Surviving the Storms Timi Spiff, 2020-06-04 *Surviving the Storms* is a vivid portrayal of the contradictions in the life of Kuro, an adolescent trying to come to terms with his existence in the city of Port Harcourt in the years following the end of the Nigerian civil war. This racy account evokes the exuberance of youth, the challenges of parenthood and the importance of a good education. Having spent part of his boyhood with his grandfather in the war zone, Kuro emerged after the guns went silent as a rather irrepressible lad both in boarding school as well as at home with his parents during school holidays. His struggles during his passage to manhood is narrated by the author with humour and insight, providing a slice of life in Nigeria in the 1970s.

Statement on Auditing Standards, Number 128 AICPA, 2016-11-21 As a result of its Clarity Project, the Auditing Standards Board (ASB) has issued Statement on Auditing Standards (SAS) No. 128, *Using the Work of Internal Auditors*, to supersede SAS No. 65, *The Auditor's Consideration of the Internal Audit Function in an Audit of Financial Statements* (AICPA, Professional Standards, AU sec. 322 and AU-C sec. 610), and amend: SAS No. 122, *Statements on Auditing Standards: Clarification and Recodification*, section 315, *Understanding the Entity and Its Environment and Assessing the Risks of Material Misstatement* (AICPA, Professional Standards, AU-C sec. 315); Various other sections in SAS No. 122 (AICPA, Professional Standards, AU-C secs. 200, 220, 230, 240, 260, 265, 300, 402, 500, 550, and 600); and Statement on Quality Control Standards No. 8, *A Firm's System of Quality Control (Redrafted)* (AICPA, Professional Standards, QC sec. 10). SAS No. 128 addresses the external auditor's responsibilities when using the work of internal auditors if it includes (a) using the work of the internal audit function in obtaining audit evidence and (b) using internal auditors to provide direct assistance under the direction, supervision, and review of the external auditor. Consistent with International Standard on Auditing (ISA) 610 (Revised 2013), SAS No. 128 introduces the concept of a systematic and disciplined approach, which is not included in SAS No. 65. Paragraph 13 of SAS No. 128 would require, among other things, as a prerequisite to being able to use the work of the internal audit function, that the external auditor evaluate the application by the internal audit function of a systematic

and disciplined approach, including quality control. Paragraphs A12-A14 of SAS No. 128 provide application guidance with regard to the application of a systematic and disciplined approach. The ASB believes that relative to SAS No. 65, this requirement represents an additional and explicit evaluation that the external auditor would need to perform to conclude on the appropriateness of using the work of internal auditors.

Community, Space and Online Censorship Dr Scott Beattie, 2013-02-28 Internet censorship is a controversial topic - while the media periodically sounds alarms at the dangers of online life, the uncontrollable nature of the internet makes any kind of pervasive regulatory control impossible. This book compares the Australian solution, a set of laws which have been criticized as being both draconian and ineffectual, to major regulatory systems in the UK and US and understanding what drives them. The 'impossibility' of internet regulation opens deeper issues - what do we mean by regulation and how do we judge the certainty and effectiveness of law? These questions lead to an exploration of the theories of legal geography which provide tools to understand and evaluate regulatory practices. The book will be a valuable guide for academics, students and policy makers working in media and censorship law, those from a civil liberties interest and people interested in internet theory generally.

The Datacenter as a Computer Luiz Barroso, Urs Hölzle, 2009-05-06 As computation continues to move into the cloud, the computing platform of interest no longer resembles a pizza box or a refrigerator, but a warehouse full of computers. These new large datacenters are quite different from traditional hosting facilities of earlier times and cannot be viewed simply as a collection of co-located servers. Large portions of the hardware and software resources in these facilities must work in concert to efficiently deliver good levels of Internet service performance, something that can only be achieved by a holistic approach to their design and deployment. In other words, we must treat the datacenter itself as one massive warehouse-scale computer (WSC). We describe the architecture of WSCs, the main factors influencing their design, operation, and cost structure, and the characteristics of their software base. We hope it will be useful to architects and programmers of today's WSCs, as well as those of future many-core platforms which may one day implement the equivalent of today's WSCs on a single board. Table of Contents: Introduction / Workloads and Software Infrastructure / Hardware Building Blocks / Datacenter Basics / Energy and Power Efficiency / Modeling Costs / Dealing with Failures and Repairs / Closing Remarks

Transfer of Technology to Developing Countries Bernard M. Hoekman, Keith Eugene Maskus, Kamal Saggi, 2004

Technology Transfer in International Business Tamir Agmon, Mary Ann Young Von Glinow, 1991 This is a book on the means by which technological knowledge is transferred from countries that develop it to those that need it, but have not yet been able to develop it on their own. The focus is on the transfer of technology from Western countries to Asian countries.

Electricity Access in Sub-Saharan Africa Moussa P. Blimpo, Malcolm Cosgrove-Davies, 2019-03-19 Access to reliable electricity is a prerequisite for the economic transformation of African economies, especially in a digital age. Yet the electricity access rate in Sub-Saharan African countries is often substantially low, households and businesses with access often face unreliable service, and the cost of the service is often among the highest in the world. This situation imposes substantial constraints on economic activities, provision of public services, adoption of new technologies, and quality of life. Much of the focus on how best to provide reliable, affordable, and sustainable electricity service to all has been on mitigating supply-side constraints. However, demand-side constraints may be as important, if not more important. On the supply side, inadequate investments in maintenance result in high technical losses; most state-owned utilities operate at a loss; and power trade, which could significantly lower the cost of electricity, is underdeveloped. On the demand side, the uptake and willingness to pay are often low in many communities, and the consumption levels of those who are connected are limited. Increased uptake and use will encourage investment to improve service reliability and close the access gap. This report shows that the fundamental problem is poverty and lack of economic opportunities rather than power. The solution lies in understanding that the overarching reasons for the unrealized potential involve tightly intertwined technical, financial, political, and geographic factors. The ultimate goal is to enable households and business to gain access, to afford to use, and utilities to recover their cost and make profits. The report makes the case that policy makers need to adopt a more comprehensive and long-term approach to electrification in the region—one centered on the productive use of electricity at affordable rates. Such an approach includes increased public and private investment in infrastructure, expanded access to credit for new businesses, improved access to markets, and additional skills development to translate the potential of expanded and reliable electricity access into substantial economic impact. Enhancing the economic capabilities of communities is the best way to achieve faster and more sustainable development progress while addressing the broad challenges of affordability, low consumption, and financial viability of utilities, as well as ensuring equitable provision between urban and rural areas.
