Agricultural Value Chains in India Ashok Gulati, Kavery Ganguly, Harsh Wardhan, 2022-01-01 This open access book provides a clear holistic conceptual framework of CISS-F (competitiveness, inclusiveness, sustainability, scalability and access to finance) to analyse the efficiency of value chains of high value agricultural commodities in India. It is based on the understanding that agriculture is an integrated system that connects farming with logistics, processing and marketing. Farmer's welfare being central to any agricultural policy makes it very pertinent to study how a value chain works and can be strengthened further to realize this policy goal. This book adds value to the existing research by studying the value chains end-to-end across a wide spectrum of agricultural commodities with the holistic lens of CISS-F. It is not enough that a value chain is competitive but not inclusive or it is competitive and inclusive but not sustainable. The issue of scalability is very critical to achieve macro gains in terms of greater farmer outreach and sectoral growth. The research undertaken here brings out some very useful insights for policymaking in terms of what needs to be done better to steer the agricultural value chains towards being more competitive, inclusive, sustainable and scalable. The value chain specific research findings help draw very nuanced policy recommendations as well as present a big picture of the future direction of policy making in

agriculture.

**Textbook of Vascular Medicine** Rhian M. Touyz,Christian Delles,2019-08-02 This textbook focuses on the vascular biology and physiology that underlie vascular disorders in clinical medicine. Vascular biomedicine is a rapidly growing field as new molecular mechanisms of vascular health and disease are unraveled. Many of the major cardiovascular diseases including coronary artery disease, heart failure, stroke and vascular dementia are diseases of the vasculature. In addition vascular injury underpins conditions like kidney failure and cardiovascular complications of diabetes. This field is truly multidisciplinary involving scientists in many domains such as molecular and vascular biology, cardiovascular physiology and pharmacology and immunology and inflammation. Clinically, specialists across multiple disciplines are involved in the management of patients with vascular disorders, including cardiologists, nephrologists, endocrinologists, neurologists and vascular surgeons. This book covers a wide range of topics and provides an overview of the discipline of vascular biomedicine without aiming at in-depth reviews, but rather offering up-to-date knowledge organized in concise and structured chapters, with key points and pertinent references. The structure of the content provides an integrative and translational approach from basic science (e.g. stem cells) to clinical medicine (e.g. cardiovascular disease). The content of this book is targeted to those who are new in the field of vascular biology and vascular medicine and is ideal for medical students, graduate and postgraduate students, clinical fellows and academic clinicians with an interest in the vascular biology and physiology of cardiovascular disease and related pathologies.

**Sport and Identity in France** Philip Dine,2012 How does sport shape society? This book seeks to answer this question by examining the meaning of sport in French society and the construction of local, national and, increasingly, global identities through sport. It begins by reassessing modern sport's emergence and consolidation in France in the late nineteenth and early twentieth centuries and then traces developments from the Second World War to the present, reflecting on the current status and future role of French sport. Horse racing, cycling, tennis, adventure sports, rugby and football, as well as the role of the Olympic Games, are discussed. The author investigates the interaction of these mass and elite physical practices with a wide variety of sporting locations - spatial and temporal, concrete and imagined - and in a rich field of representations, including literature and the fine arts, the press, cinema, radio, television and digital media. Related concepts of sporting celebrity, stardom and heroism also inform the discussion, offering new contributions to this developing critical area.

**Late Effects of Childhood Cancer** Daniel Green, Hamish Wallace, 2003-12-26 The treatment of childhood cancer has become increasingly successful over the last forty years, and during the last two decades in particular, and the overall cure rate is now 60-70%. This, in turn, has introduced new issues for the clinician as the number of long-term survivors has increased. Some of the therapies that have contributed most to the improvement in survival are now known to have serious consequences for the patient in later life, and many survivors will be affected by physical, educational and psychological disability to a lesser or greater degree. This definitive reference brings together all aspects of long-term effects of treatment for cancer during childhood in a single comprehensive volume. International in perspective, the book is structured according to complication rather than original site of malignancy for ease of reference. Topics covered include problems in the neurological system and special senses of sight and sound, cardiovascular, respiratory, gastrointestinal, urological and musculoskeletal complications, effects on the endocrine system and, in particular, future fertility, and secondary cancers. The book also reviews in detail the important issues of quality of life, prevention initiatives and strategies for long-term follow up. Key point summaries are included throughout, and the references are annotated to guide the reader quickly to seminal primary papers and key review articles. With an accessible and consistent approach throughout, *Late Effects of Childhood Cancer* is an invaluable source of information and guidance for pediatric oncologists, who need to keep fully informed in order to advise patients and their parents appropriately, and also for pediatric and adult endocrinologists, adult oncologists and other physicians to whom the patient with late effects may initially present.
