It explores worldwide, regional, and biocompartmentalized topics, bringing forth new points of view on global issues and addressing the increasing diversity and complexity of the ecotoxicological field. It also contains novel information on emerging contaminants, presents bioaccumulation effects on different levels of ecological organization and risk analyses, and discusses novel fields of methodological applications, including key aspects in ecotoxicological and environmental monitoring studies.

State of the Union Address Richard Milhous Nixon, 2018-07-04 State of the Union Address Richard Milhous Nixon Mr. Speaker, Mr. President, my colleagues in the Congress, our distinguished guests and my fellow Americans: To address a joint session of the Congress in this great Chamber in which I was once privileged to serve is an honor for which I am deeply grateful. The State of the Union Address is traditionally an occasion for a lengthy and detailed account by the President of what he has accomplished in the past, what he wants the Congress to do in the future, and, in an election year, to lay the basis for the political issues which might be decisive in the fall. Occasionally there comes a time when profound and far-reaching events command a break with tradition. This is such a time. I say this not only because 1970 marks the beginning of a new decade in which America will celebrate its 200th birthday. I say it because new knowledge and hard experience argue persuasively that both our programs and our institutions in America need to be reformed. We are delighted to publish this classic book as part of our extensive Classic Library collection. Many of the books in our collection have been out of print for decades, and therefore have not been accessible to the general public. The aim of our publishing program is to facilitate rapid access to this vast reservoir of literature, and our view is that this is a significant literary work, which deserves to be brought back into print after many decades. The contents of the vast majority of titles in the Classic Library have been scanned from the original works. To ensure a high quality product, each title has been meticulously hand curated by our staff. Our philosophy has been guided by a desire to provide the reader with a book that is as close as possible to ownership of the original work. We hope that you will enjoy this wonderful classic work, and that for you it becomes an enriching experience.

Porous Silicon Zhe Chuan Feng,Raphael Tsu,1994 Due to the recent discovery of the room-temperature visible light emission from porous silicon (P-Si), a great interest in P-Si and related materials has arisen in the last decade of the 20th century. Crystalline (c-) Si, at the heart of integrated circuits, has an indirect band gap of 1.1 eV, which limits its application in optoelectronics. The visible light emitting P-Si may open a new field combining Si integrated technology and optoelectronics. This book is a comprehensive review of the recent research and development of porous silicon. Strong visible photoluminescence (PL) and electroluminescence (EL) from P-Si and other forms of silicon nanocrystallites (nc-Si) are reviewed. Several proposed mechanisms for the PL from porous silicon such as quantum confinement, amorphicity and molecular PL are studied. The following issues are covered: mechanisms for the visible light emission, physical structures, studies of the PL and EL, correlation of structure and optical studies, surface physics and chemistry, relationships among various forms (P-Si, a-Si, μ c-Si), device applications, future developments.

Interpreting the City Truman Asa Hartshorn,1992-04-16 The Second Edition has been rewritten to provide additional coverage of topics such as urban development and third world cities as well as social issues including homelessness, jobs/housing mismatch and transportation disadvantages. It has also been updated with 1990 Census data.

Magnetic Phenomena Arlene P. Maclin,Warren E. Henry,Tepper L. Gill,Woodford W. Zachary,1989-08-23 The book begins with a personal tribute to Warren E. Henry and a reprint of one of his influential papers from Physical Review. The following proceedings give a comprehensive view of recent research on the topic of magnetism, including topics from theoretical and experimental perspectives. Contributions include papers on the theoretical relationship between magnetic phenomena and superconductivity, a new class of magnetic materials produced by molecular beam epitaxy, non-linear phenomena in magnetization fields, quantum chaos in magnetic phenomena, and magnetic devices and anisotropy. The volume brings together original papers written by experts in various areas of the field of magnetism. This is one of the first books in recent years to treat all facets of the field of magnetism. The book will be a useful survey for researchers, engineers and graduate students.
