Management of Acute Pulmonary Embolism Stavros V. Konstantinides, 2007-12-31 This practical volume highlights traditional, novel, and evolving aspects of the diagnosis and treatment of pulmonary embolism (PE). The contributors comprise an international team of experts. Important aspects of diagnosis, risk stratification, and differential treatment of patients with PE are presented in a concise, yet comprehensive manner. Emphasis is placed on specific issues related to PE, including pregnancy, cancer, thrombophilia, and air travel.

Axial Spondyloarthritis Stefan Siebert, Raj Sengupta, Alexander Tsoukas, 2016 A practical pocketbook for the nonspecialist practitioner, Axial Spondyloarthritis is the essential guide to the commonest inflammatory arthritis affecting the spine. Focusing on the practical implications of developments in classification, diagnosis, and treatment, this easily accessible text fully covers the broader spectrum of this condition.

World History as the History of Foundations, 3000 BCE to 1500 CE Michael Borgolte, 2019-10-29 In World History as the History of Foundations, 3000 BCE to 1500 CE, Michael Borgolte investigates the origins and development of foundations from Antiquity to the end of the Middle Ages. In his survey foundations emerge not as mere legal institutions, but rather as “total social phenomena” which touch upon manifold aspects, including politics, the economy, art and religion of the cultures in which they emerged. Cross-cultural in its approach and the result of decades of research, this work represents by far the most comprehensive account of the history of foundations that has hitherto been published.

Immunology Richard Coico, Geoffrey Sunshine, 2015-04-27 Immunology: A Short Course, 7th Edition introduces all the critical topics of modern immunology in a clear and succinct yet comprehensive fashion. The authors offer uniquely-balanced coverage of classical and contemporary approaches and basic and clinical aspects. The strength of Immunology: A Short Course is in providing a complete review of modern immunology without the burden of excessive data or theoretical discussions. Each chapter is divided into short, self-contained units that address key topics, illustrated by uniformly drawn, full-color illustrations and photographs. This new edition of Immunology: A Short Course: • Has been fully revised and updated, with a brand new art program to help reinforce learning • Includes a new chapter on Innate Immunity to reflect the

growth in knowledge in this area • Highlights important therapeutic successes resulting from targeted antibody therapies • Includes end of chapter summaries and review questions, a companion website at www.wileyimmunology.com/coico featuring interactive flashcards, USMLE-style interactive MCQs, figures as PowerPoint slides, and case-based material to help understand clinical applications

Experimental and Quasi-experimental Designs for Generalized Causal Inference William R. Shadish, Thomas D. Cook, Donald Thomas Campbell, 2002 Sections include: experiments and generalised causal inference; statistical conclusion validity and internal validity; construct validity and external validity; quasi-experimental designs that either lack a control group or lack pretest observations on the outcome; quasi-experimental designs that use both control groups and pretests; quasi-experiments: interrupted time-series designs; regression discontinuity designs; randomised experiments: rationale, designs, and conditions conducive to doing them; practical problems 1: ethics, participation recruitment and random assignment; practical problems 2: treatment implementation and attrition; generalised causal inference: a grounded theory; generalised causal inference: methods for single studies; generalised causal inference: methods for multiple studies; a critical assessment of our assumptions.

The Perception of Speech Brian Moore, Lorraine Tyler, William Marslen-Wilson, 2009-11-12 Spoken language communication is arguably the most important activity that distinguishes humans from nonhuman species. While many animal species communicate and exchange information using sound, humans are unique in the complexity of the information that can be conveyed using speech, and in the range of ideas, thoughts and emotions that can be expressed. Despite the importance of speech communication for the entire structure of human society, there are many aspects of this process that are not fully understood. One problem is that research on speech and language is typically carried out by different groups of scientists working on separate aspects of the underlying functional and neural systems. On the one hand, research from an auditory perspective focuses on the acoustical properties of speech sounds, their representation in the auditory system, and how that representation is used to extract phonetic information. On the other hand, research from psycholinguistic perspectives examines the processes by which representations of meaning are extracted from the acoustic-phonetic sequence, and how these are linked to the construction of higher-level linguistic interpretation in terms of sentences and discourse. Till now, there has been relatively little interaction between speech researchers from these two groups, in spite of a dramatic expansion in recent years of research into the neural bases of auditory and linguistic functions. This book bridges the gap between these two lines of research, recognising that both have the same aims in understanding how the motor gestures of a speaker are transformed to sounds and how those are mapped onto meaning in the comprehension of spoken language. It presents the work of leading researchers specializing in a wide range of topics within speech perception and

language processing - along with contributions from key researchers in neuroanatomy and neuro-imaging. This important new work cuts through the traditional boundaries and fosters crossdisciplinary interactions in this important and rapidly developing area of the biological and cognitive sciences.

