**Biochemistry and Molecular Biology of Parasites** Joseph Marr, Miklos Muller, 1995-09-06 The study of parasitic organisms at the molecular level has yielded fascinating new insights of great medical, social, and economical importance, and has pointed the way for the treatment and prevention of the diseases they cause. *Biochemistry and Molecular Biology of Parasites* presents an up-to-date account of this modern scientific discipline in a manner that allows and encourages the reader to place the biochemistry and molecular biology of these organisms in their biological context. The chapters are cross-referenced and grouped in an arrangement that provides a fully integrated whole, and permits the reader to create a composite of the biochemical function of these organisms. Individual chapter includes those devoted to metabolism, in both aerobic and anaerobic protozoa; antioxidant mechanisms; parasite surfaces; organelles; invasion mechanisms; and chemotherapy. The helminths are discussed not only from the point of view of their cellular biochemistry and metabolism, but also with respect to both their integrated functions such as neurochemistry, structure and functions of surfaces, and reproduction. Written by expert investigators, this book will be of interest to all experienced researchers, graduate students, and to the newcomer eager to become familiar with the biochemistry and molecular biology of parasites.

Plant Parasitic Nematodes Bert Zuckerman, 2012-12-02 *Plant Parasitic Nematodes, Volume III* provides a comprehensive discussion of the different advances in plant nematology. This includes biochemical techniques to taxonomy and innovation in transmission and scanning electron microscopy technology. It explains a broadened basis for understanding nematode physiology and behavior and the sensory mechanisms that govern nematode actions and plant host-nematode interactions. The book discusses the development of modern approaches to the evaluation and reduction of crop losses. The emphasis of this volume is on plant parasites and insights gained through research on other nematodes. In particular, the book explains the anatomical, developmental, behavioral, and genetic studies on the free-living nematode *Cenorhabditis elegans*, which is a widely used laboratory model for examining various biological problems. The information provided by various researches on *C. elegans* increases our understanding about the relevance of nematodes to general biological processes in higher organisms, including man. The book is divided into 19 chapters which cover the following concepts of plant nematology: biochemistry, cytochemistry, and genetics; morphology and function; host-parasite relations; and evaluation and control of crop losses. The present volume is an excellent reference for students, lecturers, and research professionals in plant

parasitology and related fields.

*Nematodes as Environmental Indicators* Michael John Wilson, Thomais Kakouli-Duarte, 2009 Nematodes are the most wide spread multicellular animals in nature and analysis of nematodes in terrestrial, freshwater and marine environments as well as their role and function in ecosystems, can be used for environmental monitoring. Compared to other organisms, they offer the greatest potential as bioindicators and can be used to study gene expression in relation to environmental challenges, to monitor changing impacts on the environment and in laboratory ecotoxicity tests. This volume addresses classical and molecular approaches to nematode community analysis, the contemporary field of nematodes as biosensors, as well as genomic aspects of nematode bioindicators. In addition, the case studies stress the importance of these bioindicators and demonstrate the commercial potential of these technologies.

Reforming Urban Land Policies and Institutions in Developing Countries Catherine Farvacque, Patrick McAuslan, 1992 This paper attempts to define and assess the various institutional and mechanical elements which constitute a land management system and which have a significant impact on the functioning of land markets. The assumption of this report is that the accumulation over time of different institutions and instruments, which have reflected different priorities and policies, has inhibited the efficient and equitable operation of land markets and that reforms of institutions and policies are now urgently needed. (Adapté du résumé des auteurs).

