboratory Practice

This course will concentrate on aspects of medical microbiology that are relevant to public health. These include; classification of micro-organisms, host-parasite relationships, factors affecting disease transmission, aspects of parasitology, bacteriology, mycology, virology and the practical use of the microscope.

Mental Public Health

The course will teach the concepts of mental well-being and the role of the public health practitioner in maintaining mental health of the public. Students will learn promotive, preventive, aspects of restorative and rehabilitative mental health.

Oral Health

This course will concentrate on the diagnosis, prevention and control of dental diseases and the promotion of oral health through organized community efforts.

Therapeutics

This will teach the drug prevention, management and control of major public health disease concerns in Nigeria and beyond.

Ethics in Healthcare

This course is to acquaint the students with the ethical knowledge necessary for medical research. It will introduce the students to the basic ethical principles and the key issues in research, tracing the history of biomedical ethics to current ethical issues in medical research.

Broad areas covered include - History and Evolution of Biomedical Ethics; International Code of Biomedical Ethics; professional negligence/Responsibility/Confidentiality/Misconduct/ appearance in court; The Doctor and the Law: Judicial, Coroner's Court, Professional Liabilities of Biomedical Practitioners, Ethical considerations in Medical Advancements (IVF, genetic engineering, abortion), Biomedical jurisprudence, ethical consideration for dead and dying patients, ethics and relationships with colleagues, patients, teachers, the society and the law

Research Project

This is a continuation of the course on ICT and research methodology. The candidate must design and execute an acceptable original project in any area related to health under supervision of an academic member of staff. The project would commence at the second year of the programme

although a topic must be agreed on with the supervisor after the first semester of the first year

EXAMINATIONS

Grading During Course

1. Continuous Assessment (30 %). This can be in various forms such as:
 - a) Attendance at classes
 - b) Seminar presentation
 - c) Assignments and coursework during lectures or postings
 - d) Participation and performance during classwork or community outreach programmes e.g. clerking and presentation
 - e) Written assessments
2. Final Examination at the end of the posting (70 %) Shall be in the form of Essay, OSCE, Practical, and Orals and would be 70%.

Pass Mark

The minimum pass mark in any course shall be 50%.

Grading System

Grading of courses shall be by a combination of percentage marks and letter grades translated into a graduates system of Grade Point Equivalents (GPE). For the purpose of determining student's standing at the end of every semester, the Grade Point Average shall be used. The GPA is computed by dividing the total number of credit points (TCP) by the total number of units (TNU) for all the courses taken in the semester. The credit point for a course is computed by multiplying the number of units for the course by the Grade Point Equivalent of the marks scored in the course. Each course shall be graded out of a maximum of 100 marks and assigned appropriate Grade Point Equivalent as in the table below:

(i) Credit units	(ii) Scores	(iii) Scores	(iv) Grades	(iv) Average
Vary according to contact hours assigned to each course or according to load carried by students	70 and above	Letter Grades A B C F	Points (GP) 5 4 3 0	(GPA) Derived by multiplying i and iv and dividing by Total Credit Unit

ACADEMIC STAFF

S/N	NAME	QUALIFICATIONS	SPECIALIZATION	DESIGNATION
1	Dr. I. Ojule	MBBS, FMCPH	Epidemiology	Senior Lecturer /HOD

Continuation Requirements

- a. A graduate student is expected to pass all taught courses with minimum grade of 'C'
- b. A student who fails a course shall register for it at the next available opportunity only once.
- c. At the end of the first year course work, the student should have a cumulative grade point average of not less than 2.75
- d. A student who does not meet the minimum CGPA at the end of the first year shall be asked to withdraw.
- e. No student shall proceed to the thesis without a cumulative Grade Point Average of 3.00 or above. A student who has exhausted both opportunities for all required courses without attaining a CGPA of 3.00 shall be asked to withdraw.

EXAMINATION POLICY

Cheating in Examination

According to the College's regulation, any graduate student found cheating in any examination shall be expelled from the University.

Examination Repeat Policy

The programme only allows repeat and of examinations as provided t the college's guidelines and only an additional chance of repeating the exam is allowed.

Overstay

Candidates that have stayed over 36 calendar months in the programme according to the University's Senate are deemed to have overstayed and are meant to re-apply and start afresh. This process would involve their getting a new form and new registration number of as new students.

Completion of Programme

A student is said to have completed his/her programme when s/he had defended his/her thesis, carried out minor or major corrections as directed, have the work certified by the appropriate officers and submitted to the department for submission to the College of Graduate Studies.

Policy for Graduation of Graduate Students

All Masters Degree students must publish one (1) Journal article from their work in a reputable journal before their oral examination and attend a minimum of one (1) Conference.

2	Prof. B. Ordinioha	MBBS 1995, FMCPH 2005	Environmental Health	Professor
3	Prof. C. Tobin-West	MD 1983, MPH 1998, Adv Dip. Mgt 1998, FMCPH 2008	Epidemiology, Health Planning/Management	Professor

FACULTY OF BASIC MEDICAL SCIENCES

DEPARTMENT OF ANATOMY

POST GRADUATE STUDIES IN ANATOMY MASTER OF SCIENCE (M. Sc) DEGREE PROGRAMME IN ANATOMY

Objective:

The programme aims to train Medical and Dental graduates, Physiotherapists and B.Sc (Anatomy) graduates with CGPA not less than 2.70 to teach Human Anatomy and to conduct research in areas relevant to Anatomical Sciences.

Degree Offered:

Master of Science (M.Sc) in Human Anatomy.

Duration of Study:

The period of training shall last for a minimum period of 18 months and maximum of 36 months. The course work shall last for 12 months after which the Research Project and Seminar shall occupy the remaining 6 months. The examination for the course work shall be taken at the end of each semester.

There will be seminar at the end of the Project Work after which those who succeed at the seminar presentation will be required to defend their projects. Those with CGPA of less than 2.70 shall be required to repeat the course work in courses they failed before proceeding with their project work.

Knowledge and Skill to be imparted:

The Graduates of this programme are expected to have acquired the Knowledge to;

- Use scientific equipment to investigate and demonstrate Structure and Organization of cell, tissue and organ system in normal growth and health.
- Be able to process tissues for Histological, Histochemical and Electron Microscopic Studies.
- Be able to process and prepare bones for Osteological Studies
- Be conversant with photomicroscopy and be able to prepare Micrographs unaided.
- Be able to adopt current relevant methodologies to solve scientific problems and make reasonable deductions and adequate inferences from data and evidence available. Be able to relate injuries to Human Anatomy.

1st Semester:

Course Code	Course Title	Credit Unit
ANA 810.1	Biomedical Anthropology	3
ANA 811.1	Reproductive Biology	3
ANA 812.1	Histochemistry	3
ANA 813.1	Neurobiology	3
ANA 814.1	Anatomical Basis of Sports Injuries	3
Total		15

2nd Semester:

Course Code	Course Title	Credit Unit
ANA 810.2	Gross Anatomical Techniques	3
ANA 811.2	Histological, Cytological and Ultra Sound Techniques	3
ANA 812.2	Biostatistics and Bioinformatics	2
ANA 813.2	Genetics and Teratology	3
ANA 814.2	Comparative Anatomy	3
ANA 815.2	Seminar I Project	6
Total		20
Total Credit Units		35

COURSE DESCRIPTION

ANA. 810.1 - Biomedical Anthropology

This course will dwell on comparative analysis in Anatomical, Physiological and genetic characteristics of pre- historic and modern human population as they have interacted through out the entire time span of Human Evolution to influence health and disease.

ANA 811.1 - Reproductive Biology

This course exposes students to the hormonal control of Reproduction, Development of Urogenital system, In-vitro fertilization, Clinical Anatomy of Reproductive System and Embryological Mechanics.

ANA 812.1 - Histochemistry

This course will deal with histochemical techniques for Lipids, Proteins Carbohydrate Enzymes and Phosphates. Macromolecules and metabolites in cells will be demonstrated. The

morphology and chemistry of cells will be appreciated.

ANA 813.1 - Neurobiology

The gross and microscopic anatomy of nervous system will be taught. Clinical anatomy and evolution of the nervous system will be taught. Neuro transmitters in the brain and cell signaling will form a major part of the course.

ANA 814.1 - Anatomical Basis of Sports Injuries

The course will concentrate on the Anatomical basis of sports injuries. Muscular, skeletal and joint injuries will be taught. Differences between male and female injuries, in sports will be highlighted. Running injuries, thermal and cold injuries will be related to human anatomy.

2nd Semester:

ANA 810.2 - Gross Anatomical Techniques

Preparation of anatomical models, bones and preservation of human body will be taught. Students will be taught preparation of museum specimens.

ANA 811.2 - Histological, Cytological and Ultrastructural Techniques

This course will deal with tissue preparation and staining techniques. The general principles of Electron Microscopy and interpretation of micrograph will be taught.

ANA 812.2 - Biostatistics and Bioinformatics

This course will equip students with Biostatistical methods necessary for the Analysis of experimental data.

ANA 813.2 - Genetics and Teratology

This course will expose students to the mechanisms of hereditary, methods of study and practical application of genetics. The involvement of genetics and environmental Factors in Fetal malformations will also be taught.

ANA 814.2 - Comparative Anatomy

The course will compare the Human Anatomy with that of other vertebrates and mammals. Evolutionary changes and adaptation will be discussed. The student will be made to become familiar with the Forms and Functions in the Animal Kingdom.

ANA 815.1 - Project

The project work will be in one of the areas of Physical Anthropology, Histochemistry, Neuroanatomy, Histology, Reproductive Biology, and Gross Anatomy. Students will be expected to complete and submit master's project for oral defense.

DEGREE REQUIREMENT

- a. A candidate must pass in all courses including the project work before graduation.
- b. A student shall be deemed to have withdrawn if he has not completed the programme at the end of 36 months. A Student who fails four or more course shall be asked to withdraw. Those who fail to repeat examinations shall also be asked to withdraw.
- c. To graduate a candidate will also satisfy all the other conditions stipulated in the regulations of the Post-graduate school.

DOCTOR OF PHILOSOPHY (Ph. D) DEGREE PROGRAMME IN ANATOMY

1. INTRODUCTION

The Department of Anatomy in the Faculty of Basic Medical Sciences offers a Doctor of Philosophy (Ph.D) Programme in Anatomy. The course provides intensive training in the following areas of specialization:

- a. Cell and Tissue Science
- b. Clinical Anatomy
- c. Anthropologic and Forensic Anatomy
- d. Radiological Anatomy
- e. Developmental, Reproductive and Molecular Biology
- f. Neuroscience

The Programme is sustained by existing Professors and Senior Lecturers in the Department as well as Visiting Senior Colleagues from Departments of Anatomy from sister Universities who have agreed to assist us in Teaching and in the Supervisor of Ph.D Research. For Multi- Disciplinary Approach in a Collegiate System, Professors from other Departments in the Faculty of Basic Medical Sciences of the University of Port Harcourt are involved in this programme.

2. (A) MISSION AND VISION

The programme is geared towards the development of scientifically oriented manpower needed in the field of Anatomy. This is to help teach and project the subject in the various medical schools across the Country and beyond.

(B) GOALS AND OBJECTIVES

- a. To train High Level Manpower in the Methodology of Research with a view to keeping them abreast with modern advances in Anatomy.
- b. To produce competent Basic and Clinical Anatomist for Teaching in our Medical Schools and Research Institutions.
- c. To encourage independent, logical and rational thinking with the view to contributing additional knowledge and new techniques of investigation.
- d. To produce highly trained Anatomists that can contribute appreciably to solving the medical problems in their environment using the knowledge and skills a

3. ADMISSION REQUIREMENTS

To be eligible for admission into the Ph. D programme in Anatomy, candidates must possess M. Sc Degree in Anatomy with a minimum Cumulative Grade Point Average (CGPA) of 3.50. Interviews are conducted to assess candidates before admission and final selection is based on interview performance.

4. DURATION OF THE COURSE

The duration of study for full time is a minimum of 2 years or 24 months and a maximum of 5 years or 60 months while the minimum duration for part time is 3 years or 36 months and a maximum of 7 years or 84 months.

5. STRUCTURE OF THE PROGRAMME

The programme is by Course Work and Research culminating in a Dissertation. The candidate is required to register and pass 18 Credit Units of prescribed Course work.

To obtain a Ph.D in Anatomy, candidate is expected to present 3 (three) Research Seminars, one of which must be to the School of Graduate Studies.

The Ph.D is finally examined by Oral Defense of the Dissertation. The Departmental Graduate Studies Committee through the Faculty Graduate Studies Committee Board of the School of Graduate Studies appoints a Supervisor and conduct the required examinations and meet other conditions that may be specified for the Award of the degree.

6. DETAILS OF THE PROGRAMME:

1st Semester:

Course Code	Course Title	Credit Unit
ANA 911.1	Current Concepts in Advanced Anatomy	3
ANA 912.1	Research Methods	3
ANA 913.1	Physical and Forensic Anthropology	3
ANA 914.2	Radiological Anatomy	3
ANA 915.2	Clinical Anatomy	3
ANA 916.2	Histochemistry	3
ANA 917.1	Dissertation	6
	Total	15

DESCRIPTION OF COURSES

ANA 911.1 CURRENT CONCEPTS IN ADVANCED ANATOMY (3 Credit units)

This course will involve literature Review on specific current topics in medical genetics, in-vitro fertilization, molecular biology, forensic sciences, medical anthropology and histochemistry.

ANA 912.1: RESEARCH METHODS (3 Credit Units)

This course covers an introduction to basic scientific research, problem formulation and hypothesis testing, research designs; data collection methods and instrumentation, data analysis and uses of statistics in research, ethical considerations in research and report writing.

ANA 913.1: PHYSICAL AND FORENSIC ANTHROPOLOGY (3 Credits Units)

This course will include biology of human variation and climatic adaptation, population genetics, adaptive physical features associated with bipedal locomotion, clinical anthropometry and essential concepts of forensic medicine and their applications.

ANA 914.2: RADIOLOGICAL ANATOMY (3 Credit Units)

This course covers imaging and radiological techniques for anatomical research, general and systemic radiology, contrast studies, scanning techniques-computerized tomography and ultrasound scanning, nuclear magnetic resonance imaging and radio- nuclide technique.

ANA 915.2: CLINICAL ANATOMY (3 Credit Units)

The course content shall include anatomical basis of sports injuries, applied medical, surgical

and dental anatomy, functional anatomy of the limbs, neck and trunk, clinical anatomy of the reproductive system.

ANA 916.2: HISTOCHEMISTRY (3 Credit Units)

This course covers principles of histochemistry, and cytochemistry, histochemical techniques for lipids, proteins, carbohydrates, enzymes and phosphates, concept of the amine precursor uptake and decarboxylase system (APUD) clinical cytochemistry, electron micrography, electrocy to chemistry and diagnostic electron microcopy.

ANA 917.2: DISSERTATION (6 Credit Units)

A candidate shall indicate his/her intended area of Specialization at the time of Registration for the

programme. A specific Topic for the Dissertation shall be proposed and defended by the candidate at a Departmental Seminar within 6 months of Registration of the Title of the Dissertation with the School of Graduate Studies.

AWARD OF DEGREE

For a Candidate to meet the Requirement for the Award of a Ph.D in Anatomy, the Candidate shall submit an acceptable Ph.D Dissertation, attain a minimum of 15 Credit Units at 900 Level Courses, present approved seminars at Departmental, Faculty and School of Graduate Studies Levels and satisfy all other Requirements as stipulated in the Graduate School Prospectus for Postgraduate Students.

ACADEMIC STAFF LIST

S/N o	NAME	RANK	STATU S	QUALIFICATIO N	SPECIALIZATION
1	Osunwoke, E. A.	Senior Lecturer/HoD	FT	B.Sc. (2001) UPH; M.Sc. (2005) U.I; PhD (2011) UPH.	Biomedical Anthropology, Forensic Anatomy and neuroscience

DEPARTMENT OF HUMAN PHYSIOLOGY

SENATE APPROVED POST GRADUATE (PG) PROGRAMMES

POST GRADUATE DIPLOMA (PGD)

FIRST SEMESTER COURSES

Course Code	Course Title	Credit Unit
PHS 720.1	Cardiovascular and Respiratory Physiology	3
PHS 721.1	Neuro-endocrinology	3
PHS 722.1	Molecular and Cellular Physiology of Ion channels	3
PHS 723.1	Laboratory techniques and Clinical instrumentation	3

SECOND SEMESTER

Course Code	Course Title	Credit Unit
PHS 720.2	Neurophysiology	3
PHS 721.2	Blood, Body fluids and Electrolytes	3
PHS 722.2	Selected Topics in Gastroenterology	3
PHS 723.2	Laboratory Teaching and Instrumentation	3
PHS 724.2	Seminar I	3
PHS 725.2	Seminar II	3

PHS 720.1 Cardiovascular and Respiratory Physiology

Cardiopulmonary functions in the foetus and in Old age, Responses at rest and in moderate-to-severe stress. Physiological basis of Hypertension. Principles of servomechanism as applied to Cardio-Pulmonary Physiology, Aviation, Space and Deep Sea Physiology.

PHS 721.1: Neuro-endocrinology

A review of Physiologic-Anatomy of Hypothalamic -Hypophysial -Pituitary link. Current concepts of channels of communication between Hypothalamic Neuro-secretions. The "Master Gland of the Endocrine System. Pituitary secretion and the current concepts on the Servomechanism between the Hypothalamus, the Pituitary and other Target Organs.

PHS 722.1: Molecular and Cellular Physiology of Ion Channels

The Electrophysiology, Biosignal processing in physiology, Biophysics of Excitable tissues. Introduction to Molecular Biology, ion channels e.g. K^+ , Ca^{2+} , Na^+ etc., in Neurons and Smooth Muscle Cells-relating their structure, distribution,

Pharmacology and functions. Current Techniques in studying ionic channels-Voltage Clamp, Fluorescent Imaging, Electro-physiology as panacea for sustainable technological, medical and scientific development and many more.

PHS 723.1: Laboratory techniques and Clinical Instrumentation.

Applied Human Physiology with regards to knowledge of Basic Analytical Methods in Human Physiology: Flame Photometry, Spectrophotometry, Vitalography, Electrocardiography, Encephalography, Ultrasonography, Radiography, Transducers, and Kymograph. Be able to demonstrate to the students how the knowledge of physiology can effectively be used in a variety of clinical settings to solve diagnostic and therapeutic problems, diabetes, cancer, pathophysiology of lipid, cardiovascular sciences. Understand and deal with all aspects of general and systemic physiology. Conduct relevant clinical/experimental research as would have significant bearing on human health and patient care.

PHS 720.2: Neurophysiology

Synapse Morphology Synaptic Transmission, Processing of Data. Neurotransmitters in the CNS, Motor Division in the CNS. Morphology of the Motor Cortex. Basal Ganglia, Pyramidal and Extra Pyramidal System. Cerebellum, Locomotion, and Maintenance of Posture, Spinal and Body Orientation Reflexes. Brainstem Control, Muscle Spindle, Muscle Tone, Limbic System and Higher Nervous System, Hypothalamus, Physiology of Special Senses, Higher functions of the Nervous System . Pain, Organization of spinal cord for motor function. Maintenance of posture and equilibrium. Nerve and Muscle Physiology, Degeneration and regeneration in nerves, Functional anatomy of skeletal muscle. Neuro-muscular transmission and blockers

PHS 721.2: Blood, Body fluid and Electrolytes

A review of the general properties and functions of Blood. Functions and life cycle of various Blood Cells. Hemostasis, Platelets, Components of hemostasis, Mechanism of coagulation, Coagulation tests, Anticoagulants. Immunity - Innate immunity, Acquired immunity, Allergy, hypersensitivity and Immunodeficiency. Abnormalities of Blood. Brief recapitulation of the functionality of the Kidneys. Renal handling of Erythrocytes. Current concepts on Concentration and Dilution Curve. The Renin-Angiotensin-Aldosterone System.

PHS 722.2 Selected Topics in Gastroenterology

General review of the Gastrointestinal functions. Physiologic Anatomy of a typical secretion of the gastrointestinal tract. Animal Experimentation Techniques for gastric acid analysis and measurement of gastric acidity. Basic principles of gastric-intestinal absorption and methods of its Investigation. Gastrointestinal Disorders.

PHS 723.2 Laboratory Teaching and Instrumentation

Opportunity for Students to review the Physiological Concepts of System. Students taught and understand them thoroughly to enable them demonstrate the concept using available equipment to Medical or Single honour Students, Ethics in science, Bioinformatics, Plagiarism, Copy Rights, Script Writing, Referencing, Basic Statistics in Physiological Sciences.

PHS 724. 2: Seminar I

Students shall be required to present for discussion colloquia on assigned topics about general principle of physiology and its application, mechanic and/or pathophysiology. Students shall be required to present papers which will be an integral part of the course.

PHS 725.2: Seminar II

The seminar shall cover selected topics in physiology. Students shall be required to make presentation on the assigned topics, and finally produce a term paper.

MASTER OF SCIENCE (MSc.)

FIRST SEMESTER

Course Code	Course Title	Credit Unit
SGS 801.1	ICT and Research Methods	3
PHS 820.1	Renal, Body fluid and Blood Physiology	3
PHS 821.1	Gastro-intestinal Physiology, Nutrition and Metabolism	3
PHS 822.1	Neurophysiology	3
PHS 823.1	Cardiovascular and Respiratory Physiology	3
PHS 824.1	General and Molecular Physiology	3

SECOND SEMESTER

Course Code	Course Title	Credit Unit
SGS 801.2	Management & Entrepreneurship	3
PHS 820.2	Endocrine and Reproductive Physiology	3

PHS 821.2	Environmental Physiology	3
PHS 822.2	Research Methods, Advanced Biometry and Instrumentation	3
PHS 823.2	Special Senses	3
PHS 826.2	Biotechnology	3
PHS 825.2	Dissertation	6

SGS 801.1 ICT and Research Methods

Effectively use the library facilities including computer, CD ROM and internet research. Essentials of spreadsheets, internet technology, statistical packages, Precision and Accuracy of Estimates, Principles of Scientific Research. Concepts of hypotheses formulation and testing. Organisation of research. Technical writing/research report writing (resumes, abstracts, and proposals). Oral and written communication skills in physiology. Presentation skill using PowerPoint and Multimedia Projector. Computer Application in Medical Physiology.

PHS 820.1 Renal Physiology and Fluid Balance

Body fluid compartments and their determination. The Special Fluid Systems. Electrolytes and Flame Photometry. Renal Clearance and Glomerular Filtration. The Kidney in acid-Base Balance. Body fluid compartments, Water balance: regulation of fluid balance, Urine formation, Regulation of extracellular sodium and osmolarity, Renal mechanisms for the control of blood volume, blood pressure and ionic composition, Micturition, Diuretics, Renal failure and Kidney function tests, Recent advances in Renal Physiology: Speculation, Discussion, and Conclusion.

PHS 821.1: Gastroenterology and Hepatic Physiology:

Gastrointestinal motility and secretion. Recent Theories in Intestinal Absorption. GIT Endocrinology. Physiological Functions of the Liver and Liver Function test.

PHS 822.1: Neurophysiology

Nerve potentials. Synaptic and Neuromuscular Transmission. Organization of the Autonomic Nervous Systems. Chemical Transmission-peripheral and Central. Localization of Function. The Cerebellum and Posture. The Cerebral Cortex, Reticular Formation. Electro-Encephalogram (EEG).The Hypothalamus and Limbic System. Sleep Mechanisms. Learning and memory. Overview of the Motor System. Imaging techniques of the brain, CT-scan, MRI, Position Emission Tomography (PET), evoked potentials. Special senses-vision, auditory system, vestibular function, olfaction (smell), and taste. Role of calcium ions and receptors.

PHS 823.1: Cardiovascular and Respiratory Physiology.

Haemodynamic. The Cardiac Cycle, Electro-Cardiogram and clinical Electrocardiograph. Blood Flow and Plethysmography. Blood Pressure and Hypertension. Pulmonary Ventilation and Perfusion. Lung Volumes and Lung Function Tests. Respiration and Acid-base Balance. Clinically Applied Respiratory Physiology.

SGS 802.2 Management and Entrepreneurship.

The course will cover business environment, general management, financial management, entrepreneurship development, feasibility studies, and marketing. Managerial problems of solving scientific research conceptual framework including empirical methods, innovative techniques and improvisation. Internet research and search tools including web directories and external linkages. Application of physiological software in bioinformatics and advanced modeling methods

PHS 820.2 Endocrine and Reproductive Physiology.

Hormones and Homeostasis. Organisation and Control of Endocrine Glands. Theories of Mode or action of Hormones. The Hypothesis and its Hormones. The Thyroid Gland. Adrenal Cortex and Medulla. The Pancreatic Hormones. Testicular function. The Ovary and the Hypothalamic-Pituitary-Ovarian-Genital Axis. The pineal Organ. Human Neuroendocrine Diseases. The Prostaglandins.

PHS 821.2 Environmental and Metabolism Physiology.

Physiology of hot environment, Physiology of cold environment, High altitude, Aviation physiology, Space physiology, Deep sea diving and hyperbaric conditions, Climate change and desertification, Environmental Health Impact Assessment, Definition and Rationale Impact Assessment, Components of International Standard Impact Assessment. Current concepts in the Control of Energy Balance. Brief review of Intermediary metabolism. Inter-relationships between metabolism of major food substances and metabolism of specific organs. Brain, Renal, Pulmonary and Cardiac Metabolism. Abnormal Metabolism. Diabetes Mellitus. Some Inborn Errors of Metabolism. Family planning, Malnutrition.

PHS 822.2 Research Methods and Advanced Biometry

The purpose of this course is to familiarize the students with the methods of research, assimilation and dissemination of information as well as Statistical Methods. The course will include

effective use of the Library, Preparation of dissertation or Thesis, Paper for Publication in Journals, Probability Distribution (binomial, Poisson and normal), Sampling Distribution. Statistical Inference, Comparison of Groups, Planning of Experiments and Sampling Regression and Correlation and Analysis of Variance (ANOVA). Statistical Methods in Medical Physiology, Handling of laboratory animals, Ethical clearance in human experimental studies and use of laboratory animals.

PHS 823.2: Special Senses.

Anatomic consideration of Vision, Photochemistry of Vision, Colour Organization and Function of the Visual Pathway. Cortex, Light and Dark Adaptation. Accommodation and control of Vision. Functional Anatomy of the Cochlea and other Auditory Structures. Auditory Pathway. Hearing abnormalities, Chemical Senses, Smell and Taste-Special Agents and Chemicals they trigger. Neurotransmitters in Visual, Auditory and Olfactory Pathways. Topographical representation of the area as in the Sensory Cortices

PHS 826 Biotechnology.

PHS 825.2 Dissertation.

An MSc thesis must make a significant original contribution to, and show a critical appreciation of, existing knowledge in the subject. Research may be undertaken under a supervisor, and which carries 6 credit units. Following satisfactory completion of the supervised research, all MSc candidates must present and defend the thesis in the Department, Faculty, and before the Board of School of Graduate studies to the satisfaction of examiners. Research area include the following fields: Neurophysiology, endocrinology, Respiratory Physiology, Cardiovascular, Blood, Gastrointestinal, Nutrition, Renal, Environmental Physiology, Reproductive Physiology, Pharmacology, Toxicology/ Pharmacokinetics, Muscle Physiology or any related field to Human Physiology, Biotechnology, and Aviation physiology.

DOCTOR OF PHILOSOPHY (PhD)

FIRST SEMESTER

Course code	Course Title	Credit unit
PHS 920.1	Principles and Methods in Physiology	3
PHS 921.1	Physiological Systems	3
PHS 922.1	Molecular Physiology	3
PHS 923.1	Physiology and Environment	3

SECOND SEMESTER

Course code	Course Title	Credit unit
-------------	--------------	-------------

PHS 920.2	Experimental Approach to Physiology Research	3
PHS 921.2	Experimental Reporting	3
PHS 922.2	Thesis	6

PHS 920.1 Principle & Methods in Physiology
Biochemical Basis of Biologic Research, Scientific Principles in Research, Methodical Approach in Systems Study, Techniques and Instrumentations in Biochemical Research.

PHS 921.1 Physiological Systems
Introductory Approach to Cardiovascular System, Respiratory System, Gastrointestinal System, Hepato-Renal System, Musculoskeletal System, Blood Physiology, Endocrine System, Special Senses, Neurophysiology.

PHS 922.1 Molecular Physiology
Molecular Biology and Genetics, Molecular Approach to Biomedical Research, Modern Techniques and Instrumentations in Molecular Research, Roles of Molecular Research in Physiology, Impedance To Molecular Research In Tropical Africa, Animal Right Groups and Campaign against Biomedical Research.

PHS 923.1 Physiology & Environment

Aviation & space physiology, undersea physiology, physiology of high altitude, exercise physiology, physiology of health, fitness and performance.

PHS 920.2 Experimental Approach to Physiologic Research
Research Communication, Experimental Design and Biostatistics, Ethical Letter Writing and Approval, Animal and Human Models, Research Designs and Conducts, Logical Interpretations of Research Extrapolates, Contribution to Knowledge Approach In Research.

PHS 921.2 Experimental Reporting
Preparation of Scientific Reporting and Papers, Seminar and Scientific Conference Mind-Set, PowerPoint Usage/Slide Preparation Skills, Confidence Building and Audience Carriage Ability, Capacity Building for Research Scientists.

PHS 922.2 Thesis
Areas of Specialization/Research
These Shall Include: Cell and Molecular Physiology, Cardiovascular, Respiratory, Renal, Reproductive, Endocrine, Gastro-Intestinal Physiology, Neurophysiology, Environmental and Metabolism, Exercise Physiology or any Related Field to Human Physiology.

