Hairspray Mark O'Donnell, Marc Shaiman, 2003-01-01 In *Hairspray*, it's 1962--the fifties are out and change is in the air. Baltimore's Tracy Turnblad, a big girl with big hair and an even bigger heart, has only one passion: to dance. She wins a spot on the local TV dance program, *The Corny Collins Show*, and overnight is transformed from an awkward overweight outsider into an irresistible teen celebrity. But can a trendsetter in dance and fashion vanquish the program's reigning blond princess, win the heart of heartthrob Link Larkin, and integrate a television show without denting her 'do? Only in *Hairspray*! Based on John Waters's 1988 film, the musical comedy *Hairspray* opened on Broadway in August 2002 to rave reviews. *Hairspray: The Roots* includes the libretto of the show--along with hilarious anecdotes from the authors, to say nothing of dance step diagrams and full-color bouffant wigs to copy and cut out--along with all the creative energy, brilliant color, and full-out emotion that have made the musical a great big, gorgeous hit . . . [that] is a triumph on all levels (Clive Barnes, *The New York Post*).

Postdramatic Theatre Hans-Thies Lehmann, 2006-09-27 Newly adapted for the Anglophone reader, this is an excellent translation of Hans-Thies Lehmann's groundbreaking study of the new theatre forms that have developed since the late 1960s, which has become a key reference point in international discussions of contemporary theatre. In looking at the developments since the late 1960s, Lehmann considers them in relation to dramatic theory and theatre history, as an inventive response to the emergence of new technologies, and as an historical shift from a text-based culture to a new media age of image and sound. Engaging with theoreticians of 'drama' from Aristotle and Brecht, to Barthes and Schechner, the book analyzes the work of recent experimental theatre practitioners such as Robert Wilson, Tadeusz Kantor, Heiner Müller, the Wooster Group, Needcompany and Societas Raffaello Sanzio. Illustrated by a wealth of practical examples, and with an introduction by Karen Jürs-Munby providing useful theoretical and artistic contexts for the book, *Postdramatic Theatre* is an historical survey expertly combined with a unique theoretical approach which guides the reader through this new theatre landscape.

Steps to an Ecology of Mind Gregory Bateson, 2000 Gregory Bateson was a philosopher, anthropologist, photographer, naturalist, and poet, as well as the husband and collaborator of Margaret Mead. This classic anthology of his major work includes a new Foreword by his daughter, Mary Katherine Bateson. 5 line drawings.

Presence in Play Cormac Power,2008-01-01 *Presence in Play: A Critique of Theories of Presence in the Theatre* is the first comprehensive survey and analysis of theatrical presence to be published. Theatre as an art form has often been associated with notions of presence. The 'live' immediacy of the actor, the unmediated unfolding of dramatic action and the 'energy' generated through an actor-audience relationship are among the ideas frequently used to explain theatrical experience - and all are underpinned by some understanding of 'presence.' Precisely what is meant by presence in the theatre is part of what *Presence in Play* sets out to explain. While this work is rooted in twentieth century theatre and performance since modernism, the author draws on a range of historical and theoretical material. Encompassing ideas from semiotics and phenomenology, *Presence in Play* puts forward a framework for thinking about presence in theatre, enriched by poststructuralist theory, forcefully arguing in favour of 'presence' as a key concept for theatre studies today.

The "new Woman" Revised Ellen Wiley Todd,1993-01-01 In the years between the world wars, Manhattan's Fourteenth Street-Union Square district became a center for commercial, cultural, and political activities, and hence a sensitive barometer of the dramatic social changes of the period. It was here that four urban realist painters--Kenneth Hayes Miller, Reginald Marsh, Raphael Soyer, and Isabel Bishop--placed their images of modern new women. Bargain stores, cheap movie theaters, pinball arcades, and radical political organizations were the backdrop for the women shoppers, office and store workers, and consumers of mass culture portrayed by these artists. Ellen Wiley Todd deftly interprets the painters' complex images as they were refracted through the gender ideology of the period. This is a work of skillful interdisciplinary scholarship, combining recent insights from feminist art history, gender studies, and social and cultural theory. Drawing on a range of visual and verbal representations as well as biographical and critical texts, Todd balances the historical context surrounding the painters with nuanced analyses of how each artist's image of womanhood contributed to the continual redefining of the new woman's relationships to men, family, work, feminism, and sexuality.

