Ecological Comparisons of Sedimentary Shores K. Reise,2012-12-06 Sedimentary coasts with their unique forms of life and productive ecosystems are one of the most threatened parts of the biosphere. This volume analyzes and compares ecological structures and processes at sandy beaches, tidal mudflats and in shallow coastal waters all around the world. Analyses of local processes are paired with comparisons between distant shores, across latitudinal gradients or between separate biogeographic provinces. Emphasis is given to suspension feeders in coastal mud and sand, to biogenic stabilizations and disturbances in coastal sediments, to seagrass beds and faunal assemblages across latitudes and oceans, to recovery dynamics in benthic communities, shorebird predation, and to experimental approaches to the biota of sedimentary shores.

The Extreme Life of the Sea Anthony R. Palumbi, Stephen R. Palumbi, 2021-10-26 A thrilling tour of the sea's most extreme species, coauthored by one of the world's leading marine scientists The ocean teems with life that thrives under difficult situations in unusual environments. The Extreme Life of the Sea takes readers to the absolute limits of the ocean world—the fastest and deepest, the hottest and oldest creatures of the oceans. It dives into the icy Arctic and boiling hydrothermal vents—and exposes the eternal darkness of the deepest undersea trenches—to show how marine life thrives against the odds. This thrilling book brings to life the sea's most extreme species, and tells their stories as characters in the drama of the oceans. Coauthored by Stephen Palumbi, one of today's leading marine scientists, The Extreme Life of the Sea tells the unforgettable tales of some of the most marvelous life forms on Earth, and the challenges they overcome to survive. Modern science and a fluid narrative style give every reader a deep look at the lives of these species. The Extreme Life of the Sea shows you the world's oldest living species. It describes how flying fish strain to escape their predators, how predatory deep-sea fish use red searchlights only they can see to find and attack food, and how, at the end of her life, a mother octopus dedicates herself to raising her batch of young. This wide-ranging and highly accessible book also shows how ocean adaptations can inspire innovative commercial products—such as fan blades modeled on the flippers of humpback whales—and how future extremes created by human changes to the oceans might push some of these amazing species over the edge.

Improving Discipline-Based Undergraduate Medical Curriculum Kadambari D, Kumar S, Zayapragassarazan Z, Parija SC, 2018-08-31 The past few decades have seen the increasing use of evidence in all aspects of healthcare. The concept of evidence-informed healthcare began in the 1990s as evidence-informed practice, and has since become widely accepted. It is also accepted that the training of medical graduates must be informed by evidence obtained from educational research. This book utilizes an evidence-informed approach to improve discipline-based undergraduate medical curricula. Discipline-based undergraduate medical curricula represent a widely adopted choice for undergraduate medical education around the world. However, there have been criticisms leveled against the discipline-based approach. One of the shortcomings cited is that students are insufficiently equipped to meet the challenges of today's healthcare. As a result, various strategies have been proposed. One option, currently in vogue, is the outcome-based approach, wherein the exit behaviors of medical graduates are explicitly examined and used to guide the educational process. The shortcomings present in discipline-based undergraduate medical curricula can be overcome by the strengths of these strategies. This book

recommends improving discipline-based undergraduate medical curricula by combining several strategies, including the adoption of an outcome-based approach and the use of evidence-informed implementable solutions. The book is relevant for all faculty, administrators and policymakers involved in undergraduate medical education, and can also be used as a resource for faculty development.

Bioremediation of Aquatic and Terrestrial Ecosystems Milton Fingerman,2016-04-19 Bioremediation, the use of microorganisms to degrade, sequester, or remove environmental contaminants, is an urgent need of our planet for protection and restoration from toxic contaminants. This book not only provides cutting edge information about bioremediation of aquatic and terrestrial habitats, but also highlights the gaps in our knowledge of

The Mediterranean Sea Alain Saliot,2005-08-24 This volume represents a practical survey of current understanding of chemical contamination of the Mediterranean Sea. Beginning with an overview of the general physical and socio-economic context, the author reviews the exploration of processes governing the fate of chemicals, assesses the budget of both inorganic and organic contaminants, and describes new tools for studying the impact of pollution on the Mediterranean.

The Economics of Salmon Aquaculture Frank Asche,Trond Bjørndal,2011-05-06 First published in 1990, *The Economics of Salmon Aquaculture* was the first book to systematically analyse the salmon aquaculture industry, from both a market and production perspective. Since publication of the first edition of this book, the salmon aquaculture industry has grown at a phenomenal rate, with salmon now being consumed in more than 100 countries worldwide. This second edition of a very popular and successful book brings the reader right up to date with all the major current issues pertaining to salmon aquaculture. Commencing with an overview of the production process in aquaculture, the following chapters provide in-depth coverage of the sources of the world's supply of salmon, the growth in productivity, technological changes, environmental issues, markets, market structure and competitiveness, lessons that can be learnt from the culture of other species, optimal harvesting techniques, production planning, and investment in salmon farms. Written by Frank Asche and Trond Bjørndal, two of the world's leading experts in the economics of aquaculture, this second edition of *The Economics of Salmon Aquaculture* provides the salmon aquaculture industry with an essential reference work, including a wealth of commercially important information. This book is also a valuable resource for upper level students and professionals in aquaculture and economics, and libraries in all universities and research establishments where these subjects are studied and taught should have copies of this important book on their shelves.