ACADEMIC STAFF

S/N	Name of Staff	Qualification	Rank	Area of Specialization
1.	Prof. A. N Chuemere	B.Sc (London) Ph. D (Wales) FRSB (UK) FPSN	Professor	Blood & Cellular Physiology

7.	Dr. A. A. Ajah	BSc. (UPH), 2006; MSc. (Ibadan), 2011. M.Phil. 2018 (Ibadan). Ph.D, 2022 (WITF)	Senior Lecturer	Metabolism and Neurophysiology
8.	Mr. V. O. Hart	B. Sc (UPH), 2006; M. Sc (Ibadan), 2010.	Lecturer I	Endocrine and Reproduction Physiology
9.	Mr. P. N. Achinike	B. Sc, 1999; M. Sc (UPH), 2010.	Lecturer I	Respiratory Physiology
10.	Dr. K. M. Odia	B. Sc., 2006; PGD, 2010; M.Sc., 2013, PhD (UPH)	Lecturer I	Cardiovascular and Exercise Physiology
11.	Dr. I. I. Weleh	B.Sc., 2006); PGD, 2012; M.Sc. (2014) Ph.D (2021)(UPH)	Lecturer I	Nutrition and Environmental Physiology
12.	Dr. F. F. Egbono	BSc, M.Sc., PhD (UPH)	Assistant Lecturer	Respiratory Physiology

FACULTY OF ENGINEERING

DEPARTMENT OF CHEMICAL ENGINEERING

POST GRADUATE PROGRAMMES IN CHEMICAL ENGINEERING

1. Introduction

The Chemical Engineering Department of the University of Port Harcourt admitted its first batch of students in the 1982/83 session. The Department has therefore come a long way. Since then over 1500 graduates have been produced two of them with first class honours. Many of the graduates are working with the key industries around Port Harcourt and beyond. We note with pride that many of our graduates have excelled at their places of work, particularly those in the oil sector. The Department, having consolidated the undergraduate programme, now has Master of Engineering and PhD degree programmes. In addition, the Department is running a Postgraduate Diploma Programme for graduates of related disciplines who wish to pursue higher degrees or improve their understanding of Chemical Engineering practice.

Port Harcourt and its immediate environs remain a major strategic industrial centre in the country. It has a large concentration of the nation's chemical industries. Some of such industries include: N.N.P.C. Refinery, Port Harcourt, Eleme Petrochemicals and the Fertilizer Company of Nigeria at Onne. Others include the West African Glass Company, PABOD Breweries. The Rivers State Vegetable Oil Company, Liquefied Natural Gas Company and many companies that provide laboratory and technical services to the oil companies. The cluster of industries therefore, make Port Harcourt a suitable environment to study and practice Chemical Engineering.

2. Objectives of the Department:

Chemical Engineering Practice comprises those activities that apply science and technology to problems related to the economic production of useful materials by processes involving chemical and/or physicochemical phenomena in one or more steps. The objectives of setting up the Department Chemical Engineering in the University of Port Harcourt are therefore as follows:

1. To train manpower for Nigeria's development.
2. To help create the awareness of the importance of self-reliance in our industrial development.

3. To stimulate student's interest in the discipline in particular, and in the quest for knowledge in general.
4. To produce citizens whose backgrounds are sufficiently flexible and broad as to understand the political, economic and social environment and operate effectively in it.

The curriculum is designed in such a way that students have a good understanding of Engineering Science. This, we hope, will enable them to develop the Scientific method of decision making. Students are also encouraged through lectures, seminars, both formal and informal interaction among themselves and with lectures to develop the important habit of critical thinking and analysis and good teamwork. The Department discourages narrow specialization and hence students are trained to understand and use as many skills as possible especially those from other Engineering disciplines. Indeed courses are taught in a manner to excite students into innovative thinking with the aim of preparing them to be employers of labour instead of job seekers, if they chose to after graduation.

A. Post Graduate Diploma in Chemical Engineering (PGD ChE)

1. Objective

Post Graduate Diploma in Chemical Engineering is designed to prepare candidates whose first degree is in other Engineering disciplines for a career in the Chemical Industry or those who wish to specialize in any of the areas offered at the master's degree program. This programme has been designed to satisfy the COREN (Council for the Regulation of Engineering in Nigeria) minimum standard for chemical engineering education.

2. Administration Requirements

The Admission is strictly for those candidates with minimum of Third Class Honours in Chemical Engineering and Second Class Honours (Lower Division) in other engineering areas from recognized universities.

3. Duration

The programme shall last for a minimum of twelve calendar months of full-time study for engineering graduates.

4. The Courses

First Semester

Course Code	Course Title	Unit	
DChE 701.1	Chemical Engineering Process	3	for reacting chemical and electrochemical systems. Surface chemistry.
DChE 703.1	Chemical Engineering Thermodynamics	3	
DChE 705.1	Basic Engineering 1	3	
DChE 707.1	Transport Phenomena 1	3	
DChE 709.1	Separation Process I	3	
	Total	15	
Second Semester			
Course Code	Course Title	Unit	
DChE 702.2	Chemical Engineering Analysis	3	
DChE 704.2	Kinetics, Catalysis and Reactor Design	3	
DChE 706.2	Process Optimization	3	
DChE 708.2	Transport Phenomena II	3	
DChE 710.2	Separation Processes II	3	
DChE 712.2	Process Dynamics and Control	3	
	Total	18	
Long Vacation			
Course Code	Course Title	Unit	
DChE 731.3	Basic Engineering II	3	
DChE 733.3	Chemical Engineering Laboratory	3	
DChE 735.3	Chemical Engineering Design, Project	3	
	Grand Total	43	

5. COURSE OUTLINE

DChE 701.1 Chemical Engineering Analysis

Introduction to chemical engineering. The role of engineers in society. Application of chemical science and engineering to socially and economically significant problems. Material and energy balances on batch, and flow systems in steady or unsteady state. Thermodynamic properties of gases, liquids, solids, and mixtures; and their application to the chemical process industries, sources of data, use of table and graphs: iteration methods: dimensional analysis.

DChE 703.1: Chemical Engineering Thermodynamics

A study of energy, entropy and equilibrium: their interrelations and the engineering relationships to which they give rise. Thermodynamics of energy conversion and fluid flow; Physical and chemical equilibria in multi-component systems. Partial molar Gibbs free energy and the chemical potential. Ideal and non-ideal solution behaviour. Phase separation and equilibrium between phases

DChE 705.1: Basic Engineering I

This course is divided into two sections namely:
Engineering Mathematics: Partial differentiation, directional derivative, gradient solutions of systems of linear equations and numerical techniques.

Strength of Materials/Engineering Mechanics: Basic concepts and: Principles of Mechanics, definition of movements, and couples. Friction problems, determination of structures (frames, machines, shear forces, moment of inertia).

DChE 702.1 Transport Phenomenal

Fluid mechanics. Momentum transfer in fluids in laminar and turbulent flow. Microscope and macroscopic material, momentum and energy balances. Rheology Dimension analysis: flow in conduits, pumps: fluid metering. Heat and mass transfer: heat transfer rate: conduction, convection and radiation mechanism of heat transfer, heat exchanger design. Molecular diffusion. Mass transfer mechanisms, phase mass transfer coefficients, prediction of mass transfer rates.

DChE 709.1 Separation Process I

General view of separation. Motion of particles in fluid. Mixing and agitation; size reduction of solids (communication): atomization, droplets and aerosols. Classification, separation and size measurement, sedimentation, flocculation. Thickener calculations: centrifugation; cyclone separation, flow through' packed bed, fluid-solid, conveying filtration. Centrifugal filtration, fluidization, fluid-solid conveying. Pneumatic/ Hydraulic Transportation. Fluid cleaning, electrostatic precipitator.

DChE 702.2 Chemical Engineering Analysis

Statistical tests of significance, regression. ANOVA and design of experiments. Applied ordinary and partial differential equations to chemical engineering operations and their numerical solution, computer application to chemical engineering problems.

DChE 704.2 Kinetics, Catalysis and Reactor Design

General principles of reaction kinetics, Chemical Kinetics of elementary steps, transition state theory, thermodynamics formulation of rates, rates in solution. Steady-state approximation; catalysis systems, chain reactions, homogeneous and Heterogeneous catalysis; Graphical treatment of complex kinetics. Analysis and design of reactors.

DChE 706.2 Process Optimization

A chemical engineering treatment of the popular forms of the calculus of variations, maximum principles, dynamic programming, optimization of stage systems, optimum seeking methods. Network analysis and queuing theory.

DChE 708.2 Transport Phenomena II

Momentum, energy and mass transfer in solids, in laminar and turbulent fluid and between two phases, theory of molecular, and eddy viscosity, thermal conductivity, air diffusivity, microscopic and macroscopic equations of motion, radiant heat transfer.

DChE 712.2 Separation Process II

Solvent extraction. Distillation of multi-component mixtures. Computational procedures for rectification column. Extractive and azeotropic distillation. Multicomponent absorption and extraction design procedures crystallization.

DChE 712.2 Process Dynamic and Control

Block and signal flow diagrams, proportional integral derivative controllers, frequency response techniques, analytical and graphical stability criteria. Introduction to modern control theory. Analog computation, time domain analysis, control of complex chemical systems, control of sample data system.

DChE 731.2 Basic Engineering II

This course is divided into two sections namely:

Engineering Drawing: Fundamentals of engineering drawing, language of engineering, use of scale, line work, lettering, geometrical constructions, Projection of points, line surface and solids in space, Principles of orthographic projection, true lengths and gradients, free hand sketching of machines.

Workshop Practice: Introductory workshop practice with inherent characteristics of inculcating the spirit of teamwork. Use of measuring devices and bench tools.

DChE 733.3 Chemical Engineering Laboratory

Experiments in mass transfer, simultaneous heat transfer, vapourization and condensation techniques.

DChE 735.3 Chemical Engineering Project

Introduction of process design, site selection, design scope and safety, plant layout, process control and instrumentation, energy and manpower needs, costing economics, construction and start-up and pollution control. The design of an integrated process would involve drawing up a flow sheet, the preparation of heat and mass balances and the detailed design of some plant equipment.

B. MASTER OF ENGINEERING PROGRAMME

1. Objective

The master's degree in chemical engineering is designed to prepare the student for professional work at a more advanced level than the B.Eng. or for further study leading to the Ph.D. degree. This is achieved through the completion of fundamental courses, both in the major field and in related science, and by obtaining a start on independent research work through preparation and defense of a dissertation.

2. Admission Requirement

For admission into the programme, candidates must possess one of the followings:

- A minimum of second class Honours (lower division) Bachelor's Degree in Chemical Engineering
- A post graduate diploma in chemical engineering with a minimum average score of 60% or a CGPA of 3.50 on a 5.0 scale.

3. Duration

The programme shall last for a minimum of twelve calendar months of full time study of twenty-four months of part-time study.

4. Courses

First Semester

Course Code	Course Title	Unit
SGS 801.1	ICT & Research Methods	2
ChE 803.1	Mathematical Techniques in Chemical Engineering	3
ChE 805.1	Advanced Chemical Engineering Thermodynamics	3
ChE 807.1	Advanced Heat and Mass Transfer	3
ChE 809.1	Advanced Reaction Kinetics and Catalysis	3
ChE 811.1	Seminar	3
	Total	17

Second Semester

Course Code	Course Title	Unit
SGS 801.2	Entrepreneurship & Management	2
ChE 804.2	Advanced processes/Project Engineering	3
ChE 806.2	Equilibrium Stage processes	3
ChE 808.2	Advanced Process Dynamics and Control	3
ChE 810.2	M.Eng. Dissertation	6
	Total	17
	Grand Total	18

5. COURSE OUTLINE

ChE 803.1 Mathematical Techniques in Chemical Engineering

Selection, construction, solution and interpretation of mathematical models applicable to the study of chemical engineering problems. Mathematical topics emphasized include divergence, curl, and gradient operators, vector field theory, and the solution of ordinary and partial differential equations by infinite series, separation of variables, Green's functions, regular and singular, perturbations, and boundary-layer techniques.

ChE 805.1 Advanced Chemical Engineering Thermodynamics

Treatment of heat and mass transfer theory and application from the viewpoint of the basic transport equations, transfer in non-turbulent binary and multicomponent systems: transfer coefficients, stage efficiencies, model analogies, interfacial phenomena, multi-phase systems, transfer with chemical reactions, coupled transport processes, calculation and design of industrial heat exchangers.

ChE 809.1 Advanced Applied Reaction Kinetics & Catalysis

- a. Advanced application of engineering and scientific principles to the study of complex chemical reaction systems. Catalytic and non-catalytic reactions in homogeneous and heterogeneous systems, fast reaction techniques, or
- b. Characterization and types of Adsorption and models for adsorption Isotherms and rates and Kinetic models of catalytic reactions, transport processes with fluid-solid heterogeneous reactions, catalyst preparation and characterization and supported metal catalysts and acid and zeolite catalysts & key catalytic processes in the petroleum industry & synthesis gas Reactions & Bimetallic Catalysis.

ChE 809.1 Seminar

Research Methodology, presentation and discussion of current topics in chemical engineering research.

ChE 804.2 Process/Project Engineering

The topics to be treated will vary from year to year but the following will be a guide: introduction to Project management, Project Economics. Cost Engineering, Risk Analysis.

ChE 806.2 Equilibrium Stage Processes

Advanced treatment of the theory and application of equilibrium stages. Binary and multi component distillation: multicomponent absorption: Extraction.

ChE 808.2 Advanced Process Dynamics and Control

Modeling and simulation of dynamic behaviour of chemical processes. Theoretical and practical aspects to development of optimal and various regulatory control schemes for start-up and continuous process operation. Application of filtering techniques for noisy or estimated data. Process automation.

ChE 810.2 M.Eng Dissertation

Research work on a selected topic in the field of chemical engineering to result in an acceptable M. Eng. Dissertation.

C. DOCTOR OF PHILOSOPHY PROGRAMME

1. Programme Objective

The PhD degree in chemical engineering is aimed at providing students an opportunity to acquire good understanding of basic, scientific and managerial principles underlying the student's area of interest in Chemical Engineering and therefore to enable them to improve their capability to carry out innovative research and applied chemical engineering process and equipment design. Their managerial competence and skill in the teaching of chemical engineering is also enhanced.

2. Application and Admission Requirements

Admission into the programme stipulates that a candidate normally possesses a Master of Engineering Degree in Chemical Engineering with a minimum CGPA of 3.50 (on a 5.0 scale) or a minimum score of 60%. The candidate obtains an application form from the School of Graduate Studies, which is filled and returned to the School of Graduate Studies. If found eligible, such candidates are invited to the Department for an interview. Success at this interview qualifies the candidate for provisional admission. Every candidate coming for the interview is expected to bring along the following:

- a) Two letters of reference from persons qualified to comment on his or her academic work (the supervisor at the Master's programme should be one of the referees).
- b) Four copies of his or her proposed research plan in the selected area of specialization.

3. Departmental Requirements

In addition to the University requirements for PhD degree, the following regulations apply to all areas of specialization for the PhD degree in Chemical Engineering:

- a) On provisional admission, every Ph.D student will be assigned to one major supervisor and a co-supervisor and later, a Ph.D Committee made up of the two

- supervisors and two other senior academic staff shall be constituted.
- b) A Ph.D student will be required to take and pass compulsory courses prescribed and in additional pass or audit courses recommended by the supervisors.
- c) **Qualifying Examination**
Prior to being formally admitted to candidacy for the Ph.D. degree, the student must demonstrate his knowledge of engineering fundamentals by passing the Departmental Qualifying Examination, the academic level and subject matter of this examination is to be determined by Departmental Graduate Board.
- d) After a minimum of two semesters after the qualifying examinations, the PhD student, in consultation with the supervisors, shall apply to the Department to make a formal presentation/Oral defense of his or her research proposal. If the presentation is successful, the student becomes a candidate for the PhD degree and is allowed to continue his research work to the end.
- e) On completion of the research work the PhD candidate is required to prepare a dissertation and submit same through the major supervisor to the Department Graduate Committee. Thereafter he/she is expected to successfully pass an oral examination in defense of the dissertation before a panel of examiners set up in accordance with the School of Graduate Studies' Regulations.
- f) The Department shall normally expect the PhD student to participate in tutorials, Departmental Seminars and present seminars to the Departmental Graduate studies committee in every three months of the Research work. He should also produce from the work, at least two conference papers and two journal articles accepted for presentation and publication in reputable academic conference proceedings and journals. These publications are expected when a major finding has been made from the work or an objective of the research has been achieved. The student is discouraged from waiting till the end of the research before publishing his or her findings.

4. Programme Duration

Full time candidates will be required to spend a minimum of 24 calendar months and a maximum

of 48 calendar months, while part-time candidates will be required to spend a minimum of 48 calendar months and a maximum of 72 calendar months to complete the PhD programme.

5. General University Regulation

All the foregoing regulations are subject to the General University regulations covering PhD degree programmes.

6. Prescribed Courses for PhD Programmes

In addition to the M.Eng programme courses detailed earlier, the student shall take major course prescribed in the discipline of specialization for the PhD level work as will be advised by the academic advisers. These are detailed in the following course listings in the tables below:

First Year 1st Semester

Course Code	Course Title	Unit
CHE 901.1	Advanced Mathematical Techniques	3
CHE 903.1	Trends in Chemical Engineering Education	3
CHE 905.1	Design of Experiments in Chemical Engineering	3
CHE 907.1	Modelling of Bioconversion systems	3
Total		12

Second Semester

Course Code	Course Title	Unit
CHE 902.2	Advanced Process Design	3
CHE 904.2	Modern Industrial Processes (preferably delivered by invited lecturers from the process industry)	3
CHE 906.2	Seminar	3
CHE 908.2	Research and Dissertation	12
Total		21

7. Areas of Specialization

1. Reaction Engineering/Kinetics and catalysis
2. Chemical Engineering Thermodynamics
3. Process optimization
4. Transport Phenomena
5. Process Dynamics and Control
6. Pollution Control Engineering
7. Petroleum Refining Engineering
8. Polymer/Material Engineering Biochemical Engineering.

ACADEMIC STAFF LIST

S/N	NAME	QUALIFICATION	RANK	AREA OF SPECIALISATION
1.	Kuye, A.O.	BSc. MSc (Lagos) PhD (Strathclyde) FNChE, MNSE, R.Eng (3290)	Professor	Computer-aided design & Modeling
2.	Iyagba, E.T.	BSc (Ife), MS (Chem Eng) MS (Pet Eng) PhD (Pittsburgh), MNSChE	Professor	Reaction Engineering and Catalysis
3.	Chukwuma, F.O.	BSc, MS, PhD (Tulsa) MNSChE R.Eng (16966)	Professor	Separation Processes and Process Control
4.	Opera, C.C.	BSc, M.Eng (Zaria), Cert. Pet. Eng. (Institute Francais de Petrole), Paris. PhD (Loughborough) MNSChE, MNSE, REng 12898	Professor	Biochemical Engineering & Food Processing
5.	Uyigwe, L.	B.Eng (UPH), M.Eng (Benin) PhD (UPH), R.Eng (15615)	Professor	Polymer Engineering
6.	Onyegbado, C.C.	BSc (Lagos) MSc (California) PhD (Lagos) MNSChE	Senior Lecturer	Reaction Engineering and Catalysis
7.	Evbuomwan, B.O.	B.Eng, M.Eng (Benin) PhD (FUTO), MNSChE, MNSE, R.Eng (13727)	Senior Lecturer	Biochemical Engineering
8.	Oduola, M.K.	M.Sc (Pet Eng), PhD (Lvov, Ukraine) R.Eng (18680)	Senior Lecturer	Reaction Engineering and Catalysis
9.	Otaraku, J.I.	MSc (Volgograd) PhD (Moscow) AIChE	Lecturer I	Reaction and Fine Chemical Engineering
10.	Josiah, P.N.	B.Eng (UPH) MSc (Lagos)	Lecturer I	Computer-aided design & Modeling
11.	Oseghale, C.I.	BSc (EDSU), PGD, M.Eng (UPH) PGD(Mgt), PGD(Edu) (UPH), MNSE (15572) MSPE (335997) R.Eng (13434)	Lecturer I	Biochemical Engineering
12.	Nwambo, Y.P. (Mrs)	B.Tech (RSUST), MSc (UNILAG)	Lecturer I	Biochemical Engineering
13.	Oji, Akuma	B.Eng, M.Eng (UPH)	Lecturer I	Biochemical Engineering & Renewable Energy
14.	Njoku, G.A.O.	BSc, PGD, M.Eng (UPH) MNSChE	Lecturer I	Biochemical Engineering
15.	Edeh, I.	B.Eng (Enugu) M.Eng (UPH)	Lecturer I	Computer-aided design & Modeling

DEPARTMENT OF CIVIL & ENVIRONMENTAL ENGINEERING

POST GRADUATE PROGRAMMES

The Department of Civil & Environmental Engineering runs the following degree programmes:

- a) Master of Engineering (M. Eng.) in Civil Engineering
- b) Master of Engineering (M. Eng.) in Environmental Engineering
- c) Doctor of Philosophy (PhD) in Civil Engineering.
- d) Doctor of Philosophy (PhD) in Environmental Engineering

The Civil Engineering Programmes are in the following areas of specialization:

- 1) Soil Mechanics and Geotechnical Engineering;
- 2) Highway and Transportation Engineering;
- 3) Structural Engineering; and
- 4) Water Resources Engineering.

Specialization in these areas is achieved by combining core courses with appropriate interdisciplinary courses and solving a chosen problem.

1. MASTER OF ENGINEERING (M.ENG) DEGREE PROGRAMMES

1.1 Programme Objectives

The aim of the M Eng. (Civil Engineering) and M Eng. (Environmental Engineering) programmes is to prepare students for professional work at a more advanced level than the Bachelor's degree in the various areas of specialization in Civil Engineering practice or in Environmental Engineering; or for further study leading to the Doctor of Philosophy (PhD) Degree in the specialized areas of Civil Engineering or in Environmental Engineering.

1.2 Programme Requirements and Criteria for the Award of the M.Eng. Degree

To realise the above objectives and qualify for the award of the M.Eng. degree, the student must complete and pass all the prescribed courses in the chosen area of specialization, participate in and present research seminars and produce a supervised thesis on an approved research topic. It is also expected that at least one conference paper and one journal article would be produced from the research work.

In addition, the general University requirements for studies leading to the masters' degree and other departmental requirements for the programme must be fulfilled by the candidate.

1.3 Entry Requirements

To be admitted into any of the specialisations in the M.Eng. Degree programmes of the Department a candidate must satisfy the general Graduate School requirement of possessing a minimum of Second Class (Honours) degree in Civil Engineering, obtained from the University of Port Harcourt or any other approved University. However, the Department gives preference to those with a CGPA of 3.5 and above (corresponding to Second Class Honours Upper Division and higher).

1.4 Programme Duration

The programme will normally require a minimum of 12 (twelve) calendar months and a maximum of 24 (twenty-four) calendar months of full-time study to complete. Part-time candidates on the other hand, will be required to spend a minimum of 24 (twenty-four) calendar months and a maximum of 48 (forty-eight) calendar months to complete the programme.

1.5 Course Registration

The lists of required courses for the different areas of specialization available in the programme are given below. Registration of courses must be done in consultation with the candidate's academic adviser who, in turn, must ensure that the candidate meets both the university and departmental requirements for the M. Eng. (Civil Engineering) or M Eng. (Environmental Engineering) degree programme as the case may be.

1.6 Specialisation Codes for M.Eng (Civil Engineering) Programme

CEG 81XX	Geotechnical Engineering
CEG 82XX	Highway and Transportation Engineering
CEG 84XX	Structural Engineering
CEG 85XX	Water Resources Engineering

1.7 Specialisation Code for M.Eng (Environmental Engineering) Programme

EVE 8 1XX	Environmental Engineering
-----------	---------------------------

1.8 Course Listings

The Course Listings consist of: *Compulsory courses* and *Electives*.

Details of the Courses are presented subsequently for the different areas of specialisation.

COURSE LISTINGS: - DETAILS

1.8.1 CEG 81XX: Geotechnical Engineering Specialisation

1st Semester				CEG 824.1	Advanced Pavement Construction and Equipment	3

1.9 COURSE DESCRIPTION

1.9.1 GEOTECHNICAL ENGINEERING COURSES:

CEG 810.1: Geotechnical Modelling and Computer Applications

Introduction to Geotechnical Modelling; Nature of Soil Behaviour; Modelling of soil behaviour: Limit and Critical States; Constitutive Modelling: Elastic, elastic-plastic models; Numerical Modelling: Finite Element modelling, Finite differences; Physical Modelling: Dimensional analysis, Soil - Structure Interaction; Centrifuge Modelling; Theoretical Modelling; Application of Modelling techniques in solving Soil - Structure Interaction Problems.

CEG 811.1 Earth Structures and Slopes

Equilibrium, of Retained Soil: Limiting equilibrium analysis; Earth pressure theories; Lateral earth; Rigid retaining walls; sheet pile walls; anchored bulkheads. Deep excavations in soil: pressure distribution, base instability, bracing and other support methods; Earth anchored excavation; concrete diaphragm walls; Reinforced earth walls; cellular cofferdams; soft ground tunneling; Ground movement accompanying excavations and tunneling operations; Slope stability:- Design and analysis of slopes and embankments, circular and non-circular failure surfaces, concept of safety; Probabilistic slope stability analysis; stress strain and time-dependent behaviour; Identification and control of slope stability problems; Graduate Soil Laboratory.

CEG 812.1: Embankment Dam Engineering and Seepage

Types of Dams; Design consideration; design details; site exploration; behaviour of Rockfills; Stress-strain modeling, Finite element modeling; stresses; Load transfer — Cracking; Pore pressure; observations/monitoring; inspection and maintenance; Foundation and abutment treatment; cut-off; causes of failure; Tailings dam. Permeability; Flow equations; Flow nets; Numerical analysis; Seepage analogies; unknown boundaries; Transfer conditions; Anisotropic seepage; layered systems; piping filters.

CEG 813.1: Engineering Behaviour and Properties of Soil

Continuum Mechanics: principles; parameters and representation of soil properties; spaces; Framework of Critical State Soil Mechanics: Behaviour of simple soils; critical state models; Quantitative models of pore pressure; Strength Behaviour of Dilative Soils; Residual Strength;

Failure theories; strength behaviour of simple contractive soils; stress-strain relationships of soils; Constitutive models; Effective Stress Design methods; SHANSEP. Soil Physics, Chemistry and Mineralogy; Conduction Phenomena: coupled and uncoupled; consolidation, compression, creep, time effects; sensitive soils; sampling and disturbances; Transient and dynamic loading response; Effective of Cycle Loading; Graduate Soil Laboratory.

CEG 814.1: Rock and Tropical Soil Engineering

Introduction; Rock as an engineering material: Geological classification; Engineering classification of intact rock; structural features in Rock masses; Engineering classification of In-situ rock masses; in-situ state of Stress; Stress-Strain-Strength behaviour. Analysis of stress and strain, Elastic relationships (isotropic, anisotropic); Deformability of discontinuities; failure criteria (intact, anisotropic, jointed); Property Evaluation and Measurement: - Laboratory, field; Tropical Soils: Chemical, physical, textural, and engineering properties; Remote sensing and air photo applications to tropical soils engineering properties; geophysical techniques in tropical site characterization; Prediction of engineering performance of tropical soils. Case histories.

CEG 815.1: Soil Dynamic and Earthquake Engineering

Introduction: Dynamic Response Characteristics; Wave Propagation; Dynamic Soil properties; Foundation response to vibrations, Blasting Vibrations; Seismic slope stability analysis; Seismic design of retaining walls; Liquefaction; Seismic response of clays; Risk analysis and stability; offshore dynamics. Engineering earthquakes from engineering point of view; Earthquake mechanism; Basic characteristics of strong ground motion; Response of simple systems to earthquakes; structural design for earthquakes; seismic codes; earthquake resistant design; site effects; soil amplification; seismic risk and seismic design decisions; Soil-structure interaction; nuclear reactor containment structures; earth dam design (seismic); fluids in tanks and reservoirs; Blast loading.

CEG 816.2: Probabilistic and Reliability Methods in Geotechnical Engineering

Basic probability theory and applications; common probability distributions and geotechnical applications; joint distributions; moment approximations; Reliability of soil structures; system reliability and applications; Geotechnical applications of entropy and least biased distribution, the hazard function; Applications of diffusion theory to subsidence, consolidation and stress

distribution (Probability consolidation, probabilistic stress distribution); Markov Process and progressive slope failure; Time series analysis and groundwater fluctuation; Uncertainty and soil parameters; Decision making under uncertainty; site characterization.

CEG 817.2: Theoretical Soil Mechanics

Stress distribution in soil: Concept of stress and strain; Elastic equations; Applications to various loading and boundary conditions in soil. Stability problems in soil: - Failure theories; Development of conventional stability methods; Effects of retaining wall movements; Sokolovski's method of characteristics. Consolidation: - Theoretical development and solution of one- dimensional consolidation; Higher-dimensional consolidation, Seepage: - Theory of groundwater movement; method of fragments.

CEG 818.2: Tunnel Engineering

Tunnel characteristics clearances and; Tunnel survey and preliminary investigation; soft ground tunneling; shield tunneling; Rock tunnels; mixed-face tunneling; Tunnel- boring machines; Material handling and construction plant; shotcrete; cut and cover construction; safety provisions; Drainage system; Tunnel operation and maintenance.

CEG 819.2: Special Topics in Geotechnical Engineering

Review of Site Appraisal and Engineering behaviour of soils; Foundations for Structures — Shallow foundations, Deep foundations: - piles, piers (caissons), bridge supports. Foundations in difficult ground conditions; Deep basements; Geotechnical Structures; Offshore Geotechnical Engineering; Offshore Structures; Soil and ground improvement: — Land reclamation; Earthworks and Soil stabilization; Geotextiles and Geosynthetics; Environmental geotechnical engineering: - ground movements (subsidence); Effects of pollution on the properties and engineering behaviour of soils. Advanced Soil Mechanics laboratory principles and procedures.

SGS 801.1: ICT and Research Methods

ICT skills; writing skills; thesis documentation; proposal writing & tendering skills; and presentation skills.

CEG 801.2: Graduate Seminar

This is a required course for all graduate students. Intensive review of the literature in the student's area of specialization will be required. A series of seminars will be delivered by students on topics of current interest. Guest Lecturers from both the department and outside (including the industry) will be invited to give seminar lectures on chosen topics of current academic and economic interest,

such as those related to the safety and protection of the environment, and to quality management.

