The Arts of Making in Ancient Egypt Gianluca Miniaci, Juan Carlos Moreno Garcia, Stephen Quirke, Andréas Stauder, 2018 This book provides an innovative analysis of the conditions of ancient Egyptian craftsmanship in the light of the archaeology of production, linguistic analysis, visual representation and ethnographic research. During the past decades, the imaginative figure of ancient Egyptian material producers has moved from workers to artisans and, most recently, to artists. In a search for a fuller understanding of the pragmatics of material production in past societies, and moving away from a series of modern preconceptions, this volume aims to analyse the mechanisms of material production in Egypt during the Middle Bronze Age (2000-1550 BC), to approach the profile of ancient Egyptian craftsmen through their own words, images and artefacts, and to trace possible modes of circulation of ideas among craftsmen in material production. The studies in the volume address the mechanisms of ancient production in Middle Bronze Age Egypt, the circulation of ideas among craftsmen, and the profiles of the people involved, based on the material traces, including depictions and writings, the ancient craftsmen themselves left and produced.

Roman Bathing in Coriovallum Paulus Antonius Maria Beliën, 2020 'Dit wetenschappelijke rapport is het resultaat van een grootschalig onderzoeksproject dat tussen 2016 en 2019 is uitgevoerd in het Thermenmuseum in Heerlen. Centraal stond het

Romeinse publieke badhuis van Coriovallum - het hedendaagse Heerlen - en haar inbedding in de Romeinse stad. De resultaten van het onderzoek van meer dan 20 archeologische specialisten worden in deze bundel gepresenteerd. Het onderzoek heeft een schat aan nieuwe informatie opgeleverd, niet alleen wat betreft het badhuis en hoe dit functioneerde door de tijd heen, maar ook wat betreft Coriovallum als kleine provinciestad op een steenworp afstand van de limes in Germania Inferior. Duidelijk is geworden dat het publieke badhuis van Coriovallum bijna 400 jaar een centrale rol in de stad heeft gespeeld'.-- Uitgever Rijksdienst voor het Cultureel Erfgoed.

Sustainable Building with Earth Horst Schroeder,2015-09-28 This book provides an insightful overview of the current state of earth building. The author approaches the subject from the perspective of the building material's life cycle, featuring in-depth explanations of the cycle's individual steps: extraction and classification of construction soil; production of earth building materials and earthen structures; planning, construction and renovation of earth buildings; and demolition and recycling of earthen structures. This unique resource provides examples of sophisticated earth building projects and illustrates the diverse applications of earth as a building material. Compared to conventional mineral building materials, earth possesses particularly positive ecological qualities such as its energy balance and recyclability. Architects, engineers, students, manufacturers and distributors of building materials, building contractors, building biologists, public authorities and preservationists will benefit from this book's ample coverage of restoring, optimizing and building with this material of the past, present and future.

Building Information Modeling André Borrmann,Markus König,Christian Koch,Jakob Beetz,2018-09-19 Building Information Modeling (BIM) refers to the consistent and continuous use of digital information throughout the entire lifecycle of a built facility, including its design, construction and operation. In order to exploit BIM methods to their full potential, a fundamental grasp of their key principles and applications is essential. Accordingly, this book combines discussions of theoretical foundations with reports from the industry on currently applied best practices. The book's content is divided into six parts: Part I discusses the technological basics of BIM and addresses computational methods for the geometric and semantic modeling of buildings, as well as methods for process modeling. Next, Part II covers the important aspect of the interoperability of BIM software products and describes in detail the standardized data format Industry Foundation Classes. It presents the different classification systems, discusses the data format CityGML for describing 3D city models and COBie for handing over data to clients, and also provides an overview of BIM programming tools and interfaces. Part III is dedicated

to the philosophy, organization and technical implementation of BIM-based collaboration, and discusses the impact on legal issues including construction contracts. In turn, Part IV covers a wide range of BIM use cases in the different lifecycle phases of a built facility, including the use of BIM for design coordination, structural analysis, energy analysis, code compliance checking, quantity take-off, prefabrication, progress monitoring and operation. In Part V, a number of design and construction companies report on the current state of BIM adoption in connection with actual BIM projects, and discuss the approach pursued for the shift toward BIM, including the hurdles taken. Lastly, Part VI summarizes the book's content and provides an outlook on future developments. The book was written both for professionals using or programming such tools, and for students in Architecture and Construction Engineering programs.

Ancient Naukratis William D. E. Coulson, Iphigeneia Leventi, 1996 Naukratis, the first city in Egypt where Greeks were permitted to settle and one of the major centers of the ancient world, is located in the West Nile Delta south of modern Alexandria. It was first excavated by Flinders Petrie in 1884; his discoveries indicated occupation from the Archaic Period to Late Antiquity. The limited extent of Petrie's excavations and the erosion of the site inspired the American Ancient Naukratis Project to start new fieldwork in 1980. This volume contains details of an intensive surface survey (with selective drill-sampling) of the area surrounding Petrie's trenches, which have become waterlogged. Intensive cataloguing of pottery and small find distribution allows full appreciation of the functional and chronological patterning of the larger site. An historical essay on the possible origins of Naukratis, a study of stamped amphora handles, a geological study and new studies of material from Petrie's original excavations are also included in this volume.

Electrochromic Materials and Devices Roger J. Mortimer, David R. Rosseinsky, Paul M. S. Monk, 2015-10-26
Electrochromic materials can change their properties under the influence of an electrical voltage or current. Different classes of materials show this behavior such as transition metal oxides, conjugated polymers, metal-coordinated complexes and organic molecules. As the color change is persistent, the electric field needs only to be applied to initiate the switching, allowing for applications such as low-energy consumption displays, light-adapting mirrors in the automobile industry and smart windows for which the amount of transmitted light and heat can be controlled. The first part of this book describes the different classes and processing techniques of electrochromic materials. The second part highlights nanostructured electrochromic materials and device fabrication, and the third part focuses on the applications such as smart windows, adaptive camouflage, biomimicry, wearable displays and fashion. The last part rounds off the book by device case studies and environmental impact issues.
