Scattering Characteristics of Aerial and Ground Radar Objects Oleg I. Sukharevsky, Vitaly A. Vasilets, 2024-06-24 This book presents computations for various types of aerial and ground objects. It contains a brief explanation of the theoretical calculation methods used for obtaining scattering characteristics of these objects. It provides working examples for the analysis of electromagnetic wave scattering processes by different objects. Scattering Characteristics of Aerial and Ground Radar Objects is divided in two sections. The first section includes scattering characteristics for different aerial objects: aircrafts, helicopters, transport and passenger airplanes, unmanned aerial vehicles, and missiles. The second section contains data about scattering for many ground objects such as tanks, surface-to-air missile systems, ground radars, and other military objects. In total, the book contains actual data for 63 aerial objects (fighters, attack aircraft, bombers, long-range radar detection aircraft, transport aircraft, helicopters, unmanned aerial vehicles, and cruise missiles) and 18 ground objects, among which are anti-aircraft missile systems and tanks. This book contains data obtained by computations such as circular diagrams of radar backscattering; mean and median radar cross section values of various objects; probability distributions of echo signal amplitude given various parameters of illumination and various kinds of underlying surfaces (for ground objects). Also, as an example, the scattering characteristics for one surface ship are given. This book will be a valuable reference for scientists, engineers, and researchers of electromagnetic wave scattering, computational electrodynamics, and those working on radar detection and recognition algorithms for aerial and ground radar targets.

Venereal Disease, Hospitals, and the Urban Poor ; London's "foul Wards," 1600-1800 Kevin Patrick Siena, 2004 This book explores how London society responded to the dilemma of the rampant spread of the pox among the poor. Some have asserted that public authorities turned their backs on the foul and only began to offer care for venereal patients in the

Enlightenment. An exploration of hospitals and workhouses shows a much more impressive public health response. London hospitals established foul wards at least as early as the mid-sixteenth century. Reconstruction of these wards shows that, far from banning paupers with the pox, hospitals made treating them one of their primary services. Not merely present in hospitals, venereal patients were omnipresent. Yet the foul comprised a unique category of patient. The sexual nature of their ailment guaranteed that they would be treated quite differently than all other patients. Class and gender informed patients' experiences in crucial ways. The shameful nature of the disease, and the gendered notion of shame itself, meant that men and women faced quite different circumstances. There emerged a gendered geography of London hospitals as men predominated in fee-charging hospitals, while sick women crowded into workhouses. Patients frequently desired to conceal their infection. This generated innovative services for elite patients who could buy medical privacy by hiring their own doctor. However, the public scrutiny that hospitalization demanded forced poor patients to be creative as they sought access to medical care that they could not afford. Thus, *Venereal Disease, Hospitals and the Urban Poor* offers new insights on patients' experiences of illness and on London's health care system itself. Kevin Siena is Assistant Professor of History at Trent University.

Theoretical Foundations of Radar Location and Radio Navigation Denis Alexandrovich Akmaykin,Eduard Anatolyevich Bolelov,Anatoliy Ivanovich Kozlov,Boris Valentinovich Lezhankin,Alexander Evgenievich Svistunov,Yury Grigorievich Shatrakov,2021-03-22 The book represents a study guide reciting theoretical basics of radar location and radio navigation systems of air and sea transport. This is the distinctive feature of this study guide. The study guide states the principal physics of radar location and radio navigation, main measuring methods of proper and relative movement parameters of an object, tactical and technical characteristics of radar location and radio navigation systems, including examining issues on radiofrequency signals detection and its parameters estimation against background and interference of different type, filtering, combined detection and rating of signals, signals resolution and classification. The structural and functioning principles of the current and advanced radar location and radio navigation systems of air and sea transport are represented in the study guide with an adequate completeness. The study guide features the result of years long lecturing on radar location and radio navigation theoretical courses at the Moscow State Technical University of Civil Aviation and G.I.Nevelskiy Maritime State Technical Academy. The study guide is designated for students of radio-engineering specialties

in area of air and sea transport. The study guide can be useful for radio engineers working in the field of air and maritime transport, and for graduate students and academic researchers as well.

