Diabetes and Cardiovascular Disease in the New Era: Epidemiology, Treatment, and Economics Dianjianyi Sun,Jingchuan Guo,2023-07-25 Advancements in the treatment for diabetes and cardiovascular complications in the last decade completely changed the landscape of these diseases. Newly developed medications significantly reduce the risk of cardiovascular complications and slow down the progression of diabetes, while innovative surgical technologies substantially improve the survival rates from the lethal complications. However, the emergence of advanced techniques comes with high expenses, which create huge barriers for access and worsens the disparity in health outcomes. Meanwhile, the use of these technologies calls for post-marketing surveillance in real world. How did new technologies adapt in the developed/developing countries? What is the cost for these treatments? Did these new treatments lead to improved healthcare quality? Many issues are unknown and thus we invite further investigation. This Research Topic seeks to draw a comprehensive picture of the current epidemiology and treatment of diabetes and cardiovascular diseases across the globe. We hope to publish high-quality articles that describe the epidemiology, economic, treatment, and disparity of diabetes and cardiovascular disease in the context of the new treatment era. Findings published in this Research Topic will enlighten an interesting discussion on how technological advancements shaped the landscape of diabetes and cardiovascular disease. It will also help identify gaps to be resolved in countries with different economic and social backgrounds across the globe. We welcome contributions of a range of topics including, but not limited to: • Contemporary epidemiology study focusing on the disease burden of diabetes and cardiovascular disease; • Economic burden of diabetes and cardiovascular disease; • Drug, new technology and service utilization for managing diabetes and cardiovascular disease; • Effectiveness and safety of treatment for diabetes and cardiovascular disease; • Policy studies involving the use of new treatments and technologies in patients with diabetes and

cardiovascular disease;

The book first focuses on the core of pharmacy, providing an overview of the field and a chapter dedicated to pharmacists. After an examination of how drug products are developed, used, and priced, it discusses the important topics of pharmacy technicians, information technology, pharmacy automation, and pharmaceutical care. Subsequent chapters cover the various areas where pharmacists work, including in community, hospital, home health care, and government pharmacies. The book concludes with chapters on the pharmaceutical industry and career planning. Evaluation of Drug Candidates for Preclinical Development Chao Han,Charles B. Davis,Binghe Wang,2010-01-19

Emphasizes the integration of major areas of drug discovery and their importance in candidate evaluation It is believed that selecting the right drug candidate for development is the key to success. In the last decade, pharmaceutical R&D departments have integrated pharmacokinetics and drug metabolism, pharmaceuticals, and toxicology into early drug discovery to improve the assessment of potential drug compounds. Now, Evaluation of Drug Candidates for Preclinical Development provides a complete view and understanding of why absorption-distribution-metabolism-excretion-toxicology (ADMET) plays a pivotal role in drug discovery and development. Encompassing the three major interrelated areas in which optimization and evaluation of drug developability is most critical—pharmacokinetics and drug metabolism, pharmaceuticals, and safety assessment—this unique resource encourages integrated thinking in drug discovery. The contributors to this volume: Cover drug transporters, cytochrome P-450 and drug-drug interactions, plasma protein binding, stability, drug formulation, preclinical safety assessment, toxicology, and toxicokinetics Address developability issues that challenge pharmaceutical companies, moving beyond isolated experimental results Reveal connections between the key scientific areas that are critical for successful drug discovery and development Inspire forward-thinking strategies and decision-making processes in preclinical evaluation to maximize the potential of drug candidates to progress through development efficiently and meet the increasing demands of the marketplace Evaluation of Drug Candidates for Preclinical Development serves as an introductory reference for those new to the pharmaceutical industry and drug discovery in particular. It is especially well suited for scientists and management teams in small- to mid-sized pharmaceutical companies, as well as academic researchers and graduate students concerned with the practical aspects related to the evaluation of drug developability.