Scientometric Indicators: A 32-century Comparative Evaluation Of Publishing Performance And Citation

Impact Tibor Braun,Andras Peter Schubert,W Glanzel,1985-07-01 After a brief account of the recent trends in science indicators research, the authors propose a coherent system of scientometric indicators. These indicators are based on the publication performance of each country in 8 science fields and reflect the versatility of the impact of the publication activity in the country in question. The special aim of the indicator system is to characterize and compare the contribution of research-intensive, medium-sized and small countries to the world's overall scientific research activity. Indicator values for 32 such countries are reported and evaluated. Relations to other economic, social and science indicators are discussed.This book is intended both as a data source and an analytic tool for specialists engaged in science policy, science management, science indicators research, scientometrics and other areas of science as well as a tool for practising research scientists.

Baba of Karo, a Woman of the Muslim Hausa Baba (of Karo),Mary Felice Smith,1981-01-01 Daughter of a Hausa farmer and Koranic teacher, Baba became Mary Smith's friend in 1949, when M. G. and Mary Smith were engaged in fieldwork in Nigeria. In daily sessions for several weeks Baba dictated her life story, which Mrs. Smith has translated from the Hausa. The old woman's memories reached back to the days of slave raids and interstate warfare before the British occupation, and she has left a fascinating and valuable record of Hausa life in the late nineteenth century and the first half of the twentieth. Baba describes Hausa male-oriented society from a woman's point of view, narrating not only her own life

history but stories of other women who were close to her. She tells of Hausa domestic life, farming, and slavery, and explains the Hausa institutions of bond friendship, adoption, polygynous marriage, and kinship, showing how, in a society that permits easy and frequent divorce, children are not exclusively dependent on their biological parents for emotional support. First published in 1945 and now reissued with a new foreword by Hilda Kuper, this autobiography of a shrewd, humorous, and courageous personality remains a classic in the field of African studies and a uniquely valuable account of a Muslim society in West Africa.

Study and Interpretation of the Chemical Characteristics of Natural Water John David Hem, Geological Survey U . S. Geological Survey, 2005 The chemical composition of natural water is derived from many different sources of solutes, including gases and aerosols from the atmosphere, weathering and erosion of rocks and soil, solution or precipitation reactions occurring below the land surface, and cultural effects resulting from activities of man. Some of the processes of solution or precipitation of minerals can be closely evaluated by means of principles of chemical equilibrium including the law of mass action and the Nernst equation. Other processes are irreversible and require consideration of reaction mechanisms and rates. The chemical composition of the crustal rocks of the earth and the composition of the ocean and the atmosphere are significant in evaluating sources of solutes in natural fresh water. The ways in which solutes are taken up or precipitated and the amounts present in solution are influenced by many environmental factors, especially climate, structure and position of rock strata, and biochemical effects associated with life cycles of plants and animals, both microscopic and macroscopic. Taken all together and in application with the further influence of the general circulation of all water in the hydrologic cycle, the chemical principles and environmental factors form a basis for the developing science of natural-water chemistry. Fundamental data used in the determination of water quality are obtained by the chemical analysis of water samples in the laboratory or onsite sensing of chemical properties in the field. Sampling is complicated by changes in composition of moving water and the effects of particulate suspended material. Most of the constituents determined are reported in gravimetric units, usually milligrams per liter or milliequivalents per liter. More than 60 constituents and properties are included in water analyses frequently enough to provide a basis for consideration of the sources from which each is generally derived, most probable forms of elements and ions in solution, solubility controls, expected concentration ranges and other chemical factors. Concentrations of elements that are commonly present in amounts less than a few tens of micrograms per liter cannot always be easily explained, but present information suggests many are controlled by solubility of hydroxide or carbonate or by sorption on solid particles. Chemical analyses may be grouped and statistically evaluated by averages, frequency distributions, or ion correlations to summarize large volumes of data. Graphing of analyses or of groups of analyses aids in showing chemical relationships among waters, probable sources of solutes, areal water-quality regimen, and water-resources evaluation. Graphs may show water type based on chemical composition, relationships among ions, or

groups of ions in individual waters or many waters considered simultaneously. The relationships of water quality to hydrologic parameters, such as stream discharge rate or ground-water flow patterns, can be shown by mathematical equations, graphs, and maps. About 75 water analyses selected from the literature are tabulated to illustrate the relationships described, and some of these, along with many others that are not tabulated, are also utilized in demonstrating graphing and mapping techniques. Relationships of water composition to source rock type are illustrated by graphs of some of the tabulated analyses. Activities of man may modify water composition extensively through direct effects of pollution and indirect results of water development, such as intrusion of sea water in ground-water aquifers. Water-quality standards for domestic, agricultural, and industrial use have been published by various agencies. Irrigation project requirements for water quality are particularly intricate. Fundamental knowledge of processes that control natural water composition is required for rational management of water quality.

Environmental Assessment of Ogoniland, 2011 A major new independent scientific assessment, carried out by the United Nations Environment Programme (UNEP), shows that pollution from over 50 years of oil operations in the region has penetrated further and deeper than many may have supposed. The assessment has been unprecedented. Over a 14-month period, the UNEP team examined more than 200 locations, surveyed 122 kilometres of pipeline rights of way, reviewed more than 5,000 medical records and engaged over 23,000 people at local community meetings. The environmental restoration of Ogoniland could prove to be the world's most wide-ranging and long term oil clean-up exercise ever undertaken if contaminated drinking water, land, creeks and important ecosystems such as mangroves are to be brought back to full, productive health. The report key findings are alarming both in terms of human health protection and environmental protection: some areas, which appear unaffected at the surface, are in reality severely contaminated underground; at least 10 Ogoni communities where drinking contaminated water; control and maintenance of oilfield infrastructure in Ogoniland has been and remains inadequate; the impact of oil on mangrove vegetation has been disastrous. The report recommends direct actions in order to address the Niger Delta contamination by oil and warns that the restoration of the area could take up years.
