Fabrication of Metallic Pressure Vessels Owen R. Greulich, Maan H. Jawad, 2021-11-02 Fabrication of Metallic Pressure Vessels A comprehensive guide to processes and topics in pressure vessel fabrication Fabrication of Metallic Pressure Vessels delivers comprehensive coverage of the various processes used in the fabrication of process equipment. The authors, both accomplished engineers, offer readers a broad understanding of the steps and processes required to fabricate pressure vessels, including cutting, forming, welding, machining, and testing, as well as suggestions on controlling costs. Each chapter provides a complete description of a specific fabrication process and details its characteristics and requirements. Alongside the accessible and practical text, you'll find equations, charts, copious illustrations, and other study aids designed to assist the reader in the real-world implementation of the concepts discussed within the book. You'll find numerous appendices that include weld symbols, volume and area equations, pipe and tube dimensions, weld deposition rates, lifting shackle data, and more. In addition to detailed discussions of cutting, machining, welding, and post-weld heat treatments, readers will also benefit from the inclusion of: A thorough introduction to construction materials, including both ferrous and nonferrous alloys An exploration of layout, including projection and triangulation, material thickness and bending allowance, angles and channels, and marking conventions A treatment of material forming, including bending versus three-dimensional forming, plastic theory, forming limits, brake forming, roll forming, and tolerances Practical discussions of fabrication, including weld preparation, forming, vessel fit up and assembly, correction of distortion, and transportation of vessels Perfect for new and established engineers, designers, and procurement personnel working with process equipment or in the fabrication field, Fabrication of Metallic Pressure Vessels will also earn a place in the libraries of students in engineering programs seeking a one-stop resource for the fabrication of pressure vessels.

Introduction to Manufacturing Systems Samuel C. Obi,2012-12 Introduction to Manufacturing Systems is written for all college- and university-level manufacturing, industrial technology, engineering technology, industrial design, engineering, business management and other related disciplines where there is an interest in learning about manufacturing systems as a complete system. Even lay people will find this book useful in their quest to learn more about the field. Its simple and easy-to-understand language makes it particularly useful to all readers. The field of manufacturing is a world of its own which bears on almost all other disciplines. This book is not necessarily a how to material that teaches one how to manufacture a product, but rather an aid to help learners gain a more complete understanding of what is in it and what happens in the field. Thus, this book will provide more comprehensive information about manufacturing. It is intended to introduce every interested person to what manufacturing is, its diverse components, and the various activities and tasks that are undertaken in its many and diverse departments. It should serve as an introductory material to beginning college manufacturing and related majors. Over the years, I have learned that most of these beginners are ill equipped with key aspects of manufacturing when they arrive. This group also includes all technical- and business-minded individuals who enroll or train in trade, business,

engineering, vocational and technical programs and institutions. This book is divided into 12 very distinctive chapters that are closely arranged to follow manufacturing activities as sequentially as possible, to help readers follow a rather continuous thread of activities generally undertaken in the industry. Its chapters cover various topics including different types, techniques or methods, and philosophies of manufacturing; manufacturing plants and facilities; manufacturing machines; tools and production tooling; manufacturing processes; manufacturing materials and material handling systems; measurement instruments; manufacturing personnel; manufactured products; and planning, implementing, controlling and improving manufacturing systems.