Environmental Assessment of Ogoniland, 2011 A major new independent scientific assessment, carried out by the United Nations Environment Programme (UNEP), shows that pollution from over 50 years of oil operations in the region has penetrated further and deeper than many may have supposed. The assessment has been unprecedented. Over a 14-month period, the UNEP team examined more than 200 locations, surveyed 122 kilometres of pipeline rights of way, reviewed more than 5,000 medical records and engaged over 23,000 people at local community meetings. The environmental restoration of Ogoniland could prove to be the world's most wide-ranging and long term oil clean-up exercise ever undertaken if contaminated drinking water, land, creeks and important ecosystems such as mangroves are to be brought back to full, productive health. The report key findings are alarming both in terms of human health protection and environmental protection: some areas, which appear unaffected at the surface, are in reality severely contaminated underground; at least 10 Ogoni communities where drinking contaminated water; control and maintenance of oilfield infrastructure in Ogoniland has been and remains inadequate; the impact of oil on mangrove vegetation has been disastrous. The report recommends direct actions in order to address the Niger Delta contamination by oil and warns that the restoration of the area could take up years.

*War and Public Health* Barry S. Levy,Victor W. Sidel,2008 The first comprehensive examination of the relationship between war and public health, this book documents the public health consequences of war and describes what health professionals can do to minimize these consequences and even help prevent war altogether. It explores the effects of war on health, human rights, and the environment. The health and environmental impact of both conventional weapons and weapons of mass destruction--nuclear, chemical, and biological weapons--is described in chapters that cover the consequences of their production, testing, maintenance, use, and disposal. Separate chapters cover especially vulnerable populations, such as women, children, and refugees. In-depth descriptions of specific military conflicts, including the Vietnam War, the Persian Gulf War, and wars in Central America provide striking illustrations of the issues covered in other chapters. A series of chapters explores the roles of health professionals and of organizations during war, and in preventing war and its consequences. This revised second edition includes seven new chapters, including one on landmines by the Nobel Prize-winning founding director of the International Campaign to Ban Landmines. A wide range of individuals, including physicians, nurses, and other health professionals, will find this book enlightening and useful in their work. The book will be valuable for faculty and students in schools of public health, medicine, nursing, and other health professions. In addition, it will be useful to those working in the fields of law, economics, international studies, peace and conflict resolution, military studies, diplomacy, and sociology, and in related disciplines.

**An Introduction to Marine Ecology** R. S. K. Barnes,R. N. Hughes,2009-07-15 This established textbook continues to provide a comprehensive and stimulating introduction to marine ecological concepts and processes. Based on a wealth of international teaching expertise, *An Introduction to Marine Ecology* is written to be the basis for an entire undergraduate course in marine biology or ecology. It covers the trophic, environmental and competitive interactions of marine organisms, and the effects of these on the productivity, dynamics and structure of marine systems. The strength of the book lies in its discussion of core topics which remains at the heart of the majority of courses in the subject, despite an increasing emphasis on more applied aspects. The authors maintain the tradition of clarity and conciseness set by previous editions, and the text is extensively illustrated with colour plates, photographs and diagrams. Examples are drawn from all over the world. In this edition, the scientific content of the text has been fully revised and updated. An emphasis has been placed on human impacts, and completely new chapters have been added on fisheries, marine ecosystems, and human interference and conservation. Completely revised and updated with a twofold increase in the number of illustrations. Adopts a more applied approach in keeping with current teaching. New chapters on fisheries, the marine ecosystem, conservation and pollution. Based on a proven and successful course structure.

*Snail Transmitted Parasitic Diseases* Emile A. Malek, 2018-05-04 Research on snail-transmitted disease has continued at a considerable pace during the last twenty years, and several investigators have made valuable contributions to our knowledge of these diseases. The objective of this book is to present an up-to-date account of the infections or diseases of the world which are transmitted by snails, and in which each disease is considered in much greater detail than is usually provided by textbooks on general, medical or veterinary parasitology. These two volumes cover the infections or diseases that are caused by certain helminths which are transmitted by snails.

