Will Africa Feed China? Deborah Brautigam,2015 In *Will Africa Feed China?*, Deborah Brautigam, one of the world's leading experts on China and Africa, challenges the conventional wisdom that the Chinese are leading the great African land grab. Her eye-opening analysis sheds new light on the myths and realities of China's evolving global quest for food security--

Quantitative International Economics Edward E. Leamer,Robert M. Stern,2017-09-04 This distinctive book sets forth, on an advanced level, various methods for the quantitative measurement of important relationships at issue in areas of the balance of payments and international trade and welfare. The results achieved in recent studies are presented and the directions for new research are indicated. This book is composed of two main parts.Part I deals with the balance of payments and consists of the first half of the book. One of the longest and almost important chapters of this part talks about, at length the time-series analysis of the demand for imports and exports from the point of view of an individual country. This subject has a long and somewhat checkered history dating from the 1940's, when a number of estimates using least squares multiple regression methods were made of import and export demand functions for the interwar period. The noteworthy feature of many of these estimates was that they suggested relatively low price elasticities of demand in international trade. The implication was thus drawn that the international price mechanism could not be relied on for balance-of payments adjustment purposes.This book talks about the topics of theory and measurement of the elasticity of substitution in international trade, estimating the international capital movements, and forecasting and policy analysis with econometric models. Part II deals with international trade and welfare. While, there are many other books dealing with trade theory, this title focuses on a narrower range of topics that are not always mentioned or understood by individuals, such as the theory and measurement of trade dependence and interdependence, the analysis of the component factors a country has that affects how its export growth is over time, and the welfare effects of trade liberalizationThis book serves as a guide and reference work for economics graduate students, academicians, and practicing economists in private and governmental circles. They will find this book

Relationships Robert Hinde, 2015-01-28 This volume on close relationships in adulthood discusses the central issues in the field and points the way towards the construction of an integrated body of knowledge about human relationships. The self, interactions, relationships and groups are treated as dynamic processes in dialectical relations with each other and with the socio-cultural structure of norms, values, beliefs and institutions.; Early chapters introduce aspects of the self relevant to the dynamics of interactions and relationships: Intrapsychic Processes Of Cognition And Emotion Are Emphasized. These are followed by chapters discussing the principle characteristics of relationships. Seven further chapters focus on the processes involved in the dynamics of relationships, and later chapters synthesize previous ones in discussions of love and friendship, and the nature of relationship change. The focus throughout the text is on current work and current controversy, placed against a background of knowledge that has been built up in recent decades.

Physically Unclonable Functions Roel Maes, 2013-11-19 Physically unclonable functions (PUFs) are innovative physical security primitives that produce unclonable and inherent instance-specific measurements of physical objects; in many ways they are the inanimate equivalent of biometrics for human beings. Since they are able to securely generate and store secrets, they allow us to bootstrap the physical implementation of an information security system. In this book the author discusses PUFs in all their facets: the multitude of their physical constructions, the algorithmic and physical properties which describe them, and the techniques required to deploy them in security applications. The author first presents an extensive overview and classification of PUF constructions, with a focus on so-called intrinsic PUFs. He identifies subclasses, implementation properties, and design techniques used to amplify submicroscopic physical distinctions into observable digital response vectors. He lists the useful qualities attributed to PUFs and captures them in descriptive definitions, identifying the truly PUF-defining properties in the process, and he also presents the details of a formal framework for deploying PUFs and similar physical primitives in cryptographic reductions. The author then describes a silicon test platform carrying different intrinsic PUF structures which was used to objectively compare their reliability, uniqueness, and unpredictability based on

experimental data. In the final chapters, the author explains techniques for PUF-based entity identification, entity authentication, and secure key generation. He proposes practical schemes that implement these techniques, and derives and calculates measures for assessing different PUF constructions in these applications based on the quality of their response statistics. Finally, he presents a fully functional prototype implementation of a PUF-based cryptographic key generator, demonstrating the full benefit of using PUFs and the efficiency of the processing techniques described. This is a suitable introduction and reference for security researchers and engineers, and graduate students in information security and cryptography.