Practical Statistics for Data Scientists Peter Bruce,Andrew Bruce,2017-05-10 Statistical methods are a key part of of data science, yet very few data scientists have any formal statistics training. Courses and books on basic statistics rarely cover the topic from a data science perspective. This practical guide explains how to apply various statistical methods to data science, tells you how to avoid their misuse, and gives you advice on what's important and what's not. Many data science resources incorporate statistical methods but lack a deeper statistical perspective. If you're familiar with the R programming language, and have some exposure to statistics, this quick reference bridges the gap in an accessible, readable format. With this book, you'll learn: Why exploratory data analysis is a key preliminary step in data science How random sampling can reduce bias and yield a higher quality dataset, even with big data How the principles of experimental design yield definitive answers to questions How to use regression to estimate outcomes and detect anomalies Key classification techniques for predicting which categories a record belongs to Statistical machine learning methods that "learn" from data Unsupervised

The Precariat Guy Standing,2021-07-15 This book presents the new Precariat – the rapidly growing number of people facing lives of insecurity, on zero hours contracts, moving in and out of jobs that give little meaning to their lives. The delivery driver who brings your packages, the uber driver who gets you to work, the security guard at the mall, the carer looking after our elderly...these are The Precariat. Guy Standing investigates this new and growing group, finding a frustrated and angry new underclass who are often ignored by politicians and economists. The rise of zero hours contracts, encouraged by fat cat corporations as risk-free employment, and by silicon valley as a way of outsourcing costs and responsibility, has been exacerbated by the COVID pandemic. At the same time, in its experience of lockdown, the western world is realizing the true value of these nurses, carers and key workers. The answer? The return of income security and meaningful work - the principles 20th century capitalism was built on. By making the fears and desires of the Precariat central to economic thinking, Standing shows how concepts like Basic Income are not just desirable but inevitable, and plots the way to a better future.

The Cultural Cold War Frances Stonor Saunders,2013-11-05 During the Cold War, freedom of expression was vaunted as liberal democracy's most cherished possession—but such freedom was put in service of a hidden agenda. In *The Cultural Cold War*, Frances Stonor Saunders reveals the extraordinary efforts of a secret campaign in which some of the most vocal exponents of intellectual freedom in the West were working for or subsidized by the CIA—whether they knew it or not. Called the most comprehensive account yet of the [CIA's] activities between 1947 and 1967 by the New York Times, the book presents shocking evidence of the CIA's undercover program of cultural interventions in Western Europe and at home, drawing together declassified documents and exclusive interviews to expose the CIA's astonishing campaign to deploy the likes of Hannah Arendt, Isaiah Berlin, Leonard Bernstein, Robert Lowell, George Orwell, and Jackson Pollock as weapons in the Cold War. Translated into ten languages, this classic work—now with a new preface by the author—is a real contribution to popular understanding of the postwar period (*The Wall Street Journal*), and its story of covert cultural efforts to win hearts and minds continues to be relevant today.

The Army Medical Department, 1775-1818 Mary C. Gillett,1981 Appendices include laws and legislation concerning the Army Medical Department. Maps include those of territories and frontiers and Continental Army hospital locations. Illustrations are chiefly portraits.

Spearhead of Logistics Benjamin King, Richard C. Biggs,2016-02-25 *Spearhead of Logistics* is a narrative branch history of the U.S. Army's Transportation Corps, first published in 1994 for transportation personnel and reprinted in 2001 for the larger Army community. The Quartermaster Department coordinated transportation support for the Army until World War I revealed the need for a dedicated corps of specialists. The newly established Transportation Corps, however, lasted for only a

few years. Its significant utility for coordinating military transportation became again transparent during World War II, and it was resurrected in mid-1942 to meet the unparalleled logistical demands of fighting in distant theaters. Finally becoming a permanent branch in 1950, the Transportation Corps continued to demonstrate its capability of rapidly supporting U.S. Army operations in global theaters over the next fifty years. With useful lessons of high-quality support that validate the necessity of adequate transportation in a viable national defense posture, it is an important resource for those now involved in military transportation and movement for ongoing expeditionary operations. This text should be useful to both officers and noncommissioned officers who can take examples from the past and apply the successful principles to future operations, thus ensuring a continuing legacy of Transportation excellence within Army operations. Additionally, military science students and military historians may be interested in this volume.