**Short Textbook of Public Health Medicine for the Tropics** Adetokunbo O. Lucas, Herbert Michael Gilles, 2003

**The Petrochemical Industry in Developing Asia** Walter Vergara, Dominique Babelon, World Bank, 1990 The purpose of this report is to address the need for information on the petrochemical industry in Asia in view of the fast-evolving situation of the industry in the region and the growing involvement of the World Bank with operations and studies in a number of Asian countries. The report reviews the current trends of the industry with relevance for Asian-based producers and documents the substantial increases in activity and rates of growth of the sector in Asia. A substantial part of the analysis is dedicated to the assessment of competitive advantages in the production of petrochemicals by individual producers. The study also reviews the policy framework in all countries selected and compares the different economic instruments and other policy tools that have been used to develop their industries. The report concludes that prospects for future development of the industry in developing Asia are generally favorable. As a caveat, the optimistic outlook hinges on the prospects for continuous economic growth and the oil supply and pricing situation. To secure their competitive position and materialize the growth prospects, countries with a lower competitive posture must move to improve their economics of manufacture through feedstock diversification, vertical integration, restructuring increased exposure to competition and improved long-term planning.

**Nematode Interactions** M. Wajid Khan, 2012-12-06 Nematode interactions are important biological phenomena and of great significance in agriculture. It is a fascinating subject which is multidisciplinary by nature, and concerns any scientist involved with plant health. There have been marked advances in our knowledge of various aspects of the subject in the last two decades. This study area has been the subject of several reviews, but there was no exclusive text on the subject. This has stressed the need to document the information, developing a unifying theme which treated nematode interactions in a holistic manner. This book is about the interaction of plant-parasitic nematodes with other plant pathogens or root symbionts, the nature of their associations, their impact on the host and consequential interactive effects on the involved organisms. Since nematodes are at the centre of the theme, the responsibility of understanding of other plant pathogens

dealt with in this book is largely delegated to the reader. I have limited the book content to interactions with biotic pathogens and root symbionts only, for various reasons. The book embodies 16 chapters, and attempts to present balanced information on various aspects of nematode interactions with other plant pathogens and root symbionts. Some chapters describe general aspects of the subject. Interactions of nematodes with specific groups of organisms are addressed in the remaining chapters.

*The Nigerian State, Oil Multinationals and the Environment. a Case Study of Shell Petroleum Development Company (Spdc)* Terry Andrews Odisu, 2016-07-22 Scientific Essay from the year 2015 in the subject Politics - International Politics - Topic: Development Politics, language: English, abstract: The paper evaluates the environmental performance of SPDC and the Nigerian State in ensuring improved environmental quality. It x-rays the company's efforts and the role of the state in safeguarding the environment. Using descriptive method of data gathering, the paper reveals the negative consequences of oil exploration - agricultural land degradation, air and water pollution. The environmental policies of SPDC and the state are below expectations given the huge earnings from oil. The activities of SPDC in the Niger Delta had left a balance sheet of ecological disaster. The state has been collaborating with the oil firms to unleash violence on the oil bearing communities. Among others, it is recommended that the state should enact effective and strict anti - pollution laws that would force the oil firms to ensure sound and healthy environmental practices.

*The Ecology Of Health And Disease In Ethiopia* Helmut Kloos, Zein Ahmed Zein, 2019-07-11 This book examines prevailing human health problems in political, socioeconomic, cultural, and physical/biotic settings of health practitioners and planners in Ethiopia. It also evaluates modern and traditional health resources and examines the occurrence of nonvectored communicable diseases.

**Ecology of the City of Sofia** Lyubomir Penev, 2004 The book consists of three parts - Environment, Plants and Animals. The papers in the first part aim to describe the environment of Sofia - climate, water and air - in order to provide a basis for present-day and future research on the biota and to outline some recommendations for improving the human comfort in the city. The botanical part consists of nine papers, ranging from inventories (bryophytes, vascular plants) to studies on the soil moisture regime and lead transformation in city parks. In the third part, eleven papers summarize data on several animal groups - nematodes, myriapods, terrestrial gastropods, opilionids, spiders, carabid beetles, ants, aphids, scuttle-flies and birds. The book is intended for urban ecologists, conservationists, environmentalists, urban planning specialists, zoologists, botanists and anyone interested in ecological and environmental issues.