Construction Dispute Research Expanded Sai On Cheung,2021-08-30 As an expansion of the book “Construction Dispute Research” published in 2014, this book presents further contributions and breaks into three new research foci in construction dispute studies. Part A discusses the conceptualization and minimization of biases in construction dispute decisions; Part B examines other impediments against settlement such as inequity, power asymmetry and loss aversion. Part C focuses on realty check of construction dispute negotiation conditions such as market competition, interdependence of contracting parties and dispute avoidance function of construction incentivization. This book showcases new ideas in construction dispute research. It offers research studies that are theory rich and conducted with robust methodologies. The research implications are practical and implementable.

Toward Behavioral Transaction Cost Economics George Z. Peng,2020-10-26 Adopting a critical realist position, this book renders transaction cost economics (TCE) into a behavioral theory of organizational decision-making by foregrounding psychological processes and introducing and integrating with effectuation theory. Consistent with its behavioral agenda, the book introduces the concept of uncertainty controllability and provides a clearer conceptualization and a novel modeling strategy of bounded rationality based on the conceptual separation of cognitive bounds from psychological ‘rationalizing.’ The book inspires new insights into the significance of cultural distance (CD). Based on the understanding that culture is socially-extended cognition, the author re-conceptualizes CD as reflecting cognitive bounds, and uses the biases arising from CD to contextualize effectuation and deepen the flat ontology of both TCE and effectuation theory. The book presents a full two-sided behavioral framework of organizational decision-making, with behavioral TCE and behavioral real options theory complementing each other to complete the full behavioral picture. Both sides are further linked to organizational learning, which reduces biases over time and thus drives governance structures toward more rational directions. The full framework uses prospect theory as the overarching theory that determines which side of the behavioral framework is relevant for the uncertainty of concern based on the different problem frames resulting from different degrees of uncertainty controllability. Because effectuation can take place on both sides of the framework based on competing risk logics, prospect theory serves to

harmonize inconsistencies in the effectuation literature as a side note. This book applies the behavioral TCE side of the framework to the study of MNC subsidiary ownership decision-making process using a dataset of over 10,000 Japanese subsidiaries founded in 43 host countries. It concludes with a discussion of implications and future directions for TCE in general and international business in particular.

Regional Organizations and Democracy, Human Rights, and the Rule of Law Sören Stapel, 2022-01-10 This book explores when, why, and how regional organizations adopt and design institutions to promote and protect fundamental standards of democracy, human rights, and rule of law in their member states. These regional institutions have spread globally. While their institutional designs have become increasingly similar over time, regional particularities persist. The book identifies factors that generate the demand for regional institutions and shape its institutional design. The argument combines hitherto juxtaposed explanatory factors of demands and diffusion by integrating them in a single framework and clarifying under what conditions the interplay between demands and diffusion plays out in the adoption and design of regional institutions. The book provides a comprehensive overview of regional democracy, human rights, and rule of law institutions based on two original datasets and draws on multivariate statistical analysis as well as case studies on the making and change of regional institutions in the Organization of American States and the Organization of African Unity/African Union.

I Have a Dog Charlotte Lance, 2014-05-01 I have a dog. An inconvenient dog. When I wake up, my dog is inconvenient. When I'm getting dressed, my dog is inconvenient. And when I'm making tunnels, my dog is SUPER inconvenient. But sometimes, an inconvenient dog can be big and warm and cuddly. Sometimes, an inconvenient dog can be the most comforting friend in the whole wide world.

Family business goal, sustainable supply chain management, and platform economy: a theory based review & propositions for future research Rawa Alwadani, Nelson Oly Ndubisi, This article reviews important and diverse issues that can affect family business goals, which scholars can consider in their future research. A systematic review was undertaken in three different areas: family businesses goals, sustainable supply chain and platform economy. The three topics were reviewed in terms of the theories utilised in the studied articles. Two theories (institutional and social exchange) were found to be common across the three topics. As a result, family businesses goals, sustainable supply chain and platform economy were reviewed through the lenses of the institutional and social exchange theories. We conclude by discussing directions for future research and other promising approaches, so as to inform the investigation concerning family businesses, and the expected contemporary goals to pursue in relation to sustainable supply chain and platform economy.

