**Structural Bioinformatics: Applications in Preclinical Drug Discovery Process** C. Gopi Mohan,2019-01-10 This book reviews the advances and challenges of structure-based drug design in the preclinical drug discovery process, addressing various diseases, including malaria, tuberculosis and cancer. Written by internationally recognized researchers, this edited book discusses how the application of the various in-silico techniques, such as molecular docking, virtual screening, pharmacophore modeling, molecular dynamics simulations, and residue interaction networks offers insights into pharmacologically active novel molecular entities. It presents a clear concept of the molecular mechanism of different drug targets and explores methods to help understand drug resistance. In addition, it includes chapters dedicated to natural-product- derived medicines, combinatorial drug discovery, the CryoEM technique for structure-based drug design and big data in drug discovery. The book offers an invaluable resource for graduate and postgraduate students, as well as for researchers in academic and industrial laboratories working in the areas of chemoinformatics, medicinal and pharmaceutical chemistry and pharmacoinformatics.

Transcatheter Valve Therapies Christoph Huber,Ted Feldman,2017-05-31 The landscape of cardiac surgery is changing, as is the field of interventional cardiology. The idea of accessing and replacing a failing valve through the patients vasculature has become the most rapidly expanding therapy of choice in cardiovascular disease. Transcatheter Valve Therapies chronicles the astonishing advances that have taken place in the field and prepares readers for the challenging future of cardiac valve therapies. Designed to meet the growing needs of cardiologists, cardiac surgeons, anesthesiologists, and general practitioners, the book covers all aspects from logistic needs to clinical outcomes. It provides a comprehensive overview of transcatheter valve therapies and the necessary understanding for a successful clinical introduction at individual institutions. Topics include: Epidemiologic considerations Aspects of balloon aortic valvuloplasty as a stand-alone procedure or as part of the transcatheter valve replacement The history of how transcatheter valve therapies were implemented into surgical practice New imaging modalities The particularities of transcatheter access Aortic root anatomy Emerging technologies and future design improvements Development steps of aortic devices and potential solutions for transcatheter tricuspid, mitral, and pulmonary valve replacement The rigorous testing requirements for endovascular medical devices Clinical results of aortic transcatheter valve therapies in easy accessible text and table formats The future of transcatheter

valve therapies All topics are discussed based on the author's own clinical and experimental experience in the field. This volume is essential for anyone involved in transcatheter valve implantation, clinicians wishing to become more involved in improving transcatheter valve therapies, and researchers engaged in building and creating new medical technologies to shape the cardiovascular landscape of the future.

**Poverty Reduction Through Non-Timber Forest Products** Deepa Pullanikkatil, Charlie M. Shackleton, 2018-11-23

This book narrates personal stories of people from around the world who have used natural products, in particular Non Timber Forest Products (NTFPs) as a means to come out of poverty. Ending poverty remains a major worldwide challenge and is the number one goal under the UN Sustainable Development Goals. The book fills an important knowledge gap; that of personal stories of NTFP users. This has not been part of past publications on NTFPs which tend to focus on statistics and analysis of numbers, thus, the human faces of NTFP users are missing. Narrative stories provide a wealth of data about people and their experiences rather than aggregated classifications, categories and characteristics of poverty. The objective of this book is to illustrate the poverty alleviation potential of NTFPs through documenting the personal life stories of individuals and households that lifted themselves out of poverty through trade of NTFPs. This book is for all who are interested in poverty alleviation and NTFPs.

*Where the Water Goes* David Owen, 2017-04-11 “Wonderfully written...Mr. Owen writes about water, but in these polarized times the lessons he shares spill into other arenas. The world of water rights and wrongs along the Colorado River offers hope for other problems.” —Wall Street Journal An eye-opening account of where our water comes from and where it all goes. The Colorado River is an essential resource for a surprisingly large part of the United States, and every gallon that flows down it is owned or claimed by someone. David Owen traces all that water from the Colorado’s headwaters to its parched terminus, once a verdant wetland but now a million-acre desert. He takes readers on an adventure downriver, along a labyrinth of waterways, reservoirs, power plants, farms, fracking sites, ghost towns, and RV parks, to the spot near the U.S.–Mexico border where the river runs dry. Water problems in the western United States can seem tantalizingly easy to solve: just turn off the fountains at the Bellagio, stop selling hay to China, ban golf, cut down the almond trees, and kill all the lawyers. But a closer look reveals a vast man-made ecosystem that is far more complex and more interesting than the headlines let on. The story Owen tells in *Where the Water Goes* is crucial to our future: how a patchwork of engineering marvels, byzantine legal agreements, aging infrastructure, and neighborly cooperation enables life to flourish in the desert—and the disastrous consequences we face when any part of this tenuous system fails.

Social and Environmental Dimensions of Organizations and Supply Chains Marcus Brandenburg, Gerd J. Hahn, Tobias Rebs, 2017-07-13 This book focuses on environmental and social factors in international supply chains and industry networks. It explores whether socially-responsible and environmentally-conscious operations are complementary or conflictive to economic targets. The book elaborates on innovative approaches to manage the economic, ecological and social performance in supply networks from different perspectives. In addition, it links sustainability to operational processes and illustrates specific application contexts. Moreover, it covers the social dimension of sustainability. The rise of sustainability in management forces enterprises to revisit the concept of profitability that drives their operations. Social standards and ecological targets represent critical factors that challenge industry networks. The interplay of these goals requires new insights from scientific research and managerial practice. New approaches and systems are needed to minimize

environmental and social harms and to promote sustainability.

**Nanomedicine** Robert A. Freitas,1999 Nanosensors and nanorobots are not science fiction but part of nanomedicine, the newest direction in medicine. After touring medical history and defining molecular nanotechnology as the atomic-level control of molecular structures to create precisely targeted medical procedures, Freitas (Institute for Molecular Manufacturing, Palo Alto, CA) details such topics as molecular transport and device applications but leaves ethical debates to others. Appends data on nanodevice design, and human blood and cell types; and a 36-page glossary. Part of a three-volume work, due to be available online. Annotation copyrighted by Book News, Inc., Portland, OR.

**Realizing Women's Rights to Land and other Productive Resources** United Nations Office of the High Commissioner for Human Rights,2016-04-21 This publication provides detailed guidance for lawmakers and policymakers, as well as civil society organizations and other stakeholders, to support the adoption and effective implementation of laws, policies and programmes to respect, protect and fulfil women's rights to land and other productive resources. It is based on the results of an expert group meeting held in June 2012 in Geneva, Switzerland, where critical issues facing women today in relation to the enjoyment of their land rights were raised. Land itself can be understood to include farmland, wetland, pasture, rangeland, fishery, forest, as well as harvesting and hunting territories. Throughout this publication the phrase [women's rights to land] must be understood holistically and in a manner which is grounded in the international human rights framework, and in the context of intersecting forms of discrimination. While this publication focuses on women's rights to land, it is also recognized that land is inextricably linked to women's access to, use of and control over other productive resources, such as property, fisheries, livestock and game. Therefore, the publication also uses the phrase [women's rights to land and other productive resources] to reflect this broader context.
