Emotional Cognition Simon C. Moore, Mike Oaksford,2002-08-08 Emotional Cognition gives the reader an up to date overview of the current state of emotion and cognition research that is striving for computationally explicit accounts of the relationship between these two domains. Many different areas are covered by some of the leading theorists and researchers in this area and the book crosses a range of domains, from the neurosciences through cognition and formal models to philosophy. Specific chapters consider, amongst other things, the role of emotion in decision-making, the representation and evaluation of emotive events, the relationship of affect on working memory and goal regulation. The emergence of such an integrative, computational, approach in emotion and cognition research is a unique and exciting development, one that will be of interest to established scholars as much as graduate students feeling their way in this area, and applicable to research in applied as well as purely theoretical domains. Families and Food in Hard Times Rebecca O'Connell, Julia Brannen,2021-05-24 Food is fundamental to health and social participation, yet food poverty has increased in the global North. Adopting a realist ontology and taking a comparative case approach, *Families and Food in Hard Times* addresses the global problem of economic retrenchment and how those most affected are those with the least resources. Based on research carried out with low-income families with children aged 11-15, this timely book examines food poverty in the UK, Portugal and Norway in the decade following the 2008 financial crisis. It examines the resources to which families have access in relation to public policies, local institutions and kinship and

friendship networks, and how they intersect. Through 'thick description' of families' everyday lives, it explores the ways in which low income impacts upon practices of household food provisioning, the types of formal and informal support on which families draw to get by, the provision and role of school meals in children's lives, and the constraints upon families' social participation involving food. Providing extensive and intensive knowledge concerning the conditions and experiences of low-income parents as they endeavour to feed their families, as well as children's perspectives of food and eating in the context of low income, the book also draws on the European social science literature on food and families to shed light on the causes and consequences of food poverty in austerity Europe.

Transition of Care M. Polak,P. Touraine,2018-06-11 Pediatricians face many questions and challenges during patients' transition from childhood to adulthood. Chronic diseases justify long-term medical, psychological, educational, and social management. The establishment of networks with adult endocrinologists is, therefore, very important to achieving optimal conditions for a successful transition period. In this book, leading experts discuss major public health issues such as diabetes and obesity. They also review genetic diseases, including Turner syndrome and congenital adrenal hyperplasia. All clinical cases are presented in a focused way to highlight any issues which might be discussed by the doctor with patients and family. Psychological approaches are debated as are proposals for defining specific tools to encourage autonomy during this life period. This book is a valuable tool and will be helpful in answering many questions for endocrinologists, adult and pediatric, dedicated to the long-term management of patients with chronic diseases.

Severe Dementia Alistair Burns, Bengt Winblad, 2006-05-12 The later stages of dementia are as important, if not more so, as the earlier stages, since they harbour unique characteristics and events, which profoundly affect the lives of patients and their carers. Severe dementia has not had a high profile in the clinical literature as until recently prognosis was poor and there were few beneficial interventions. With the recent licensing of memantine, clinicians finally have a drug option that will delay disease progression. *Severe Dementia* is the first book to focus exclusively on severe dementia. It addresses both the clinical features of the disease and the social aspects of care. Introductory chapters on the differential diagnosis, neurochemistry and molecular pathology of severe dementia set the scene for the clinical discussion. Detailed clinical chapters on cognitive function, depression, physical effects, staging and function follow. All therapeutic interventions are then discussed, including memantine, anticholinesterases, neuroleptics and non-pharmacological treatment. The final chapters review the social and economic aspects of dementia care, including family involvement, person-centered care, palliative care, ethics and health economics. Written and edited by experts in geriatric psychiatry and geriatrics, *Severe Dementia* is of value to all clinicians involved in the management of this complex and vulnerable group of patients. It is also of interest to general practitioners and carers in nursing homes.

Review of the State of World Marine Fishery Resources Food and Agriculture Organization of the United Nations. Marine Resources Service,1994 This document provides a review, commentary and tabulations of the main trends that have occurred in exploitation of fisheries resources since the 1970s, largely as they are reflected in the FAO database on fishery landings, supplemented with selected information from the fishery literature. Reviews were prepared separately for the 15 main areas into which FAO divides the world's oceans for statistical purposes. They are then compared from a global perspective to reveal relative trends by species and areas, which are highlighted. Several special topics are reviewed, including tuna and tuna-like species, whales and dolphins, and environmental issues in fisheries.

The State of the World's Children 2019 United Nations Publications,2020-02-28 This report examines nutrition, providing a fresh perspective on a rapidly evolving challenge. Despite progress in the past two decades, around 200 million under-fives suffer from undernutrition. Adding to this toll is rising obesity, which affects 38 million children. All these forms of malnutrition threaten children's development, while obesity is creating a lifelong legacy of disease. At the heart of this evolving challenge is a global shift towards modern diets that do not meet children's nutritional requirements. The report provides unique data and analysis of malnutrition in the 21st century and outlines recommendations to put children's needs at the heart of global and national food systems.

Imaging Dementia Massimo Filippi, Federica Agosta, 2021-02-20 This book helps physicians select from among the currently available imaging tools, promoting the correct and cost-saving diagnosis and management of common dementias. Magnetic resonance (MR) and nuclear medicine techniques are routinely used to facilitate diagnosis, select therapies, provide information regarding the prognosis, and monitor therapy response in patients with cognitive impairment and dementia. Furthermore, the advent of quantitative MR techniques, such as diffusion-weighted imaging, perfusion imaging, etc. have opened up new opportunities to diagnose neurological diseases based on objective findings, and offer unique new insights into the main neurodegenerative diseases of the human brain. However, the practical value of various neuroimaging techniques in clinical practice has yet to be clearly defined, and their potential for future development is not yet fully appreciated. To help remedy the situation, this book offers practical and useful algorithms and rules that can be directly applied in the clinical setting. It provides concise content, together with a wealth of clinical case material.
