Disease Control Priorities, Third Edition (Volume 4) Vikram Patel, Dan Chisholm, Tarun Dua, Ramanan Laxminarayan, Mari'a Lena Medina-Mora, Theo Vos, 2016-03-10 Mental, neurological, and substance use disorders are common, highly disabling, and associated with significant premature mortality. The impact of these disorders on the social and economic well-being of individuals, families, and societies is large, growing, and underestimated. Despite this burden, these disorders have been systematically neglected, particularly in low- and middle-income countries, with pitifully small contributions to scaling up cost-effective prevention and treatment strategies. Systematically compiling the substantial existing knowledge to address this inequity is the central goal of this volume. This evidence-base can help policy makers in resource-constrained settings as they prioritize programs and interventions to address these disorders.

Global Mental Health Vikram Patel, Harry Minas, Alex Cohen, Martin Prince, 2013-11 This is the definitive textbook on global mental health, an emerging priority discipline within global health, which places priority on improving mental health and achieving equity in mental health for all people worldwide.

Innovations in Global Mental Health Samuel O. Okpaku, 2021-11-02 Over the course of the last decade, political and mental entities at large have embraced global mental health: the idea that psychiatric health is vital to improved quality of life. Physicians globally have implemented guidelines recommended by the National Institute of Mental Health (NIMH) in 2007, thereby breaking down barriers to care and improving quality of life in areas where these practices have been implemented. Programs for training and education have expanded as a result. Clinicians benefit more from both local resources in some regions as well as in international collaboration and technological advancements. Even amidst all of these positive outcomes, clinicians still face some stumbling blocks. With worldwide statistics estimating that 450 million people struggle with mental, neuropsychiatric, and neurological disorders—25 percent of the world's non-communicable disease burden—rising to these challenges prove to be no small feat, even in wealthy Western nations. Various articles and books

have been published on global mental health, but few of them thoroughly cover the clinical, research, innovative, and social implications as they pertain to psychiatry; often, only one of these aspects is covered. A comprehensive text that can keep pace with the rapidly evolving literature grows more and more valuable each day as clinicians struggle to piece together the changes around the world that leave open the possibility for improved outcomes in care. This book seeks to boldly rectify this situation by identifying innovative models of service delivery, training, education, research funding, and payment systems that have proven to be exemplary in implementation and scalability or have potential for scalability. Chapters describe specific barriers and challenges, illuminating effective strategies for improved outcomes. This text is the first peer-reviewed resource to gather prestigious physicians in global mental health from around the world and disseminate their expertise in the medical community at large in a format that is updateable, making it a truly cutting-edge resource in a world constantly changed by medical, scientific, and technological advances. *Innovations in Global Mental Health* is the ultimate resource for psychiatrists, psychologists, primary care physicians, hospitalists, policy makers, and all medical professionals at the forefront of global mental health and its implications for the future.

The World Health Report 2003 World Health Organization, 2003 We have a real opportunity now to make progress that will mean longer healthier lives for millions of people.

World Health Statistics 2015 World Health Organization, 2015-05-14 World Health Statistics 2015 contains WHO's annual compilation of health-related data for its 194 Member States and includes a summary of the progress made towards achieving the health-related Millennium Development Goals (MDGs) and associated targets. This year it also includes highlight summaries on the topics of reducing the gaps between the world's most-advantaged and least-advantaged countries and on current trends in official development assistance (ODA) for health. As in previous years World Health Statistics 2015 has been compiled using publications and databases produced and maintained by WHO technical programmes and regional offices. A number of demographic and socioeconomic statistics have also been derived from databases maintained by a range of other organizations.

The Ocean and Cryosphere in a Changing Climate Intergovernmental Panel on Climate Change (IPCC), 2022-05-19 The Intergovernmental Panel on Climate Change (IPCC) is the leading international body for assessing the science related to climate change. It provides policymakers with regular assessments of the scientific basis of human-induced climate change, its impacts and future risks, and options for adaptation and mitigation. This IPCC Special Report on the Ocean and Cryosphere in a Changing Climate is the most comprehensive and up-to-date assessment of the observed and projected changes to the ocean and cryosphere and their associated impacts and risks, with a focus on resilience, risk management

response options, and adaptation measures, considering both their potential and limitations. It brings together knowledge on physical and biogeochemical changes, the interplay with ecosystem changes, and the implications for human communities. It serves policymakers, decision makers, stakeholders, and all interested parties with unbiased, up-to-date, policy-relevant information. This title is also available as Open Access on Cambridge Core.

The Global Burden of Disease Colin Mathers, World Health Organization, 2008 The global burden of disease: 2004 update is a comprehensive assessment of the health of the world's population. It provides detailed global and regional estimates of premature mortality, disability and loss of health for 135 causes by age and sex, drawing on extensive WHO databases and on information provided by Member States.--Publisher description.

Mental Illness in General Health Care T. Bedirhan Üstün, Norman Sartorius, 1995-06-15 This book presents the largest international study of psychological disorders seen in primary health care. Centres in fourteen countries participated in this investigation, including Brazil, Chile, China, India, Nigeria and the USA as well as several European countries. The study has shown how people with mental disorders present their problems to doctors and how likely their disorders are to be detected and treated.