Revivalism and Social Christianity Christophe Chalamet, 2017-09-29 How does one become 'righteous among the Nations'? In the case of Henri Nick (1868-1954) and Andre Trocme (1901-1971), two French Protestant pastors who received the title for their acts of solidarity toward persecuted Jews, it was because they had been immersed, from an early age, in the discourses and practices of social Christianity. Focussing on the lives of these two remarkable figures of twentieth-century Christianity, *Revivalism and Social Christianity* is the first study in English on the Social Gospel in French Protestantism. Chalamet presents a genealogy of the movement, from its emergence in the last decades of the nineteenth century to its high point during World War II, in Le Chambon-sur-Lignon, where Trocme and many local people rescued hundreds of Jewish refugees. As social Christians who prayed and worked for the coming of God's kingdom on earth in the midst of a society ravaged by two world wars, Henri Nick and Andre Trocme combined a deep revivalist faith with a concern for the concrete conditions in which people live.

Beyond Blue Skies Chris Petty, 2020-11 In 1945 some experts still considered the so-called sound barrier an impenetrable wall, while winged rocket planes remained largely relegated to science fiction. But soon a series of unique rocket-powered research aircraft and the dedicated individuals who built, maintained, and flew them began to push the boundaries of flight in aviation's quest to move ever higher, ever faster, toward the unknown. *Beyond Blue Skies* examines the thirty-year period after World War II during which aviation experienced an unprecedented era of progress that led the United States to the boundaries of outer space. Between 1946 and 1975, an ancient dry lakebed in California's High Desert played host to a series of rocket-powered research aircraft built to investigate the outer reaches of flight. The western Mojave's Rogers Dry Lake became home to Edwards Air Force Base, NASA's Flight Research Center, and an elite cadre of test pilots. Although one of them—Chuck Yeager—would rank among the most famous names in history, most who flew there during those years played their parts away from public view. The risks they routinely accepted were every bit as real as those facing NASA's astronauts, but no magazine stories or free Corvettes awaited them—just long days in a close-knit community in the High Desert. The role of not only the test pilots but the engineers, aerodynamicists, and support staff in making supersonic flight possible has been widely overlooked. *Beyond Blue Skies* charts the triumphs and tragedies of the rocket-plane era and the unsung efforts of the men and women who made amazing achievements possible.

Antenna Theory and Design Warren L. Stutzman, Gary A. Thiele, 2012-05-22 Stutzman's 3rd edition of *Antenna Theory and Design* provides a more pedagogical approach with a greater emphasis on computational methods. New features include additional modern material to make the text more exciting and relevant to practicing engineers; new chapters on systems, low-profile elements and base station antennas; organizational changes to improve understanding; more details to selected

important topics such as microstrip antennas and arrays; and expanded measurements topic.

Sustainable Civil Engineering at the Beginning of Third Millennium Umut Türker,

UK Wind Energy Technologies Simon Hogg, Christopher Crabtree, 2016-08-05 Phase 1 of the EPSRC SUPERGEN Wind programme began in March 2006 and work continued under Phase 2 until March 2014. The strategic aim was to re-establish a strong research community in wind energy technologies, across the UK's leading academic and industrial research organisations. UK Wind Energy Technologies gives a comprehensive overview of the range of wind energy research undertaken in the UK under Phases 1 & 2 to achieve this goal. Specific topics covered in the book include: wind resource assessment, turbine array layout, environmental interactions, control of turbines, drive train reliability and condition monitoring, turbine array electrical connection, power transmission to grid, assessment of operations and maintenance strategies, and the analysis of turbine foundations and structures. Since the completion of Phase 2 the Supergen Wind consortium partners have formed a networking Hub, which is now the principal national coordinating body for academic research into wind energy in the UK. This book will be of interest to researchers and engineers from industry and academia and also provides workers from other countries with an overview of the range of activity within the UK resulting from the SUPERGEN Wind programme to date.

