**Selected Health Conditions and Likelihood of Improvement with Treatment** National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Committee on Identifying Disabling Medical Conditions Likely to Improve with Treatment, 2020-07-12 The Social Security Administration (SSA) administers two programs that provide disability benefits: the Social Security Disability Insurance (SSDI) program and the Supplemental Security Income (SSI) program. SSDI provides disability benefits to people (under the full retirement age) who are no longer able to work because of a disabling medical condition. SSI provides income assistance for disabled, blind, and aged people who have limited income and resources regardless of their prior participation in the labor force. Both programs share a common disability determination process administered by SSA and state agencies as well as a common definition of disability for adults: the inability to engage in any substantial gainful activity by reason of any medically determinable physical or mental impairment which can be expected to result in death or which has lasted or can be expected to last for a continuous period of not less than 12 months. Disabled workers might receive either SSDI benefits or SSI payments, or both, depending on their recent work history and current income and assets. Disabled workers might also receive benefits from other public programs such as workers' compensation, which insures against work-related illness or injuries occurring on the job, but those other programs have their own definitions and eligibility criteria. Selected Health Conditions and Likelihood of Improvement with Treatment identifies and defines the professionally accepted, standard measurements of outcomes improvement for medical conditions. This report also identifies specific, long-lasting medical conditions for adults in the categories of mental health disorders, cancers, and musculoskeletal disorders. Specifically, these conditions are disabling for a length of time, but typically don't result in permanently disabling limitations; are responsive to treatment; and after a specific length of time of treatment, improve to the point at which the conditions are no longer disabling.

**Investing to Overcome the Global Impact of Neglected Tropical Diseases** World Health Organization, 2015-08-05 The presence, or absence, of neglected tropical diseases (NTDs) can be seen as a proxy for poverty and for the success of interventions aimed at reducing poverty. Today, coverage of the public-health interventions recommended by the World Health Organization (WHO) against NTDs may be interpreted as a proxy for universal health coverage and shared prosperity - in short, a proxy for coverage against neglect. As the world's focus shifts from development to sustainable development, from poverty eradication to shared prosperity, and from disease-specific goals to universal health coverage, control of NTDs will assume an important role towards the target of achieving universal health coverage, including individual financial risk protection. Success in overcoming NTDs is a litmus test for universal health coverage against NTDs in endemic countries. The first WHO report on NTDs (2010) set the scene by presenting the evidence for how these interventions had produced results. The second report (2013) assessed the progress made in deploying them and detailed the obstacles to their implementation. This third report analyses for the first time the investments needed to achieve the scale up of implementation required to achieve the targets of the WHO Roadmap on NTDs and universal coverage against NTDs. **INVESTING TO OVERCOME THE GLOBAL IMPACT OF NEGLECTED TROPICAL DISEASES** presents an investment strategy for NTDs and analyses the specific investment case for prevention, control, elimination and eradication of 12 of the 17 NTDs. Such an analysis is justified following the adoption by the Sixty-sixth World Health Assembly in 2013 of resolution WHA66.12 on neglected tropical diseases, which called for sufficient and predictable funding to achieve the Roadmap's targets and sustain control efforts. The report cautions, however, that it is wise investment and not investment alone that will yield

success. The report registers progress and challenges and signals those that lie ahead. Climate change is expected to increase the spread of several vector-borne NTDs, notably dengue, transmission of which is directly influenced by temperature, rainfall, relative humidity and climate variability primarily through their effects on the vector. Investments in vector-borne diseases will avoid the potentially catastrophic expenditures associated with their control. The presence of NTDs will thereby signal an early warning system for climate-sensitive diseases. The ultimate goal is to deliver enhanced and equitable interventions to the most marginalized populations in the context of a changing public-health and investment landscape to ensure that all peoples affected by NTDs have an opportunity to lead healthier and wealthier lives.--Publisher's description.