CEG 802.2: Graduate Research and Thesis

This is a directed research on problems in the student's area of specialization. Emphasis will be on the use of research methodology for scientific investigation leading to a written thesis.

CEG 845.2: Expert System and Computer-Aided Design in Civil Engineering

Principles of artificial intelligence, including applications in robotics, natural language programmes and advanced computer input-output devices; Analysis of various expert systems; Development of the knowledge base and the role of the knowledge of engineers; Computer systems; High level languages; computer architecture; computer graphics and draughting; Data base aspects of CAD; Interrelationship between CAD and numerical methods: Simulation and optimization.

CEG 851.1: Groundwater Hydrology and Groundwater Exploration

Groundwater as a renewable resource; occurrence, disposal and historic background; types of aquifers; measurement of soil moisture; unsteady flows and measurement of hydraulic conductivity, transitivity and specific yield/storage coefficient; Well hydraulics with considerations to Theis Jacob, Chow and Hantush methods; leaky aquifer, recovery, methods, and Bolton's Flow around fully and partially penetrating wells and well losses; well construction and drilling methods. Groundwater quality analysis, artificial recharge; surface and sub-surface investigation and sea water intrusion.

1.9.2 HIGHWAY & TRANSPORTATION ENGINEERING COURSES:

CEG 821.1 Transportation Modeffing and Planning

Transport and Society; The Urban Transportation problem: its roots, manifestations and implications. The systems approach to transportation. Conventional models of travel demand in transportation studies including disaggregate behavioural models, Trip Generation, Frater and Gravity models of trip distribution; trip-end and trip-interchange modal split; network assignment. Generation of alternatives and their evaluation. Introduction to decision theory. Traffic and parking: Distribution of highway traffic speeds; the negative exponential distribution applied to headways or highways, Capacity at intersections; Design of merging and diverging lanes using department of transport procedure; Simulation of highway headway distributions.

Accident statistics and trends: Road safety education.

CEG 822.1 Advanced Pavement Design

Pavement Analysis, Design and Management Principles. Low Volume Road Design, Computer applications in design and analysis of pavements. Fundamental Principles - Design factors; Types of distress - structural and functional: Stresses in flexible and rigid pavements; Vehicle and Traffic consideration. Climatic and environmental conditions. The Economic Factor, design strategies. Systems analysis. Properties of pavement components and material characterisation; Soil and base stabilisation: bituminous surfaces and material variability.

Flexible Pavement Design - Airport and highway pavements and their differences. Theories of layered Systems. Boussinesq theory, Burmister analysis. Mechanistic-Empirical Design Procedures.

Rigid Pavement Design - Airport and highway pavements; modulus of rupture; design charts; design factors. Junction of flexible and rigid pavements; Joints and reinforcements; Load-Transfer devices. Thickness design, load stresses; subgrades and bases. Design of overlays.

CEG 823.1 Road Geometric Design

Principles of Highway/Route Location; Highway Survey Methods, Photogrammetry; Circular Curves, Spiral Curves, Vertical and horizontal Alignments & super elevations; Cross Section elements, Design Controls and Criteria - Basic design policy; Design principles; Geometric design standards: geometric design data; design vehicle and design speed; Highway capacity; Control of access, Geometric plan elements; Intersections. Grade separation structures, Ramps; Design of interchanges.

Drainage Design: - Basic policy on drainage design, economics of drainage design: Hydrological analysis; Culverts; Storm sewers: Roadside drainage Channels: Drainage of highway pavements; inlet design; subsurface drainage.

Secondary Design Elements - Design criteria; illumination; Signing and pavement markings: Guardrail and vehicular barriers Special structures and installations roadside development. Factors contributing to accidents.

CEG 824.1 Advanced Pavement Construction & Equipment

Earthmoving and heavy construction - Earthmoving materials and operations; Excavating and lifting, shovels, draglines, backhoes, clamshells, cranes. Loading and hauling. Equipment travel time, dozers, loaders, scrapers, trucks and wagons. Compacting and finishing. Rock excavation. Compressed air and water

systems, Paving - Concrete paving; bituminous materials: Bituminous surface treatment, asphalt paving. Job Planning and Management; factors affecting the selection of construction equipment; Engineering fundamentals: Soil stabilization and compaction operation analyses; Economics of owning and operating construction equipment. Single and multiple surface treatments. Belt conveyor systems; Drilling and Blasting of Rocks; the production of crushed stone aggregate. Asphalt in rigid pavement maintenance; Safety precautions.

CEG 819.2 Special Topics in Geotechnical Engineering

Review of Site Appraisal and Engineering behaviour of soils; Foundations for Structures — Shallow foundations, Deep foundations: - piles, piers (caissons), bridge supports. Foundations in difficult ground conditions; Deep basements; Geotechnical Structures; Offshore Geotechnical Engineering; Offshore Structures; Soil and ground improvement: — Land reclamation; Earthworks and Soil stabilization; Geotextiles and Geosynthetics; Environmental geotechnical engineering: - ground movements (subsidence); Effects of pollution on the properties and engineering behaviour of soils. Advanced Soil Mechanics laboratory principles and procedures.

SGS 801.1: ICT and Research Methods

ICT skills; writing skills; thesis documentation; proposal writing & tendering skills; and presentation skills.

CEG 826.2 Highway Economics & Pavement Evaluation

Pavement Distress: - Flexible and rigid pavements; Visual condition surveys; Concepts of condition and evaluation surveys; Present serviceability Index equation methods of measuring condition, skid resistance; Strengthening existing pavements: Principles of maintenance, Methods of performance survey, methods of structural evaluation: Deflection measurements and interpretation of collection data, Conversion factors. Overlay categories; Flexible overlays and over flexible pavements, based on deflection component analysis. Overlay Design of Flexible Pavements; Analysis of stresses in unbounded concrete overlay. Improved rigid pavement joints: Analytic approach to concrete pavement blowups; maintenance of flexible pavements.

The economic factor, design strategies, systems analysis, techniques and limitations: pavement cost; economic analysis; effect of growth and variable costing: estimating costs; sensitivity of the cost factors; illustrative examples of computation; payments by the general public and by property owners or developers; value engineering studies;

optimum stage construction; on-surfaced roads versus surfaces.

CEG 827.2 Pavement Materials and Mix Design

Asphalt Technology: Petroleum asphalt Refining and properties of asphalt cement; Liquid asphalts, air-blown asphalts; Uses of asphalts and effects of temperature and viscosity. Sampling and Temperature-volume relationships measurements and calculations; Aggregate gradation blending calculations, Asphalt concrete mix design; Properties of asphalt mixes: Asphalt mixture calculations.

Manufacture of Hot asphalt plant mixes: Asphalt plant operation and inspection: Roadway surface preparation. Miscellaneous asphalt construction. Special uses of asphalt and additives; Safety precautions.

CEG 829.2: Special Topics in Highways and Transportation Engineering

Highway signals and lighting. Pavement Components and materials characterization. Road Safety. Road work, theory and practice.

CEG 834.2: Project Appraisal & Management Techniques

Economic appraisal methodologies; Benefit/cost analysis; Levels of Management; the organisational chart. Linear and dynamic programming — the Simplex method, the transportation problem, the assignment problem; Network Analysis — the shortest route problem, minimal spanning tree problem. Project planning and control with CPM and PERT. Queuing theory, inventory theory and decision analysis.

CEG 812.2 Embankment Dam Engineering and Seepage

Types of dams; Design consideration; design details; site exploration; behaviour of rockfills; stress-strain modelling, Finite element modelling; stresses; Load transfer — cracking; Pore pressures; observations/monitoring; inspection and maintenance; Foundation and abutment treatment; cut-off; causes of failure; tailings dams, permeability; Flow equations; Flow nets; Numerical analysis; seepage analogies; unknown boundaries; Transfer conditions; Anisotropic seepage; layered systems; piping; fillers.

CEG 845.2 Expert Systems & Computer Aided Design in Civil Engineering

Principles of artificial intelligence, including applications in robotics, natural language programmes and advanced computer input-output devices. Analysis of various expert systems, including tools and generators, classification versus diagnostic type systems. Development of the knowledge base and the role of the knowledge

of engineers. Computer systems, High level languages, computer architecture; computer graphics and draughting, the data base aspects of CAD; the interrelationship between CAD and numerical methods. Simulation and optimisation.

CEG 801.2: Graduate Seminar

This is a required course for all graduate students. Intensive review of the literature in the students area of specialization will be required. A series of seminars will be delivered by students on topics of current interest. Guest Lecturers from both the department and outside (including the industry) will be invited to give seminar lectures on chosen topics of current academic and economic interest, such as those related to the safety and protection of the environment, and to quality management.

CEG 802.2: Graduate Research and Thesis

This is a directed research on problems in the student's area of specialization. Emphasis will be on the use of research methodology for scientific investigation leading to a written thesis.

1.9.3 STRUCTURAL ENGINEERING COURSES

CEG 841.1: Advanced Structural Analysis

Vector and tensor analysis. Vector fields, Integral theories, Cartesian and curvilinear tensors. Tensor calculus. Differential geometry. Solution of non-linear equations and sets of linear equations. Numerical integration. Ordinary and partial differential equations. Finite difference method. Finite elements method. Application of finite element method.

Matrices, Linear algebraic equations, Special matrices determinants, Stiffness matrix method; member stiffness transformation matrices; structure stiffness matrix; flexibility matrix method, virtual work; plane plasticity. Reticulated structures. Triangular and rectangular finite elements. Axi-symmetric and three-dimensional elements.

Development of governing equations for thin rectangular plates; classical solution techniques such as Navin, Lavy and energy methods applied to circular plates on elastic foundations and orthotropic plates, large deflection theory. Variational techniques; the methods of Ritz, Galerkin and Kantorovitch. Box girders, introduction to shell theory, membrane hypothesis, cylindrical shells of revolution, translational shells, shalloor-shell theory; the static-kinetic analogy of Goldenceisers, Lur's and Calladine, the duo-surface theory with numerical applications.

Triangular and rectangular elements, Axi-symmetric and three-dimensional elements, isoparametric elements. Non-linear systems, Boundary element concepts, Finite strip, high

temperature and rate dependent problems. Extensive utilization of FEM package on engineering work station.

CEG 842.1: Advanced Structural Mechanics

Equilibrium and compatibility of forces and deformation. Theory of limiting states of stress. Unsymmetrical bending, torsion, stability. Thin-walled structures, plasticity. Fracture mechanics. Experimental stress analysis, measurement of strain, load, moment.

Theory of elasticity: - The calady stress relationship. Equilibrium of stress at Varnant Torsion. Membrane analogy. Torsion criteria for crack initiation and propagation leading to failure; Giffith theory. Plane strain, fracture, toughness phenomena, stability: - Buckling criteria, Elastic stability of columns and plane frames. Stability function. Plates and shells; Development of the governing equations for thin rectangular plates.

CEG 843.1: Advanced Concrete Design

Brief historical review. Design of sections in combination of axial load and bending. Design for torsion. Design of non-prismatic sections, Columns with bi axial bending. Design of two-way and plate slabs by the yield line method. Point load and line load on slab. Design of deep beam, Analytical treatment of the effects of shrink and creep. Final pre-stressing force. Limit state design of statically indeterminate pre-stressed slabs. Cyclic loading of simple supported beams and portal frames. Fatiguejoints and End-block design.

CEG 845.2: Structural Reliability and RiskAnalysis

Modelling and computer simulations; Optimization. Optimum design accounting for uncertainty and failure consequences. Stochastic dynamic programming. Analysis and design specification of structural performance and safety through probability theory. Description of random occurrence, wind and earthquake loadings and variability in material properties.

CEG 846.2: Advanced Steel Design and Analysis

Torsion behaviour of thin-walled members of open and cross-section. Pure and restrained torsion, shear controls. Inelastic stability concepts in modern; imperfection sensitivity, moment relaxation, inelastic lateral torsion, buckling provisions and the design of bracing. Beam-column behaviour and design under sway.

Composite plates and beams, elastic and plastic design. Composite columns, sheer connections, static and fatigue loading. Portal frames, plastic design and secondary effects. Behaviour and design of eccentrically restrained beam-columns.

Methods of cladding, stress- strain design, cranes, girders, plate girder design.

CEG 847.2: Expert System and Computer-Aided Design in Civil Engineering

Principles of artificial intelligence, including applications in robotics, natural language programmes, and advanced computer input-output devices. Analysis of various expert systems. Development of the knowledge base and the role of the knowledge of engineers.

Computer systems. High level languages, computer architecture; computer graphics and draughting, the data base aspects of CAD; the interrelationship between CAD and numerical methods. Simulation and optimization.

CEG 819.2: Special Topics in Geotechnical Engineering

Review of Site Appraisal and Engineering behaviour of soils; Foundations for Structures — Shallow foundations, Deep foundations: - piles, piers (caissons), bridge supports. Foundations in difficult ground conditions; Deep basements; Geotechnical Structures; Offshore Geotechnical Engineering; Offshore Structures; Soil and ground improvement: — Land reclamation; Earthworks and Soil stabilization; Geotextiles and Geosynthetics; Environmental geotechnical engineering: - ground movements (subsidence); Effects of pollution on the properties and engineering behaviour of soils. Advanced Soil Mechanics laboratory principles and procedures

SGS 801.1: ICT and Research Methods

ICT skills; writing skills; thesis documentation; proposal writing & tendering skills; and presentation skills.

CEG 801.2: Graduate Seminar

This is a required course for all graduate students. Intensive review of the literature in the student's area of specialization will be required. A series of seminars will be delivered by students on topics of current interest. Guest Lecturers from both the department and outside (including the industry) will be invited to give seminar lectures on chosen topics of current academic and economic interest, such as those related to the safety and protection of the environment, and to quality management.

CEG 802.2: Graduate Research and Thesis

This is a directed research on problems in the student's area of specialization. Emphasis will be on the use of research methodology for scientific investigation leading to a v ritten thesis.

1.9.4 WATER RESOURCES ENGINEERING COURSES

CEG 851.1 Surface Water Hydrology & Reservoir Operations

A review of climatological/meteorological parameters, hydrologic cycle, precipitation, distribution, interpretation of data; variations and measurements. Stream flow measurements, stage-discharge relations; rating curves; hydrographs; types, separation and synthesis; flow-duration curve and precipitation-runoff relationship. Evapo-transpiration and surface evaporation in the open water bodies; stream flow routing by hydrological and hydraulic principles. Probability in surface water hydrology as a basis for design; flow and rainfall intensity duration - frequency analysis and design storms. Reservoir operations and management.

CEG 852.1 Finite Element Methods in Water Resources I

Groundwater 2-D flow equation; Use of finite elements and computer programming as aids to flow predictions. Rivers flow models and numerical solution approaches. Water quality governing equations and numerical solution approaches. Sensitivity analysis in model developments and applications.

CEG 853.1: Advanced Hydraulics

Water flow in open channels; Uniform flow and energy principles in open channel flows. Gradually varied flow, classification, computation of water surface profiles- direct integration method, direct step method, the standard step method, Bresses method, practical problems related to land design, backwater and channel delivery computations, theory of canal regimes, transitions, hydraulic jump and its use as energy dissipators.

Rapidly varied unsteady flow, the moving hydraulic jump, positive surges, negative surges, surge through channel transition. Water flow through pipes in pipe networks. Pipelines, pipe branching, pipe networks; siphon and pump in pipelines, design of pipe distribution systems. Hardy-Cross methods, pipe and materials, valves and hydrants, distributing reservoirs, standpipes and elevated tanks, hydraulics of sewers, water pumps; Power and efficiency of water pumps, centrifugal pumps, propeller (axial flow) pumps, jet pumps, selection alteration, pumps in parallel or series, specific speed and similarity. Hydraulic similitude: - Reynolds number law, Froude number law, Open channel models, Hydraulic models distorted river and channel models.

Unsteady flow: Water hammer, the basic differential equation and method of arithmetic integration, surge control, theory of mass oscillation, surge tanks- basic differential equation.

Hydrodynamics: - Euler's equations, Navier-Stokes equations effect of Viscosity, Laplace

equation, waves, deeper water waves, short waves and long tidal waves, hydrodynamics of fluid-particle systems.

Sediment transport in open channels: The bed load, the suspended load, Duboys-type equations, Einsteins bedload equations, the total load, Canals in regime, meandering of rivers, Sediment measuring devices, River and channel models.

CEG 854.2: Advanced Water Resources Engineering

Application of the principles of hydraulics, hydrology, and water control to problems in erosion control, flood control, water power, irrigation, navigation, and river basin planning; design principles of water regulatory structures: Optimization and simulation of water quality Modelling, water well technology; mathematical Modelling of groundwater.

CEG 855.2: Irrigation Engineering

Introduction to irrigation practice in humid and arid regions; crop-water requirement; infiltration and water holding capacities of soil; salinity and water quality; reclamation and management; irrigation water application (surface, sprinklers and sub-irrigation) use and distribution; water management and efficiency. Economic analysis; operation management of irrigation schemes. Sources of drainage problems; Surface drainage systems; Drainage structures, Sub-surface drainage system; Drainage of tidal areas; Soil erosion and soil conservation practices.

CEG 856.2 Groundwater Hydrology & Exploration

Groundwater as a renewable source; occurrence, disposal and historic background. Types of aquifers, measurement of soil moisture, unsteady flows and measurement of hydraulic conductivity, transitivity and specific yield/storage coefficient. Well hydraulics with considerations to Theis Jacob, Chow and Hantush methods, leaky aquifer, recovery methods, and Boulton's. Flow around fully and partially penetrating wells and well losses, well construction and drilling methods. Groundwater quality analysis, artificial recharge; surface and sub-surface investigation and sea water intrusion. Groundwater exploration, drilling methods for shallow and deep wells (Boreholes), casing, well development, operation and maintenance in riverine and upland environments.

CEG 857.2 Optimization & Simulation in Water Resources Systems

Introduction to operations research, linear programming, objective function and constraints, Gauss-Seidel method, water management, benefit-cost analysis, concept of marginal cost in water pollution and pollution control. A review of 2-D

groundwater simulation, effect of natural and artificial recharge. Selection of best project alternative using Sondheim method.

CEG 858.2: Special Topics in Water Resources Engineering

Investigation of dam site, and choice of dam type. Gravity Dam: - Forces acting on dams. Requirements for stability, general procedure for design with examples, internal stresses and stress concentrations in gravity dams. Slab and Buttress Dams: - Concrete dams and dams on permeable foundations. Embankment Dams: - General design procedure, foundations types and treatments, seepage analysis and control, method of stability analysis, slope protection, typical designs of embankment dams, earth dams, rockfill dams, method of construction.

Spillways, gates and outlet works, gate and valves, needle valves, protection against scour below dams, beams and energy dissipater, hydraulic model studies, Fishways at dams.

Reservoir Operation: - Reservoir, physical characteristics, sedimentation, reservoir capacity for a given yield, selection of capacity for a river reservoir, flood mitigation.

Direct supply reservoirs, regulating reservoirs. Pumped storage reservoirs. Conjunctive use schemes, control rules, simulation. Evaluation criteria for seasonal effects and correlations.

CEG 859.2 Design of Drainage Systems

Storm water collection and disposal, municipal drainage, land drainage, highway drainage, culverts designs, conventional and tapered inlet or outlet control with software (HY-8), Design of drainage network via computational algorithm and an approved computer language, user- friendly to solve real time/field problem(s).

1.9.5 ENVIRONMENTAL ENGINEERING COURSES

EVE 810.1: Aspects of Environmental Science and Ecology

Acid-base chemistry and its significance in environmental engineering. Dissolution and precipitation chemistry, and chemical precipitation reactions in water and wastewater treatment. Coordination chemistry, electrochemical reactants, chemical reactants, solution preparation-Normality, molarity, equivalence etc. Introduction to general Microbiology, water and wastewater microbiology. Degradation metabolism of compounds by organisms. Enzyme kinetics. Batch growth kinetics. Recycling of minerals and nutrients. Freshwater ecology, marine ecology, estuarine ecology, stratification of water bodies, terrestrial ecology, eutrophication, natural resources and their management. Functional parts

of ecosystem, energy flows, and nutrient cycles. Instrumentation and practical.

EVE 811.1: Unit Operations in Environmental Engineering

Unit operations of water and wastewater treatment; pretreatment, sedimentation, coagulation/flocculation, filtration, aeration, disinfection, sludge treatment and disposal, advanced wastewater treatment processes.

EVE 812.1: Pollution Prevention and Control

Strategy of pollution control engineering; the engineering design process; environmental systems; toxicity and aquatic water quality criteria; risk assessment; waterborne microbial diseases; faith of pollutants in air, water, soil and groundwater; guidelines for environmental protection.

CEG 810.1: Advanced Engineering Hydrology

Fundamental theories on hydrological cycle (water balance, atmospheric water, subsurface water, surface water), measurements and data collection. Precipitation analysis, evaporation and evapotranspiration processes, hydrograph analysis, rainfall runoff modelling (unit hydrograph), hydrological flow routing, infiltration, ground water movement (Aquifers; types and properties and properties), hydrological statistics and hydrological design. Flow nets; hydraulic wells; pumping test.

CEG 832.1: Water Treatment and Supply Engineering

Water quality, Demand for water; population forecasts. Sources of water; ground and surface water development. Collection and transmission of water. Unit operations and water treatment processes: pre-treatment, coagulation and flocculation, sedimentation and flotation, filtration, ion removal by chemical precipitation, disinfection, ion exchange, adsorption, membrane processes and solids handling. Distribution of water and service reservoirs. Pumping. Distribution systems and system appurtenances. Calculation techniques for distribution system hydraulics. Computer methods. Distribution system solutions. Pipes and materials for pipes.

EVE 813.1: Oil Industry & Pollution

Definitions; measurement of pollution; Oil field activities; Sources and types of pollution; In-situ pollution prevention and control measures; inorganic pollutants; oil and organic pollution; newer forms of pollution; Remediation processes; Regulatory controls.

SGS 801.1: ICT and Research Methods

ICT skills; writing skills; thesis documentation; proposal writing & tendering skills; and presentation skills

EVE 816.2: Environmental Management

Baseline and environmental sensitivity studies, Concepts of environmental impact assessment. EIA assessment procedure — identification, prediction and evaluation, methodologies, statement and report preparation. Applications of mathematical models to environmental impact assessment cases involving soil, water and air quality problems. Preparation of environmental impact statement. Case studies. Environmental Risk assessment. Principles of developing national environmental quality standards and compliance measures. Concept of environmental loading and prevention of significant deterioration in ecological balances. Current national and international standards. Principles of developing risk-based land-use planning. Needs analysis for new industrial facilities. Baseline assessment.

EVE 814.2: Air Quality and Environmental Noise

Atmosphere and air pollution system; Sources and classification of air pollution; Air quality standards and effects of air pollution on man, plants and structures; Global air pollution concerns; Air quality index, measurement of air pollutants and units: Dispersion of air pollutants, atmospheric stability, introduction to air pollution modelling; removal of particulates and flue gases. Noise sources and characteristics, computation with decibels (dB), human response to sound, types of noise, noise criteria and noise measurements, Effects of noise on humans and noise prevention and control, humans and structural vibration measurement and standards.

CEG 834.2: Design of Wastewater Treatment Systems

Principles of wastewater treatment; Preliminary treatment units; Primary treatment units; Overview of reactions, reactors and bio-kinetic coefficients; Introduction to activated sludge treatment; Trickling filter units; Waste Stabilization ponds, Septic tank systems, VIP; Wastewater treatment plant hydraulics, disposal and reuse of wastewaters. Sludge treatment.

CEG 812.2: Design of Drainage Systems

Introduction: hydraulic design, appurtenances, ventilation of sewers, pipe material. Open channel hydraulics: open channel flows, channel properties, uniform flow equations, empirical equations, rational method. Channels with composite sections, channel design flow in partly full pipes. Design of storm sewers: peak runoff estimate, hydraulic design of storm sewers. Design

of Open drains: design approach, conveyance (K), section factor (Z). Design of sanitary sewers: design principle, computation, design of conventional sewer network, design of simplified sewerage system. Loads on buried pipes: strength of rigid pipes, beddings, allowable loads on pipes. Sub-surface drains.

EVE 819.2: Solid and Hazardous Waste Management

Generation of solid wastes. On-site handling, storage and processing. Collection, transfer and transport of solid wastes. Processing techniques and equipment. Recovery of resources, conversion products and energy. Disposal methods for solid wastes and residual matter: Sanitary landfill, incineration, composting and other techniques. Hazardous waste classification, generation rates, regulations on hazardous wastes, waste minimization, recycling and recovery of hazardous wastes, treatment of hazardous wastes using physicochemical processes, biological processes, and thermal methods. Land storage and disposal of hazardous wastes, site remediation and case studies. Design of sanitary landfill.

EVE 821 Water Quality Modeling

Introduction to descriptive modelling approaches for analysing water quality changes in lakes, reservoirs, rivers, and estuaries. Applications include modelling dissolved oxygen, temperature, nutrients, and algal dynamics.

EVE 801.2: Graduate Seminar

This is a required course for all graduate students. Intensive review of the literature in the student's area of specialization will be required. A series of seminars will be delivered by students on topics of current interest. Guest Lecturers from both the department and outside (including the industry) will be invited to give seminar lectures on chosen topics of current academic and economic interest, such as those related to the safety and protection of the environment, and to quality management.

EVE 802.2: Graduate Research and Thesis

This is a directed research on problems in the student's area of specialization. Emphasis will be on the use of research methodology for scientific investigation leading to a written thesis.

2. DOCTOR OF PHILOSOPHY (PhD) DEGREE PROGRAMME IN CIVIL ENGINEERING.

2.1 Programme Objective

The aim of the PhD (Civil Engineering) and PhD (Environmental Engineering) programmes is to provide students an opportunity to acquire indepth understanding of basic engineering and scientific

principles underlying their areas of interest in Civil Engineering or Environmental Engineering; and hence enable them develop the capability to apply these principles creatively through advanced methods of research, analysis and synthesis.

2.2 Admission Requirements

Candidates for admission into the PhD (Civil Engineering) and PhD (Environmental Engineering) programmes must possess the Master of Engineering or Master of Science degree in Civil Engineering or Environmental Engineering from the University of Port Harcourt or any other recognized University with at least an average score of B grade. In addition, every applicant must provide:

- (a) Two letters of reference (at least) from persons qualified to comment on his or her academic work (preferably, the supervisor at the Master's programme should be one of the referees;
- (b) A copy of his or her Masters degree transcript; and
- (c) Four copies of his or her proposed research plan in the chosen area of specialization.

Final selection of candidates will be based on the evaluation of the above documents as well as interview performance.

2.3 Departmental Requirements and Regulations

In addition to the general University requirements for the PhD degree, the following regulations also apply for all areas of specialisation in the PhD (Civil Engineering) degree programme:

- a) On provisional admission every PhD student will be assigned a supervisor and later a PhD committee made up of the Supervisor and four (4) senior academic staff.
- b) A PhD student will be required to take and pass prescribed courses in consultation with members of his/her committee.
- c) The student will take a Qualifying! Comprehensive after a minimum of one semester in the programme. The pass grade in his examination shall be 70% and only success in it will confirm the student's status as a PhD student.
- d) After a minimum of two semesters of work the PhD student, in consultation with the supervisor, shall apply to the Department to make a formal presentation/Oral defence of his or her research proposal. If the presentation is successful, the student becomes a candidate for the PhD degree and is allowed to continue with his research work to the end.

- e) On completion of the research work the PhD candidate is required to prepare a dissertation and submit to the Head of department. Thereafter he/she is expected to successfully pass an oral examination in defence of the dissertation before a panel of examiners set up in accordance with the Graduate School regulations.
- f) The Department shall normally expect the PhD student, as a normal PhD degree requirement, to participate in and present seminars to the Departmental Graduate Studies Committee in the course of the research work. He should also produce, from the work, at least two conference papers and two journal articles accepted for presentation and publication in reputable academic conference proceedings and journals.

2.4 Programme Duration

Full-time candidates will be required to spend a minimum of 36 calendar months and a maximum of 60 calendar months, while part-time candidates will be required to spend a minimum of 60 calendar months and a maximum of 84 calendar months to complete the PhD (Civil Engineering) Programme.

2.5 General University Regulation

All the foregoing regulations are subject to the general University regulations covering PhD degree programmes.

2.6 Specialisation Codes for PhD (Civil Engineering) Programme

CEG 91 XX Geotechnical Engineering
CEG 92XX Highway and Transportation Engineering

CEG 94XX Structural Engineering
CEG 95XX Water Resources Engineering

2.7 Specialisation Code for PhD (Environmental Engineering) Programme

EVE 90XX Environmental Engineering

2.8 Prescribed Courses for PhD Programme

A student shall take major courses prescribed in the discipline of specialisation as will be advised by the academic advisers. These are detailed in the following course listings.

2.8.1 CEG 91XX: Geotechnical Engineering Specialisation

First Year: 1st Semester

Course Code	Course Title	Unit
CEG 910.1	Advanced Modelling and Numerical Techniques in Geomechanics	3

3. PhD COURSE DESCRIPTION

3.1 GEOTECHNICAL ENGINEERING COURSES:

CEG 910.1: Advanced Modelling techniques in Geomechanics

Introduction: Geotechnical Modelling of soil behaviour - Limit and Critical States (a Review); Constitutive Modelling: Elastic, elastic-plastic models; Numerical Modelling: Finite Element modelling, Finite differences; Physical Modelling: Dimensional analysis, Soil — Structure Interaction; Centrifuge Modelling; Theoretical Modelling; Application of Modelling techniques in solving Soil — Structure Interaction Problems.

CEG 913.1: Advanced Concepts in Engineering Behaviour of Soils

Parameters and representation of soil properties. Advanced concepts in Critical State Soil Mechanics - Limit and Critical State Models. Strength behaviour of simple contractive soils. Strength behaviour of dilative soils. Behaviour of heavily over-consolidated clays including residual strength. Quantitative models of pore pressure. Volume change and compressibility behaviour:

Consolidation, compression, creep and other time effects. Conduction phenomena-uncoupled and coupled. Sensitive soils. Stress-Deformation of soils. Models for stress-strain and other constitutive laws. Transient and dynamic loading response. Effects of cyclic loading. Failure theories.