Development and Perspectives of Landscape Ecology O. Bastian, Uta Steinhardt, 2013-03-14 Development and status of landscape ecology - subject of this book During the last decades, landscape ecology has developed tremendously. It concerns both the theoretical basis and practical application. The roots of landscape ecology are geography and biology. The term landscape ecology was first coined by the German scientist Carl Troll in 1939. Since, the development center of landscape ecology was in Central Europe. Recently, also other parts of the world became powerful centers of landscape ecology, especially Northern America. American approaches partly differ essentially from the European, because they are focused especially on biogeography and population dynamics. In Europe, however, the geographical roots of landscape ecology play a major role. Landscape is defined as a complex of abiotic, biotic and human components. Mainly due to linguistic barriers, the international discussion does not take notice of approaches and experiences from non-anglophone countries in a sufficient manner. Therefore this book considers more the German and European views on landscape ecology than the books which were published before. It tries to bridge the gaps between theory and practice of landscape ecology, as well between the German/European and American approaches. The book gives a fundamental representation of landscape ecology, which proves to be a young, but an interesting and very important transdisciplinary science for the solution of environmental problems. Both the theoretical basis and practical application of landscape ecology are considered.

Apoptosis Enrico Mihich, Robert T. Schimke, 2013-11-11 The fifth Annual Pezcoller Symposium entitled, Apoptosis, was

held in Trento, Italy, June 9-11, 1993 and was focused on the specific phenomena leading to Programmed Cell Death (PCD) or Apoptosis, and the mechanisms involved. With presentations at the cutting edge of progress and stimulating discussions, this Symposium addressed the genetics and molecular mechanisms determining PCD and the role of this suicidal process in cancer and the immune system. The functions of p53, c-myc and bcl-2 in affecting apoptosis in different cell types and the role of ions and intracellular pH changes and that of intranuclear endonucleases are given particular emphasis as are the effects of anticancer agents, hormone imbalances and growth factors. The role of p53, a tumor suppressor gene, in inducing PCD is discussed in detail as pertinent to hematological and non-hematological tumors. The requirement of p53 for the induction of apoptosis by ionizing radiation or adenovirus oncoproteins is outlined. Decision points during the cell cycle affecting the cascade of events leading to PCD are discussed as is their role as switches under the control of c-myc and bcl-2 proteins or the influence of cycle specific drugs. The concurrent requirement of multiple signals in determining apoptosis is emphasized. The examples of the role of PCD in the regulation of hematopoiesis, and in the generation of antigen-specific immune repertoire are illustrated.

Chipless RFID Systems Using Advanced Artificial Intelligence Larry M. Arjomandi, Nemai Chandra Karmakar, 2023-01-31 This book shows you how to develop a hybrid mm-wave chipless Radio Frequency Identification (RFID) system, which includes chip-less tag, reader hardware, and detection algorithm that use image processing and machine learning (ML) techniques. It provides the background and information you need to apply the concepts of AI into detection and chip-less tag signature printable on normal plastic substrates, instead of the conventional peak/nulls in the frequency tags. You'll learn how to incorporate new AI detection techniques along with cloud computing to lower costs. You'll also be shown a cost-effective means of image construction, which can lower detection errors. The book focuses on side-looking-aperture-radar (SLAR) with a combination of deep learning to provide a much safer means of chipless detection than the current iSAR technique. Each chapter includes practical examples of design. With its emphasis on mm-waveband and the practical side of design and engineering of the chipless tags, reader and detection algorithms, this is an excellent resource for industry engineers, design engineers and university researchers.

IMS Application Developer's Handbook Rogier Noldus, Ulf Olsson, Catherine Mulligan, Ioannis Fikouras, Anders Ryde, Mats Stille, 2011-07-20 IMS Application Developer's Handbook gives a hands-on view of exactly what needs to be done by IMS application developers to develop an application and take it live on an operator's network. It offers practical guidance on building innovative applications using the features and capabilities of the IMS network, and shows how the rapidly changing development environment is impacting on the business models employed in the industry and how existing network solutions can be moved towards IMS. Elaborating on how IMS applies basic VoIP principles and techniques to realize a true multi-access, and multimedia network, this book ensures that developers know how to use IMS most effectively for applications.

Written by established experts in the IMS core network and IMS service layer, with roots in ISDN and GSM, with experience from working at Ericsson, who have been active in standardisation and technology development and who have been involved in many customer projects for the implementation of fixed mobile converged IMS network and service. The authors of this book bring their in-depth and extensive knowledge in the organizations involved in the IMS standardization and its architecture. Clear, concise and comprehensive view of the IMS and Rich Communication Suite (RCS) for developers Written by established experts in the IMS services layer, who have been involved in many customer projects for the implementation of fixed mobile converged IMS network and service Covers potential service and operator scenarios for the IMS architecture; it is significantly more than merely a description of the IMS standards
