Decision Making under Deep Uncertainty Vincent A. W. J. Marchau, Warren E. Walker, Pieter J. T. M. Bloemen, Steven W. Popper, 2019-04-04 This open access book focuses on both the theory and practice associated with the tools and approaches for decisionmaking in the face of deep uncertainty. It explores approaches and tools supporting the design of strategic plans under deep uncertainty, and their testing in the real world, including barriers and enablers for their use in practice. The book broadens traditional approaches and tools to include the analysis of actors and networks related to the problem at hand. It also shows how lessons learned in the application process can be used to improve the approaches and tools used in the design process. The book offers guidance in identifying and applying appropriate approaches and tools to design plans, as well as advice on implementing these plans in the real world. For decisionmakers and practitioners, the book includes realistic examples and practical guidelines that should help them understand what decisionmaking under deep uncertainty is and how it may be of assistance to them. Decision Making under Deep Uncertainty: From Theory to Practice is divided into

four parts. Part I presents five approaches for designing strategic plans under deep uncertainty: Robust Decision Making, Dynamic Adaptive Planning, Dynamic Adaptive Policy Pathways, Info-Gap Decision Theory, and Engineering Options Analysis. Each approach is worked out in terms of its theoretical foundations, methodological steps to follow when using the approach, latest methodological insights, and challenges for improvement. In Part II, applications of each of these approaches are presented. Based on recent case studies, the practical implications of applying each approach are discussed in depth. Part III focuses on using the approaches and tools in real-world contexts, based on insights from real-world cases. Part IV contains conclusions and a synthesis of the lessons that can be drawn for designing, applying, and implementing strategic plans under deep uncertainty, as well as recommendations for future work. The publication of this book has been funded by the Radboud University, the RAND Corporation, Delft University of Technology, and Deltares.

Gender Equality and Sustainable Development Melissa Leach, 2015-07-30 For pathways to be truly sustainable and advance gender equality and the rights and capabilities of women and girls, those whose lives and well-being are at stake must be involved in leading the way. Gender Equality and Sustainable Development calls for policies, investments and initiatives in sustainable development that recognize women's knowledge, agency and decision-making as fundamental. Four key sets of issues - work and industrial production; population and reproduction; food and agriculture, and water, sanitation and energy provide focal lenses through which these challenges are considered. Perspectives from new feminist political ecology and economy are integrated, alongside issues of rights, relations and power. The book untangles the complex interactions between different dimensions of gender relations and of sustainability, and explores how policy and activism can build synergies between them. Finally, this book demonstrates how plural pathways are possible; underpinned by different narratives about gender and sustainability, and how the choices between these are ultimately political. This timely book will be of great interest to students, scholars, practitioners and policy makers working on gender, sustainable development, development studies and ecological economics.

Understanding Public Policy Paul Cairney, 2019-11-08 The fully revised second edition of this textbook offers a comprehensive introduction to theories of public policy and policymaking. The policy process is complex: it contains hundreds of people and organisations from various levels and types of government, from agencies, quasi- and non-governmental organisations, interest groups and the private and voluntary sectors. This book sets out the major concepts and theories that are vital for making sense of the complexity of public policy, and explores how to combine their insights when seeking to explain the policy process. While a wide range of topics are covered - from multi-level governance and punctuated equilibrium theory to 'Multiple Streams' analysis and feminist institutionalism - this engaging text draws out the common themes among the variety of studies considered and tackles three key questions: what is the story of each theory (or multiple theories); what does policy theory tell us about issues like 'evidence based policymaking'; and how 'universal' are policy

theories designed in the Global North? This book is the perfect companion for undergraduate and postgraduate students studying public policy, whether focussed on theory, analysis or the policy process, and it is essential reading for all those on MPP or MPM programmes. New to this Edition: - New sections on power, feminist institutionalism, the institutional analysis and development framework, the narrative policy framework, social construction and policy design - A consideration of policy studies in relation to the Global South in an updated concluding chapter - More coverage of policy formulation and tools, the psychology of policymaking and complexity theory - Engaging discussions of punctuated equilibrium, the advocacy coalition framework and multiple streams analysis

Towards a Natural Social Contract Patrick Huntjens, 2021-03-30 This open access book is a 2022 Nautilus Gold Medal winner in the category World Cultures' Transformational Growth & Development. It states that the societal fault lines of our times are deeply intertwined and that they confront us with challenges affecting the security, fairness and sustainability of our societies. The author, Prof. Dr. Patrick Huntjens, argues that overcoming these existential challenges will require a fundamental shift from our current anthropocentric and economic growth-oriented approach to a more ecocentric and regenerative approach. He advocates for a Natural Social Contract that emphasizes long-term sustainability and the general welfare of both humankind and planet Earth. Achieving this crucial balance calls for an end to unlimited economic growth, overconsumption and over-individualisation for the benefit of ourselves, our planet, and future generations. To this end, sustainability, health, and justice in all social-ecological systems will require systemic innovation and prioritizing a collective effort. The Transformative Social-Ecological Innovation (TSEI) framework presented in this book serves that cause. It helps to diagnose and advance innovation and spur change across sectors, disciplines, and at different levels of governance. Altogether, TSEI identifies intervention points and formulates jointly developed and shared solutions to inform policymakers, administrators, concerned citizens, and professionals dedicated towards a more sustainable, healthy and just society. A wide readership of students, researchers, practitioners and policy makers interested in social innovation, transition studies, development studies, social policy, social justice, climate change, environmental studies, political science and economics will find this cutting-edge book particularly useful. "As a sustainability transition researcher, I am truly excited about this book. Two unique aspects of the book are that it considers bigger transformation issues (such as societies' relationship with nature, purpose and justice) than those studied in transition studies and offers analytical frameworks and methods for taking up the challenge of achieving change on the ground." - Prof. Dr. René Kemp, United Nations University and Maastricht Sustainability Institute

Environmental Management Accounting for Cleaner Production Stefan Schaltegger,Martin Bennett,Roger L. Burritt,Christine M. Jasch,2008-10-10 Sustainability requires companies to develop in an economically, environmentally and socially sustainable manner. Corporate sustainable development in turn requires movement towards cleaner production. In

order to recognize the potential from cleaner production - reduced costs and fewer environmental impacts through the reduced use of materials - environmental management accounting (EMA) is a necessary information management tool. Environmental Management Accounting for Cleaner Production reveals a set of tools for companies to collect, evaluate and interpret the information they need to estimate their potential to use cleaner production to realize cost savings and to make the best decisions about the available cleaner production options. EMA is therefore the key for driving environmental progress, cost savings, increased competitiveness and corporate sustainability through the means of cleaner production.
