Flagship Universities in Africa Damtew Teferra,2017-06-26 This book advances an in-depth, comprehensive analysis of flagship universities in Africa - the largest, most selective, and most prestigious universities on the continent. The book draws on a range of country-specific case-studies, including Botswana, Egypt, Ethiopia, Ghana, Kenya, Mauritius, Nigeria, Senegal, Tanzania and Zambia, to explore a range of issues associated with flagship universities and their role in higher education in Africa. . Newly-established institutions in new nation states, and states emerging from conflict, often rely on these flagship universities to train their academics, and build their intelligentsia; flagship universities are thus capacity-builders and trend-setters in their respective countries and sub-regions. This volume brings together a range of scholars to celebrate the impact, influence and contributions of African universities, not only within Africa, but across the globe The book will be of great significance to students and researchers in the field of education, particularly those with an interest in sociology and politics of higher education.

Pedagogic Frailty and Resilience in the University Ian M. Kinchin, Naomi E. Winstone, 2017-04-17 Pedagogic Frailty and Resilience in the University presents a theoretical model and a practical tool to support the professional development of reflective university teachers. It can be used to highlight links to key issues in higher education. Pedagogic frailty exists where the quality of interaction between elements in the evolving teaching environment succumbs to cumulative pressures that eventually inhibit the capacity to develop teaching practice. Indicators of frailty can be observed at different resolutions, from the individual, to the departmental or the institutional. Chapters are written by experts in their respective fields who critique the frailty model from the perspectives of their own research. This will help readers to make practical links between established bodies of research literature and the concept of frailty, and to form a coherent and integrated view of higher education. This can then be explored and developed by individuals, departments or institutions to inform and evaluate their own enhancement programmes. This may support the development of greater resilience to the demands of the teaching environment. In comparison with other commonly used terms, we have found that the term 'frailty' has improved resonance with the experiences of colleagues across the disciplines in higher education, and elicits a personal (sometimes emotional) response to their professional situation that encourages positive dialogue, debate and reflection that may lead to the enhancement of university teaching. This book offers a particular route through the fractured discourses of higher education pedagogy, creating a coherent and cohesive perspective of the field that may illuminate the experiences and observations of colleagues within the profession. "If we are to realise the promise of higher education ... we will need the concepts, methods, and reflections contained in this book." - Robert R. Hoffman

System of National Accounts, 1993 International Monetary Fund, 1993-03-15 The 1993 SNA represents a major advance in national accounting. While updating and clarifying the 1968 SNA, the 1993 SNA provides the basis for improving compilation of national accounts statistics, promoting integration of economic and related statistics, and enhancing analysis of economic developments. The 1993 SNA deals more clearly with relationships between economic flows (such as production, income, savings, accumulation, and financing) and links between these flows and stocks. At the same time the 1993 SNA reflects the many significant developments that have taken place in financial markets and completes the integration of balance sheets into the system. The 1993 SNA also suggests how satellite accounts (e.g. environmental accounts) and alternative classifications (e.g., through social accounting matrices) can be used to augment the central framework of the system.

Monetary and Financial Statistics Manual International Monetary Fund. Statistics Dept.,2000-09-14 This Manual offers guidelines for the presentation of monetary and financial statistics. It provides a set of tools for identifying, classifying, and recording stocks and flows of financial assets and liabilities, describes the standard, analytically oriented frame works in which the statistics may be presented, and identifies a set of analytically useful aggregates within those frameworks. The concepts and principles set out in the Manual are harmonized with those of the System of National Accounts 1993.

On Higher Education David Riesman, On Higher Education is about the consequences of the student revolt of the 1960's and the decline of faculty influence. This shift from emphasis on academic merit to student consumerism is one of two great reversals of direction in the history of American higher education. This is a book for those curious about our society and its institutions and for all who share a civic concern about the society's future.

The Space Environment Alan C. Tribble,2020-05-05 The breakup of the Space Shuttle Columbia as it reentered Earth's atmosphere on February 1, 2003, reminded the public--and NASA--of the grave risks posed to spacecraft by everything from insulating foam to space debris. Here, Alan Tribble presents a singular, up-to-date account of a wide range of less conspicuous but no less consequential environmental effects that can damage or cause poor performance of orbiting spacecraft. Conveying a wealth of insight into the nature of the space environment and how spacecraft interact with it, he covers design modifications aimed at eliminating or reducing such environmental effects as solar absorptance increases caused by self-contamination, materials erosion by atomic oxygen, electrical discharges due to spacecraft charging, degradation of electrical circuits by radiation, and bombardment by micrometeorites. This book is unique in that it bridges the gap between studies of the space environment as performed by space physicists and spacecraft design engineering as practiced by aerospace engineers.

Challenges and Options: The Academic Profession in Europe Maria de Lourdes Machado-Taylor, Virgílio Meira Soares, Ulrich Teichler,2017-02-21 This volume explores the various issues that have an impact on the academic career of professionals in European higher education. Higher Education Institutions (HEIs) are currently subject to profound uncertainties and are more challenged than ever on quality issues, both with regard to their conceptual nature and in the extension and amendment of their mission. Divided into three parts, the first part of the book deals with the challenges and issues in higher education academic careers. It addresses such topics as the influence of European policies and changes, the cultural differences in the preferences of academics for teaching or research, the increasing inequality in working conditions for academics, and the changing nature of academic strategy in the transformational world of higher education with its implications for academic structures, work and careers. The second part of the book analyses the findings of a national study on satisfaction of academics in Portuguese higher education, carried out at the Centre for Research on Higher Education

Policies (CIPES). The third part offers a comparative analysis of a number of national European case studies, focusing on the changing relevance of and increasing expectations around academic careers. The concluding chapter discusses whether the academic profession is merely an artificial term that has to do with a heterogeneous range of occupations, or if there are important common elements of the academic profession across European Higher Education systems.