**Sports-Related Concussions in Youth** National Research Council, Institute of Medicine, Board on Children, Youth, and Families, Committee on Sports-Related Concussions in Youth, 2014-02-04 In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. **Sports-Related Concussions in Youth: Improving the Science, Changing the Culture** reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. **Sports-Related Concussions in Youth** finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to **Sports-Related Concussions in Youth**, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding

of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

*Fiscal Policies for Development and Climate Action* Miria A. Pigato, 2018-12-31 This report provides actionable advice on how to design and implement fiscal policies for both development and climate action. Building on more than two decades of research in development and environmental economics, it argues that well-designed environmental tax reforms are especially valuable in developing countries, where they can reduce emissions, increase domestic revenues, and generate positive welfare effects such as cleaner water, safer roads, and improvements in human health. Moreover, these reforms need not harm competitiveness. New empirical evidence from Indonesia and Mexico suggests that under certain conditions, raising fuel prices can actually increase firm productivity. Finally, the report discusses the role of fiscal policy in strengthening resilience to climate change. It provides evidence that preventive public investments and measures to build fiscal buffers can help safeguard stability and growth in the face of rising climate risks. In this way, environmental tax reforms and climate risk-management strategies can lay the much-needed fiscal foundation for development and climate action.

*The plan for growth* Great Britain: H.M. Treasury, Great Britain Department for Business, Innovation and Skills, 2011-03-25 This supporting document to Budget 2011 (HC 836, ISBN 9780102971033) sets out the Government's plan for sustainable, long-term economic growth for the UK economy. It sets out four ambitions that underpin this objective, these are: to create the most competitive tax system in the G20; to make the UK one of the best places in Europe to start, finance and grow a business; to encourage investment and exports as a route to a more balanced economy and to create a more educated workforce that is the most flexible in Europe. Growth review measures outlined in Chapter 2 cover these priority areas: planning; regulation; trade and inward investment; access to finance; competition; corporate governance; low carbon. The first phase of the review also examined eight sectors of the economy to remove the barriers to growth that affect them: advanced manufacturing; healthcare and life sciences; digital and creative industries; professional and business services; retail; construction; space; tourism.

**Teaching to Strengths** Debbie Zacarian, Lourdes Alvarez-Ortiz, Judie Haynes, 2017 This book outlines a comprehensive, collaborative approach to teaching students living with trauma, violence, and chronic stress that focuses on students' strengths and resiliency.

The International Space Station Robert C. Dempsey, 2017 Looks at the operations of the International Space Station from the perspective of the Houston flight control team, under the leadership of NASA's flight directors, who authored the book. The book provides insight into the vast amount of time and energy that these teams devote to the development, planning and integration of a mission before it is executed. The passion and attention to detail of the flight control team members, who are always ready to step up when things do not go well, is a hallmark of NASA human spaceflight operations. With tremendous

support from the ISS program office and engineering community, the flight control team has made the International Space Station and the programs before it a success.

**Global Study on Homicide 2013** United Nations,2014-06-15 The Global Study on Homicide 2013 is based on comprehensive data from more than 200 countries/territories, and examines and analyses patterns and trends in homicide at the global, regional, national and sub-national levels. Such analysis is fundamental to understanding the various factors and dynamics that drive homicide, so that measures can be developed to reduce violent crime. The Study provides a typology of homicide, including homicide related to crime, coexistence-related homicide, and socio-political homicide. The nature of crime in several countries emerging from conflict, the role of various mechanisms in killing, and the response of the criminal justice system to homicide are also analyzed. A further chapter examines homicide at the sub-national level, and includes analysis at the city-level for selected global cities.

**Drugs and Appetite** Trevor Silverstone,1982 Abstract: Seven papers review current knowledge on ways in which drugs can influence appetite and feeding, covering the latest findings derived from human research and animal studies. Topics include: a description of the physiological context in which drugs act on feeding; the neuropharmacological actions of drugs on discrete brain mechanisms, regarding feeding; behavioral, pharmacological aspects of feeding, derived from drug and feeding behavior studies in laboratory animals; the measurement of hunger and food intake in humans as influenced by the ingestion of drugs; the relationships of anorectic and orexigenic drugs in consideration of the clinical pharmacology of appetite; and the use of drugs for the treatment of obesity and anorexic states. The material covered should be of interest to clinical nutritionists, dietitians, and researchers in physiology, pharmacology, psychology, and other health-related professions. (wz).