Neurological, Psychiatric, and Developmental Disorders Institute of Medicine, Board on Global Health, Committee on Nervous System Disorders in Developing Countries, 2001-01-01 Brain disorders—neurological, psychiatric, and developmental—now affect at least 250 million people in the developing world, and this number is expected to rise as life expectancy increases. Yet public and private health systems in developing countries have paid relatively little attention to brain disorders. The negative attitudes, prejudice, and stigma that often surround many of these disorders have contributed to this neglect. Lacking proper diagnosis and treatment, millions of individual lives are lost to disability and death. Such conditions exact both personal and economic costs on families, communities, and nations. The report describes the causes and risk factors associated with brain disorders. It focuses on six representative brain disorders that are prevalent in developing countries: developmental disabilities, epilepsy, schizophrenia, bipolar disorder, depression, and stroke. The report makes detailed recommendations of ways to reduce the toll exacted by these six disorders. In broader strokes, the report also proposes six major strategies toward reducing the overall burden of brain disorders in the developing world.

Reducing Inequalities Rémi Genevey, R. K. Pachauri, Laurence Tubiana, 2013-01-01 The reduction of inequalities within and between countries stands as a policy goal, and deserves to take centre stage in the design of the Sustainable Development Goals agreed during the Rio+20 Summit in 2012. The 2013 edition of *A Planet for Life* represents a unique international initiative grounded on conceptual and strategic thinking, and “most importantly” empirical experiments, conducted on five continents and touching on multiple realities. This unprecedented collection of works proposes a solid empirical approach, rather than an ideological one, to inform future debate. The case studies collected in this volume

demonstrate the complexity of the new systems required to accommodate each country's specific economic, political and cultural realities. These systems combine technical, financial, legal, fiscal and organizational elements with a great deal of applied expertise, and are articulated within a clear, well-understood, growth- and job-generating development strategy. Inequality reduction does not occur by decree; neither does it automatically arise through economic growth, nor through policies that equalize incomes downward via ill conceived fiscal policies. Inequality reduction involves a collaborative effort that must motivate all concerned parties, one that constitutes a genuine political and social innovation, and one that often runs counter to prevailing political and economic forces.

Global Mental Health and Psychotherapy Dan J. Stein, Judith J. Bass, Stefan G. Hofmann, PhD, 2019-02-15 Global Mental Health and Psychotherapy: Adapting Psychotherapy for Middle- and Low-Income Countries takes a detailed look at how psychotherapies can be adapted and implemented in low- and middle-income countries, while also illuminating the challenges and how to overcome them. The book addresses the conceptual framework underlying global mental health and psychotherapy, focusing on the importance of task-shifting, a common-elements approach, rigorous supervision, and the scaling up of psychotherapies. Specific psychotherapies, such as cognitive-behavioral therapy, interpersonal therapy and collaborative care are given in-depth coverage, as is working with special populations, such as children and adolescents, pregnant women, refugees, and the elderly. In addition, treatment strategies for common disorders, such as depression,

anxiety and stress, and substance abuse are covered, as are strategies for more severe mental disorders, such as schizophrenia. Provides adapted psychotherapy strategies for low- and middle-income countries Looks at special considerations for particular disorders and populations Covers the treatment of both common and severe mental health problems Focuses on task-shifting, a common-elements approach and scaling of psychotherapies Addresses cognitive-behavioral therapy, interpersonal therapy and schema therapy

The Weirdest People in the World Joseph Henrich, 2020-09-10 'A landmark in social thought. Henrich may go down as the most influential social scientist of the first half of the twenty-first century' MATTHEW SYED Do you identify yourself by your profession or achievements, rather than your family network? Do you cultivate your unique attributes and goals? If so, perhaps you are WEIRD: raised in a society that is Western, Educated, Industrialized, Rich and Democratic. Unlike most who have ever lived, WEIRD people are highly individualistic, nonconformist, analytical and control-oriented. How did WEIRD populations become so psychologically peculiar? What part did these differences play in our history, and what do they mean for our collective identity? Joseph Henrich, who developed the game-changing concept of WEIRD, uses leading-edge research in anthropology, psychology, economics and evolutionary biology to explore how changing family structures, marriage practices and religious beliefs in the Middle Ages shaped the Western mind, laying the foundations for the world we know today. Brilliant, provocative, engaging and surprising, this landmark study will revolutionize your understanding of who - and how - we are now. 'Phenomenal ... The only theory I am aware of that attempts to explain broad patterns of human psychology on a global scale' Washington Post 'You will never look again in the same way at your own seemingly universal values' Uta Frith, Professor of Cognitive Development, University College London

WHO Guidelines on Hand Hygiene in Health Care World Health Organization, 2009 The WHO Guidelines on Hand Hygiene in Health Care provide health-care workers (HCWs), hospital administrators and health authorities with a thorough review of evidence on hand hygiene in health care and specific recommendations to improve practices and reduce transmission of pathogenic microorganisms to patients and HCWs. The present Guidelines are intended to be implemented in any situation in which health care is delivered either to a patient or to a specific group in a population. Therefore, this concept applies to all settings where health care is permanently or occasionally performed, such as home care by birth attendants. Definitions of health-care settings are proposed in Appendix 1. These Guidelines and the associated WHO Multimodal Hand Hygiene Improvement Strategy and an Implementation Toolkit (<http://www.who.int/gpsc/en/>) are designed to offer health-care facilities in Member States a conceptual framework and practical tools for the application of recommendations in practice at the bedside. While ensuring consistency with the Guidelines recommendations, individual adaptation according to local regulations, settings, needs, and resources is desirable. This extensive review includes in one

document sufficient technical information to support training materials and help plan implementation strategies. The document comprises six parts.
