Constitutionalism in Islamic Countries: Between Upheaval and Continuity Tilmann Röder (J.), 2012-02-16

Constitutionalism in Islamic Countries: Between Upheaval and Continuity examines the question of whether something similar to an Islamic constitutionalism has emerged out of the political and constitutional upheaval witnessed in many parts of North Africa, the Middle East, and Central and Southern Asia. In order to identify its defining features and to assess the challenges that Islamic constitutionalism poses to established concepts of constitutionalism, this book offers an integrated analysis of the complex frameworks in Islamic countries, drawing on the methods and insights of comparative constitutional law, Islamic law, international law and legal history. European and North American experiences are used as points of reference against which the peculiar challenges, and the specific answers given to those challenges in the countries surveyed, can be assessed. The book also examines ways in which the key concepts of constitutionalism, including fundamental rights, separation of powers, democracy and rule of law, may be adapted to an Islamic context, thus providing valuable new insights on the prospects for a genuine renaissance of constitutionalism in the Islamic world in the wake of the Arab spring.

*Human Rights Approaches to Environmental Protection* Alan E. Boyle, Michael R. Anderson, 1998 This collection of essays explores links between the environment and human rights, and responds to the growing debate among activists, lawyers, academics and policy-makers on the legal status of environmental rights in both international and domestic law, and on the proposals for a human right to a satisfactory environment. The collection is an original and timely contribution to the existing literature on this subject, and offers a sustained analysis which addresses both the conceptual and practical problems of environmental rights. The conceptual dimensions are particularly rich, raising fundamental questions concerning the human/environment relationship as well as more general issues regarding the form, content and limitations of international and domestic human rights law. The first part of the book deals mainly with the protection of the environment in international human rights law and EC law, while part two concentrates on problems and experience in developing countries, some of which have already incorporated environmental rights and international constitutional law and from which a growing jurisprudence has emerged. This is where at present human rights approaches seem to be of greatest value. Each chapter is written by an author well qualified in the field. The volume will have a wide appeal to anyone interested in environmental law

and human rights.

*International Sanctions* Carina Staibano, Peter Wallensteen, 2005-02-18 The main theme of the book is that the new types of sanctions constitute a challenge to the international system. First, there are more of the targeted sanctions, including financial, travel, aviation, special commodity and arms sanctions. Furthermore, there are considerable but varied practices in implementation. Also there are now sanctions by new actors (regional bodies, international organizations). These all put new strains on international bodies in carrying out sanctions or getting member states to work together in these efforts. These challenges are analyzed in this volume, with some examples, but mostly from a generalist perspective. A completely novel aspect is that this volume also includes studies of the difficulties that are met by targeting actors, their way of managing the situations, and most interesting, the human rights of such actors.

*The Oxford Handbook of International Climate Change Law* Cinnamon Piñon Carlarne, Kevin R. Gray, Richard Tarasofsky, 2016 As the threats posed by changing weather patterns are becoming more apparent, climate change law has emerged as an important area of law in its own right. This Handbook provides a comprehensive understanding of this growing subject, setting out the key institutions and processes, and featuring interdisciplinary insights from leading experts.

*Procedural Environmental Rights* Jerzy Jendrośka, Magdalena Bar, 2017 'Procedural Environmental Rights: Principle X in Theory and Practice' provides an overview of various aspects of the current status, development and practice of rights of access to information, public participation in decision-making and access to justice in environmental matters following their codification as non-binding principles in Principle X of the Rio Declaration.

**Oil and Governance** David G. Victor, David R. Hults, Mark C. Thurber, 2011-12-08 National oil companies (NOCs) play an important role in the world economy. They produce most of the world's oil and bankroll governments across the globe. This book explains the variation in performance and strategy for NOCs and provides fresh insights into the future of the oil industry.

**Climate Change Liability** Richard Lord, Silke Goldberg, Lavanya Rajamani, Jutta Brunnée, 2011-12-01 As frustration mounts in some quarters at the perceived inadequacy or speed of international action on climate change, and as the likelihood of significant impacts grows, the focus is increasingly turning to liability for climate change damage. Actual or potential climate change liability implicates a growing range of actors, including governments, industry, businesses, non-governmental organisations, individuals and legal practitioners. Climate Change Liability provides an objective, rigorous and accessible overview of the existing law and the direction it might take in seventeen developed and developing countries and the European Union. In some jurisdictions, the applicable law is less developed and less the subject of current debate. In others, actions for various kinds of climate change liability have already been brought, including high profile cases such as

Massachusetts v. EPA in the United States. Each chapter explores the potential for and barriers to climate change liability in private and public law.