**Trade in Counterfeit and Pirated Goods** Piotr Stryszowski, Michał Kazimierczak, 2016 This study offers unique up-to-date analysis of the impact on global trade of counterfeit and pirated products, known as fakes by the general public. Using statistical analysis and drawing on a global dataset covering almost half million customs data on seizures, the study estimates the huge share of international trade commandeered by counterfeit and pirated goods. In 2013, international trade in such products represented up to 2.5% of world trade, or as much as USD 461 billion. This is the equivalent of the GDP of Austria, or the combined GDP of Ireland and the Czech Republic. Above all, it highlights that right holders, governments and the formal economy as a whole suffer from significant economic and social losses. It also gives an idea about the potential financial revenues collected by criminal networks that are behind such trade. ^More specifically, counterfeit and pirated products amounted to up to 5 % of imports in 2013 in the European Union, or as much as EUR 85 billion (USD 116 billion). This suggests that the relative impact of counterfeiting is twice as high for a group of developed countries, such as the EU, than it is for the world as a whole. The scope of the phenomenon appears to be greater than a decade ago. Back in 2008, a previous OECD study estimated that counterfeit and pirated goods accounted for up to 1.9 % of world imports, or up to USD 200 billion, relying on the best data and more limited methods available at that time. In the context of today's revival of international trade in the global economy, there is no shortage of opportunities for counterfeiters and criminals. Counterfeit and pirated trade is a major threat to any modern, knowledge-based economy. Counterfeiting and piracy matter in an innovation driven global economy. ^Intellectual property (IP) is a key value generator for firms, helping them succeed in competitive markets. At the macroeconomic level, IP protection and enforcement is one of the main drivers of innovation, which contributes to long term economic growth. Given the fundamental economic importance of IP, counterfeiting and piracy must be directly targeted as a threat to sustainable IP-based business models.

**World Development Report 2009** World Bank, 2008-11-04 Rising densities of human settlements, migration and transport to reduce distances to market, and specialization and trade facilitated by fewer international divisions are central to economic development. The transformations along these three dimensions density, distance, and division are most noticeable in North America, Western Europe, and Japan, but countries in Asia and Eastern Europe are changing in ways similar in scope and speed. 'World Development Report 2009: Reshaping Economic Geography' concludes that these spatial transformations are essential, and should be encouraged. The conclusion is not without controversy. Slum-dwellers now number a billion, but the rush to cities continues. Globalization is believed to benefit many, but not the billion people living in

lagging areas of developing nations. High poverty and mortality persist among the world's 'bottom billion', while others grow wealthier and live longer lives. Concern for these three billion often comes with the prescription that growth must be made spatially balanced. The WDR has a different message: economic growth is seldom balanced, and efforts to spread it out prematurely will jeopardize progress. The Report: documents how production becomes more concentrated spatially as economies grow. proposes economic integration as the principle for promoting successful spatial transformations. revisits the debates on urbanization, territorial development, and regional integration and shows how today's developers can reshape economic geography.

*Regulatory and Procedural Barriers to Trade in Georgia* Hana Daoudi, 2018 Since 2010, the ECE has been undertaking demand-driven national studies of regulatory and procedural barriers to trade, with a view to: helping countries achieve greater regional and global economic integration; informing donors as to where assistance might be required; and supporting policy discussions within the Steering Committee on Trade Capacity and Standards (previously, the Committee on Trade) and its subsidiary bodies on where additional work is required. This study summarizes the key findings of the seventh study, which focuses on Georgia. It was prepared by the ECE secretariat in close consultation with public and private sector stakeholders. The study integrates the outcome of the stakeholder meeting, which was organized in Tbilisi, Georgia on 23 April 2018 by the Ministry of Economy and Sustainable Development to discuss the initial results and recommendations.