CEG 915.1: Earthquake Engineering and Foundation Vibrations

Introduction: Dynamic Response Characteristics; Wave Propagation; Dynamic Soil properties; Foundation response to vibrations, Blasting Vibrations; Seismic slope stability analysis; Seismic design of retaining walls; Liquefaction; Seismic response of clays; Risk analysis and stability; offshore dynamics. Engineering earthquakes from engineering point of view; Earthquake mechanism; Basic characteristics of strong ground motion; Response of simple systems to earthquakes; structural design for earthquakes; seismic codes; earthquake resistant design: site effects; soil amplification; seismic risk and seismic design decisions; Soil-structure interaction; nuclear reactor containment structures; earth dam design (seismic); fluids in tanks and reservoirs; Blast loading.

CEG 916.2: Reliability of Geotechnical Systems

Basic probability theory and applications; common probability distributions and geotechnical applications; joint distributions; moment approximations; Reliability of soil structures; system reliability and applications; Geotechnical applications of entropy and least biased distribution, the hazard function; Applications of diffusion theory to subsidence, consolidation and stress distribution (Probability consolidation, probabilistic stress distribution); Markov Process and progressive slope failure; Time series analysis and groundwater fluctuation; Uncertainty and soil parameters; Decision making under uncertainty; site characterization.

CEG 917.2: Advanced Concepts in Theoretical Soil Mechanics

Stress distribution in soil: Concept of stress and strain; Elastic equations; Applications to various loading and boundary conditions in soil. Stability problems in soil: - Failure theories; Development of conventional stability methods; Effects of retaining wall movements; Sokolovski's method of characteristics. Consolidation: - Theoretical development and solution of one-dimensional consolidation; Higher-dimensional consolidation. Seepage: - Theory of groundwater movement; method of offragments.

CEG 918.2: Tunnel Engineering

Tunnel characteristics clearances and; Tunnel survey and preliminary investigation; soft ground tunneling; shield tunneling; Rock tunnels; mixed-face tunneling; Tunnel-boring machines; Material handling and construction plant: shotcrete; cut and cover construction; safety provisions; Drainage system; Tunnel operation and maintenance.

CEG 901.2: Seminar

This is a required course for all graduate students. Intensive review of the literature in the student's area of specialization will be required. A series of seminars will be delivered by students on topics of current interest. Guest Lecturers from both the department and outside (including the industry) will be invited to give seminar lectures on chosen topics of current academic and economic interest, such as those related to the safety and protection of the environment, and to quality management.

CEG 902.2: Research and Thesis

This is a directed research on problems in the student's area of specialization. Emphasis will be on the use of research methodology for scientific investigation leading to a written thesis.

3.2 STRUCTURAL ENGINEERING COURSES

CEG 940.1 Design of tall buildings

Influence of ground condition on choice of foundations for high rise building. Analysis of tall buildings for dead load, superimposed load, and winds. Design of high-rise steel building by elastic and inelastic methods. Design of high-rise concrete structure by ultimate strength method. Stability Analysis. Design Example.

CEG 941.1 Bridge Design

Bridge deck analysis. Precast bridge deck and composite bridge deck. Stiffened plate and box girders. Bridge abutments. Cable stayed bridges and suspension bridges. Bridge hydraulics. Design Example.

CEG 942.1 Concrete Materials, Properties & Practice

Properties and methods of testing concrete and concrete materials. Specification for aggregates. Statistics and quality control in the field. Concrete mix design. Construction techniques including form work, joints, water-retaining structures, repairs and maintenance. Rheological properties of fresh concrete. Engineering properties of concrete including time-dependent behaviour and climatic effects. Methods of testing.

CEG 943.2 Theory of Plates

Development of governing equations for thin rectangular plates: classical solution techniques

such as Navian, Levy and energy methods applied to circular plates on elastic foundation and orthotropic plates, large deflection theory. Variational techniques; the methods of Ritz, Galerkin and Kantorovitch. Introduction to shell theory, membrane hypothesis, Cylindrical Shells of revolution, translational shells, shallower-shell theory: the static-kinetic analogy of Gol'denceisers. Lur's and calladine, the duo-surface theory with numerical applications. Triangular and rectangular elements. Axi-symmetric and three-dimensional elements, isoparametric elements. Non-linear systems. Boundary element concepts. Finite strip, high temperature and rate dependent problems. Extensive utilization of FEM packages on engineering structures.

CEG 944.2 Experimental Stress Analysis

Experimental methods for measuring surface strains and stresses including mechanical, optical and electrical strain gauges. Moire and grid method, model laws and similitude, model techniques, analogies. General optics, theory of photo-elasticity, applications to two dimensional problems, materials and models.

CEG 945.1 Advanced Methods in Theory of Elasticity

Three-dimensional elasticity problems: problem formulation and solutions.

CEG 946.2 Advanced Theory of Plates

Thick plates, large deflection theory and applications. Anisotropic plate method of initial functions. Spline functions.

CEG 947.2 Theory of Shells

Membrane hypothesis and theory; bending stresses in long shell structures; cylindrical shells, shells of revolution, translational shells and domes. Stability and vibration of shells.

CEG 948.2 Stability of Structures

Buckling of elastic and inelastic columns, plates and frames, torsional and lateral buckling. Various methods of solutions.

3.3 WATER RESOURCES ENGINEERING COURSES

CEG 951.1 Finite Element Methods in Water Resources II

Application of finite element methods in model development, flood routing, groundwater flow and water quality simulation for initial and boundary value conditions. Application of existing commercial software in case studies for surface and sub-surface problems.

CEG 952.2 Advanced Surface Water Hydrology

Erosion, sedimentation, and the River basin; Deterministic hydrologic models. Types of deterministic models, structure of conceptual models, parameters and calibration, probability in hydrology - a basin for planning; stochastic hydrology, flow generation strategy, storage requirement from stochastic data, reservoir reliability and time trend, stochastic analysis of rainfall data. Applications of hydrology, flood regulation, channel improvement for flood mitigation, urban storm drainage.

CEG 953.1 Advanced Hydraulics II

Open channel flow through hydraulic structures, orifices, sluiceways, flow under gates, weirs, spillways, energy dissipators, design of sewers, water distribution for fire-fighting using available software (Epanent); complex structures - model analysis, general design considerations. Flow measurement from creeks, rivers and hydraulic structures.

CEG 954.2 Coastal Engineering and Bank Protection

Waves, motion and forces; spatially variable and unsteady flow; wave run-up and overtopping, wave forces; wind tides, shore-erosion control; bank erosion and deposition and shore protection.

CEG 955.1 Advanced Groundwater Hydrology

Measurement of hydraulic conductivity, transmissivity, specific yield and storage coefficient; Flow system analysis, models and unsaturated flow; surface-sub surface interaction; subsidence and lateral movement of the land surface due to groundwater pumping and groundwater quality and contamination.

CEG 956.1 Computer Methods in Water and Wastewater Engineering

Application of commercial software in water supply distribution network analysis; concept selection in wastewater design via Agglomerative hierarchy clustering; conventional wastewater design using variable parameters, i.e. temperature dependent parameters.

3.4 ENVIRONMENTAL ENGINEERING COURSES

EVE 903.1 Advanced Wastewater Treatment

Reactions and Reactors; Bio-kinetics of Wastewater Treatment and Applications; Nutrients Removal; Oxidation Ditch & Rotating Biological Reactor Design; Anaerobic Wastewater Treatment; Sludge Treatment.

EVE 904.1 Advanced Water Treatment

Review of Water Treatment processes; Water Disinfection; Water Softening; Iron & Manganese Removal; Membrane Filtration; Cooling Tower & Boiler Feedwater Treatment.

EVE 905.1 Noise Metrics and Control

Noise Propagation; Noise and Human Sensitivity; Noise Metrics; Noise Control

EVE 906.2 Oil and Gas Pollution

EVE 907.2 Meteorology & Air Pollution

Introduction to Air Pollution; Basic Meteorology; Atmospheric Dispersion of Pollutants; Cleansing the Atmosphere/Control of Air Pollution; Indoor Air & Hazardous Air Pollutants.

EVE 909.2 Hazardous & Radioactive Waste Management

ACADEMIC STAFF

S/No	Name	Qualification	Designation
1	Sule, Samuel	B.Sc (ABU); M.Eng (UNN)Ph.D (FUTO), R.Engr 27606	Senior Lecturer/HOD
2	Nwaogazie, Ify Lawrence	B.Sc, Civil Eng; M.Sc, Water Res (Kansas); Ph.D (Oklohoma State); FNSE; R. Engr (2455)	Professor
3	Nwofor, Temple Chukwumeka	B.Tech; M.Tech; PhD (RSUST),R.Engr (COREN) 16307	Professor
4	Eme, Dennis Budu	B.Tech; M.Tech (RSUST),Ph.D (UNN); R.Engr (COREN) 14231	Reader
5	Ugbebor, John Nwenaarizi	B.Sc (UNIPORT); M.ENG (UNIPORT); M.Sc (UNIPORT); Ph.D (UNN) (R21634)	Reader
6	Nwaobakata, Chukwuemeka	B.Tech; M.Tech (RSUST); Ph.D (UNN); R.Engr (COREN) 13346	Reader
7	Ugwoha, Ejikeme	B.Tech (RSUST); M.Sc (Newcastle); Ph.D (Nottingham) (R35508)	Reader
8	Momoh, Yusuf	B.Sc (UNIBEN); M.Sc (UNIPORT); PhD (UNIBEN)	Senior Lecturer
9	Udeh, Ngozi Uzor	B.Sc (ESUT); M.Eng (UNIPORT) Ph.D (UNN) (R16307)	Senior Lecturer
10	Awodiji, ChiomaTemitope Gloria	B.Eng, MEng Civil Eng (FUTO), Ph.D (FUTO) (R33348)	Senior Lecturer
11	Nwankwo, Chindo Anulika	B.Sc (EKPOMA); M.Sc (UNILAG); M.Eng (UNIPORT); Ph.D (Leeds) Environmental Engineering	Lecturer I
12	Ikebude, Chiedozie Francis	B.Eng, MEng Civil Eng (UPH), Ph.D (UNN) (R33750)	Lecturer I
13	Amah, Victor Emeka	B.Eng (UNIPORT); M.Eng (UNIPORT); Ph.D (UNN) (R38738)	Lecturer I
14	Raheem, Kazeem Adewunmi	B.Sc; M.Sc (Lagos)	Lecturer I
15	Nnenanya, Faith	B.Eng, Civil Eng (UPH), MSc Soil Mechanics (Imperial College London)	Lecturer II
16	Onu, Chikaodi Awuse	HND; B.Eng; M.Eng; P.hD (NAU) (R36382)	Lecturer II
17	Mohammed, Ganiyu Oluwaseun	B.Eng, Civil Eng (FUTA); M.Eng (UNIPORT) (R17681)	Lecturer II

DEPARTMENT OF ELECTRICAL/ELECTRONIC ENGINEERING

Introduction

The Department of Electrical/Electronic Engineering, University of Port Harcourt offers Post-Graduate programme leading to M.Eng. Degree. The objective of the programme is to give the students advanced courses in Electrical/Electronic Engineering concepts and experience in applying these concepts to actual Engineering problems. The courses are mission-oriented and closely linked with industry with a view to evolving practical solutions to modern day technological problems. A candidate will be required to specialize in one of the following areas: Power Systems and Machines or Electronics and Telecommunications.

Admission Requirements

The admission requirement for the M.Eng degree is a minimum of a Second Class lower degree in Electrical/Electronic Engineering. Requirement for Graduation. To satisfy the requirements for the award of the Masters degree, a student must accumulate a minimum of thirty (30) credit units, which shall include six taught courses and the Dissertation.

A Master student is required to give at least one departmental Seminar on his/her research work during the period of his/her study.

POWER SYSTEMS & MACHINES OPTION

First Semester

Course Code	Course Title	Unit
SGS 801.1	ICT and Research Methods	2
EEE 801.1	Advanced Experimentation and Seminar	3
EEE 802.1	Advanced Engineering Mathematics	3
EEE 804.1	Electrical Machine Theory	3
EEE 806.1	Power System Analysis	3
EEE 807.1	Relays and Power System Protection	3

Second Semester

Course Code	Course Title	Unit
SGS 801.2	Management and Entrepreneurship	2
EEE	(Elective 1)	3
EEE	(Elective 2)	3
EEE	(Elective 3)	3
EEE 829.2	M.Eng Project and Dissertation	6

Elective Courses (3 units each)

Course Code	Course Title	Unit
EEE 805.2	Electrical Machine Design	3
EEE 808.2	Energy Conversion and Utilization	3
EEE 809.2	High Voltage Technology and Electrical Materials	3
EEE 810.2	Optimization and Control of Integrated Power System	3
EEE 813.2	Electric Drives: Dynamics and Control	3
EEE 814.2	Power Electronics	3
EEE 815.2	System Design, Planning and Equipment	3
EEE 816.2	Unified Theory of Machines and Special Machines	3

ELECTRONICS & TELECOMMUNICATION OPTION

First Semester

Course Code	Course Title	Unit
SGS 801.2	Management and Entrepreneurship	2
EEE 801.1	Advanced Experimentation and Seminar	3
EEE 802.1	Advanced Engineering Mathematics/ Computer Science	3
EEE 817.1	Computers & Electronic Equipment Design	3
EEE 818.1	Advanced Electronics and Integrated Circuits	3
EEE 819.1	Analogue Communication Systems	3

Second Semester

Course Code	Course Title	Unit
SGS 801.2	Management and Entrepreneurship	2
EEE	(Elective 1)	3
EEE	(Elective 2)	3
EEE	(Elective 3)	3
EEE 829.2	M.Eng Project and Dissertation	6

Elective Courses (3 units each)

Course Code	Course Title	Unit
EEE 820.2	Antenna	3
EEE 821.2	Digital Communication Systems	3
EEE 823.2	Propagation and Microwave Electronics	3
EEE 825.2	Digital and Logic Systems	3
EEE 826.2	Solid State Engineering	3

steady state and transient operations of a d.c. and a.c. machines. Electro-mechanical dynamics. The two-axis theory of electrical machines and the differential equations forms of electrical machines. Characteristics of synchronous machines, steady transient, power angle excitation, synchronizing torque, and stability relations. The Asynchronous Machines Characteristics methods of analyzing and advanced treatment of circle diagram. Large Three- Phase Transformers and their cooling problems. Machines modeling in power systems.

Course Description

EEE 801.1 Advanced Experimentation and/or Design

Concurrently with the theoretical courses, at least two experiments or aspects of design work of a reasonable degree of difficulty shall be performed (or solved) and the report written up by each candidate. Allocation will normally be by the project supervisor.

EEE 802.1 Mathematics and Computer Science

Basic logical operations, logic elements and memories, numbering systems and codes. Hardware implementation arithmetic and control operations. Central processor structures and features. Machine language, Assemblers, Compilers and Operating Systems, Peripheral Devices and device characteristics. Interrupt and direct core access arrangement: special purpose facilities.

Mnemonic code; assembler language; Higher-level language, Fortran IV

Transform Methods - Laplace and Systems.

Definition and properties of Laplace transformation; transform relations for linear systems; forced and free response; transfer function; poles and zeros; stability; inverse Laplace transformation methods of residues; distribution systems; electrical and mechanical transmission lines; sampled systems, the x transform synchronous sampling theorem.

Statistics

Probability theory; frequency and probability distribution, expectations and moments classical distribution; binomial, poisson, Caussia, exponential central limit theorem and its significance, estimation and hypothesis testing; significance tests, confidence limits; regression and correlation.

EEE 804.1 Electrical Machine Theory

Basic rotating machine theory; energy flow, magnetic field and inductance relationships including electrochemical energy conversion; torque Equation, commutator actions, Flux and distributed winding mmf relations. A study of

EEE 806.1 Power Systems Analysis Review of Circuit Theorems

Power systems network representation. Per-unit systems. Solution of networks by mesh-current, branch-current, and nodal-voltage equations. Formulation of nodal admittance matrix for digital computer solution. Methods of solution using elimination matrix, inversion and iterative techniques. Acceleration and convergence.

Load Flow and Fault Analysis

Load flow analysis of large systems and use of digital computers. Three phase faults in Large Systems Symmetrical components and unbalanced fault analysis.

Power System Stability

Transient stability analysis using step-by-step and numerical integration methods. Comparison of digital computer and network analyzer solutions for power system problems.

EEE 815.1 System Design, Planning and Equipment

Power Systems Planning and Design

World energy resources. Methods of electrical power generation. Load forecasting and source analysis. Principles and practice of H. V. a.c. transmission and distribution. Mathematical methods used in planning of source utilization and transmission network. Generation scheduling.

Power System Equipment

Alternators: factors affecting size and design, special problems of turbo hydro-alternator construction and operation. Transformers; design, construction and operation. Switchgear, principles of circuit breaking, types, layout of sub-stations. Overload lines and cables, fabrication, erection and use.

EEE 816.1. Information Theory, Coding and Noise

Information Theory

The concept of information measure. Information content and information transfer in discrete noiseless and noisy channels. Entry definition, channel matrix and channel capacity. Coding to

match source to channel, entropy of continuous random-variables. Relative Entropy, Capacity of channel distributed by white additive Gaussian noise. Capacity of a band-limited channel.

Coding for Noise Channels

Systematic Block Codes. Hamming Distance; minimum distance groups and rules for optimal, groups. Algebraic code: general generator matrix; message matrix purity check matrix, error syndrome. Cyclic codes: generation of cyclic codes: generation of cyclic codes using shift registers. Decoding for cyclic codes Meggitt Decoder. Furor Trapping Decoding.

Noise

Stochastic Processes Stationary Process (Strict and wide sense). Properties of Gaussian and Poison Processes, Gaussian Noise and impulsive Noise as a Stochastic processes.

EEE 817.1 Computers and Electronic Equipment Design

Analogue Computing

Basic analogue techniques for system simulation; simulation of non-linear systems, time and amplitude- scaling methods, checking procedures control of the analogue computer use of logic and hybrid systems.

Micro-Computer

Nature and functions of microprocessors: architecture of a micro-processor and a microcomputer system instruction sets and assembly languages Gross assemblers and simulators inputs and interrupts, typical applications.

Desin of Electric Equipment

Need for a rational approach to design problems in electronic engineering. Basic elements of design; technical economic, ergonomic and aesthetic. Design by evolution and innovation. Elements of the theory of reliability. Reliability and its economic significance. Relationship between designing, development and production. Maintenance and organization of maintenance service.

EEE 818.1 Advanced Electronic and Integrated Circuits

Electronic Analogue Device

The ideal operational amplifier: physical limitations; considerations of gain, bandwidth, CMRR: a working model: common configurations: inverting, non- inverting, difference modes, other application, voltage and current source, the oscillators, rectifier, buffer, comparator, balanced-unbalanced systems: noise from external fields; choice of configurations: the

instrument amplifier: use of guard system: diode function generator: square low and multiplication: division: transconductance methods: log function generator: multiplication: temperature effects: analysis and design of active filter: circuits: stability of feedback configurations, compensation circuits.

Digital Integrated Circuits

Properties of available commercial devices: evolution of the integrated circuits: transistor-transistor logic in small, medium and large-scale packages. MOS devices; construction and utilization of systems based on digital integrated circuits manipulation of digital signal, conversion of signals from analogue to digital form, digital storage of information.

EEE 819.1 Analogue Communication Systems

Television

TV signals, monochrome vision, photometry, illumination, colour vision and colourimetry TV systems, transmission of monochrome vision and chrominance values.

Telephony

General principles of Telephony and the description of the public telephone systems: relays, construction, types and performance characteristics. Signaling; introduction, principles and types. Switching: manual, and automatic, selector mechanisms, crossbar and electronic exchangers. Traffic and trucking distribution frames.

Satellite Communication

Introduction, Design of Satellite systems, multiple access techniques, modulation techniques, ground station, future trends, and the Nigerian domestic satellite systems.

EEE 820.1 Antenna

Electromagnetic Theory

Review of Maxwell's equations. General theory of wave propagation radiation, scattering and diffraction with appropriate introduction to the mathematical techniques used.

Antennas

Factors determining the design of antennas, calculating radiating apertures, control of beam shapes sidelobes. Complementary antennas. Radiation resistance and input impedance. Power gain, microwave antennas, scanning wide-band antenna. Adaptive antennas. Practical forms of antennas in the band 30KHz - 30GHz.

EEE 805.2 Electrical Machine Design

Principles of electrical machines and design. The output equation, the calculation of machine

parameters, saturation problems in machine design, specific electric and magnetic loading related to cooling of machines specific design problems and computer-aided design of electrical machines. Definition of classification of windings, coil construction and insulation, physical problems connected with single and double layer winding voltage analysis of windings, distribution factor, interspersing, pitch factors and; electrical short pitching, fractional slot winding, slot-star diagrams; MP Analysis of windings; fundamental and harmonics rotating fields; principles and analysis of close-ratio windings, three-phase symmetrization.

EEE 807.2 Relays and Power System Protection

The concept of protective relaying in power systems. Distance relaying. Differential relaying protective systems in generators motors and transformers. Basic principles of relay design, construction, characteristics application and testing.

EEE 808.2 Energy Conversion and Utilization *Terrestrial and Thermodynamic Limitations*

Introduction. Energy crisis, Energy consumption Units and growth rate. Fossil fuel reserves. Terrestrial Limitations, solar radiation, solar energy balance of the earth. Reflectivity and Emissivity constants. Carbon dioxide generation and atmospheric pollution. Thermodynamic limitations; laws of thermodynamics, cycles and their efficiencies and related types of engines.

Electrical Energy Production

Steam and Gas turbines, and combined cycles, magnetohydro dynamic, environmental considerations, fuel cells. Introduction to nuclear fission; excess mass and binding energies, radioactive decay, fusion chain reaction, thermal neutron reactors, fast breeder reactors, radiation; fission waste disposals and other limitations. Fusion: requirements for thermonuclear fusion devices. Laser induced fusion.

Other Energy Sources and Utilization

Solar Energy, Solar potentials, incident radiation, collectors, low and high temperature applications, thermal generation of electricity, cooling, photovoltaic solar cells, photosynthesis. Water, wind and geothermal power, hydropower (more detailed study). Tidal power, power from ocean temperature gradients, wind power, geothermal power. Energy Usage: Energy Conservation, effective utilization, energy economy, input-output analysis, energy per Naira value of goods and services, social implications.

EEE 809.2 High Voltage Technology and Electrical Materials

High Voltage Technology and Testing Methods

H.V. cascade transformers and series resonant testing; d.c. multiplier circuits, impulses generation and analysis; sphere gasps potential dividers and measurements; insulator strings and voltage distribution surges in transformer windings; corona and radio interference.

High Voltage dielectric Phenomena

Calculation of electric fields in solid, liquid and gaseous dielectrics, avalanche and steamer breakdown in gases, dielectric loss, relaxation and breakdown mechanism in solids. Conduction and breakdown in dielectric liquids, vacuum insulation; special problems associated with high voltage apparatus.

Electric Materials

Introduction to conducting magnetic and insulating materials: structure and properties of thin films, electronic transportation properties of solid characteristics of dielectric materials, conducting materials and introduction to superconductivity; theoretical and experimental magnetism, preparation and properties of materials.

EEE 810.2 Optimization and Control of Integrated Power Systems

Requirement of Economic Dispatch, Systems with Transmission Losses, Coordination using the digital computer, Economic operation of Inter-connected systems load-frequency control, combined effect of steam, hydro-and gas-turbine power generating systems. Introduction to the state space, solution of matrix differential equation concepts of controllability. Consideration of the stability on non-linear system modeling techniques.

EEE 813.2 Electric Drives: Dynamics and Control Theory

Review of differential equations and their solutions. Transfer function and frequency response functions. Bode diagrams, Nyquist diagrams and Nyquist stability theorem. Nicholas chart root locus methods. Use of these techniques in the design of electric drive system.

Drive Systems (Steady State and Transient Characteristics)

Fundamentals of Electric Drives, Speed Control of electric drives, Motor power rating, selection and load diagrams. Automatic Electric drive systems; Open-loop and closed-loop automatic drive control systems. Typical controls of electric drives. Transients and dynamics of drive systems.

EEE 814.2 Power Electronics

Properties of thyristors and power transistors. Controlled rectifier line commutated inverter

circuits. A.c to d.c. power conversion using time ratio control. The control of d.c. mechanics. Impulse commutated inverters, waveform synthesis techniques, and control circuits.

EEE 816.2 Unified Theory of Machines and Special Machines

Unified Theory of Machines

Unified theory of machines and representation methods of machine analysis, steady state performance characteristics of a.c. machines, general equations of a.c. machines, the a.c. machines.

Special Machines

Homopolar machines, inductor machines, stepped motors, induction regulators and generators, rectifiers and inverters, introduction to linear motors, PAM motors, and super conducting machinery.

EEE 823.2 Radiowave Propagation and Microwave Circuit

Microwave Circuits

Behaviour of wavelength modes: transmission line analogies discontinuities. Wavelength junctions and the scattering matrix. Properties and design of microwave components, synthesis techniques. Microwave measure.

Radio- Wave Propagation

Propagation of radio waves over the ground; effect of ground constants and surface irregularities. Tropospheric propagation; effect of obstacles and weather. Propagation using scatter techniques. Impact of propagation considering on the planning of communication systems in the band 30KHz - 30GHz.

Microwave Electronics

Microwave tubes, basic introductory concepts, space- charge wave theory and velocity modulation, klystrons and performance characteristics: Parametric amplifiers: p-n diodes and Manley-Rowe relations, characteristics and types of parametric amplifier linearised equations, negative-resistance parametric amplifiers.

EEE 825.2 Digital and Logical Systems

The processing of information in digital form, the analysis and synthesis of logical systems; combinational sequential systems: switching algebra; systematic method amplification switching systems; race hazards, digital arithmetic processes: the addition, subtraction, multiplication and division of digital information, encoding and decoding, error detection and correction.

EEE 826.2 Solid State Engineering

Semi conductin Materials

Significance of semiconducting materials. Intrinsic, impurity, compound semiconductors; conduction mechanism; holes and electrons, drift; diffusion; internal fields and contract potential difference; the p-a junction; depletion layers control of junction properties by impurities, d.c. Characteristics, depletion and diffusion capacitances, transient charges, storage effects; transistors operation and parameters; origins of quantum theory of electron energies, fonn level application of the foregoing theory to metals, insulators and semiconductors; the tunnel effect; meal to semiconductor contact; the Schottsky diode: physical mechanism of field effect transistors: Hall effect.

Fabrication of Semi-Conductor Devices

Diodes: Transistors, C.M.D.S., ITL and ECL integrated circuits. Analog devices; multipliers, operational amplifiers, modulators, Microprocessor chips using Large Scale Integration.

10	Omeje, C. O.	B.Eng, M.Eng, PhD (UNN); <i>MNSE, R.Eng</i>	Power Electronics	Senior Lecturer
11	Esobinenwu C. S.	B.Sc.(Ed), B.Tech(RSU), M.Eng (Uniport), PhD	Power Systems Engineering	Senior Lecturer
12	Okeke, R. O	B.Eng (ESUT), M.Eng (UK), PhD; <i>MNSE, R.ENG</i>	Communications Engineering	Senior Lecturer
13	Big-Alabo, A	B.Eng, M.Eng (Uniport), M.Sc. PhD	Renewable Energy	Senior Lecturer
14	Ehikhamenle, M.	B.Eng (A.A.U), M.Eng (UNIBEN), PhD (Umudike); <i>MNSE, R.ENG</i>	Electronic and Telecommunications Engineering	Senior Lecturer
15	Ezeofor, C. J.	B.Eng (ESUT), M.Eng (FUTO), PhD (NAU, Awka)	Computer /Control Engineering	Senior Lecturer
16	Akinwole, B.O.H.	B.Eng, M.Eng (UNIPORT),	Electronic/Telecommunications Engineering	Lecturer I
17	Ekpah, D. A.	B.Eng, M.Eng (UNN), PhD (Uniport)	Communication Engineering, Network Security	Lecturer I

18	Uchendu, I.E.	B.Eng(UNIPORT),M.Eng(Teeside), PhD(Surrey)	Electronics and Communication Engineering	Lecturer I
19	Ogbonna, B. O.	B.Eng, M.Eng (UNIPORT), PhD (RSU)	Power Systems Engineering	Lecturer II
20	Owuda, L. S.	HND, B.Eng, M.Eng, PhD	Power Systems and Electrical Machines	Lecturer II
21	Onu, I. P.	B.Eng, M.Sc. (UNIPORT)	Communications Engineering	Assistant Lecturer

DEPARTMENT OF MECHANICAL ENGINEERING

POSTGRADUATE DEGREE PROGRAMMES

The Department of Mechanical Engineering offers three postgraduate degree programmes leading to the award of Postgraduate Diploma (PGD, Mech. Eng), Master's of Engineering (M. Eng) degree and Doctor of Philosophy (PhD) degree in Mechanical Engineering. Details of these programmes are presented below.

1. Postgraduate Diploma in Mechanical Engineering

1.1 Programme Objective

The postgraduate Diploma programme in mechanical engineering has been designed for degree holders in mechanical engineering who wish to improve the quality of their degree in order to meet the requirements for admission into the Masters of Engineering programme of the Department. It is also designed for degree holders from other engineering fields who wish to change to a career in mechanical engineering, and/or take up the opportunities for a higher degree made available in the Masters of Engineering degree and Doctor of Philosophy degree programmes of the Department. The programme provides adequate grounding for the new comer to enable him bridge over the differences between his former field of engineering and the new one.

1.2 Admission Requirements

Candidates for the Postgraduate Diploma in Mechanical Engineering must possess a Bachelors degree in engineering from a reputable university

with a minimum of third class honours for graduates of mechanical engineering, or a minimum of second class lower division for graduates of other related engineering fields.

1.3 Programme Duration

The programme shall normally last for a minimum of four (4) semesters and a maximum of six (6) semesters of full time study, or a minimum of six (6) semesters and a maximum of eight (8) semesters of part time study.

