Ethics and Business Kevin Gibson,2007-07-19 This undergraduate textbook captures the dynamic nature of business ethics in the era of globalization.

50 Years of Solar System Exploration Linda Billings,2020 To commemorate the 50th anniversary of the first successful planetary mission, Mariner 2 sent to Venus in 1962, the NASA History Program Office, the Division of Space History at the National Air and Space Museum, NASA's Science Mission Directorate, and the Jet Propulsion Laboratory organized a symposium. Solar System Exploration @ 50 was held in Washington, D.C., on 25-26 October 2012. The purpose of this symposium was to consider, over the more than 50-year history of the Space Age, what we have learned about the other bodies of the solar system and the processes by which we have learned it. Symposium organizers asked authors to address broad topics relating to the history of solar system exploration such as various flight projects, the development of space science disciplines, the relationship between robotic exploration and human spaceflight, the development of instruments and methodologies for scientific exploration, as well as the development of theories about planetary science, solar system origins and implications for other worlds. The papers in this volume provide a richly textured picture of important developments - and some colorful characters - in a half century of solar system exploration. A comprehensive history of the first 50 years of solar system exploration would fill many volumes. What readers will find in this volume is a collection of interesting stories about money, politics, human resources, commitment, competition and cooperation, and the faster, better, cheaper era of solar system exploration--

Structural Hearing Felix Salzer,Professor Felix Salzer,1962-01-01 Written by a pupil of Heinrich Schenker, this outstanding work develops and extends Schenker's approach. More than 500 examples of music from the Middle Ages to the 20th century complement the detailed discussions and analyses.

A Mathematical Medley George Szpiro,2010 Describes in layman's terms mathematical problems that have recently been solved (or thought to have been solved), research that has been published in scientific journals, and mathematical observations about contemporary life. Anecdotal stories about the lives of mathematicians and stories about famous old

problems are interspersed among other vignettes.

You Are Now Less Dumb David McRaney, 2014-08-05 The author of the bestselling *You Are Not So Smart* gives readers a fighting chance at outsmarting their not-so-smart brains. A mix of popular psychology and trivia, *You Are Now Less Dumb* is grounded in the idea that we all believe ourselves to be objective observers of reality--except we're not. But that's okay, because our delusions keep us sane. Expanding on this premise, McRaney provides eye-opening analyses of seventeen ways we fool ourselves every day, including: Enclothed Cognition (the clothes you wear change your behavior and influence your mental abilities) The Benjamin Franklin Effect (how you grow to like people for whom you do nice things and hate the people you harm). Deindividuation (Despite our best intentions, we practically disappear when subsumed by a mob mentality) The Misattribution of Arousal (Environmental factors have a greater effect on our emotional arousal than the person right in front of us) Sunk Cost Fallacy (We will engage in something we don't enjoy just to make the time or money already invested "worth it") McRaney also reveals the true price of happiness, and how to avoid falling for our own lies.

A History of African Higher Education from Antiquity to the Present Y. G-M Lulat, 2005-08-30 Until recently, Eurocentrist history professors taught that it was the Europeans who brought higher education to the African continent. While the Europeans have indeed influenced African education in recent times, there is some vital information that most history books leave out: for centuries before the arrival of the Europeans, the vast and advanced native African civilizations already had sophisticated universities and other institutions of higher education to boast about. This book is an attempt to fill the chasm in today's literature regarding this topic. It will be of interest to those researching the accurate, non-Euro-biased history of Africa.

Numbers Rule George Szpiro, 2020-11-03 The author takes the general reader on a tour of the mathematical puzzles and paradoxes inherent in voting systems, such as the Alabama Paradox, in which an increase in the number of seats in the Congress could actually lead to a reduced number of representatives for a state, and the Condorcet Paradox, which demonstrates that the winner of elections featuring more than two candidates does not necessarily reflect majority preferences. Szpiro takes a roughly chronological approach to the topic, traveling from ancient Greece to the present and, in addition to offering explanations of the various mathematical conundrums of elections and voting, also offers biographical details on the mathematicians and other thinkers who thought about them, including Plato, Pliny the Younger, Pierre Simon Laplace, Thomas Jefferson, John von Neumann, and Kenneth Arrow.

