**Food Security and Safety** Olubukola Oluranti Babalola, 2021-09-01 This book focuses on food security and safety issues in Africa, a continent presently challenged with malnutrition and food insecurity. The continuous increase in the human population of Africa will lead to higher food demands, and climate change has already affected food production in most parts of Africa, resulting in drought, reduced crop yields, and loss of livestock and income. For Africa to be food-secure, safe and nutritious food has to be available, well-distributed, and sufficient to meet people's food requirements. Contributors to Food Security and Safety: African Perspectives offer solutions to the lack of adequate safe and nutritious food in sub-Saharan Africa, as well as highlight the positive efforts being made to address this lack through a holistic approach. The book discusses the various methods used to enhance food security, such as food fortification, fermentation, genetic modification, and plant breeding for improved yield and resistance to diseases. Authors emphasize the importance of hygiene and food safety in food preparation and preservation, and address how the constraints of climate change could be overcome using smart crops. As a comprehensive reference text, Food Security and Safety: African Perspectives seeks to address challenges specific to the African continent while enhancing the global knowledge base around food security, food safety, and food production in an era of rapid climate change.

**Traditional Medicinal Plants and Malaria** Merlin Willcox, Gerard Bodeker, Philippe Rasoanaivo, Jonathan Addae-Kyereme, 2004-06-28 Malaria is an increasing worldwide threat, with more than three hundred million infections and one million deaths every year. The world's poorest are the worst affected, and many treat themselves with traditional herbal medicines. These are often more available and affordable, and sometimes are perceived as more effective than conventional antimalaria

**Early Mongol Rule in Thirteenth-Century Iran** George E. Lane, 2003-09-01 An account of the re-emergence of Persia as a world player and the reassertion of its cultural, political and spiritual links with Turkic Lands, this book opposes the way in which, for too long, the whole period of Mongol domination of Iran has been viewed from a negative standpoint. Though arguably the initial irruption of the Mongols brought little comfort to those in its path, this is not the case with the second 'invasion' of the Chinggisids. This study demonstrates that Hülegü Khan was welcomed as a king and a saviour after the depredations of his predecessors, rather than as a conqueror, and that the initial decades of his dynasty's rule were

characterised by a renaissance in the cultural life of the Iranian plateau.

Strategic Marketing: Planning and Control Graeme Drummond, John Ensor, Ruth Ashford, 2007-06-01 Strategic Marketing: planning and control covers contemporary issues by exploring current developments in marketing theory and practice including the concept of a market-led orientation and a resource/asset-based approach to internal analysis and planning. The text provides a synthesis of key strategic marketing concepts in a concise and comprehensive way, and is tightly written to accommodate the reading time pressures on students. The material is highly exam focused and has been class tested and refined. Completely revised and updated, the second edition of Strategic Marketing: planning and control includes chapters on 'competitive intelligence', 'strategy formulation' and 'strategic implementation'. The final chapter, featuring mini case studies, has been thoroughly revised with new and up to date case material.

*A Synopsis of the Scolytine Ambrosia Beetles of Thailand (Coleoptera : Curculionidae: Scolytinae)* Roger A. Beaver, W. Sittichaya, L-Y. Liu, 2014 The present state of knowledge of the scolytine ambrosia beetles of Thailand is summarised to provide a basis for future studies of the fauna and its economic importance in forestry, timber production and crop tree plantations. A checklist of the fauna is provided with information on local and world distribution, host trees, biology and taxonomy. Six faunal elements based on geographical distribution, and the host tree and altitudinal preferences of species are discussed. One hundred and sixty-one species are recorded from Thailand, 67 of them for the first time. The following new synonym is proposed: *Euwallacea wallacei* (Blandford) (= *Xyleborus barbatomorphus* Schedl n.syn.). The following new combinations are given: *Ambrosiophilus cristatulus* (Schedl), *Ambrosiophilus latisulcatus* (Eggers), *Beaverium dihingensis* (Eggers), *Beaverium lantanae* (Eggers) and *Immanus desectus* (Eggers) are transferred from their present position in *Ambrosiodmus*; *Ancipitis depressus* (Eggers) and *Ancipitis punctatissimus* (Eichhoff) are transferred from *Leptoxyleborus*; *Cyclorhipidion armipenne* (Schedl), *Cyclorhipidion inarmatum* (Eggers), *Euwallacea semiermis* (Schedl), *Fortiborus macropterus* (Schedl), *Microperus nudibrevis* (Schedl) and *Wallacellus minutus* (Blandford) are transferred from *Xyleborus*.

Research Developments in Saline Agriculture Jagdish Chander Dagar, Rajender Kumar Yadav, Parbodh Chander Sharma, 2019-06-21 Soil and water salinity is a major challenge for the agricultural community and policy makers in terms of meeting the burgeoning population's demand for food and other agricultural commodities. In coastal regions, climate change and sea level rise will aggravate the problem with more and more areas becoming saline due to intrusion of sea water. As such there is a pressing need for modern tools and innovative techniques for the identification of salty soils and poor-quality waters, crop production, soil reclamation and lowering the water table in waterlogged areas. Tackling next-generation problems such as contamination of soil and underground water due to fluoride and arsenic, as well as developing multi-stress tolerant crops is also a high priority. Further, techniques for domesticating halophytes, mangrove-based aquacultures, using seaweed cultures as agricultural crops and integrated farming systems need to be perfected. This book addresses all these

aspects in detail, highlighting the diverse solutions to tackle the complex problem of salinity and waterlogging and safer management of poor-quality waters. With chapters written by leading experts, it is a valuable resource for researchers planning future investigations, policy makers, farmers and other stakeholders, and for students wanting insights into vital issues of environment.