1.4 Classes of Postgraduate Diploma Award

The Postgraduate Diploma in Mechanical Engineering shall be awarded with distinction, upper credit, lower credit or pass based on the candidate's performance on the course. A distinction shall be awarded if a candidate achieved a cumulative grade point average (CGPA) of 4.50 – 5.00, upper credit for a CGPA of 4.00 – 4.49, lower credit for a CGPA of 3.50-3.99 and a pass for a CGPA of 3.00 – 3.49.

1.5 Criteria for the Award of the Postgraduate Diploma

A candidate for the Postgraduate Diploma degree must:

- (a) Complete and pass all courses recommended by the Department;
- (b) Fulfil the general University requirements for studies leading to the award of a postgraduate diploma; and
- (c) Fulfil all other requirements by the Department in connection with the programme of study.

1.6 COURSE OUTLINE

First Semester

S/No.	Course Code	Course Title	L	T	P	CU
1.	DME 701.1	Engineering Mathematics I (Mathematical Analysis I, Probability and Statistics)	2	2	0	3
2.	DME 703.1	Engineer-in-Society	2	2	0	3
3.	DME 705.1	Basic Software Engineering	1	2	3	3
4.	DME 707.1	Engineering Materials, Selection and Applications	1	2	3	3
5.	DME 709.1	Mechanics of Machines and Mechanisms	1	2	3	3
6.	DME 711.1	Engineering and Machine Drawing	1	0	6	3
			8	10	15	18

Second Semester

S/No.	Course Code	Course Title	L	T	P	CU
1.	DME 702.2	Engineering Mathematics II (Mathematical Analysis II & Numerical Methods)	1	2	3	3
2.	DME 704.2	Mechanical Engineering Design and CAD/CAM	1	2	3	3
3.	DME 706.2	Manufacturing Processes	1	0	3	3
4.	DME 708.2	Strength of Materials, Vibration and Noise	1	2	3	3
5.	DME 710.2	Engineering Thermodynamics	1	2	3	3
6.	DME 712.2	Fluid Mechanics and Turbomachinery	1	2	3	3
			6	10	18	18

Third Semester

S/N	Course Code	Course Title	L	T	P	CU
1.	DME 721.3	Professional Practice and Technoentrepreneurship	2	2	0	3
2.	DME 723.3	Technical Writing and Seminar	1	2	0	3
3.	DME 725.3	Engineering Management and Economics	2	2	0	3
4.	DME 727.3	Principles of Industrial and Production Engineering	1	2	0	3
5.	DME 729.3	Heat and Mass Transfer	1	2	3	3
			7	10	06	15

Fourth Semester

S/N	Course Code	Course Title	L	T	P	CU
1.	DME 700.4	Mechanical Engineering Final Project	0	0	18	6
2.	DME 722.4	Principles of Air-conditioning and Refrigerating Engineering	1	2	0	3
3.	DME 724.4	Principles of Automotive and Power Plant Engineering	1	2	0	3
4.	DME 726.4	Instrumentation and Control Engineering	1	2	3	3
			3	6	21	15

1.7 Course Content**DME 700.4 Mechanical Engineering Final Project (6 Credits)**

An individually supervised research/design project on any mechanical engineering topic of current local, national and/or professional interest chosen by the student-lecturer team; the final-year project must contain quantitative analysis and simulation using computer, and the project report presented in the approved Faculty format. *Pre-requisite:* Good academic standing.

DME 701.1 Engineering Mathematics I (Mathematical Analysis I, Probability and Statistics) (3 Credits)

Review of plane analytical geometry; determinants and systems of linear algebraic equations, solid analytic geometry; matrices, eigenvalues and eigenvectors; engineering applications of algebra and analytic geometry; derivatives, differentials and differential calculus, Taylor's series, and function extrema; vectors: linear spaces, vector function of a scalar argument; partial derivatives and differentials of first and higher orders.

Theory of probability: independence of events, Bernoulli trials; discrete and continuous random variables, mass, distribution, and generating functions, failure density, hazard function, some important distributions; stochastic process, Bernoulli, Poisson, and renewal processes, availability analysis, random incidence; introduction to discrete and continuous Markov chains; statistical inference, parameter estimation, hypothesis testing; regression, correlation, analysis of variance, time series analysis, and application to engineering problems; engineering

applications of the topics considered must be emphasised.

DME 702.2 Engineering Mathematics II (Mathematical Analysis II & Numerical Methods) (3 Credits)

Vector field: vector lines, gradient, divergence, circulation, rotation, Green's, Stokes' and divergence theorems; differential operators in curvilinear orthogonal coordinate system. Series: number, functional, power and trigonometric series; orthogonality and orthogonal functions; Fourier series in normal and complex forms; Parseval relation; Hilbert space; Laplace and Fourier transforms; Special functions; ordinary differential equations (ODEs): first-order equations; geometric interpretation; integrable equations; exponential solution; exact differential equation; singular points and solutions; integration by differentiation; higher-order equations and systems of differential equations; linear equations of the general form: homogenous and non-homogenous equations; boundary-value problems; linear equations with constant coefficients, Euler's equations, operator method of solution; systems of linear equations, applications for Lyapunov stability test; examples of modelling engineering problems by ODEs; introduction to partial differential equations, classes, and solution by the separation of variables.

Review of the number systems and error analysis; Numerical schemes, error analysis, computer pseudocode algorithms and programs for the solution of the following problems: interpolation by polynomial; nonlinear equations; systems of linear equations, determinants and matrix eigenvalue problems; approximations: data fitting, orthogonal polynomials, least-squares, splines and

fast Fourier transforms; differentiation and integration; difference equations; Introduction to the finite-difference method for partial differential equations; Numerical solutions to the problems considered are generated in MS Excel, Visual Basic, MatLab and/or C⁺⁺.

DME 703.1 Engineer-in-Society (1 Credits)

History of engineering and engineering technology, development of engineering in Nigeria; modern engineering professional practice, team work in engineering, engineering education, branches and functions of engineering, role of engineering in nation building; engineering methods, creativity, and innovation; engineering societies; engineering ethics and code of conduct; safety in engineering; engineering problem solving; computers in engineering analysis, graphics, systems and processes; application of mathematics, physics, chemistry, biology and social sciences in engineering; engineering and the environment; entrepreneurship in engineering, engineering infrastructure and national development.

DME 704.2 Mechanical Component Design and CAD/CAM (3 Credits)

The design process; reliability and economics in design for production; strength, wear and material consideration; review of the basic types of force systems and stresses encountered in design; design of keys and pins, bolted, riveted, welded, brazed and bonded joints; design of springs and cast structures; review of interchangeability problems; use of codes, standards, charts, tables, empirical data, and computer data bases in mechanical design; design of thin pressure vessels, tanks, and thick walled vessels; shafting and the design of shafts and axles, pulleys and belt drives; design of gears, bearings and bearing selection; introduction to CAD/CAM and computer integrated manufacturing (CIM); geometric modelling; automated drafting and manufacturing systems; work piece handling; programmable controllers and their programming; numerical control and robotics, individual tutorial assignments and group design projects of local industrial interest are envisaged.

Laboratory: Laboratory sessions are individual/group projects on design of major machine elements using computer and manual drafting facilities; practice using Pro/Engineer for computer-aided drafting and CNC part programming to manufacture selected jobs using computer; completed design projects are properly presented and assessed in a seminar.

DME 705.1 Basic Software Engineering (3 Credits)

Computers and computer technology: hardware and software; computer applications; software packages of engineering interest; computer programming languages: syntax and semantics, assembly and high-level languages, procedural and object-oriented languages; design of computer algorithms: flow chart and pseudocode algorithms; pseudocode features, repetition, data specification, condition and logical operators; top-down design and bottom-up design; stepwise refinements; modularity; recursion; parallelism; complexity and correctness of algorithms; testing and debugging techniques; documentation and standards; the fundamental pseudocode algorithms, including sorting and searching; computer data processing and application packages; programing in Visual Basic, Pascal and the latest version of FORTRAN. Introduction to C programming, C⁺⁺ and Java, structured program development in C, program control and functions; arrays, pointers, characters and strings, formatted input/output; structures, unions, bit manipulations and enumerations; files and streams, data structures, dynamic memory allocation; Java object-based programming , Introduction to the software development process, The Unified Modelling Language (UML) in software design; the user-case diagram; development of Window-Based applications and Web-Based application.

Laboratory: Hands-on practice in Windows environment on the use of word processing, spreadsheet, graphic, presentation and data-base software packages; implementation of computer programs written in Visual Basic, Pascal, latest FORTRAN version, and other procedural languages of engineering interest; MATLAB and Pro/Engineer software packages; Individual/group project on software design and implementation using C⁺⁺ and Java.

DME 706.2 Manufacturing Processes (3 Credits)

Review of the basic manufacturing processes: solid state, plastic, material removal and forming; mechanics of metal cutting and machining; tools, speeds and feeds in machining, cutting tool geometry, tool signature; drilling and reaming; multipoint cutting tools; grinding wheels; tool failure and tool wear mechanisms; cutting fluids; machinability; drilling, planing and milling machines-block diagrams; surface finish of machine parts; production, turning and milling operations and machines; gear cutting, broaching, sawing; production grinding, tool and cutter grinding, surface and abrasive belt grinding; precision and surface finishing, lapping, honing, polishing and buffing; chipless material removal processes; introduction to foundry technology;

computer algorithms and programs for the design and control of manufacturing processes.

DME 707.1 Engineering Materials, Selection and Applications (3 Credit)

Atomic and crystal structure; crystal imperfections and impurities in solids; fundamentals of crystallography; atomic vibrations and diffusion; mechanical properties - engineering and true stress - strain curves, ultimate strength, ductility, impact strength, hardness; electrical, optical and magnetic properties of materials; phase diagrams of alloys; creep, fatigue; heat treatment processes; stability of materials in the service environment - corrosive media, sub-zero and elevated temperatures, corrosion and oxidation; corrosion prevention, measurement and monitoring; basic criteria for the selection of materials for engineering applications; engineering properties of wood, concrete, ceramics, polymers, and non-ferrous metals and alloys, and composites

Laboratory: Laboratory sessions are based on materials covered in the course.

DME 708.2 Strength of Materials, Vibration and Noise (3 Credits)

Force equilibrium - free body diagrams; centroids and second moment of area; stress and strain; stress-strain diagram; axially loaded members; composite bars; temperature stresses; relation between elastic constants; thin cylindrical, spherical and conical pressure vessels, cylindrical shells with rings, torsion of circular shafts and power transmission of shafts; axial force, shear force and bending moment diagrams; pure bending of beams, bending stresses in composite beams, shearing stresses in beams, complex stresses; principal stresses; bending of beams with unsymmetrical sections, skew bending, bending of curved bars, thin plates, beams on elastic foundations; torsion of thin walled sections; statically indeterminate systems and stability analysis; introduction to plastic behaviour of materials, elastic, perfectly plastic and strain hardening materials, linear viscoelastic materials, theories of failure; problems in stress analysis; thin shells of revolution, pressure vessels, stresses due to shrinkage fit, concentrated forces, contact stresses. Detailed treatment of the one-degree-of-freedom systems in mechanical vibrations; multi-degrees-of-freedom systems by receptance and impedance methods; selected topics, including rigid body vibrations on elastic soils and perturbation methods of non-linear vibrations; vibration and noise control; computer-aided vibration and noise analysis and control; individual tutorial assignments and group term projects of local industrial interest are envisaged.

Laboratory: Laboratory sessions are based on materials covered in the course.

DME 709.1 Mechanics of Machines and Mechanisms (3 Credits)

The concepts of mechanisms, linkages, kinematic pairs, kinematic chains and kinematic inversion; types of mechanisms, slider crank mechanism; kinematic and kinetic analysis; coupler curves, velocity and acceleration, static and dynamic forces; kinematic synthesis, computer techniques; cam design; theory of involute gearing; simple, compound and epicyclic gear trains; dynamics of rotating and reciprocating machines; static and dynamic balancing of machines; balancing of rotating masses, governors; tribology: friction, wear and lubrication; applications in kinematics, selection of power screws, belt and rope drives, chains, brakes and clutches; hydrodynamic and hydrostatic lubrication; journal bearings, Reynolds equation, graphical solutions, oil and gas bearings; hydrodynamic drives; torque converters; introduction to vibration and noise; tropicalisation of mechanical components and systems; computational procedures and software packages for the analysis of mechanics of machines and mechanisms problems. Individual tutorial assignments and group term projects of local industrial interest are envisaged.

Laboratory: Laboratory sessions are based on materials covered in the course.

DME 710.2 Engineering Thermodynamics (3 Credits)

Basic concepts, definitions, thermodynamic properties; the thermodynamic system units; equations of state for perfect and real gases, and gas mixtures; thermodynamic work and heat; the First law of thermodynamics; energy equations; basic thermodynamic processes and cycles for ideal gas, pure substance and mixtures; power and reversed cycles, gas and vapour cycles, turbines and jet engines, nozzles and diffusers; reactive systems, thermodynamics of combustion; thermodynamic relations, Helmholtz and Gibbs functions; the Second law of thermodynamics, introduction to irreversible processes, exergy and exergoeconomic analysis.

Laboratory: Laboratory sessions are based on materials covered in the course

DME 711.1 Engineering and Machine Drawing (3 Credits)

Review of drawing instruments and their proper use, size of paper and drawing layout, dimensioning, line work and lettering; geometrical constructions and engineering graphics; development of geometrical figures and intersection of solids and curves; orthographic projections in first and third angles; isometric projection, sections and sectioning, auxiliary views and staggered sectioning; freehand sketching; conventional practice with simple

examples, including threads and threaded fasteners, cam profiles and assembly drawings from detailed components; fits, limits and tolerances; BS standards; the use of parametric drafting technology: AutoCAD, Mechanical Desktop, Autodesk Inventor and Pro/Engineer, for mechanical engineering component and assembly drawing, threads and fasteners, cam profiles and gears, detail and assembly drawings, section views, and dimensioning and tolerancing; 3D object creation using animation software, composing video segments and using audio tracks in animation; hand-on sessions, individual assignments, and group term projects are crucial aspects of this course.

DME 712.2 Fluid Mechanics and Turbomachinery (3 Credits)

Fluid properties, fluid statics, principles of fluid flow and applications, flow measurements; continuity, energy and momentum equations and their applications; ideal flow, vorticity, potential and stream functions, irrotational flows, flow fields; viscous flow, Prandtl mixing length; fluid resistance: laminar and turbulent, flow through pipe systems and the Moody chart; boundary layer theory, drag on immersed bodies; lift aerofoil theory; compressible flow, 1-D isentropic flow, venturies and orifices, De-Laval nozzle, shock waves, Fanno and Rayleigh flows, isothermal flow; unified principles underlying the design of pumps, turbines, compressors and fans; similarity and scaling laws; cavitation; aerodynamic analysis and design of axial flow and radial flow compressors, steam and gas turbines; unified principles underlying the design of pumps, turbines, compressors and fans; similarity and scaling laws; cavitation; aerodynamic analysis and design of axial flow and radial flow compressors, steam and gas turbines; meridional flow analysis for general equilibrium; centrifugal compressor modelling; unsteady flow; rotating stall and surge; turbomachinery selection; computer-aided fluid flow analysis and turbomachinery design and selection.

Laboratory: Laboratory sessions involve experimentation/testing of fluid flow machines and networks.

DME 721.3 Engineering Professional Practice and Technoentrepreneurship (3 Credits)

Engineering Professional Practice, Ethics and Law: Registration of engineers, the engineer's functions, responsibilities and liabilities; the Council for the Regulation of Engineering in Nigeria (COREN), the Nigerian Society of Engineers (NSE) and professional practice in Nigeria; engineering professional ethics and code of conduct; engineering projects; research and development; design, manufacturing, construction,

and sales and marketing functions; engineering decisions; engineering communication; introduction to the Nigerian legal system, classification and sources of law, the Nigerian courts; the law of contracts and agency; engineering contracts; intellectual property; industrial legislations: safety, health and workers' welfare; industrial relations.

Technoentrepreneurship: Review of the basic entrepreneurship concepts, organising innovative teams, and enterprise formation, operation, and closure; technoentrepreneurship, technology-based innovations; technology sales and management; identifying and quantifying market opportunities for technology-based products/services; conceptualising, planning and starting a new technology-based enterprise; small- and medium-scale engineering enterprises (SMEEs): opportunity and risk assessment; product development and testing; manufacturing/construction, quality and safety assurance, technomarketing, e-commerce; supply chain coordination; facility maintenance; maintaining corporate health; statutory regulations and government policies; cyber law; identifying potential SMEE products and services of local and national interest; managing a technology-induced changing business environment.

DME 722.4 Principles of Air-conditioning and Refrigerating Engineering (2 Credits)

Introduction to heating, cooling, ventilating, refrigerating and air-conditioning engineering, history, application areas; psychrometry, instruments and measurements, energy resources, computer applications; environmental quality, gaseous and particulate air contaminants, sound and vibration control; materials and processes, refrigerants, brines, lubrication, water treatment; load calculations and energy requirements, load data and procedure, ventilation requirements and infiltration, energy calculations, indoor environmental modelling; ventilation and air distribution, fans, duct design, room air distribution, air pollution control, air-to-air energy recovery, fire and smoke control, industrial ventilation; heating and cooling systems, renewable energy utilisation, thermal storage, fuels and combustion; air-conditioning and refrigerating system components, systems and applications, compressors, absorption machines, heat exchangers, humidifiers, pumps, piping, ducting, motors and controls; large building, industrial, transportation, heat-pump, laboratory, and clean-space air-conditioning systems, custom-made, ice-making, cryogenic, transport, and food and beverage refrigerating systems; energy storage; economics of air-conditioning and refrigerating plants; computer-assisted air-

conditioning and refrigerating engineering analysis and design; industrial visits to key industrial ventilating, air-conditioning, and refrigerating facilities in the country are required; individual tutorial assignments and group term projects of local and/or national interest are envisaged.

DME 723.3 Technical Writing and Seminar (3 Credits)

Introduction to technical writing and presentation, scope and history; starting and writing a technical writing project, progress report, proposals, final-year project report, thesis, dissertation, and scientific papers (journal and conference papers); ethics of scientific publishing; formatting and writing the report: title, authors' names and addresses, abstract, introduction, literature review, main body, results and discussion, conclusions and recommendations; acknowledgements, references, and appendices; preparing and placing tables, figures, graphs, photos, equations, etc.; referencing systems: in-text citation and the list of references; writing a textbook, a book chapter, opinions, for the public; technical correspondence: letters of inquiry and replies, letters of application and memoranda; copyrights and permissions; oral and visual presentations; computer-aided technical writing and presentation; use of word processing, spreadsheet and data-base software packages. Students are required to present individual or group seminar on topics related to their final project, DME 700.4

DME 724.4 Principles of Automotive and Power Plant Engineering (2 Credits)

Review of thermodynamic cycles of internal and external combustion engines; theoretical and actual cycles; spark ignition and compression ignition engines; cycles of supercharged and turbocharged engines; operating principles of two stroke and four stroke engines; principles of carburettor and diesel fuel injection systems; combustion in internal combustion engines; microprocessors in automotive engines; the world and Nigeria's energy supplies and demands; methods of electrical power generation; steam-turbine power generation cycles, steam generators and turbines, condensers, feedwater pumps and auxiliaries; gas-turbine power generation cycles, turbocompressors, gas turbines, combustors and auxiliary equipment; cogeneration and combined power generation; nuclear power generation; hydropower generation; energy storage; economics of power generation; computer-aided automotive and powerplant engineering analysis and design; industrial visits to at least one each of the hydro-, steam- and gas-turbine or combined power stations in the country are required; individual tutorial

assignments and group term projects of local and/or national interest are envisaged.

DME 725.3 Engineering Management and Economics (3 Credits)

Scope of engineering investment decisions; compounding, discounting, and economic equivalence; cash flow analysis and inflation; choosing between alternatives: methods for evaluating investments; depreciation, taxes, and cost of capital; comparing alternative investments; replacement analysis; budget and budget control, evaluation of public projects; decision and cost analysis; lease-or-buy decisions; economic feasibility study of engineering projects. Organisational structure, goals and functions; project planning and control; cost engineering; capital and operating cost estimating, contingencies and allowances; production forecasts, phases and constraints, decline functions; productivity improvement; purchasing and materials management; maintenance management.

DME 726.4 Instrumentation and Control Engineering (3 Credits)

General characteristics of measuring systems; error analysis; mechanical instrumentation: interferometry; dimensional and angular measurement; measurement of strain, time, speed, acceleration, frequency, force, power, pressure, fluid flow and temperature; intelligent instrumentation: sensing elements, transducers and interfaces; analogue-digital data sampling and conversion; semiconductor devices; oscillators; amplifiers; filters and rectification process; logic gates and switching devices; microprocessors and control; introduction to mechatronic engineering principles; basic concepts of control engineering, history, feedback control, control system design; mathematical models of systems, differential equations and linear approximation of physical systems, Laplace transform, transfer functions, block diagrams and signal flow models, MATLAB simulation tool; servomechanisms, components, transfer functions and analysis; control systems; state variable models, state differential equations, signal-flow state models, transfer functions, time response and the state transition matrix, discrete time response; feedback control system characteristics, open- and closed-loop control systems, transient response control, disturbance signals, steady-state error; performance of feedback control systems; stability of linear feedback control systems; the root locus methods, parameter design, sensitivity, PID controllers; frequency response methods, frequency response plots, Bode diagram; stability in the frequency domain, the Nyquist criterion, system bandwidth, PID controllers in the frequency domain; design of feedback control

systems using Bode diagram and root locus; design of state variable feedback systems; Robust control systems; digital control systems, applications, the z-transform, closed-loop feedback sampled-data systems, implementation of digital controllers; individual tutorial assignments and group term projects of local industrial interest are envisaged.

Laboratory: Laboratory sessions are based on materials covered in the course.

DME 727.3 Principles of Industrial and Production Engineering (3 Credits)

Introduction to industrial and production engineering, evolution and applications; plant location and layout, facility design and organisation of industry; productivity analysis, production fundamentals and manufacturing economics; quality control systems, inventory control, cost control; operations planning and control; financial compensation and wage administration; product design and CAD/CAM, robotics and automation; ergonomics; resource management; process planning and concurrent engineering, production planning and control systems, lean production and agile manufacturing; application of operations research techniques to industrial, and production engineering problems; computer methods and software packages for industrial and production engineering analysis; individual tutorial assignments and group term projects of local industrial interest are envisaged.

DME 729.3 Heat and Mass Transfer (3 Credits)

Heat Transfer: Basic concepts, heat transfer modes and rate processes. Fourier's law of heat conduction; Newton's law of cooling; Stephan-Boltzmann law of thermal radiation; stationary heat conduction in simple geometries and composite bodies; correlational equations for forced and free convective heat transfer for internal and external flows, boiling and condensation; heat transfer by combined modes; insulation and intensification of heat transfer; electrical and triple analogies; thermal radiation between blackbodies and between grey bodies; configuration factor algebra; radiation shields; radiation from gases and vapours; solar radiation; differential equations of heat conduction, steady and unsteady state heat conduction in 2- and 3-dimensional geometries; heat transfer in extended surfaces; differential equations of convective heat transfer, dimensional analysis and similitude, analytical and numerical solutions for selected cases; mass diffusion; convective mass transfer; analogy between momentum, heat and mass transfer; heat exchangers, flow arrangements, effectiveness-number-of-transfer units; thermal, hydrodynamic and mechanical design of heat and mass exchangers; design for manufacturing; computational methods; computer algorithms,

programs and software packages for Heat and Mass Transfer analysis. Individual tutorial assignments and group projects of local industrial interest are envisaged.

Laboratory: Laboratory sessions are based on materials covered in the course

2. Master of Engineering Degree in Mechanical Engineering

The Department of Mechanical Engineering offers postgraduate programme of study leading to the Master's of Engineering (M. Eng) degree in Mechanical Engineering in the following five (5) options:

- (i) Energy and Thermofluid Engineering (ETE);
- (ii) Industrial and Systems Engineering (ISE);
- (iii) Applied Mechanics and Design Engineering (AMD);
- (iv) Mechatronic Engineering (MTE); and
- (v) Production and Maintenance Engineering (PME).

2.1 Programme Objectives

The objectives of the M.Eng degree programme in Mechanical Engineering are to produce high level specialised engineers with the capability to: play leadership role in the nation's energy and industrial sectors; provide consultancy services and guidance for prospective entrepreneurs, government functionaries and politicians in their quest for feasible engineering systems for the country; establish and/or man small- and medium-scale industrial systems in Nigeria; engage in research and development activities; provide academic services for the nation's higher institutions of learning; and pursue an academic programme leading to a doctorate degree in mechanical engineering.

2.2 Admission Requirements

Candidates for the M. Eng. in Mechanical Engineering must possess a good bachelor's degree (B. Eng) or an acceptable postgraduate diploma (PGD) in mechanical engineering with a minimum CGPA of 3.0 (or 3.5 for PGD holders). Bachelor's degree holders from other related fields of engineering with a minimum of second class upper division may also be considered, but they must be prepared to remedy their deficiencies by taking the recommended Department's undergraduate and/or postgraduate diploma courses in addition.

2.3 Programme Duration

The programme shall normally last for a minimum of three (3) semesters and a maximum of six (6) semesters of full-time study, or a minimum of four (4) semesters and a maximum of eight (8) semesters of part-time study.

2.4 Criteria for the Award of the M. Eng. Degree

In addition to the general University requirements for programmes leading to a Master's degree, the candidate must fulfil the following Departmental requirements:

- (i) Choose and specialise in one of the available options.
- (ii) Complete thirty-six (36) semester credits, six of which must be devoted to the *M. Eng.* thesis, which starts immediately after the second semester and presentation of seminar.
- (iii) Present a seminar, at least one conference presentation and a journal article, and a thesis on issues of current national, professional and academic interest, and in which adequate knowledge of the underlying principles of the taught courses is demonstrated.

2.5 Course Outlines

The course outlines for the five options in the M. Eng. degree programme in Mechanical Engineering are as follows:

2.5.1 Energy and Thermofluid Engineering (ETE) Option

First Semester

Course Code	Course Title	Credit Unit
MEG 801.1	Advanced Engineering Mathematics	3
MEG 803.1	Advanced Engineering Management	3
MEG 811.1	Advanced Thermodynamics	3
MEG 813.1	Advanced Fluid Mechanics / Turbomachinery	3
SGS 801.1	Information and Communication Technology and Research Methods	2
		14

Second Semester

Course Code	Course Title	Credit Unit
MEG 802.2	Advanced Research and Development Techniques and Graduate Seminar	2
MEG 810.2	Advanced Heat and Mass Transfer Analysis	3
MEG 812.2	Advanced Power Plant Engineering Analysis	3
SGS 801.2	Management and Entrepreneurship	2
		10

Third Semester

Course Code	Course Title	Credit Unit
MEG 800.3	MEng. Thesis	6
MEG 815.3	Renewable Energy Engineering Technology	3
MEG 8xx.3	ETE Elective	3
		12

2.5.1.1 Energy and Thermofluid Engineering (ETE) Technical Electives

Course Code	Course Title	Credit Unit
MEG 820.3	Optimal Design of Energy and Thermofluid Systems	3
MEG 821.3	Computational Fluid Dynamics	3
MEG 822.3	Thermoeconomics of Energy Conversion	3
MEG 823.3	Advanced Refrigerating Engineering Analysis	3
MEG 824.3	Advanced Air-conditioning Engineering Analysis	3
MEG 825.3	Advanced Automotive Engineering Analysis	3
MEG 826.3	Experimental Fluid Mechanics	3
MEG 827.3	Advanced Drying Engineering Analysis	3
MEG 828.3	Advanced Combustion Mechanics	3
MEG 829.3	Fuel Cell Engineering Technology	3

2.5.2 Industrial and Systems Engineering (ISE) Option

First Semester

Course Code	Course Title	Credit Unit
MEG 801.1	Advanced Engineering Mathematics	3
MEG 803.1	Advanced Engineering Management	3
MEG 805.1	Advanced CAD/CAM	3
MEG 831.1	Advanced Industrial Engineering Analysis	3
SGS 801.1	Information and Communication Technology and Research Methods	2
		14

Second Semester

Course Code	Course Title	Credit Unit
MEG 802.2	Advanced Research and Development Techniques and Graduate Seminar	2
MEG 830.2	Industrial Operation Management and Resource Simulation	3
MEG 832.2	Advanced Systems Engineering Analysis	3
SGS 801.2	Management and Entrepreneurship	2
		10

Third Semester

Course Code	Course Title	Credit Unit
MEG 800.3	MEng. Thesis	6
MEG 833.3	Applied Productivity Analysis	3
MEG 8yy.3	ISE Elective I	3
		12

2.5.2.1 Industrial and Systems Engineering (ISE) Technical Electives

Course Code	Course Title	Credit Unit
MEG 834.3	Green Engineering and Energy Efficiency	3
MEG 835.3	Advanced Materials and Materials Selection	3
MEG 836.3	Industrial Robots and Automation	3
MEG 837.3	Advanced Operations Research and Information Management	3
MEG 838.3	Advanced Engineering Project Management	3
MEG 863.3	Maintenance Engineering and Management	3
MEG 865.3	Global Manufacturing	3
MEG 868.3	Supply Chain Management	3
MEG 871.3	Principles of Mechatronic Engineering	3

2.5.3 Applied Mechanics and Design (AMD) Option

First Semester

Course Code	Course Title	Credit Unit
MEG 801.1	Advanced Engineering Mathematics / Computational Methods	3
MEG 803.1	Advanced Engineering Management	3

* Although, the M.ENG programme in Mechatronic Engineering is well developed, but

MEG 837.3	Advanced Materials and Materials Selection	3
MEG 841.3	Dynamics of Solids and Structures	3
MEG 843.3	Advanced Computational Solid Mechanics	3
MEG 865.3	Global Manufacturing	3
MEG 866.3	Quality Management and Reliability Assurance	3
MEG 867.3	Sensors, Instrumentation and Control	3
MEG 868.3	Supply Chain Management	3
MEG 869.3	Advanced Tool and Die Engineering Analysis	3

SGS 801.2 Entrepreneurship and Management (3 Credits)

Historical background, definition and practice of entrepreneurship; The engineer entrepreneur: industrial evolution, invention commercialization, technoentrepreneurship; technology transition and entry strategies; human resources management; supply chain management; government policies for development of entrepreneurship in Nigeria.