The Best Writing on Mathematics 2010 Mircea Pitici, 2021-09-14 The year's most memorable writing on mathematics This anthology brings together the year's finest writing on mathematics from around the world. Featuring promising new voices alongside some of the foremost names in mathematics, *The Best Writing on Mathematics* makes available to a wide audience many articles not easily found anywhere else—and you don't need to be a mathematician to enjoy them. These writings offer surprising insights into the nature, meaning, and practice of mathematics today. They delve into the history, philosophy, teaching, and everyday occurrences of math, and take readers behind the scenes of today's hottest mathematical debates. Here readers will discover why Freeman Dyson thinks some mathematicians are birds while others are frogs; why Keith Devlin believes there's more to mathematics than proof; what Nick Paumgarten has to say about the timing patterns of New York City's traffic lights (and why jaywalking is the most mathematically efficient way to cross Sixty-sixth Street); what Samuel Arbesman can tell us about the epidemiology of the undead in zombie flicks; and much, much more. In addition to presenting the year's most memorable writing on mathematics, this must-have anthology also includes a foreword by esteemed mathematician William Thurston and an informative introduction by Mircea Pitici. This book belongs on the shelf of anyone interested in where math has taken us—and where it's headed.

XXXXX Xxxxx, Martin Howse, 2006 xxxxx proposes a radical, new space for artistic exploration, with essential contributions from a diverse range of artists, theorists, and scientists. Combining intense background material, code listings, screenshots, new translation, [the] xxxxx [reader] functions as both guide and manifesto for a thought movement which is radically opposed to entropic contemporary economies. xxxxx traces a clear line across eccentric and wide ranging texts under the rubric of life coding which can well be contrasted with the death drive of cynical economy with roots in rationalism and enlightenment thought. Such philosophy, world as machine, informs its own deadly flipside embedded within language and technology. xxxxx totally unpicks this hiroshimic engraving, offering an dandyish alternative by way of deep examination of software and substance. Life coding is primarily active, subsuming deprecated psychogeography in favour of acute wonderland technology, wary of any assumed transparency. Texts such as Endonomadology, a text from celebrated biochemist and chaos theory pioneer Otto E. Roessler, who features heavily throughout this intense volume, make plain the sadistic nature and active legacy of rationalist thought. At the same time, through the science of endophysics, a physics from the inside elaborated here, a delicate theory of the world as interface is proposed. xxxxx is very much concerned with the joyful elaboration of a new real; software-led propositions which are active and constructive in eviscerating contemporary

economic culture. xxxxx embeds Perl Routines to Manipulate London, by way of software artist and Mongrel Graham Harwood, a Universal Dovetailer in the Lisp language from AI researcher Bruno Marchal rewriting the universe as code, and self explanatory Pornographic Coding from plagiarist and author Stewart Home and code art guru Florian Cramer. Software is treated as magical, electromystical, contrasting with the tedious GUI desktop applications and user-led drudgery expressed within a vast ghost-authored literature which merely serves to rehearse again and again the demands of industry and economy. Key texts, which well explain the magic and sheer art of programming for the absolute beginner are published here. Software subjugation is made plain within the very title of media theorist Friedrich Kittler's essay Protected Mode, published in this volume. Media, technology and destruction are further elaborated across this work in texts such as War.pl, Media and Drugs in Pynchon's Second World War, again from Kittler, and Simon Ford's elegant take on J.G Ballard's crashed cars exhibition of 1970, A Psychopathic Hymn. Software and its expansion stand in obvious relation to language. Attacking transparency means examining the prison cell or virus of language; life coding as William Burrough's cutup. And perhaps the most substantial and thorough-going examination is put forward by daring Vienna actionist Oswald Wiener in his Notes on the Concept of the Bio-adaptor which has been thankfully unearthed here. Equally, Olga Goriunova's extensive examination of a new Russian literary trend, the online male literature of udaff.com provides both a reexamination of culture and language, and an example of the diversity of xxxxx; a diversity well reflected in background texts ranging across subjects such as Leibniz' monadology, the ur-crash of supreme flaneur Thomas de Quincey and several rewritings of the forensic model of Jack the Ripper thanks to Stewart Home and Martin Howse. xxxxx liberates software from the machinic, and questions the transparency of language, proposing a new world view, a sheer electromysticism which is well explained with reference to the works of Thomas Pynchon in Friedrich Kittler's essay, translated for the first time into English, which closes xxxxx. Further contributors include Hal Abelson, Leif Elggren, Jonathan Kemp, Aymeric Mansoux, and socialfiction.org.