Arts of Living on a Damaged Planet Anna Lowenhaupt Tsing, Nils Bubandt, Elaine Gan, Heather Anne Swanson, 2017-05-30 Living on a damaged planet challenges who we are and where we live. This timely anthology calls on twenty eminent humanists and scientists to revitalize curiosity, observation, and transdisciplinary conversation about life on earth. As human-induced environmental change threatens multispecies livability, *Arts of Living on a Damaged Planet* puts forward a bold proposal: entangled histories, situated narratives, and thick descriptions offer urgent “arts of living.” Included are essays by scholars in anthropology, ecology, science studies, art, literature, and bioinformatics who posit critical and creative tools for collaborative survival in a more-than-human Anthropocene. The essays are organized around two key figures that also serve as the publication’s two openings: Ghosts, or landscapes haunted by the violences of modernity; and Monsters, or interspecies and intraspecies sociality. Ghosts and Monsters are tentacular, windy, and arboreal arts that invite readers to encounter ants, lichen, rocks, electrons, flying foxes, salmon, chestnut trees, mud volcanoes, border zones, graves, radioactive waste—in short, the wonders and terrors of an unintended epoch. The Risk Theatre Model of Tragedy Edwin Wong,2019-01-28 WHEN YOU LEAST EXPECT IT, BIRNAM WOOD COMES TO DUNSINANE HILL The Risk Theatre Model of Tragedy presents a profoundly original theory of drama that speaks to modern audiences living in an increasingly volatile world driven by artificial intelligence, gene editing, globalization, and mutual assured destruction ideologies. Tragedy, according to risk theatre, puts us face to face with the unexpected implications of our actions by simulating the profound impact of highly improbable events. In this book, classicist Edwin Wong shows how tragedy imitates reality: heroes, by taking inordinate risks, trigger devastating low-probability, high-consequence outcomes. Such a theatre forces audiences to ask themselves a most timely question--what happens when the perfect bet goes wrong? Not only does Wong reinterpret classic tragedies from Aeschylus to O'Neill through the risk theatre lens, he also invites dramatists to create tomorrow's theatre. As the world becomes increasingly unpredictable, the most compelling dramas will be high-stakes tragedies that dramatize the unintended consequences of today's risk takers who are taking us past the point of no return.

Autonomous Horizons Greg Zacharias,2019-04-05 Dr. Greg Zacharias, former Chief Scientist of the United States Air Force (2015-18), explores next steps in autonomous systems (AS) development, fielding, and training. Rapid advances in AS development and artificial intelligence (AI) research will change how we think about machines, whether they are individual vehicle platforms or networked enterprises. The payoff will be considerable, affording the US military significant protection for aviators, greater effectiveness in employment, and unlimited opportunities for novel and disruptive concepts of operations. *Autonomous Horizons: The Way Forward* identifies issues and makes recommendations for the Air Force to take full advantage of this transformational technology.

What Should Schools Teach? Alka Sehgal Cuthbert ,Alex Standis,2021-01-07 The design of school curriculums involves deep thought about the nature of knowledge and its value to learners and society. It is a serious responsibility that raises a number of questions. What is knowledge for? What knowledge is important for children to learn? How do we decide what knowledge matters in each school subject? And how far should the knowledge we teach in school be related to academic disciplinary knowledge? These and many other questions are taken up in *What Should Schools Teach?* The blurring of distinctions between pedagogy and curriculum, and between experience and knowledge, has served up a confusing message for teachers about the part that each plays in the education of children. Schools teach through subjects, but there is little consensus about what constitutes a subject and what they are for. This book aims to dispel confusion through a robust rationale for what schools should teach that offers key understanding to teachers of the relationship between knowledge (what to teach) and their own pedagogy (how to teach), and how both need to be informed by values of intellectual freedom

and autonomy. This second edition includes new chapters on Chemistry, Drama, Music and Religious Education, and an updated chapter on Biology. A revised introduction reflects on emerging discourse around decolonizing the curriculum, and on the relationship between the knowledge that children encounter at school and in their homes.

Systems We Have Loved Eve Meltzer, 2013-07-02 By the early 1960s, theorists like Lévi-Strauss, Lacan, Foucault, and Barthes had created a world ruled by signifying structures and pictured through the grids of language, information, and systems. Artists soon followed, turning to language and its related forms to devise a new, conceptual approach to art making. Examining the ways in which artists shared the structuralist devotion to systems of many sorts, *Systems We Have Loved* shows that even as structuralism encouraged the advent of conceptual art, it also raised intractable problems that artists were forced to confront. Considering such notable art figures as Mary Kelly, Robert Morris, Robert Rauschenberg, and Rosalind Krauss, Eve Meltzer argues that during this period the visual arts depicted and tested the far-reaching claims about subjectivity espoused by theorists. She offers a new way of framing two of the twentieth century's most transformative movements—one artistic, one expansively theoretical—and she reveals their shared dream—or nightmare—of the world as a system of signs. By endorsing this view, Meltzer proposes, these artists drew attention to the fictions and limitations of this dream, even as they risked getting caught in the very systems they had adopted. The first book to describe art's embrace of the world as an information system, *Systems We Have Loved* breathes new life into the study of conceptual art.