MEG 800.3 M. Eng. Thesis (6 Credits)

Supervised research on a problem of current national, professional and academic interest chosen from the student's area of specialisation. The research should represent a significant level of the student's independent work and be such as to culminate his/her efforts in applying the principles covered in the graduate programme. Written thesis and oral examination are required.

2.5.6 General Technical Electives *

Course Code	Course Title	Credit Unit
MEG 881.3	Advanced Theory of Elasticity and Plasticity	3
MEG 882.3	System Modelling and Control	3
MEG 883.3	Subsea Engineering	3
MEG 884.3	Advanced Safety, Risk, and Reliability Engineering	3
MEG 885.3	Engineering Design Optimisation	3
MEG 886.3	Optimal Design of Engineering Components and Systems	3

* Students in any of the options can choose the technical elective course from the General Technical Electives.

2.6 Course Content

The detailed description of the courses offered in the M. Eng degree programme of the Department is presented as follows:

SGS 801.1 Information and Communication Technology and Research Methods (3 Credits)

Basic concepts of information and communication technology (ICT); computer hardware and software; applications of ICT in engineering professional practice, education, and scientific research; internet applications. Research methodology versus research methods; sampling and statistical inference; testing of hypothesis; regression analysis; factor analysis; discriminant analysis; interpretation and publication of research findings.

MEG 801.1 Advanced Engineering Mathematics/Computational Methods (3 Credits)

Advanced analysis and engineering applications of the following mathematical concepts, methods and tools: scalar and vector fields; sets and fuzzy sets; linear and tensor algebra; infinite series; calculus of variations; systems of ordinary differential equations, partial differential equations and integral equations, approximate analytical solution methods; review and advanced topics in applied probability and statistics, distributions. Advanced numerical schemes, approximation of functions by orthogonal polynomials and splines; curve fitting; ordinary and partial differential equations, CFD; the Monte Carlo methods; optimisation problems, mathematical programming, genetic algorithms, artificial neural networks, etc.; computer digital solution and simulation of problems of interest programmed in high level languages such as visual basic, Pascal, PL/I, Ada or C++, and in the MATLAB and Spread Sheet (Microsoft Excel) environments

MEG 802.2 Advanced Research and Development Techniques and Graduate Seminar (3 Credits)

Review of the history and basic concepts of scientific research, research and development, formulating research/thesis topics and writing research proposals; literature review, sources of research information, searching and researching on the world wide web (www); measurement of engineering system properties, computer-aided data acquisition and manipulation; field experimentation, experimental design; prototyping; intellectual property, patent rights, statistical data acquisition and analysis, interpretation and communication of experimental

and simulation results (research findings), report writing; oral presentation using MS PowerPoint.

This course is also designed to allow thesis topics to be discussed by both staff and students, in the process, the students learn how to initiate, design, communicate and implement engineering proposals, projects and theses, including publication of research findings in learned journals and conference proceedings; students are required to present individual seminars on topics related to their master's dissertations.

MEG 803.1 Advanced Engineering Management (3 Credits)

Management in engineering; organizing and planning the engineering function; engineering project planning; engineering and marketing interface; technology based engineering management; mathematical and computer techniques for management decision making, scheduling, and forecasting; stochastic modelling and simulation; recent advances in advanced engineering management; case studies chosen from the Nigerian small- and medium-scale technology-based organisations.

MEG 805.1 Advanced CAD/CAM (3 Credits)

Review of computer hardware and software; automated drafting and manufacturing systems; linking design and manufacturing functions by computer; geometric modelling; programming programmable controllers; numerical control (NC) and robotics; motion control; linear and circular interpolation; programming numerical controlled machines; NC and computer numerical control (CNC) programming languages and software; computer integrated manufacturing (CIM) and flexible manufacturing systems (FMS); recent advances in CAD/CAM technology; computer-aided drafting, CAD/CAM practice using Pro/E; case studies to ascertain the state of CAD/CAM in Nigerian industries and to implement CAD/CAM systems for selected industries.

MEG 810.2 Advanced Heat and Mass Transfer Analysis (3 Credits)

Unified system of equations of heat and mass diffusion and convection; approximate analytical solution methods; numerical solution methods; diffusion in composite and in anisotropic media; phase change and nonlinear heat and mass transfer problems; convective heat and mass transfer by similitude, order analysis, criterion equations and correlations, the triple analogy, analytical boundary layer analysis; heat and mass transfer in media with chemical reactions; thermal radiative heat transfer in absorbing and emitting media; radiation from gases and vapours; solar and flame radiation; heat and mass exchangers; case studies

on some advanced heat and mass transfer problems from some key industries in the locality.

MEG 811.1 Advanced Thermodynamics (3 Credits)

Review of the First and Second laws of thermodynamics; combined First and Second law analysis elements of statistical thermodynamics; single-and multi-phase systems, chemically reactive systems; power generation; thermodynamics of irreversible processes; phenomenological laws; Onsager theorems; application to single-and multi-component systems with and without chemical reactions; computational techniques for evaluation of thermodynamic properties of real systems; computer-aided energy auditing of energy and thermofluid systems; case studies on energy audit for some key Nigerian industries such as the fertiliser industry, refinery, and power plants.

MEG 812.2 Advanced Turbomachinery and Computational Fluid Dynamics (3 Credits)

Turbomachinery analysis and design concepts; similarity and scaling laws; cavitation; flow theory applied to fluid-flow machines; fan and blower analysis and design; analysis and design of radial flow compressors, steam, gas and hydraulic turbines, nozzles, centrifugal compressors, and positive displacement fluid-flow machines; cascading of turbomachinery; turbomachinery modelling and testing; design optimisation; turbomachinery selection; selected topics from computational fluid dynamics (CFD) based on the finite difference, finite element, boundary element, and pressure-velocity coupling schemes for the Navier-Stokes equations, computer-aided turbomachinery analysis: use of available CFD softwares.

MEG 813.1 Advanced Fluid Mechanics (3 Credits)

Properties of fluids; Newtonian and non-Newtonian fluids; tensor analysis of stress and strain in a static fluid; control volume and system analysis; Reynolds transport theorem, conservation laws; the Second law of thermodynamics; applications; the general Navier-Stokes equations; approximate solution; compressible fluid flow; boundary layer isothermal turbulent flow; free turbulence; plane and axisymmetric turbulent jets; diffusion processes in inhomogeneous fluids; dynamics of particles in fluids, Cunningham's correction factors; aerodynamics of jets, suction and exhaust spectra; aerosol mechanics; reactive gas dynamics; flow in porous media; two-phase flow; computer algorithms and implementation; case studies on analysis of fluid flow processes for specific

applications in the Nigerian energy and Thermofluid industry.

MEG 814.2 Advanced Power Plant Engineering Analyses

Review of power plant engineering principles; World, national, state, local and community energy demands and strategies; energy economics; power plant thermodynamics including exergy analysis; design analysis of fossil-fuelled power plants, steam and gas turbine plants, hydropower plants, nuclear power plants; renewable energy technology, energy storage; power generation, transmission and distribution; environmental impact of power plant systems, power plant feasibility studies, selection and location; computer-aided power plant engineering analysis; developments in the Nigerian power plant industry, and the way forward; case studies on analysis of existing power plants, design, selection and location of new power plants in Nigeria.

MEG 815.3 Renewable Energy Engineering Technology (3 Credits)

Renewable energy: sources, applications and sustainability; environmental, technical and social considerations; application potentials in Nigeria; thermodynamic analysis, momentum, thermal and mechanical design considerations for: solar thermal and photovoltaic energy and power plants, small hydropower plants; wind power plants; ocean wave-, ocean tidal-, ocean thermal- and geothermal-power plants; outside design conditions; photosynthetic process; biomass and biofuels; energy storage systems; conversion and transmission; computational methods and software packages for renewable energy engineering technology system analysis, design and selection; advances in renewable energy technology.

MEG 817.3 Advanced Automotive Engineering Analysis (3 Credits)

Review of: internal combustion principles; spark ignition and compression ignition engines; two and four stroke engines; petrol and diesel engines; tractor, industrial, marine, jet and turbo, free piston, Wankel, Stirling and stratified engines; and fuels and oils; combustion mechanics and thermodynamics; the automobile: component analysis and system synthesis; vehicle dynamics; automotive systems analysis and design; computer-aided automotive systems analysis and design; selection, operation, and maintenance; case studies on analysis, design and selection of suitable automotive systems for the Nigerian environment.

MEG 820.3 Optimal Design of Energy and Thermofluid Systems (3 Credits)

Energy and thermofluid systems: fluid flow systems; conventional and nonconventional, fossil and renewable energy power plants; refrigerating systems; air-conditioning systems; plants for the chemical and food processing industries; heat and mass transfer systems; design methodology for energy and thermofluid systems; feasibility study; preliminary design; detailed design; economic, social and environmental considerations; optimisation methods, modelling energy and thermofluid systems; dynamic behaviour of energy and thermofluid systems; probabilistic approaches to design; component and system tropicalization; computer-aided energy and thermofluid systems design.

MEG 821.3 Applied Energy Economics (3 Credits)

Introduction to energy economics, energy and multidimensional interactions; economics of energy demand, energy efficiency improvements; economics of energy supply, economic analysis of energy investments, energy projects, cost-benefit comparison, uncertainty and risk in projects; economics of fossil fuel supply; economics of electricity supply; economics of non-electricity energy supply such as for industrial processes; energy markets; economics of gas transportation; integrated economic analysis of energy systems; management of environmental issues arising from energy utilization; the economics of climate change; regulation and governance of the energy sector.

MEG 822.3 Thermoeconomics of Energy Conversion (3 Credits)

Interaction of energy and materials requirements, thermodynamics, costing and optimization; thermodynamic analysis, the exergy method; costing analysis, the objective function, the operating resources of an energy device and system of devices, cost indices, combined Second law and costing analyses – thermoeconomic analysis; system optimization, the two-way decomposition strategy, discipline and device levels; device design models, communication between thermodynamics and design; load-variation-induced off-design performance, prediction, control and optimization; software resources; recent advances in thermoeconomics of energy conversion.

MEG 823.3 Advanced Refrigerating Engineering Analysis (3 Credits)

Thermodynamic and exergoeconomic analysis of vapour compression, gas cycle, vapour absorption, and ejector-compression refrigerating plants for low temperature, very low temperature and cryogenic applications; design, performance analysis and selection of refrigerants, refrigerant

compressors refrigerant condensers, expansion devices, evaporators and other auxiliaries, refrigeration control systems; refrigerating plants for agricultural produce/food preservation, refrigerated transport, and industrial applications; computer applications in refrigerating engineering analysis; case studies on refrigerating systems for selected microenvironments of interest.

MEG 824.3 Advanced Air-conditioning Engineering Analysis (3 Credits)

Psychrometry, solar energy and thermal analysis of buildings and structures; air-conditioning systems (ACSs), summer and winter process and load analysis; pipe and duct system design; analysis and design of: central and unitary comfort air-conditioning systems; industrial air-conditioning systems; industrial ventilation; solar cooling and heating systems; noise and automatic control in ACSs; advances in air-conditioning engineering science and technology; computer-aided ACS analysis, design and control; case studies on air-conditioning systems for selected microenvironments of interest.

MEG 825.3 Experimental Fluid Mechanics (3 Credits)

Modelling test facilities; wind tunnel force measurement; theory of conventional and modern manometry; classical velocimetry; hotwire anemometry; theory and application of laser Doppler velocimetry; particle image velocimetry; flow visualization techniques; thermometry.

MEG 826.3 Advanced Industrial Ventilation and Pollution Control Engineering Analysis (3 Credits)

Engineering infrastructure and the environment; environmental pollution, pollution control legislation and measures; ventilation requirements; industrial ventilation systems analysis and design; design of subsurface industrial ventilation and pollution control systems (IVPCS) ; analysis and design of waste water treatment plants, solid-waste disposal plants, water pollution control systems, and noise pollution control systems; computer-aided monitoring, assessment and control of pollution, and IVPCS analysis and design; case studies on design of IVPCS for selected Nigerian industries.

MEG 827.3 Advanced Drying Engineering Analysis (3 Credits)

Review of the basic concepts of drying engineering and technology; psychrometric processes in drying; moisture transfer mechanism; kinetics of convective drying; thermodynamic drying cycles, kinetic analysis of dryers; design analysis of selected dryers; transport phenomena in capillary porous bodies; analytical heat and mass transfer, diffusion

through porous materials; computational methods and software packages for the numerical solution to the drying engineering analysis problems; recent advances in drying and drying technology.

MEG 828.3 Advanced Combustion Mechanics (3 Credits)

Fundamentals and modelling of reactive systems, gas dynamics and combustion using analytical and numerical methods; conservation equation of reacting flows; multispecies transport, chemical thermodynamics and chemical kinematics; non-equilibrium flow, detonation and reacting boundary layers; ignition, flammability, and extinction; premixed and diffusion flames; combustion instabilities; supersonic combustion; turbulent combustion; liquid and solid burning; fire, safety, and environmental impact of pollutant emissions; applications to energy and Thermofluid systems; computer-aided analysis; advanced topics and recent advances in combustion mechanics.

MEG 829.3 Fuel Cell Engineering Technology (3 Credits)

Gas turbines and fuel cells technology; diffusion and migration in solids; ionic, electronic and mixed conductivity in fuel cell materials; thermal barrier coatings; energy system architecture and electrochemical energy conversion; fuel cell thermodynamics and electrochemistry; proton exchange membrane fuel cells and solid oxide fuel cells; hydrogen production, storage and distribution.

MEG 830.2 Industrial Operation Management and Resource Simulation (3 Credits)

Industrial organizations, operational issues, productivity and competitiveness; design and management of products, processes, services and supply chains; analysis of acquisition, process development, and resource utilisation; analysis of operational issues such as plant location, supply chain management, distribution logistic, customer service process, production scheduling and control, inventory management, materials handling, equipment maintenance policies; improvement of organisational overall performance and competitiveness through the use of discrete simulation modelling and other computer software packages.

MEG 831.1 Advanced Industrial Engineering Analysis (3 Credits)

The industrial engineering function; advanced techniques for the analysis of or dealing with: facilities location and layout, material handling, distribution and routing, work design and organizational performance; operations planning and control; quality control; financial compensation; CAD/CAM; robotics; factory

automation; ergonomics; resource management; financial management and engineering economy; materials management; personnel management; application of operations research tools to industrial engineering analysis; other advanced topics and recent advances in industrial engineering analysis; case studies on industrial engineering problems in industries situated in the locality.

MEG 832.2 Advanced Operations Research and Information Management (3 Credits)

Operations research models and decision making, applications; formulation of linear optimization models, algebraic and geometric interpretations, the simplex method of solution, sensitivity and duality; transportation problem, assignment and transshipment models, network models, dynamic optimization models, inventory scheduling; optimization methods for an unbounded horizon; integer programming and combinatorial models; optimization with nonlinear objective function; advanced technique in nonlinear optimization; stochastic programming models, probabilistic dynamic programming models, dynamic programming in Markov chains; probabilistic inventory models, waiting line models; simulation modelling; computer simulation of management systems; information management, bar codes and other automated data collection methods, management of data, information network applications, interfacing technical systems with business systems, artificial intelligence and knowledge management systems; other advanced topics of interest, and recent advances in operations research and information management; computer software packages and computational schemes for modelling and simulation of operations research and information management problems.

MEG 833.3 Advanced Engineering Project Management (3 Credits)

Project-driven and non-project-driven organizations, classifications of projects; project management growth, product versus project management, project life cycles, project management methodologies; organizational structures, traditional, line-staff, and pure-product organizations, matrix organization form, strategic business unit management, transitional management; organising and staffing the project office and project team; management functions; project performance measurement, financial compensation and rewards, project management in small- and medium-scale business organizations, mega projects, breakthrough projects, innovative projects, agile project management; the variables for project success; working with executives and project sponsors, handling disagreements,

stakeholder relations management; planning, validating assumptions and objectives, project planning, project specifications, milestone schedules, work breakdown structure, master production scheduling, etc.; network scheduling techniques, graphical evaluation and review technique, dependencies, slack time, network replanning, estimating activity time, and total project time, total PERT/CPM planning, crash times, PERT/CPM problem areas, alternative PERT/CPM models, precedence networks, project management software, critical chain; project graphics; pricing and estimating; cost control, the earned value measurement system, cost control problems, project management information systems, enterprise resource planning, project metrics, business intelligence, infographics; trade-off analysis; risk management, risk identification, qualitative and quantitative risk analysis, risk and concurrent engineering; learning curves, contract management; quality management; the project office, networking project offices, the project management information system, dissemination of information, mentoring, development of standards and templates, project portfolio management; crisis project management; complex, and troubled project management; special and advanced topics, and recent advances in engineering project management.

MEG 834.2 Advanced Systems Engineering Analysis (3 Credits)

Review of systems concepts and evolution, conceptual, preliminary, and detailed design and development; system testing and evaluation; alternatives and models in decision making; models for environmental, social, and economic evaluations; optimization in design and operations; probabilistic and statistical methods of system analysis; queuing theory and analysis; control concepts and techniques; design for operational feasibility, reliability, maintainability, manability, supportability, and environmental, social, and economic feasibility; systems engineering management; system design application; communication, repairable equipment population and energy systems design; system tropicalisation; computer applications in systems engineering analysis; other advanced topics and recent advances in systems engineering analysis; case studies.

MEG 835.3 Applied Productivity Analysis (3 Credits)

Concepts of productivity, industrial productivity, and productivity enhancement techniques; ergonomics; motion and time study; productivity enhancement of man, and man-machine systems; human information processing and control;

workplace design; physiological fatigue measurement; work-unit and work activity analysis; work sampling; motion economy; time study and work measurement; job evaluation and wage administration; measurement of industrial productivity; design criteria for enhanced system productivity; computer-aided productivity analysis; case studies on productivity measurement and analysis of some key industries (private and public sector) in Nigeria.

MEG 836.3 Green Engineering and Energy Efficiency (3 Credits)

Green engineering and sustainable development within engineering industries and the built environment; energy, energy chains and energy conversion efficiencies; industrial, transportation and interior climate control energy systems, energy consumption assessment, optimisation technologies; environmental impact of energy systems; energy system sustainability; performance assessment of engineering components, systems, and processes; analytical methods for the minimisation of industrial waste, scrap, and pollution through design and manufacture of environmentally benign products; environment-friendly materials and technologies for various engineering industries, and environmental operations; environmentally related resource requirements for the manufacture and operation of engineered products; assessment of potentials for alternative energy applications in engineering systems; recycling technologies, and redesign and design of recyclable products with minimal waste; specification and development of energy efficient, sustainable and environmentally conscious products; product life-cycle assessment with sustainability incorporated at the conceptual design stage; recent advances in green engineering and energy efficiency of industrial and the built environment; computer-aided analysis; case studies of industrial, transportation and architectural systems within the locality.

MEG 837.3 Advanced Materials and Materials Selection (3 Credits)

Review of engineering materials, their properties and selection; identification of the relationships between structures and mechanical properties of engineering materials, metals, ceramics, polymers, and composites; types of material failure, fast fatigue, fatigue, creep, and corrosion and oxidation; design with materials, modulus-limited design, yield-limited design, fatigue design, and creep-limited design; materials selection, selection criteria; experimental, analytical, and computational techniques in materials and materials selection; recent advances in materials and materials selection; case studies.

MEG 838.3 Industrial Robots and Automation (3 Credits)

Designing for automation; product life cycle; quality and automation; machine reliability; hard and flexible automation. Sensors, analysers, actuators; drives; mechanization of part handling; automatic production and assembly numerical control and CAD/CAM; industrial robots, dynamics of the mechanical parts of a robot, robot arm, mobile robots workspace exploration, robot control architecture, robot communication with external world; programming methods; VAL; AML/2; and ARMBASIC; machine vision systems; implementation; industrial logic control systems; logic diagramming, and programmable logic controllers; on-line computer control; microprocessors; computer integrated manufacturing (CIM): functions, units and design; flexible manufacturing systems (FMS); group technology; hybrid systems; integrating vendors; automation of warehouses, factories, offices and homes; ethics: unemployment theory X and theory Y; labour's attitudes; automation integrity; Murphy's law, legal hazards; case studies on the level of industrial automation in Nigerian, selection of automation-ripe industries, and design of automated facilities for them.

MEG 840.2 Advanced Vibrations and Noise (3 Credits)

Review of vibration of systems having one degree of freedom; vibration of multi-degree-of-freedom systems by receptance and impedance methods; vibration of systems with distributed mass and elasticity; nonlinear vibration; random vibration; autocorrelation; response to impulse; displacement due to random force; effects of mechanical vibration: fatigue, equipment malfunctioning and noise; vibration of aircraft, suspension bridges, pipes, and panels; vibration monitoring and control; free field sound propagation; sound level; mechanical sources of noise; sound conduit, emission, and absorption; effects of noise; environmental and legal implications of noise; noise monitoring and control techniques; mathematical models and computational techniques for vibration and noise analysis; other advanced topics and recent advances in vibrations and noise analysis and control; case studies on vibration and noise control in refrigerators, air-conditioners, vehicles, turbomachinery, pipelines, and electric generators, and in other systems that are a major source of noise pollution in Nigeria.

MEG 841.1 Dynamics of Solids and Structures (3 Credits)

Impact of rigid bodies, Hertzian impact; Hopkinson pressure bar and momentum trap; stress wave induced spalling, scabbing and fracture; Newtonian and variational principles;

generalized coordinates and degrees of freedom; constraints and virtual work; small oscillations and normal modes; impulsive motion and gyroscopic systems; dynamics of plates and shells; advanced topics and recent advances in dynamics of solids and structures; computational methods for the analysis of topics treated; case studies chosen from the Nigerian Oil industry.

MEG 842.2 Advanced Theory of Elasticity and Plasticity (3 Credits)

Review of three dimensional analysis of Hookian stress and strain in Cartesian and curvilinear coordinates, and application to axisymmetric problems; equations of equilibrium and compatibility; stress function; application to engineering problems – beams, rings, and concentrated loads; theory of plates and shells; application to metal working processes and pressure vessels; fracture mechanics; fatigue, creep, stress rupture and brittle fracture; contact stresses; modelling and computer stimulation techniques; other advanced topics and recent advances in the theory and application of elasticity and plasticity; case studies chosen from locally processed elastic and plastic materials.

MEG 843.1 Tribology (3 Credits)

Tribology and tribological problems; surface topography and smooth/rough surfaces in contact; solid friction. lubricants and lubrication, Reynolds equations and lubrication regimes; wear, sliding wear; wear by hard particles, wear and design; surface engineering tribology, materials for and selection of bearings and gears; failure analysis and control; lubricants: types, composition, properties, testing and specifications, condition monitoring, health, safety, and environment; engine tribology: lubrication of components, tribological testing, advanced materials; computer-aided tribological systems design and analysis; advances in engineering tribology; case studies taken from the automotive, marine, oil and gas, and power generation sectors on wear-induced failures of mechanical components and systems of national economic interest.

MEG 844.3 Failure of Materials, Components and Structures (3 Credits)

The concepts of excessive and composite classes; micro-mechanisms of failure in materials; fracture and fracture mechanics, toughening mechanisms in ceramics and composites, probabilistic failure assessment; fatigue, total life and damage tolerant approaches, persistent band formation, stages I and II crack growth, closure mechanisms, long and short crack behaviour, fatigue in ceramics, composites and hybrid laminates; performance of components and structures subjected to mechanical stresses; the influence of design and

manufacturing processes on service performance of components and structures, and the associated defects and residual stresses, fatigue performance of welded and mechanically fastened joints; environmental effects on components and structures: corrosion, stress corrosion cracking, and hydrogen-induced failures; high-temperature and high-humidity induced failures: high-temperature fatigue, creep, oxidation, high-temperature corrosion, etc.; failure modes prevention methods, tropicalisation, correct alloy selection, composites, stainless steels, surface coatings, etc.; recent advances in failure of materials, components and structures; computer and computational methods for the analysis of failure of materials, components and structures.

MEG 845.3 Advanced Computational Solid Mechanics (3 Credits)

Review of numerical methods in the solution of solid mechanics and materials problems; geometrical representation of solids, automatic meshing, approximation theory, interpolation error estimation, optimal and adaptive meshing; variational principles in linear elasticity; finite element analysis: use of the minimum potential energy principle to approximate the solution of elasticity problems, Rayleigh-Ritz method in statics; the general finite element formulation, derivation of the element matrices, assembly, application of boundary conditions, solution procedures, the use of finite element codes, pre- and post-processing, the use of commercial software packages; finite element formulation for 1D elastic continua – rods, shafts, strings; constant strain triangle elements for plane stress and plane strain, axi-symmetric elements; 2D quadrilateral elements; isoparametric finite element formulation; element selection; error estimation, convergence, singularities, adaptive strategies, constrained problems, mixed methods, stability and convergence, variational problems in nonlinear elasticity; bifurcation analysis; adaptive strategies in nonlinear elasticity; constrained finite deformation problems, contact and friction; coupled problems, impact and friction, subcycling; space-time methods; inelastic solids; applications to finite deformation visco-plasticity, and viscoelasticity.

MEG 846.3 Mechanisms Synthesis (3 Credits)

Coupler curves; permutation theory; movability criteria; Chebyshev and Euler theorems; number synthesis; finite displacement theory; centre and circular point curves; Burmester points; graphical methods of synthesis; mechanism synthesis based on inversion, angular cognates, path cognates, and curvature transform; multiple separated position theory; optimisation techniques; handling

problems; design methods and economics; computer-aided mechanisms synthesis; case studies on synthesis of mechanisms for small- and medium-scale Nigerian agricultural product processing machines

MEG 847.3 Surface Engineering (3 Credits)

The surface engineered materials and the service environment; tribologically induced stress, Hertz, dynamic Hertz, residual stresses, etc.; stress field and wear interactions; measurement of surface and coating properties; wear mechanisms, lubricated wear, wear-corrosion and erosion; surface engineering processes, erosion resistant coatings deposited by chemical vapour deposition, physical vapour deposition, high oxy-fuel, and weld overlay; plating and nano-composite coatings and surfaces; corrosion resistant surfaces and high temperatures; surface modification: induction hardening, ion-implantation, carburising, carbonitriding, nitriding and nitro-carborising; sustainability through correct surface technology; engineering assessment of failure problems and the associated micromechanical failure modes; economics of surface selection; applications in the automotive, power generation, marine, oil and gas industries; introduction to microstructural and surface characterisation of materials and components: surface profilometry, transmission electron microscopy, scanning electron microscopy, optical microscopy, diffraction techniques, and energy dispersive spectroscopy.

MEG 848.3 Analysis and Design Optimization of Laminated Composites (3 Credits)

Applications of laminated composites; fibres and resin materials, types and properties; laminae and laminates: micromechanical models, modelling of laminae, classical lamination theory; analysis of composite structures: beam, plate and shell modelling; thermal effects; finite element analysis; fracture and failure; sensitivity analysis and optimization techniques for problems such as the thermally-induced residual stresses due to the manufacturing process, integrated stiffeners, vibration and buckling; optimization of laminates using both ply-angles and lamination parameters as design variables; 3D effects and general design principles.

MEG 849.3 Pressure Vessels (3 Credits)

Axisymmetric loading of shells of revolution; general equations for elastic shells, edge solutions for spherical shell; plastic analysis of plates and shells; shakedown principles; thermal stresses; creep behaviour; design methodology; fatigue analysis; design of pressure vessels; mechanical design of heat and mass exchangers; computational methods for pressure vessel analysis and design; case studies on design of

domestic gas refilling pressure vessels, and other autoclaves for the locally based chemical and food processing industries.

MEG 850.2 Mechatronic Instrumentation (3 Credits)

Sensors and transducers; measurement systems, sensors, transducers and measurement, classification by function, performance and output; developments in transducer technology, solid state, optical, piezoelectric and ultrasonic transducers; signal processing and information management; the design of a measurement system; resistive, capacitive, inductive and resonant transducers; optical measurement systems, radiant energy sources, photodetectors, vision and laser systems, laser scanning, fibre and non-fibre optical transducers; solid state sensors and transducers, magnetic, temperature, mechanical and chemical measurements; piezoelectric and ultrasonic sensors and transducers, devices and systems; interference and noise in measurement, signal processing.

MEG 851.1 Mechatronic Components and Devices (3 Credits)

Motion control devices, drives and actuators, electrohydraulic and electropneumatic control devices, control of electric devices, converters, choppers, inverters and cycloconverters; linear systems, pneumatic ram-rod and rodless types, pneumatic diaphragms, etc., rotational drives, pneumatic, hydraulic and electrical motors; motion converters, fixed ratio motion converters, gears, harmonic and belt drives, toothed belt drives, chains and sprockets, friction wire wrap drives, rack and pinion, screw nut devices, converters with invariant motion profile, cams, indexing mechanisms, linkages, springs and dampers, variators, remotely controlled couplings; Linear circuits, equivalent electrical circuit, methods, impedance, semiconductor electronic devices, operational amplifiers, digital electronic devices, digital and analogue input and output, digital-to-analogue and analogue-to-digital converters, computer interface with I/O devices, D/A and A/D converters; advanced topics in electronic components for mechatronic systems.

MEG 852.2 Control Sensors and Actuators (3 Credits)

Sensors and signal conditioning methods; performance specification of components, component matching, error analysis; operating principles, analysis, modelling, design considerations of control sensors; actuation systems: pneumatic and hydraulic actuation systems, directional control valves, pressure control valves, servo and proportional control valves, process control valves, rotary actuators;

mechanical actuation systems, types of motion, kinematic, chains, cams, gears, ratchet and pawl, belt and chain drives, bearings; electrical actuation systems, mechanical switches, solid-state switches, solenoids, DC and AC motors, stepper motors, motor selection; mechanisms for motion transmission, rotary-to-rotary, rotary-to-translational, and cyclic motion transmission mechanisms, shaft misalignments and flexible couplings, actuator sizing, homogeneous transformation matrices.