The Water Goddess in Igbo Cosmology Sabine Jell-Bahlsen,2008 This evocative study of a water Goddess among the Igbo of Lake Oguta in southeastern Nigeria, thoroughly explores the rituals, beliefs and social organization associated with rituals of women's power ... the analysis of this powerful Goddess, based on many years of research, is a notable contribution to African female ritual studies, long neglected by scholars.--Publisher's website.

The Korean War Keith D. McFarland,2009-12-04 The Korean War is the most comprehensive and detailed bibliography compiled to date on the American involvement in The Forgotten War. In this revised and expanded second edition, Keith D. McFarland's clearly written annotations provide concise descriptions of more than 2,600 of the most important books, articles, and documents written in English on the conflict in Korea. Key topics include origins of the war; the political and military roles of North and South Korea, the United States, the Soviet Union, China, Great Britain, Canada, Australia, South Africa, Turkey, and other United Nations members; campaigns and battles; weapons and uniforms; and the military and

diplomatic aspects of the war. Specific subjects are easy to find using the index organized by topic and author, making *The Korean War* a necessity for every academic or research library.

Vision and Voyages for Planetary Science in the Decade 2013-2022 National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Planetary Science Decadal Survey, 2012-01-30 In recent years, planetary science has seen a tremendous growth in new knowledge. Deposits of water ice exist at the Moon's poles. Discoveries on the surface of Mars point to an early warm wet climate, and perhaps conditions under which life could have emerged. Liquid methane rain falls on Saturn's moon Titan, creating rivers, lakes, and geologic landscapes with uncanny resemblances to Earth's. *Vision and Voyages for Planetary Science in the Decade 2013-2022* surveys the current state of knowledge of the solar system and recommends a suite of planetary science flagship missions for the decade 2013-2022 that could provide a steady stream of important new discoveries about the solar system. Research priorities defined in the report were selected through a rigorous review that included input from five expert panels. NASA's highest priority large mission should be the Mars Astrobiology Explorer-Cacher (MAX-C), a mission to Mars that could help determine whether the planet ever supported life and could also help answer questions about its geologic and climatic history. Other projects should include a mission to Jupiter's icy moon Europa and its subsurface ocean, and the Uranus Orbiter and Probe mission to investigate that planet's interior structure, atmosphere, and composition. For medium-size missions, *Vision and Voyages for Planetary Science in the Decade 2013-2022* recommends that NASA select two new missions to be included in its New Frontiers program, which explores the solar system with frequent, mid-size spacecraft missions. If NASA cannot stay within budget for any of these proposed flagship projects, it should focus on smaller, less expensive missions first. *Vision and Voyages for Planetary Science in the Decade 2013-2022* suggests that the National Science Foundation expand its funding for existing laboratories and establish new facilities as needed. It also recommends that the program enlist the participation of international partners. This report is a vital resource for government agencies supporting space science, the planetary science community, and the public.

The History of Islam in Africa Nehemia Levtzion, Randall Lee Pouwels, 2000 The history of the Islamic faith in Africa spans 14 centuries. This book provides a detailed mapping of the cultural, political, geographic and religious past of Islam in a single volume. Intended as a reference and textbook, it does not assume prior knowledge of the subject.
