Higher Education in Asia UNESCO Institute for Statistics, 2014 As demand for tertiary education continues to rise across Asia, countries are expanding their higher education systems outwards by constructing new universities, hiring more faculty and encouraging private provision. Many of these systems are also moving upwards by introducing new graduate programmes to ensure that there are enough qualified professors and researchers for the future. Based on data from the UNESCO Institute for Statistics (UIS) and a diverse range of national and international sources, this report provides a comprehensive view to evaluate different strategies to expand graduate education. Special focus is given to middle-income countries in the region which have recently experienced the most dramatic growth through an innovative mix of policies. For example, interventions aimed at improving university rankings may be controversial but are nonetheless reshaping university reforms. The report highlights the pros and cons by comparing the three most commonly-used university ranking systems. Across the region, countries are not simply seeking to accommodate more students - they are striving to build top-quality universities that can produce the research and workforce needed for national economic development. So this report presents a range of data to better evaluate the economic benefits flowing from university research, as well as the spillover effects to the private sector. The authors also analyse the ways in which international collaboration can boost the productivity and quality of university-based research. Overall, this report provides the data and analysis to help countries weigh the balance of different policies to expand their higher education systems.

Electric Machines and Drives Miroslav Chomat, 2011-02-28 The subject of this book is an important and diverse field of electric machines and drives. The twelve chapters of the book written by renowned authors, both academics and practitioners, cover a large part of the field of electric machines and drives. Various types of electric machines, including three-phase and single-phase induction machines or doubly fed machines, are addressed. Most of the chapters focus on modern control methods of induction-machine drives, such as vector and direct torque control. Among others, the book addresses sensorless control techniques, modulation strategies, parameter identification, artificial intelligence, operation under harsh or failure conditions, and modelling of electric or magnetic quantities in electric machines. Several chapters give an insight into the problem of minimizing losses in electric machines and increasing the overall energy efficiency of electric drives.

Social Reproduction Theory Tithi Bhattacharya, 2017 Crystallizing the essential principles of social reproductive theory, this anthology provides long-overdue analysis of everyday life under capitalism. It focuses on issues such as childcare, healthcare, education, family life, and the roles of gender, race, and sexuality--all of which are central to understanding the relationship between exploitation and social oppression. Tithi Bhattacharya brings together some of the leading writers and theorists, including Lise Vogel, Nancy Fraser, and Susan Ferguson, in order for us to better understand social relations and how to improve them in the fight against structural oppression.

Habitus and Field Pierre Bourdieu, 2020-02-03 This is the second of five volumes based on the lectures given by Pierre Bourdieu at the Collège de France in the early 1980s under the title 'General Sociology'. In these lectures, Bourdieu sets out to define and defend sociology as an intellectual discipline, and in doing so he introduces and clarifies all the key concepts which have come to define his distinctive intellectual approach. In this volume, Bourdieu focuses on two of his most important and influential concepts: habitus and field. For the social scientist, the object of study is neither the individual nor the group but the relation between these two manifestations of the social in bodies and in things: that is, the obscure, dual relation between the habitus - as a system of schemas of perception, appreciation and action - and the field as a system of objective relations and a space of possible actions and struggles aimed at preserving or transforming the field. The relation between the habitus and the field is a two-way process: it is a relation of conditioning, where the field structures the habitus, and it is also a relation of knowledge, with the habitus helping to constitute the field as a world that is endowed with meaning and value. The specificity of social science lies in the fact that it takes as its object of knowledge a reality that encompasses agents who take this same reality as the object of their own knowledge. An ideal introduction to some of Bourdieu's most

important concepts and ideas, this volume will be of great interest to the many students and scholars who study and use Bourdieu's work across the social sciences and humanities, and to general readers who want to know more about the work of one of the most important sociologists and social thinkers of the 20th century.

From Amis to Bellow, Blake to Gallico, and Shakespeare to Woolf, these explorations ask why it is that books are so important to us and why our relationships with writers and characters can be as vital as any we form in "real life." As it studies the psychological solace of books, this narrative also introduces classic and contemporary literature guaranteed to intrigue all book lovers.

The Student Experience Susanne Haselgrove,1994-01-01 This book focuses on higher education from the student perspective. In particular, it examines the change in the UK (and other countries) from an elite model towards the USA model of mass higher education, and how this is reflected in student experience. Higher education courses are increasingly diverse in content, delivery and location; the student population itself has become more diverse; financial support and employment opportunities have changed; and customer care and a market focus are to the fore. What are the implications for students, and how far have universities adjusted to their new constituents? This book tackles these issues. It approaches student-experience chronologically so is divided into sections on pre-entry, 'on-course', and on the period of transition to the next stage of their lives. By exploring a wide range of contexts, it is a valuable reflection of the overall pattern of student experience.

From Plantations to University Campus Woodville K. Marshall,2013 In *From Plantations to University Campus*, Woodville Marshall examines the evolution in the use of the space that surrounds the campus of the University of the West Indies at Cave Hill, Barbados, and identifies some of the individuals who played pivotal roles at different junctures. Based primarily on deeds and wills, this story reveals serial transformation while providing some clear indications of varied entrepreneurial activity in a physical environment that was not ideally suited to intensive agricultural activity. Several small plantations co-existed with one large plantation during the first century of English settlement. However, by the 1740s, the space was entirely dominated by small plantations and by medium-sized farms; and it was evident that occupancy of the land was as much tied to residence and to various types of business activity (including land speculation) as it was to cultivation of the soil. Not surprisingly, by the 1850s and 1860s, many of the farms on the marginal land had been succeeded by villages that were created by some of the formerly enslaved population, and both proximity to Bridgetown and internal migration ensured that those villages by the early twentieth century were less farming settlements than residential districts, barely distinguishable from non-plantation tenancies. In a final twist, an urban development programme of the 1960s ensured the continuation of hybrid characteristics in the use of the space. Middle-income housing estates were built and a university campus was established, and that development co-exists with the remnants of the earlier post-slavery villages.

Caribbean Popular Culture Yanique Hume,Aaron Kamugisha,2016-04-08 Caribbean Popular Culture: Power, Politics and

Performance examines the Caribbean popular - an idea that has been an important and contested terrain for exploring the dynamic and oftentimes subversive cultural expressions of the region. The Caribbean popular arts, whether embodied in the hybrid musical genres or vernacular performance and festival traditions, have historically provided a space for social and political critique, the performance of visibility and also articulations of a temporal emancipatory ethos with its attendant acquisition of power and status. Beyond the spaces of their local/regional enactments and the social realities out of which they emerged and continue to circulate, Caribbean popular culture has over time contributed to contemporary understandings of global and diasporic cultures and, at the same time, the dynamics of inter-cultural encounters. The terrain of the popular has been a generative site for the study of Caribbean societies, and has produced enduring theoretical postulations that have been pivotal to the shaping of the intellectual production on the Caribbean. It is also the most powerful force that socializes contemporary Caribbean citizens into an understanding of their identities, the limits of their citizenship, and the meaning of their worlds.