MEG 853. 3 Control Systems with Embedded Implementation (3 Credits)

System modelling, mathematical models, mechanical, electrical, pneumatic, hydraulic, and thermal systems building blocks; system models, engineering systems, rotational-translational, electromechanical, hydraulic-mechanical systems, linearity; dynamic responses of systems, modelling, first- and second-order systems, performance measures, system identification; system transfer function, systems in series, systems with feedback loops, effect of pole location on transient response; frequency response, sinusoidal input, phasors, Bode plots, performance specifications, stability, closed-loop controllers, continuous and discrete control processes, two-step and proportional modes, derivative and integral controls, PID controllers, digital controllers, control system performance, controller tuning, velocity control, adaptive control; methods of representing and processing; sets and crisp logic; fuzzy logic control, hierarchical fuzzy control; programmable logic controllers, hardware components of PLCs, programming of PLCs, PLC control system applications; programmable motion control systems, design methodology for PMC systems, motion controller hardware and software, single-axis motions, coordinated motion control methods; industrial applications; this course also allows students to design and implement embedded control systems using CAD tools and embedded microcontroller-based systems including real-time industrial computers.

MEG 855.3 Mechatronic System Design (3 Credits)

Mechanical systems and design, traditional versus mechatronic design approaches, the design process; mechanisms and structures, load conditions, design, flexibility, environmental isolation, systems, modelling and simulation; man-machine interface, industrial design and ergonomics, information transfer: from machine to man and from man to machine; system safety considerations; advanced topics in mechatronic system design; case studies.

MEG 856.2 Microprocessors and Embedded Systems (3 Credits)

Microprocessors in mechatronic systems, embedded real-time microprocessor systems; control, the microprocessor systems, system components, system bus, the memory map, the microprocessor bus operation; the CPU; semiconductor memory, input and output, and peripheral circuits, devices, coprocessors microcontrollers and digital signal processors; semicustom devices, programmable logic and device technology, semiconductor technologies; the development of microprocessor systems, the system specification, the development environment, the development cycle, assemblers, linkers; assembly language, instruction sets, programs, subroutines, look-up tables and embedded systems; high level languages and compilers, the real-time multitasking executive; C language, program structure, branches and loops, arrays, pointers, program development; input/output systems, interfacing, input/output addressing, interface requirements; programmable logic controllers, structure, input/output processing, ladder programming, instruction lists, latching and internal relays, sequencing, timers and counters, shift registers, master and jump controls, data handling, analogue input/output; communication systems, digital communications, centralized, hierarchical and distributed control, networks, protocols, open system interconnection communication model, serial and parallel communication interfaces, wireless protocols; fault finding, fault detection techniques, watchdog timer, parity and error coding checks, common hardware faults, microprocessor systems, evaluation and simulation, PLC systems; control and communication system hierarchies, local area networks, communication system hierarchy for industrial automation application.

MEG 857.3 Design of Intelligent Machines and Systems (3 Credits)

Machines, technology, engineering design, concurrent engineering and mechatronic engineering; intelligent systems, intelligent machines, artificial intelligence and expert systems, architectures, safety, operating models; the mechatronic design process, engineering design models, mechatronic design framework, principles and approaches to designing mechatronic hardware; requirements interpretation for mechatronic systems, customer requirements and product life cycle; artificial intelligence, AI programming versus conventional programming, knowledge acquisition and representation, searching for solutions; neural networks and fuzzy systems, the Adeline, the Perception, Kohonen networks, adaptive resonant theorem networks, Hopfield networks, implementation of artificial

neural networks, fuzzy systems, set operations, fuzzy reasoning and control, developing a fuzzy system, fuzzy neural systems; software, development process models, methods, requirements, design, object-oriented methods, testing; user interfaces, the design of the human-machine interface, tele-operation; factory automation, computer integrated systems, robots and machine vision, office automation, home automation; technology assessment; recent advances in mechatronic engineering system design; system safety considerations.

MEG 858.3 Intelligent Control and Robotic Systems (3 Credits)

Review of traditional control techniques and comparison with intelligent control; methods of representing and processing knowledge; conventional sets and crisp logic; fuzzy logic control; hierarchical fuzzy control; control system tuning; industrial applications; intelligent robotic systems: system components and organisation, modelling and advanced control techniques, vision, tactile, laser and proximity sensing, task planning, part planning, planning with uncertainty, robot learning, online application, collision avoidance, object interception, robotic assembly; case studies, and seminar presentation are envisaged.

MEG 859.3 Advances in Mechatronic Engineering (3 Credits)

This course discusses the recent and future theoretical and technological developments in mechatronic engineering with particular emphasis on automotive systems, home systems, telecare and telehealth, automation and robotic systems, mechatronic design and manufacturing; topical case studies help to emphasize and illustrate the applications, and implications of mechatronic systems development and deployment in a developing and well-populated economy.

MEG 860.2 Production and Operations Planning and Control (3 Credits)

The operations function; production systems concept; product and resource planning, and process design; facility location; forecasting; aggregate, production and resource capacity planning, master scheduling and capacity planning; facility layout; work design and measurement; inventory management; materials and capacity requirements planning; operations activity control; purchasing; distribution; quality assurance and control; service systems and personnel scheduling; system reliability and the maintenance function; application of operations research methods in mathematical modelling of

production and operation planning and control problems; computer-aided production and operation planning and control; recent advances in production and operation planning and control; case studies on feasibility studies, resource planning, and facility design for local small- and medium-scale industries.

MEG 861.1 Advanced Production Systems and Computer Integrated Manufacturing (3 Credits)

Review of the concepts of production systems and computer integrated manufacturing, production system facilities, manufacturing support systems, automation and manual labour in production systems, manufacturing operations, automation and control technologies, industrial control systems, sensors, actuators, etc.; numerical control (NC), computer numerical control (CNC), direct numerical control (DNC), NC part programming, engineering analysis of NC positioning systems, APT programming; industrial robotic engineering, anatomy and attributes, control systems, end effectors, sensors, analysis, programming, and applications; discrete control using programmable logic controllers and PCs; materials handling and identification technologies, material transport systems, storage systems, and automatic data capture; manufacturing systems, single station manufacturing cells, group technology and cellular manufacturing, flexible manufacturing systems (FMS), manual assembly lines, transfer lines, and automated assembly systems; quality control systems; manufacturing support systems, product design and CAD/CAM in the production system, process planning and concurrent engineering, production planning and control systems, lean production and agile manufacturing; more advanced topics and recent advances in production systems and computer integrated manufacturing; case studies.

MEG 862.2 Reliability-Centred Maintenance Management (3 Credits)

Reliability, productivity, safety, and environmental integrity of physical assets; reliability block diagrams, reliability while being active and standby; reliability-centred maintenance – basic guidelines; case study of implementing reliability-centred maintenance techniques; analytical tools: failure mode and effect analysis, root cause failure analysis, criticality matrix; hazard analysis, and fault-tree analysis; event tree analysis, prediction model for reliability; software implementation for reliability-centred maintenance; assets and spare parts management functions, financial, human, and physical assets management, comparative analysis, conventional systems of ordering spare

parts and materials; economic order quantity, procurement management; safety engineering and fault tree analysis, hazard analysis, codes and standards in occupational safety, fire extinguishers and their applications, automobile maintenance, electrical and chemical hazards, and their prevention, hazards due to ergonomics, responsibilities of safety supervisors, sneak circuit analysis, failure mechanisms; total productive maintenance, elimination of the “six big wastes”, world class maintenance organisation, lean maintenance, mentoring and training by example, metrics for maintenance of culture change; business-centred maintenance; maintenance planning and scheduling, shutdown planning and execution, monitoring and sequencing of activities, effectiveness of proactive shutdown; computer applications in maintenance management, computerised maintenance systems and their integration with the overall network, software failures and software security; statistical distributions in preventive maintenance; maintenance integration, system effectiveness and cost, availability and availability measurement, profitability-driven reliability, measuring and evaluation of the effectiveness of computerised maintenance systems; computerised reliability-centred maintenance information management systems; recent advances in reliability-centred maintenance management; case studies relevant to the topics covered.

MEG 863.3 Maintenance Engineering and Management (3 Credits)

Maintenance systems, repair and maintenance, maintenance as a business proposition, the business unit concept, automation, maintenance cost reduction, maintenance philosophy; maintenance systems: planned, preventive, predictive, and proactive maintenance; maintenance policies and procedures; concept of supervision; maintainability - measure; failure rate curves, typical bathtub type of failure pattern, inherent and operational availability, procedure for sampling and testing; test plan for determination of mean time to repair (MTTR) or maintainability, computerised evaluation of MTTRs and other related parameters; design for maintainability; condition-based maintenance: condition monitoring, vibration analysis, ultrasonic evaluation, motor condition monitor, thermography, methods of analysis of oil and lubricants, degradation of grease, case study of engine oils, transmission oil and drive train oils, gas-leakage detectors, alignment shafts, non-destructive testing techniques, retirement for cause; computerised maintenance management systems; recent advances in maintenance engineering and management; case studies of

interest to the industries and transportation systems in the locality.

MEG 865.3 Global Manufacturing (3 Credits)

Enterprise systems for supporting product manufacturing, development, life-cycle; marketing, services, and supply chain, and their interface; e-manufacturing and operations; digital enterprise technology; virtual organisations and integration; selection and use of digital enterprise technology and e-manufacturing tools; global manufacturing implementation issues and methodology; global manufacturing and marketing; global manufacturing and the evolution of technology; global manufacturing, the developed and developing economies, the sub-Saharan African region and the rest of the world; global manufacturing and global services; recent advances in global manufacturing technology, standards and practice.

MEG 866.3 Quality Management and Reliability Assurance (3 Credits)

Quality management and reliability assurance concepts; inspection and quality control; control charts; acceptance sampling; quality control and reliability data collection and analysis; system reliability modelling, simulation and prediction; maintainability and availability; replacement policies; life testing; failure analysis; reliability and quality, human factor, environment, and safety; maintenance engineering; terotechnology; value engineering; quality and reliability assurance; management and economics; probabilistic mathematical modelling and computer simulation of quality control and reliability problems; total quality management; computer-aided quality management and reliability assurance; case studies on quality and reliability problems in key Nigerian industries.

MEG 867.3 Sensors, Instrumentation and Control (3 Credits)

Sensors and transducers; measurement systems, sensors, transducers and measurement, classification by function; signal processing and information management; the design of a measurement system; resistive, capacitive, inductive and resonant transducers; optical measurement systems, etc.; magnetic, temperature, mechanical and chemical measurements; piezoelectric and ultrasonic sensors and transducers, devices and systems; interference and noise in measurement; signal conditioning methods; error analysis; design considerations of control sensors; actuation systems; mechanical actuation systems, types of motion; electrical actuation systems; mechanisms for motion transmission; advanced instrumentation and

sensing methods, and computer interfacing for data processing, monitoring and control of engineering processes; case studies.

MEG 868.3 Supply Chain Management (3 Credits)

Definitions, evolution, and supply chain management (SCM) and logistics; trends in global supply chain management; incentives and the strategic management of suppliers; time compression in supply chain; agile supply chains; logistics customer service through marketing and services strategies; people powering contemporary supply chains; creating shareholder value through SCM; outsourcing; risk in SCM; information systems and information technologies for SCM; supply chain sustainability; performance measurement; mathematical modelling (optimization) of supply chain operations in manufacturing, process and service sectors; recent advances in SCM and global logistics.

MEG 869.3 Advanced Tool and Die Engineering Analysis (3 Credits)

Design methodology and analysis for jigs, fixtures and dies; locating and positioning theory; mechanics of metal clamping, cutting, bending, forming, drawing, stamping and compressing; design of drilling jigs, milling, turning, grinding, inspection and assembly fixtures; design of press tools for blanking, piercing, bending and drawing operations; die design for forging, stamping, and compressing, miscellaneous dies; tooling for numerical control machines; tool and die materials; tool and die making economics; computer-aided tool and die engineering; other advanced topics and recent advances in tool and die engineering analysis; case studies on die design for forming metal and plastic shapes of significant local and/or national value.

MEG 871.3 Principles of Mechatronic Engineering (3 Credits)

Introduction to mechatronics, measurement systems, resistive, capacitive, inductive and resonant transducers, optical measurement systems, solid state sensors and transducers; piezoelectric and ultrasonic sensors and transducers; interference and noise in measurement; signal processing; microprocessing in mechatronic systems; the microprocessor system, semi-custom devices, programmable logic and device technology; fussy logic; communications; drives and actuators; control devices; linear systems; rotational drives; motion converters; mechanical systems and design; mechanisms; structures; modelling and analysis of dynamic systems; man-machine interface; applications of mechatronic engineering; factory automation, computer integrated systems, robots and machine vision, office automation, home

automation; technology assessment; special topics and recent advances in mechatronic engineering; case studies to ascertain the feasibility of mechatronic systems in Nigerian industries, and to design and implement simple mechatronic systems for selected local manufacturing plants.

MEG 872.3 Pattern Recognition and Machine Learning (3 Credits)

Review of probability theory, model selection, the curse of dimensionality, decision theory, and information theory; probability distributions, binary variables, multinomial variables, the Gaussian distribution, the exponential family, nonparametric methods; linear models for regression, linear basis function models, the basis-variance decomposition, Bayesian linear regression, the evidence approximation; linear models for classification, discriminant functions, probabilistic generative and discriminative models, the Laplace approximation, the Bayesian logistic regression; neural networks, feed forward network functions, network training, error back propagation, the Hessian matrix, regularization in neural networks, mixture density networks, Bayesian neural networks; kernel methods, sparse kernel machines; graphical models; mixture models and EM; approximate inference, variational inference, variational linear regression, variational logistic regression, expectation propagation; sampling methods, basic sampling algorithms, Markov chain Monte Carlo, Gibbs sampling, etc., estimating the partition function; continuous latent variables, principal component analysis, probabilistic and kernel CPAs, nonlinear latent variable models; sequential data, Markov and hidden Markov models, linear dynamical systems; combining models, Bayesian model averaging, committees, boosting, tree-based models, conditional mixture models; special topics and recent advances in pattern recognition and machine learning; case studies.

MEG 882.3 System Modelling and Control (3 Credits)

Mathematical modelling of system components; system simulation; state-space representation and analysis; nonlinear analysis; control system components, sensors, controllers, actuators, input elements, and signal conditioning for mechanical, thermofluid, and electrical systems; analogue, digital and hybrid computers in control systems; statistical methods for system identification; feedback systems, accuracy and stability; the Root locus method; the sampled-data process; multivariable control system design; advances in system modelling and control; computer-aided system modelling and control using MatLab; case studies on control systems for the Nigerian Oil and power industries.

MEG 883.3 Subsea Engineering (3 Credits)

Review of key subsea engineering concepts and problem dimensions; environmental considerations, materials and corrosion; offshore inspection, safety, risk and reliability; subsea oil and gas exploration and exploitation; offshore pipeline design, installation and maintenance; analysis of offshore material and structural failures; offshore renewable energy technology; subsea automation; computational methods, and computer-assisted subsea engineering analysis and design; advanced topics and recent advances in subsea engineering; case studies based on the Nigerian offshore engineering facilities.

MEG 884.3 Advanced Safety, Risk and Reliability Engineering (3 Credits)

Review of the principles of risk identification, assessment and control; workplace safety; materials handling, mechanical plants and equipment, confined spaces, fire and explosion, noise, whole body vibration, electrical safety, and workplace design; concepts of reliability, availability and maintainability; failure rates and modes, and reliability data; reliability block diagram analysis of series and parallel systems; reliability-centred maintenance and inspection; Markov modelling of system failures; probabilistic safety analysis; concepts of structural safety and risk; probabilistic modelling of strength and loads; the first-order second moment method and the first order reliability method; Monte-Carlo simulation and variance reduction techniques; causes of structural deterioration such as corrosion, fatigue and fracture, and risk-based inspection strategies using Bayesian methods; fire safety, explosions and process safety; human factor methods; environmental impact assessment: legislations, screening and scoping, baseline studies, analysis and prediction of impact, consultation, review and monitoring; computer-based modelling and simulation in safety, risk and reliability engineering; other advanced topics and recent advances in safety, risk and reliability engineering; case studies of local industrial interest.

MEG 885.3 Engineering Design Optimisation (3 Credits)

Optimum design concepts and problem formulation; the general mathematical model for optimum design; unconstrained and constrained problems; global optimality; sensitivity analysis; numerical methods for optimal design problems: linear, geometric, dynamic, and nonlinear programming; probabilistic methods; iterative design optimisation; artificial neural networks and genetic algorithms; computer-aided design optimisation; case studies on design optimisation of mechanical systems of interest.

MEG 886.3 Optimal Design of Engineering Components and Systems (3 Credits)

The design process; sources of information; choice of manufacturing processes; manufacturing economics; structures and stresses; design for strength, creep, and fatigue; choice of safety factor; tolerancing, interchangeability and tropicalisation; failure analysis; design of gears and gear trains, jigs and fixtures, tools and machine tools, hydraulic and pneumatic elements and machines; conceptual approach to mechanical engineering system design, design of selected systems; design optimisation techniques, optimal design problem formulation, solution methods, optimality conditions, numerical and computer methods for optimal design problems, optimal design with MS Excel solver and MATLAB; other advanced and modern topics on optimal design of engineering components, devices and systems; applications; case studies on optimal design of machine components and assemblies whose high failure rate is due to the Nigerian climatic conditions

3. Doctor of Philosophy (PhD) Degree in Mechanical Engineering

The Department of Mechanical Engineering offers a postgraduate programme of study leading to the Doctor of Philosophy (PhD) degree in Mechanical Engineering in the specialised areas of Applied Mechanics and Design (AMD), Energy and Thermofluid Engineering (ETE), Industrial and Systems Engineering (ISE), and Production and Maintenance Engineering (PME).

3.1 Programme Objective

The Doctor of Philosophy (PhD) programme in Mechanical Engineering has been designed to produce men and women of proven capability, well grounded in the engineering science and technology of their areas of specialisation, and possessing the analytical, experimental and computational skills that ensure executive confidence in professional practice. The products of the PhD programme should be able to take up their positions in academics, research and development institutes and in industry, actively participating in knowledge dissemination, research and development, and policy decision making.

3.2 Admission Requirements

To be admitted into the PhD Degree Programme in Mechanical Engineering, each aspiring student must fulfil the following requirements:

- (i) Satisfy the general University requirements for admission into the programme;
- (ii) Possess a Master's degree in Mechanical Engineering with a minimum CGPA of 3.5 (on a

- 5.0 scale) or a minimum percentage score of 60% obtained from a recognised university; and
- (iii) Be successful (score at least 60%) in a proposal presentation/admission screening interview to be organised by the Department. The successful candidates will be assigned project supervisors (a main supervisor and a sub-supervisor) immediately after the proposal presentation.

3.3 Programme Duration

The programme shall normally last for a minimum of six (6) semesters and a maximum of twelve (12) semesters of full time study, or a minimum of eight (8) semesters and a maximum of sixteen (16) semesters of part-time study.

3.4 Criteria and Procedure for the Award of the PhD Degree

The PhD programme in Mechanical Engineering consists of course work and Thesis, and the degree is awarded primarily on the basis of research conducted by the student, after he or she has fulfilled the general University requirements for programmes leading to the PhD degree, including the following specific conditions:

- (i) On admission into the programme, the student will take two taught courses (one general course which applies to all the areas of specialization and a second course which is purely for the student's area of specialization) and take a comprehensive examination in each of the courses. Each of the courses has 3 credit units. The pass grade in the examination, as in every other examination in the programme, shall be C (50% minimum). The examinations in these two courses must be taken within the first six months of the programme.
- (ii) Three months after the course works and the examinations, the student will present Chapters one and two (Introduction and Literature Review) of his or her thesis. This is the first presentation and is termed **SEMINAR I**. This presentation will come not later than the first nine months of the student in the programme. If the presentation is not successful, the student will be required to redo the presentation after three months from the date of the first presentation. If the presentation is successful or has little issues, the student will be asked to address the issues and go on with the programme. If the student is not successful in the second attempt in Seminar I, he / she stands disqualified and will be out of the programme.
- (iii) Between 18 and 21 months in the programme, the student will be required to

present **SEMINAR II** which will cover Chapter 3 (Materials and Methods) in addition to Chapters one and two which should be improved versions of what is contained in **SEMINAR I**. The PhD student can also present preliminary or selected or few results if possible. If the presentation is successful, the candidate can go ahead with his or her research to conclusion and thesis write-up. If the presentation is not successful, the student will be required to redo the presentation after three months from the date of the first presentation. If the student is not successful in the second attempt in Seminar II, like in Seminar I, the student stands disqualified and will be out of the programme.

- (iv) Between 27 and 30 months of the programme, the student will be required to present **SEMINAR III** which covers the entire work done by the student and hence the presentation will cover the entire Thesis. This should be presented when the student has completed his or her research. This is equivalent to **Internal Departmental Defence** by the student. The successful student will be required to make corrections and prepare for Faculty defence not later than two months after the Departmental Internal Defence.
- (v) After the Faculty defence which should come not later than 32 months of the programme, the student will be required to present his or her work in the School of Graduate Studies, and thereafter do external examination (final oral defence) of his or her work 36 months into the programme. The student has a maximum of ten semesters or 60 months in the programme. Students who delayed in any of the stages should ensure he or she does the final oral defence before 60 months into the programme. The timelines specified in (i) to (v) are applicable to full time study. For students in part time study, the final external examination is expected to come within 8 semesters or 48 months of the programme on the earliest and not later than 16 Semesters or 96 months into the programme.
- (vi) The student will produce at least two journal articles (accepted for publication) in a reputable journal and attend and present his/her work in at least one conference.
- (vii) The PhD degree is awarded upon satisfactory performance in the final oral examination (scoring a minimum of C grade) and fulfilment of all Departmental and University requirements.

3.5 Course Outline

For the purposes of the Doctor of Philosophy Degree, courses are offered at a higher level than the requirements for M.Eng degree in each of the following four major areas of Mechanical Engineering: Applied Mechanics and Design (AMD), Energy and Thermofluid Engineering (ETE), Industrial and Systems Engineering (ISE), and Production and Maintenance Engineering (PME). The first two seminars are graded and have credit units of 3 each. The course outlines are presented below.

3.5.1 General Courses

Course Code	Course Title	Credit Unit
MEG 900.6	Mechanical Engineering PhD Thesis	12
MEG 901.1	Advanced Engineering Mathematics and Philosophy of Mechanical Engineering	3
MEG 911.2	Seminar I	3
MEG 912.2	Seminar II	3
		21

3.5.2 Courses in Areas of Specialization

Course Code	Course Title	Credit Units	Option
MEG 902.1	Energy Conversion and Advanced Thermofluids Engineering Analysis	3	ETE
MEG 903.1	Advanced System Analysis, Logistics and Industrial Operations Research	3	ISE
MEG 904.1	Tribological Engineering and Advanced Mechanical Design Systems	3	AMD
MEG 905.1	Terotechnology, Advanced Production Systems and Computer Integrated Manufacturing	3	PME

3.6 Course Content

MEG 900.6 Mechanical Engineering PhD Thesis (12 Credits)

The successfully completed dissertation, having passed the School of Graduate Studies Seminar, shall be presented by the Mechanical Engineering PhD candidate at an oral defence before a board of examiners, which includes an External Examiner, constituted according to the regulations of the

School of Graduate Studies, University of Port Harcourt.

MEG 911.1 Seminar I (3 Credits)

This comes in the form of a presentation which covers Chapters one and two of the student's thesis, hence, a preliminary report of the student's research. Introduction and detailed Literature Review of the area of study of the student will be covered.

MEG 912.2 Seminar II (3 Credits)

Like seminar I, this also comes in the form of a presentation which covers Chapter 3 (Materials and Methods) in addition to Chapters one and two. Chapters one and two here should be improved versions of what is contained in Seminar I. Preliminary results from the research, if any, should be included in this presentation.

MEG 901.1 Advanced Engineering Mathematics and Philosophy of Mechanical Engineering

Specific course content: Analysis and engineering applications mathematical concepts: scalar and vector fields, analytic functions; operational calculus; linear and tensor algebra and fields; calculus of variations; systems of ordinary differential equations, partial differential and integral equations and their solution methods; advanced numerical schemes, pseudocode algorithms, error and stability analysis; finite-difference, boundary element, and finite element methods.

Assessing the explanatory relevance of ascription of technical functions; mechanistic explanation of mechanical engineering science; assessing the roles of design representation: counterfactual understanding and technical advantage predictions; testing of mechanical engineering design methods: explanation, reverse engineering and constitutive relevance.

MEG 902.1 Energy Conversion and Advanced Thermofluids Engineering Analysis

Energy forms, supply and demand, conversion, utilization and management, and environmental impact; energy resources; energy chains, power plants; thermodynamic analysis; applications of renewable energy resources; energy management, planning and investment issues; economics of energy-environment interactions and climate change; regulation and governance of the energy sector.

Application of the First and Second laws of thermodynamics; combined First and Second law analysis, thermodynamics of irreversible processes and application to single-and multi-component

systems with and without chemical reactions; Combustion Chemistry of a Simple Fuel, Fossil Fuel Characteristics, Combustion Reactions and Analysis, Combustion analysis using JANAF Tables, Combustion instabilities and application to internal combustion engines design and analysis. Basic Concepts and Fundamentals of fluid flow; Conservation equations; Exact solutions of Navier-Stokes Equations, Potential Flows, Laminar Boundary Layers, Elements of Stability Theory, Turbulent Flow, Compressible Flows, Introduction to Computational Fluid Dynamics (CFD); Unified system of equations of heat and mass diffusion and convection; thermal radiation and applications; heat and mass exchangers.

MEG 903.1 Advanced System Analysis, Logistics and Industrial Operations Research

Review of systems concepts and evolution, conceptual, preliminary, and detailed design and development; system testing and evaluation; alternatives and models in decision making; models for environmental, social, and economic evaluations; optimization in design and operations; probabilistic and statistical methods of system analysis; queuing theory and analysis; control concepts and techniques; design for operational feasibility, reliability, maintainability, supportability, and environmental, social, and economic feasibility; logistics management; trends in global supply chain management; incentives and the strategic management of suppliers; time compression in supply chain; agile supply chains; logistics customer service through marketing and services strategies; people powering contemporary supply chains.

Industrial organizations, productivity and competitiveness; design and management of products, analysis of acquisition, process development, and resource utilization; analysis of operational issues; improvement of organizational overall performance and competitiveness through the use of discrete simulation modelling and other computer software packages. Operations research models and decision making, applications; transportation problem, network models, dynamic optimization models, inventory scheduling.

MEG 904.1 Tribological Engineering and Advanced Mechanical Design Systems

Tribology and tribological problems; Contact mechanics, Friction theories, Wear theories, Lubrication and lubricants, Surface Engineering and applications.

Review of linear vibration of rigid bodies, Single- and multi-degree of freedom systems, Vibration measurement and isolation; Vibration of continuous systems: Classical theories of beams, plates and shells, Shear deformation theories of beams, plates and shells; Nonlinear vibration analysis: Sources of nonlinearity in vibrating systems; Modelling and solution techniques for nonlinear vibrations; Impact dynamics: Impact of rigid bodies – one-, two- and three-dimensional impacts, Impact of flexible structures by rigid projectiles

MEG 905.1 Terotechnology, Advanced Production Systems & Computer Integrated Manufacturing

Maintenance systems, repair and maintenance, maintenance as a business proposition, the business unit concept, automation, maintenance cost reduction, maintenance philosophy; maintenance systems; concept of supervision; maintainability; failure rate curves, inherent and operational availability, procedure for sampling and testing; test plan for determination of mean time to repair (MTTR) or maintainability, computerized evaluation of MTTRs and other related parameters; design for maintainability; condition-based maintenance; non-destructive testing techniques, retirement for cause; computerized maintenance management systems; recent advances in maintenance engineering and management; case studies of interest to the industries and transportation systems in the locality.

Review of the concepts of production systems and computer integrated manufacturing, production system facilities, manufacturing support systems, automation and manual labour in production systems, manufacturing operations, automation and control technologies; numerical control (NC), computer numerical control (CNC), direct numerical control (DNC), NC part programming, engineering analysis of NC positioning systems, APT programming; industrial robotic engineering, anatomy and attributes, control systems, programmable logic controllers; materials handling and identification technologies, material transport systems, storage systems, and automatic data capture; manufacturing systems, single station manufacturing cells, group technology and cellular manufacturing, flexible manufacturing systems (FMS), manual assembly lines, transfer lines, and automated assembly systems; quality control systems; manufacturing support systems, product design and CAD/CAM in the production system.

SELECTED STAFF LIST FOR THE PhD PROGRAMME IN MECHANICAL ENGINEERING

S/N	NAME	DESIGNATION	SPECIALISATION
1.	Prof. H. U. Nwosu	Professor	Applied Mechanics and Production Engineering
2.	Dr. T. A. Briggs	Professor	Industrial and Production Engineering
3.	Dr. C. V. Ossia	Professor	Applied Mechanics and Tribology
4.	Dr. M. U. Shadrack	Reader	Energy and Thermofluid Engineering
5.	Dr. E. O. Diemuodeke	Reader	Energy and Thermofluid Engineering
6.	Dr. A. Big-Alabo	Reader	Applied Mechanics and Tribology
7.	Dr. J. C. Ofodu	Senior Lecturer	Energy and Thermofluid Engineering
8.	Dr. M. M. Ojapah	Senior Lecturer	Energy and Thermofluid Engineering
	Dr. E. G. Saturday	Senior Lecturer	Energy and Thermofluid Engineering
	Celestine Ebieta	Senior Lecturer	Energy and Thermofluid Engineering
9.	Daniel Aikhuele	Senior Lecturer	Production and Manufacturing Engineering
10.	Chidozie Ezekwem	Senior Lecturer	Energy and Thermofluid Engineering

DEPARTMENT OF PETROLEUM & GAS ENGINEERING

A.2. Brief History of the Programme

The Federal Government of Nigeria founded the University of Port Harcourt in 1975 as a college of the University of Lagos. The college gained the University status in 1977. The academic units of the University are organized into faculties and Departments. One of such academic units is the Faculty of Engineering. The faculty started in 1979 with two programmes, viz: Electrical and Petroleum Engineering. Other programmes which were added later included Chemical Engineering in 1982, Civil Engineering in 1983, Mechanical Engineering in 1988, Gas Engineering and Environmental Engineering in 2000. In 1999 the Electrical Engineering programme was upgraded to Electrical/Electronic Engineering programme, while the now upgraded Petroleum and Gas Engineering Department teaches and conducts research in Petroleum and Gas Engineering.

