Rethinking Class Size: The complex story of impact on teaching and learning Peter Blatchford, Anthony Russell, 2020-11-12 The debate over whether class size matters for teaching and learning is one of the most enduring, and aggressive, in education research. Teachers often insist that small classes benefit their work. But many experts argue that evidence from research shows class size has little impact on pupil outcomes, so does not matter, and this dominant view has informed policymaking internationally. Here, the lead researchers on the world's biggest study into class size effects present a counter-argument. Through detailed analysis of the complex relations involved in the classroom they reveal the mechanisms that support teachers' experience, and conclude that class size matters very much indeed. Drawing on 20 years of systematic classroom observations, surveys of practitioners, detailed case studies and extensive reviews of research, Peter Blatchford and Anthony Russell contend that common ways of researching the impact of class size are limited and sometimes misguided. While class size may have no direct effect on pupil outcomes, it has, they say, significant force through interconnections with classroom processes. In describing these connections, the book opens up the everyday world of the classroom and shows that the influence of class size is everywhere. It impacts on teaching, grouping practices and classroom management, the quality of peer relations, tasks given to pupils, and on the time teachers have for marking, assessments and understanding the strengths and challenges for individual pupils. From their analysis, the authors develop a new social pedagogical model of how class size influences work, and identify policy conclusions and implications for teachers and schools.

Effective Intervention in Primary Schools Marion Bennathan, Majorie Boxall, 2013-12-19 First Published in 2001. Nurture groups are spreading rapidly throughout the UK. This fully updated second edition is written in response to the support given by the DfEE to the Nurture Group project and the recognition by every major special needs policy document that they provide effective early intervention for children showing signs of emotional and behavioural difficulties.

Applied Multiple Regression/Correlation Analysis for the Behavioral Sciences Patricia Cohen, Stephen G. West, Leona S. Aiken, 2014-04-04 This classic text on multiple regression is noted for its nonmathematical, applied, and data-analytic approach. Readers profit from its verbal-conceptual exposition and frequent use of examples. The applied emphasis provides clear illustrations of the principles and provides worked examples of the types of applications that are possible. Researchers learn how to specify regression models that directly address their research questions. An overview of the fundamental ideas of multiple regression and a review of bivariate correlation and regression and other elementary statistical concepts provide a strong foundation for understanding the rest of the text. The third edition features an increased emphasis on graphics and the use of confidence intervals and effect size measures, and an accompanying CD with data for most of the numerical examples along with the computer code for SPSS, SAS, and SYSTAT. Applied Multiple Regression serves as both a textbook for graduate students and as a reference tool for researchers in psychology, education, health sciences, communications, business, sociology, political science, anthropology, and economics. An introductory knowledge of statistics is required. Self-standing chapters minimize the need for researchers to refer to previous chapters.

The Science of Learning and Development Pamela Cantor, David Osher, 2021-06-21 This essential text unpacks major transformations in the study of learning and human development and provides evidence for how science can inform innovation in the design of settings, policies, practice, and research to enhance the life path, opportunity and prosperity of every child. The ideas presented provide researchers and educators with a rationale for focusing on the specific pathways and developmental patterns that may lead a specific child, with a specific family, school, and community, to prosper in school and in life. Expanding key published articles and expert commentary, the book explores a profound evolution in thinking that integrates findings from psychology with biology through sociology, education, law, and history with an emphasis on institutionalized inequities and disparate outcomes and how to address them. It points toward possible solutions through an understanding of and addressing the dynamic relations between a child and the contexts within which he or she lives, offering all researchers of human development and education a new way to understand and promote healthy development and learning for diverse, specific youth regardless of race, socioeconomic status, or history of adversity, challenge, or trauma. The book brings together scholars and practitioners from the biological/medical sciences, the social and behavioral sciences, educational science, and fields of law and social and educational policy. It provides an invaluable and unique resource for understanding the bases and status of the new science, and presents a roadmap for progress that will frame progress for at least the next decade and perhaps beyond.

Mobilizing Mutations Daniel Navon, 2019-09-20 With every passing year, more and more people learn that they or their young or unborn child carries a genetic mutation. But what does this mean for the way we understand a person? Today, genetic mutations are being used to diagnose novel conditions like the XYY, Fragile X, NGLY1 mutation, and 22q11.2 Deletion syndromes, carving out rich new categories of human disease and difference. Daniel Navon calls this form of categorization “genomic designation,” and in *Mobilizing Mutations* he shows how mutations, and the social factors that surround them, are reshaping human classification. Drawing on a wealth of fieldwork and historical material, Navon presents a sociological account of the ways genetic mutations have been mobilized and transformed in the sixty years since it became possible to see abnormal human genomes, providing a new vista onto the myriad ways contemporary genetic testing can transform people’s lives. Taking us inside these shifting worlds of research and advocacy over the last half century, Navon reveals the ways in which knowledge about genetic mutations can redefine what it means to be ill, different, and ultimately, human.

Effective Personal Tutoring in Higher Education Dave Lochtie, Emily McIntosh, Andrew Stork, Ben Walker, 2018-10-08 This is an important new text for all academic and professional staff within higher education (HE) who have a personal tutoring, student support or advising role. It examines key topics in relation to tutoring including definitions, coaching, core values and skills, boundaries, monitoring students, undertaking group and individual tutorials and the need to measure impact. Throughout, the text encourages reflection and the need to think critically about the role of the personal tutor. A scholarly

and practical text, it comprehensively brings together relevant academic literature to inform tutoring practice as well as contextualising the role within the HE policy and quality assurance landscape.

Turkish Cultural Policies in a Global World Muriel Girard,Jean-François Polo,Clémence Scalbert-Yücel,2018-01-16 This book provides a multidisciplinary analysis of the production of Turkish cultural policies in the context of globalization and of the circulation of knowledge and practices. Focusing on circulations, the book proposes an innovative approach to the transfer of cultural policies, considering them in terms of co-production and synchrony. This argument is developed through an examination of circulations at the international, national, and local levels; employing original empirical data and case study analyses. Divided into three parts the book first examines the Kemalist legacy, before turning to the cultural policies developed under the AKP's leadership, and concludes by investigating the production of cultural policies in the outlying regions of Turkey. The authors shed new light on the particular importance of culture to the understanding of the societal upheavals in contemporary Turkey. By considering exchanges as circulations rather than one-way impositions, this book also advances our understanding of how territories are (re)defined by culture and makes a significant contribution to the interrogation of the concept of "Westernization". This book brings into clear focus the reconfigurations currently taking place in Turkish cultural policy, demonstrating that while they are driven by the ruling party, they are also the work of civil society actors. It convincingly argues that an authoritarian turn need not necessarily spell the end of the cultural scene, and highlights the innovative adaptations and resistance strategies used in this context. This book will appeal to students and scholars of public policy, sociology and cultural studies.