**European Integration and the Nationalities Question** John McGarry,Michael Keating,2006-09-27 A highly topical examination of the effect of European integration on relations between states and minority nations. This new collection brings together the leading specialists in the field, and covers a wide range of cases, from Northern Ireland in the West, to Estonia and Latvia in the East, and Cyprus in the South-East. The contributors assess how European integration has affected the preparedness of states to accommodate minorities across a range of fundamental criteria, including: enhanced rights protection; autonomy; the provision of a voice for minorities in the European and international arena; and the promotion of cross-border cooperation among communities dissected by state frontiers. The comprehensive chapters stress the importance of the nationality question, and the fact that, contrary to the hopes and beliefs of many on the left and right, it is not going to go away. Beginning with an introductory essay that summarizes the impact of European integration on the nationalities question, this accessible book will be of strong interest to scholars and researchers of politics, nationalism, ethnic conflict and European studies.

**Beyond Politics** Michael P. Vandenbergh,Jonathan M. Gilligan,2017-12-21 This book argues that government action alone will not prevent dangerous climate change, but that private governance can fill the gap.

*Democratic Contestation on the Margins* Claire Metelits,Stephanie Matti,2015-04-21 This edited volume focuses on the democratic performance of regimes in some of the least populous countries on the African continent. Using a framework developed by Steven Levitsky and Lucan Way, each case study provides in-depth analysis of democratic contestation in the following arenas: electoral, judiciary, legislature, media, and civil society. This volume also examines the key factors that push these regimes in either democratic or authoritarian directions, and how these regimes are likely to evolve in the future.

**Attribution in International Law and Arbitration** Carlo de Stefano,2020-01-16 Attribution in International Law and Arbitration clarifies and critically discusses the international rules of attribution of conduct, particularly regarding their application to states under international investment law. It examines the key question of how and to what extent breaches of State obligations, particularly in respect of States' commitments to foreign investors under international investment agreements (IIAs) and bilateral investment treaties (BITs), can be attributed. Of special interest within this context is the responsibility of States when the alleged breach has been committed by separate legal entities, rather than the state itself. Under domestic law, entities such as state-owned enterprises (SOEs) are considered legally distinct, however the State may still be considered responsible for their actions under international law. The book addresses the relevant issues systematically, beginning with direct reference to the Draft Articles on Responsibility of States for Internationally Wrongful

Acts (ARSIWA) on attribution, finalized by the International Law Commission (ILC) in 2001. It then elaborates on the specifics of international investment law, based on a detailed examination of practice and case law, whilst giving due consideration to the academic debate. The result is a full, innovative take on one of the most difficult questions in investment arbitration.

**Climate Change Liability** Michael Faure, Marjan Peeters, 2011-01-01 This book sheds new light on the growing issue of using liability as a tool for both preventing and compensating for the damage caused by climate change. Michael Faure and Marjan Peeters have brought together a selection of expert contributors who explore a variety of both national and European perspectives on the topic. Climate change liability is no longer only a theoretical idea since climate change litigation has become so hotly debated and this book examines to what extent it can be used for mitigation and adaptation issues. Chapters discuss the potential role of liability within various legal systems, like the national systems of the USA and The Netherlands, but also EU and ECHR law. Liability is outlined in a broad perspective since not only compensation for damage suffered by plaintiffs is discussed, but also the need for prevention in order to obtain a reduction of greenhouse gases.

**Germany and the Common Foreign and Security Policy of the European Union** A. Miskimmon, 2007-09-20 This study assesses the influence of German policy makers on EU policy and the impact of EU membership on foreign policy making at the national level. The book concludes that limitations remain on the Europeanization of German foreign and security policy and Germany's ability to play a leading role in military crisis management.