Petroleum and Gas Engineering is the practical application of the basic sciences of physics, chemistry, mathematics and geology, and all the Engineering sciences to the development, recovery and processing of oil and gas. Engineering problems must be solved with due consideration to economic factors, and the petroleum and gas engineer must be thoroughly familiar with the basic economic relationships which involve investment, operating expenses, taxation and profitability analysis. If you are interested in becoming involved in solving today's energy problems, then consider a career in Petroleum and Gas Engineering where initiatives and engineering skills of the highest order are essential, but equally important is the ability of the petroleum and gas engineer to work harmoniously with his or her associates. In oil and gas development, the petroleum and gas engineer supervises the drilling of wells and their completion, if oil or gas is discovered. In the recovery of crude oil and natural gas, the petroleum and gas engineers aim at:

- 1) Controlling and efficiently using the natural energy in an underground reservoir
- 2) Providing additional energy by injecting fluids into the reservoir;
- 3) Increasing the flow capacity of the reservoir or the petroleum in it through sound engineering techniques;
- 4) Reducing the cost of oil and gas recovery, production and transportation; and

- 5) Minimizing waste and protecting the environment

Compared with other branches of engineering, Petroleum and gas Engineering is a relatively new professional field. However, because of the rapidly increasing demand for oil and gas and the advances in petroleum technology, it has attained an important position. The unique problems of the oil and gas industry have stimulated the demand for men and women trained in such specialties as reservoir engineering, production engineering, drilling engineering, natural gas engineering, and petroleum economics. Since the petroleum industry is expanding rapidly in many parts of the world, ample opportunities for travel and advancement of positions of high salaries and marked responsibilities are to be found in the profession.

Over the years, students' population has increased steadily; many of which have graduated with very impressive degree classes, including the distinction category. Many of these graduates are working with some of the key industries around Port Harcourt and beyond. We note with pride that many of our graduates have excelled at their places of work, particularly those in the oil sector.

A.3. Philosophy, aims and objectives of the programme

Philosophy

The philosophy of the programme is to produce competent Petroleum and Gas Engineers as well as qualified teaching and technical staff, needed to meet the manpower requirements in the global oil and gas sector.

Aims and Objectives

The aims and objectives are:

- (i) To provide the much-needed manpower required to drive the oil and gas sector development in the country and beyond.
- (ii) To produce competent petroleum and gas engineering graduates that should be confident enough to establish a small engineering business if ready-made jobs are not available.
- (iii) To offer internationally competitive and locally responsive postgraduate training.

Student Outcomes (SOs)

Graduates of the Petroleum Engineering programme from the University of Port Harcourt must demonstrate:

- An ability to identify, formulate, and solve engineering problems by applying principles of engineering, science, and mathematics.
- An ability to apply both analysis and synthesis in the engineering design process, resulting in designs that meet desired needs.
- An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
- An ability to communicate effectively with a range of audiences.
- An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
- An ability to recognize the ongoing need for additional knowledge and locate, evaluate, integrate, and apply this knowledge appropriately.
- An ability to function effectively on teams that establish goals, plan tasks, meet deadlines, and analyze risk and uncertainty.

To ensure that SOs are met, the graduate board established processes to monitor students that are able to attain the programme's SOs at an acceptable level. These processes include:

- All students pass all required courses in the programme
- All students undertake compulsory design projects
- All students be involved in at least 3 seminar presentations before graduation
- All students be involved in an entrepreneurial project before graduation

Program Educational Objectives (PEOs)

Graduates of Petroleum & Gas Engineering should:

- Be employable and able to practice petroleum engineering as qualified engineers, who are ready to solve industry problems to enhance hydrocarbon exploration and exploitation as well as

provide requisite skills to boost service operations in the oil and gas industry.

- Be able to pursue lifelong learning and demonstrate successful career growth in petroleum engineering through post graduate education and active participation in professional activities.
- Become entrepreneurs, who are critical and independent thinkers, exhibiting good leadership skills and playing vital roles that contribute to the welfare of society and the environment.

B. CURRICULUM

1. Post Graduate Diploma in Petroleum Engineering

2. Course Structure and Course Schedule

The Department runs a one-year Post-graduate Diploma programme leading to the award of a Post Graduate Diploma Degree in Petroleum and Gas Engineering (**PGDPE**). Generally, the programme is divided into two broad areas: Basic Engineering and Chemical Engineering Courses; and Core Petroleum Engineering Courses

- **Basic-Engineering and Chemical Engineering Courses:** This covers courses in Basic Engineering such as Strength of Materials, Engineering Mathematics, Drawing and Workshop Practice. Those from Chemical Engineering are Chemical Engineering Thermodynamics and Transport Phenomena I & II.
- **Core Engineering Courses:** This covers courses taken in Petroleum Engineering designed to ground them in basic Petroleum Engineering

4 Post Graduate Diploma Programme

FIRST SEMESTER

Course Code	Course Title	Credit Units
DPE 710.1	Drilling Engineering	3
DPE 720.1	Petroleum Production Engineering	3
DPE 730.1	Reservoir Analysis I	3
DCHE 703.1	Chemical Engineering	
DENG 705.1	Thermodynamics Basic Engineering I	3
DCHE 707.1	Transport Phenomena I	3

18

SECOND SEMESTER

Course Code	Course Title	Credit Units
DPE 740.2	Applied Petroleum Geology	3
DPE 750.2	Well Completion and Worker	3
DPE 750.2	Reservoir Analysis II	3
DPE 770.2	Natural Gas Engineering	3
DPE 780.2	Petroleum Economics and Property Evaluation	3
DCHE 708.3	Transport Phenomena II	3
		18

diagrams. Pure bending of beams, bending stresses in composite beams, shearing stresses in beams, complex stresses; principal stresses.

DENG 731.3 Basic Engineering II

This course is divided into two sections namely:

- Engineering Drawing:** fundamentals of engineering drawing, language of engineering, use of scale, line work, lettering, geometrical constructions. Projection of points, line surface and solids in true lengths and gradients. Free hand sketching of machines.
- Workshop Practice:** Introductory workshop practice with inherent characteristics of inculcating in the students the spirit of team work and use of measuring devices and bench tools.

LONG VACATION

Course Code	Course Title	Credit Units
DPE 785.3	Petroleum Engineering Laboratory	3
DPE 790.3	Petroleum Engineering Design	3
DENG 731.3	Project Basic Engineering II	3
TOTAL		45

5.2 PETROLEUM ENGINEERING COURSES

DPE 710.1 Drilling Engineering

This course covers drilling engineering: Specifically, the following topics are covered. Comprehensive picture of modern drilling operations, practices, equipment, both onshore and offshore. Well drilling methods, rheology of Newtonian and non-Newtonian fluids, chemical properties and carrying capacity of drilling fluids, rotary abnormal pressures: pressure loss calculations in rotary drilling, surge and swab pressures and hole problems encountered in drilling operations. Coiled Tubing Drilling, Slim hole and Monobore, Aerated fluid Drilling.

DPE 720.1 Petroleum Production Engineering

Analysis, specification and characteristics of production systems. Well analysis; inflow performance relationships. Study of flow in pipes; sucker rod pumping; gas lift; submersible pumping; hydraulic pumping production logging, offshore technology formation Damage Assessment; Production Optimization. Analysis and evaluation of surface production processing, fluid separation, storage, measurement, treatment, custody transfer, transmission, disposal corrosion, other operations.

DPE 730.1 Reservoir Analysis I

This course covers rock and fluid properties, reservoir engineering and water and gas flooding aspects of enhanced oil recovery. Participants are exposed to the petro-physics of reservoir rocks. Discussion of porosity, permeability, saturations, electrical conductivity, capillary pressure, and relative permeability.

5. COURSE DESCRIPTIONS

5.1 Engineering Courses (ENG)

DENG 705.1 Basic Engineering I

This course is divided into two sections namely:

- Engineering Mathematics:** partial differentiation, directional derivative, gradient differential, infinite series, matrix algebra, solutions of systems of linear equations and numerical techniques.
- Strength of Materials:** Force equilibrium-free body diagrams, centroids and second moment of area. Concept of stress and strain; stress-strain diagram. Axially loaded members, composite bar; temperature stresses; relation between elastic constants. Thin cylindrical spherical and conical pressure vessels, cylindrical shells with rings, torsion of circular shafts and power transmission of shafts. Axial force, shear force and bending moment

Reservoir fluid properties and behavior under high pressure and relatively high temperature. Gas laws, pressure-volume-temperature (PVT) characteristics of binary and complex hydrocarbon systems; equation of state. The K-value concept and its use in stage separation. The use of fluid properties in reservoir engineering. Description and classification of natural underground oil and gas reservoir. Fluid flow in porous media. Reservoir drive mechanisms. Engineering calculations of fluid content of reservoirs and produced recoveries of oil; natural gas geothermal, and water reservoirs; material balance, steady and unsteady state flow equations. Water flooding and gas injection aspects of enhanced oil recovery.

DPE 740.2 Applied Petroleum Geology

This covers introductory geology, petroleum geology and formation evaluation: specifically, the following areas are emphasized: Geology map interpretation. Simple geologic structures. Orogenic movements, volcanism and mountain building. Introduction to paleontology and stratigraphy, historical geology. Introduction to petrology of Nigeria. Economic minerals of Nigeria. Applied aspects of geology. Physical and chemical characteristics of petroleum; reservoir geology. Chemistry and origin of formation water. Origin, migration and accumulation of petroleum. Structural, stratigraphic and combined traps. Basin analysis and the Nigeria Delta petroleum prospect. Other Nigerian petroleum deposits. Global distribution of petroleum in time and space. The energy problem. Subsurface methods in petroleum exploration and exploitation. Well-logging methods and interpretations. Open-hole and cased-hole logs, their mechanics and manipulations. Courses will be accompanied by labs and/or field trips.

DPE 750.2 Well Completions and Workover

Participants are exposed to the following areas: casing design and selection, tubing design and selection, primary and secondary cementing methods, perforation, stimulation, acidizing, hydraulic fracturing, formation testing, sand control and workovers.

DPE 760.2 Reservoir Analysis II

Mathematics: basis of pressure transient test. Theory and practice of pressure testing techniques for oil and gas wells. Pressure build-up, pressure draw-down; pressure fall-off, interference, multi-rate, injectivity and pulse testing. Determination of average reservoir pressure, reservoir heterogeneities and rock properties.

DPE 770.2 Natural Gas Engineering

This course covers Natural Gas Engineering and Processing. Specifically, the following topics are emphasized:

Production and transportation of gas; metering; compression; well performance; estimation of reserves; utilization and conservation. Field handling of natural gas.

Sour gas problems. Study of gas condensate field; underground storage.

Application of the concepts of thermodynamics, transport phenomena, and phase behaviour in processing and conditioning, of natural gas and its liquids, absorption, adsorption and fractionation processing; gasoline plant design; Liquefied Petroleum Gas (LPG); Liquefied Natural Gas (LNG). Other sources of gas.

DPE 780.2 Petroleum Economics and Property Evaluation

Profitability analysis in oil and gas investments; interpretation of technique and economic data; evaluation of risk and uncertainty in oil and gas exploitation. Decision tree analysis; Monte Carlo Simulation; preference theory; pricing and bidding strategies; optimum development of oil and gas fields.

DPE 785.3 Petroleum Engineering Laboratory

Experiments in rock and fluid properties; drilling fluids; cementing and well completion fluids flow measurements and instrumentation.

DPE 790.3 Petroleum Engineering Design Project

The projects will cover field and/or laboratory studies. Every student is required to submit a project report on the solution of an integrated petroleum engineering problem.

CHEMICAL ENGINEERING COURSES (CHE)

DCHE 703.1 Chemical Engineering Thermodynamics

A study of energy, entropy and equilibrium; either interrelations or the engineering relationships to which they give rise. Thermodynamics of energy conversion and fluid flow. Physical and chemical equilibria in multi-component systems partial molar Gibbs free energy and the chemical potential ideal and non-ideal solution behaviour. Phase

separation and equilibrium between phases for reacting chemical and electrochemical systems. Surface chemistry.

DCHE 707.1 Transport Phenomena I

Fluid mechanics. Momentum transfer in fluids in laminar and turbulent flow. Microscopic and macroscopic material, momentum and energy balances. Rheology. Dimensional analysis: flow in conduits, pump: fluid metering, heat and mass transfer: heat transfer rate: conducting, convection and radiation mechanisms of heat transfer: heat exchange design. Molecular diffusion. Mass transfer mechanisms, phase mass transfer coefficients, prediction of mass transfer rates.

DCHE 708.2 Transport Phenomena II

Momentum, energy and mass transfer in solids, in laminar and turbulent fluid in and between two phases; theory of molecular, and eddy viscosity, thermal conductivity and diffusivity, microscopic and macroscopic equations of motion, radiant heat transfer.

C.1. Curriculum

C.2. Master in Engineering Degree

The required post-graduate courses, depending on the area of specialization, are listed below. This is in compliance with the Benchmark Minimum Academic Standards (BMAS) requirement. Students on full-time are expected to complete the course work in one session while part-time students or students without a background in petroleum engineering, may complete the course work in two sessions.

Courses for Students with Petroleum Engineering Background

M. ENG. Petroleum Engineering (Reservoir Engineering)

FIRST SEMESTER

Course Code	Course Title	Credit Units
PNG 800.1	Mathematical Techniques in Petroleum Engineering	3
PNG 801.1	Advanced Reservoir Engineering	3
PNG 805.1	Advanced Evaluation of Oil and Gas Properties	3
PNG 814.1	Improved Recovery Method	3

SGS 801.1	ICT and Research Method	3
		14

SECOND SEMESTER

Course Code	Course Title	Credit Units
PNG 806.2	Well Testing Analysis	3
PNG 807.2	Numerical Reservoir Simulation	3
PNG 820.2	Graduate Seminar in Petroleum Engineering	3
PNG 830.2	M.Eng. Dissertation	6
SGS 802.2	Management & Entrepreneurship	2

COURSE DESCRIPTIONS

SGS 802.2 Management and Entrepreneurship (2 Credits)

Advances and development of entrepreneurship, the entrepreneurship qualities and Characteristics, the opportunities; Starting and developing new business ventures, legal ownership; feasibility Studies; role of small and medium scale enterprise (SME) in the economy, role of government in entrepreneurship, business location and layout, accounting for SME, financing SME, managing of factors of SME, Marketing in SME, risk management of SME, Success and failure factors of SME prospects and challenges of entrepreneurship and entrepreneurship ethical behavior in small business.

PNG 801.1: Advance Reservoir Engineering (3 Credits)

Geological concepts in reservoir Engineering; Recovery methods and definitions of reservoirs. Determination of Hydrocarbon in-Place Oil Recovery: Volumetric methods; Material balance and applications; water influx models and calculations; uncertainties in reserve calculations. Fluid flow concepts; flow potential; Description and classification of natural underground oil and gas reservoirs. Fluid flow in porous media. Reservoir drive mechanisms. Engineering calculations of fluid content of reservoirs and predicted recoveries of oil, natural gas geothermal, and water reservoirs, material balances, steady and unsteady flow equation. Water flooding and gas injection aspects of enhanced oil recovery. Mathematical basis for pressure transient tests. Theory and Practice of pressure tests, techniques for oil and gas well. Pressure build-up, Pressure drawdown; pressure fall-off, interference, multi-rate, injectivity and pulse testing. Determination of average reservoir pressure, reservoir heterogeneities and rock properties, Test design, etc

PNG 808.2: Drilling Optimization (3 Credits)

Introduction to drilling optimization, well planning and cost estimation. Drilling team, drilling rigs, rig power system, hoisting system, circulation system, the rotary system, the well control system, well-monitoring system, special marine equipment, drilling cost analysis, Bit types available. Casing design and selection, tubing design and selection, primary and secondary cementing methods, sand control, perforation, formation testing and initial well completion Rock failure mechanisms. Hydrostatic Pressure, pore pressure and fracture gradient calculations, pressure control and blow out prevention.

Equipment, Indicators and methods of kick controls. Cementing; Properties, Equipment, Hole conditions volume calculations and Rate of circulation, squeeze cementing and testing of cement, coiled tubing drilling, slim hole drilling, directional and horizontal drilling techniques and equipment, developments in drilling fluids technology, wellbore stability and concepts. Fishing: Tools and methods, drilling services and contract specifications. Offshore drilling technology, advances in drilling engineering measurement while drilling (MWD) Bit selection and evaluation. Factors affecting tooth wear, bearings wear, terminating a bit run. Factors affecting penetration rate, bit operation, drilling fluids and drilling hydraulics, well head equipment. Authorization for expenditure (AFE).

PNG 804.2: Advance Formation Evaluation (3 Credits)

Concepts of formation evaluation and comparison of the various methods well logging, coring, well testing etc. Well logging: classification and principles. Electric, acoustic and radioactive properties of reservoir rocks. Reserve estimation based on well logs. SP curve, conventional resistivity logs (normal and lateral devices), focusing-electrode logs (laterolog and spherically focused logs), induction logs, micro-resistivity logs (microlog, microlaterology, proximity log, microSFL), radio-activity logs (gamma ray, neutron, formation density and thermal time decay) sonic log, electromagnetic propagation tool and the Repeat formation tester. Review/overview of basic well logging. Well log interpretation methods. Log normalization, cross-plots, computer process interpretation overlays and office processed logs. MWD system. Applications and problems of log interpretation. Production logging; CBL flow meter, temperature logs and other special purpose logs. Recent advances in logging and log analysis such as fluid

contacts, water or gas entry points, thief zone, faults identification, permeability anisotropy. Production logging measurements. Logging while Drilling. Computer aided well log interpretations.

PNG 802.1: Advance Gas Engineering (3 Credits)

Properties of natural gas, Thermodynamics of Gas Production and Transportation; Compression of natural Gas: Gas Metering; Transportation in Pipes; Well Performance evaluation; Estimation of Gas Reserves: Field handling of Natural Gas; Sour Gas Problems; Gas Condensate Fields and Storage.

PNG 806.2: Well Testing Analysis (3 Credits)

Mathematical basis for pressure transient tests. Theory and Practice of pressure tests, techniques for oil and gas well. Pressure build-up, Pressure drawdown; pressure fall-off, interference, multi-rate, injectivity and pulse testing. Determination of average reservoir pressure, reservoir heterogeneities and rock properties. Test design. Purpose of BHP surveys, types of BHP surveys, ideal conditions for running tests, BHP survey equipment, correct procedures for conducting tests, gauge quality check procedure. Theory of well testing-phases and flow geometries flow equations and solutions, analysis models, skin concept; analysis of BHP tests Drawdown, buildup, interface etc. Field practices and other factors that affect tests, examples of bad and good tests.

PNG 800.1: Mathematical Techniques in Petroleum Engineering (3 Credits)

Special functions, gamma, Beta, Bessel, Legendre and hypergeometric functions. Euler's equations, geometrical and physical interpretation of solutions. Operators and operator method of solving equations, system of linear equations. Operational calculus, Laplace transform, theory and application to initial value problems. Axiomatic definitions of probability. Basic rules of probability. Bayes formula. Permutations and combinations. Tabular and graphical representation of samples. Measures of central tendency and dispersion. Random variables. Probability distributions, rectangular, hypergeometric, binomial, poisson and normal distribution and Mathematical expectation. Mean and variance of a distribution, Bivariate distributions, Joint, marginal and conditional distributions covariance; correlation coefficients. Regression and correlations. Method of least squares, Regression curves. Random sampling,

Sampling distributions, Expected value, and Standard error. The control limit theorem. Student's t , X^2 and F -distributions. Confidence intervals for mean, proportion, difference of means, difference of proportion and ratio of variances. Elements of tests of hypothesis: critical regions, significance level, type I and type II errors. Derivation of fluid flow equations in the reservoir using the law of conservation of mass, transport equation, equation of state and the equilibrium equation. Derivations should consider both single and multiphase flow in Cartesian and radial systems with emphasis on the dimensions, the classification of boundary conditions and the use of initial conditions. Solution methods for first and higher order differential equations, the application of Fourier equation, Laplace transform, Bessel function, Gamma function and the Green function in petroleum engineering.

PNG 812.2: LNG Processing (3 Credits)

Properties and characteristics of natural gas; Natural gas processing, Gas conditioning: sweetening and dehydration. Heat and mass transfer; Liquefaction of natural gas. Types of liquefaction facilities; propane cooled, turbo expander, mixed refrigerant, Joule Thompson effect, Low temperature separation (LTS) and Mechanical refrigeration. Re-gasification terminals; LNG storage: peak shaving and base load facilities. Ocean transport, Boil off gas management; safety of LNG

PNG 814.1: Improved Recovery Method (3 Credits)

Review of current recovery methods; imbibitions and drainage; Wettability concepts; recovery mechanism; Multiphase flow concepts; immiscible displacement concepts; miscible displacement concepts; sweep efficiency; water flood performance prediction; Miscible flooding; Chemical flooding; Thermal recovery concepts.

PNG 820.2: Graduate Seminar in Petroleum Engineering (3 Credits)

Designed to expose students to research methodology in Petroleum Engineering, advances in petroleum engineering, techniques, and formats for technical paper and report writing and strategies of representation to technical audience. Students shall look at overview of research logic, technical progress introduction to research purposes, writing of proposals and research funding, research literatures and material gathering types of research projects, data processing and analysis, presentation of results, economics,

Limitations, observations, conclusion and recommendations, case studies, paper review, advances in petroleum engineering research.

PNG 807.2: Numerical Reservoir Simulation (3 Credits)

Concept of reservoir simulation, Single Fluid Flow Equation; Multiphase Flow Equation; Finite-Difference Approximations; Consistency, convergence and stability; Grid Systems and Boundary Conditions; Solution Methods; Discussion of black-oil simulator; Practical considerations in reservoir simulation; simulation study with black-oil simulation. Practical reservoir simulation studies with software.

PNG 805.1: Advance Evaluation of Oil and Gas Properties (3 Credits)

Profitably analysis in oil and gas investments, inter-relation of technical and economic data, time value of money compound interest and annuity calculations depreciation methods, capital budgeting projects evaluations. Decline curves analysis, risk uncertainly in oil and gas exploration, decision tree analysis. Monte Carlo simulation, preference theory, pricing and bidding strategies, optimum field development, Nigerian petroleum profit tax law.

PNG 809.1: Alternative Hydrocarbon Sources (3 Credits)

World energy sources, natural sources, uses and properties of fossils and other energy sources. Alternative hydrocarbons resources in Nigeria. Exploration and mining of such resources. Existing and proposed industrial processes for conversion of such resources into Engineering materials and energy. Technologies for the use of coal, shale, tar sands and biomass. Economic assessment of hydrocarbon resources. Environmental advantages/disadvantages of alternative hydrocarbons.

PNG 816.2: Rock Mechanics (3 Credits)

Concepts of rock mechanics, crater formation: plastic and pseudo-plastic characteristic of rocks. Load rate mechanism static and impact leading; tooth penetration as a function of differential and overburden pressures. Effects of differential pressure on drilling rate, Rock properties and earth stresses.

PNG 810.2: Coal Conversion Processes (3 Credits)

Origin and Occurrence of coal; Characteristics and types of Coal; Grade of Coal; Proximate and

Ultimate Analysis; Mining of Coal; insitu-methods, excavation and processing; syngas production and purification. Coal liquefaction and gasification processes. Fisher Tropsch synthesis. Processing and purification of products of coal. Ammonical liquor, coal tar, coke. Etc. Environmental issues in coal production and processing.

PNG 811.1: Risk Analysis in Petroleum Ventures (3 Credits)

This course will cover evaluation of risk and uncertainty in oil and gas exploitation. Decision tree analysis; Utility theory, Probability, Expected Monetary Value (EMV), Expected Utility value maps, Monte Carlo simulation; preference theory; pricing and bidding strategies; optimum development of oil and gas fields.

PNG 803.1: Multiphase flow in Pipes (3 Credits)

Principles of two-phase flow; the general energy equation; evaluation of friction losses. Single-phase flow variables used in two-phase flow; flow patterns. Horizontal pressure loss prediction methods. Prediction of horizontal flow patterns. Flow through restrictions.

PNG 830.2: M.Eng Dissertation (6 Credits)

The master’s project undertaken by each student is equivalent to about three months fulltime work. An individual project is selected from a list of project at the end of the first year. Students may suggest their own project.

Courses for Students with Gas Engineering Background

M. ENG. Fuel and Energy Engineering

FIRST SEMESTER

Course Code	Course Title	Credit Units
FEN 800.1	Mathematical Techniques in Petroleum Engineering	3
FEN 860.1	Energy Conservation and Management	3
FEN 810.1	Heat Transfer, Combustion and Aerodynamics	3
FEN 830.1	Power Generation and Pollution Control	3
SGS 801.1	ICT and Research Method	2
		14

SECOND SEMESTER

Course Code	Course Title	Credit Units
FEN 870.2	Catalysis and Fuel Synthesis	3
FEN 875.2	Energy Seminar	3
FEN 840.2	Combustion Technology and Thermostatic	3
PNG 830.2	M.Eng. Dissertation	6
SGS 802.2	Management & Entrepreneurship	2
		16

COURSE DESCRIPTIONS

M. ENG. Fuel and Energy Engineering.

FEN 600.1: Mathematical Techniques in Energy Engineering (3 Credit Units)

Interpolation: Theory and application, Piecewise polynomial Interpolation, Curve fitting and statistical application, Numerical differential and integration, Derivation of fluid flow, flow equation, Solutions of fluid flow equations; Numerical methods and green’s function etc., Superposition theory and application.

FEN 610.1: Heat Transfer, Combustion and Aerodynamics (3 Credit Units)

Conduction, convection, heat exchangers, boiling and condensation, radiative heat transfer in enclosures, heat transfer in furnaces, solar energy. Basic combustion: stoichiometry, burning velocity and limits of flammability, flame stability, gas burners, liquid and solid fuel combustion, boilers. Navier stokes equation, energy and species balance equations for combusting flows, turbulence, CFD, free and enclosed jets, swirling jets, flame, stabilization, stirred reactors, jet propulsion.

FEN 630.1: Power Generation and Pollution Control (3 Credit Units)

Basic thermodynamics, steam power cycles, gas turbine cycles and combined cycles, cooling towers and condensers, ideal engine cycles, refrigeration and heat pumps, wind and tidal power. Atmospheric pollution and legislation, measurement, techniques, dispersion in the atmosphere; formation and control of particulates and emissions from combustion, transport, fuel processing, waste disposal and incineration.

FEN 660.2: Energy Conservation and Management (3 Credit Units)

Energy Conservation And Management In Developing Countries, Energy Audits, Energy Analysis, Energy Use And Losses In Building, Boilers And Combustion, Industry Energy Conservation, Heat Pumps, Total Energy Systems, Furnace Performance, Energy Storage And Fuel Cells.

FEN 670.2: Catalysis and Fuel Synthesis (3 Credit Units)

Nature of catalysts, the types of catalysts used in different processes, Mechanism of catalytic action, General functionalities of types of catalysts, Catalytic reforming, Zeolite catalyst, the conversion of method and other oxygen containing compounds to hydrocarbons over ZGM-5 catalyst, Fluid catalytic cracking unit, Catalysis and energy economics.

FEN 675.2: Energy Seminar (3 Credit Units)

Each student is required to present a short paper on an energy topic of his or her choosing. This may be based on industrial experience or on the project.

FEN 640.2: Combustion Technology and Thermostatic Control (3 Credit Units)

Gaseous fuel combustion, flame temperature, calculations, diffusion and premixed flame calculations, laminar flame stability. Liquid and

solid fuel combustion, atomization and spray combustion, fluidized bed combustion of coal and char particles. Thermostatic control of combustion system, transfer functions, process dynamics, system response, controls system stability, frequency response analysis.

SGS 802.2 Management and Entrepreneurship (2 Credits)

Advances and development of entrepreneurship, the entrepreneurship qualities and Characteristics, the opportunities; Starting and developing new business ventures, legal ownership; feasibility Studies; role of small and medium scale enterprise (SME) in the economy, role of government in entrepreneurship, business location and layout, accounting for SME, financing SME, managing of factors of SME, Marketing in SME, risk management of SME, Success and failure factors of SME prospects and challenges of entrepreneurship and entrepreneurship ethical behavior in small business.

FEN 630.2: M. Eng Dissertation (6 Credit Units)

The master's project undertaken by each student is equivalent to about three months fulltime work. An individual project is selected from a list of project at the end of the first year. Students may suggest their own project.

ACADEMIC STAFF LIST

S/N	NAME(S)	QUALIFICATION	FIELD OF SPECIALIZATION	DESIGNATION
1	J.A. Ajienka	B.Sc (Ibadan), M.Eng, Ph.D. (UPH), R.Eng (5285)	Petroleum Production Engineering/ Multiphase Flow in Pipes	Professor
2	D. Appah	M.Sc Mining, Eng., Dip. Edu. (Baku) Ph.D (UPH), MNSE, R.Eng (7961)	Production Engineering, Formation Evaluation	Professor
3	O. F. Joel	B.Tech, Chem/Petro-Chem. Engg. (UST), M.Sc Eng Mgt. (Uniben), Ph.D Chem/Petro-Chem Engg. (UST), R.Eng(9471)	Drilling & Environmental Engineering	Professor
4	S. S. Ikiensikimama	B.Eng., M.Eng. (Chem), M.Eng (Pet), (UPH), Ph.D. Chem. (Unilag), R.Eng (10595)	Reservoir Engineering, Petroleum Economics, Petroleum Refining	Professor
5	B. S. Kinigoma	B.Sc (RSUST), M.Eng., (UPH) Ph.D (Uniport) R.Eng 33572	Energy and Environmental Engineering	Professor