**Highlights of Spanish Astrophysics V** Jose M. Diego, Luis J. Goicoechea, J. Ignacio González-Serrano, Javier Gorgas, 2010-03-18 Astronomy is a scientific discipline that has developed a rapid and impressive growth in Spain. Thirty years ago, Spain occupied a purely anecdotal presence in the international context, but today it occupies the eighth position in the world in publication of astronomical articles, and, among other successes, owns and operates ninety per cent of the world's largest optical telescope GTC (Gran Telescopio Canarias). The Eighth Scientific Meeting of the Spanish Astronomical Society (Sociedad Española de Astronomía, SEA), held in Santander in July 7-11 2008, whose proceedings are in your hands, clearly shows the enthusiasm, motivation and quality of the present Spanish astronomical community. The event brought together 322 participants, who represent almost 50% of Spanish professional astronomers. This percentage, together with the continuously increasing, with respect to previous SEA meetings, number of oral presentations and poster contributions (179 and 127 respectively), confirms that the SEA conferences have become a point of reference to assess the interests and achievements of astrophysical research in Spain. The most important and current topics of modern Astrophysics were taken into account at the preliminary meeting, as well as the number and quality of participants and their contributions, to select the invited speakers and oral contributors. We took a week to enjoy the high quality contributions submitted by Spanish astronomers to the Scientific Organizing Committee. The selection was difficult. We wish to acknowledge the gentle advice and commitment of the SOC members.

**Urban Allotment Gardens in Europe** Simon Bell, Runrid Fox-Kämper, Nazila Keshavarz, Mary Benson, Silvio Caputo, Susan Noori, Annette Voigt, 2016-03-10 Although urban allotment gardening dates back to the nineteenth century, it has recently undergone a renaissance of interest and popularity. This is the result of greater concern over urban greenspace, food security and quality of life. This book presents a comprehensive, research-based overview of the various features, benefits and values associated with urban allotment gardening in Europe. The book is based on a European COST Action project, which brings together researchers and practitioners from all over Europe for the first detailed exploration of the subject on a continent-wide scale. It assesses the policy, planning and design aspects, as well as the social and ecological benefits of urban allotment gardening. Through an examination of the wide range of different traditions and practices across Europe, it brings together the most recent research to discuss the latest evolutions of urban allotment gardening and to help

raise awareness and fill knowledge gaps. The book provides a multidisciplinary perspective, including insights from horticulture and soil science, ecology, sociology, urban geography, landscape, planning and design. The themes are underpinned by case studies from a number of European countries which supply a wide range of examples to illustrate different key issues.

*Global Biodiversity* T. Pullaiah, 2018-12-07 This is the first volume in the new multi-volume set, *Global Biodiversity*. Each volume in this series aims to provide insightful information on the biodiversity of selected nations in particular regions. The volumes summarize the available data on both wild and cultivated plants, wild and domesticated animals, and microbes of the different nations. *Global Biodiversity, Volume 1: Selected Countries in Asia* focuses on selected countries of Asia, providing an abundance of biodiversity information on Afghanistan, Bangladesh, India, Indonesia, Iran, Iraq, Japan, Lebanon, Malaysia, Mongolia, Myanmar, Nepal, and Vietnam. The first chapter in the volume provides an informative overview of what is biodiversity along with biogeographic classifications. It provides explanations of biodiversity patterns and species number; biodiversity conservation, protection, and international commitments and cooperation; biodiversity threats and drivers of change (such as human population growth, climate change, land use change); and the economics of biodiversity as well.

*Senses of Culture* Sarah Nuttall, Cheryl-Ann Michael, 2000 Everyday life in South Africa has been dominated by the politics of racial identities, while such identities form and re-form around a range of cultural activities and practices. This book traces the important dimensions of cultural activity in late twentieth-century South Africa, offering a multidisciplinary assessment between culture and politics. It also explores the ways in which the place of culture is being rethought since South Africa's transition to democracy.

**Plant Functional Diversity** Eric Garnier, Marie-Laure Navas, Karl Grigulis, 2016 Biological diversity, the variety of living organisms on Earth, is traditionally viewed as the diversity of taxa, and species in particular. However, other facets of diversity also need to be considered for a comprehensive understanding of evolutionary and ecological processes. This novel book demonstrates the advantages of adopting a functional approach to diversity in order to improve our understanding of the functioning of ecological systems and their components. The focus is on plants, which are major components of these systems, and for which the functional approach has led to major scientific advances over the last 20 years. *Plant Functional Diversity* presents the rationale for a trait-based approach to functional diversity in the context of comparative plant ecology and agroecology. It demonstrates how this approach can be used to address a number of highly debated questions in plant ecology pertaining to plant responses to their environment, controls on plant community structure, ecosystem properties, and the services these deliver to human societies. This research level text will be of particular relevance and use to graduate students and professional researchers in plant ecology, agricultural sciences and conservation biology.

**Human Retrovirus Protocols** Tuofu Zhu, 2008-02-04 A cutting-edge collection of basic and state-of-the-art methods optimized for investigating the molecular biology of this class of retrovirus. These readily reproducible techniques range from methods for the isolation and detection of human retroviruses to cutting-edge methods for exploring the interplay between the viruses and the host. Here, the researcher will find up-to-date techniques for the isolation and propagation of HIV, HTLV, and foamy virus from a variety of sources. There are also assays for determining the cell tropism of HIV-1, the coreceptor usage of HIV-1, and human gene expression with HIV-1 infection by microarrays, as well as for phenotyping HIV-1 infected monocytes and examining their fitness. Highlights include the detection and quantification of HIV-1 in resting CD4+, a new cloning system for making recombinant virus, cDNA microarrays, and the determination of genetic polymorphisms in two recently identified HIV-1 co-factors that are critical for HIV-1 infection.