Property and the Law in Energy and Natural Resources Aileen McHarg, 2010 The law of energy and natural resources has always had a strong focus on property as one of its components, but there are relatively few comparative, book-length, treatments of both property law and energy and natural resources law. The aim of this edited collection is to explore the multiple dimensions of the contemporary relationship between property and energy and natural resources law. Its genesis was the growing resurgence of global interest in questions of property in energy and resources and how it manifests itself across legal regimes around the world. With an international and comparative character, the collection seeks to capture differences in the meaning of property, and the different views about the role it should play in a diverse range of contexts: civil law and common law; the law of indigenous communities; public law and private law; and national and international law. Key issues discussed include private rights and common property situations, privatization and regulation, competition for land use and resources, the role of property rights in environmental protection, and the balance between national sovereignty and the security of foreign investment. The collection thus has relevance for a wide readership interested in the legal dimensions of property as an increasingly important aspect of the law for energy and resources across diverse countries, and at the international level. The contributors are established experts in the energy and natural resources law field, and the collection builds upon a body of previous collaborative work in this area.

**National Oil Companies and Value Creation** Silvana Tordo, 2011-07-13 National Oil Companies (NOCs) directly or

indirectly control the majority of oil and gas reserves. As such, they are of great consequence to their country's economy, to importing countries' energy security, and to the stability of oil and gas markets. The paper analyzes the available evidence on the objectives, governance and performance of 20 NOCs from both net importing and net exporting countries, and draws conclusions about the design of policies and measures that are more likely to lead to social value creation. NOCs differ from private companies on a number of very important variables, including the level of competition in the market in which they operate, their business profile along the sector value chain, and their degree of commercial orientation and internationalization. Most share some core characteristics: they are usually tied to the 'national purpose' and serve political and economic goals other than maximizing the firm's profits. This paper introduces a conceptual model to analyze value creation by NOCs that takes into consideration their complex objective function. Our analysis aims to answer the following questions: Are certain corporate governance arrangements more suited than others to promote value creation? Is good geology a pre-condition for NOC value creation? Are there benefits from exposing the NOC to competition from private oil companies? Does the development of forward and backward linkages hamper NOC value creation?

*North Korea in the 21st Century* J.E. Hoare, Susan Pares, 2021-11-15 North Korea is not easily accessible, but boasts some of the most beautiful scenery in the Korean Peninsula, and arguably in East Asia. Travel to and in North Korea is tightly controlled, while political, economic, social and cultural life is played out in terms of a not readily understood philosophy, known as *juche*.

**Resource Abundance and Economic Development** R. M. Auty, 2001-06-28 Since the 1960s the per capita incomes of the resource-poor countries have grown significantly faster than those of the resource-abundant countries. In fact, in recent years economic growth has been inversely proportional to the share of natural resource rents in GDP, so that the small mineral-driven economies have performed least well and the oil-driven economies worst of all. Yet the mineral-driven resource-rich economies have high growth potential because the mineral exports boost their capacity to invest and to import. Resource Abundance and Economic Development explains the disappointing performance of resource-abundant countries by extending the growth accounting framework to include natural and social capital. The resulting synthesis identifies two contrasting development trajectories: the competitive industrialization of the resource-poor countries and the staple trap of many resource-abundant countries. The resource-poor countries are less prone to policy failure than the resource-abundant countries because social pressures force the political state to align its interests with the majority poor and follow relatively prudent policies. Resource-abundant countries are more likely to engender political states in which vested interests vie to capture resource surpluses (rents) at the expense of policy coherence. A longer dependence on primary product exports also delays industrialization, heightens income inequality, and retards skill accumulation. Fears of 'Dutch disease' encourage efforts to force industrialization through trade policy to protect infant industry. The resulting slow-

maturing manufacturing sector demands transfers from the primary sector that outstrip the natural resource rents and sap the competitiveness of the economy. The chapters in this collection draw upon historical analysis and models to show that a growth collapse is not the inevitable outcome of resource abundance and that policy counts. Malaysia, a rare example of successful resource-abundant development, is contrasted with Ghana, Bolivia, Saudi Arabia, Mexico, and Argentina, which all experienced a growth collapse. The book also explores policies for reviving collapsed economies with reference to Costa Rica, South Africa, Russia and Central Asia. It demonstrates the importance of initial conditions to successful economic reform.

The New Eastern Europe Daniel Sheldon Hamilton, Gerhard Mangott, 2007 The nations of Ukraine, Moldova and Belarus are the new Eastern Europe - sandwiched between a larger EU and a resurgent Russia. Their success could benefit democracy, pluralism and the rule of law throughout the post-Soviet space. Their future will help shape Russia's own destiny and ultimately determine where Europe ends.