Value in Business Jeffrey Yi-Lin Forrest, Yong Liu, 2021-10-22 This book uses a system-based approach to decipher and organize the concepts and conclusions relevant for creating and capturing value in business. It develops a scientific theory based on systems science and logical reasoning that is commonly employed in mathematics and natural science. The resulting new theory focuses on the organizational nature of the world and the organic and holistic feature of human organizations and their interactions. To this end, this book identifies a few axioms, instead of empirical discoveries, on which it reliably constructs the entire theory.

The Political Economy of International Agreements Florian Kiesow Cortez, 2021-09-25 This volume analyzes international agreements from a political economy perspective. In four essays, it raises the question of whether domestic institutions help explain if countries join international agreements, and in case they do, what type of international organization they join. The book examines how specific democratic design elements channel and mediate domestic demands directed at politicians, and how under certain circumstances entering international agreements helps politicians navigate these demands to their benefit. The volume also distinguishes between different types of international instruments with a varying expected constraining effect upon member states, and empirically tests if this matters for incentives to join. The volume addresses scholars, students, and practitioners interested in a better understanding of how the shape of domestic institutions affects politicians' incentives to enter into binding international agreements.

China and Africa Development Relations Christopher M. Dent, 2010-09-13 China is among a number of large developing country or new powers on the ascendance in the international system, all of which are deepening their economic relations with Africa. However, China is the largest and most powerful of this group. It has sought closer economic relationships with other developing country regions and continents such as Latin America and Central Asia, but it is with Africa – the continent that hosts more developing countries than any other – that China has fostered the closest links. This book provides an overview of how the China – Africa relationship has evolved over the last few decades and examines whether it presents a new paradigm of ‘development relations’ in the international system. The contributors investigate what is particularly special about the emerging development partnership between Africa and China, and how it may evolve in the future. The contributors focus on various development capacity issues – infrastructural, industrial, technocratic, institutional, human capital, sustainable economic practices – and consider various debates on ‘development’ and development ideologies, including whether China’s practices in Africa pose a challenge to Western conventions on development assistance. China-Africa Development Relations will be of interest to those students and scholars of African studies, Chinese studies, international development and development studies.

Cultural Influences on the Process of Strategic Management Andreas Michael Schühly, 2022-01-01 This unique book is positioned at the crossroads of strategic management and international business. Based on an in-depth literature review, the author empirically assesses the widely shared, implicit assumption that strategic management processes can be globally applied in a standardized, i.e., culture-free, manner. So far, a variety of tools have also been recommended but without incorporating cultural differences. As many organizations observe that this ethnocentric view is more an illusion than reality, strategic management research has started to focus on the cultural sensitivity of its theories, tools, and processes to provide practitioners in a multicultural setting with adequate know-how and tools. To foster long-term decision-making despite uncertainty, scenario planning is frequently applied by practitioners. Up until today, scenario planning has however gained little attention from the academic community. Through this book, the author presents a newly developed framework for strategic management that combines the cultural value scale to test the cultural sensitivity of the long-term planning tool called “scenario planning.” The different process steps of scenario planning have been individually examined for their sensitivity toward the cultural dimensions of uncertainty avoidance and long-term orientation. The investigation is based on a unique, global set of management consultants working for a leading professional service firm. The results of this research show the cultural sensitivity of scenario planning, with different degrees of the process steps and the tested cultural

dimensions.

English as a Medium of Instruction in Postcolonial Contexts Lizzi O. Milligan, Leon Tikly, 2018-10-16 Almost all low- and middle-income postcolonial countries now use English or another dominant language as the medium of instruction for some, if not all, of the basic education cycle. Much of the literature about language-in-education in such countries has focused on the instrumentalist value of English, on one side, and the rights of learners to high quality mother tongue-based education, on the other. The polarised nature of the debate has tended to leave issues related to the processes of learning in English as a Medium Instruction (EMI) classrooms under-researched. This book aims to provide a greater understanding of the existing challenges for learners and educators and potential strategies that can support more effective teaching and learning in EMI classrooms. Contributions illustrate the impact that learning in English has on learners in a range of regional, national and local contexts and put forward theoretical and empirical analyses to support more relevant and inclusive educational policies. This volume was originally published as a special issue of Comparative Education.