Young People's Health in Context Candace Currie,2004-01-01 This report is the first major presentation of the international data from the 2001/2002 HBSC survey. The survey covered the physical, emotional and psychological aspects of health, and the influences of the family, schools and peers on young people aged 11, 13 and 15 years in 35 countries and regions in the WHO European Region and North America. The main body of the report gives comprehensive cross-national data on health and well-being, smoking, alcohol consumption, physical activity and sedentary behaviour, eating habits and body image, oral health, bullying and fighting, injuries and, for the first time, cannabis use and sexual health. Other chapters describe the contexts of young peoples health - socioeconomic inequality, puberty, relationships with family, peers, and schools - and discuss the implications of the surveys main findings for the future development of policies and programmes.

The Origins of Asset Management from 1700 to 1960 Nigel Edward Morecroft,2017-04-22 This book explores the origins and development of the asset management profession in Britain as a distinct activity within financial services, independent of banks and stockbrokers. Specifically, it identifies the main individuals and institutions after 1868 who established the profession. The book draws a distinction between banks (short-term deposit-taking) and asset management (an investment service with longer-term objectives). It explains why some banks fail but asset management businesses generally do not. It argues that asset management has been socially useful and has had a beneficial impact on the development of securities markets by offering choices to savers as an alternative to banks, improving the efficiency of capital allocation, re-cycling excess savings productively and enabling a range of investors - from institutions to individuals - to benefit from thoughtful, long-term investing.

Traumatic Stress Bessel A. Van der Kolk,Alexander C. McFarlane,Lars Weis?th,1996-05-03 This book should be of value to all mental health professionals, researchers, and students interested in traumatic stress, as well as legal professionals dealing with PTSD-related issues.

Cellular Aspects of Wood Formation Jörg Fromm,2013-04-11 With today's ever growing economic and ecological problems, wood as a raw material takes on increasing significance as the most important renewable source of energy and as

industrial feedstock for numerous products. Its chemical and anatomical structure and the excellent properties that result allow wood to be processed into the most diverse products; from logs to furniture and veneers, and from wood chippings to wooden composites and paper. The aim of this book is to review advances in research on the cellular aspects of cambial growth and wood formation in trees over recent decades. The book is divided into two major parts. The first part covers the basic process of wood biosynthesis, focusing on five major steps that are involved in this process: cell division, cell expansion, secondary cell wall formation, programmed cell death and heartwood formation. The second part of the book deals with the regulation of wood formation by endogenous and exogenous factors. On the endogenous level the emphasis is placed on two aspects: control of wood formation by phytohormones and by molecular mechanisms. Apart from endogenous factors, various exogenous effects (such as climate factors) are involved in wood formation. Due to modern microscopic as well as molecular techniques, the understanding of wood formation has progressed significantly over the last decade. Emphasizing the cellular aspects, this book first gives an overview of the basic process of wood formation, before it focuses on factors involved in the regulation of this process.

Canopy Photosynthesis: From Basics to Applications Kouki Hikosaka, Ülo Niinemets, Niels P.R. Anten, 2015-12-17 The last 30 years has seen the development of increasingly sophisticated models that quantify canopy carbon exchange. These models are now essential parts of larger models for prediction and simulation of crop production, climate change, and regional and global carbon dynamics. There is thus an urgent need for increasing expertise in developing, use and understanding of these models. This in turn calls for an advanced, yet easily accessible textbook that summarizes the “canopy science” and introduces the present and the future scientists to the theoretical background of the current canopy models. This book presents current knowledge of functioning of plant canopies, models and strategies employed to simulate canopy function, and the significance of canopy architecture, physiology and dynamics in ecosystems, landscape and biosphere.

The Evolution of Plant Physiology Alan R. Hemsley, Imogen Poole, 2004-02-05 Coupled with biomechanical data, organic geochemistry and cladistic analyses utilizing abundant genetic data, scientific studies are revealing new facets of how plants have evolved over time. This collection of papers examines these early stages of plant physiology evolution by describing the initial physiological adaptations necessary for survival as upright structures in a dry, terrestrial environment. The Evolution of Plant Physiology also encompasses physiology in its broadest sense to include biochemistry, histology, mechanics, development, growth, reproduction and with an emphasis on the interplay between physiology, development and plant evolution. Contributions from leading neo- and palaeo-botanists from the Linnean Society Focus on how evolution shaped photosynthesis, respiration, reproduction and metabolism. Coverage of the effects of specific evolutionary forces -- variations

in water and nutrient availability, grazing pressure, and other environmental variables

Genomics in Precision Medicine Shiv Sanjeevi, Prerna Pandey, 2019-11 Genomics in Precision Medicine makes the people aware about the field of genomics and that of precision medicine, by taking the readers through all the details related to genomics and precision medicine. It also updates the readers about the various innovations that have taken place in the field of precision medicine and discusses the path that is to be followed further. Also discussed in the book is a review on the relation between the precision medicine and the mutations that drive it, delving on the various computational methods and conformational principles for the detection of the factors that drive cancer. It also discusses the various genetic mutations and epigenetic modifications and goes on to explore the various benefits and harms in the research on precision medicine.
